The house of detention is to be so constructed as to keep in four divisions, each division entirely separate from the others, the prisoners comprehended in the following classes: first, male persons detained as witnesses, those confined for misdemeanors, disturbance of a court, breach of recognizance and non-payment of a fine, and those sentenced to simple imprisonment; second, female prisoners of the same descriptions; third, male persons regularly committed on an accusation of crime; fourth, female prisoners of the same description. The confinement of those persons in the first and second classes who have been sentenced to imprisonment, and of every one embraced in the third and fourth classes, is to be solitary; but there are to be two enclosed yards, the one for the male, the other for the female prisoners, where they may take exercise, and pursue such employment as is permitted.

The penitentiary and school of reform are for the confinement of all those convicted of crime; the former containing such convicts as have attained the age of eighteen at the time of conviction, the latter such as are under that age, to whom may be added other youthful offenders and vagrants specially included by law. The penitentiary is to contain a cell with an enclosed court for every convict, a machine so disposed that a convenient number of prisoners may work

* It would seem that the mournful habiliments of the child had made a strong impression on the young prince's mind.

at it, separated from each other by a wall, school-rooms, an infirmary, and all buildings necessary for safely keeping and preserving the health of the prisoners. The house of detention has separate divisions for the sexes, a separate dormitory for each prisoner, courts and rooms for their employment, school-rooms, and an infirmary.

The officers of these places are not only the wardens and keepers necessarily employed, but there are also chaplains, teachers, matrons, and physicians, whose duties—strictly specified by the code—embrace the religious instruction and the constant education of those detained, the preservation of their health, and the enforcement of continual industry. To see that these duties are adequately performed, a board of five inspectors is appointed by the highest authority of the state, who, together with the governor, the presidents of both houses of the legislature, the judges of the supreme court, and other distinguished functionaries, are directed constantly to visit the different places of confinement, to prevent all oppression, peculation, and abuse in the management of them, and to make frequent periodical reports to the legislature. Their duties, in all these respects, are strictly prescribed by the code; they are allowed an adequate compensation; and their feelings, character, and honour are thus enlisted in the strict maintenance of the institution on the plan framed by the authority from whom they receive their trust.

The second book of this code contains the provisions for the treatment of prisoners in the several places of confinement. It has been already seen, from the plan of their construction, as well as from the penalties prescribed by the code of crimes and punishments, that a proper classification and separation in a few cases, and entire solitude in nearly all, are laid down as the fundamental principles of reform and prison discipline. Nothing, perhaps, is more universally admitted than the danger of vicious association; yet in no respect has the discipline of prisons been more defective than in confounding together all who are involved in the various different stages of criminal procedure. After condemnation, there can be no association but of the guilty with the guilty; in preliminary imprisonment guilt must be associated with innocence. He who is confined as a witness, for a misdemeanor, or on suspicion, leaves the den where he was imprisoned with tainted morals, depraved habits, and excited passions, which are certain to lead him back to the abode of infamy, where they were first acquired or infinitely augmented. The provisions of the code applicable to this subject are the more important, because, while there has been much legislation on the subject of solitary imprisonment as a punishment after conviction, few efficient steps have anywhere been taken to prevent the demoralising consequences attending

indiscriminate association before trial, and for offences which amount not to crime.

Persons whose liberty, for the good of society, must be restrained, are either those upon whom imprisonment is imposed merely to secure their appearance when the purposes of justice require it, or those upon whom it is inflicted as a punishment. The detention of those of the first description, to be just, must be accompanied with no unnecessary privation; it is therefore provided that they shall be, in all respects, comfortably attended to, allowed the visits of their families and friends, supplied with books, and receive the proceeds of such labour as they may choose to engage in. Persons who are accused of offences punishable, when proved, by a comparatively light penalty, ought not to be treated with that rigour of confinement which is necessary to secure those charged with crime. The degrees of this rigour are, therefore, distinctly laid down in the code; the danger of guilty associations is prevented; those comparatively innocent are separated from such as are probably guilty; those accused of offences implying no great moral turpitude, from the depraved in mind and manners; the young from the old offender. Classification and separation are provided for before trial with the same care as after conviction.

The rules which regulate the imprisonment of the convict, when it comes to be treated in a double capacity,—as a punishment and means of reform,—are made to refer to the various degrees of simple imprisonment, imprisonment at hard labour, and solitary confinement at certain intervals, which were the penalties designated in the "Code of Crimes and Punishments." Precise provisions are prescribed, to prevent oppression on the one hand, and, on the other, strictly to enforce the execution of the sentence; nothing is left to the discretion of turnkeys or keepers, to be varied according to their caprice or the means a criminal may have of purchasing their favour. The qualifications required of these officers are pointed out, as a guide to the selecting power, and a lesson to him who is chosen, so that the one may not commit the fatal error of underrating the talents necessary for the employment, and the other may feel its dignity and responsibility. The punishment once ordered, can neither be aggravated nor alleviated by a ministerial officer. When labour is added to confinement, the convict is made to rise at the dawn of day, and to continue at work until half an hour before sunset, except during the intervals of meals and attendance on a teacher. Perseverance accompanied with obedience, moral conduct, and a desire to reform, bring to the prisoner proportionate and increasing advantages of a better diet, permission to read books of instruction, the privilege of visits from relations and friends, and, ultimately, a part of the proceeds

of his industry. Solitary confinement, without labour and in entire seclusion, varies as to duration, according to the enormity of the crime. Those convicted of murder, without any aggravating circumstances, are deprived of labour for two consecutive months every year; while, in the case of the infanticide and the assassin, this is extended to three and to six months; none of them have any communication with persons out of the prison except the inspectors, and they are considered dead to the rest of the world.

It seems to be equally consistent with humanity and sound reason, that the severity of these punishments should be tempered, or, at least, the mode of applying them should be varied in the instance of a youthful criminal. When a child of tender age commits an offence, he probably acts under the influence of those passions which nature has given him, while she has not yet conferred that discretion which teaches him to control them. He is, perhaps, without parental or friendly advisers, and knows neither the duties nor penalties of the law. In such a case, if crime has been committed, it is but just to seek to remove its cause, by the milder method of instruction and useful employment. Instead, therefore, of being consigned to a penitentiary, the criminal under eighteen is sentenced to the school of reform, the details for the government of which are minutely laid down. Occasional solitude, constant instruction, labour in the different mechanic arts, with mild but certain punishment for the bad, and marks of distinction for those who improve, form the outlines of this excellent branch of prison discipline, and contribute all that can be devised to rescue the young from a headlong course leading them to ruin and aggravated crime.

To these two books, which, properly speaking, embrace all the branches of a code of reform and prison discipline, Mr. Livingston has added a third, for the purpose of establishing an institution connected with it in its general features, and certainly of great importance in a complete system of police. This he denominates a "House of Refuge and Industry." Its object is not the punishment of crime, it is intended to afford the means of employment, voluntary for those able and willing to labour, and coercive on those who, although able, prefer a life of idleness, mendicancy, or vice. Implements and necessary materials are provided for the poor, habits of economy and industry are taught, good but plain food is supplied, the vicious not yet convicted of crime are reclaimed, and the unfortunate are protected and relieved. To one unhappy class who are expressly entitled to admission, (that of discharged convicts,) such a refuge is invaluable.

"Here," in the language of Mr. Livingston, "he may find employment and subsistence, and receive such wages as will enable him to remove from the scenes of his past crimes, place him

above temptation, confirm him in his newly-acquired habits of industry, and cause him safely to pass the dangerous and trying period between the acquisition of his liberty and restoration to the confidence of society. The cause, the temptation, or the excuse for relapse being thus removed, it is hoped that instances of return to vicious pursuits will become more rare, and that many will become useful members of society who, under the present system, either burden it by their poverty, or prey upon it by their crimes. The house of refuge is rendered the more necessary, because a man of prudence will no more receive or employ a convict discharged from one of our present penitentiaries, than he would shut up with his flock a wild beast escaped from its keepers; but the reformatory plan once fairly in operation, its principles studied, developed, steadily adhered to, improved by the light of experience, and its beneficial effects upon morals perceived, the man who has undergone its purifying operation will, in time, be no longer regarded with fear or contempt, and society, by confiding in his reformation, will permit him to be honest."

V. There only remains what may be considered rather as an appendix than a portion of the system of penal law—the "Book of Definitions."

This is added in order to render the system both explicit and concise. The employment of technical terms, though never used where common expressions sufficiently definite are to be found, is, in many instances, unavoidable. In all such cases, and whenever words or phrases are either ambiguous or employed in any other sense than that given in common parlance, they are defined and explained in this supplementary book.

These remarks complete the analysis of the "System of Penal Law" prepared by Mr. Livingston for the state of Louisiana. It has been less the object of them to offer a criticism upon its various provisions, than to condense and present them in a complete and single point of view. It would have been a task comparatively easy to examine particular portions more in detail; some of the views which we have passed hastily over might, perhaps, have been partially controverted, others were susceptible of far more illustration and praise than has been bestowed. But the work is one every way worthy of the deep consideration of all communities, not partially, but as a whole; not merely for the provisions it establishes in regard to one offence or another, but for the wise, the liberal, the charitable manner in which it travels over and embraces those rights and duties, the most sacred that belong to and devolve upon each member of the human family. Taken as a single and complete work, it is the production of a mind at once prepared, by long practice in the study and profession of the law, to treat it with all the lights and aids

of science, and imbued with that humane and comprehensive spirit which is necessary to reform what is rooted in general habit and prejudice, and to systematise and reduce what has been diffused by circumstances and time. It has

already fixed upon Mr. Livingston the attention of the most intelligent statesmen and purest philanthropists in other countries, and enrolled his name in those high places which are assigned to general benefactors of mankind.

BALLAD POETRY.

THE SHEPHERD'S TALE.

Few of our readers, we should presume, need be informed of the beautiful ballad poetry in the composition of which the genius of the late Sir Walter Scott so much delighted. The following ballad-tale we have taken from Lockhart's Life of his eminent literary friend and relation,—a work which fully realises the high idea we have ever entertained of the intellectual author of "Valerius." Mr. Lockhart remarks of this ballad, that, "though long and very unfinished, it contains many touches of his (Sir Walter's) best manner."

* * * * *

"And ne'er but once, my son," he says,
"Was yon sad cavern trod
In persecution's iron days,
When the land was left by God.

"From Bewlie bog, with slaughter red,
A wanderer hither drew,
And oft he stopped and turned his head,
As by fits the night-wind blew.

"For trampling round by Cheviot edge
Were heard the troopers keen,
And frequent, from the Whitelaw ridge,
The death-shot flashed between.

"The moonbeams through the misty shower
On yon dark cavern fell;
Through the cloudy night the snow gleam'd white,
Which sunbeam ne'er could quell.

"Yon cavern dark is rough and rude,
And cold its jaws of snow;
But more rough and rude are the men of blood
That haunt my life below.

"Yon spell-bound den, as the aged tell,
Was hewn by demons' hands;
But I had lowed melle * with the fiends of hell
Than with Clavers and his band."

He heard the deep-mouthed bloodhound bark,
He heard the horses neigh,
He plunged him in the cavern dark,
And downward sped his way.

Now faintly down the winding path
Came the cry of the faulting hound,
And the mutter'd oath of balked wrath
Was lost in hollow sound.

He threw him on the flinted floor,
And held his breath for fear;
He rose, and bitter cursed his foes,
As the sounds died on his ear.

* "Rather meat."

"O, bare thine arm, thou battling Lord,
For Scotland's wandering band;
Dash from th' oppressor's grasp the sword,
And sweep him from the land.

"Forget not thou thy people's groans
From dark Dunnottar's tower,
Mixed with the sea-fowl's shrilly moans,
And ocean's bursting roar.

"O, in fell Clavers' hour of pride,
Even in his mightiest day,
As bold he strides through conquest's tide,
O stretch him on the clay!

"His widow and his little ones,
O may their tower of trust
Remove its strong foundation-stone
And crush them in the dust!"——

"Sweet prayers to me," a voice replied,
"Thrice welcome, guest of mine!"
And, glimmering on the cavern side,
A light was seen to shine.

An aged man, in amice brown,
Stood by the wanderer's side,
By powerful charm, a dead man's arm
The torch's light supplied.

From each stiff finger, stretch'd upright,
Arose a ghastly flame,
That waned not in the blast of night
Which through the cavern came.

Of deadly blue was that taper's hue,
That flamed the cavern o'er,
But more deadly blue was the ghastly hue
Of his eyes who the taper bore.

He laid on his head a hand like lead,
As heavy, pale, and cold——

"Vengeance be thine, thou guest of mine,
If thy heart be firm and bold.

"But if faint thy heart, and caitiff fear
Thy recreant sinews know,
The mountain-erne thy heart shall tear,
Thy nerves the hooded crow."

The wanderer raised him undismay'd—
"My soul, by dangers steel'd,
Is stubborn as my border-blade,
Which never knew to yield."

"And if thy power can speed the hour
Of vengeance on my foes,
Thine be the fate, from bridge and gate,
To feed the hooded crows."

The Brownie looked him in the face,
And his colour fled with speed;——

"I fear me," quoth he, "uneath it will be.
To match thy word and deed.

"In ancient days, when English bands
Sore ravaged Scotland fair,
The sword and shield of Scottish land
Was valiant Halbert Kerr.

"A warlock loved the warrior well,
Sir Michael Scott by name,
And he sought for his sake a spell to make
Should the Southern foeman tame.

"Look thou, he said, from Cessford head,
As the July sun sinks low,
And when glimmering white on Cheviot's height,
Thou shalt spy a wreath of snow,

"The spell is complete which shall bring to thy feet
The haughty Saxon foe.
For many a year wrought the wizard here,
In Cheviot's bosom low,

"Till the spell was complete, and in July's heat
Appeared December's snow;
But Cessford's Halbert never came
The wondrous cause to know.

"For years before, in Bowden isle,
The warrior's bones had lain,
And after short while, by female guile,
Sir Michael Scott was slain.

"But me and my brethren in this cell
His mighty chains retain;
And he that can quell the powerful spell
Shall o'er broad Scotland reign."

He led him through an iron door,
And up a winding stair,
And in wild amaze did the wanderer gaze
On the sight which opened there.

Through the gloomy night flashed ruddy light,
A thousand torches' glow,
The cave rose high, like the vaulted sky,
O'er stalls in double row:

In every stall of that endless hall
Stood a steed in barbing bright;
At the foot of each steed, all armed, save the head,
Lay stretched a stalwart knight.

In each mailed hand was a naked brand,
As they lay on the black bull's hide;
Each visage stern did upward turn,
With eyeballs fixed and wide.

A lancegay strong, full twelve ells long,
By every warrior hung;
At each pommel there, for battle yare,
A Ledwood axe was slung.

The casque hung near each cavalier,
The plumes waved mournfully
At every tread which the wanderer made
Through the hall of Grammarye.

The ruddy beam of the torches' gleam
That glared the warriors on,
Reflected light from armour bright,
In noontide splendour shone.

And onward seen, in lustre sheen,
Still lengthening on the sight,
Through the boundless hall stood steeds in stall,
And by each lay a sable knight.

Still as the dead lay each horseman dread,
And moved nor limb nor tongue;
Each steed stood stiff as an earth-fast cliff,
Nor hoof nor bridle rung.

No sounds through all that spacious hall
The deadly still divide,
Save where echoes aloof from the vaulted roof
To the wanderer's step replied.

At length before his wondering eyes,
On an iron column borne,
Of antique shape and giant size
Appear'd a sword and horn.

"Now choose thee here," quoth his leader,
Thy venturous fortune try;
Thy wo and weal, thy boot and bale,
In yon brand and bugle lie."

To the fatal brand he mounted his hand,
But his soul did quiver and quail,
The life-blood did start to his shuddering heart,
And left him wan and pale.

The brand he forsook, and the horn he took,
To 'say a gentle sound;
But so wild a blast from the bugle brast,
That the Cheviot rocked around.

From Forth to Tees, from seas to seas,
The awful bugle rung;
On Carlisle wall, and Berwick withal,
To arms the warders sprung.

With clank and clang the cavern rang,
The steeds did stamp and neigh,
And loud was the yell as each warrior fell
Sterte up with hoop and cry:

"Wo, wo," they cried, "thou caitiff coward,
That ever thou wert born!
Why drew ye not the knightly sword
Before ye blew the horn?"

The morning on the mountain shone,
And on the bloody ground,
Hurl'd from the cave, with shiver'd bone,
The mangled wretch was found.

And still beneath the cavern dread
Among the gladders gray,
A shapeless stone, with lichens spread,
Marks where the wanderer lay.

* * * * *

It will be remarked, that in this ballad there are two familiar legends blended together; and it may be interesting to compare the latter of these with the prose version of it, as given in one of the last works of the author's pen. He says, in the "Letters on Demonology and Witchcraft, 1830,"—"Thomas of Ercildowne, during his retirement, has been supposed, from time to time, to be levying forces to take the field in some crisis of his country's fate. The story has often been told of a daring horse-jockey having sold a black horse to a man of venerable and antique appearance, who appointed the remarkable hillock upon Eildon hills, called the Sucken-hare, as the place where, at twelve o'clock at night, he should receive the price. He came, his money was paid in ancient coin, and he was invited by his customer to view his residence. The trader in horses followed his guide, in the deepest astonishment, through several long ranges of stalls, in each of which a horse stood motion-

less, while an armed warrior lay equally still at the charger's feet. 'All these men,' said the wizard in a whisper, 'will awaken at the battle of Sherifmuir.' At the extremity of this extraordinary depôt hung a sword and a horn, which the prophet pointed out to the horse-dealer as containing the means of dissolving the spell. The man, in confusion, took the horn, and attempted to wind it. The horses instantly started in their stalls, stamped, and shook their bridles; the men arose and clashed their armour, and the mortal, terrified at the tumult he had excited,

dropped the horn from his hand. A voice like that of a giant, louder even than the tumult around, pronounced these words:—

'Wo to the coward that ever he was born,
That did not draw the sword before he blew the horn.'

A whirlwind expelled the horse-dealer from the cavern, the entrance to which he could never again find. A moral might be, perhaps, extracted from the legend, namely, that it is best to be armed against danger before bidding it defiance."

THE INFIDEL.

ONE day as I was seriously meditating upon the inconsistency and unreasonableness of atheism, suddenly my mind took a visionary flight; and in my vision I could see an infidel walking by the edge of the water, over which the barren rocks hung; near by was a small boat within his reach; he gave a step into it, and rowed into the deep to enjoy the pleasures of a more extensive view of the glory of nature. Being extremely delighted with the prospect, he did not observe that the boat floated toward the vortex of the sea; his arms were folded, and the sun shone on the deep. Unknown to him, the stream was gently gliding him toward the cataract, the sounds of which were occasionally conveyed in a weak manner upon the silent gale, so that he heard them not. His thoughts had gone far,—so far as the years of his infancy; visions of the things that were past, floated before his eyes; it was not his hand that threw back the dark curtain of oblivion, pointing to that which had gone by; it was not he that called up the forms that rushed before him: no, if the "pride of infidelity" had not blinded him, he would have perceived that it was the Spirit of God that was making an additional effort to save his soul from irrecoverable ruin; operating for the last time upon his best and purest feelings—the feelings which had hitherto flowed through the dark and tempestuous sea of his raging thoughts, like a small, pure, unmingled, and unpolluted rill, by their raging billows, even when the storms of the passions had driven them to the precipice of madness. But he saw this not.

He looked back upon the time of his infancy, and his mind went gently—gentle as the delusive stream that hastened him to eternity. He appeared as if he had been enchanted by his childish affections anew; and the earth, its glory and beauty, were forgotten, and even the magnificence of nature was absorbed by their presence. He saw the home of his youthful years—the mother that nursed him upon her tender bosom, who taught his infant lips to sound the language of gratitude. He knelt upon her footstool, repeating *lispingly*, in half-formed words, his evening

prayer: he rose, and her embrace, with a cheerful smile, were his reward; her tender arms carried him to his couch, and her kiss and blessing were his fancied protection through the dark hours of night. The dawn of the morning awoke him, and he leaped through the flowery gardens, and skipped over the green clover fields, while his little heart overflowed with innocent pleasure and happiness. * * * *

He lost sight of many years, but he did not lose sight of his mother—for a moment she was there; and he went onward in his dream. He was now about to part with her, and to take a voyage to the continent; and the hour came. She gave him her parting admonitions and the Book of God—the book upon which he now looks with contempt; that book, to complete his ruin, he rent in pieces, and sacrificed it an offering to the flames. Her arms encircled him, and her tears fell in a stream upon his face; he felt them *then*,—he felt them *now* going into his soul. Her tranquil, heavenly voice breathed a prayer for his safety; and his bosom swelled, as if his heart would burst; but these pains passed, and the ocean conveyed him away upon its bosom, and the atmosphere of Italy received him. There he drank deeply of the vials of corruption—he drank to intoxication: then the monster atheism grappled him, extracting from his soul every solid comfort—stealed his nature's best and purest feelings—threw the curtain of despair between his soul and eternity, and buried his hope for life and immortality in the dense blackness of eternal annihilation. * * * *

The vision went on progressively, and he looked once more: again, for the last time, he saw the face of his mother; she was on her death-bed: he would have asked her for the cause of her indisposition, but his conscience gave him a full answer before he moved his lips. He sat down, taking hold of her hand, which, unknown to him, rested upon the Bible; he saw it, and his countenance changed to strangeness. His mother saw him, and the tears floated in her eyes—they fell upon his hand.

"Yes, here! here! here!" said he, *now* stammering, while his eyes are as if they would suddenly

leap out of his head to look upon the place. His mother exerted herself to speak to him once—twice, but she failed: however, she made another effort. "My son," said she, with maternal affection, "O my son, who art dear to my soul, I am about to appear before God, yet I do not fear and tremble, because I have an Intercessor: this book,"—and she pressed the Bible to her bosom,—"this book was a guide to me in life, it is now my hope in death, and my assurance of immortality. Promise"—and her voice lowered to the sound of one that felt that she should not speak again upon earth—"promise to thy dying, broken-hearted mother, that it shall be so with thee, that my God shall be a God to thee; promise me this, and I shall die happy."

While she spoke his eyebrows lowered, his whole system trembled, and his soul was in a manner enshrouded with horror; but with an energy of mind almost superhuman, he silenced the voice of his awakened conscience, which cost him bitterly dear: his mother turned her dying eyes upon him for a moment—and slept in death. He saw her aspect *then*, while she looked upon him in the agonies of death—she is *now* before his eyes; and he hides his face with his hands, as if he would shut her out from his presence; but in vain: the eye of his mind sees her, let him do his worst. * * * *

The boat now hurried on with a furiously wild and frightful velocity: a monstrous stump of a tree, when floating by, struck against the prow, and the furious blow shivered it in pieces: he was roused from his deadly slumbers: he saw his danger—yes, he saw that safety was altogether unattainable, and his face became pale; he could see the mist ascending over his head, high as the heaven; and then he began to look about; to what purpose he did not know! he felt that he was alone—that there was none to save—and *no hope*. He attempted to quiet his agitated spirit, and to look upon death face to face. "A moment," said he, "and I shall cease to exist—a moment, and I shall be as if I had never been—nothing." But instantaneously that thought withered within him: he could not hold the eyes of his mind unmoved upon the incomprehensible abyss of annihilation, the dense thick darkness of non-existence; and his mind, without any place to rest, returned upon himself, cleaving to him, and in its hold upon him he *felt* that there was *another world* to be found.

The deafening roar of the assembled waters, the dashing of the foam against the boat, the dreadful fierceness of its velocity, the awful assurance of destruction, and the instinctive dread

of annihilation overcame him; he sunk down, and in that extreme and ineffable hour of his incomprehensible anguish, when every thing gathered blackness about him, his carelessness and philosophy forsook him. He reclined for some moments, and then lifted up his head: the black rocks frowned upon him terrifically, giving a most perfect and constant echo to the dashing of the waters which foamed outrageously against their foundations. "O God," said he, lifting his cold hands upward, "this is awful." But he had scarcely stopped, before he broke forth into a heartrending cry—"but why should I take His name in my lips? I have said, there is no God!—there is no God! O that I could be satisfied of this now! that I could convince myself that this was true! But the noise of the waters, and a voice within my bosom, ten thousand times stronger than the noise of the waters, tell me that HE IS,—this view testifies that he is, and I am hastening into his presence."

At this moment he saw the boat within a few yards of the centre of an immense half-circle of prodigious rocks, over which the flood descended in one immense and perpendicular sheet, with a noise higher than the roar of all the thunder that ever rolled since the ages of time through the expansive heavens. The boat whirled about, his brains became perplexed, his face deformed, and he exclaimed in broken and imperfect expressions, "I see the wrath of an avenging God, I see the vehement flames of his indignation—there—there—above the mist he is, whom I have denied. I hear the voice of an accusing spirit higher than the furious waters!" As the boat drew nearer the precipice over which the flood swept, he cried out "O, immense chasm—the pit—and hell is deeper! The Deity—the dying form of my murdered mother—the Saviour—all—all will rise up against me in this hour. Demons—demons will snatch me away." Before these predictions had escaped from his lips, they were fulfilled. The boat reached the precipice; the foam, the mist, and the thundering noise of the descending waters encompassed him; it broke like a thunderbolt over the rocks, which appeared rising like an eternal embankment against the floods; he was enveloped in the raging deluge that rushed precipitately, with a velocity that made the rocks themselves to tremble to their extreme depths—to the depths that no line can reach their unattainable bottoms, nor mortal eye dare penetrate into them. The gates of the eternal world opened; the irresistible arm of Omnipotence hurled him away, while he dare not look back with guilt, nor onward with despair.

SITTINGS FOR MY PORTRAIT.

SEVENTH SITTING.

As I passed through the drawing-room, this morning, Caroline was seated at the piano, play-

ing one of Mozart's most splendid compositions. I afterwards requested Handel's *Occasional Over-*

ture, and must confess myself to have been greatly delighted, not only with the music, but with the progress of the performer in that fine accomplishment.

Then, looking into the parlour, behold the round table was occupied by a pretty group, each at some chosen employment, reading, writing, working; and there was my precocious Jonathan, wielding his poetic pen; for you must know, kind reader, that he has a wonderful notion of rhyme, as well as reason.

"Well, my boy, I must own, whatever your taste, I should be better pleased to see this morning season devoted to some more solid and useful pursuit. I think Latin, or Greek, or history, would be a more suitable employment just now, than poetry; or it would not be amiss to devote an hour or two each day, in the vacation, to the revision of your school exercises. But come, let me see what you are about."

Jonathan is really a modest lad, and looked a little reluctant; he is also, let my juvenile readers observe, very obedient, and, therefore, handed me at once his paper. It was but a beginning; and ran thus:—

"Sweet is the hour, the vernal hour,
And sweet the zephyr's breath,
When Spring resumes her long lost power,
New risen from wintry death,
The flowery shrubs, the flowing streams,
Awake a glad surprise;
The sun his still increasing beams
Pours o'er the brightening skies."

"There, now, papa, I think it is quite fair you should finish this for me. I have often heard you say that you had a poetic turn in your youth, and I have some notion that I have caught it. At all events, I was rather at a standstill as you entered, and pray do help me."

"But, my dear, my painter is waiting in the library."

"Never mind, papa, you can give me a line or two in a minute, just to go on."

"Let me see. I'll try. Just step to Mr. Painter, and tell him I will attend him in five minutes, by the time he has prepared his palette and pencils."

Jonathan returns. "Well, my boy, like most young poets, you have plenty of vernal and zephyr, and flowery and flowing, and so forth; but give me the pen. There, now, I have added something:—"

"But sweeter far than flowers or fruits,
In Nature's ample space,
The cultivated mind that gives
To every thing its place.
I love to see your skill, and thirst
For eminence hereafter;
But then, my boy, be scholar first,
And pretty poet after."

"And now, Jonathan, leaving you to cogitate over this impromptu, I must hasten to Mr. Painter."

Thus were three rooms occupied with the

three sister arts; and methought I might surely find a subject of reflection; and what should it be? Nothing better surely than a brief comparison of this beautiful sisterhood. Instead of the muses, therefore, I invoked the powers of a just discrimination.

Music appeals to the ear, painting to the eye, and poetry more immediately to the mind. In the curious workmanship and nice adaptations of the instrument of sound, the naturalist and the moralist might alike find an inexhaustible subject of admiration; but the question at present respects an estimate of the comparative value of the effect produced by the "concord of sweet sounds." The sensitiveness of the organ which is formed to catch the aerial undulations, appears to be great in most individuals, and in innumerable instances rouses the mind to an absolute enthusiasm. If we analyse the feeling, however, it will be found to be purely sensual; that is, its sphere of operation is the senses, or, at best, the passions, to which the former are subsidiary. The effect of the finest combinations of music is to impart sensations or emotions, not ideas; it does not, therefore, hold a relation to the intellectual and moral nature of man, so much as to his physical constitution, or to the merely instinctive susceptibilities of his spirit. It furnishes a fine stimulus to thought or meditation, to the inventive faculty, and the devotional bias or power, but seems incapable of originating sentiment, enlarging the boundaries of knowledge, or illustrating truth. Simply viewed as a medium of pleasure or relaxation, it must be allowed to rank high, and is worthy of many of the elaborate encomiums that have been pronounced upon it. At once soothing and elevating, it has been employed in every age to alleviate care, to promote hilarity, and to pacify turbulent emotions. It merits indeed a more exalted encomium; for in its application to the purposes of religion, it is undoubtedly adapted to give a tone to the mind which is eminently favourable to devotion. It is not, indeed, religion, but may be the concomitant and adjunct of it. It is the instrument of praise; and thus becomes the medium of intercourse with heaven, and is an appropriate mode of the creature's expression of his reverence and admiration of the Creator. But still it is only the instrument and the mode. Indifferent in itself, it may thus become a valuable auxiliary to good, as by a misapplication of its powers, it may, and often does, prove a means of moral detriment and social evil. As to its moral value, therefore, it is comparatively nothing in itself, since it depends upon the moral condition of the individual who is under its influence. It is simply exhilarating or soothing; but it may inspire deeds of unholy daring, or soothe into luxurious and vicious inaction. This may be no reason for its disuse, but should check an excessive indulgence.

As the liability to misapplication and the frequent tendency to improper associations have been brought as grounds of objection against music, so the demoralising effects of improper paintings have been adduced as deteriorating to the character of that attractive art: and doubtless, in both instances, the perversion of that which in itself is good, or simply indifferent, is to be greatly censured. Painting, however, must be allowed a higher station than music in the grade of excellence, and surpasses it on several accounts. So far as mere taste is concerned, the gratification may be nearly equal, and doubtless is, in either case, exquisite to the genuine devotee; but it is evident that the range of the imitative art is more extensive, and the impressions it is calculated to produce are more important and more permanent. Painting brings us into immediate contact with nature, and, in a degree, forces upon the least inquisitive mind a variety of otherwise undiscovered beauties. By its magical power of bringing into concentrated view, upon a small space, the chief objects of the wide-spread landscape, the least observant individual is constrained to compare and comprehend the whole, and to derive gratification from the curious resemblance; besides that, scenes the most distant, and combinations the most beautiful, that may have been familiar in other years, and partly faded from the memory, are presented again and again in all their freshness, and with all their past associations. He who climbed the Alps, or visited the remotest lands, or oceans, or seas, in the days of his youth, may thus in age, without peril or adventure, ascend the mountains, penetrate the wilderness, or circumnavigate the globe again. The drawing of a hill, a building, a city, connects the mind with large portions of knowledge which we may have acquired on important spheres of action in which we may have moved—nay, with all history and all time itself. On the vivid canvass, cities, men, and empires reappear. Thebes rises from the desert; Herculeanum springs from its ashes; Cesar reassumes his throne. The eye reads, it may be, the perished page of history, or the whole volume of fact is unravelled at once, as by a glance. While, perhaps, it is just to concede the palm of superiority to that department which is denominated historical painting, yet enough of the moral value of portrait painting has not been understood or realised. It is at once delightful and profitable to be introduced to the great and the good of past ages, by entering a room adorned with their pictures, and the impression becomes at once more intense and useful still when we find ourselves encircled by our own ancestry. To see the vivid resemblance of the mighty dead, of whose deeds we have so often read or heard, and to trace the very features of those whose names and whose virtues have filled many a winter's tale, and cheered many a summer's ramble; and

to detect still the reflection of countenance or form in the yet unobliterated marks of family likeness and descent, cannot but excite emotions of no ordinary kind. We seem at once, in an hour, to live through centuries, to hold converse with bygone generations, and to take part in long transacted events. Through these images we see the busy crowd alive again, mingle with their thoughts, and convert past into present time. The gay and the grave, the witty and the wise, the ignorant or the learned, the great and the little, the bad and the good, encompass us; and though, as it were, in the bustle and amidst the business of a revived generation, we are at leisure to study and profit by the known peculiarities of every character. Thus does the pencil assert a kind of triumph over the tomb, and invest the departed with the prerogatives of life, and the glory of a terrestrial immortality.

The moral effect of a large picture, in which many individuals are seen in groups, or engaged in one great action, possesses certain advantages which do not belong even to a real event. In the latter case, every moment changes the aspect of the scene; different positions are assumed, and different emotions arise. The *crisis* of the scene lasts but a moment, and, if we are personally interested, does not admit of being distinctly examined, or even wholly seen. But we soon return again and again to the painting, study every part of it, renew the full impression of every object and every countenance, and weep or rejoice, love or hate the good or the evil a thousand times. Still it must be admitted that the application of the art is comparatively limited, and the moral effect restricted by circumstances. It ranks higher than music, but only next to poetry.

This elegant accomplishment, or rather this intellectual power, is in immediate association with sentiment. The senses here become tributary to genius, and taste is the vehicle of thought. Those bold flights of the imagination in which poetry revels cannot fail of exerting a seductive influence upon the heart, and producing an evident moral result of the strongest character. On the use or abuse of the art every thing depends; every thing to the poet, and every thing to the admiring reader. It is from a golden goblet he drinks—a goblet that sweetens either nectar or poison. Poetry has both the harmony of music, and the imagery of painting. She can sing as sweetly as the one sister, and describe as powerfully as the other. Holding one in either hand, she leads their movements, commands their aid, and towers above their height. Her influence is potent upon the mind itself, debasing or purifying its principles, exalting to heaven, or casting down to hell. Who can calculate the moral effects, in either case, upon generations past, present, or to come, that have been produced, or may yet arise from the

sublimities of a Milton, the devotion of a Watts, or the libertinism of a Byron?

The comparison, therefore, drawn by a sensible writer, in a publication which has been for some years extinct, is worthy of remembrance: "Music appears to awaken feeling only; painting presents more materials for speculation than for the excitement of sensibility; but poetry combines and harmonises the acuteness of intellect and the tenderness of emotion. It is a proper and

natural *vehicle of sentiment*; and sentiment is the test of moral character, the life and soul of moral principle, the end and aim of moral study. Correct sentiment is the spring of every virtuous action; to instil it is the only legitimate object of Christian education, and to attain to it is the perpetual desire, the constant aim, and the humble prayer of every consistent and sincere believer in revealed truth."

THE ABYSSINIAN DISEASE.

THERE is a holy water at the church Onn Arvel, which is greatly esteemed for the cure of persons afflicted with evil spirits. This is a very wonderful disorder, which I cannot pass over in silence, though the reader may think it fabulous and ridiculous; yet we have accounts of something of the same kind in the New Testament, which the priests and learned men of Abyssinia believe to be the same complaint. This complaint is called "*tigretier*;" it is more common among the women than among the men. The *tigretier* seizes the body as if with a violent fever, and, from that, turns to a lingering sickness, which reduces the patients to skeletons, and often kills them, if the relations cannot procure the proper remedy. During this sickness their speech is changed to a kind of stuttering, which no one can understand but those afflicted with the same disorder. When the relations find the malady to be the real *tigretier*, they join together to defray the expenses of curing it. The first remedy they in general attempt, is to procure the assistance of a learned Doctor, who reads the Gospel of St. John, and drenches the patient with cold water daily, for the space of seven days—an application that very often proves fatal. The most effectual cure, though far more expensive than the former, is as follows:—The relations hire, for a certain sum of money, a band of trumpeters, drummers, and fifers, and buy a quantity of liquor; then all the young men and women of the place assemble at the patient's house, to perform the following most extraordinary ceremony.—I once was called in by a neighbour to see his wife—a very young woman, and of whom he was very fond—who had the misfortune to be afflicted with this disorder; and the man being an old acquaintance of mine, and always a close comrade in the camp, I went every day, when at home, to see her; but I could not be of any service to her, though she never refused my medicines. At this time I could not understand a word she said, although she talked very freely, nor could any of her relations understand her. She could not bear the sight of a book or a priest, for at the sight of either she struggled, and was apparently seized with acute agony, and a flood of tears, like blood

mingled with water, would pour down her face from her eyes. She had lain three months in this lingering state, living upon so little that it seemed not enough to keep a human body alive. At last her husband agreed to employ the usual remedy, and after preparing for the maintenance of the band during the time it would take to effect the cure, he borrowed from all his neighbours their silver ornaments, and loaded her legs, arms, and neck with them.

The evening that the band began to play, I seated myself close by her side, as she lay upon the couch; and about two minutes after the trumpets had begun to sound, I observed her shoulders begin to move, and soon afterwards her head and breast, and in less than a quarter of an hour she sat upon her couch. The wild look she had, though sometimes she smiled, made me draw off to a greater distance, being almost alarmed to see one nearly a skeleton move with such strength—her head, neck, shoulders, hands, and feet, all made a strong motion to the sound of the music; and in this manner she went on by degrees, until she stood up on her legs upon the floor. Afterwards she began to dance, and, at times, to jump about, and at last, as the music and noise of the singers increased, she often sprang three feet from the ground. When the music slackened, she would appear quite out of temper, but when it became louder, she would smile and be delighted. During this exercise, she never showed the least symptom of being tired, though the musicians were thoroughly exhausted; and when they stopped to refresh themselves by drinking and resting a little, she would discover signs of discontent.

Next day, according to the custom in the cure of this disorder, she was taken into the marketplace, where several jars of *maize*, or *tsug*, were set in order by the relations, to give drink to the musicians and dancers. When the crowd had assembled, and the music was ready, she was brought forth, and began to dance, and throw herself into the maddest postures imaginable; and in this manner she kept on the whole day. Towards evening she began to let fall her silver ornaments from her neck, arms, and legs,

one at a time, so that, in the course of three hours, she was stripped of every article. A relation continually kept going after her as she danced, to pick up the ornaments, and afterwards delivered them to the owners from whom they were borrowed. As the sun went down, she made a start with such swiftness, that the fastest runner could not come up with her; and when at the distance of about two hundred yards, she dropped, on a sudden, as if shot. Soon afterwards a young man, on coming up with her, fired a matchlock over her body, and struck her upon the back with the broadside of his large knife, and asked her name, to which she answered, as when in her common senses—a sure proof of her being cured, for, during the time of this malady,

these afflicted with it never answer to their Christian name. She was now taken up in a very weak condition, and carried home; and a priest came and baptized her again, in the name of the Father, Son, and Holy Ghost, which ceremony concluded her cure.

Some are taken in this manner to the marketplace for many days before they can be cured, and it sometimes happens that they cannot be cured at all. I have seen them in these fits dance with a *bruly*, or bottle of maize, upon their heads, without spilling the liquor or letting the bottle fall, although they have put themselves into the most extravagant postures.—*Pearce's Life and Adventures in Abyssinia.*

THE HOUR OF DEATH.

MIX be the hour of death, as evening shades
Silently close around the parting day,
As the tired sun in radiance sinks away,
And night-birds sing from darkened forest-glades.

Then, as the choral vesper-hymn, ascending
On the still air in soothing melody,
Charms the enraptured soul—O let me fly
To yon bright world, with seraph-bands attending!

Let evening gales my parting requiem sing,
While white-robed spirits, on the winds careering,
Me to the realms of endless glory bearing,
Chant to celestial harps, "Death has no sting."

Gently, most gently, may I sink in death,
As infants, pillowed on the mother's breast,
Calmly and softly yield to slumbers blest,—
So to my God may I resign my breath.

Or, as the pearly dew on flowerets falling,
Silently, unseen, when evening dies,

And fades away the hue of golden skies,—
So may I sink when God my soul is calling.

And as the radiant sun, at evening's close,
Sinks but to rise with new-fed beams of light,
To chase the clouds that gird the gloomy night,
And wake the glittering flowers from night's repose,—

So, when I fall in death, this hope my soul
Shall cheer—that I from my sepulchral bed
Shall rise, when through the regions of the dead
The archangel's wakening trumpet-blast shall roll.

My hopes shall rest on Him who died for me,
Who shed his blood for man's rebellious race,
And sealed the covenant of redeeming grace,
When his meek spirit sighed on Calvary.

O may I reach the place where now he reigns,
And near his sapphire throne, with spirits blest,
In glittering robes of stainless beauty dress,
Join in the loud and everlasting strains!

T. W. A.

MANNERS.

MANNERS are of more importance than laws; upon them, in a great measure, the laws depend. The law touches us but here and there, now and then. Manners are what vex or soothe, corrupt or purify, exalt or debase, barbarise or refine us, by a constant, steady, uniform, insensible operation, like that of the air we breathe in; they give their whole form and colour to our lives. According to their quality, they aid morals, they supply them, or they totally destroy them.—*Burke.*

If you should happen to meet with an accident at table, endeavour to preserve your composure, and do not add to the discomfort you have created by making an unnecessary fuss about it; the easier such things are passed over, the better. I remember hearing it told of a very accomplished gentleman, that, when carving a tough goose, he had the misfortune to send it entirely out of the dish, and into the lap of the lady next to him; on which he very coolly looked her full in the face, and, with admirable gravity and calmness, said, "Ma'am, I will thank you for that goose." In a case like this, a person must necessarily suffer so much, and be such an object of compassion to the

company, that the kindest thing he could do, was to appear as unmoved as possible. This manner of bearing such a mortifying accident gained him more credit than he lost by his awkward carving.—*Young Lady's Friend.*

Good manners is the art of making those people easy with whom we converse; whoever makes the fewest people uneasy is the best bred man in company.—*Swift.*

The three sources of good manners are good nature, humility, and good sense. Good sense and integrity, if we are sure we possess them, will not make good manners unnecessary, the former being but seldom called out to action, but the latter continually.

"Without good breeding truth is disapproved,
That only makes superior sense beloved."

The only way to be a gentleman is to have the feelings of one—to be gentle in its proper acceptation, to be elevated above others in sentiment rather than situation, and to let the benevolence of the heart be manifested in the general courtesy and affability of the demeanour.—*Horace Smith.*

THE LAST OF HIS RACE.

THE earliest rays of the morning sun were striking the highest parts of the lofty mountain of Penmaen Mawr, when a small band of warriors, the unconquered descendants of the aborigines of Britain, were seen crowding together round an aged man, whose long white beard and coarse mantle that hung down to his knees, together with a harp which a youth held before him, betokened him to be one of the Welsh minstrels, whose stirring strains had so roused and animated the spirits of their countrymen against their blood-thirsty Saxon oppressors, that all the mighty and concentrated power of Edward had been unable to subdue their indomitable courage. The spot where they were assembled was a natural hollow in the side of the mountain, so surrounded on all sides that, from below, no one could perceive them; and to this place they had been driven by the myrmidons of their invader. They were the remnant of a band which had escaped from the battle in which Llewellyn lost his country and his life, and had now assembled in that well-known spot to meet the old man to whom they looked up with a superstitious kind of reverence. He was the bard of Glendall, and the last of his race. The harp which he took in his hand had been handed down from father to son for many generations, and its prophetic notes were often listened to with breathless attention, by those who had been accustomed to attach a sacred character to the office which the bards assumed.

As he swept the strings with a tremulous hand, every voice was hushed; and the men, leaning on their swords, retained their breathing, and gazed fixedly upon him. A few wild notes preluded the burden of his song, and sad and mournful were they as the voice of the autumn winds. The spirit of sadness shook her darkened wing over the old man's soul, as he sung of the desolations of the land, of the burning home of the captive, and of the oppression of the enslaved. The hearts of the men were faint within them as the harp breathed forth its melancholy musings; and their anguished souls endeavoured to restrain the emotions that arose, and to hide from each other's observation the feelings that struggled for expression. Yet might an aged warrior be seen who had beheld his sons fall beside him in the field, like noble trees beneath the woodman's stroke, down whose cheek the big tear rolled in silence. The scions of his house, one by one, had departed, and he stood like an oak of the forest deprived of its branches—naked and alone. Some had seen the friends of their bosom, the brothers of their home, overwhelmed by numbers, sink in death; and of that gallant band which surrounded Llewellyn on the ill-fated morning of battle, few saw the descending sun fling his last beams on the field of carnage, and light up,

[No. 28. JUNE 7, 1837.—2d.] VOL. I.

with a fearful gleam, the broken armour of the slain.

The bard raised his head from his breast, on which he had suffered it to fall after he had sung of his bleeding country, and, with fixed attention, appeared as if listening to a distant sound. All were mute as death; every eye was turned towards him, watching his movements; some gazed upon him with awe, as if he were holding communion with unseen spirits, who were revealing to him the secrets of the future. Again he took the harp; his hand ran swiftly across the chords, and he struck into the wild and enthusiastic war-song of the Welsh. As he played, his eye seemed riveted upon a distant part of the mountain; and as he gazed long and fixedly in that direction, the eyes of his auditors involuntarily turned towards the spot he was contemplating. They looked not long before an object appeared that called forth a cry from every lip, while, in a moment, their swords glittered in the beams of the risen sun. The well-known standard of Edward was seen waving on an eminence at no great distance, nearly on a level with the spot where the bard and the warriors were assembled. Their place of retreat had been discovered, and a party of the enemy had been despatched to dislodge them. It was the sound of their footsteps, as they wound up the side of the hill, that had struck on the ear of the old man, when the last notes of his song had died away among the caves of the mountain.

By a circuitous route, the diminished band of Llewellyn arrived to within a short distance of the spot where the English soldiers stood. It was a small plain on the side of the hill, that afforded sufficient room for the combatants to meet on pretty equal terms; at one end, the ground rose abruptly towards the higher part of the mountain, and on a ledge near this stood the bard, his white beard waving in the wind, his tall majestic form appearing in outline against the sky, and his gestures indicating the high-born purposes of his soul. Before him was the small plain where the rival warriors stood meditating death; behind him a fearful precipice, whose awful depth was unbroken, save by jutting pieces of rock, and the decayed stumps of trees that had once waved over the frowning gulf below. Any one unaccustomed to such scenes, and unused to the daring exploits of mountaineers, would have shuddered only to look over that natural wall; but the bard remained firm and fearless, evincing no more emotion than if he had been standing in the midst of one of his beautiful vales.

He struck the harp, and, with a loud shout, his little party rushed on their invaders. Twice did the aged chief of Morven contest with the

2 A

leader of the enemy, and twice were they separated in the tumult. Eight of the English lay extended on the ground, when another detachment of twenty appeared, whose presence greatly inspired their comrades who had been engaged in the fight. The Welsh warriors, repulsed by the fresh assailants, lost the advantage they had at first obtained, and the sudden appearance of more of the enemy caused them for a moment to waver. Glendall, who, from his elevated situation, saw all that was passing, perceived the panic that had seized them, and the notes of the war-song again rose on the air, and were heard clear and distinct, even amidst the shouts of the combatants and the groans of the dying. But the band of the Britons, overwhelmed by numbers, was gradually diminished. They fought long and desperately: yet, nerved as they were to the conflict by a recollection of their undeserved calamities, and by their deadly hatred of their Saxon oppressors; proud and indomitable as were their spirits, and high-souled and lofty as was their courage, they could not resist a force so unequal; and, one by one, these heroic defenders of their country sunk beneath the swords of their victorious invaders.

As the bard saw the warriors fall, covered with wounds, he raised the death-song of the brave, and chanted, to the funereal music of his harp, the requiem for the departed spirits, and when he had finished the mournful strain, remained motionless on the spot where he stood. He had not failed to attract the eye of the leader of the English party, who, well knowing the power which his race possessed over the minds of the people, and to what a pitch of lofty and daring enthusiasm they were capable of elevating the souls of those who came within the sphere of their influence, and acting upon the orders of his master, commanded some of his men to advance and seize him. The cruel severity of Edward to the bards of Wales, when he completed the conquest of that country, cannot be justified. Such men as they deserved, at the hands of a proud and valiant enemy, a far different fate; the lofty courage and heroic constancy they displayed, ought to have claimed the respect and admiration of their fortunate victor; nor should he have been wanting in the exhibition of clemency even towards an enemy whose patriotic conduct evinced the true nobility of soul. But we forget we are writing in the nineteenth century, when correcter and more generous ideas are entertained of those who, by the fortune of war, are delivered into the hands of their enemies.

The soldiers, in obedience to the command of their captain, began to advance towards the old man. To accomplish his capture, however, it was necessary that they should approach him from above the place where he then stood; and this they lost no time in attempting to do. Glendall

perceived their object, and determined to prevent them from making him their captive. Another stern purpose seized his soul, and his dark eye flashed with terrible lustre as he gazed on his approaching enemies, one of whom, at least, he resolved should perish with him.

The bard, although far advanced in years, was yet a man of powerful strength; and his gigantic stature, and strong muscular powers, made the soldiers watch with wary eye his every movement, as they drew near to seize him. He took the harp that had rested before him, and which had so long been the companion of his wanderings, and lightly touched one string; and as it woke with a soft and melancholy sound, lifting it high above his head, he whirled it into the deep abyss below. This done, he again relapsed into apparent unconsciousness.

The foremost of the party to whom was committed the dangerous charge of possessing themselves of the person of the old man, advanced to within three paces of the place where he stood. Still their victim seemed unmoved, betraying neither signs of fear, nor of consciousness that any one was nigh. His white beard waved in the wind, and his tall proud figure stood erect and motionless as a statue. For a moment the advancing soldiers stopped to regard the singular being that presented himself before them; and as they cast their eyes over the ledge of the rock, and beheld the dark and tremendous gulf below, their hearts sickened with terror at the dizzy sight. Recovering from their momentary stupor, they drew nearer, and the foremost soldier stretched out his hand to seize the arm of the bard. It was his last act. Starting from his temporary trance, Glendall, with the swiftness of thought, seized his enemy by the belt, and tightening his arms by his own giant pressure, lifted him up to the place on which he stood, and held him, as if he had been an infant of a day, over the awful chasm. One simultaneous shriek of horror rose from the lips of all his comrades as they saw him, for a moment, suspended over the unknown depth, and then, as the harper loosed his grasp from the doomed and ill-fated man, pass with fearful velocity down into the abyss below. One wild cry alone was heard from the unfortunate victim, as he felt the strong hand of the bard shake him off, and the depth into which he had fallen gave forth no other voice or sound.

The men who had thus beheld the sudden destruction of their companion, started back with terror and alarm; there were four of them, yet none dared to approach the lone old man. That shriek which had arisen from the lips of the devoted soldier still rung in their ears, and their spirits quailed at grappling with such a destructive enemy. A spell seemed cast around, and a deep-breathing shudder passed through all their frames as they looked upon the sternly-triumphant features of the bard, who stood in the same appa-

rently listless attitude as if subtly waiting for the approach of the other victims.

The officer who had commanded the party during the late assault, had watched the movements of his men as they marched to execute his orders, and had seen, with dismay, the terrible revenge which had been inflicted on one of them by their bold and vindictive enemy. He perceived their hesitation to advance, lest the same end should await them; for the ledge of the rock of which Glendall had possessed himself was so narrow, that more than two were not able to stand; and, as on the side opposite to that on which he must be approached was the tremendous precipice, it would be a fearful contest of personal strength between the assailant and the assaulted; and from this all the men shrank with the utmost dread. The officer remembered the strict injunctions which had been laid upon him, that he should not suffer any of the bards to escape from his hands, or elude his pursuit; and as one was almost in his grasp, he well knew the frown of anger would darken the haughty brow of Edward, should he fail in accomplishing his mission. He joined his men, and commanded them to follow him closely, as he advanced towards Glendall to make him prisoner. The bard withdrew his glance from the rock on which it had rested, and surveyed the approaching party with a keen and flashing eye; he planted his foot firmly on his resting-place, stood with the resolute air of a man who had determined to contest for victory, and then awaited in calmness the nearer advance of his foes. They came, treading closely in the footsteps of their leader, and eyeing carefully the singular being before them, as he stood on the very edge of the precipice, cool and undaunted. The officer first drew nigh; and as, for a moment, his eye glanced from the giddy and unprotected height into the deep and yawning abyss, his brain reeled at the sight; but, quickly recovering himself, he pointed his sword at the heart of the old man, and, in the language of the ancient Britons, ordered him to surrender. It was but

the work of a moment for Glendall—as he regarded his enemy with a proud and scornful look—to wrap a part of his long dark cloak around one of his hands, and turn aside the glittering weapon, and with the other to grasp the throat of his hated adversary. The sword sprung from the hand that held it, and fell flashing in the sunlight down the precipice; and the harper, disengaging his arm from his cloak, entwined it round the waist of his victim, and, for a moment, they struggled together on that fearful brink. The soldiers looked on as men paralysed with fear; they moved not, they spake not, until they saw the bard, with a sudden burst of strength, move their leader—who was himself a tall and powerful man—from his balance, and throw himself over the edge of the rock, dragging with him to destruction his ill-fated enemy. Then a wild and dreadful cry of horror burst from every lip, which the echoes of the mountain prolonged, and which scared the eagle that towered above them in his airy flight.

The soldiers descended by a circuitous route to the foot of the rock, from the summit of which Glendall had precipitated himself with his victim, and, arriving there, found the bodies of the three men, mangled and lifeless. On the features of the bard sat the same proud and contemptuous expression they exhibited when he watched the approach of his last victim. Not a muscle betrayed any signs of pain; his lips were compressed, but more in determined resolution than in agony, for his stern and destructive purpose seemed to have banished all consideration of self from his mind. Very near him lay the shattered remains of his harp: its strings, which his fingers had so often waked into music and life, were all broken; he who had borne it would no more raise the song in the halls of the mighty; and it was fitting that its sweet voice should be silent, when sunk in death its high-souled possessor,—the only descendant of an honoured house, and the last of an ancient and powerful race.

THE ALLIGATOR.

THIS animal, which is called *caymân* by the Indians, is by no means so active as it has generally been described. Even in the water, where, from its conformation, it must be more particularly capable of exertion, its movements are far from being rapid or sudden; and it appears chiefly to trust, at all times, to surprise for taking its prey. On land it is remarkably awkward and heavy in its motions, and is evidently incapable of pursuing any animal with a chance of success. It is scarcely ever found at any great distance from the river or lagoon which it haunts; and in general, when the swamps are dried up by the excessive tropical heat, it prefers remaining in

the mud in a torpid state to wandering farther in search of water. The exertion necessary for the *caymân* to use in dragging itself up the bank, when it leaves the water for the purpose of laying eggs or basking in the sun, appears very great. Its legs, indeed, appear but ill-adapted, both in size and position, to the weight they have to support; so that it has nothing whatever of the activity that distinguishes all the rest of the lizard genus. Although it is amphibious, water appears to be the element most natural to it, for it passes the greater part of its time in it, and retreats thither on any alarm. It is frequently to be seen sleeping afloat on the water; at which time

it is enabled to continue respiration, in consequence of the concave curve of its head, by which its nostrils and eyes can remain above water, while every other part of the body is below. It is a mistake to suppose that they are always obliged to go on shore for the purpose of devouring their prey; they can manage this by raising their heads out of the water, in the same manner in which the seal is seen to eat fish, when too far out at sea to admit of his carrying it on shore; and few objects appear so truly *farouche* as a group of large alligators feasting on a horse while floating down the stream. The violence with which they tear off whole limbs, and the noise their tusks make when they close their vast jaws in the act of chewing, are indescribable. If disturbed when on the land, they appear to be in the most awkward state of alarm, and flounder down to the water in the clumsiest manner possible. They have, at that time, no leisure for offensive or defensive warfare; and may be attacked and killed with a lance, without attempting to offer any resistance. It is dangerous, however, to intrude between them and the water, as the mere weight of the animal would render it impossible to stop its progress; and the violent motion of its tail, in its exertions to retreat, would endanger the limbs of an assailant.

It lays about thirty or forty eggs in the sand, of an oval shape, six inches long, and covered with a tough membrane, which differs from that enclosing the turtle's eggs, in having a small quantity of brittle shell on the outside. These are constantly eaten by the river Indians, notwithstanding the disagreeable smell of musk that distinguishes the *caymàn*, and is so strong as to infect the air in the places frequented by it. The young alligators, immediately on breaking their shell, show symptoms of their innate ferocity, by biting at every thing presented to them. They will, even then, allow themselves to be lifted from the ground by a stick, which they seize in their mouth, and cling to obstinately. They are frequently seen, when very young, resting on the back of the full-grown *caymàn*, when in the water; but we are not authorised to suppose that they attach themselves to their parents for protection, as is sometimes asserted. They merely climb up unnoticed, in search of a resting-place, as they also do on floating logs of wood, and roots of trees under the banks. Neither is there any foundation whatever for the story so often repeated, of the *caymàn* bringing

her newly-hatched young down to the river on her back; in fact, no animal that deposits its eggs in the sand takes any further notice of or interest in them. When there is much noise or agitation in the water,—as, for instance, if a drove of horses are swimming across a river, or a number of men are bathing or wading in the same place,—there is little danger to be apprehended from the alligators, although hundreds of them may be near. They lie in wait, however, for the colts and weak horses that are left behind, and seldom fail to intercept one or two of them.

The *caymàn* is greatly to be dreaded after it has once tasted man's flesh, for, like all beasts of prey, it will then brave every danger to obtain this aliment, which it prefers to any other. It is then said to be *cebado*, for it will lie in wait for bathers, who may be carelessly sitting on the banks of the rivers, and for washerwomen, who are all day employed there; and will allow itself to float gently towards them with the stream, raising its eyes and nostrils, at intervals, above the water, to ascertain if it be near enough for an attack. Should it succeed in approaching them unobserved,—which often happens,—it strikes the victim whom it has selected a sudden and violent blow with the tail. This seldom fails of throwing it into the water, where it falls an easy prey to the voracious animal. There are, however, instances of persons freeing themselves from the *caymàn's* jaws, by having the presence of mind to stab it in the eyes, which invariably compels it to lose its hold. It is, perhaps, needless to add, that this operation must be performed with some sharp and hard instrument, and that it would be the height of imprudence to trust to the fingers for *gouging* the animal, even though it be asserted that an Indian girl once saved herself in this manner.

When an Indian has occasion to swim across any pass of a river known to be the haunt of a dangerous alligator, he provides himself with a stout stick, of about eighteen inches in length, sharpened at both ends. Should he be attacked by one while in the water, he presents the stick to his expanded jaws, and as the *caymàn* endeavours ravenously to seize him, the sharp points of the stick pierce the roof of the mouth and under-jaw, in such a manner as to render it incapable of extricating itself. The Indian may then with safety kill it, or leave it to drown, which, as it is unable to close its jaws, quickly ensues.—*Scenes in Venezuela.*

THE PHANTOM PORTRAIT.

We fell upon ghosts, and he exposed many of the stories, physically and metaphysically. He seemed to think it impossible that you should really see with the bodily eye what was impalpable,

unless it were a shadow; and if what you fancied you saw with the bodily eye was in fact only an impression on the imagination, then you were seeing something *out of your senses*, and your

testimony was full of uncertainty. He observed how uniformly, in all the best attested stories of spectres, the appearance might be accounted for from the disturbed state of the mind, or body, of the seer; as in the instances of Dion and Brutus. Upon ——'s saying that he *wished* to believe these stories true, thinking that they constituted a useful subsidiary testimony of another state of existence, Mr. C. differed, and said, he thought it a dangerous testimony, and one not wanted: it was Saul, with the Scriptures, and the prophet before him, calling upon the witch of Endor, to certify him of the truth! He explained very ingeniously, yet very naturally, what has often startled people in ghost stories—such as Lord Lyttelton's—namely, that when a real person has appeared, habited like the phantom, the ghost-seer has immediately seen two, the real man and the phantom. He said that such *must* be the case. The man under the morbid delusion sees with the eye of the imagination, and sees with the bodily eye too; if no one were really present, he would see the spectre with one, and the bed-curtains with the other. When, therefore, a real person comes, he sees the real man as he would have seen any one else in the same place, and he sees the spectre not a whit the less: being perceptible by different powers of vision, so to say, the appearances do not interfere with each other.

He told us the following story of the "Phantom Portrait."

"A stranger came recommended to a merchant's house at Lubeck. He was hospitably received; but, the house being full, he was lodged at night in an apartment handsomely furnished, but not often used. There was nothing that struck him particularly in the room when left alone, till he happened to cast his eyes on a picture, which immediately arrested his attention. It was a single head; but there was something so uncommon, so frightful and unearthly, in its expression, though by no means ugly, that he found himself irresistibly attracted to look at it. In fact, he could not tear himself from the fascination of this portrait, till his imagination was filled by it, and his rest broken. He retired to bed, dreamed, and awoke from time to time with the head glaring on him. In the morning, his host saw by his looks that he had slept ill, and inquired the cause, which was told. The master of the house was much vexed, and said that the picture ought to have been removed, that it was an oversight, and that it always was removed when the chamber was used. The picture, he said, was, indeed, terrible to every one; but it was so fine, and had come into the family in so curious a way, that he could not make up his mind to part with

it, or to destroy it. The story of it was this:—'My father,' said he, 'was at Hamburgh, on business, and, whilst dining at a coffee-house, he observed a young man of remarkable appearance enter, seat himself alone in a corner, and commence a solitary meal. His countenance bespoke the extreme of mental distress, and every now and then he turned his head quickly round, as if he heard something, then shudder, grow pale, and go on with his meal, after an effort as before. My father saw this same man at the same place for two or three successive days, and at length became so much interested about him, that he spoke to him. The address was not repulsed, and the stranger seemed to find some comfort in the tone of sympathy and kindness which my father used. He was an Italian, well informed, poor but not destitute, and living economically upon the profits of his art as a painter. Their intimacy increased; and at length the Italian, seeing my father's involuntary emotion at his convulsive turnings and shudderings, which continued as formerly, interrupting their conversation from time to time, told him his story. He was a native of Rome, and had lived in some familiarity with, and had been much patronised by, a young nobleman; but upon some slight occasion they had fallen out, and his patron, besides using many reproachful expressions, had struck him. The painter brooded over the disgrace of the blow. He could not challenge the nobleman, on account of his rank; he therefore watched for an opportunity, and assassinated him. Of course he fled from his country, and finally had reached Hamburgh. He had not, however, passed many weeks from the night of the murder, before, one day, in the crowded street, he heard his name called by a voice familiar to him: he turned short round, and saw the face of his victim looking at him with a fixed eye. From that moment he had no peace: at all hours, in all places, and amidst all companies, however engaged he might be, he heard the voice, and could never help looking round; and, whenever he so looked round, he always encountered the same face, staring close upon him. At last, in a mood of desperation, he had fixed himself face to face, and eye to eye, and deliberately drawn the phantom visage as it glared upon him; and *this* was the picture so drawn. The Italian said he had struggled long, but life was a burden which he could now no longer bear; and he was resolved, when he had made money enough to return to Rome, to surrender himself to justice, and expiate his crime on the scaffold. He gave the finished picture to my father, in return for the kindness which he had shown to him.'—*Coleridge's Table Talk.*

SCENERY OF THE ORINOCO.

THE scenery of this river is strikingly beautiful, and when viewed from a ship's deck, as she glides slowly along the smooth water, presents a magnificent moving panorama. The banks, on each side, are covered with impervious forests of majestic trees, chained, as it were, to each other, by the *begiceo*, or gigantic creeping-plant, of South America, which grows to the thickness of an ordinary cable. These ancient trees, when decayed through length of years, (for the axe of the woodman has never yet resounded in these wilds,) are supported upright by these enormous plants, which bear a striking resemblance to the huge water-snakes that lurk in the swamps beneath. There are many other parasitical plants, which bear flowers of various brilliant colours, forming festoons on the trees to which they cling. Among the branches, monkeys of every description gambol, springing from tree to tree by means of the *begiceo*, which has obtained from this circumstance, its Indian name of "monkey's ladder." The most conspicuous among this mischievous tribe, is the *araguato*, a large red monkey, always seen in herds, the young ones clinging to their mother's shoulders. These are very destructive among the plantations, where they pull up and destroy more roots and fruit than they eat or carry away. Their howling, during the night, is much louder than could be supposed possible, considering the size of the

animal. The noise they make may be easily supposed to proceed from panthers or other beasts of prey. This is so much the case, that after leaving Angostura with the army, three English soldiers who had deserted when the troops landed in the evening for the purpose of cooking, and who proposed returning by land to the city, were so terrified by the noises made by these animals in the middle of the night, that they hailed the boats which had anchored out in the stream, and begged to be taken on board again, declaring that they were surrounded by tigers.

Parrots and macaws, with *tucans* and other birds of beautiful plumage, complete this splendid picture, and fill the air with their discordant screams, to which the metallic note of the *dazza*, or bell-bird, responds at measured intervals; at one moment sounding close to the ear, and at the next dying away in the distance. Up the small creeks—which are completely embowered by magnificent evergreens—are seen pelicans, spoonbills, and *garçons*, or gigantic cranes, all busily employed in fishing. When to this is added the occasional appearance of that tyrant of the stream—the alligator, floating in conscious superiority among the bulky *manatis*, and the more agile *toninos*, which are incessantly rising and blowing in shoals, the scene altogether may be imagined, but cannot be adequately described. —*Scenes in Venezuela.*

PASSAGES FROM MY NOTE BOOK.

FIRST SERIES.

I.

THERE is perhaps no spot on this wide earth, however bleak, cold, desolate, or barren it may be, that does not bear beneath its soil the hidden germs and seeds of a resurrection of fruitful fields and flowers, or the larvæ of myriads of light-winged insects, that only wait for the sunbeam and the warm summer to penetrate into their darkness, and awaken them up "from death unto life."

II.

Who is there that has not in some one moment or other of his existence, felt within him the sentient thrillings of an Almighty Oracle, whispering strange words and thoughts—foretelling glories and phantoms yet unrevealed, and bringing before the amazed mental sight the awful and majestic forms of a supernatural and seraphic existence—before which all human ideas and imaginations sink into utter contempt and nonentity? Who is there that has not been visited with strange embryotic dreams of future greatness or misery—heaping up visions of im-

mortal grandeur, like Pelion upon Ossa—or delving down to the lowest depths of degradation or despair? Are not these dim prophesyings and prophetic forewarnings of future days to come?

III.

We may well imagine that those elements on which the mind of man was wont, in former and happier times, to dwell with gratification or delight—may even now equally afford to him the same blissful sensations of felicity and enjoyment. Music and Poetry are twin-born immaterial spirits of Heaven. They were blissful inhabitants of Eden; and, in the green and youthful hours of the undeluged world, they gave their sweetest songs to the stars, the sunbeams, and the waters—the creatures of Nature's own element. But their rejoicings were turned to sorrow, and their mirthful music to lamentation, when the darkness of sin and sorrow became spread over the garden, and the cherubim's flaming sword blazed like lightning over the solitude and ruin of Paradise. But these unhappy exiles

from Eden still wander over the lovely and shadowy earth ; and, in the hush and silence of night, the soul may listen for their mysterious harpings in the solemn pauses of the night winds.

IV.

How much, during the years of our mortal life, do the sympathies of the human heart vary in the pleasure which we experience from the creations of fiction. Alas ! how beautiful and green are those scenes of our early years, when, in the contemplations and dreams of our fairy childhood, we lose sight of all the barren landscapes which truth displays to us. But if from the imagination come the delicious pleasures of that golden age, so from the same fountain do we even then first taste of the marsh waters of sorrow and disappointment. Consolation and woe spring within us, even then, from the same source. But these waters become soon dried up amid the hot and arid heat which impregnates the very atmosphere of manhood's existence around us. The enchantments and spells which wove such delicious lights around our earlier years, have all faded then beneath the scorching sunbeam which the restless toil and unquiet fever of this world's life for ever feeds. The midnight lamp has lost its light and fragrance, and the vestal has ceased her watch over the holy fires of the temple. The chain and the yoke bind us more closely to the galling disquietudes and restless anxieties of the polluted and unholy earth. In the pausing of the noisy surge around us, we listen no longer to the dove's note pining in the woods—nor think of the musing, moonlit melancholy of the past years of our youth. We tell them no more to the breathing winds of eve, or to the watchful silence of the midnight stars. The homes of Romance and Imagination are crumbled—deserted and forlorn—and their voices, soft and lowly, are not heard in the rough storm around. The iron enters deep into the soul, and the garlands we wear are but of the wild fern and the ivy. Anxieties and sorrows cling like clods around us ; the customs and reasonings of the world cloud the intellect, and darken the sunshine of the golden heavens. The extent of our wanderings shows us but the length of our chain ; and the height of our soaring but the low roof of our dungeon-cell. Vain—vain is the hope that, in our after years, we can ever regain the elastic freshness, and the sunny joyousness of our earlier youth. When we leave the shores of youth, we hang on through shoals and quicksands towards the dark and misty prospect which surrounds the viewless and unknown future.

V.

How awfully mysterious is the influence over us of that power which we call "mind !" It is born, and cherished, and nourished from a

thousand invisible fountains ; and as we increase its flow, its richness, its energy, and its depth, so do we enrich the vast shores and plains which surround it. The mind neither acknowledges nor holds claim with birth, rank, or fortune ; and by increasing its riches we increase our own. Beyond the reach of human power, even the most despotic, it can neither be given nor taken away by man. Such is that beautiful and wondrous creation of the Eternal—the mind. Formed for the reception and culture of thought, fancy, feeling, and imagination, it brings before us gifts of the spirit which make us kings and conquerors in the shadowy land of dreams. It is ours from birth to death, and is our seraph guide from the darkened valleys of earth to the sunny hills of eternity.

VI.

Time, custom, and the quiescent state of everyday life unfit the mind for penetrating through the clod and vapour which surrounds us. Could these be removed, and our eyes unveiled of the moral blindness which now covers them, we should then discern the sublimity of that visible presence which every where surrounds us. We should behold angels and spirits, by whose breath and word the beauty of this world is nourished—who shed life abroad over all that to us appears dead—who attend, guide, and direct us wherever we go, and who are to us what the cloud and the fiery pillar were to the Israelites of old. They live in, and are part of, the beautiful atmosphere that surrounds us, and gives birth within us to every sensation of the heart, soul, and spirit. They seat the poet on Parnassus, the hermit in his cell, the captive in his dungeon, and the monarch on his throne.

VII.

The high and the low form but the pinnacle and the basement of society. On the one, there shineth the rich sheen of gold, but the hard and flinty heart of stone is beneath. Over the other there is the mud and the clay—you must dig deeply down, but you will have your labour rewarded—you will surely meet with the vein and the richness of pure and refined gold.

VIII.

Ambition casts its baleful and poisoned shadow over every class and race of mankind. The rich, with their golden names and haughty deeds, will stoop and throw the die for the inglorious honour of a day or an hour ; but if that should be lost, how will the revel pass neglected and the dance uncared for ? Mirth will then become changed into mournfulness ; the banquet be deserted ; the garlands fall drooping and faded ; and the golden chalice of love itself become a poisoned bowl. But the poor feel alike the sting and the venom, and amid the slough and dis-

ease of human nature in which they dwell, their throats become parched and husky from thirsting after sordid fame; and from the abyss of crime, and the loathsome degeneracy of civilisation, they lift up their hoarse aspirations of avarice. Ambition there either hugs the fiend or the felon, or scowls in horrid defiance on the despairing or the doomed.

IX.

What a solemn and magnificent legend is that which states that the first-born star of creation shone in the visible outline of the heavens only until that creation was finished and accomplished. It was then withdrawn into ethereal depths of space, until its light awoke the Chaldean shepherds from their night-watches, and, star-like, led them to where the infant Saviour lay. Again, it was seen over Calvary, in the hour of crucifixion, and thence descended into the realms of death, where the accursed and the doomed beheld it shining, the only bright spot, amid the darkness of their abode. The firmament that covers that region is black and sullen, and its stars glow with a fierce and malignant aspect upon the tortured and agonised myriads beneath. But this one single star shines like an angel of peace; and, through a rifted chasm in that hell-sky, the captives look up to it from their dim abodes of despair. It keeps watch over them like a guardian angel—it reminds them that there are regions above of eternal happiness and felicity, but where they can never dwell. That star shall burn there until the trumpet shall awake the dead, and when the earth and the sea shall be rolled like whirlwinds into space, and the legions of unjudged dead shall be hurried into the presence of their Creator, and their final doom pronounced—then shall that star re-ascend again into the splendours of heaven, and burn at the right hand of the Messiah for ever and for ever.

X.

A cathedral is a fine and noble object to look upon. The pinnacles, towers, and light airy spires, point upwards to the dwelling-place of that Godhead to whose adoration and worship it is consecrated. The architectural display of rich gothic work assists in the fine effect given to the interior, and imposes upon the whole a serene and solemn magnificence. Under every variety of light and shade, from the external atmosphere, the interior of a cathedral is very grand and solemn. The long drawn aisle—the lengthened vista of arch upon arch—gold and silver—marble and stone—cross, canopy, censer, and crucifix. I have looked through the noontide dimness upon the shining face of some martyr or angel, in the pictured window, till I have fancied that it expanded into a lustre of surpassing glory, flooding the whole building with the light, and making it voiceful with the sound of rushing wings.

XI.

Oh, Earth! Earth!—beautiful and bounteous mother of all—over whose lovely bosom brood the wings of that incarnate and mysterious Spirit, that shed over thee the power to bring forth the living millions from the dead—so that the very atoms of our present existence are wove from the ashes of our sires, who were before us—so that we and all human creation sprung forth from the same source and fountain of decay. Oh, eldest and most solemn-born, what awe and terror blend even with thine aspects of loveliness and joy! Thy sunshine is girdled with clouds; thy lightning is heralded with the thunder and the trumpet; and thy stars are overshadowed with the darkness of the night—day cometh out of darkness, and unto darkness doth it return. The flower that blooms in the valley, the stream that murmurs through the forest, the air, and the circumambient regions of space, are all teeming with the atoms of corruptible decay and death. But mortal man may not probe too deeply into the mysteries of natural existence. The flower sheds the same fragrance if it blooms in Eden or on a grave, and the same song which awoke the lark at morn may lull the dying at evening to repose.

But when I lifted up mine eyes from the earth unto the heavens, when the starry records of space told me of a *future* home of repose beyond the grave, how was the veil unrolled, how were the bright intelligences revealed to me, how did I tremble when, in thought, I trod the vast vestibule that led to the morning-gates of heaven! The night passed on with the rich solemnity of starlight; the pale white moon lay like a slumbering ghost over the west, and the day arose. But the gold had been purified—light and immortality had been revealed. The vision was spread over me, as sunshine is spread over the heavens. Youth, poetry, life, and love, were to me, from henceforth, the dreams of a holier and a purer nature than they had ever been before.

XII.

There are in the world minds and spirits cast in a more lofty and generous mould than the rest, as there are stars set and shined in regions of richer and brighter light than their surrounding sisters of the sky. Hearts and natures such as these beautify the world around them; they are the purer shrines, before which love may be sanctified—the brighter and loftier spirits, that seek communion with the fairer and happier excellences of the earth and skies. For them does nature unfold her secret sources of Divine and mysterious lore. The solemn mountains and the summer woods have whispering voices, which are heard by them alone; the worlds of foliage and flowing streams claim kindred communion with their spirits; and the oracular mysteries of

the eternal stars are unfolded to them alone. The brooding quiet of the evening sky is to their gifted vision like the unfolded page of a golden scroll of prophecy, and the dim and moonlit hours of night are to them the times and seasons of a shadowy and gifted inspiration, when thought awakens from its slumber within the veiled sanctuary of the soul, and hope, and desire, and love keep gently fanning that mysterious light

"That every soft and solemn spirit worships."

XIII.

Hope and sorrow form the Eros and Anteros of existence in the worlds of mind and thought. Genius, that "winged child," claims a fonder kindred with them than with the more worldly brethren of mankind. The maxim that would ally genius with diffidence would rob love of its wings—it would exalt the exception, and debase the rule. What can ever bear up the child of genius amid the stormy and impetuous struggles after fame, or support the untrembling and unshaken soul amid its lofty aspirations after immortality, which, like the prophet's vision, may burst the narrow bounds of time and space, and see, far away into the distant land of promise. Give to genius its diffidence, and it shrinks from its natural proportions; its loftiness becomes fallen, and its grandeur stunted; its hopes become wasted, and its lamp burns no more; draw the veil over its visions and enchantments; remove from it

"—— the wings it used to wear,
When the heart was like a bird,"

and you chain it down like a prisoner in its cell of solitary confinement; it becomes feverish and wasted; the heart feeds then but upon blighted hopes and scattered sacrifices, and it pines, sickens, becomes dejected, and dies. Such, alas! is the fate of many a one over whose burning hopes the dust and ashes of disappointment have been scattered—who have shrunk by unseen, and unnoticed by the world, and have covered their shoulders with the sackcloth of the grave, but to appear in whiter and brighter robes, and stand before the presence of the Eternal!

XIV.

The independent philosophy of the schools is the honesty of the world, and if by the aid of this principle we gather up the seeds of true knowledge and wisdom, and deposit them safely in the storehouses of the mind, we shall then, most assuredly, heap up a plentiful and abundant harvest of fruitful thought in the autumn-time of life.

XV.

Eulalie!—Oh, how softly—how brightly does the memory of thine early love flash back again each hour, like sunshine upon me! Yet, amidst all this festival of the heart, which is thus re-

created within me, there is a restless uneasiness of spirit and a delusive anxiety of hope over which that thought throws its brightest richness. I muse of dwelling with thee amidst the green and silent depths of holy forests, where every autumn, since the deluge, has scattered myriad heaps of unstirred and untrodden leaves over the dark greensward. I dream of looking out with thee from the dark shadow of some vast antediluvian cave over a gorgeous and brightening expanse of ocean, that never yet bore galley or gondola to its goal; or of dwelling with thee in a mighty palace of art—an oasis of beauty in the desert—whence thou and I should watch the sun rise and set upon our love through unnumbered ages of delight and holy happiness. But the cloud and the chaos come back again, and, like the Arabian astronomer of old, I ask—Where am I? and the night-wind echoes back—Where am I?

XVI.

Sometimes, in moments of depression, I have imagined that, even as when in the days of creation, "the spirit of God moved upon the face of the waters," so now that same spirit vexes and agitates the bosom of the ocean, lashing its very darkness and depth into stormy passion, or waving it with gentle breezes into a peaceful and slumberous rest. Or may not the original formation of nature have been water, which, ever since the period of creation, even until this day, has encroached upon "the dry land," and bears away every grain of sand and every sea-shell back unto itself? Thus every shape of individual existence, from the atoms in the air and the leaves on the tree, even unto man, "vanisheth away into dust to return no more." One day rejoicing on the sand in the golden sunshine, the next day engulfed, drowned, and dead for ever!

XVII.

Reason is appointed at our birth to be our friend and guide, but not our ruler. Our hopes, our joys, our fears, and our sorrows, what are they but guides, appointed to lead us to the fountain, and bid us drink of the waters of an unseen and imperious destiny? From the earliest ages have they rolled forth, yet the angel seldom comes down to stir them, nor does a bough break forth to cleanse the bitterness of their thorax. We cannot tell of the mysteries of the morrow, nor of the occult changes which one day may bring forth. We cannot predict from the cloud that the thunder will soon burst forth; nor tell from the scent of the clay that death will dim the eye, and stiffen the palsied limb, and give unto the worm the feast of corruption. Yet the presages and "sweet influences" of the future will give gladness at times to the wildest heart, and throw sweet chequered gleams of sunshine over the darkest and the bleakest prospects. Hope may dawn forth, like the morning-star of the

morrow, and serenity may sleep down again in a heart where all is peace.

XVIII.

Death may quench the torch of life in the desert or in the dungeon, distanced from those voices for whose whispers we have pined the most; we may linger out the latter days of a worn and wearied existence, and die on that shore which our hearts have panted so long to tread. We may die in the halls of a city where genius has thrown a consecrating glory over the matchless creations of the painter or the sculptor—beneath a sky radiant with an eternal sunshine, where we may respire poesy and inspiration from the breathing winds—there the long-lingering spirit may find rest at last, and the broken and fluttering wings of hope close gently and softly over that bosom where heart and pulse have ceased to beat for ever.

XIX.

Oh! how much of the prophet's hope and inspiration is there in the very divinity of love! We bring all our thoughts from the world, and lay them like holy offerings before the altar of the affections. There is peace and calm—deep bliss and heartfelt joy—in that sanctuary of the heart. What wonder then if, when that offering is accepted, we leave that shadowy temple for the ruder glare of the outer world, that the wild storm and tempest should bruise and wound us,

and cast the very hopes on which we fed, like stricken and scattered wrecks, around us.

XX.

How very calm and peaceful is it to turn from the hardened sympathies, and the friendless feelings of man's heart, to the gentle and hooding recesses of woman's more sweet affections? Within her musing dreams of thought what a rich world of haunted and fairy sympathies lies concealed, wherein are no revelations from the darker world without! What to her subdued and happy spirit are the rise and fall of states and kingdoms, the setting up or the subjugation of empires? There is within her the soft inspiration of a tender philosophy, teaching her to regard the beings around her as creatures of the affections, destined to share the shadow and the sunshine of life under the subdued and tender emotion of the heart's best feelings. Her imaginations are peopled with the golden creations of a delicious poesy, softened and spiritual, and steeped in the dim and fairy moonlight of the night, weaving their little life from the shadowy hours of sleep. The poetry of the heart surrounds her with its delicious atmosphere of dreams. She gathers her thoughts from the mystic and meditative romance of nature. The richly peopled earth and the resounding sea—the sunshine and the solemn moon—the gathering stars and the clouds of night—these shed a heaven over that repose from whence she draws her faith and her inspiration! ERHON.

ON THE DEVELOPMENT OF THE INTELLECT IN CHILDHOOD.*

FIRST ARTICLE.

THE brain not only increases much in size in the child, but also alters sensibly in structure, advancing towards more complete organisation, and this remarkably, at the time when signs of intelligence begin to be displayed. From about the period when the first teeth appear, this advance in structure is striking, that in size having before been more remarkable.

The brain now becomes firmer, more consistent, and less vascular; the difference between the internal and external portions is greater also. About the age of seven years the brain assumes a considerable volume, and its structure apparently resembles that of adult life; but even after this period, advance in structure, and increase of size may still be remarkable.

The character begins now to be defined, and some indications of the mental endowments of the future man are afforded; the features form, and the physiognomy begins to exhibit traces of a marked disposition. But in regarding the

countenance, we must take into account the development of the bones and muscles connected with the head and face, which forms about this age! yet the general enlargement of the head is not so much connected with the expansion of the skull and the integuments as some insist. The head varies with the progress of growth, not only in size, but shape; the different regions of the brain being found to bear a different relative proportion at different ages, particularly during youth, while at all periods there exists a certain degree of individual peculiarity. Not less remarkably do we observe a certain order or relation in the successive development of the several moral and intellectual powers; which is thoroughly investigated by M. Quetelet. According to him, the average weight of the male infant at birth is about half a pound more than that of the female, and the length about an inch more; and the annual growth of the female infant is less than that of the male, but her development is more early completed.

The growth of the stature is most rapid during the first year, when it amounts to nearly eight

* From "A Practical Treatise on the Management and Diseases of Children. By R. T. Evanson, M.D., and W. Maunsell, M.D. Dublin. 1836."

inches; it is less rapid as the child approaches the fourth or fifth year, but afterwards increases with a tolerably regular progression.

A remarkable difference is often to be observed in the degree of development or proportional growth of one organ or system of organs more than another. In some children, the head is very large, and great liveliness and intelligence are early displayed.

In other children, great muscular power is early displayed, the chest is large, the body well nourished, and the complexion florid. Such a child is strong and active, but not particularly intelligent.

Other varieties of temperament exist; and in some individuals, no temperament is strongly marked, or more than one are mixed together.

These varieties of constitution may be born with the child, and looked upon as hereditary; but they will be much influenced by the manner in which the individual is managed, according as one system of organs or another is neglected or

cherished. Every organ should have its proper or appropriate share of exercise or occupation, so as to strengthen the weak or ill-developed organs; while we repress those that are disproportionately developed or over active, by consigning them to quiescence.

Thus have we, in a brief and summary manner, sketched those peculiarities of infancy, a knowledge of which must serve as our guide in understanding aught of the management of children, in health or disease.

We have seen the infant presented to us, in the first instance, as a mere vegetative being, with the organs of nutritive life preponderating in development and activity. As growth proceeds, however, the little being asserts its claim to a higher order of existence; the organs of organic life diminish relatively in importance, while those of animal life advance, and ultimately preponderate—the infant becomes a rational being.

INTERVIEW BETWEEN HUNKER AND THE BRITISH AMBASSADOR.

[In our eleventh number we presented an extract from Dr. Walsh's admirable work on Constantinople. We now accompany our ambassador and his suite to the sultan, to whom we are introduced by the same author.]

We now arrived at a large mulberry tree, where two ways branch off—one to the right, leading up to the Porte; the other on the left, proceeding to the Seraglio. Here our cavalcade halted, and waited a reasonable, or unreasonable time under the tree, till the Vizier and his cortège thought fit to descend from the Porte to go before us. At length one came, and then another, and then scattered parties of three and four in different costumes, and finally the Vizier himself with his attendants. The courtesies of life among these people are very extraordinary. It was certainly intended to pay the British Ambassador particular respect through the whole of this ceremony, as we afterwards found; yet the Vizier saw him, the representative of a great sovereign, with all his suite in full dress, kept waiting under a tree in a dirty street, for nearly an hour; and though he courteously bowed to the Bostangee Bashî and other Turkish officers, he did not condescend to take the slightest notice of us, no more than if we had been part of the crowd of hummalls, or porters with packs on their backs, who were gathered with us to see the great man pass by. When he went on we had leave to proceed. We followed him at a humble distance up a steep street. The way led along the side of a battlemented wall, which had been the boundary of Old Byzantium, cutting off the apex of the triangle from the rest of the peninsula. All within was now the sultan's residence, which exactly occupied the site of the ancient city.

At the top of the street was the Babi Hummayoun, or Sublime Porte, the first entrance to the Seraglio. Here was a characteristic sight. The piles of human faces which I had seen a short time before were all trampled to the level of the ground. A few of the largest, however, seemed as if reserved for this occasion. On each side of the gate were niches in the wall, and in one of these some boys were amusing themselves. I had the curiosity to look, as usual, for some trait of national manners, which is seen even in the sports of children, and I found it. They had got half a dozen of these mutilated heads, which they were balancing on their toes, and knocking one off with another. They were absorbed in their game, and no one took any notice of them. Having entered the gate, we found ourselves in a large, oblong, irregular area, like Smithfield, with mean houses on each side. One of them was the Taraphannay, or Royal Mint, which I wished to see. I stood a moment at the door, when an Armenian superintendent, who sat upon a cushion in a corner close beside, got up, and taking me kindly by the hand, as he would a child, he led me through the establishment, which did not differ much from a similar one in Europe, except that the workmen sat cross-legged on the ground at their several presses. We stopped at every press where there was a change of die; and my conductor, with great urbanity, first pointed out to me the process, and presented to me a specimen of every coin. There were about thirty men employed, exceedingly busy making up piasters for an exhibition which was afterwards presented to us.

Beside the mint is a platanus, which rivals

that at Boyukderé, and whose age is less probable. The Turks plant a tree of this kind to commemorate a birth, as they do a cypress to record a death in their family. Mahomet II., when his son Bajazet was born, followed this usage, and tradition says that this tree in the first court of the seraglio was the one he planted on that occasion. It is blasted at the top, and greatly decayed in the branches, but the trunk yet remains alive. I measured it a few feet from the ground, and I found its circumference fifty feet. If this be Mahomet's tree, planted after the taking of Constantinople, it must now be about three hundred and sixty years old, a much more probable period than that assigned for the duration of others. It has all the appearance of extreme old age, and that it had attained the utmost limits of vegetable life.

We advanced through the first court, among a crowd of people, to the second gate, where we dismounted and left our horses. Having passed this we found ourselves in a kind of chamber, called Kapi-arasi, because it lies between two gates, which form the entrance to it from each court. Here the implements of punishment are hung up: on one side is the apartment of the chief executioner; and, in effect, two public functionaries of that class were pointed out to me among the company we found waiting to receive us. If the legate be only a *chargé d'affaires*, he is kept standing here; but as his excellency was ambassador extraordinary, we were not left in the common passage, but brought into a cell like a turnkey's lodge, at one side of the gate, where we were again treated with coffee and pipes. Having been kept here about half an hour, we were told to advance, and proceeded up the second court of the seraglio. This is nearly as large, and of the same shape as the first, but is distinguished by rows of trees, and is therefore called the "garden." On one side are ranges of kitchens; on the other is the divan, with its appendages, and at the upper end is the grand entrance to the harem.

As it is the ridiculous and ostentatious policy of this people to display all the most imposing details of government to foreign ministers, that they may be impressed with the power and resources of the Porte, they generally fix an audience on a day when the janissaries or other troops receive their pay. This was the day for the janissaries, and they were all assembled in the court for that purpose, exhibiting a motley group of boys and old men, without any settled uniform, except the large, greasy, very awkward felt hat, or bonnet, which I described before. It is so ungainly that it is continually falling off. The colonels are also distinguished by most extraordinary helmets, which are so tall and top-heavy, that they are sometimes obliged to keep them on their heads with both hands: indeed, every covering for the head among the

Turks seems remarkably ill-adapted to convenience. The turban, in its best state, is unmanageable, and some resemble woollacks, constantly balanced on the head like milk-pails. The first thing displayed was the ceremony of running for pilaff, porringers of rice and milk were laid down in different parts of the court, and at the signal the janissaries started for them; whoever seized them first kept them, so sometimes they scrambled, and daubed, and smeared each other with great gravity.

Through the confusion of this childish absurdity, we were marshalled into the divan. This celebrated place, where all the affairs of state are transacted, as in our cabinets, is called a *divan*, from the cushion-seats which run in continuity all round it. It consists of two apartments, formed by domes, and separated by a partition richly carved and gilt, which is only breast-high. The apartment on the left is the place where the great officers of state hold their discussions; that on the right, which communicates with it by a door, is appointed for inferior officers, and is like a guard-room, but finer. There is no great appearance of mysterious secrecy here, as the door of entrance opens directly on a piazza, which forms part of the common court-yard of the seraglio, and on the left hand is also a door which leads into a coffee-house, which appears to be open to every person. In the middle, and opposite the door of entrance, sat the grand vizier, dressed in robes of white satin, with a conical turban of snow-white muslin, marked with a broad band of gold. Immediately over his head was a semicircular little gallery, about the size of half a hogshead, projecting from the wall, formed of very close gilded bars, through which a person might hear and see, but could not himself be seen. Here the sultan sometimes places himself while the divan is sitting, or on other occasions; and it gave to this enclosure of despotism the appearance of the ear of Dionysius. I looked up with a furtive glance more than once, and at length caught the gleam of an eye through the small aperture in the lattice-work, which no doubt was that of the sultan.

On the right hand of the vizier sat, at an humble distance, the Capitan Pasha, dressed in green satin robes, with a turban similar to that of the vizier. The vizier was an old and feeble man, with dark eyes, and a mild, but stupid countenance. The pasha was much the same, but not so genteel looking—the one was commander of the armies, and the other of the fleets of the Turkish empire, and both looked but little qualified for their offices at this critical moment. The pasha's name is Delhi Abdalla. Delhi means mad, and was given to him from his extraordinary manners. He had been a boatman on the Bosphorus, and attracted the notice of the sultan, while rowing in his barge on an aquatic excursion, by a certain rude humour, and a habit of shouting when he speaks, and swearing strange

oaths, to which he is much addicted. For these qualities, though so illiterate that he knows not how to write, he was raised to command the fleet, and to the personal favour of his master. On the other hand of the vizier sat two judges of the empire, one for Roumelia, the European, and the other for Natolia, the Asiatic portion of the empire. They were dressed in dingy green robes, and were very emaciated and feeble, particularly one of them, who, I think, was the most imbecile-looking man I ever saw. On the adjoining side sat two officers of the treasury, dressed in red robes. These six men were remarkably old; and the first impression they made was that of surprise how they could have possibly kept on their heads in such a place for so many years!

The ambassador and his suite were all crammed into a kind of recess at one side of the room, and no more notice taken of them than of any crowd of people in a public court: and yet a mark of distinction was shown which, it is said, never was permitted to any ambassador before. Sometimes when a minister is tired standing here, a joint-stool is brought for him alone to sit down and rest himself. This was not done on the present occasion, so he sat down on the divan, and by special favour was not made to rise up again. I assure you this fact was one of public notice, as an extraordinary occurrence in Turkish courtesy, and a mark of singular and distinguished favour to the British ambassador; for the rest, *nos turba furimus*, we were the mob, and we dared not sit if we were fainting.

It is on this occasion that the Turks delight to show what they think will strike Europeans, and to do it as if it were an ordinary thing, and at which they did not know we were present. The first display was a law-suit before the vizier. A number of persons entered in different coloured robes, holding in their hands papers like lawyer's briefs. These ranged themselves on each side the vizier, so as to make a lane from the door to his seat. One of them stated something from his paper, which was answered by one of the other party. The vizier made his decree, and the law-suit was decided in fifteen minutes. Another of the same kind followed, which lasted about as long, and neither of the judges, though just beside, seemed to be concerned or consulted on the occasion. It was certainly a very simple and very summary process, and I wish it was adopted in other places.

After this followed the payment of the troops. Men began to bring in leather purses of money, and pile them on the floor, till they made two large heaps of four feet high, and ten long, exactly the shape and size of clumps made over potatoes buried for winter, and two smaller ones; each purse contained four hundred and sixty piastres, and the heaps altogether six millions and a half, or about two hundred thousand pounds, in thirty purses, for six months' pay for all the janissaries in

Constantinople. When the piles were finished, which took more than an hour, the vizier sent a sealed paper, wrapped in muslin, by a messenger, to the sultan, stating that the money was there, and desiring to know what was his pleasure to do with it. This letter also contained, I was informed, by way of postscript, that some infidel ambassador had come there, and was waiting to know his commands. It is part of that absurd assumption of superiority which these people arrogate, to pretend ignorance or indifference on these occasions. Though this audience had been carefully arranged beforehand, and was the subject of public notoriety, every thing in our reception seemed to indicate that the grand vizier and his master knew nothing about us, and we were treated as casual visitors, brought there by curiosity, which the courtesy of the Turks allowed us to gratify, by looking on at what was going forward. In sealing this letter, with red wax, he used no candle, or any other process that I could see, to dissolve it, so as to make it susceptible of an impression, though he impressed a seal on it.

After about another hour's tedious delay, the return of the messenger was announced by the attendants striking an iron-shod pole against the pavement, as they advanced to the divan. The vizir immediately rose, and proceeded to the door to meet the sacred packet, which was as large as a volume of maps, and enveloped in a muslin case. Having received it, he retired to his place; he applied it first to his forehead, then to his lips, and then opened it with great form. The seals, which were appended by red tape, and seemed of red wax, he carefully took off, kissed, and put in his bosom. Having announced the contents, several persons came in and took the bags by tens, laying them in heaps at the door, and from thence they were distributed by the colonels of different regiments, who formed a lane at the entrance with their high caps. When each of these received the last bag due to him, he wiped up the dust with the sleeve of his robe, and, bending on one knee towards the divan, as the sacred throne of the omnipotent sultan, he humbly applied the dusty robe to his forehead. The bags were then laid separately on the flags in front of the divan. At a considerable distance stood a large detachment from each regiment, with one leg before the other, waiting for "One, two, three, and away!" like boys playing prison-bars. The word was given, when they all rushed forward to seize the purses, as they did the pilaff, tumbling one over another in great confusion, and equally amused. Whoever could catch a purse in this way, was entitled to a few paras in his pay more than his comrades. After this most tedious and childish ceremony had lasted three hours, we were at length given to understand, as you have often heard it said, that after being fed, clothed, and washed, and made fit to be seen, we should be admitted into

the presence of his sublimity. In fact, such an intimation was conveyed, though not precisely in the words usually reported, and we went through the ceremony accordingly.

When the order was given for food to be brought, we were all crowded together—vizir, ambassador, secretaries, dragomans, merchants, and janissaries—in the divan; and with some difficulty four attendants made their way with four tripod stands, which they set in different parts of the room. On them were placed four large round metal trays, like circular tea-trays, but not japanned. One of these was placed before the vizir, who invited the ambassador to eat; another before the capitan pasha, who invited the principal secretary and the Prussian envoy. At one side was placed the third, before the bostangee bashi, I think, who invited the oriental secretary, with some members of the Levant company; at the other a fourth was placed before the chouash bashi, who invited the chaplain of the embassy with the other officers. The chouash bashi is the head of the corps of couriers, and the bostangee bashi is the head of the corps of gardeners, both officers of high rank in the seraglio. Round these tables we all stood, two or three deep, and helped ourselves by thrusting our hands over the shoulders of those before us, and scrambling on the table for what we could feel. It was my misfortune to be in front, next the chouash bashi, and I received the dripping of all the sauces that passed over me on my lustre gown. Our entertainment consisted of eleven large dishes, served up in succession; and those at all the tables were the same. First, a cauldron of peas-soup; second, broiled fish; third, a kind of mutton-haricot; fourth, sweet-balls; fifth, roast fowl; sixth, large sweet pudding, covered with paste; seventh, mutton roasted to rags; eighth, boiled fowl, almost raw; ninth forced-meat, in a mass; tenth, stewed apples, floating in sauce, with cups of youart, or sour milk, placed round the dish; eleventh, pilaff of rice, with which all entertainments end in Turkey, and a large bowl of sherbet, extremely mawkish, to wash it down.

To eat all this we had large wooden spoons, the bowls of which were circular, and almost the size of a saucer. What we could not eat with a spoon we tore with our fingers. When a man wanted a bit of fowl, he took it up by the leg, and holding it out, his neighbour took the other leg or wing, and so tugged it asunder. In every dish which came on the table, the chouash bashi thought it necessary to make the first hole with his dirty hands. His example was followed by every one of the crowd within reach of the table; and you may conceive how inviting an entertainment must be where roast and boiled, sweet and sour, hard and soft, were all clawed together by fifty dirty hands, without knife, fork, cloth, or napkin. At the ambassador's table some little

distinction was made. Spoons were laid, which were supposed to be horn; they were, however, of jasper, and said to be part of the costly table-service of the Greek emperors, preserved since the taking of Constantinople. The tray, also, was of silver, of the same era, but so tarnished that it was not easy to distinguish the metal. After this scramble, the ambassador alone was washed; a vase with a long spout was brought to him, out of which water was poured on his hands; and then we all proceeded to a large tree, at the entrance of the harem.

Under the tree our names were called, and a second set of pelisses were here distributed to us. Bits of paper stuck on them marked for whom they were intended. Mine was labelled "Doshervatch," the nearest approximation a Turk could make to my name. There were present, besides the members of the embassy and Levant company, several English gentlemen on their travels. Those who had seen the sultan before, lent their pelisses to those who had not, as no person could be admitted to the presence without one. In this way eighteen of us were dressed up, and waited under the tree for orders. By and by the approach of the vizir was announced, proceeding from the divan to the presence, with the capitan pasha, reis effendi, and other officers; a lane of attendants was made for them across the garden; and in their way they passed close by us, but took no more notice of us than if we were jugglers dressed up and waiting to exhibit before their master. In about half an hour it was notified to us that we should come forward; and we advanced to the gate of the seraglio, or rather, the harem.

This gate was decorated with the most gorgeous display of Turkish sculpture. It was covered by a large semicircular projecting canopy, supported on pillars richly carved, gilt, and embossed, in a style of architecture perfectly oriental; round the entrance were several officers in their richest dresses, some in stuffs shot with gold, which, as they moved, were quite dazzling; but those which struck us most were the unfortunate eunuchs. Some of these creatures were boys, or young men from sixteen to twenty. They were tall, bloated, and disproportioned; their countenances were of a sickly, sallow hue, with a delicate, hectic-looking flush, and an expression of extreme anguish and anxiety, as if they suffered pain, and laboured under a deep sense of degradation. One old man was wrinkled and pallid, his face perfectly smooth, and resembling that of an aged woman, except only that it had an expression very strange and unnatural. They were all dressed in green satin robes. Among them were many blacks, who did not look so disfigured as the whites, probably because the change of their features was not so conspicuous.

While I stood gazing on these things in a kind of absorption of mind, I was roused by being

suddenly seized by the collar by two men, one at each side of me. I now saw that each of the party was caught in the same manner; and in this way we were hurried, or rather dragged, down a broad descending passage, between rows of guards, to the interior of the harem. Here we found ourselves in a narrow, gloomy courtyard; and suddenly turning to the right, we entered a dark, dismal little chamber, lighted only by one grated window, which opened into the yard. At first I could not clearly discern objects, but in a little time my eyes were accommodated to the dim light. Our party filled one half of the apartment, the other was occupied by a large throne, exactly resembling, in size and shape, an old-fashioned four-post bed without curtains. This was covered with something very like a gay-coloured cotton quilt; but it was a rich stuff, embroidered with dull gold and pearls. On the side of this, with his feet hanging down, sat the sultan, exactly in the attitude of a man getting out of bed in the morning. I mention this because the Turks, on state occasions, always sit with their legs hanging, but on others cross-legged. Next to him, standing stiff, with his back to the wall, was the vizir, and next to him the capitan pasha; they were both motionless as statues, with their eyes riveted on the ground. Our party formed a kind of irregular semicircle across the room, and half round the bed; in our front stood the ambassador with his dragoman and that of the Porte.

The sultan appeared a tall, ill-made, mean-looking man, about forty. His countenance is as dark as mahogany; his beard very full, and as black and glossy as jet; it is said he uses artificial means to colour it. He is remarkable for the smallness of his hands, and the length of his body, the latter being that of a man exceeding six feet in stature, though his is not more than five feet seven or eight inches. He looks always to most advantage sitting or riding; and, in fact, he is seldom seen by strangers in any other position. His dress was a dark, dingy red robe, and we thought there appeared nothing brilliant about him. He never turned his head, which he kept straightforward, as immovable as if it was fixed in a vice; but his eye was continually rolling, and the white of it—something like the colour of white glass—gleaming now and then under his mahogany forehead, as he glanced sideways at us, gave him, I thought, a most demon-like expression, according well with the cruel character I had heard of the man, the melancholy state of the country, and the gloomy cell in which he received us. The speech of the ambassador—expressing a desire on the part of his Britannic majesty to continue the ties of amity and good will between the two powers—was translated to the Sultan by his trembling dragoman; and after a short pause he replied, in a low, but firm, haughty tone, addressing himself apparently to

the vizir, who repeated the speech very badly and hesitatingly to the dragoman, who stammered it out in French to the ambassador. This unfortunate dragoman's name was Stavrak Oglou, not a Greek of the Fanal, but a native of Caramania. He was a tall, cadaverous-looking person, and could not conceal the extraordinary impression of terror under which he laboured. He stood next me, and trembled so exceedingly, as quite to shake me as well as himself; and his nerves were so agitated that he could scarcely see to read the paper he held, which was blotted with large drops of perspiration dropping from his forehead, and more than once nearly fell from his hand. The man had some reason: his predecessor had just been executed, and he had no hope he should escape the same fate. In a very short time he was deposed and banished to Natioia, and a few days after his arrival was found assassinated at his own door.

Our interview did not take up ten minutes, and the moment the last word was out of his mouth, we were all, without the slightest previous notice, dragged suddenly back by our conductors, whose gripe never left our necks a moment. In stumbling backwards I trod on the tail of my gown, and was well nigh prostrating myself, without intending it. The purpose of this rudeness was to prevent our turning our backs on the sultan as we retired from his presence. When we reached the door of the chamber, however, we were twirled about, hurried up the passage with the same precipitation as we were hurried down, and, when arrived at the outside, flung off by our conductors like things by whose touch they felt contaminated. The origin of this practice is a subject of controversy. The French writers assert that an attempt was made on the life of Amurath II., at an audience, by a Croat, in revenge for the death of Mark, the despot of Servia; and ever since, all persons admitted are held fast by the arms while they remain in the presence; and this is the account, also, of Busbequius, who was himself so treated.* Others deny this origin, and say that it is merely a token of respect shown by a great man, that you are supported in his presence by his attendants. You will form your own conclusion; it is certain no possible disrespect was intended at our interview; but, on the contrary, it was meant to show us every mark of attention and good will, and it was evinced by many little circumstances. The persons who conducted us were men of rank, and dressed in pelisses of honour; yet those who had hold of me and others griped us sometimes very hard; and when we were able to speak, each of us might truly say in the words

* "Singuli ut ingrossi sumus, ad eum a cubiculariis ejus deducti sumus, brachia nostra tenentibus. Ita enim fert consuetudo ab eo tempore quo Croata quidam, in vindictam domini sui interfecti Marci, despote Servie, petito colloquio Amuratum occidit."—*Busbeq. Epist. l., p. 98.*

of Hamlet, "I pray thee take thy fingers from my throat." The janissaries were disposed to be very insolent, thrusting their sticks between the legs of the gentlemen to throw them down, and showing other marks of contempt and ill will.

This was far, however, from being generally the case; on the contrary, the name "Inglesi" seemed to procure for us attention and good will.

MIDNIGHT.

'Tis night's most calm, most melancholy hour,
And silence broods o'er all the sleeping vale,
Save when a voice from yonder ivied tower
Proclaims to sighing winds Time's passing tale.
The stars are out in all their loveliness;
And gently breathes the violet-scented gale;
While from the hawthorn shade is heard the wail
Of the lone night-bird. Now, with sable dress,
The silent heavens are robed, and dark clouds press
Around the silvery moon, and now she flings
Her chastened light to earth, while sephyr's wings
Scatter a thousand sweets the flowers to bless,
And tiny elves, that shun the garish day,
In forest haunts their fairy music play.

T. W. A.

THE SOUTH SEA ISLANDS.

SWEEP isles of beauty! where fair nature throws
The loveliest robes this tainted earth may wear,
Where every flower in wild luxuriance glows,
And verdant hills that rise to heaven appear;
All, all around is beautiful and bright—
Blue skies, green earth, and hoary mountains, where
The soft clouds sleep. The palm-trees' shadows there
Yield sweet repose, while balmy airs invite,
When suns are pouring down their noontide light.
The dashing cataract falls from rock to rock,
And lordly pines the howling tempests mock,
While o'er their heads they sweep with giant might.
And round thy shores the crested waters play,
While rainbow hues are seen 'mid falling spray.

DUELLING.

THE brave Dutch admiral Van Tromp, who was a large heavy man, was challenged by a thin active French officer. "We are not on equal terms with rapiers," said Van Tromp; "but call on me to-morrow morning, and we will adjust the affair better." When the Frenchman called, he found the Dutch admiral bestriding a barrel of gunpowder. "There is room enough for you," said Van Tromp, "at the other end of the barrel; sit down; there is a match, and as you were the challenger, give fire." The Frenchman was a little thunderstruck at this terrible mode of fighting; but as the Dutch admiral told him he would fight in no other way, terms of accommodation ensued.

I have heard a story of a general officer in our service which pleased me much. On receiving a chal-

lenge he went to the challenger and told him, he supposed they were to fight on equal terms; "but as things now stand," said he, "the terms are very unequal: I have a wife and five children, who have nothing to subsist on but my appointments; you have a considerable fortune, and no family. To place us, therefore, on an equality, I desire that you will go with me to a conveyancer, and settle upon my wife and children, if I should fall, the value of my appointments. When you have signed such a conveyance, if you insist upon it, I will then fight you." The deliberate manner in which the general said this, and the apparent justice of the requisition, made his antagonist reflect a little on the idea of leaving a wife and five children to beggary; and as the affair could not well stand reflection, it went off.—*Gilpin*.

WALKING.

WALKING.—Walking is the best possible exercise; habituate yourself to walk very far. The Europeans value themselves on having subdued the horse to the uses of man; but I doubt whether we have not lost more than we have gained by the use of this animal. No one has occasioned so much the degeneracy of the human body. An Indian goes on foot nearly as far in a day, for a long day, as an enfeebled white does on his horse; and he will tire the best horses. A little walk of half an hour in the morning when you rise, is advisable; it shakes off sleep, and produces other good effects in the animal economy.—*Jefferson's Memoirs*.

I may urge upon all, and especially upon those whose habits are sedentary, to contrive some motive for daily and regular walking, even should they not appear at present inconvenienced by their confinement; the cloud will be insensibly collecting that shall, sooner or later, darken their spirits, or break upon them in the fulness of the apoplectic stertor. A physician with whom I was well acquainted, and who scarcely ever was upon his legs, used to say to me that he found no inconvenience in sitting day after day in his carriage and in his study. Nor did he, so far as his immediate feelings were concerned; but he died suddenly and prematurely, from an apoplectic stroke, which I verily believe might have been averted, had he made less use of his carriage and books, and more

of his limbs. In contrast with his case, I will just state, that last week I conversed with a veteran in literature and years, whose powers of mind no one can question, however they may differ from him in speculative points. This gentleman has preserved the health of his body and the soundness of his mind through a long course of multifarious and often depressing circumstances, by a steady perseverance in the practice of walking every day. It is curious that he has survived, for a very long period, almost all the literary characters that were his friends and contemporaries at the period in which his own writings excited so much public attention; almost all of those who have dropped into the grave one after the other, while he has continued on in an uninterrupted course, were men of far less regular habits, and, I am obliged to add also, of much less equanimity of mind; but the preservation of this equanimity has, I verily believe, been mainly ensured by the unvaried practice to which I have referred, and which to others would prove equally available, if steadily and perseveringly pursued. "Were I a gentleman, Dr. Uwins," my neighbour Mr. Abernethy used to say to me, "I would never get into my carriage." And certain it is, that many disorders of the most troublesome kind, beside unsoundness of mind, may be traced to the idle habit of carriage gestation.—*Uwins on Mental Diseases*.

PHYSICAL AND PECUNIARY DRAINAGES.

A PARALLEL.

THOUGH the fact of "never meeting, though they are continued ever so far," appears to be an essential property of all parallels, yet I confess that I am fond of them; and certainly not less so on account of their being disliked by certain angular gentlemen of the critic breed. I wish to tell the reason of this, and to "raise use" therefrom, if I can, and I know no better vehicle for my purpose than *Ward's Miscellany*, which every one who has seen it admits to have *no parallel*, and, I may add, that the intellectual privation of all who have not seen it has no parallel either.

To dwell a little on the value of parallels, before I introduce the reader to my own "unparalleled parallel," I may mention that parallels never can possibly jostle or cross each other; and, therefore, if the whole world would only move on in parallels, they would never get into each others' way. The advantage of this would be incalculable; for more than half the time, and fully nine (almost ten) tenths of the tempers of many people, are spent in their crossings and jostlings, merely because one, or both, is off the parallel. It would be a most salutary lesson to various *sharp* eyes, if the purlieus of Palace-yard, and many other places, were all marked over with parallel lines. It is matter of every day remark, that they who "keep the rut," whether in the ways of mire or of men, are seldom or never overturned; and the reason is obvious—the ruts are parallels. The — (what-d'ye-call-'ems?) of a railroad,—for to say the "rails of a railroad," makes as unseemly a gash in the grammar, as their "strange ways" make in the ground, are parallels; and this is the reason why the trains are either overturned, or sent spinning over, if the wheel gets off the "what-d'ye-call-it." Indeed, we can hardly move a step without getting a new proof of the value of parallels. For instance, when the late illustrious Watt—one of the few men, by the way, that, like the "*Miscellany*," had no parallel—improved the steam engine, he found there was no keeping it in order. The piston-rod worked outwards and inwards, and soon let out the steam. What did Watt, upon this trying point? Why, he invented a "parallel motion," which converted the arc described by the end of the beam, into a line *parallel* to the tangent; and the engine has worked ever since without a jolt. O, that some moral Watt would arise, and a piece of mechanism capable of converting all the "crooked motions" of men into "straight lines parallel to the tangent!" for then they would, by another property of parallels, be all parallel to each other, and society would thenceforth work well, and without any jolt.

I might thus run on with the subject, quite parallel, and so never touching it for any length;

[No. 24. JUNE 14, 1837.—2d.]

VOL. I.

but this I leave to the reader, and shall mention only one or two steps more, which will, I trust, bring me to the parallel I have in view. First, then, if a third one goes, fair and straight forward, to two parallels, it gets exactly the same reception from both. But if it goes shuffling and wriggling by a crooked path, the reception which it meets with from the one throws no light whatever on that which it may meet with from the other. There is far from an uninformative moral parallel here: if all the folks of any one locality moved through life in parallels, which, as we have shown, would be of vast advantage to themselves; and if a *straight forward* stranger came to visit them, for pleasure, business, or any thing else, he would meet with the same reception from the whole; whereas if he were curving and shuffling, their very parallelism would detect him, and he would be soon turned out of their company. There are some real cases which approximate this, although there is always less or more reason to have a doubt about them. This is owing to the difficulty of proving the parallelism; for if they of the locality do not go parallel, they cannot possibly all give the same reception to the straight forward, though they may do so to one who bends and shuffles. Thus, if we study them well, there is really more moral instruction—and reproof—in parallels than in some sermons.

Again—and it is "finally and to conclude," in so far as the *morale* of the parallels is concerned, there is this advantage in parallels, that if you know correctly in what relation they stand to each other in any one instance, you are sure that the relation will be the same in every other instance. This is the grand advantage of parallels, in all matters of instruction in which they can be applied; and whether the form of their application be allegory, fable, metaphor, simile, simple comparison, or any thing else, it is the fault of the user, if it does not penetrate deeper and stick faster than any other mode of instruction.

Now for my own parallel, as the application of all this profound philosophy, which has, of course, cost me *moons of mystification*, whether the reader shall be sufficiently grateful or not. The vicar of Wakefield complained that "the world said nothing at all about *his* paradoxes; and it will be a most crooked shame if the said world shall treat "*my* parallels" with the same neglect.

Well, then, here follows my *thesis*, or *hypothesis*, which, however, I hope to prove to be *mathesis* before I am done of it. *The drainage of bogs and the drainage of bogs are parallel operations of improvement; the one as applied to the soil of a country, and the other as applied to the inhabitants.*

2 B

Both parts of the demonstration here must be partly drawn from historical induction, though any intelligent reader may verify them, or overturn them, (if he can,) by his own personal observation. I shall first examine them singly, and then lay them together, in order to see how they tally as to parallelism; and I would advise the reader to do the same in all comparisons he may have to make; for some wise men look more like fools than any thing else, when they compare objects or subjects, of one or of both of which they are ignorant.

First, then, as to the *bogs*, under which short appellation I include all puddles, ponds, quagmires, morasses, swamps, fens, lakes—no, *not* lakes, and other receptacles whatsoever, high-lying or low-lying, which catch and keep the rain of heaven until it is evaporated by the mutual action of the air and the water in the process of evaporation; and more especially if, in the receptacles aforesaid, the said “caught and kept” rain of heaven is mixed with mud, or promotes a copious growth of mosses, flags, reeds, rushes, or any other rank aquatic vegetation whatsoever.

There was a time when England was sadly infested with places of this kind; and, as happens in the cases of many natural annoyances, the small ones, in consequence of their greater abundance, and more general distribution, were really more injurious than the rich ones. It is true that the large ones shook the people with agues, or that life was a burden, in many districts, where it is now a pleasure. But the small ones were on most farms, and in every field in some places; and even although they were seasonal in their appearance, they always did mischief. They stagnated on the fields in spring, so that the labours of the husbandman could not be carried on; they formed again with the midsummer rains, and spread cold and vapoury fogs, which blighted the ear while yet green, and nursed their parasitical fungi, which waste the crops with rust and smut, or poison them with ergot. There the autumnal rains overtake the late crops in the field, and they were “sprung,” rusted, or otherwise injured, both on the culm and in the shock. In consequence of this there was a much smaller breadth of land under crop than there is now; acre for acre the yield was much less, and the quality was vastly inferior. Green crop, for summer feed, there was little or none; and the soil in most places was too wet and sodden for the healthy growth of such roots as the turnip and potato. Where the rains of autumn and early winter pelted the bare earth and ran off, they carried the richer part of the soil with them; and where they stagnated, they fostered the growth of mosses and other unkindly vegetables. In proof of this last, there may be seen, in many of the batteries in the south of England, kindly meadows, from under which

the people dig the fruit of the olden time for fuel.

The pastures also suffered severely. The water stagnated and nourished mosses, which made it stagnate still more; the autumnal rains sent up numbers of unwholesome fungi, which injured the constitutions of the sheep, while the cold damp of the surface afflicted them with the foul rot. But while the rain was held in these pestilent places, the brooks often run dry in the seasons of drought; so that though the country was really suffering from an excess of water, there was a deficiency where it was most required. It would be too long, however, to enumerate the whole list of evils; but what have been mentioned are a pretty fair example of them.

To compensate these evils, there was comparatively little. Frogs, and newts, and water beetles, were certainly far more numerous; and water flies were more plentiful. There were also some water birds in abundance, which are now rare, such as storks, and herons, and bitterns, and other birds, with long legs and bills, and comparatively small bodies; and these afforded sport—such sport as it was, and they were served up at the feasts of the great, along with porpoises and other small *cetacea*, which not the fisherman certainly, and hardly the more delicate of the gulls of the present day will eat. There was probably also more natural wood in these days; but it was swamp-grown, and of little value as timber, and the swamps in which it grew contributed to the unwholesomeness of the climate.

Drainage has altered many of these matters, and has by so doing contributed much to the healthiness, the productiveness, and the beauty of the country. But man must not take credit for the whole, or even the greater part of this; for, partly by filling up the bottoms, partly by cutting through banks and making deposits, the waters have in no small measure worked their own correction. Direct drainage by man has, however, done much, more especially since it began to be conducted on scientific principles. The mode at first was to make the drain where there appeared to be the most obvious surface need, namely, through the middle of the quagmire or marsh. The effect of this was in many instances the producing of a ditch full of water, and nothing more. The peat or other earth of such bogs is generally so retentive, that they cannot be drained in this way, and this led to the improvement.

It is not the rain which falls on the surface of such a place, or that which flows to it from the neighbouring slopes, which causes it to form and continue, so much as that which finds its way underground through the porous strata, and which comes to the surface when a retentive soil is arrived at; and this is the place where the drain is placed to proper advantage. Hundreds of places could be pointed out, where an

ancient bog, penetrated by such drains, has been converted into a fine and productive field; and the water, dislodged from those trap-reservoirs, in which it only spoiled the land, has been sent into its proper channels; and the brooks and rivers have gotten that from which the land has been delivered. If the underground supply comes from the bottom of the bog, drainage cannot be so well applied; and the removal of the peat down to the hard soil is the cure, which is not practicable under all circumstances. I have, however, seen such an effect produced to some

extent; and the cleared surface spotted with beautiful springs of water, the discharge of which flowed perennially in a clear rivulet, though the channel had always been dry in summer as long as the bog was there. We shall only add, on this parallel, that among the results have been the doubling the weight of the oxen, and tripling that of the sheep, when they are fit for the market.

The reader will have the kindness to wait a little for the other parallel, and the comparison.

MEDICAL THEORIES.

THIRD ARTICLE.

THIS error, which brings all their theories into utter contempt and ruin, is one which raises their hands against every man. All who differ from them are treated as empirics and nostrum venders, of the very worst class and grade; and this universality of censure diminishes its value and roughens its sharpness and pungency. In sober seriousness, we ever and anon (when hearing one of our Gallic neighbours thus stoutly defending his faith, and inviting to mortal cudgel-combat all who presume to talk or think differently from him,) lift our spectacles from the bridge of our nose, and ask ourselves, whether, according to the best rules of mental and arithmetical calculation, it is probable that the French doctors should be alone right, and that all others of a similar class and order in creation should be wrong, and have been so for so many centuries—a fact which they credibly inform us they have made out by one chance and fortuitous discovery—one lucky idea, germinating and sprouting from childhood to youth, and from youth to full manhood, with the swiftness and rapidity of a mushroom. Were the truth of their theories put up to the vote or ballot, we shrewdly suspect that they would find themselves shrunk to a small and miserable minority. It will most assuredly be their future fate, in the days to come, to retract many of their wild and delusive reasonings, and, we shrewdly prophecy, that they will be then made fully aware of the task being much easier had they promised less of their own positive and exclusive authority, and had been more considerate towards men who, assuredly with no less talent, education, and experience than themselves, have exerted their powers through long lives and successive periods in pursuit of the same mystery, art, and science.

It will scarcely be credited by our readers, into what lengths the dangerous tendency of theorising upon disease will lead a man. In our early days we were in correspondence with a very celebrated physician of the French metropolis, who was then considered to be one of the most acute and clever medical theorists of the day. This person would argue, and with the most truthful

reasoning and simplicity, upon what he denominated the certitude of physic. He would dwell upon the theory and calculations of that old author Cabanis. He conceived that not only morals and philosophy, but that government, diplomacy, jurisprudence, military tactics, and commercial speculations; in short, that every science that was not founded upon the pure and simple calculation and observation that were afforded by the external attributes of the body, offered less certainty in all details than did medicine. He marvelled much that this idea had not been then more considered by the great men of his day, and accounted for it by supposing that the majority of those by whom it had been taken up had considered its character as more problematical than true. In this reasoning he entirely forgot the comparison that he was so unjustly instituting between physics and morals, that great and extensive branch of human science which must, from its very nature, ever remain unsusceptible of demonstration or "certitude," with that which does not, in its very essence, exclude all proof and certainty, notwithstanding that it may still do so in many of its ramifications. The idea of Cabanis, to a professed medical theorist, is one partaking neither of novelty nor wonder. The mass of the world will always be misled by the authority of a great name; and though Moliere, Rousseau, or Le Sage, or any other satirical writer, might cast severe ridicule and scorn upon it, yet we may safely state, that if physicians could once prove their art to be a certain one, they might remain perfectly satisfied that all the united voices of the world would soon be on their side. It is a subject in which every one has a direct individual interest. The world at large may differ, and probably will differ, for ever, upon the subjects of necessity, of liberty, and of forms of government; many may reap a very excellent and profitable interest from the glorious uncertainty of the law, or from diplomacy, whose very essence and nature is to be found in its uncertainty. But every man possesses within himself a most powerful will and desire to be well, and to remain as free from, and

as unfettered by, illness and disease as possible : let any man be once persuaded that he need have neither the gout nor the toothach, and we should very soon hear no more from the mob of the uncertainty of physic.

It is not our purpose to conclude this article by passing under review the various causes which have led to the degenerated and unsettled state of the art or science of medicine wherever the theorists have abounded, or the chimerical ideas in which they have indulged have become spread abroad in any populous neighbourhood or district; we could wish that the remedy were as easily discovered as the disease. The subject is a wide and fruitful one, but time and space prevent our going into it very far.

Education and talents are the same inheritors of that success in the onward struggle through the paths of medicine; they are the requisites which all should possess. Law may ordain the routine of education, but whence are the acquirements to come, when an ukase or act of parliament ordain it. Examination will go but little way towards the attainment of it, as all experience has shown. Admitting, however, all this as possible—admitting it to be all attained, medicine must still remain a trade, as all human knowledge is—war and diplomacy, or war and shoemaking, it is all one. There is existing around us an enormous mass of people that never can be expected by any possibility to remunerate this class for talent and information. These can dispense with law, or at least they must, if it be too dear; but no man in pain or sickness or illness will dispense with physic, more than he will with food, and he will, if driven to the necessity, take the worst, because he can get no better. Among the civilised nations of the world, at least, physic is considered as one of the necessities of life. Old women and barbers will carry it on if village apothecaries do not; and we need scarcely say that in such a state of things as this the gain to the people will not be very great. The man who shall propose an effectual corrective to the present state of things deserves to be handed down in honoured renown to the remotest posterity. Our own present impression is, that the case, as it now stands, is hopeless. Paracelsus attributed all the mischief in the profession to a personage whose blackness forbids our mentioning his name more particularly,

We cannot, however, look back to the days of our youth, and look around us now in the extreme days of old age, without being at once made fully aware that in the medium time between these two great epochs of our existence much has been done, if partially, and is still doing even now. It is possible that there may not be a better physician alive in London than Hippocrates or Sydenham, but there is a comparatively wide difference in the attainments of medical knowledge now, to what there was even half a

century ago. The general and universal diffusion of knowledge in every branch of education, which is so great and striking a characteristic of the present age, has done, and is even doing now, much for medicine; the gradations onward may be imperceptible, perhaps, if viewed from day to day, but the final sum is a large one. Were we to get into more close and particular details, we could point out much good, that a set of positive regulations, whether from the general legislature, or the subordinate legislature of medicine, might yet effect, and without the counterbalancing power of any collateral evil. Still we repeat, viewing the present position as it now stands, the subject is one which is very far from being neglected. Every thing is liable, in a greater or less degree, to abuse and neglect: but we may say with the most perfect truth, that in our day medical schools and corporations have, in our own country, assuredly shown a most perfect good will towards reform and improvement; and, we may add, that their efforts have been attended with much success, and with very valuable results to the medical world, and by reflection to the aggregate array of the community at large. Were we to venture, in closing this article, to hazard an opinion upon the subject of medical education in those schools of this metropolis, where, as in the University College, for instance, it is intended and attempted to make it perfect, we should be inclined to premise that it was too technical in its outline and details. Now, a technical education may teach an art, but it never yet taught a science. To what purpose, may we ask, is it to accumulate loads of facts and theories, when the faculties of thought, reason, reflection, and judgment are utterly neglected, and suffered to run wildly to waste? We may be told, perhaps, that botany and chemistry are to be considered as enlightened additions to a mere course of medical education; yet we must confess that, to our views of thinking, these are, after all, but inferior technical branches of medical science: they may teach the name of a plant, or its analogies, wherever they are to be met with in the wide and universal kingdom of nature: they will perhaps teach us to compound our drugs, or to write our prescriptions; and chemistry may introduce itself into our medical theories, and lay the foundation for much of that future mischief which we have endeavoured to develop in this paper; yet, most assuredly, these cannot be looked upon as the studies which will either cultivate or improve the nascent powers of the medical student's mind. We would require more generally enlightened views—a mind disciplined in logic—not the logic of technicalities, but the logic of the sciences. We are convinced, and the increased experience which ushers in the purpling dawn of every day tends to confirm it, that without this all the mere medical learning in the universe, and all the practice of either a Sydenham or a Baillie, will

never raise the medical practitioner, in whatever grade of the profession he may be, (and there are three of these,) above the mean and despised rank of the quack or empiric. Under such sad auspices as we have before described medicine must ever remain an art, and that an uncertain one; for if there be a collection of facts and of phenomena, of daily occurrence, in any one branch of natural history, peculiarly difficult to generalise, it is in this, where the most assiduous and attentive student must ever be prepared to meet with a thousand varied and collateral circumstances and appearances, which only serve to render the principal ones more confused and obscure. For our own parts, if it be requisite or necessary that we give up something, before we are

permitted to offer any new suggestion for adoption, we would most willingly surrender those branches of medical education which are comprised in *materia medica*, botany, chemistry, and, perhaps, something more, if we were permitted that full reform on which, even in these days, we dare not dwell. In our humble opinion we care not how wide or how general the subjects of medical education may be; and we should have a better opinion of a physician, and would fain trust the short remnant of our decaying life with more safety in the hands of him, who, like La Fleur, might have added to the rest of his acquirements the arts of drum-beating and spatterdash-making.

ERIKON.

THE DEAD CHILD.

"Al pena si può dir questa fu rosa."—*Italian Epitaph.*

"Sweet flower 'twas scarcely blown!"

I WAS sitting the other evening pondering over the fire, when the servant entered the room and delivered to me a note.

The sable hue of the signet bespoke the mournful import of the communication, and I recognised in the handwriting that of one of the earliest and most endeared of my friends. I hastily broke the seal and perused its distressing contents.

"Come to me," it said, "we have lost our babe; Mary and myself are in deep affliction; and you will not, I am persuaded, refuse us that consolation which your sympathy and your presence will afford."

I lost no time in obeying the summons, and repaired to the dwelling of my friends, whom I found overwhelmed with grief. They were sitting by the fire, totally absorbed in their sorrows. My friend, indeed, seemed to bear his loss with the feelings of a father, yet with the firmness of a man; but the mother's softer nature yielded to the pressure of her calamity, and, after faintly endeavouring to bid me welcome, she sank back in her chair, and gave vent to her feelings in a flood of tears. A little cherub girl was playing round the room; and with her innocent expressions of regret, and her artless, yet often poignant remarks, alternately soothed and increased the anguish of her parents.

A short interval ensued, during which I took occasion to inquire into the particulars of the lost child's decease. Its dissolution had taken place very suddenly, after an illness of only a few hours duration; and the pain of the calamity was thus increased by the suddenness with which it had occurred. My friends, after this explanation, relapsed into their previous silence, and a pause ensued which I was both unable and unwilling to interrupt.

Our mutual silence was at length broken by the fond feelings of the bereaved mother, who desired me to view the dear object of her love, her departed infant. "You knew my boy when living," she said, "and you will not, I am sure, be unwilling to behold him now he is dead;" and she led the way into an adjoining room in which the infant lay.

The care of the anxious parent was evident in all that surrounded her departed child, and the infant seemed as much, if not more, the object of solicitude now that it was about to be consigned to the tomb, than when it clung in life and beauty to the maternal bosom. The little sleeper was placed in a kind of basket, which had been its resting-place while living, and was attired in the night-dress which it usually wore. A rose, which the care of maternal affection had placed in its little hand, afforded, methought, a fit emblem of the lovely infant,—alike beauteous and alike mortal!

It had been a sweet and lovely boy when alive, and seemed rather to have gained than lost in attraction by the change which had gradually and almost imperceptibly passed over it. The small and rosy mouth, the fair and innocent cheek, the pure and marble brow, were as bright and beautiful as they had been before; and the eye, which was partially unclosed, wore an expression, which, though dim and languid, was so nearly allied to animation and to life, that it seemed as if a word, nay, a whisper, would have sufficed to wake the little slumberer again and call it back to existence. Alas! its sleep was the sleep eternal! and not even all the fondness of a mother's sorrow, nor the mother's frequent kiss imprinted on its forehead, could awaken its deep repose or recal the seraph spirit that had fled.

We stood for some moments mutely gazing on the lovely but unconscious object of our attention, till our silence was painfully broken by

the intrusion of the elder child, who had followed us from the drawing room and mingled her artless expressions of regret with her parents' sorrows. "Billy's asleep," said the prattler, and touching the hand of the deceased, she tremblingly exclaimed, "and he is so cold. Mamma, wake him for me!"

The agonised parent, recalled from her momentary abstraction, raised the surprised infant in her arms, and eagerly and almost convulsively clasped it to her heart, as if anxious to secure her remaining treasures from the grasp of the spoiler—Death!

I followed in silence to the drawing room, where a fresh burst of sorrow relieved the sufferings of my friends. There are emotions which we could no more wish or attempt to repress than we would restrain the whirlwind in its rage or the ocean in its fury. This impetuous gust of sorrow exhausted, while it soothed, the feelings; and after some interval I found the mourners sufficiently recovered to listen to suggestions which would previously have seemed intrusive and vain. I then endeavoured to urge those consolations which it is, alas! so much more easy to recommend than to adopt, and which poor human nature is so much less prone to practise than to preach.

Imperceptibly my observations were first listened to, then acquiesced in, till at length they evidently afforded solace and relief. The mother, who still retained her surviving treasure on her knee, retired to consign it to its pillow, and the little cherub, as she extended her cheek to kiss me a farewell, thanked me for "telling mamma not to cry."

Left with my friend, I urged still more strongly the duty and the advantages of fortitude. His own manly mind proved my best auxiliary, and I found in his breast an echo to every sentiment that was dignified, exalted, or resigned. By degrees, I engaged him in speculations on the subject which we were so painfully called on to contemplate. We endeavoured to consider death

rather as a friend than a foe; and we hazarded the conjecture, that the disembodied spirit, exalted and refined above the apprehensions of earth, may possibly regard the fears of mortality with surprise and regret. With this view we assumed that the philosophic mind may look on the King of Terrors as a friendly messenger, commissioned to call it to a higher existence and a better world; and may welcome his approach with the same delight with which the prophet may be supposed to have hailed the chariot of fire that was sent to bear him to the skies. We reviewed the various systems of philosophy and religion which have prevailed in different ages of mankind, and contemplated their various opinions as to a change of being and a future state. We noticed the firm belief entertained by the most enlightened heathens of another world, and the fondness with which they clung to the hope of a blissful eternity. We remarked on the glimmering of light which was permitted to the Hebrews, and concurred that, though no definite revelation of a future existence was held out to them, yet it formed too frequent and too palpable a subject of allusion to admit a doubt of its having been hoped and aspired after by the most enlightened and holiest of their seers. And, lastly, rising to the contemplation of the Christian philosophy, and adverting to the subject of our mutual regret, I begged my friend not to weep, but rather to rejoice in an exchange which transferred his lost child from a scene of suffering, of error, and of guilt, to a state of pure, eternal, and uninterrupted felicity; the certainty of which, I reminded him, was assured by One who can neither err nor deceive, and who, in reference to little children, has pronounced that his kingdom is of such as these.

As my friend grasped my hand in acknowledgment, and tendered his thanks for my sympathy, I rose and bade him farewell, happy in the reflection that my exhortation had not been wholly fruitless, nor my visit altogether in vain.—*Richardson's Sketches in Prose and Verse.*

A SIGH FOR THE FIELDS.

TO —

Thou spring at length is in the sky,
And all around is gay;
But, ah! my heart is sad—I sigh
For green fields far away:
Would that I might, through yon blue space,
From this brick prison flee,
To gaze with thee on Nature's face—
Oh, would I were with thee!

Oh, would I were with thee! thy feet
Pressing the verdant mead;
Around thee flowers, the bright, the sweet,
And breezes sweet indeed,
Laden with fragrance from the flower,
And carols, loud and free,
Of birds, who hail the sunny hour—
Oh, would I were with thee!

I covet not the rich man's gold,
Nor prize the warrior's meed:
For one must health and peace be sold;
For one must nations bleed:
Proud titles, and the pomp that dwells
With rank, can charm not me;
But thou, amid the cowslip-bells,
Oh, how I envy thee!

Alas! in years more bright than these
I plucked their golden store;
And filled, 'mid hum of envious bees,
Basket and pinafore;
But now a cloud is in mine eye,
Wishing what may not be;
I breathe the town's thick air, and sigh,
Yes, sigh to roam with thee.

May, 1836.

N.

ANCIENT BOOKSELLING.

THE trade of bookselling seems to have been established at Paris and at Bologna in the twelfth century: the lawyers and universities called it into life. It is very improbable that it existed in what we properly call the dark ages. Peter of Blois mentions a book which he had bought of a public dealer (*a quodam publico mangone librorum*). But we do not find, I believe, many distinct accounts of them till the next age. These dealers were denominated, "*stationarii*," perhaps from the open stalls at which they carried on their business; though *statio* is a general word for a shop in low Latin. They appear, by the old statutes of the University of Paris, and by those of Bologna, to have sold books upon commission; and are sometimes, though not uniformly, distinguished from the *librarii*—a word which, having originally been confined to the copyists of books, was afterwards applied to those who traded in them. They sold parchment and other materials of writing, (which, with us,—though, as far as I know, no where else,—have retained the name of stationery,) and naturally exercised the kindred occupations of binding and decorating. They probably employed transcribers; we find, at least, that there was a profession of copyists in the universities and in large cities; and by means of these, before the invention of printing, the necessary books of grammar, law, and theology, were multiplied to a great extent, for the use of students; but with much incorrectness, and far more expense than afterwards. That invention put a sudden stop to their honest occupation. But, whatever hatred they might feel towards the new art, it was in vain to oppose its reception; no party could be raised in the public against so manifest and unalloyed a benefit; and the copyists, grown by habit fond of books, frequently employed themselves in the somewhat kindred labour of pressmen.

The first printers were always booksellers, and sold their own impressions. These occupations were not divided till the early part of the sixteenth century. But the risks of sale, at a time when learning was by no means general, combined with the great cost of production, (paper

and other materials being very dear,) rendered this a hazardous trade. We have a curious petition of Sweynheim and Pannartz, to Sixtus IV., in 1472, wherein they complain of their poverty, brought on by printing so many works which they had not been able to sell. They state the number of impressions of each edition. Of the classical authors, they had, generally, printed two hundred and seventy-five; of Virgil, and the philosophical works of Cicero, twice that number. In theological publications, the usual number of copies had also been five hundred and fifty. The whole number of copies printed was twelve thousand four hundred and seventy-five. It is possible that experience made other printers more discreet in their estimation of the public demand. Notwithstanding the casualties of three centuries, it seems, from the great scarcity of these early editions which has long existed, that the original circulation must have been much below the number of copies printed; as, indeed, the complaint of Sweynheim and Pannartz shows. The price of books was diminished by four-fifths after the invention of printing. Chevillier gives some instances of a fall in this proportion. But not content with such a reduction, the University of Paris proceeded to establish a tariff, according to which every edition was to be sold, and seems to have set the prices very low. This was by virtue of the prerogatives they exerted, as we shall soon find, over the book-trade of the capital. The priced catalogues of Colinaeus and Robert Stephens are extant, relating, of course, to a later period than the present (the fourteenth century); but we shall not return to the subject. The Greek Testament of Colinaeus was sold for twelve sous, the Latin for six. The folio Latin Bible, printed by Stephens, in 1532, might be had for one hundred sous; a copy of the Pandects for forty sous; a Virgil for two sous and six deniers; a Greek Grammar, of Cleonardus, for two sous; Demosthenes and Æschines (I know not what edition) for five sous. It would, of course, be necessary, before we can make any use of these prices, to compare them with that of corn.—Hallam's *Literature of Europe*.

SITTINGS FOR MY PORTRAIT.

EIGHTH SITTING.

My little boy, of three years and a half old, came running into my bed-room this morning, with the following exclamation, "O papa, come and see yourself!"

Then it is a likeness, thought I, and a good one.

"Ah, my charming fellow, I wish I could see myself, truly and impartially!"

"Yes, papa, it is yourself."

This testimony was corroborated by every other person in the family, and of course afforded to all much gratification. But, after all, neither the mimic canvass, nor the mimic glass, can do more than exhibit the shadow, the fleshless, speechless, lifeless shadow of oneself. Where, and how, can we find a moral portrait—an image, that shall

indeed be the very image of the mind, with its passions and affections, and whatever may conduce to form the moral character—a resemblance so vivid and just that may display and impress the truth without the exaggerations of fancy, or the false colourings of self-adulation—a reflection, as in a glass, of the breathing, reasoning, and acting man, by which to dress one's thoughts? The pencil cannot embody the conceptions of the soul, or reveal the motives of the heart; and yet these are the important objects of the highest knowledge and the grounds of a profitable self-examination.

Probably there are few persons capable of affording the expense, or occupying any station of importance in society, who have not at some period of their life indulged the wish to have their portrait taken; but there is a step beyond this, to which most public men at least have often, it is likely, wished to proceed, namely, that of seeing some genuine mimicry or imitation of themselves in the acts or attitudes of their own particular profession, by which they might be placed in a position to judge of themselves as though they were other persons, and yet with the consciousness they were in a sense both the judges and actors. Where is the pleader at the bar, the debater in parliament, or the preacher in the pulpit, who has not desired to see himself represented in his own proper character? Who has not felt an anxiety, or would not be gratified or instructed, to hear the actual modulations of his own voice, to see the effect of his own manner, or to trace the methods of his own oratory in the discussion of a subject, through the reflecting glass of another's acknowledged accuracy of imitation? This is doubtless an exercise of art, in many respects demonstrably superior even to the noble art of painting, were it restricted within proper bounds and applied to its legitimate purpose. It has been, indeed, generally employed for ridicule and caricature, and in the absence of the parties especially concerned; but this is only the abuse of a power which is manifestly capable of a beneficial application. Let but the successful imitator practice in the presence of the individual, and for the avowed object, at his own solicitation, of affording the materials of useful inquiry and observation, and it is not difficult to perceive what advantages might accrue. When the beam is in the eye, we overlook it from its immediate contact with ourselves; but let it be extracted, and placed at a distance for our inspection, and it would instantly become apparent and conspicuous. And thus the man who cannot perceive an awkward attitude, an ungraceful movement, a faulty pronunciation, an ineffective or inconclusive mode of propounding or pursuing a subject, might at once become conscious of either or of all these deficiencies, when thus personated and presented to view; and hence would spring the benefit of inducing an aim at the correction of

faults, which otherwise were not seen or imagined to exist. Here, too, is an advantage above the mimicry of painting; because in the practice of that art the design is merely to imitate, and there, in the perfection of the copy, it ends, for we cannot make one hair white or black, or add one cubit to our stature; whereas in the present case, the direct and moral intention of this self-reduplication, or *living portrait*, as I may call it, is to furnish the means and suggest the methods of self-improvement. The natural figure is fixed irrespectively of ourselves and unalterably, and the sole end of the painter is to transmit and perpetuate it as it is; but the accidents of profession, as they may be termed, or the methods of oratory, are susceptible of continual change, and may thus be studied for the purpose of correction. It may be difficult to persuade the mimic to employ his art for this express object, and sometimes it may be difficult to persuade ourselves to sit for this kind of living portrait; it might, nevertheless, be a very useful employment, and it may be presumed is not unfrequently, at least as a matter of curiosity, desired.

It may be deemed a quaint conception, but nevertheless is one with which there will probably be an extensive sympathy, if another kind of portrait were supposed, the practical utility of which could scarcely be questioned. Let us then imagine a sort of shadowing forth, in living reality, of the intellectual powers and moral feelings, so that not the corporeal image, but the true and proper man, were exhibited to himself. Conceive that, apart from the mere bodily or external form, the inward character were shown, in the spiritual semblance of its faculties, passions, and principles—that another, and yet not another, self could be made to appear to one's own view—to the view, if not to the sight, yet of the inward consciousness—so that the mechanism of thought, the operation of motives, the workings of the mind, the moral apart from the material man, could be as distinctly seen as the portrait of the latter is made visible on the canvass. Thus should we become capacitated to see the very soul, and to contemplate, in undeniable fact, our inward, mental, and identical selves; and were it possible to imagine that we could, as it were, stand by, in pure and impartial observation of the truth of character, to look at this inward portrait, and trace at once its accuracy and its painful developments, it cannot be doubted that the examination of this second self might be attended with manifold and manifest advantages.

This, however, is not a mere fiction or play of fancy. If such a visioned or pictured image of oneself be not literally possible, or but just conceivable as one of the wild imaginings of the mind, there are some obvious approaches to it which the Author of our being has unfolded for wise and beneficial purposes. In that part of the mechanism of our minds which we denominate

consciousness, the soul becomes the spectator of itself, and views a reflected identity in the very glass of truth. So perfect and so powerful is this exhibition, by the very law of our nature, that in defiance of all attempts to deceive others, and to induce them to believe that we are other and better than we are, which attempts may be very successful, and in defiance too of all the artifices of the mind itself to perplex its own consciousness, the very image is there, and the right or wrong of the motive or the passion is vividly and irresistibly impressed. This inward mirror is so placed by the Creator, that no sentiment can exist without being reflected by it upon our own

minds, and no thought or feeling can arise without, in its egress into action, passing, so to speak, this reflecting medium. There is, moreover, an outward glass which corresponds entirely with that within, and throws back the imaged consciousness upon the heart: it is the Scriptures. Here human nature is seen in its genuine characteristics, and every nature or individual for himself may discern the most secret workings of his own spirit; and surely the correctness and the correspondence of these two reflected images, or, if you please, the accuracy of these two moral testimonies, are adapted to impart profitable and varied instruction. X.

LETTER-WRITING.

"THE Polite Letter-writer," and "Every Man his own Correspondent," I have never read. They are doubtless two bewitching books, able to transform any stick of a gentlemen into at least a three-penny post. I am the more particular in disclaiming all knowledge of these *letterary* authors, as I would not my reading public should imagine me guilty of plagiarism. Believe me, I am quite virtuous.

Something I have to say touching most sorts of letters—not all. For instance, I have nothing to say of lawyers' letters, those peremptory "how d'you do's," Charons of Fleet-ditch, purveyors of bread and water, whose words run through the heart corkscrew-wise, outraging a tidbit at the table, and mixing aloes in our wine:—they cannot reach me,—I am off, away from the land of credit—no dun can knock at my door,—we deal for ready money only. For the same reason I am silent about tailors' cross-legged scrawls, coming like a needle at the wind-up of one's Christmas merriment, telling us, modest, hurrying rogues, they have "a small bill to make up by Saturday next," and "hoping for future favours." I wear my own coat! A man, out of Britain, may live as happy as Job; for recollect Job had no debts. Nor will I speak of the letters of great men deceased, golden authors, or tinselled authorities: they speak for themselves. Nor of mercantile letters—yes, they must have their due; for they uphold our commerce, and commerce upholds our brave old England, and all her old incumbrances—Alas! poor England! By the head of Hermes, though most interesting compositions to pury exchangers and young ledger-students, they are unworthy of his votaries! His other votaries, thieves and pickpockets, can surely write better—though not to my knowledge: fortunately for society at large, and perhaps for myself, I have no correspondence with these "gentlemen of the shade, minions of the moon." But look at their every day, or rather their every night language: is it not fanciful? While they decorate their theft of linen from a hedge with

the cant expression of "nimming the snow," with many other similar snatches at poetry, I cannot forbear, in an imaginative point of view, placing them far above Mercury's humbler servants. To make short work, I divide merchants into two classes—the laconic and the flummery. Here is a specimen of the first:—

"Gentlemen. Your's ninth received. Contents noted. Arrived, *Jenny*, Saunders. She cleared the Custom-house yesterday. Her hams not yet landed. Hope they are in good condition. Enclosed last price-current. Since which a spirit in the rum market. Wines, best, run off quickly. Lead heavy. Copper very dull. Tin plates look lively. Much done in tallow. Wax sticks on hand. Feathers, goose, are down. Skins do not get off. Great demand for hemp by the Government. Coffee, very good, this morning, with sundry parcels of sugar, eagerly sought after. Our Exchange, one half, has fallen. Money scarce, and therefore great difficulty with bills. Bristles rising. We are, Gentlemen, &c."

The other style is "tedious as a king," and I cannot "find in my heart to bestow it all on your worships." It generally contains advice of a bill being drawn, and rings a bob-major, as thus:—"Honour to acknowledge your esteemed favour—have the honour to transmit—valued on your respected house in favour of our esteemed and valuable friend—not doubting but your respected house will favour us by duly honouring—and, with the most perfect esteem and respect, we have the honour to be," &c.

What a relief to turn from such perpetrations! Come let us talk of servant-maids. Their letters are always worth something to themselves or others, as they have neither time nor postage to throw away. They write only when a passion becomes too restless to stay within doors. I take great interest in their unskilful attempts to throw a veil over their impatience. Bad grammar, and worse spelling, a clumsy folding up, eccentric splashings of thimble-sealing, and an upside down direction, are, to many persons, their chief re-

commendations; though, to my mind, these are no more than the scenery and dresses to a good comedy; they "hold, as 't were, a mirror up to nature,"—a crooked one, I grant. Here I see many follies, mixed with their share of goodness, and sometimes without, making odd faces as they peep through our language in rags. The purchase of a new bonnet, with Mrs. Mansby's assurance "it is the prettiest thing she ever made, and besides that, she has not a bit more of the stuff," is followed by challenging, per post, her former fellow-servant to make holiday some day next week; and thus, at a trifling expense, vent is given to the exuberance of that vanity without a becoming share of which neither a scullion nor a princess would look half so charming. In an affair of jealousy, when she writes to the crony friend of a rival, that she intends for evermore to have done with Mr. Jemmy, because she knows he keeps low and disagreeable acquaintances,—how innocent is her revenge compared to the cruel and ignorant Roxana's! When I read Molly's wrathful story of some vail or perquisite being unjustly withheld from her share of the kitchen spoils, and observe her anger exhausting itself as her fingers become weary of the pen, I cannot but lament that Thetis did not teach her son to read and write, and thus have saved a whole Iliad of fury and slaughter, though it were pity to lose the poem. What a blessed invention is the post, whether twopenny, general, or foreign! It carries off, by a thousand invisible channels, like the system of underground draining, half the disorders of the human heart. Let every one write down his worst, instead of putting it into practice. A spiteful scrawl cannot well do much harm in the world; while, on the other hand, a sheet of paper full of kindness does infinite good to all parties. One of this last description lately fell into my hands, from a cook at Canterbury to her old uncle. She enclosed—kind soul!—a two pound note, saved from her quarter's wages; said a thousand affectionate things, and, after wishing him many happy days, she—what think you?—she quoted Shakspeare!—"May gudness and you feel up one monument." Thomson's Season's laying in the window-seat of a cottage has been pronounced sufficient evidence of the poet's fame; but what is that compared to being quoted by a Canterbury cook? There is another species of kind-hearted letter-writing, where servant-maids almost equal their too susceptible mistresses; but this falls into the next division of my subject, and, indeed, I am ashamed of having neglected it so long.

Love-letters—here's a theme! In the first place, let every one beware of counterfeits, for such are abroad. Few genuine ones are to be had for love, and none for money. Finely wrought compliments, an epigrammatic style, or any thing that looks like great care and study, is a sure proof of heresy—that rogue is thinking

of the girl's money. Raptures and complaints, sprinkled with something stolen from Ovid or Moore, and crow-quilled on the best gilt-edge, are enough to startle the virtue of any considerate young lady. Folks cannot be too cautious. There is another sort of love writing, much in vogue in this our philosophic age, downright profanation, taking upon itself to prove that Cupid has found out a new cut to the heart,—namely, by sending his arrows first through the brain: it makes me wince to think of it. Such letters are treatises on preternatural history. These sedate persons, who generally wear flannel nightcaps, because the head should be kept warm, and Angola socks for winter wear, because the damp is so bad for the feet—these mock heroic gentry, I say, absolutely assert there can be no true love, except what is founded on the qualities of the mind. At first, as they argue, it must be no more than simple esteem, till, ripened into a softer feeling by a similarity of taste, and a congeniality of sentiment in matters of religion and morality, it haply attains to something the value of—a plain gold ring and the parson's blessing. A very comfortable doctrine for those with whom it is impossible to fall in love. Just as if Romeo and Juliet ever thought of more than one sentiment in each other's breast; and their love was truer than metaphysics. I must quit such a subject—flesh and blood can't bear it. Now for a hint at what is more to the purpose. It is no such difficult matter to distinguish between truth and hypocrisy in these affairs, as some old people imagine. For the benefit of the rising generation, here are a few infallible signs of an unfeigned passion. Let them always bear in mind that obscurity is the grand point. There ought to be so restless a confusion in the lover, that, far from its being necessary his mistress should find his letter intelligible, he should be, after an hour's respite, incapable of explaining his own meaning: it is quite sufficient if he thought he understood himself at the time. If thou art guilty of a pretence to the drowsiness of reason, "there is no more faith in thee than in a stewed prune." This is a general rule, and as the style is inimitable, there can be no fear of deception. Any attempt, though a flurried one, at sense or connexion of sentences, is fatal. Again, a constant interchange of the sublime and the bathos is indispensable; together with certain usual epithets of endearment, in endless repetition; and, here and there, a lively idea of dying. To uninterested persons such effusions may appear insipid, and probably silly, but their opinion is of no importance. In fact, to the parties themselves, if they ever happen to fall out of love, they will certainly be as little amusing as a physician's prescriptions to his patient just happily recovered from a fever. Let not my readers, fair ones I mean, imagine I entertain any disrespectful notions of love, or that my temper is soured by a parcel of billets-doux

returned on my hands. All my intention is, to show that the young blooming god ought not to expose himself in black and white.

Hate-letters ought not to come next, yet, for the sake of variety, they are welcome. These, whether expressed in reproaches or threats, contempt or indignation, are wonderfully energetic. Of all passions, anger is the most eloquent. It is easier to say a cruel thing than a kind one. Milton's devils talk better than his angels. It is more difficult for love to express itself in words, because it has so much to say; while hatred can utter its heart full in a breath, and afterwards expatiate on the strength of its own inspiration. An angry man, and a good one at the same time, always writes more bitterly than he would have spoken; this, at first sight, seems unaccountable, as the comparatively slow motions of the pen must give him the more time for reflection; but I am convinced the cause of this excess arises from having a blank piece of paper before him instead of a human countenance, which latter must be very bad indeed not to awaken some remorse. The greatest provocation to write a hate-letter is in answer to a treacherous friend, who still addresses you throughout in the kindest manner, with a "my dear sir," at the beginning, and ends with a "yours, most sincerely." In this case it may be excusable to dip your pen in gall; but will that do any good? On the contrary, it is more noble, more manly, to pay respect even to the ashes of friendship.

Now are a swarm of notes, like gnats, buzzing about me, all claiming attention to their several merits. One without a seal, yet pretending to the title of a letter, boasts of introducing strange gentlemen to one another. A second makes wary inquiries about the "cleanliness, sobriety, and honesty" of a housemaid, footman, or cook. Then a crowd of borrowers perplex me, by requesting the loan of a fish-kettle, or the last canto of "Don Juan," or a trifle to be repaid in a fortnight. And, lastly, a very agreeable one offers to bribe me with an invitation to dinner. I cannot possibly accept it.

At length I arrive at what my fingers have been aching to come at—letters from a friend; or, if the world will allow it, from many friends. In my opinion, friendship can best express itself by the pen; from which alone, the closest friendships have sometimes originated. "The pleasure of society among friends," La Bruyere tells us, "is cultivated by a resemblance of opinions on points of morality, and by some difference of taste in the sciences." Yet this pleasure may exist in parties who can separate for ever without much regret; while that honest, glowing sentiment, of all others the least selfish, never so thrills in our hearts as when our friend writes to us; and it must be often, and in all his moods, in his hopes and fears, in his joys and sorrows;

not the careless correspondence between two worthy gentlemen in adjoining counties, when a day's ride, or haply a walk, can bring them face to face. No; the letter must have been long on the road, must be stamped with a foreign post-mark, to make it precious; or with an English stamp, to him who is called "the foreigner," wherever he travels away from his endeared associates. It is enough to make sweet the pain of actual banishment. Let those who live out of their own country describe, if they can, the emotion they feel as they burst the seal of such a letter.

It is a frequent complaint with those at home, that the one abroad does not write so often as he ought. I suspect there is little justice in it. The one abroad will hardly fail, until wearied out by neglect; he will be wise enough to bait his hook. The fact is, (and why conceal it?) there is manual labour, time occupied, and no small resolution requisite, to fill a sheet of paper in a minute character, which, every one knows, is expected between friends; and these are the sole reasons of their deferring it from day to day, with an evil worrying conscience, till at last they are often ashamed of writing. I never have put faith in the phrase of "the pleasure of writing to you," as I invariably find it used by the worst correspondents; it is a lying bit of civility. Nothing, indeed, can be more delightful than to stroll about the fields, filling up an imaginary letter; but when we sit at our desks to turn it into reality, it becomes downright work, and is cheerfully performed, solely because it is the means of getting another in return. Besides, an absentee, if he happens to be remiss, should be treated with charity; he requires evidently more attention than those left behind. They have their ordinary occupations and associations; they miss but a single link in the chain; a traveller has torn himself from all. Again, this feeling must not be omitted in the balance:—he who is at a distance has better grounds for the suspicion of being forgotten, while his friends have an assurance that he cannot possibly forget his home.

Some there are whose labours might be spared; I have long ceased to encourage them. They fill the first page with apologies for not having answered me earlier; this is worse than their silence. The next thing is, to echo every circumstance I have related for their amusement; and their sentences, one after the other, set out with "your account of"—"how delighted you must have been when"—"I envy the journey you had from"—"as, you observe, the climate must be"—and so on to the end of the chapter; and this they call answering me. Then follow loving remembrances from all the family, severally and collectively; and they finish with another apology, far more reasonable than the first, for having "troubled me with so much non-

sense." There are others who fly off into the opposite extreme. To execute something worthy of being sent across the channel, and of the postage, is to them a serious matter—quite an undertaking. They tease their brains for a fit subject, ponder on the best things that may be said upon it, and send you, not a letter, but an intolerable essay. A few general rules may be of use: the principal one is, as in conversation, to keep in mind the taste and character of the person to whom you are writing. It is always folly to assert you have "really nothing to say," unless it is your belief you would remain dumb in his company. Never touch on politics to one who cares not for a newspaper; indeed, it is well to omit them on every occasion, as they read better in print. With a matter-of-fact man, you must imagine yourself in a witness-box; no exaggeration, nothing figurative, I would not trust a metaphor; he may be confused, or misled, or, what is worse, suspect you intend to impose upon him. You have no small advantage in addressing a literary man: with him every thing is interesting that is worth telling; however, news of new books, or of a very old one, ought to occupy a considerable space. To a lady, young or old, a story is acceptable; and let it be spiced with love. By-the-bye, I have to beg pardon of the ladies for not having yet said a word about them. Perhaps, as they have so constantly been praised for their skill in letter-writing, it appeared to me a work of supererogation. I assure them that, were the world entirely composed of ladies, a gentleman—and then he must be the man in the moon—would know better than to drop any instructions on this point. It is said the reason of their excelling is, that they write as they talk. I insist upon it, their writing is superior; at

least, that their pens run on like their tongues in their pleasantest and happiest moods. Then—a great recommendation to a traveller—they have the art of bringing to one's mind home, more than can any master of a house; every word breathes of their own atmosphere, till it is difficult to believe you can be at so great a distance.—Surely I am only next door! After what I have thus said publicly, I trust I shall be rewarded—secretly, if they prefer it; and no doubt this will increase the number of my fair-handed correspondents. Men's letters are, for the most part, of too stubborn a nature; they will not bend to petty circumstances; or, if they do, it is but a kind of Dutch painting—they either omit them altogether, or paint them with an awkward minuteness, leaving nothing to the imagination. "In your next describe your present sitting-room"—were the few words which made me feel the force of the writer's friendship, and the interest he took in all that concerned me, far more than a very long sentence which preceded it, where he expressed his regret at our being separated. Of all letters, the most magical in their effect are those written in a state of pure enjoyment, full of high animal spirits. Sorrows will have their way, and it is fit they should; but if we are happy, why not make it appear? The gravest philosopher can, if he chooses, clap on his wig with the hind part before; and his profoundest thoughts will lose nothing in being uttered with a laugh. So great an epicure in this science as I am, could give as many receipts as that kitchen-favourite, Dr. Kitchener. But at this moment I am all impatience: the post arrived an hour ago, and the treasures of the leathern bag must by this time be sorted.

THE SABBATH IN SWEDEN.

(From *Rae Wilson's Travels in Norway, Sweden, Finland, and Denmark.*)

It is deeply to be lamented, that in a country released from the darkness and superstition of Catholicism, and where the principles of Protestantism and Lutheranism form a fundamental article of the constitution, so little attention should be paid to what I humbly conceive the proper observance of the Sabbath; and that the inhabitants are so little aware how widely this is at variance with the rules of that faith which they profess, and the practice of their brethren in England, Scotland, Germany, and other parts where the blessed light of the Reformation is allowed to shine forth with such unrivalled lustre. It is true that divine service is performed in the different churches on that day; yet the shops are allowed to remain open, carts and carriages passing along during divine service, tradespeople going after their callings, and strolling about as

on any other day. In the afternoon I could discover no difference between the capital of Sweden and that of France in this respect, excepting, perhaps, that in the former the amusements and exhibitions were more calculated for the lower orders than on other days. The public-houses are crowded, pleasure-boats full of people swarm on the waters, and fishing parties are seen along the banks; in short, there is a complete "turn out," or general stir among the inhabitants, who are all in search of amusement. On the Admiralty Island, opposite the palace, where are public walks, are found houses of entertainment, and bands of music, nay, discharges of artillery. The theatre is also thrown open, where I observed just as great a pressure for admittance as in Catholic countries. It is impossible to reconcile such a flagrant disregard

for the Sabbath with Protestant principles, and a due respect for the ordinances of revelation itself, in which the great God, who allowed his dependent creatures six days for the arrangement of their worldly concerns, claimed the seventh as peculiarly his own, calling upon them to keep this day, not in part, but the whole of it, and that in a holy and devout manner. In the words of an apostle, "he that regardeth the day, regardeth it unto the Lord; he that regardeth not the day, to the Lord he doth not regard it." Such a violation of the seventh day of the week most unquestionably calls aloud for correction, and for the strenuous exertions of those ministers of religion on whom so high a responsibility for the care of souls devolves. Let not, I entreat, my testimony alone be taken as an authority for the fact: the reader is only solicited to question any one person who has travelled in this country, whether that respect due to the Sabbath-day is paid to it as in Britain, or in that solemn manner in which the Almighty himself has commanded, in the imperishable page of revelation; and I am perfectly convinced he will find the fact confirmed. At the same time, I do admit it is laid down, that a different mode of calculation has been adopted in Sweden, and the Sabbath is considered to begin on Saturday night, at six o'clock, and to end at the same hour on Sunday.

Now, on this I would remark, that if the seventh day is to be admitted by Christians as "the Sabbath of the Lord their God," it ought to be guarded against invasion; and it necessarily follows, that any part of the preceding has not the least connexion with this day, or *vice versa*; but the Sabbath must be understood to commence after the expiration of the sixth day. On the other hand, if Sunday is to commence from six o'clock, or any other hour, on the last day of the week, and to be finished at the same

hour on the first, when the Sabbath is totally at an end, and the remaining six hours of that day to pertain to Monday,—by this calculation three days are confounded that are totally distinct. Such a principle, I apprehend, can be considered in no other light than an arrangement adapted for the accommodation of man himself, or, in other words, to afford him time for pleasure the moment public service in church is finished; in fine, it must be evident that the whole of the seventh day must be considered as the Christian Sabbath, and, consequently, a period of time that ought not to be diverted from its true purpose, and so disposed of in order to meet the taste of the creature, but to be exclusively set apart as a day of rest and devout contemplation, and altogether distinct from those allowed for business or pleasure by the Almighty. He claims the whole of the seventh as exclusively his own, and requires it to be sanctified, not only in commemoration of his having accomplished the glorious work of creation, during six, and resting on the seventh, which he hallowed, but to keep alive in the mind of men the glorious resurrection and ascension of the great Redeemer of our world. Admitting, however, the Swedish plan to be proper in itself, I can in truth aver, that I took particular pains to discover whether any part of the evening of Saturday was marked by peculiar solemnities; but I could not perceive this in any one respect whatever, either by the sound of church-bells, the shops being shut up, or any degree of tranquillity in the streets. On the whole, if we admit the full force of the language of the word of God, that its righteousness "exalteth a nation," so, on the other hand, indulgence and frivolity, amusement and dissipation, on this most sacred of all days, must be considered in no other light than that of degrading it.*

REVIEW.

THE CONTROVERSY BETWEEN DRS. PRICE AND PRIESTLEY ON THE MATERIALITY OF MIND.

THE names of Priestley and Price are intimately associated with ideas of riots and revolutions. The yells of the Birmingham mob, and the thunder of Burke's anathemas, still sound in our ears with appalling violence. But amid these humiliating recollections we are soothed and thrilled, by seeing our two philosophers retiring from the boisterous contentions of

politics, to "beat together the ample field of science," and to seek that truth, which, in the language of a writer too little read, (1 Esdras iv. 38,) is "the strength, kingdom, power, and majesty of all ages." Waiving, however, all further remarks on the circumstantialities of this well-known controversy, and the amiable spirit in which it was conducted, perhaps our

* In no country that I have visited, is there, perhaps, a more strict regard paid to the Sabbath than in Scotland. A succession of Acts were made by the parliaments, 1503, 1579, 1593, 1661, 1663, 1696, to enforce a proper observance of it. Such was the anxiety to prevent persons from even travelling on that day, that there is an Act of the General Assembly of the church—the highest ecclesiastical court in the kingdom—19th July, 1649, expressly declaring that persons who have occasion to make journeys should be obliged to produce "testimonials from the place where they rested on that day, when they were from home, &c., to their ministers." Farther, by an act of parliament

16th of June, 1646, it is enacted that "skippers or sailors who begin any voyage, or loose ships, barks, or boats on the Sabbath, are to be censured." Even abstaining wilfully from divine service on Sabbath was punished by a fine of twenty shillings being imposed; and if the person was unable to pay, he was to be exposed in the public stocks.

In the seventh century, St. Theodore, archbishop of Canterbury, laid down several regulations to the Church for a rigorous observance in England of this day. Among others, he commanded that "persons were not to put to sea, ride, or travel in any manner, unless to church."

readers will allow us to offer a few general observations on this much-litigated question, relating to the materiality, or immateriality, of the human mind.

Even Dr. Priestly, we believe, admits that, notwithstanding the ceaseless changes that take place in our bodies, there is still a something within us that retains a feeling of identity, through all the vicissitudes of infancy, manhood, and old age; and, likewise, that there is in the machinery of our constitution, a convergence of sensations, ideas, and emotions, as to a common focus, so as that it is the *same something* which sees, hears, understands, believes, doubts, loves, hates, admires, despises, &c. The product of these admissions may be thus expressed: Man possesses a permanent, sensitive, and living something, which, though it resides in the body, is as distinct from it, "as is the swimmer from the flood." Let us then, for argument's sake, call that something "spirit," and the tenement it occupies "matter." We must have some names, (and no matter what they are,) otherwise we could not speak about them.

Let not the reader be startled, when we thus affirm, at the outset, that the *essences* of matter and of spirit may be admitted to be *identical*, without at all affecting the question before us. The term "*essentia*," is said to have been coined by Cicero, but it never obtained general currency till the schoolmen introduced it into their vocabulary, and gave it a prominence in all their metaphysical writings. Locke speaks of two kinds of *essences*, the *nominal*, and the *real*. By the former is meant the idiosyncrasies of an object, or those peculiar and distinguishing qualities which characterise it as a separate existence; or, in short, those very circumstances in which it differs from every thing else, and by which it obtains an independent individuality. The term "*real essence*" is employed to denote the radical elements or principal attributes of a thing; or that which belongs to every such thing, at all times and under all circumstances, in such a way that the mind cannot conceive any thing prior thereto: it is that which, with reference to its subject, presupposes nothing, but yet is itself presupposed in all its qualities; or, in short, it is that intangible, indiscernible, and indescribable something which constitutes the ultimate basis, or substratum, of every essential and accidental, or of every primary and secondary attribute.

But, leaving this for a moment, there is another remark we wish to bring in apposition with it: it is this,—matter and spirit are known unto us *only* as the permanent subjects of certain phenomena, and those phenomena are known only by their resultants on our own consciousness. We cannot, therefore, define either matter or spirit, otherwise than by describing the properties of the one, and the functions of the other; or, rather, we cannot even describe such properties or functions, but fix words or arbitrary marks for their effects upon our own minds. In fact, our absolute knowledge is limited to the phenomena of our individual consciousness. If, therefore, we are asked—what is matter? we can only say—it is that which (to us) necessarily associates in itself certain ideas, designated solidity, extension, &c. And if we are asked—What is spirit? We can only answer, in the same way,—it is that which (to us) necessarily associates in itself certain ideas which we call thought, feeling, &c. The former is merely an arbitrary name, given to a certain aggregation of ideas of certain qualities; and the latter is an equally arbitrary name, given to a certain other aggregation of other qualities or properties.

Here, however, it is important to observe, an elementary principle of our nature renders it impossible for us to believe that qualities can exist in isolated independence. We *know* that matter is not mere extension or colour, &c.; we *know* that mind is not mere thought or feeling, &c.; the conclusion, therefore, is

inevitable, that there exist somehow, and somewhere, certain substrata, to which such properties are annexed, or in which they inhere. Of these substrata, in themselves, we can form no idea whatever, unless indeed it be the simple one of *existence*; on which supposition, the essences of all things would be identical; so that, as far as our *actual apprehension* extends, the substratum of spirit is virtually the same as the substratum of matter; because, in fact, each amounts only to a certain indefinable ultimate conception, to which separate classes of subordinate conception are attached. In the one case, this ultimate conception receives a series of certain adjuncts; and in the other case, it receives another series of certain other adjuncts; and these adjuncts give to the respective agglomerates a generic difference of nature and of character. Even granting, then, the basis or ultimate conception to be the same in *both*, still as it is to the modification of that, combined with various subordinate ideas, that we give the names "matter" and "spirit," the names have meanings perfectly distinct; indeed, so distinct, that considering them as representatives of complex ideas, they have no element in common, excepting the simple idea of the attribute of *being*. Admitting, therefore, that mud, sunbeams, and souls, are but different combinations of properties, attached to the same *parent substratum*, it is obviously quite as proper to say that a sunbeam is but a refined species of mud, as that spirit is but a refined species of matter; or, to put it in a more mathematical form, let a certain combination of qualities be called A, and another combination of different qualities B; then, whatever the foundation of these separate combinations, A is no more B, than B is A, or X Y Z, &c.

Perhaps, however, our meaning will be more clearly understood if we place it in a different light. This, therefore, we shall attempt, as far as possible, to prevent misapprehension. Words are nothing more than arbitrary signs or representations of our own conceptions, having no direct relation to things as they are in themselves. Let matter and spirit be thought of as you please, the words stand for nothing more than agglomerates of our own ideas, so that the difference or identity of their meaning must correspond with the difference or identity of the conceptions they are employed to express. He whose mind is so formed that in the complex idea denoted by "matter," he finds the same governing elements as in the equally complex idea denoted by "spirit," has, in reality, but one idea for the two representatives; so that, to him, spirit is strictly material, and matter is strictly spiritual.

In consequence of the language of philosophers, that we know nothing of objects, *except their properties*, we are apt to impose upon ourselves, by fancying that we understand all about the said properties; whereas, in reality, we know nothing more of the properties *immediately*, than of the substrata to which they are annexed. To us, the term "property" is nothing more than the symbol of a certain idea: there is, doubtless, an efficient cause *ab extra* to suggest the idea; but what that cause is, human sagacity can never discover. We can take cognizance of it only as a phenomenon of consciousness. Take divisibility as an instance: there is of course an extrinsic cause,—our constitution, as rational beings, compels us to believe this; at the same time, it is evident to us, "divisibility" is but a conception of our own coining. Now, here the question is, can this conception of divisibility be involved in the more complicated conception of spirit? If not, as all will allow to be the case, there comes the inquiry,—is that fact a sufficient reason for placing the aggregation of ideas, involving divisibility, called "matter," and the other aggregation of ideas, *not* involving divisibility, called "spirit," under different divisions among the objects of knowledge? After

all, then, it is simply a question of classification—a classification of our own combinations of our own conceptions.

But let us illustrate this by a few examples: We find ourselves surrounded by myriads of objects, which have many and obvious features of agreement and disagreement; and, according to our perception (or, as Dr. Brown calls it, *feeling*) of their agreement or disagreement, we arrange them under separate classes. *e. g.* There are many objects which have four legs: all these, however they may differ in other respects, we group together under the term "quadrupeds;" but there are many others which have only two legs: and these, however they may differ among one another, we designate "bipeds." Now, although quadrupeds and bipeds confessedly have many properties in common, (that is, they excite similar ideas in us,) *e. g.* existence, colour, &c.; still as long as our principle of classification is recognised, it is of no consequence whether the principle be a good one or otherwise, no one will say that a biped is a quadruped, or yet that a quadruped is but a refined species of biped. Again, we see a certain object, which contains a certain degree of heat, exhibits a certain colour, and will ignite combustibles, &c.; this we call "fire;" we likewise see another object, which possesses a certain other degree of heat, exhibits a certain other colour, and will even extinguish fire, &c.; this we call "water." Yet although fire and water have many elements in common, *e. g.*, existence, extension, &c., no one will say that water is fire, or that fire is but a refined species of water. Once more: there are many objects around us which exhibit the properties of extension, &c., without thought; all these, however various, we call "matter." There are others which exhibit the properties of thought and feeling, &c., without extension; and these, however they may differ among themselves, we call "spirit." Now then, be it remembered, the aggregation of ideas, denoted by "matter," has but one *known* feature in common with the aggregation denoted by "spirit," namely, simple

entity. And as it is with the *known* properties alone we have to do, otherwise the words would symbolise *unknown*, that is to say, *no* ideas, whatever principle of classification be adopted, it is absurd to say that *spirit* or *mind* is material.

It appears to us, therefore, that by a proper analysis, this long-agitated controversy may be shown to be mere logomachy. Let the materialists point out but one definite quality which they would ascribe to mind, and then we shall have a legitimate question to debate, as to whether or not that be appropriable. If they predicate extension, or figure, or colour, &c., we shall know how to cope with them; but while they adhere to alternated generalities, they are placed beyond the reach of argument.

After all that Dr. Priestley has said about matter, as consisting of nothing but attractions and repulsions, it must still be admitted that matter and spirit are different species of attractions and repulsions; or at least *radically different modifications* of such attractions and repulsions. Let it be granted that in all their properties they differ *in toto*, except *being*, (if *being* can be called a *property*), and we care little by what names they may be called. If any one thinks these appellations should be transferred, let him do so: let that which is extended be called "spirit," and that which thinks be called "matter;" yet even then, the terms should not be used indiscriminately; or, if he pleases, let him assume that *entity* is the essence of both matter and mind, (an assumption, by the bye, perfectly gratuitous,) still, as matter is *one* modification of that entity, and mind *another*, and as these modified totalities are generally different, or rather in most respects are diametrically opposite, we repeat, that to say the human *mind* is *material*, is a glaring contradiction in terms.

We have been led to these remarks by glancing over a recent publication, whose object is to show "the materialism of the mind;" that work, however, is so impregnated with the lowest scurrility, that we shall not stoop to mention its name,—for it is beneath the dignity of refutation. F. F.

MORNING.

THROWN on a radiant cloud of golden light,

The rosy-fingered morn rides up the sky,

Glittering with gems insufferably bright,

'Mid the pale glory of her forehead high.

Over her shining car the fairy hours,

With silver wings, in airy circles fly,

Bidding the fragrant winds go forth and sigh

Their waking music to the sleeping flowers.

Perched in the coverts of their leafy bowers,

The shrill-voiced minstrels sing their matin lay,

And dewdrops, coloured by the sun's pure ray,

Fall from the waving boughs in pearly showers.

The streamlet wakes anew his mellow song,

As 'mid the daisied banks he glides along.

WILD summer roses to the blushing morn

Their fragrant incense from the hedgerows fling;

And violets, purpling 'neath the shadowy thorn,

Breathe their rich odours; and the musky wing

Of the low-whispering breeze is scattering round

A thousand sweets at day's awakening.

The valleys lift their voice, the meadows sing,

The everlasting hills, with verdure crowned,

Fling back the echoes of the joyous sound.

The ocean glitters in the deepening glow,

While silver waves with softest music flow

On shingled beach, or kiss their rocky bound.

And men from pleasant dreams of sleep arise,

As morning journeys o'er the azure skies. T. W. A.

MUSIC AND MUSICIANS.

THE American physician, Dr. Rush, thus speaks of the utility of singing, not only as an accomplishment, but as a corrective of the too common tendency to pulmonary complaints. Vocal music, says this celebrated writer, should never be neglected in the education of a young lady. Besides preparing her to join in that part of public worship which consists in psalmody, it will enable her to soothe the cares of domestic life; and the sorrows that will sometimes intrude into her own bosom may all be relieved by singing, when sound and sentiment unite to act upon the mind. I here introduce a fact which has been suggested to me by my profession; and that is, that the exercise of the organs of the breast by singing, contributes very much to defend them from those diseases to which the climate and other causes

expose them. The Germans are seldom afflicted with consumptions, nor have I ever known but one instance of spitting blood among them. This, I believe, is in part occasioned by the strength which their lungs acquire by exercising them in their vocal music; for this constitutes an essential branch of their education. The music-master of our academy has furnished me with an observation still more in favour of this opinion. He informed me, that he had known several instances of persons who were strongly disposed to consumption restored to health by the exercise of their lungs in singing. The best foreign singers have been remarkable for longevity, many reaching the age of ninety years and upwards.

PRESS WARRANT FOR SINGING BOYS.—The only

impressment remembered in the present age is that cruel expedient which was once resorted to for procuring a sufficient number of able men to serve in the navy; but in former times it was frequently resorted to for obtaining workmen for the service of the king, and, according to the Sloane MS. in the British Museum, No. 2035, a species of the same tyranny was practised even in the time of Elizabeth for the purpose of getting choristers for the different royal chapels. The following is a copy of the royal mandate, which bears her majesty's autograph:—

“By the Queene, Elizabeth R.

“Whereas we have authorised our servaunte Thomas Gyles, Mr. of the children of the cathedrall church of St. Paule, within our cittie of London, to take upp suche apte and meete children as are most fitt to be instructed and framed in the arte and science of musicke and singinge as maye be had and found out within anie place of this our realme of England or Wales, to be by his education and bringinge up made meete and liable to serve us in that behalf, when our pleasure is to call for them.

“Wee therefore by the tenor of these presents will and require you that you permit and suffer from henceforth our saide servaunte Thomas Gyles and his deputie or deputies, and every of them to take up in anye cathedrall or collegiate church or churches, and in everye other place or places of this our realme of England and Wales suche childe or children as he or they or anye of them shall finde and like of, and the same childe and children by vertue hereof for the use and service aforesaide with them or any of them, to bring awaye withoute anye lettes, contradicions, staye, or interruptions to the contrarie, charginge and commandinge you and everie of you to be aydinge, helpinge, and assistinge to the above named Thomas Gyles and his deputie and deputies in and aboute the due execution of the premises for the more spedie, effectuell, and better accomplishing therof from tyme to tyme, as you and everie of you doe tender our will and pleasure, and will answer for doinge the contrarie at yor perilles.

“Given under our signet at our Manor of Greenwich, the xxvth daye of Aprill, in the xxviii yere of our reign.

“To all and singular Deanes, Prouostes, Maisters, and wardens of Collegies, and all ecclesiasticall psons and mynisters, and to all other our officers, mynisters, and subjects to whome in this case it shall apperteyne, and to everye of them greetinge.”

MALIBRAN.—A young English singer in the chorus of the Italian Opera in Paris, not having the means to follow the company to London, resolved upon taking a benefit concert, Malibran having promised to sing for her. By chance, on the evening fixed for her concert, Madame Malibran was summoned to the Duke of Orleans' party. The bénéficiaire, uneasy and alarmed, requested the audience to be patient. 11 o'clock had struck, and Malibran came. After singing several romances, she took the lady aside, and said, “I promised you my evening, you know: well I have contrived to make a double harvest of it. Before I came here I sang for you at the Duke of Orleans', and here are the hundred crowns he has sent you.”—*Musical World*.

SHEEP CHARMED.—In my early youth, I went with some other young people, one day during the extreme heat of summer, to seek for coolness and fresh air on one of the lofty mountains which surrounded the Lago Maggiore, in Lombardy. Having reached by day-break the middle of the ascent, we stopped to contemplate the Borromean isles, which were displayed under our feet, in the middle of the lake, when we were surrounded by a large flock of sheep, which were leaving the fold to go to their pasture. One of our party, who was no bad performer on the flute, and who

always carried his instrument along with him, took it out of his pocket. “I am going,” said he, “to turn Corydon; let us see whether Virgil's sheep will recognise their pastor.” He began to play. The sheep and goats, which were following one another to the mountain, with their heads hanging down, raised them at the first sound of the flute, and all, with a general and hasty movement, turned to the side from whence the agreeable noise proceeded. Gradually they flocked round the musician, and listened with motionless attention. He ceased playing; still the sheep did not stir. The shepherd with his staff obliged those nearest to him to move on. They obeyed; but no sooner did the flute begin again to play, than his innocent auditors again returned to him. The shepherd, out of patience, pelted them with clods of earth; but not one would move. The flute played with additional skill; the shepherd fell into a passion, whistled, scolded, and pelted the poor fleecy amateurs with stones. Such as were hit by them began to march, but the others still refused to stir. At last, the shepherd was obliged to entreat our Orpheus to stop his magic sounds; the sheep then moved off, but continued to stop at a distance, as often as our friend resumed the agreeable instrument. The tune he played was nothing more than the favorite air of the opera at that time performing at Milan. As music was our continual employment, we were delighted with our adventure; we reasoned upon it the whole day, and concluded that physical pleasure is the basis of all music.—*Life of Haydn*.

HAYDN used to relate, with much pleasure, a dispute which he had with a music-seller in London. Amusing himself one morning, after the English fashion, in shopping, he inquired of a music-seller if he had any select and beautiful music? “Certainly,” replied the shopman, “I have just printed some sublime music of Haydn's.” “Oh,” returned Haydn, “I'll have nothing to do with that.” “How, sir, you will have nothing to do with Haydn's music! And pray what fault have you to find with it?” “Oh, plenty; but it is useless talking about it, since it does not suit me: show me some other.” The music-seller, who was a warm Haydnist, replied, “No, sir, I have music, it is true, but not for such as you;” and turned his back upon him. As Haydn was going away, smiling, a gentleman of his acquaintance entered, and accosted him by name. The music-seller, still out of humour, turned round at the name, and said to the person who had just entered the shop: “Haydn!—aye, here's a fellow who says he does not like that great man's music.” The Englishman laughed; an explanation took place, and the music-seller was made acquainted with the man who found fault with Haydn's music.—*Life of Haydn*.

JOHN BULL.—Dr. John Bull was the first Gresham professor of music, and organist and composer to Queen Elizabeth. John, like a true Englishman, travelled for improvement, and having heard of a famous musician at St. Omer's, he placed himself under him as a novice; but a circumstance very soon convinced the master that he was inferior to the scholar. The musician showed John a song, which he had composed in *forty parts*!—telling him at the same time, that he defied all the world to produce a person capable of adding another part to his composition. Bull desired to be left alone, and to be indulged for a short time with pen and ink. In less than three hours, he added *forty parts* more to the song. Upon which the Frenchman was so surprised, that he swore in great ecstasy, he must be either the *Devil* or *John Bull*; which has ever since become proverbial in England.

REFUSAL.—A skillful musician, who had acquired a large fortune by marriage, was asked to sing in company. “Allow me,” said he, “to imitate the nightingale, which does not sing after it has made its nest.”

THE TRUE KINDRED OF CHRIST.

To have seen a place or a person of eminence is a circumstance on which we are accustomed to reflect with pleasure, and which we relate to others who have not enjoyed the gratification, with a feeling of superiority. Had we seen the Son of God—had we traced the features of his heavenly countenance—had we listened to the kind and encouraging tones of his voice—had we heard him addressing the astonished and delighted multitude—seen him healing the sick, comforting the distressed, and raising the dead—had we gazed on his sacred person after his own resurrection from the dead—how often should we have been heard reverting to the fact—reverting to it as the most interesting part of our history—and perhaps claiming to ourselves a degree of credit and authority on account of it. Thus, when the apostle Peter was exhorting the elders of the Christian church, he claimed to be heard, not only because he himself was an elder, but also because he had been “a witness of the sufferings of Christ.” And our Lord himself declares that, in the last day, many will claim admission into heaven, partly because they have eaten and drunk in his presence, and had seen him teach in their streets.

Had we not only seen him, but had we been also on terms of friendship with him—had he taken us with him when he left the multitude, and explained to us his public discourses, and admitted us to familiar intercourse, and even permitted us to recline on his bosom, how distinguished would have been the honour, and how many would have envied us its possession.

But still more—had we been related to Christ according to the flesh, how much greater the distinction still. Many employ their time and their wealth in tracing back their pedigree to the great and mighty of the earth; they value an exalted ancestry even more than an honourable character; and if they can but establish a remote and doubtful alliance to it, they make it their boast and their glory. But if it be an honour to be allied to any earthly dignity—to any one to whom man has given a title—then who can estimate the distinction of being related to Him who is the great fountain of all the honour and authority in the universe? If it be an honour to be related to the wise—in him are hid all the treasures of wisdom and knowledge; every sentence he uttered was a revelation; and he has given to us the key of the knowledge which opens heaven and leads to eternal life. If it be an honour to be allied to the rich—he is the heir of all things:—or to be related to the conquerors of the earth—he is the conqueror of sin, and death, and hell. And hence the apostle Paul, when enumerating the peculiar distinctions of the Jewish nation, describes it as one, that

[No. 25. JUNE 21, 1837.—2d.] VOL. I.

Christ was born of it: “Whose are the fathers; and of whom, as concerning the flesh, Christ came, who is over all, God blessed for ever.”

But, on a certain occasion, the Saviour declared that there is an honour greater than that of having seen him—of having been admitted to occasional intercourse with him—or of even having been related to him by the ties of human consanguinity—namely, the honour of a spiritual relationship. The union to him which originates in faith, is cemented by love, and which leads to a life of holy obedience, is an honour which swallows up every other distinction, and which puts the believer into the possession of all he can desire or enjoy. “Jesus stretched forth his hand towards his disciples, and said, Behold my mother and my brethren. For whosoever shall do the will of my Father, who is in heaven, the same is my brother, and sister, and mother.”

Here, our Lord describes the *man who is most nearly related to him*. When a person of property dies intestate, it is considered a point of great importance to determine who is the nearest of kin—who has the first and the strongest claim to the property of the deceased. But the question here pending is,—who is the most nearly related to Christ? because to him devolves spiritual wealth and honours beyond all computation. Guided by the language we have just quoted, the question admits of an easy solution. The happy individual may be found in a palace, or in a hovel—pining in poverty, or rolling in affluence—lying in the depths of obscurity, or standing on the pinnacle of fame—destitute of learning, or sitting in the chair of philosophy and wisdom; his ancestry, age, and external circumstances, are altogether unimportant;—but, wherever he is to be found, he is distinguished by *doing the will of God*. This is his *proprium*—his distinctive badge. He avails himself of every opportunity which he enjoys of learning that will. As far as he understands it, he loves it; and loves the Saviour for having revealed it. He is conscientiously earnest in obeying it, however humbling the doctrines which it requires him to believe, and however difficult the duties which it calls him to perform; he counts it his meat to do the will of his Father who is in heaven. He knows no other rule to walk by than the word of God—no other end to aim at than the glory of God. And, this being his character, he is related to Christ. He is moving in a line with Christ; and tending, though not with equal steps, to the same celestial goal. He has been born into the same family—partakes of the same spiritual nature—and, as an heir of God, he is said to be a joint-heir with Christ. However obscure, therefore, the station he may occupy—whatever the country which gave him birth—and whatever the circum

2 c

stances which may combine to depress him—all such considerations are merged and lost sight of in that greatest of all distinctions, that *he does the will of God*;—while the Saviour extends his hands towards him, and says, *Behold my mother, and sister, and brother.*

Here, too, we learn *the superiority of this relationship to Christ to every other.* It is more *vital*;—by which we mean, that it is more essential to our spiritual life than our natural ties are to our natural life. The rupture of the latter we may survive; but Christ is our life, and were it possible for the ties which bind us to him to be broken asunder—though we might live on as men, as Christians we should perish.

It is more *dignified* than any earthly relationship. It allies us to the throne of God—to the royalty of heaven—to dignities which will survive the wreck of all things earthly, and live on when time shall be no more. By our kindred to him, our weakness becomes linked to Almighty strength, and our exigence to Divine all-sufficiency. We become entitled to share in all his possessions and glories.

This union is more *tender* than any earthly connexion. The language of Christ on this point is remarkable; he does not say, “the same is my brother, or sister, or mother;” but, “the same is my brother, *and sister, and mother.*” He is bound to me by a tie so tender and intimate, that it includes all relations in one. I feel for my obedient followers all the tenderness due to a mother—all the kindness and generous regard a man would feel towards his own sister—and all the faithful friendship due to an affectionate brother.” Whatever there is peculiar in the affection or regard of the different endeared relations of life, all centres in the love of Jesus to his sincere disciples.

And this union is more *enduring* than any earthly connexion. Mere human relationships are daily breaking up. Whole families, with every branch belonging to them, have entirely disappeared. How probable is it that the family from which our Lord himself descended, in his human nature, is now entirely extinct. But the relation which subsisted between him and his primitive disciples is not extinct: he can now point them out in the ranks of the blessed above, and say, *Behold my mother and my brethren.* And when every earthly tie shall be dissolved—when he shall come to receive his people to himself—he declares that he will recognise and acknowledge them all as his brethren, his true and only kindred: for he will say to such as have cherished a benevolent and fraternal spirit towards his followers, “inasmuch as ye have done it unto one of the least of *these my brethren*, ye did it unto me.” He will look around on the

assembled world, as he once did on his assembled hearers, and, extending his hand toward them, will draw on them the admiring regards of the universe, by saying, *Behold my mother and my brethren.* And, Oh, who would not in that day gladly disclaim relationship to the noble and mighty of the earth, rather than be destitute of relationship to Christ! Who among the proudest and the loftiest will not then wish that he had claimed kindred with the dust which he almost disdained to tread—that he had said “to corruption, ‘Thou art my mother,’ and to the worm, ‘Thou art my sister’”—rather than be destitute of relationship to Christ? Who among the despisers and persecutors of the saints will not deplore their folly, and envy the faithful the relationship which binds them to Christ! Every other connexion will then have melted away before the fires of the last day—the golden chain which binds his people to himself will be the only remaining bond—and that shall remain for ever; for, saith he, “because I live, ye shall live also.”

How utterly insufficient is every other relationship to Christ than that which arises from faith, and love, and holy obedience! How little has it availed the Jews that they are related to Christ by the ties of country: and as little will it avail them in the last day, when the nations shall be seen coming from the east and from the west, from the north and from the south, to sit down with the patriarchs in the kingdom of God, and they themselves shall be cast out. How little will it avail those who enjoyed the personal ministry of Christ—or those who performed miracles in his name—to plead their peculiar privileges, when he shall say to them, “Depart from me, ye workers of iniquity, I never knew you.” And as useless will it be for one nominal Christian to plead that he occupied a high station in the church—and another that he maintained a profession of religion—and a third that he was born of a pious ancestry—and a fourth that he gave even his body to be burned as a martyr to religion. If they were not his humble and sincere followers, he would say to each of them, as the Almighty is represented saying of one of old, “Though this man were the signet on my right hand, I would pluck him off and cast him away.” The salvation of our Lord’s brethren—the salvation of the virgin mother herself—arose not from the alliance of blood, but from sincerely believing in his name. Nothing, nothing short of a Divine and scriptural relationship to Christ will ever entitle us to the joys of heaven. But, possessed of this, let the Christian rejoice in the assurance that the hand which unties every other bond, shall only draw the principle which binds him to Christ closer than ever, and render it indissoluble.

MATRIMONY.

A LETTER TO THE GENTLEMEN OF NEW-YORK. BY A LADY.

MY DEAR YOUNG FRIENDS,

I HAVE been long solicited to write a letter to the young gentlemen on the subject of "Matrimony." I have declined heretofore, thinking some one more capable of the task would write something upon this important subject. But as I have not seen any such work, and feeling a deep solicitude for the happiness of mankind in general, and believing, as I do, after a careful investigation, that most, if not all, the misery and unhappiness which exists among many who have joined in the sacred bonds of wedlock, arises from the wrong choice of a wife, I am induced to comply with the request; but must beg the patience and forbearance of those who may peruse this letter, it being my first attempt to throw before a criticising world the scribblings of my pen.

I know of no way that I can express my own views, on this subject, in a more vivid manner, than by relating to you the history of two gentlemen, which I had from a source that cannot admit a doubt of its truth.

William Meed and Henry Cross were sent to school at the age of twelve years, in the village of C—, a few miles distant from their native home. Their parents were neither of them rich, but were what was called, forty years since, good livers. They had, each of them, neat little farms, well stocked, and situated in one of the flourishing towns in the land of steady habits. The two eldest sons were selected, from among their ten children, to receive a college education. They were designed in future, by their fond parents, for the ministry; for in those days, in the land of steady habits, every parent thought one of his sons, at least, must be a clergyman.

William and Henry were of the same age. They had been playmates from their infancy, and had become very much attached to each other; their dispositions were as near alike as two dispositions could be, both amiable, unassuming, and affectionate; they had never been among strangers before; they now clung to each other with more ardour, and pledged themselves never to forsake each other; they soon laid aside all feelings of home sickness, and devoted their whole time to their books. A few weeks only passed before the two youngsters had gained the confidence of their teacher, and the love and respect of all the school. When other boys were seen sporting about the play-ground, William and Henry were diligently studying; consequently, they made rapid progress. In three years they were prepared to enter college. After spending a few months with their friends, they entered at Yale. Never did two youths enter that institution with higher hopes, and more determined purpose to be great men, than William Meed and Henry Cross.

At the close of their college term, they left with high applause. They were now to seek a profession: their parents wished them to enter on the study of divinity; but they were too conscientious to attempt to fill that station, without being called by a higher power than man. Although they were strictly moral, and entertained a high regard for religion, they had no reason to believe they had been regenerated by the blood of Christ. And without that regeneration they were sensible they could not perform the duties devolving on a minister of Jesus Christ. Their parents, finding their sons were determined not to comply with their wishes, gave them the liberty of choosing a profession for themselves. The young men consulted together, and concluded they could best realise their early ambition of being great men, by reading law. They lost no time in procuring a situation with one of the most celebrated of that profession; and with the same eagerness and diligence they pursued the study of law, until they were admitted to the bar.

Now a new scene opened before our two heroes. All their wants had hitherto been supplied by their affectionate parents; but now they were to be cast on their own exertions for support. This circumstance, however, did not in the least discourage them; it gave them new energy. About this time there was great emigration to Ohio, then the "far west." William and Henry determined to seek their fortunes in that new country. But few days elapsed after they came to that determination, before they bade adieu to their home, parents, brothers, sisters, friends; and taking their packs on their backs, and staff in hand, set out on foot to seek a home, and fame, in a strange land. After several weeks' travel, and enduring great fatigue, and escaping many dangers to which they were exposed, from encountering Indians and wild beasts, they arrived at a little village, (now a great city,) on one of the banks of the Ohio river. As there was at that time no lawyer in the place, they thought that both might find employ. They had been companions so long, that neither could endure the thought of a separation; they therefore hired a small room together. Very soon they had as much business as they could attend to, and in a few years they had each acquired a small fortune, and were designated by their neighbours as the rich lawyers. They were now twenty-eight years old; and, strange as it may appear, had never been in love. All their time—all their energy, had been devoted to the pursuit of fame and money. They had secluded themselves from female society almost entirely; and the reason for this we give in their own words, when they first went to school: "If we go among the girls

2 c 2

they will steal our hearts, and then we may hang up our fiddles, about being great or rich men: we will first get the cage, and there will be birds enough who will gladly fly to it." They had now got their cages, and they thought (and rightly too) that nothing now was wanting to complete their earthly happiness, but birds, or, in other words, amiable wives. But to get these was not so easy as they had anticipated. In that new country there were but few unmarried ladies: but William and Henry had determined to get married; they therefore attended church more frequently than before, visited their neighbours oftener; but it was all in vain for the two lawyers to look any longer among the fair maidens of Ohio. William and Henry at last concluded to make a visit to the land of steady habits once more, and take to themselves wives from among the honest farmers' daughters of their own native village.

This being settled, they set out on their journey in the month of August, 18—. On their arrival, they made it their first business, after spending a few days with their aged parents, to make a visit to all their old friends. By the old people they were received as their own children; but they were forgotten by the young people; those that were of their own age had long since married, and, like themselves, sought homes in the new country. They very soon, however, became acquainted with all the young ladies.

Some weeks had passed, and as yet they had not made the object of their visit known. But the young ladies had not been silent observers of the rich lawyers; they had, as the saying is in New England, all set their caps to catch them, except Helen Wilson: she was the daughter of a poor farmer, and an only child. Mr. Wilson having once been in good circumstances, had given his daughter every advantage of education; but now he was, through sickness and misfortune, very poor. Helen had been her parents' only support for four years; she had been able, thus far, by teaching the village school, to supply their every want; but this was no task to Helen; she assisted her mother in the domestic affairs, and there was not a happier family than Mr. Wilson's in the whole village. Helen was a child when our two heroes first left their native village; she was now in her twenty-second year. In her were united the most unaffected modesty, and the highest ease and elegance of manners. Her dress was plain and simple, arranged with perfect taste, and in such a way as to set off her elegant form with the greatest effect. Intelligence beamed in her soft blue eye; and when she spoke, her words conveyed a charm that went to the soul. Her voice was music, and every movement was the perfection of grace. Yet she seemed wholly unconscious of the effect she produced upon the beholder; and this circumstance threw an irresistible loveliness over every other

charm. Her mother was devoutly pious, and had instilled into the mind of Helen all the pure principles of religion. This instruction had produced its legitimate effect. It had not only given to her life and character an almost angel purity, but had so chastened and beautified her whole behaviour and conversation, as to attract the love and admiration of every heart. Old Mr. Wilson had known William when a boy; he had often dandled him on his knee, and told him he must be a good boy if he would be a great man. William thus became very much attached to Mr. Wilson, and though he had not seen him for many years, he still loved him; and although he had become poor, and thought but little of among the wealthy villagers, William made his first visit to him. The old man was rejoiced to see him; and after a hearty shake of the hand, seated him by his side, asking questions three times as fast as William could find words to answer. Helen's entrance to the room, however, afforded William a moment's rest. "Come here, my daughter," said the old man, "I suppose you do not know this young man," pointing to William. "I do not." "He is the son of Mr. Meed; you have heard his sister speak often of him." "Yes." Helen seated herself for a few moments, and then rose to assist her mother in the same room. William, although to appearance in deep conversation with the old man, watched every motion of Helen; and when he left the house, he felt emotions that he had never before experienced. He hastened to find Henry, to tell him of his feelings. Henry could sympathise with him in every feeling; he had the same morning been smitten with the beauty of Susan Green, the daughter of a wealthy merchant. Susan was tall and graceful, her skin of alabaster whiteness; the profuse tresses of her auburn hair hung carelessly over her shoulders, and half concealed her swan-like neck; her eyes black and piercing: and on her lip played a bewitching smile. She had just returned from a fashionable boarding-school, where great attention was paid to the outward adorning of its pupils, while the mind was left a barren wilderness. Susan was an only daughter, and had been the idol of her parents. No inclination had been crossed—no wish ungratified. Her dresses were splendid, and seemed to have been selected with a view more of extravagance than of propriety. She knew nothing of domestic concerns; her time was spent in walking, riding, and visiting; religion was never thought of; her parents thought religion to be the work of more advanced years; and as they knew but little about it themselves, they had not troubled their daughter with it; they undoubtedly meant well; but the error which they committed was fatal to the temporal, and, it is to be feared, the eternal welfare of their child.

Henry, in the heat of his passion, was blinded to all these imperfections in Susan. Without

delay, he solicited her hand: it was granted, and the day appointed for their marriage; it was Susan's eighteenth birthday that was selected. She had been accustomed, from her infancy, to keep this as a holiday. The day arrived; all the villagers were invited; musicians were hired from the city, and a splendid supper prepared. After the knot was tied, the remainder of the night was spent in dancing, as was the fashion with some in those days. Henry would have preferred to follow the example of William, who had the same evening taken his lovely bride, dressed in a plain white muslin, to the village parson's, without any attendants but her parents; yet he would not openly disapprove of the wishes of his intended bride.

The next morning they set out on their journey to Ohio, accompanied by the parents of the two young ladies. William had persuaded the parents of his beloved Helen to go with him to his home, and there spend the remainder of their days, free from cares. The party soon arrived at their place of destination. Helen was delighted with the new country, and commenced the duties of her family with cheerfulness and delight. She was ardently devoted to her husband; it was her only aim to make him happy. When he returned from his day's labour, she met him with a smile; and in her storehouse of knowledge she never failed of finding something to talk of—to interest and please. She soon became acquainted with many of her neighbours, and by them she was beloved and esteemed, as she had been in her own native village. Year after year passed away, and nothing marred the pleasure and happiness of this amiable couple.

Through the instrumentality of Helen, William, soon after their marriage, was brought to feel that he was a sinner, and destitute of the grace of God in his heart. He sought the Saviour, and was renewed by his Spirit. They now engaged in all the benevolent operations of the day; and no two have ever done more to disseminate the pure principles of religion through the western country, than Mr. and Mrs. Meed. Helen is now the mother of seven children. William has amassed a large fortune, and retired from practice, one of the most respectable and most beloved gentlemen that the western country affords.

But it is not so with Henry. He was enamoured with the beauty of Susan's face and figure, and never thought, until too late, that the beauty of a wife should consist in a well-cultivated mind, and industrious habits, to insure happiness. Susan knew nothing of governing a family. Totally ignorant of domestic affairs, and, like too many young ladies of the present day, she had imbibed the false idea, that it was a disgrace to be seen in her kitchen, giving orders to her servants; and, as every thing was trusted to their management, consequently much was

wasted. Her house was constantly in an uproar. When Henry sought for happiness and pleasure by his fireside, he was continually harassed with complaints from his wife, about the bad conduct of the servants. Henry, thinking all his wife said must be right, scolded the servants, turned them away, got more, but all to no purpose. Every day things grew worse and worse. His wife was unpleasant; his children neglected; and so it went on until his fortune was far spent, and he had to labour night and day to support his wife and two children. After repeated efforts to remedy the evil, and finding no change, he became discouraged; his once mild and amiable disposition became soured, and discord arose between him and his wife. His home had become a place of misery to him, and he dreaded to enter it. Happiness is the object after which all mankind are seeking; and when it cannot be found in one place, the pursuer turns to another. So it was with Henry. Fatal mistake! He deserted his home, and made the tavern his place of resort, to spend his leisure hours; there he mixed with the vicious, and took the intoxicating cup to drown his troubles! Ah! how many thousands have done the same! His business was neglected, and poverty stared him in the face. His wife became more turbulent, and often angry words passed between them, and the neighbours were obliged to interpose to quell their disturbances. So they lived, until they became the by-word of the place, and were despised by all who knew them. Susan at last returned to her father, leaving her children to the mercy of a drunken husband. These poor little children—one ten, the other but eight years of age—were now turned into the street, ignorant and dirty, to beg a living. This great change in the once pleasing prospects of Henry Cross, was a painful thing to Mr. and Mrs. Meed. William had never forsaken Henry, but used every means in his power to reclaim him. But when the seeds of vice have become deep-rooted in the heart of man, it is impossible to destroy them. So it was with poor Henry. His once high hopes of fame were blasted; his ambition and pride of character had been annihilated by deeds of evil. From his children he was weaned; and the world, in his sober moments, appeared to him now nought but a dreary waste. With these feelings, and but little money, (which William had given him,) he bade adieu to the once happy, but now deserted home, not knowing or caring which course he took.

Helen, whose heart was open to every noble deed of charity, proposed to her husband to take under their protection the poor despised children of his early friend. This William had long wished to do; but, unwilling to bring any additional cares upon his wife, he had kept his feelings concealed from her. But when Helen made the proposition, he was rejoiced, and immediately gave orders to have the two children, a boy and

girl, brought to his house, where they have, under the instruction of Mrs. Meed, and the example of her well-disciplined family, become respectable and beloved.

Susan reached her father's house just as her mother was breathing her last. She had been attacked a few days before with a fever, which proved fatal. Mr. Green had previously been made acquainted with the unhappy situation of his daughter; but he did not once think that she was the cause of all her unhappiness, and that on him, and his wife, who now was a lifeless corpse before him, rested much blame. Had they governed and subdued her temper, taught her to be industrious, instilled into her mind the pure principles of religion; in short, if they had "trained her up in the ways she should have gone," she would have been as bright a star as ever shone. She was committed to their charge in perfect form of body and mind; but they, like many other parents, permitted the tender plant to grow up without cultivation. She now became mistress of her father's house; and, as it had been in her own, so it was there—all confusion and discord. She disagreed with all her neighbours; and the once happy little village of P— was constantly in a broil. The death of Mrs. Green, and the bad conduct of Susan, weighed so heavily on the mind of Mr. Green, that he died, two years after the return of his daughter, with a broken heart.

Susan was now left sole heir of twenty thousand dollars. She was yet young and good looking. To spend the remainder of her life in a little country village, she could not think of. Six months after the death of Mr. Green, Susan

located herself in the city of B—. She had cast aside her habiliments of mourning, and arrayed herself in the most costly apparel. About this time a young Englishman, just emigrated from his native land, was seen promenading Mainestreet; and as Susan made this her chief resorting place, the young Englishman saw her, and, as she says, fell in love with her; but as it turned out, it was the money, that some one told him she possessed, that he was in love with. He sought an interview, and in three days they were married. He soon worked the card so as to get into his hands all her money, and, bidding adieu to Susan, turned his heel on America, and embarked once more for his native land. Susan was now in a strange city, without money—without friends. Where could she flee? Wherever she was known, she was despised. To work she knew not how; and she had led such an indolent life that she had no desire to learn.

She is now an inmate of a house of ill fame, one of the most degraded kind, where the writer saw her a few months since—the most miserable, degraded being in the world. A tract was presented to her by the writer, which she promised to read, and also to quit her course of life. But, alas! I fear she will never fulfil her promise.

The last account of Henry was, that he had joined the Texian army, and fallen a victim to the sword of the enemy.

You see, my young friends, I have written a long and tedious letter, but if it produce its desired effect with those to whom it is addressed, my object will be gained, and I shall never regret the time I have spent in writing it.

W. M

SITTINGS FOR MY PORTRAIT.

NINTH AND LAST SITTING.

THE painter is advancing rapidly towards the completion of his work; to which, after continual sittings of three hours, I can have no powerful objection. It is no useless lesson to learn and to practise, that whereas much may be achieved with patience and perseverance, nothing can be accomplished to any purpose without them. There is no royal road, I perceive, either to science or art; on the contrary, labour is universally essential to attainment. We can neither bound up by a leap to the summit of skill, nor reach the top of the hill where "fame's proud temple shines afar" by flying. I have been at once amused and astonished at the artists' quickness and dexterity in the management, or, as I should say, the play of his pencil, and at the numberless touches and retouches that have been given to this canvass, to produce the almost breathing shadow, for shadow it is, and only shadow after all, while, nevertheless, it is all but life!

I see an irremediable disadvantage attaching to this beautiful art, in its incapacity to exhibit more than one point of human existence. It is only possible to catch the outlines of an ever varying form in a single crisis of existence, on one day, or in one week of the predestined three score years and ten. If the painter knew what had been, or could ascertain what would be, the vicissitudes of our corporeal frame, he would be unable to condense into one view the past and the future; or, indeed, would be thanked for it, were it possible: the effect must be grotesque and heterogeneous. He must seize and fix the reality of our fugitive season of life only, which may, nevertheless, convey a sufficiently vivid impression of a general character which previous and slow working elements may have formed, and which subsequent processes of a physical or intellectual decay cannot wholly exterminate.

This, then, is the representation, so far as ap-

pearance goes, of my maturity, the manhood and the middle age of my present being. And what are the indications? These may furnish materials for self-reflection, but perhaps not properly for disclosure. *What am I?* is a question of grave importance, to be pursued calmly, closely, and impartially; and a valuable picture will this be if its striking semblance to the living reality should often prompt the investigation. Let me, while even now taking the frequent and permitted glances at the yet unfinished production, repeat secretly the profitable inquiry, and trace some of its moral bearings, and hereafter often return to it. Whether it be of any consequence to the world at large or not, it is to myself of incalculable moment, even to others, however, it may not be utterly insignificant. O, tell me in truth, and in the subtle but powerful language of a physiognomical reflection—tell me, if thou canst, thou self-imagining shade, what am I? What am I as a man, a social man, an immortal man? What am I as a creature of Omnipotent Power?—"I am fearfully and wonderfully made." What am I as a being preserved and sustained by a succession of providential ministrations? Do I employ my powers and my time for any great or good purpose? or am I only living "to eat and drink," and forgetful or disdainful of the fact that "to-morrow I die?" What am I in the family, in the intercourse of social life, amidst the claims of business or profession, in the church, in the world? What am I in temper, motive, and character? Am I a curse or a benefactor to my race, in the wrong or right use of property, talents, and influence? or am I simply neutral, a kind of border inhabitant, on the verge of either, and a dreamer away of a life which must bear with it, unto another, all its awful responsibilities? Are the suggestions of that portrait painful or pleasing? What is there to be cherished—what to be corrected—what to be expunged in the moral portrait, of which this contains a shadowy indication? for here are enstamped by the vivid mockery of the pencil the beamings of love and hatred, good and evil. What do those eyes express? what do those lips intimate? what does that brow describe? I will look at it as if it were another's. I will forget for a time whose image it is, and strive to read only, so to speak, the moral superscription. These are surely tokens of *natural* qualities or passions, and of *acquired* dispositions. There is anger, or envy, or pride, or ambition, or avarice; let me aim to crush the vipers with their hideous brood: or there is kindness, or humility, or good temper; let me cultivate and not boast of what may be merely constitutional, but be grateful for what is superinduced by the mighty operations of a Superior Power through the media of copious instructions, providential monitions, and all the means of high improvement. If the mental or moral workings within are to produce, or have produced, or essen-

tially modified the physiognomical structure, then is it such as it ought to have been, or as I should wish it to be, as a subject of reflection or continued observation in years to come? Would I be really what that very picture seems to indicate? Would I, myself presumed for a moment to be the observer only of some other shade—would I take that man for my companion, my friend, or my example? Is there worth or worthlessness, greatness or meanness, virtue or vice, the earthly or the heavenly, there?—But I pause—

What have I been? When the traveller attains the highest elevation of some mountain whither he had for many a day bent his weary steps, he sits down to review his journey, and to contemplate the circumambient prospects. There is a certain set of feature and a certain fixation of character which, with allowances for probable modifications for both in future days, may be considered the real man about the middle of life; and, therefore, the age from forty-five to fifty-five is probably the best, the most true to nature, and the least deceiving to future times, for the exertion of the painter's art. It is then, I think, and rarely before or after, the portrait should be taken; that is the true and useful portrait, except for mere curiosity, or the gratification of intimate friends, or under the varying circumstances of contemplated absence and danger. For a man's own reflections, moreover, it is the advantageous period. And, as has been said, the traveller looks back from his attained elevation on the traversed region; so may one in frequent retrospections retrace, for moral purposes, whether of humiliation, gratitude, or impulse, the journey of existence. By the experience acquired, we may teach others as well as ourselves. From analogy we may calculate on the future by the past, and become the counsellors of our juvenile successors. To roll back departed time we cannot, to retrace and re-order our steps we cannot; but to receive and communicate instruction are both in our power; and he has surely lived to little purpose who at fifty has no lessons of wisdom to impart, and no self-corrections to adopt or resolve.

Personal identity, as spread over a large space of time, is a curious subject of contemplation. There I am assuredly, in the shadowed representation of this fugitive hour; but can that be, and can I be the very being that in the littleness of infancy slept in the arms of maternal tenderness—in advancing juvenility trundelled the hoop, and on the Saturday's holiday loved to fly my kite, to run, and leap, and swim, in eager competition with my gay companions, or at "old, old Christmas" speak my speeches to laudatory grand-mamas, and exhibit, in the rejoicing greetings of the family and friendly circle, the prizes of an ambition that rivalled according to its capability the heroes of Greece and Rome—and in riper, but still early age, trod so many weary ways, formed so many pleasing associations with men

and things, and devised so many romantic schemes that have all vanished away like the dreamy phantoms of twilight?—Yes, says the spirit of conscious identity, "Tis he, but O how changed!"

It is curious, however, to see myself, in the rapid tracings and conceptions of my own mind, at once an infant, a youth, and a man. It is a strange perspective, and gives birth to strange paradoxes. I am he who was, but is not, and I am he who is, but was not; and yet the past and the present, yea and the future too, are here in reality one!

At twelve years of age my portrait was painted by an eminent artist. It is now suspended over the parlour fireplace in my father's house, and whenever I pay my filial visits, the sight of it rouses into action a thousand indescribable emo-

tions. It brings to my mind school, playmates, competitions—innumerable things. There is the curly hair hanging down in its auburn coloured ringlets which are now no more! There is the careless look of childhood, with hat in hand, after a walk or a foot-race of the young Olympics; but all these, or nearly so, have disappeared! There is the red coat and the plaited frill, and the yet unhidden bosom—yes, the identical coat, of brilliant hue and envied smartness, in which I walked, and talked, and strutted on the stage of Christmas theatricals; but coat, stage, profession, are changed; and the *pride* too of that season, nourished by praise, and then twining about all the fibres of feeling and thought—is that too—would that it were—"buried in the tomb of all the Capulets!" X.

TALES OF THE INN-KITCHEN.—No. IV.

THE affecting incidents of the last tale, delivered, as they were, with much feeling and pathos, had excited no small interest in the minds of the travellers, especially when assured that the principal circumstances narrated were strictly true; the gentleman who had told it having been the school-fellow of the captain from whose lips he had received the account.

A third person in the party, of youthful appearance, was next required to contribute to the amusement of his companions. He drew from his pocket a manuscript, and, with ingenuousness and modesty, said that he had employed some leisure hours in the composition of a poetical tale, which, if it met with the approval of the company present, he would with pleasure recite for their gratification. His proposal being received with delight, he began the story of

THE EMIGRANT.

I.

IN that fair province of Britannia's isle
Where Avon pours his limpid tide along,
Through vales that bask in nature's gentlest smile,
Where first drew breath the bard supreme in song,
Where yet, defying time, the hoary pile
Of stout Earl Guy attracts the gaping throng;
A maiden, pure as the transparent dew
She trod at morn, to woman's stature grew.

II.

No scion she of an ancestral race,
Ages had lent no halo to her name,
Yet she had that from nature which might grace.
The pedigree most rich in rank and fame:
Nobility of soul is not of place
Nor station; none by earthly patent claim
That which ennoble peasants, and which sheds
New honours upon coroneted heads.

III.

Simple were Mary's pleasures: o'er her flowers
To bend, and bathe their roots with mimic rain,
When summer skies withheld the needed showers;
To trail the climbing woodbine round the pane,

To watch the bees, forth issuing from their bowers,
Or homeward speeding, laden from the plain;
Or her loved bird to tend, that all day long
Repaid her care with oft-repeated song;

IV.

Such were her recreations. Labours meet
In turn were hers, and both alike could please:
To bread was metamorphosed home-grown wheat;
The snowy curd became a massy cheese;
Pure wine was press'd from berries ripe and sweet,
Which left unwished-for that from o'er the seas;
And she, with temper meek and mind serene,
Flourished, the fairy of the rustic scene.

V.

Hers was a frame from nature's finest mould,
A cheek with pure blood tinged, a step as light
As the wild deer's, when hunters' clarion bold
Startles him into half-contemptuous flight;
Sweet smiles would oft her coral mouth unfold,
Displaying teeth as new-carved ivory white;
Her voice was music's echo, and her words
Flowed free and artless as the notes of birds.

VI.

She had a large eye of the palest blue,
Or it might rather be a lustrous grey,
An orb o'erfilled with light, that, while it drew
Observance, turn'd the keenest gaze away,
Dazzling and baffling the beholder's view,
Like the unclouded sun at noon of day;
And round a forehead nobly arch'd and fair,
Loose natural ringlets flowed, of auburn hair.

VII.

Her home a small farm-house within a vale,
Border'd with gentle hills and spreading trees,
That smiled in beauty the new sun to hail,
Whose rays brought merry birds, and troops of bees
To pilfer from the blossom on the pale
Woodbine, or mossy rose, or fragrant peas;
A green and tangled wood uprose behind,
A barrier 'gainst the surly northern wind.

VIII.

The ample garden's wicket oped before,
On a small common clothed with stunted green,
By many a noisy brood besprinkled o'er;
In sooth, that pleasant site had lonely been,

But that gray smoke around was seen to soar,
 'Mid winter's stormy rack or summer's sheen,
 In many a slender wreath, from many a roof,
 And held all sense of loneliness aloof.

IX.

And there she grew, in innocence and joy,
 To graceful womanhood; her pleasures those
 Which satisfy the mind they cannot cloy:
 Useful employment, undisturbed repose,
 Were hers; but there is ever some alloy
 Of earthly happiness, and bitter throes
 Will heave the heart that seemed but now to glide—
 A summer skiff on life's unruffled tide.

X.

The daisied turf, through many a bygone year,
 Had lain upon her father's lowly grave;
 Though early lost to her, he had been dear;
 And when in evening's breeze the yews would wave
 Their mournful branches, oft a secret tear
 To his yet cherished memory she gave:
 And now again the grave must gape, and close
 Upon her other parent's last repose.

XI.

Deeply she mourn'd. Meanwhile the seasons four
 Their circle ran; and if they failed to chase
 Her grief, some pangs upon their wings they bore,
 And to her sorrow-worn and pallid face
 The rose's delicate tinting 'gan restore,
 And lent her step once more its wonted grace;
 Again the tribes of field, and wood, and air,
 Could win her notice—earth again seemed fair.

XII.

It chanced that one—in years of infancy
 Her playmate—left the city's smoke and din,
 To breathe once more beneath a clearer sky,
 And from his native air the tint to win
 That mantled on his cheek when he would hie,
 What time glad larks to greet the sun begin,
 With Mary, o'er the fields, and through the wood,
 And seize, despite her tears, the callow brood.

XIII.

Nature he loved, nor wrong'd her as of old,
 But mark'd with joy the footsteps of the spring,
 And loved to see the early flowers unfold
 Their petals;—tribes of insects on the wing,
 With instincts wondrous, all yet half untold;—
 To hear the birds their natural anthems sing,
 Piping their shrilly notes at eventide,
 Or when the ruddy morn the welkin dyed.

XIV.

Playmates they had been, lovers they became,
 And ranged, with feelings new, each favourite spot;
 On Mary's heart had none beside a claim,
 All whom she loved, who loved her, now were not;
 Youth's atmosphere was round them, and the flame
 Of love thence brightness and full vigour caught;
 Theirs seemed a new existence, a charm'd life,
 And earth an orb with sudden glories rife.

XV.

Young Love is fond of solitude, and straying
 By moonlit river, when upon its tide
 The ripples with the evening breeze are playing;
 Love joys adown its silvery course to glide,
 Or in some smooth, expansive bay delaying,
 Where arboury trees bend down on every side,
 To spend the hours in dalliance, on which day
 Shall rise—and rise with an unwelcome ray.

XVI.

Love roams in twilight paths when all is still,
 Save the night bird, with his 'lorn plaintive note;
 The rustling leaves, and the unquiet rill;
 The coo of wild doves, and the beetles' drone;
 The homeward peasant's whoop, that hill to hill
 Repeats; the call of owls that ponder lone;
 And that low whisper heard, we know not whence,
 Amid the lull of silence most intense.

XVII.

Music is love's own language; not a bird
 That sings but lends him some resistless note,
 The one loved being's every eloquent word,
 The mingled lays that through the ether float,
 Eolian harpings in the midnight heard,
 The cause of all mysterious Love promote;
 The brook's low murmur as it devious roves,
 The torrent's crash, the thunder's roar, are Love's.

XVIII.

Thus fed, Love in their hearts in stature grew,
 And, specious tyrant, soon became supreme,
 And tinted all around with his own hue,
 Till this cold world a fairy land did seem!
 Hope o'er their path his arc of promise threw,
 Whose vista's brighter than a poet's dream;
 Ere young hearts realise their hopes, alas!
 Travellers the horizon's line shall overpass.

XIX.

One favourite walk they had—through the still wood,
 Across the meadow, by the winding brook,
 Past the old oak, which centuries had stood,
 And still its leafy boughs in sunshine shook,
 By tempests, as by time, all unsubdued,—
 Until they reached a little peaceful nook,
 The home of one who Mary's childhood nursed,
 And led her footsteps in that pathway first,—

XX.

A cottage where clematis flusher grew,
 And roses blushed with a more conscious red,
 And the rife violets caught a sweeter hue
 From the more heavenly azure overhead;
 Where heavier and more silvery clung the dew,
 And merrier bees with richer fare were fed
 (It seemed so) than elsewhere, and through the night
 The tremulous stars shed down a keener light.

XXI.

And they would wander o'er that pathway lone,
 In the sweet season of declining day,
 When silence marks the landscape for her own,
 And in the pallid sky the filmy gray
 Is darkening into night, and from her throne
 The earliest star emits a timid ray;
 Or when the morning's first and freshest breeze
 Crept with a gentle whisper through the trees.

XXII.

Hither one noon they stray'd, when all was bright
 And fervent, even as their fondest dream:
 Flowers spread their bosoms to the glowing light,
 And silvery fish leap'd from the glassy stream
 In the warm air, then plunged from human sight;
 Sudden the sun's light grew a lurid gleam,
 Masses of cloud weigh'd on the distant hill,
 And every twig and leaf grew deathly still.

XXIII.

The lightning now its jagged lances threw,
 And now its ample banner of pale fire
 Waved athwart heaven a moment, then withdrew;
 On rushed the bellowing thunder—louder—nigher—

Through gaps of the rent air, that tremulous grew,
As nature would in that wild throes expire !
Then chorusing the peal's retiring crash,
Of the big leaden rain was heard the plash.

XXIV.

Mary with serious, not with timid gaze,
Marked, from the cottage window, the wild strife
Of elements—the deep "boom" and the blaze ;
Then spoke, her voice with deepest meaning rife :—
" Henry, is this an emblem of our days ?
Such as this morn was *is* our mutual life ;
Shall future clouds its sunny calm deform,
And peace and gladness yield to gloom and storm ? "

XXV.

'Twas a prophetic strain : they saw moons grow,
And wane, and vanish ; and ere yet the sun
Had lost his clear and chasten'd autumn glow,
Or the harsh wind to strip the trees begun,
And lay the last flowers of the season low,
The village pastor made the lovers one.
The town received them ; strangers trod the floor
By gold made theirs, which she should tread no more.

XXVI.

The village maiden, in the city's maze,
Like a fair lily from its green retreat
Transplanted into arid dusty ways,
Seemed then a flower not less supremely sweet
Than in her rustic and her maiden days :
Yet was she an exotic, to her feet
The stones were hard, the endless walls awoke
Thoughts of a prison canopied with smoke.

XXVII.

Yet, loving, she was happy : the months flew
On rapid wings, till their amount was years,
And she the fondness of a mother knew—
A mother's anxiousness, a mother's fears ;
A meek fair girl was hers, the tender blue
Of whose young eyes betoken'd frequent tears ;
And a frank boy, her elder, o'er whose sleep
The mother oft would pensive vigil keep.

XXVIII.

A mother's joy is sadness half, and smiles
Through warm tears glisten ; cares will blend with
shade
Love's sunshine, which thus tempered more beguiles !
Alas for Mary ! on the sea of trade
Their all was launched—and lost ! a villain's wiles
Wreck, havoc, of the luckless venture made ;
And left what but a little space might hold,
The gaunt wolf, hunger, from their tender fold.

XXIX.

Their dwindling substance every hour grew less,
Their comforts hourly fewer and more few ;
Plainer their fare was, coarser was their dress,
And poverty more close and closer drew ;
Soon debt o'erbrimm'd the cup of their distress,
Then famine, prisons, opened on their view ;
A chilly hearth, a bed of thorny cares,
A gloomy and a zestless board were theirs !

XXX.

Exertion thwarted, on inaction grew
Accumulated woe. Beyond the main,
Where late the barb of the stark Indian flew,
Ere Britain peopled many a spacious plain,
Roved Henry's fancy ; for that fancy drew
That kindred land a paradise of gain,
A natural granary.—A few days o'er,
Henry will speed toward that distant shore !

XXXI.

Alas for Mary ! when afresh the thought
Came, and the fever mantled on her cheek,
She leaned her head on Henry's breast, and sought
The consolation which he could not speak,
And raised her eyes, with love and beauty fraught,
A ray of comfort in his eyes to seek ;
But nought was there, save the hot tears that clung
To the drenched lashes,—tears her grief had wrung.

XXXII.

They sought the chalky coast ; Mary to wait
Till he had won, he said, in that far place
A home, since that they had was desolate,
And means whereby across the liquid space
She, like a cage-freed dove to join her mate,
Might with her children flee. In Mary's face
His words found no reply : a faint smile there
Did but betray the depth of her despair.

XXXIII.

The eve of parting came : the wind was fair,
The crescent moon was up in the pale sky,
Canvass and streamers fluttered in the air,
And oft was heard the sailor's cheery cry ;
Sorrow, profaneness, merriment, were there,
Oaths, laughter, passionate sob, and stifled sigh ;
From the coarse throng the sad group stood apart,
With livid lips, and each a throbbing heart.

XXXIV.

She raised her eyes to the unclouded moon,
From their long lashes the big tears were streaming,
Like drops that fall from the warm sky of June,
When from the misty east the sun is beaming ;
Henry, when rose the signal sound—too soon !
Started as one who has been wildly dreaming,
Pressed his white lips to lips as white as they,
Grasped her cold trembling hand, and rush'd away !

XXXV.

Mary left not that coast, but waited there
Her fate ; and by her needle, deftly plied,
Earned, from the hardy cotters, humble fare,
What nature needed, and scarce aught beside ;
But few her wants were, if her meals were spare ;
Lofty of soul, she felt no pangs from pride,
And knew no cause for shame ; repining not,
She bore the lonely burden of her lot.

XXXVI.

Yet had she pleasures. When at close of day
Her merry-hearted boy and daughter fair,
Their ever-busy limbs fatigued with play,
For their untroubled pillow 'gan prepare,
And little Mary, yet untaught to pray,
Would kneel and lisp her brother's simple prayer
In the grave tone she heard, unconscious why ;
Then tears would steal into the mother's eye—

XXXVII.

Tears that were not of grief, yet pensive too,
The overbrimming of a gentle heart,
To which affliction only closer drew
Objects from which it could not beat apart,
By love's o'erwarmth urged from their fountains blue,
As drops from summer's surcharged ether start ;
The pathos of enjoyment, sweet but brief,
For soon those founts were sealed again by grief !

XXXVIII.

One eve she at her chamber window sat,
Moulding the pliant twilight into forms
Of living things and things inanimate,
No more, far off, or scathed by the rude storms

That sweep o'er all in this sublunar state—
Of many beings to the hungry worms,
From the pure air and cheerful light, descended,
And with the cold clod of the valley blended !

XXXIX.

Her native valley, to her mental gaze,
Outspread itself in all the summer glow
It used to wear in her young happy days,
Days that sped onward like the rivulet's flow,
So calm, so peaceful ; and even now some rays
Of the heart's sunshine flicker'd o'er the snow
Of present grief, as through her memory passed
Scene after scene, each lovelier than the last.

XL.

Lilac, and sweetbriar, and cuckoo flower,
Cowslips, and harebells, and a thousand more
Flowers of all months, from field and garden bower,
Seemed in succession on her sense to pour
Commingled sweets ; or in a snowy shower
The wind-swept trees shook down their blossomy
store
Around her, while on every side was heard
The mellow pipings of some happy bird.

XLI.

Then in reaped cornfields once again she strayed,
A little gleaner darkening in the sun ;
Or marked, beneath the wood's o'erarching shade,
How Autumn's tints on summer's greenness won ;
Or in the fragrant hay a couch she made,
And idly nestled till the day was done ;
Or hailed the teeming spring, and from the spray
Severed sweet burdens of the rosy may.

XLII.

Then rose a farm-house to her fancy's view,
With slated roof, and eke with paven floor ;
And burnished oak that from its surface threw
Reflections of the wide hall's motley store,
And mirror'd crackling flames, that monstrous grew
'Mid Christmas mirth ; and hearth that glowed no
more,
Or gladdened others with that cheery light
Which makes a summer of the dreariest night !

XLIII.

Again she roved through field, and wood, and grove,
A happy maiden by her Henry's side,
Feeling it gladness to be loved and love :
Then her thoughts wandered over ocean wide,
And with their gloomy bent in vain she strove ;
Sad feelings flowed like a resistless tide ;
Tears from her eyes a moment gushed like rain,
Then ceased, while thus she poured the simple strain :

He told me we should meet again
Upon that distant shore ;
But my heart whispers hope is vain,
And we shall meet no more !

He said that land should be to us
As England was of yore ;
But, ah ! I feel 'twill not be thus,
For we shall meet no more !

There is a prescience of the soul,
Untaught by human lore ;
I feel it, and cannot control ;
Yes, we shall meet no more !

XLIV.

She paused—the open door a stranger's form
Admitted ; one whose honest, open brow
And manly cheek of many a raging storm
And stiff gale told, when scarce his bark might
plough
The battling billows, lash'd to fury warm,
That hurl'd their giant foam-crests o'er her prow.
Dear, Britain, are thy ocean sons to thee,
Bold as the winds, resistless as the sea !

XLV.

The stranger from his vest a packet drew,
And from his eyes the while the large tear stole,
For well the purport of that sheet he knew,
And his, though rude, was yet a gentle soul ;
His words of greeting honest were and few,
And skillless were his efforts to condole.
When to the wounded heart gave words relief ?
Strange tongues profane the sanctuary of grief !

XLVI.

In transatlantic earth was Henry laid !
Save that drear bourn no other "home" he found ;
He saw his last hope like the twilight fade,
And night more dark and dreary gather round ;
Upon his jaded heart misfortune preyed,
And like a noxious snake about it wound,
Crushing the life within it. Thus he fell !
Far, far away from those who loved him well.

XLVII.

One who had with him left his native shore,
And knew his story, tended his last bed,
And from the hand that ne'er should trace one more,
Received a letter, o'er which Mary shed,
Thereafter, many tears. When all was o'er,
And the freed spirit from its prison fled,
He wept a generous tear into his grave,
And sent the sad, sad tidings o'er the wave.

XLVIII.

No sigh heaved Mary's heart that night, and day
Saw her a breathing statue, stony pale ;
Inflamed her eyes were, but no tears had they ;
No sob convulsed her, and she made no wail ;
Her children's earnest eyes and harmless play
Over her apathy could nought prevail ;
Life's tide seemed in her veins to ice congealed,
And feeling's source within her bosom sealed.

XLIX.

But storm to calm succeeds, and thaw to frost ;
And soon in Mary's bosom passionate grief
Displaced that torpor wherein life seemed lost ;
Few were her intervals from tears, and brief ;
But even tears at length their founts exhaust,
And yield to the worn heart a short relief ;
Short, for those founts again and oft reflow,
Ere fails the reservoir of human woe.

L.

The seal of death was on her : day by day
His chilling footsteps left their ghastly trace ;
Hourly the flesh shrunk from her frame away ;
Transparent grew her skin ; a wider space
Seemed claimed by her lit eyes, whose fearful ray
Spoke not of earth, but of that better place
Whither she tended ; awful scene is this—
A spirit struggling from its chrysalis !—

LI.

A beauteous spirit, whose approach we see
To that eternal realm which never cloud
Of mortal life may shadow ! It may be
She shrunk sometimes from thoughts of the dank
shroud,

Yet hers had been calm joy to be set free,
But for her little ones—her pensive-browed,
Who felt reflected grief; for these she sighed:
But wherefore dally with the tale?—she died!

LII.

And where are they, the orphans? On the green,
Lowly and cheerless looking buildings spread,
Where penury's hapless victims aye are seen,
The infant visage and the hoary head—
The parish poorhouse! There those babes have been
Since death assailed the humble cottage shed,
Where, 'mid their sport, oft from their mother's eye
They caught a moment's gloom, and marvell'd why!

As the young poet ended his narrative, with
flushed countenance and sparkling eye, many
and loud were the expressions of pleasure and
approbation which he received. The ladies in

the company were affected by the detail of a
wife and a mother's sorrows, and the sympathy
they felt for the unfortunate Mary was indicated
by the eloquent tear that trembled in the eye.
When all had expressed their thanks for the
entertainment which had been afforded, being
reminded of the lapse of time, they retired to
rest. The following day, facilities for proceed-
ing on their several routes presenting themselves,
the company separated; well-pleased that the
obstructions occasioned by the severity of the
weather had thrown into contact so many agree-
able and conversant companions, some of whom
had enlivened the rest by the interesting com-
munications which were made, and which had
pleasantly wiled away the tediousness and gloom
of a wintry night.

THE MAGICIAN OF CAIRO.

"A few days after my arrival in this country,"
says Mr. Lane, "my curiosity was excited on
the subject of magic, by a circumstance related
to me by Mr. Salt, our consul-general. Having
had reason to believe that one of his servants
was a thief, from the fact of several articles of
property having been stolen from his house, he
sent for a celebrated Mughrebee magician, with
the view of intimidating them, and causing the
guilty one (if any of them were guilty) to con-
fess his crime. The magician came, and said
that he would cause the exact image of the per-
son who had committed the thefts to appear to
any youth not arrived at the age of puberty;
and desired the master of the house to call in
any boy whom he might choose. As several
boys were then employed in a garden adjacent
to the house, one of them was called for this
purpose. In the palm of this boy's right hand
the magician drew, with a pen, a certain diagram,
in the centre of which he poured a little ink.
Into this ink he desired the boy stedfastly to
look. He then burned some incense; and several
bits of paper inscribed with charms; and, at the
same time, called for various objects to appear in
the ink. The boy declared that he saw all
these objects, and, last of all, the image of the
guilty person: he described his stature, counte-
nance, and dress; said that he knew him; and
directly ran down into the garden, and appre-
hended one of the labourers, who, when brought
before the master, immediately confessed that he
was the thief."

The relation of this made Mr. Lane desirous
of witnessing a similar performance; he hunted
out the magician accordingly, and appointed an
interview, for the purpose of proving his skill.
He was called the Sheykh Abd El-Ckadir El-
Mughrebdee, and has been mentioned, we be-
lieve, by many English travellers, though never

so elaborately examined and tested as by Mr.
Lane:—

"He came at the time appointed, about two
hours before noon; but seemed uneasy, fre-
quently looked up at the sky, through the
window, and remarked that the weather was
unpropitious: it was dull and cloudy, and the
wind was boisterous. The experiment was per-
formed with three boys, one after another. With
the first it was partly successful; but with the
others it completely failed. The magician said
that he could do nothing more that day: and
that he would come in the evening of a sub-
sequent day. He kept his appointment, and
admitted that the time was favourable."

Sundry preparations of charms and forms of in-
vocation, written on various small strips of paper,
are then fully described.

"I had prepared, by the magician's direction,
some frankincense and coriander seed;* and a
chafing-dish with some live charcoal in it. These
were now brought into the room, together with
the boy who was to be employed: he had been
called in, by my desire, from among some boys in
the street, returning from a manufactory, and was
about eight or nine years of age. In reply to my
inquiry respecting the description of persons who
could see in the magic mirror of ink, the magi-
cian said that they were a boy not arrived at
puberty, a virgin, a black female slave, and a
pregnant woman. The chafing-dish was placed
before him and the boy; and the latter was
placed on a seat."

A magic diagram was now drawn on the boy's
right hand, which the magician held, while ink
was poured upon it, into which the boy was in-
structed to look intently.

"He then took one of the little strips of
paper inscribed with the forms of invocation, and
* He generally requires some benzoin to be added to these.

dropped it into the chafing-dish, upon the burning coals and perfumes, which had already filled the room with their smoke ; and as he did this, he commenced an indistinct muttering of words, which he continued during the whole process, excepting when he had to ask the boy a question, or to tell him what he was to say. The piece of paper containing the words from the Koor-an he placed inside the fore part of the boy's tackee-ye, or scull-cap. He then asked him if he saw any thing in the ink ; and was answered ' No ; ' but about a minute after, the boy, trembling and seeming much frightened, said, ' I see a man sweeping the ground. ' ' When he has done sweeping, ' said the magician, ' tell me. ' Presently the boy said, ' He has done. '

Several very curious and elaborate ceremonies were then ordered to pass over the mirror of the ink, and were all responded to by the boy, while the various strips of invocations were finally lodged in the chafing-dish :—

" He now addressed himself to me ; and asked me if I wished the boy to see any person who was absent or dead. I named Lord Nelson, of whom the boy had evidently never heard, for it was with much difficulty that he pronounced the name, after several trials. The magician desired the boy to say to the Sooltan—' My master salutes thee, and desires thee to bring Lord Nelson ; bring him before my eyes, that I may see him speedily. ' The boy then said so, and almost immediately added, ' A messenger is gone, and has returned, and brought a man, dressed in a black suit of European clothes : the man has lost his left arm. ' He then paused for a moment or two ; and, looking more intently and more closely into the ink, said, ' No, he has not lost his left arm ; but it is placed to his breast. ' This correction made his description more striking than it had been without it ; since Lord Nelson generally had his empty sleeve attached to the breast of his coat : but it was the *right* arm that he had lost. Without saying that I suspected the boy had made a mistake, I asked the magician whether the objects appeared in the ink as if actually before the eyes, or as if in a glass, which makes the right appear left. He answered, that they appeared as in a mirror. This rendered the boy's description faultless."

Further performances are described, which are still more curious :—

" On one of these occasions, an Englishman present ridiculed the performance, and said that nothing would satisfy him but a correct description of the appearance of his own father, of whom, he was sure, no one of the company had any knowledge. The boy, accordingly, having called by name for the person alluded to, de-

scribed a man in a Frank dress, of course, with his hand placed to his head, wearing spectacles, and with one foot on the ground, and the other raised behind him, as if he were stepping down from a seat. The description was exactly true in every respect: the peculiar position of the hand was occasioned by an almost constant headache ; and that of the foot or leg, by a stiff knee, caused by a fall from a horse, in hunting. I am assured that, on this occasion, the boy accurately described each person and thing that was called for. On another occasion, Shakspeare was described with the most minute correctness, both as to person and dress ; and I might add several other cases in which the same magician has excited astonishment in the sober minds of Englishmen of my acquaintance. A short time since, after performing in the usual manner, by means of a boy, he prepared the magic mirror in the hand of a young English lady, who, on looking into it for a little while, said that she saw a broom sweeping the ground without any body holding it, and was so much frightened that she would look no longer."

Mr. Lane adds :—

" The reader may be tempted to think that, in each instance, the boy saw images produced by some reflection in the ink ; but this was evidently not the case ; or that he was a confederate, or guided by leading questions. That there was no confederacy, I satisfactorily ascertained, by selecting the boy, who performed the part above described in my presence, from a number of others passing by in the street, and by his rejecting a present which I afterwards offered him with the view of inducing him to confess that he did not really see what he had professed to have seen. I tried the veracity of another boy on a subsequent occasion in the same manner, and the result was the same. The experiment often entirely fails ; but when the boy employed is right in one case, he generally is so in all : when he gives, at first, an account altogether wrong, the magician usually dismisses him at once, saying that he is too old. The perfumes, or excited imagination, or fear, may be supposed to affect the vision of the boy who describes objects as appearing to him in the ink ; but if so, why does he see exactly what is required, and objects of which he can have had no previous particular notion ? Neither I nor others have been able to discover any clue by which to penetrate the mystery ; and if the reader be alike unable to give the solution, I hope that he will not allow the above account to induce in his mind any degree of scepticism with respect to other portions of this work."—*Lane's Manners and Customs of the Modern Egyptians.*

REVIEW.

The History of Protestant Nonconformity in England, from the Reformation under Henry VIII.
By THOMAS PRICE, D.D. In two Volumes. Vol. I.
London: Ball, 1836.

WE owe an apology to Dr. Price for our delay in noticing his volume; but as such an apology would not pass like current money, even in the literary market, we will waive it, and proceed at once to the discharge of our duty.

It has long appeared to us that the world has yet much to learn from history. We are by no means sure that the facts relating to the past have been so fully collected as they might be. Unless we are mistaken, old manuscripts, hieroglyphics, statues, medals, &c., will yet contribute very largely to our stores of knowledge. Nor is it by any means certain that our historians, either civil or ecclesiastical, have been as free as they might have been from prejudice and party spirit. There have been certain old opinions to be cherished, and venerable institutions which, whether good or bad, must be maintained; and facts which have tended to effect these objects, or which were capable of being so distorted as to accomplish the party purposes of their writers, have been so used as to keep the mind in fetters, and to perpetuate, to a very great degree, the darkness of the world.

But the most lamentable defect in this class of writers, has been their want of discrimination and care in drawing from history what may be regarded its philosophy, or rather its theology. Many scriptural doctrines, tending at once to benefit man and to glorify the Creator, might be drawn from the history of the world, which but seldom occur even to the truly pious, and which have never fallen under our notice in any historical publication. It would be very easy to refer to histories professedly written on Christian principles, and which, with devout zeal, warn us against this evil, or allure us to that good; but all these are merely common-place. We feel that we want some master-minds to ascend the vantage-ground of historical truth; and as they present the scroll of past events to the assembled throng, shall distinctly mark out to every class of men what they may learn from the whole record relating to God and to themselves, and what are the specific duties taught by history to the inhabitants of the world at this remarkable crisis of its affairs.

We are happy to introduce to the thousands who read our Miscellany the volume before us, as one that discovers great originality of thought, deep research, and the most praiseworthy candour. Dr. Price is no disclaimer: he feels and exemplifies the responsibility and the dignity of an historian more intent on the attainment and publication of truth than the prosperity of a party; and even where the reader may see occasion to differ from his author as to his inductions from facts, he will always admire the spirit in which those facts and reasonings are written. But the reader shall judge for himself as to these matters. The following are the remarks of our author on the ignorance of Cranmer and his associates of the true nature of religious liberty:—

"The popish party now gained ground in the king's councils, and the progress of the Reformation was consequently stopped. Before attempting a detail of the measures by which they partially compassed their end, it may be necessary briefly to sketch the course of persecution with which Cranmer and his brethren were unhappily identified. This will throw light on the character of the chief actors in the scene, and help us to understand the precise position of ecclesiastical affairs. A blind party-spirit has attempted to throw the whole odium of persecution on the Church of Rome. The records of history, and the prin-

ciples of human nature, have been alike disregarded in its indiscriminate censure and praise. The candid of all parties will regret the criminality of such an attempt, while the increasing intelligence of the age renders its folly as obvious as its guilt. The truth is, that, with very few exceptions, the first reformers were as ignorant of the true principles of religious liberty as the most bigoted of the catholics. Though rebels themselves, they refused to allow rebellion in others; impugning the authority of Rome, they established their own; and whilst denying the infallibility of the pope, they practically asserted that of their own creeds. Cranmer possessed a more timid disposition and a more benevolent heart than Gardiner and Bonner; but he was not a whit before them in his knowledge of the right of private judgment, and the unfettered freedom of religious worship. It may seem strange to some, that the reformers did not at once perceive the true ground of their own proceedings;—that they did not feel constrained, by a sense of absolute necessity, to defend their secession from Rome by asserting, in bold and unhesitating terms, their own intelligence and the spirituality of religion; that they did not vindicate the dignity of their nature, and the ethereal temper of their faith, by exploding coercion as an insult to the one, and a gross outrage on the other. But when we take into account the ignorance of their times, and the influences amid which they were trained, our surprise will be awakened by the extent rather than by the scantiness of their discoveries. Important principles are of slow development. Whatever is necessary to the preservation of life and the perpetuation of the species, is provided for by some general law of the Creator; the promptings of instinct are made to anticipate and supersede the decisions of judgment. But not so in the moral world. To the formation of character the free exercise of thought is indispensable. The elements of knowledge are liberally supplied; but diligence, discrimination, and fidelity are requisite to deduce from them the principles of wisdom and the lessons of piety. The mists of passion and the interests of party obscure and pervert the judgment, and thus conceal from view those celestial principles which would be readily discovered and embraced by an unbiased intellect.

"The reformers were mainly influenced in their separation from the papacy, by the grievous injuries which its superstitions had inflicted on the human mind; this was the impelling motive which gave its character to the whole of their proceedings. The very ardour of their zeal, as it carried them forward to the ultimate purpose of Christianity, left them no time for the prosecution of those inquiries which, however important, were not obviously connected with the main object of their efforts. Their purpose was the conversion of souls, and the purification of the church of Christ; and we need not be surprised, nor should our condemnation be severe, if they were so absorbed by its magnitude as to overlook inquiries of a less vital character. Their confidence in the integrity of their own views tended still further to mislead them. Instead of appealing to the principles of human nature, and to the character of religion, they vindicated their course by alleging the superiority of their sentiments; instead of rearing a defence which might have protected themselves and their posterity, in all future times, from the assaults of spiritual intolerance, they were content to meet the exigency of the moment by making an impression on the men of their day. Their defence was grounded on an unsound basis. Its fallacy, though not obvious at once, was speedily shown in the discussions which followed; for each party employed it with equal confidence. The Romanist and the Protestant, Gardiner and Cranmer, retained it as common ground, on which to conduct their defence and to vindicate their persecution of others. It was not till the Puritans were subjected to the fiery ordeal through which priestly intolerance made them pass, that those immortal principles were elicited which now constitute the basis of our legislation. Amidst the strife of parties, the human intellect worked out its own salvation."—(pp. 42-45.)

The following character of the Reformation, so far as it was effected by Henry VIII., appears to us to be written with great force and beauty:—

"The course which Henry pursued as an ecclesiastical reformer, was in harmony with his character. So long as interest impelled he assailed popery in its strongholds. The supremacy of the pontiff was discarded, monastic institutions were abolished, the exorbitant wealth of the clergy was scattered amongst a rapacious and impoverished aristocracy, the word of God was translated into the vernacular tongue, and many vestiges of ancient superstition were removed from the land. But the system he established was of the same nature as that which he displaced. The supremacy of the pope was supplanted by that of the king; and if infallibility was not claimed, the proceedings taken could only be justified on that principle. The right of private judgment was as sternly denied as in the worst days of popery, and the fires of persecution were kindled by a bigotry as intolerant and brutal as the man of sin ever displayed. The fact is, and impartial history records it, the reformation of Henry was a struggle for power, and not for principle—the reckless daring of a mind which would have subverted all law, and extinguished all virtue, for the gratification of its selfish

passions. Religion was an engine of state policy which the monarch employed to heighten his power and confirm his despotism. The radical error of the reformers was their admission of the magistrates' right to legislate for the Church. By making the faith of a nation dependant on the will of the king, they hazarded a thousand evils, amongst the least of which was the reaction which this principle involved on the accession of Mary. The immediate effects of a vicious principle may appear to be beneficial, but its ultimate tendencies are invariably pernicious. Had Cranmer and his associates exhibited religion in its primitive simplicity and honour; had they denounced its subjection to the state as incompatible with its nature, and injurious to its success; had they, while scrupulously rendering to Cæsar the things which were Cæsar's, reserved unto God that which was his; in a word, had they trusted to the mysterious power with which Christianity is allied, rather than to the patronage of their prince, they might have exposed themselves to dangers which for a time they escaped, but they would have redeemed religion from reproach, and have preserved her from those corrupting associations which have enfeebled her energies and rendered her an object of mistrust, if not of contempt. The power of religion consists in her purity and meekness. She is adapted to the sympathies and wants of man; and when unfettered by human aid, and freed from the insult of kingly patronage, she will win her way to the confidence and gratitude of mankind."—(pp. 61-63.)

Omitting several other most interesting passages, which we should have gladly transcribed had our space permitted, we quote Dr. Price's remarks on the Reformation as left by Edward, in which the reader will further see the discrimination that distinguishes this excellent volume:—

"The Reformation effected under Edward the Sixth, whatever imperfections attended its progress, or however incomplete the state in which it was left, must be regarded with devout gratitude by every advocate of religious liberty and scriptural truth. The offices of the church were reformed, many vestiges of superstition removed, and a freer circulation was given to the word of life. The Reformation of Henry was mainly characterised by a rejection of the pope's supremacy; but that of his son consisted in the erection of a new constitution, more rational in its principles, and more simple in its form. The former monarch exulted in overthrowing the power of the papacy; the latter, in rooting out its errors. The one was a vindictive destroyer, who found his happiness in the ruins with which he surrounded himself; while the other, with the beneficent spirit of Christianity, sought, according to the measure of his knowledge, to communicate to his subjects the elements of eternal life. It were absurd to suppose that, at the commencement of his reign, Edward could give a rational assent to the measures of his council. In the latter years of his life, however, there is reason to believe that he took an active and enlightened part in ecclesiastical affairs. Without adopting the exaggerated and fulsome terms in which it has been customary with protestant writers to speak of this youthful monarch, we may affirm his intellect to have been matured, and his principles fixed, far beyond his years. The instructions of his tutors were received with docility by his virtuous mind, and served to qualify him, at a very early age, to preside over the deliberations of a great and powerful nation. As soon as he became rationally cognisant of what was taking place, he entered with the ardour of youth on the work of reformation, and would probably have proceeded much further, had he not been checked by the interposition of his advisers. His piety seems to have been undoubted, and his errors are to be attributed to his education rather than to the promptings of his own heart.

"Cranmer and the other divines with whom he acted, were sincerely attached to the doctrines of the Reformation. With all their imperfections, they were men of a high and noble spirit, who zealously laboured in the cause of human improvement. Their situation was perplexing and difficult, almost beyond example; and an impartial posterity, in pronouncing sentence on their conduct, is bound to remember the wayward and cruel policy of Henry, as well as the covetousness and ambition of the courtiers of his son. Had Cranmer, Ridley, Hooper, Latimer, and their brethren, been permitted to act out their principles, the English Reformation would probably have assumed a different character. Cranmer is reported to have drawn up a Book of Prayers a hundred times more perfect than that in use; 'yet the same cannot take place,' it was affirmed, 'for that he was matched with such a wicked clergy and convocation, with other enemies.' That extensive dissatisfaction existed amongst the Reformers is unquestionable. The principle of concession to the papists, on which the offices of the church had been constructed, was regarded by the more zealous as a sacrifice to expediency, uncalculated for by existing circumstances, and unjustifiable in principle. 'Diverse there were now,' says

Strype, 'in this king's reign, that liked so little of popery, that they thought it highly convenient not to symbolise with that church in any of its usages. And that gave occasion to them to dislike, particularly, two things; viz. the posture of kneeling at the reception of the communion, and the priestly habits, which were not laid aside by the reformers of this church from papal innovations. The retaining of these gave the more disgust, because it was contrary to the example of many of the foreign reformers, as those of Switzerland and Geneva; whose books and judgments swayed greatly, and were much used here.'"—(pp. 91-94.)

Entirely passing over the reigns of Mary and Elizabeth,—not on account of their nonimportance, nor because we could not draw from them heart-thrilling passages, but solely for want of room,—we will close by presenting a short extract illustrating the *ecclesiastical* government of James. The historian's sketch of his personal character shows the hand of a master, but it is too long for our purpose.

"His ecclesiastical government laid the foundation of all those evils which embittered the reign and produced the tragical death of his son. Surrounding himself with a servile clergy, he repaid their flattery by a zealous support of their immunities, and a merciless proscription of their foes. He hated the puritans as heartily as any of his bishops, and brought to their persecution all the rancour and fierceness of polemical strife. The clergy lent themselves to the support of his prerogative, with a zeal which entitled them to his patronage. So early as 1606, the convocation drew up a set of canons deducing the origin of government from the patriarchal regimen of families, and denouncing the more popular and liberal views which were becoming prevalent. Passive obedience to the reigning monarch is inculcated throughout these canons, and anathemas are liberally pronounced on all who refuse it. The same doctrines were maintained by the higher clergy during the whole of this reign; towards the close of which, the university of Oxford pronounced a solemn decree, 'That by the doctrine of the Holy Scriptures, it is in no case lawful for subjects to make use of force against their prince, nor to appear offensively or defensively in the field against the king, either upon the score of religion, or any other account whatever.' All doctors, masters, and bachelors of law and physic, were to subscribe this article; and all persons to be promoted in future to any degree, were further required to take an oath that they not only at present detested the opposite doctrines, but would always continue to be of the same opinion. These slavish dogmas offended the House of Commons, and arrayed against the rulers of the church every friend of liberal government and of popular rights. The puritans and the patriots were more closely united than ever. They sympathised with each other's views; and, sharing a common peril, they combined for mutual defence.

"The vacillating policy of James towards his catholic subjects was another source of mistrust and dissatisfaction. This marked the whole of his reign, but was especially visible during the treaty for the Spanish match. A dread of the return of popery was thus awakened, which in its blindness and impetuosity called for severer penalties and more exterminating laws against the persecuted members of the papal church. A line of distinction was thus palpably drawn between the church party and their opponents. The former advocated the prerogative of the throne, the latter the rights of the nation; the one contended for the propriety of relaxing the penal laws against the papists, the other demanded the infliction of their unmitigated rigour. This state of parties operated unfavourably on the interests of the church. It was deserted both by the patriot and the zealous protestant; and was regarded as a sort of middle or neutral ground, where the half-hearted in politics and religion only could abide. The puritans and the catholics increased in numbers and boldness. The former especially made rapid progress in the enunciation of those immortal principles for which they so zealously struggled in the following reign. The severities practised against them, instead of subduing their spirit, only hardened them for the endurance of suffering, and fitted them successfully to plead the cause of human liberty against the iron despotism of Laud and Strafford."—(pp. 346-349.)

With this passage the first volume closes. We impatiently wait for the second, when we hope an opportunity will present itself to enter more fully into the subject than we have been able to do in the present article; in the meantime, we earnestly wish the author of this important volume health to pursue this and his other literary undertakings.

MEN AND THINGS.

Bells.—A taste for great metal castings, destined for show rather than utility, seems to have influenced the metallurgic art of the Russians at a very early

age. Close by the five colossal cannons, which are fired only once a year, (at Easter,) lies in a pit, at the foot of the tower of St. Ivan, the still more colossal bell.

As this is unquestionably the largest work of its kind ever executed, the consideration of it naturally recalls to our memory the fact, that Herodotus (460 years B.C.) saw among the southern Scythians, between the Dnieper and Kuban, a metal vessel, of a magnitude no less extraordinary for that age. It was six times the size of the largest work of the kind at that time extant in Greece; and, supposing it to have been of bronze, its weight cannot be estimated, from his statement of its dimensions, at less than 41,000 French pounds. This ancient vessel, therefore, seen by Herodotus at Exampe, though probably not more than a tenth in weight of the great fallen bell at the Kremlin of Moscow, considerably surpassed in size the largest bell now in France—that of the cathedral of Rouen, which is computed to weigh about 36,000 pounds. * * That a peculiar expertness in the casting of metal had been handed down, by uninterrupted tradition, from the earliest ages in this part of the world, is proved by the bells suspended in the still remaining portion of the tower of Ivan Welikoi, which were all made about the same time, when the church was erected in 1600. The largest of them weighs about 400 pūd, or 133,684 French pounds, or more than five times the famous bell at Erfurth, and nearly four times that of Rouen. Perhaps the early proficiency of the Chinese in works of this kind—for already, in 1403, in the reign of the emperor Yum lo, they cast a bell weighing 120,000 pounds—may help to account for the skill of the Scythians and their Russian descendants. The Siberian nations learned most of their arts from the Chinese, and the Russians have been but slowly estranged from Southern Asia by their intercourse with Western Europe.

Our readers will perhaps be more disposed to admire the colossal magnitude of the Russian bells after they shall have cast a glance at the following short list of the largest bells in Europe:

	English pounds.
Great bell of St. Paul's.....	8,400
— of Lincoln.....	9,894
Great Tom, Christ Church, Oxford.....	17,000
In the Palazzo Vecchio, Florence, suspended at a height of 275 feet from the ground.....	17,000
Great bell of Saint Peter's, Rome.....	18,607
Bell at Erfurth.....	28,224
— Rouen.....	43,000
— St. Ivan, Moscow	160,000
Fallen bell at the foot of the same tower..	443,772

The prodigy of the Kremlin was fractured by its fall, a large piece being broken from its side: its height somewhat exceeds 21 feet, its diameter at the rim 22 feet.

It is said to have been recently disinterred from the pit in which the force of its fall, and its weight, continually working on a soft soil, had buried it, and over which a vault had been built; but we know not whether it has been brought to light in order to exhibit it more satisfactorily, or for the sake of the metal, which Dr. E. D. Clarke calculated to be worth above 66,000*l.* sterling.

NATURAL REQUISITES FOR THE LEARNED PROFESSIONS.—"Na, I'm grieved to think about the callants o' ours," said the careful mother of three promising young men, to the sagacious father,—"I'm grieved to think about them, for I muckle doubt we'll never be able to make anything wislike o' them."

"Never fash your thoomb about the callants, Janet," said the old man, "there's nae fear o' the callants; we's give them lair, and that'll set them on their feet. Nae doubt, Charlie is a rum cheil', and owre coorse and fursome a fellow to make a wright, or a weaver, or a tailor o' him; but he'll do for a

doctor—for though he could not be trusted to work among dear mahogany, nor to handle fyke warp and weft, nor to rin the sheers through guid braid clath, he'll do weel enough for physicking and the setting o' banes. As for Jock, there's nae denying that he's a loppo, sneekdrawing, pawky scoondral, and no inclined to win his bread at ony honest calling; but wi' a tift o' lair in his head, he'll make a capital lawyer, and answer weel for the dispensing o' justice. And though, as ye ken, Tam is but a fule, wi' as little sense or gumption as a sooking turkey, and no fit to learn ony trade like a wise body, we'll pet him through the college, and when he comes out he'll be qualified to get a kirk, and to be a teacher o' the people."

STRONG MEMORIES.—Seneca says he could in his youth repeat a thousand names in the same order as they were read to him. Themistocles made himself master of the Persian language in a year's time. Mithridates understood as many languages as he commanded nations; that is, no less than twenty-two. Tully says of Julius Cesar, in his oration for Ligarius, that he never forgot any thing but an injury. A girl at a Sabbath evening school in the north repeated the 119th psalm without a mistake. A blind man, who lived in the town of Stirling, could repeat the whole Bible, which he acquired by hearing children read at school. He used to say, that if he heard any thing read twice he never forgot it. But, though he could repeat the Bible, he seemed very ignorant of its great truths, not aware of their value. Mr. Wesley remarks, "Thomas Walsh was so thoroughly acquainted with the Bible, that if he was questioned concerning any Hebrew word in the Old, or any Greek word in the New Testament, he would tell after a little pause, not only how often one or the other occurred in the Bible, but what it meant in every place."

Cyrus knew the name of every soldier in his army. Cynaeas, sent on a mission to Rome by Pyrrhus, made himself acquainted in two days with the names of all the senators and the principal citizens. Appian Claudius and the Emperor Hadrian, according to Seneca, could recite two thousand words in the order they had heard them, and afterwards repeat them from the end to the beginning. Portius Latro could deliver all the speeches he had hastily written without any study. Eusebius is stated by historians to have restored the sacred Hebrew volumes by memory when they had been destroyed by the Chaldeans; and, according to Eusebius, it is to his sole recollection that we are indebted for that part of Holy Writ. St. Anthony, the Egyptian hermit, although he could not read, knew the whole Scripture by heart; and St. Jerome mentions one Neopolitan, an illiterate soldier, who, anxious to enter into monastic orders, learned to recite the works of all the fathers, and obtained the name of the "Living Dictionary of Christianity;" while St. Antonius, the Florentine, at the age of sixteen, could repeat all the papal bulls, the decrees of councils, and the canons of the church, without missing a word. The Pope Clement V. owed his prodigious memory to a fall on his head. This accident at first impaired this faculty; but by dint of application he endeavoured to recover its powers, and he succeeded so completely, that Petrarch informs us he never forgot any thing he had read. John Pic de la Mirandola, justly considered a prodigy, could maintain a thesis on any subject—*de omni re scibili*—when a mere child; and when verses were read to him, he could repeat them backward. Joseph Scaliger learned his Homer in twenty-one days, and all the Latin poets in four months. Haller mentions a German scholar, of the name of Muller, who could speak twenty languages correctly. Our own literary annals record many instances of this wonderful faculty.

THE MISSIONARY ENTERPRISE.

THE OBLIGATIONS OF CHRISTIANS TO SPREAD THE GOSPEL ACCUMULATIVE.

HISTORY is full of examples which show how natural it is for men, after expending a certain amount of zeal and strength in the support of great enterprises, to relax in their ardour, and presently sink into a state of comparative indifference and neglect. So much of the earnestness of human endeavour as has its origin in the love of novelty, can, of course, be only of short continuance. The circle of what is new and exciting is soon traversed; and either the languor of repetition must then ensue, or relief from it be sought in a change of objects. Many other causes, also, contribute to the inconstancy of which we speak: the supporters of a project sometimes abandon it from distrust of their own resources for its accomplishment, or from conviction of its uselessness, or fear of some personal evil, which adherence to it may entail upon them. Every undertaking, in short, is liable, in so many ways, to have its hold upon the public sympathy impaired, that no demonstrations of zeal at the commencement can afford the least guarantee for the future. Each successive hour may be the hour of apathy and reaction.

Religious enterprises differ, it is true, in very essential respects, from those which are merely secular; and yet they are by no means so different as not to have many things in common with them. Although plans of Christian benevolence, from their very nature, exclude many of those causes which lead to a decay of zeal in the support of worldly projects, yet they leave room for the operation of so many tendencies of this sort, that there is always danger lest they, sooner or later, decline in the regard of the religious community, and either altogether or in part fail of that vigorous prosecution of which there were so many intimations at their first announcement.

The cause of modern missions, although fraught pre-eminently with all the elements of a deep and permanent interest, is not exempt from this liability. Its brief history has already been marked with periods of vicissitude and fluctuation which are fearfully admonitory. The excitement of novelty, be it remembered, has now passed away; the churches have listened often to the recital of the miseries and crimes of heathenism; they have witnessed the embarkation of one missionary band after another, till the spectacle has ceased to be strange; the determination to forsake friends, and home, and country, for a life of self-banishment among strangers and barbarians, has been so often announced, that it is now heard with little surprise. The cause, under these circumstances, can receive but little aid from a variety of motives which

have been heretofore powerful auxiliaries in its service. Its support, for the future, must depend more entirely upon its own intrinsic claims: it now appeals, and will henceforth appeal more and more, to the higher principles of the Christian. It will call less into exercise those natural sympathies which kindle so readily upon contact with new objects; the love of truth, sense of obligation, philanthropy, piety, simple and unmixed, are the basis which must sustain it. There are many Christians in the community who are not prepared for this change. They have depended, perhaps unconsciously, upon extraneous incentives for no inconsiderable part of their activity; it would not be strange if the removal of these should be followed by a painful sense of want; it would not be strange if some abatement of their zeal should ensue, and excuses for inaction be secretly framed, if not promulgated.

The proper corrective of this tendency lies, as we conceive, in a correct view of the present relations of the missionary enterprise. It will be seen, from a glance at some of these relations, that the obligations of Christians to spread the Gospel have been neither diminished in number nor impaired in force, by the past efforts of the church to convert the world; but, on the contrary, that our obligations have been increased by those very efforts.

This effect follows, in the first place, from the increased information which is now diffused through the Christian community, in regard to the moral condition of mankind. The indifference of the church to the claims of the heathen in past ages, has been owing, in no slight degree, to the want of such information. Till recently, the men who have explored the world have been mere adventurers, in pursuit of the objects of wealth, or science, or fame. It could not be expected that such travellers would examine the countries which they visited in those points of view which would chiefly attract the attention of a Christian. An entire omission, frequently, of those notices which he would most anxiously collect, has been but a part of their fault. When the accounts given by such men to the world have contained facts of a moral nature, they have not only been rendered comparatively powerless for want of a religious spirit in the manner of exhibiting them, but have often been presented with all the distortion of prejudice, and sometimes, it is to be feared, of intentional misrepresentation. In this absence of a correct knowledge of the wants of the world, none but a feeble interest was felt, or could be felt, for its wretchedness. But this difficulty has now ceased. The missionaries are dispersed throughout every

quarter of the earth, and are studying, with the best facilities for accuracy, the opinions, the habits, the civil institutions, and every thing which enters into the character of the nations, for whose benefit they are labouring. The accounts which are transmitted to us, containing the results of this scrutiny, are so direct and vivid, that an actual survey of the scenes which they describe could hardly render them more impressive. The narratives of the Moravians have opened to view the dark and inhospitable regions of Greenland. The journals of Ellis, and Stewart, and others, have made us almost as minutely acquainted with the islands of the Pacific as we are with portions of our own country. The Christian reader may receive almost as strong an impression of the horrors of idolatry as it exists in Asia, from such descriptions as Buchanan and Heber have given, as if he should with his own feet traverse the plain where the car of the idol crushes its victim. But it is unnecessary to specify. The time has come when scarcely an individual in Christendom may not, if he will, understand minutely the moral condition of his race. The missionary exhibits no form of human wretchedness which the eyes of the church may not see; he echoes no groan of the creation, travelling in pain even now, after the deliverance of the Gospel has been so long provided, which the ears of the church may not hear. This is a state of things which exists for the first time. It places the claims of the missionary cause, in some sense, on new ground. The man who is indifferent to them was never before guilty of so great a sin; he never had an appeal to his sympathy so strong, and never violated, if he disregards it, an obligation so sacred. The increased information, therefore, which the progress of the missionary cause has furnished, devolves upon Christians an increased responsibility to sustain it, with all the energy which they can apply to its support.

Our second topic of remark is, that the examples of extraordinary zeal which have already appeared in the course of the missionary work, increase the obligations of Christians to labour for its advancement. We may discover the ground of this in the principle, that when men have a common duty to perform, exemplary faithfulness on the part of some of the number, renders any neglect of the rest the more deeply criminal. Strictly speaking, indeed, the manner in which one person treats his duties has no effect upon those of another. My responsibility remains intrinsically the same, whether yours be neglected or discharged. At the same time, there is a sense in which I may be held more guilty, if negligent, because you are faithful—a sense in which the performing of your obligation is a strengthening of mine. The self-devotion, for instance, of those who fell in the first battles of our Revolution, not only discharged what they

conceived to be due to the claims of patriotism on their own account, but, by the example which they set to their countrymen, prescribed also the measure of their obligations. They had now to fight for the memory of the dead, as well as for the freedom of the living; the lives which had been sacrificed had given, as it were, a new value to the liberty for which they were contending, and they were bound to redeem it at a greater price. It would be ignominy even to listen to terms which they might before have accepted with honour. Such, precisely, are the effects which signal displays of the missionary spirit have in reference to our obligations. Every instance of extraordinary zeal for the conversion of the world, and especially of personal consecration to the work, if made at the cost of sacrifice and suffering, is an appeal to the Christian's sense of justice which nothing but the most hardened insensibility can resist. Such cases excite him to ask how, while some of the church are doing so much to extend a knowledge of the Gospel, others who are subject to the same obligations, can be justified if they do but little. He is shown clearly how unequal it is that one Christian should be reposing at his ease, while his brother is bearing the heat and burden of the day; and if true to his convictions, he will resolve to do his part towards a fair adjustment of the labour.

It will contribute to distinctness of impression, if we here turn our thoughts to a particular example. The history of the first mission to Greenland occurs to us, and is as pertinent, perhaps, to our purpose as any other. The Gospel was introduced into this country by the Moravians, in 1788. The pioneers in the work were Christian David, and two brothers whose names were Matthew and Christian Stark. They were illiterate men, qualified for the enterprise which they undertook by little else except their piety and zeal. They had merely heard that the people in Greenland had no knowledge of a Saviour; and they resolved to go and teach them the way of salvation. "There was no need"—we quote their own simple but affecting language,—“there was no need of much time or expense for our equipment. Our whole community consisted chiefly of poor exiles, who had not much to give, and we ourselves had nothing but the clothes which we wore. Being accustomed to do with little, we gave ourselves no concern how we should get to Greenland, or how we should live in that country. Some money having been received the day before our departure, we took part of it to pay the expenses of our journey to Copenhagen; and as we considered ourselves richly provided for, we refused to accept of any thing from persons on the road, believing that He who had sent a supply for our journey at the critical moment, would also take care for every thing that was necessary for carry-

ing our purpose into execution, as soon as we should need it."

On reaching Copenhagen, after a wearisome journey, which they performed on foot, they found their project ridiculed as impracticable and romantic, even by those who approved their motives. The most discouraging representations were made to dissuade them from their purpose. "How," it was asked, "do you expect to live in Greenland, should you ever succeed in reaching there?" They were ignorant that the country furnished no wood, and answered, "that they would build a house and cultivate the land, that they might not be burdensome to any." When told of the impossibility of this, they said, "O, then, we will dig in the earth, and lodge there."

They could not be diverted from their object, either by the ridicule of foes or the apathy of friends; and after many trials they reached the country which they were seeking. The history of their labours, from this period until the icy heart of the Greenlander was at length melted by the Gospel, is full of interest, and would make a volume of itself. The substance of one or two passages is all which we have time to adduce. For want of other employment, we are told that they engaged in the business of spinning, to provide for their support. In acquiring the language of the country they had no assistance except such as was given through the medium of another tongue, equally strange to them, and which they had to learn to enable them to understand their instructor. This, a difficult task under any circumstances, must have been especially so to men who had scarcely seen a grammar in their lives. The severity of their labours, together with the extremity of their wants, in a short time exposed them to the attack of disease; they were reduced, by its violence, to such a degree, as even to lose the use of their limbs. They now, for a moment, wavered in their constancy, and thought seriously of abandoning their design. The arrival, however, of two other missionaries at this crisis, restored their firmness, and they resolved to remain. Their motto was, "We will believe though there be nothing to be seen, and we will hope though there be nothing to be expected."

From these statements an idea may be formed of the privations which these soldiers of the Cross were, for five years, daily enduring. The severest of their trials, it should be remembered, was, that during all this period they seemed to be toiling in vain: they were permitted to see no evidence that their labours and sufferings either had been, or were soon likely to be, in any measure, productive of good. Yet they toil on; difficulties do not discourage, dangers do not appal them;

And plant, successfully, sweet Sharon's rose
On icy plains, and in eternal snows.*

This illustration was at hand, and we have given it for this reason, rather than because it is singular. The history of modern missions contains many such examples. It will be excused if we present briefly another scene from missionary life, one which has occurred within the memory of most of our readers.

At the commencement of the war between England and Burmah, in 1824, the Baptist missionaries in the latter country were seized and thrown into prison. The dreadful story of their captivity, as drawn by the hand of Mrs. Judson, and contained in the Memoir of that gifted and devoted woman,† has scarcely a parallel in the records of human suffering. Mr. Judson, who was treated with even less severity than the others, was confined six months in three pairs of fetters, two months in five, six months in one, and was two months a prisoner at large. In this period of two years the missionaries suffered almost every form of misery which cruelty could inflict or fortitude endure. No voice of sympathy could reach them in their distress; they were excluded, by their situation, from all intercourse with civilised men. Their fate was, for a long time, matter of the most painful uncertainty. It was a happy relief to the churches when, at length, intelligence came that the sufferers were free from the grasp of their oppressors, and safe under British protection.

Who now, our object in making these references leads us to ask—who are these men whom the Saviour called to such tests of fidelity to his service? What peculiar guilt would they have incurred had they shrunk from these duties, involving a severity of suffering which it makes us shudder even to think of? What rewards had they to expect from obedience which do not equally allure the hopes of others? How were they bound by obligations, which do not always result from the relation of a redeemed sinner, whoever sustains it? Where is the proof that, as the Saviour of the world groaned in the garden and bled on the cross, the burden of the sins of these men lay heavier on his soul than the sins of others? On what page of his recorded will do you find it that he has prescribed to his followers different terms of service? It is impossible to allege any thing like this. The authority which imposes their obligations is the source, also, of ours. The labours which it requires of us and of them, however diversified they may be in form, are still materially the same. It has called us to the support of a common cause, and has recognised no ground of dis-

* Fired with a zeal peculiar, they defy
The rage and rigour of a northern sky,

* See the "Table Talk" of Cowper, under the division "Hope."

† Memoir, chap. xvi.

tion in the service, except such as unequal ability may create.

It follows, if these remarks are true, that extraordinary displays of missionary zeal should be presented to the church, not simply in the light of exciting appeals, but as absolutely prescriptive of duty. They are demonstrations of what all should do, as well as of what some have done. They show, impressively, how much men may accomplish when the love of Christ and of souls constrains them. The illustrations of this sort which the missionary enterprise has already called forth, devolve, it seems to us, a new responsibility upon the church; they raise immeasurably the standard of Christian action. It requires a higher aim to reach it than would have been necessary in the absence of those examples which are now summoning us to effort. The Grecian soldier had another character to sustain after the victories of Thermopylæ and Marathon: he must perform deeds of greater chivalry if he would vindicate his fame. A flight, which might before have been commended in him as caution, would now brand him as a coward. It is thus that the achievements of such men as Eliot, and Brainerd, and Carey,—the sufferings of such martyrs to the cause of the heathen as the Moravians and Judson,—the sacrifices, in short, which have been made, in a greater or less degree, by every true missionary,—affect the duty of the Christian. All are bound to do the more when a few have done so much. We owe this, not only to the cause itself, but to those of our brethren who have laboured with such singular zeal for its promotion.

Nor, in this matter, are the claims of the living less imperious than those of the dead. It is something, indeed, for the churches to have sent forth so many messengers of salvation; but this act, so far from leaving less to be done by them, has given rise to new and important relations between them and their missionaries abroad. Our brethren who are now labouring in the foreign service, have a right to look to us for sympathy in their trials, for the aid of our prayers, for contributions to their support, and co-operation with them, in all practicable ways, in the great object of their enterprise. It was on condition that we should thus sustain them, that they consented to go on the perilous service. There is not one of us who is not as really bound to sympathise with them in their trials, to pray for their success, and contribute to their support, as we should be had we individually put into their hands, at their departure, a written stipulation to this effect. It is an obligation which every one assumes who enters the church. His membership implies it; and if he violates it he is guilty of as clear a breach of fidelity as he would commit in breaking the conditions of a formally drawn and legal contract. We have seen somewhere an illustration on this point

of the Rev. Andrew Fuller, one of the chief instruments of rousing the missionary spirit of the English churches, as truly just—it struck us—as it is forcible. It is substantially this:—In our undertaking to convert the world, we may be compared to a company of men who are exploring a mine which has never yet been penetrated. It is necessary that some should make the perilous descent: all, for a time, demur. While they deliberate, two or three offer to enter, provided the rest will remain at the mouth of the cavern, and hold the rope with which the bodies of the adventurers must be fastened. The missionaries are such explorers. They have plunged into those dens of idolatry, superstition, and barbarism which no rays of the Sun of Righteousness have yet illumined; but before they went down, at the entrance of the horrid chasm they, as it were, took an oath from every one of their brethren in Christian lands, that, so long as he lives, he will never let go the rope which supports them. This that Christian does—of so base a desertion, is he guilty—who leaves the missionaries to struggle on in their difficulties without his sympathy,—who neither prays as he might that the Gospel which they preach may be believed, nor gives according to his ability for the relief of their wants.

We ask attention to another way in which what has been already done for the conversion of the heathen, so far from justifying any decline of zeal, requires, for the future, even a greater amount of activity than ever. The missionary operations of the age have placed the church in an attitude before the world which increases greatly her responsibility. These operations have now assumed an importance which is attracting the general attention. The work is no longer a silent one, so insignificant in its results, and so feebly supported, that it may be either overlooked or despised. But it has not always been so. Irreligious men, of course, have no confidence in the unseen agency on which the believer relies for success. The proportion which the causes visibly in operation bear to the proposed result, determines, in their view, its practicability. Accordingly, it has heretofore seemed to them—as it certainly must when judged of by such a rule—a project of folly. This is the only character it could have so long as no decided effects had yet been produced to correct their mistake—that Christians were employing means inadequate to their end. The refutation of that mistake has now been furnished. What has been accomplished is small, indeed, compared with what yet remains to be done; still it is by no means inconsiderable. The countries where the benefits of missionary instruction have been, for any length of time, enjoyed, are exhibiting such an improvement in their moral, social, and intellectual condition, that every eye is compelled to observe it. Men who feel but little interest in

the religious object of such exertions, see that they are productive of temporal advantages which, without any other result, amply repay the expense at which they are gained. These effects, which are every hour increasing, are attracting to the agents of them an attention which was not, and could not be secured, in the incipient stages of the work.

There are, also, many incidental ways in which the cause of missions has been gradually rising into more extended notice. The literary labours, for example, of Morrison in China, the translations of the English Baptists at Serampore, and of Judson in Burmah, have extorted the admiration of men who feel a sovereign contempt for them in their character as missionaries. The journals, too, of those who are engaged in this service, containing articles of interesting intelligence, which are frequently translated from language to language, till nearly every reader in Christendom has seen them;—the books of travels which they publish, with a fascination of matter and style which secures them an admission into the library of the scholar as well as the Christian; (such, for instance, as the “*Travels of Tyerman and Bennet*,” prepared by Montgomery; the “*Travels of Gutzlaff, in China*,” the “*Poly-nesian Researches*” of Ellis; and the “*Letters*” of Stewart);—the contributions, too, with which the pioneers of the Gospel in heathen lands have enriched the various departments of science,—these, and similar causes, have been operating to place the efforts of Christians for the conversion of the heathen in a point of conspicuousness before the world altogether new and peculiar. It is a position, certainly, which increases our responsibility. We cannot be recreant or unfaithful to the cause in such circumstances, without an increase of our guilt. We are committed, and must go forward. The eyes of men are upon us as they never were before. To recede, or even falter, now, would be to sin in their sight as well as against Heaven. The church, by appearing in her present attitude before the world, has thrown her standard, as it were, into the midst of the enemy; and her soldiers must—*must* rescue it, whatever the peril; to shrink at such a moment would be double treachery.

It would be easy to extend the course of thought which we have been pursuing to a great variety of topics; we shall notice, however, but one other:—the success which has attended the efforts of Christians to convert the world constitutes, as to all purposes of efficiency, a real increase of their power. An increase of power is, of course, an increase of obligation. Nothing contributes so much to the energy of human labours as confidence of success. It would seem as if such confidence not only secured a more effectual use of such ability as was already possessed, but even created that which before had no existence.

Hence, to persuade men who are engaged in a work that it is no Sisyphean task, but one to which they are competent, is virtually to make them competent. Experienced commanders understand this secret, and turn it to most important account. The general who, like Hannibal, can point his soldiers, on the eve of battle, to Ticinus and Cannæ, or, like Bonaparte, to Marengo and Austerlitz, does more to ensure victory than if he should join the myriads of Xerxes to his ranks. The principle now is as applicable to the enterprises of the church as to those of the world. A confident expectation of success constitutes as large a part of the ability of Christians as of other men. The apostles were really mightier agents in the assurance which they possessed that the Gospel would ultimately triumph, than they could have been without that assurance, although at the head of all the legions of the Roman empire. The word of God is undoubtedly the chief source from which we should derive our conviction that the truth will finally prevail. But we are not restricted to this source of evidence: the providence of God, as well as his word, is to instruct us on this subject. The faith which he has planted in our hearts by his promises, we not only may, but ought to strengthen, by looking at what he exhibits before our eyes. When we do this, we see in the fruits of missionary effort already secured, ample proof that if we faint not we may, in due time, reap the harvest of the world. It is for authorising and impressing this conviction, that we guard the history of modern missions as chiefly valuable. It is impossible that the church, while that history is familiar, should ever be weak. It contains, brief as it is, enough to show that men who have neither the gift of miracles, nor inspiration, may change the moral aspect of the world; it affords a ground of confidence which, of itself, is strength, and without which all the resources of mere physical power are but weakness. In this view, the treasures already expended in this enterprise are, even as it regards its further prosecution, the best riches of the church. The death of those who have fallen in it is the life of their co-workers who survive. What was once thought to be physically true,—that when one member of the body is lost its strength passes into the other members,—the church is more than realising in this sacred cause.

Thus accumulative are the obligations of Christians to labour for the spread of the Gospel. What they have done for this object does not release them from the duty of continued activity; on the contrary, it imposes that duty upon them with a voice of authority such as has never been heard before. The command of our Saviour, “Go ye into all the world, and preach the Gospel to every creature,” is binding upon his followers at all times. To disregard it, under any circumstances, would be criminal; but to be

guilty of such neglect at this stage of the missionary work, would be an offence and a sin surpassing as infinitely the guilt of that same

neglect at any former period, as the motives to faithfulness now surpass infinitely those of all former times.

ON THE DEVELOPMENT OF THE INTELLECT IN CHILDHOOD.

SECOND ARTICLE.

A determined infant may be seen to rule a weak parent, and even exercise an influence over a whole family. A very gentle child may never acquire sufficient force of character to make his way in the world, no matter how intellectual he may be.

The higher sentiments, generally speaking, are the more slowly developed; and superior moral powers, as the sense of justice and religion, are among the latest to come into operation, requiring some assistance from the understanding for their direction and support.

No doubt can exist that the child is endowed with certain powers, moral and intellectual, varying in different individuals, and constituting natural differences of character; but this militates not against the necessity for education and training and the vast influence exercised thereby; on the contrary, it serves as a guide and a limitation, —pointing out what requires to be cultivated, and what to be repressed; and shows us what is possible to be done.

How important, then, to acquire a knowledge of the primitive faculties of man, and the laws by which they are regulated in their natural development, or influenced by artificial training. Nor is the necessity for such knowledge confined to the system more immediately connected with mental manifestation. The same holds good respecting all the other systems in the body; for without due attention to each, we shall not be able to do justice to any, or secure for the whole its best advantages during the period of development or growth.

With regard to the general growth of the body, and the advance in height, weight, and strength, differences arise from age and sex, and these have been accurately dependent upon the relative advance in size or structure in different parts of the brain, though not yet directly connected therewith.

It is certain, that the disposition and intellect are gradually unfolded, and that attempts to force the one or the other before its appointed time and proper progression, are sure to be attended with injurious, if not dangerous consequences. The reason is obvious; because what is called the cultivation of the mind, is, in truth, but the exercise of the brain; and this, like every other organ, if overtasked, will be worn out or destroyed.

In noticing the development of the intellectual powers, we see that the child observes before he reasons—that the perceptive faculties come into

play before the reflective. The child really observes and recollects things, and the quantities and relations of things, and is inquisitive about events. He constantly asks what this or that is.

But the senses advance still more rapidly than the perceptive faculties, and are thus prepared to furnish these faculties with knowledge of the various properties of matter. The differences to be observed, however, in the power of appreciating these qualities of bodies depend on differences in the constitution of the perceptive faculties—not of the senses. The eye may see well, and clearly perceive deficiencies in size or form, and yet not be able to distinguish differences in colours; the ear that hears best, is not that which best appreciates those variations in sound that constitute melody.

The various degrees of talent exhibited by some children more than others, depend much on the different degrees with which they are endowed with those faculties that take cognizance of the physical properties of things. In these qualities and relations of bodies we have the foundation of the physical and natural sciences; and for these sciences, (especially the latter,) mental capacity exists at a much earlier age than seems commonly supposed.

The gift of language, as a mental power, is that which earliest attracts attention and is first cultivated. Hence, facility in this respect, with a quick observation, are taken as indications of great intellectual capacity. But the reflective faculties must be in full operation, to constitute a really good understanding; and these are always the latest to be developed, and often not very liberally bestowed. It is, indeed, upon a due balance between the reasoning and perceptive faculties, that the superiority of the intellect will depend. Where the latter preponderate, they early show themselves, and give a quickness of apprehension, which, in the child, is often taken for superior talent. But the smartest boy does not necessarily make the cleverest man: there must be a full endowment of the reflective faculties, to give depth of thought or soundness of understanding.

When these faculties early preponderate, however, the child will be slow in apprehension, and may be esteemed dull; but when the period for their exercise arrives, powers will be exhibited which had not been anticipated. Peculiarities of disposition, moreover, will affect these results as much as differences in talent, though seldom, if at all, taken into the account. The child often

exhibits (from the earliest age) a marked disposition, as it occasionally does some peculiar talent. Almost from the moment of birth some

infants are observed to be peevish, passionate, or obstinate; while others are gentle and affectionate, or timid.

MARRIAGE.

A LETTER TO A YOUNG LADY. BY THE LATE S. T. COLERIDGE.

If there be any one subject which it especially concerns a young woman to understand, both in itself generally, and in its application to her own particular habits and circumstances, IT IS THAT OF MARRIAGE; and if there be any one subject of more perplexing delicacy than any other to advise a young woman about, above all for one of a different sex, and of no marked inequality in respect of age, however the attempt may seem authorised by intimacy and nearness of kindred; if there be one that at once attracts by its importance, and repels by its difficulty, IT IS THAT OF MARRIAGE. To both sexes, indeed, it is a state of deep and awful interest, and to enter into it without proportionate forethought is, in both, alike an act of folly and self-degradation. But in a woman, if she have sense and sensibility enough to deserve the name, it is an act tantamount to suicide—for it is a state which, once entered into, fills the whole sphere of a woman's moral and personal being, her enjoyments, and her duties, dismissing none, adding many, and modifying all. Even those duties (if such there be) which it may seem to leave behind, it does but transfer; say, rather, it re-imposes and re-consecrates them under yet dearer names; (though names more dear than those of daughter and sister it is not easy to imagine;) at all events, with obligations additionally binding on her conscience, because undertaken by an act of her own free will. A woman—mark me! in using that term I still have before my mind the idea of womanhood, and suppose the individual to possess its characteristic constituents—a woman in a single state may be happy, and may be miserable; but *most* happy, *most* miserable, these are epithets which, with rare exceptions, belong exclusively to a wife. The tree of full life, and that “whose mortal taste brings death” into the heart, these, my dear —, grow in the probationary Eden of courtship alone. To the many of both sexes I am well aware this Eden of matrimony is but a kitchen garden, a thing of profit and convenience, in an even temperature between indifference and liking, where the beds, bordered with thrift, reject all higher attractions than the homely charms of marygold and pennyroyal, or whatever else is good to boil in the pot, or to make the pot boil; or if there be aught of richer fragrance and more delicate hues, it is put or suffered there, not for the blossom, but for the pod. But this, my dear —, is neither the

soil, climate, nor aspect, in which your “heart's ease,” or your “herbs of grace,” would bloom or burgeon. To be happy in marriage life, nay, (unless you marry with the prospect of sinking into a lower state of moral feeling, and of gradually quenching in yourself all hope, and all aspiration that looks beyond animal comforts, and the outside shows of worldly respectability,) in order not to be miserable, you must have a *soul-mate*, as well as a *house* or a *yoke-mate*; you must have a husband whom, before the altar, making yourself at that moment distinctly conscious of the presence of Almighty God, to whom you appeal, you can safely, that is, according to your confident belief, grounded on sufficient opportunities of observation, conscientiously vow to love, honour, and respect. With what disgust would you not turn from a sordid, with what horror would you not recoil from a contagious or infectious garment offered to you? You would not suffer it to come near your skin. And would you surrender your person, would you blend your whole personality, as far as God has put it in your power to do so, all that you call “I,”—soul, body, and estate—with one, the contagion of whose principles, the infection or sordidness of whose habits and conversation, you would have to guard against in behalf of your own soul; and the insidious influence of which, on the tone and spirit of your thoughts, feelings, objects, and unconscious tendencies and manners, would be as the atmosphere in which you lived! Or, were the man's character merely negative in these respects—were he only incapable of understanding the development of your moral being, including all those minor duties and objects of quiet pursuit and enjoyment which constitute the moral taste—were he only indifferent to the interest you felt for his and your own salvation, and for the conditions of your reunion in the world to come—still it would be a benumbing influence, and the heart may be starved where it is neither stabbed nor poisoned. God said, that it was not well for the human being to be alone: to be what we ought to be, we need support, help, communion in good. What, then, if instead of a helpmate we take an obstacle, a daily counteraction? But the mere want of what God has rendered necessary, or most desirable for us, is itself an obstacle. Virtue sickens in the air of the marshes, loaded with poisonous effluvia; but even where the air is merely deficient in the due quantity of its vital element, and where there is too little, though what there

* Too often, I fear, on the supposed sanction of the *mis-translated*, and still worse *interpreted*, text, Gen. ii. 24.

is may be faultless, human virtue lives but a panting and anxious life. For as to a young woman's marrying in the hope of reforming the man's principles, you will join with me in smiling at the presumption, or more probably the pretext; as if the man was likely to appreciate, as of very serious importance, a danger which the wife had not feared to risk on so slender a chance, or be persuaded by her to feel as hateful the very qualities which she had taken to her bosom, as a few weeds in a nosegay that she might pick out at leisure.

Well, you will perhaps reply, you would have convinced me, if I had not been convinced before, of the misery attendant on an unfit choice, and the criminal folly of a rash and careless one. But by what marks am I to distinguish the suitable from the unsuitable? What are the criteria, or at least the most promising signs, of a man likely to prove a good husband to a good wife? And, as far as you can judge from your knowledge of my character, principles, and temper, likely to find his happiness in me, and to make me happy and deserving to be so? For perfection can be expected on neither side.

Most true; and whilst the defects are both in their kind and their degree within the bounds of that imperfection which is common to all in our present state, the best and wisest way that a wife can adopt, is to regard even faulty trifles as serious faults in herself, and yet to bear with the same or equivalent faults as trifles in her husband. If the fault is removable, well and good; if not, it is a speck in a diamond—set the jewel in the marriage ring with the speck downmost. But it is one thing to choose for the companion of our life a man troubled with occasional headaches or indigestion, and another to run into the arms of inveterate gout or consumption, (even though the consequent hectic should render the countenance still more winning and beautiful,) or of hemiplegia, that is, of palsy on one side. For, as you will see that I am speaking figuratively, and under the names of bodily complaints am really thinking, and meaning you to think, of moral and intellectual defects and diseases, I have hazarded the hard word "hemiplegia;" as I can conceive no more striking and appropriate image or symbol of an individual with one half of his being, that is, his person, manners, and circumstances, well, and as it should be, while the other, and inestimably more precious half, is but half alive, blighted and insensate. Now, for the prevention of the perilous mistake into which a personal prepossession is too apt to seduce the young and marriageable, and females more often, perhaps, than males, from the very gentleness of their sex, the mistake of looking through the diminishing end of the glass, and confounding vices with foibles, I know no better way than by attempting to answer the questions which I have supposed you to put, viz.,

What are the marks, &c., first, generally, and, secondly, in particular application to yourself? In the latter I can of course only speak conjecturally, except as your outward circumstances and relative duties are concerned; in all else, you must be both querist and respondent. But the former, the knowledge of which will be no mean assistance to you in solving the latter for your own satisfaction, I think I can answer distinctly and clearly; and with this, therefore, we will begin.

You would have reason to regard your sex affronted, if I supposed it necessary to warn any good woman against open viciousness in a lover, or avowed indifference to the great principles of moral obligations, religious, social, or domestic. By "religious," I do not *here* mean matters of opinion, or differences of belief, in points where good and wise men have agreed to differ. Religious, in my present use of the word, is but morality in reference to all that is permanent and imperishable; God and our souls, for instance; and morality is religion in its application to individuals, circumstances, the various relations and spheres in which we happen to be placed; in short, to all, to all that is contingent and transitory, and passes away, leaving no abiding trace but the consciousness of having or not having done our duty in each.

I would fain, if the experience of life would permit me, think it no less superfluous to dissuade a woman of common foresight and information, from encouraging the addresses of one, however unobjectionable or even desirable in other respects, who she knew, or had good reason to believe, was, by acquired or hereditary constitution, affected by those mournful complaints which, it is well known, are ordinarily transmitted to the offspring, to one, or more, or all. But, alas! it often happens, that afflictions of this nature are united with the highest worth and the most winning attractions of head, heart, and person; nay, that they often add to the native good qualities of the individual a tenderness, a sensibility, a quickness of perception, and a vivacity of principle, that cannot but conciliate an interest in behalf of the possessor in the affections of a woman, strong in proportion to the degree in which she is herself characterised by the same excellences. Many virtues and manly sense, with feminine manners without effeminacy, form such an assemblage, a *tout ensemble* so delightful to the womanly heart, that it demands a hard, a cruel struggle to find in any ground of objection an effective counterpoise, a decisive negative. Yet the struggle must be made, and must end in the decisive and, if possible, the preventive "No;" or all claims to reason and conscience, and to that distinctive seal and impress of divinity on womanhood, the maternal soul, must be abandoned. The probable misfortunes attendant on the early death of the head of the family are the least fearful of the conse-

quences that may rationally be expected from such a choice. The mother's anguish, the father's heart-wasting self-reproach, the recollection of that innocent lost, the sight of this darling suffering, the dread of the future,—in fine, the conversion of heaven's choicest blessings into sources of anguish and subjects of remorse—I have seen all this in more than one miserable, and *most* miserable, because amiable and affectionate, couple, and have seen that the sound constitution of one parent has not availed against the taint on the other. Would to God the picture I have here exhibited were as imaginary in itself as its exhibition is unnecessary, and the reality of improbable occurrence, for you.

Dismissing, therefore, as taken for granted or altogether inapplicable, all objections grounded on gross and palpable unfitness for a state of moral and personal union and lifelong interdependence,—and less than this is not marriage, whether the unfitness result from constitutional or from moral defect or derangement; and with these, and only not quite so bad, dismissing too the objections from want of competence, on both sides, in worldly means, proportional to their former rank and habits; and yet what worse or more degradingly selfish, (yea, the very dregs and sediment of selfishness, after the more refined and human portion of it, the sense of self-interest, has been drawn off,) what worse, I repeat, can be said of the beasts of the field, without reflection, without forethought, of whom and for whose offspring nature has taken the responsibility upon herself? Putting all these aside, as too obvious to require argument or exposition, I will now pass to those marks which too frequently are overlooked, however obvious in themselves they may be; but which ought to be looked for, and looked after, by every woman who has ever reflected on the words “my future husband” with more than girlish feelings and fancies. And if the absence of these marks in an individual furnishes a decisive reason for the rejection of his addresses, there are others the presence of which forms a sufficient ground for hesitation, and I will begin with an instance.

When you hear a man making exceptions to any fundamental law of duty in favour of some particular pursuit or passion, and considering the dictates of honour as neither more nor less than motives of selfish prudence in respect of character; in other words, as conventional and ever-changing regulations, the breach of which will, if detected, black-ball the offender and send him to Coventry in that particular rank and class of society of which he was born, or has become a member; when, instead of giving instantaneous and unconditional obedience to the original voice from within, a man substitutes for this, and listens after the mere echo of the voice from without; his knowledge, I mean, of what is commanded by fashion and enforced by the foreseen consequences of

non-compliance on his worldly reputation, (thus, I myself heard a buckish clergyman, a clerical Nimrod, at Salisbury, avow that he would “cheat his own father in a horse,”) then I say, that to smile, or to show yourselves smiling angry, as if a tap with your fan was a sufficient punishment, and a “for shame! you don't think so, I am sure,” or, “you should not say so,” a sufficient reproof, would be an ominous symptom either of your own laxity of moral principle and deadness to true honour, and the unspeakable contemptibleness of this gentlemanly counterfeit of it, or of your abandonment to a blind passion, kindled by superficial advantages and outside agreeables, and blown and fuelled by that most base, and yet frequent thought, “one must not be over nice, or a woman may say No till no one asks her to say Yes.” And what does this amount to (with all the other pretty common-places as, “what right have I to expect an angel in the shape of a man?” &c., &c.,) but the plain confession, “I want to be married; the better the man the luckier for me; I have made up my mind to be the mistress of a family; in short, I want to be married!” Under this head you may safely place all the knowing principles of action, so often and so boastingly confessed by your clever fellows—“I take care of number one; hey, neighbour: what say you?”—“Each for himself, and God for us all: that's my maxim.” And likewise, as the very same essentially, though in a more dignified and seemly form, the principle of determining whether a thing is right or wrong by its supposed consequences.

There are men who let their life pass away without a single effort to do good either to friend or neighbour, to their country or their religion, on the strength of the question—“What good will it do?” But woe to the man who is incapable of feeling that the greatest possible good he can do for himself or for others, is to do his duty, and to leave the consequences to God. But it will be answered, “How can we ascertain that it is our duty, but by weighing the probable consequences? Besides, no one can act without motives; and all motives must at last have respect to the agent's own self-interest; and that is the reason why religion is so useful, because it carries on our self-interest beyond the grave!”

O, my dear —! so many worthy persons who really, though unconsciously, both act from, and are actuated by, far nobler impulses, are educated to talk in this language, that I dare not expose the folly, turpitude, immorality, and irreligion of this system, without premising the necessity of trying to discover, previous to your forming a fixed opinion respecting the true character of the individuals from whom you may have heard declarations of this kind, whether the sentiments proceed from the tongue only, or, at worst, from a misinstructed understanding, or are the native growth of his heart.” S. T. C.

PROPHECY AND ITS FULFILMENT

It has been well remarked, that prophecy is a constantly growing evidence of the truth of the Holy Volume. We have often been desirous of seeing the accomplished ancient predictions collected from the pages of the sacred writers, and placed in parallel columns with passages from the historian and the traveller, which may present a concise and striking view of the subject, tending to remove the scepticism of the infidel,

PROPHECY.

"I will stretch out my hand upon Edom,—and will make it desolate from Teman."—Ezekiel xxv. 18.

"And he shall stretch out upon it (Idumæa) the line of confusion, and the stones of emptiness."—Isaiah xxxiv. 11.

"If grape-gatherers come to thee, would they not leave some gleanings? If thieves by night, they will destroy till they have enough. But I have made Esau bare."—Jeremiah xlix. 9, 10.

"And Edom shall be a desolation."—Jeremiah xlix. 17.

"Behold, O Mount Seir, I am against thee, and I will stretch out mine hand against thee, and I will make thee most desolate."

"I will lay thy cities waste."—Ezekiel xxxv. 3, 4.

"I will make thee perpetual desolations, and thy cities shall not return."—Ezekiel xxxv. 9.

"Thy terribleness hath deceived thee, and the pride of thine heart, O thou that dwellest in the clefts of the rock, that holdest the height of the hill; though thou shouldst make thy nest as high as the eagle, I will bring thee down from thence saith the Lord."—Jeremiah xlix. 16.

and to confirm the faith of every ingenuous mind.

What we are so desirous of seeing fully carried out, has been partially done by the very able translator of M. Leon de Laborde's "Journey through Arabia Petrea," in his preface to that very interesting work. We copy the whole passage, with many thanks to its author for his zeal and judgment in its production:—

FULFILMENT.

"In many places it (Petrea) is overgrown with wild herbs, and must once have been thickly inhabited; for the traces of many towns and villages are met with on both sides of the Hadj road, between Maan and Akaba, as well as between Maan and the plains of Hauran, in which direction are also many springs. At present *all this country is a desert*, and Maan (Teman) is the only inhabited place in it."—*Burckhardt's Travels in Syria*, p. 436.

"On ascending the western plain (of Idumæa), on a higher level than that of Arabia, we had before us an immense expanse of dreary country, entirely covered with *black flints*."—*Burckhardt, Syria*, p. 444.

"The whole plain presented to the view an expanse of shifting sands, whose surface was broken by innumerable undulations and low hills."—"And the Arabs told me that the valleys continue to present the same appearance beyond the latitude of Wady Mousa (Petra). In some parts of the valley the sand is very deep, and there is not the slightest appearance of a road or of any work of human art. A few trees grow among the sand-hills, but the *depth of sand* precludes all vegetation or herbage. The sand which thus covers the ancient cultivated soil appears to have *been brought from the shores of the Red Sea*, by the southern winds."—*Burckhardt*, p. 442.

"The following ruined places are situated in *Djebel Shera* (Mount Seir), to the south and south-west of Wady Mousa (Petra), Kalaat, Djerba, Basta, Eyl, Ferdakh, Anyk, Bir el Beytar, Shemakh, and Syk. Of the towns laid down in D'Anville's map, (viz.: Elusa, Tamara, Zoara, Thoana, Necta, Phenon, Suzuma, Carcaria, Oboda, Berzumma, Lyssa, Gypsaria, Zodocata, Gerasa, Havara, Presidium ad Dianum, Elana, and Asion Gaber.) Thoana excepted, *no traces remain*."—*Burckhardt*, pp. 443, 444.

"The ruins of the city (Petra) here burst on the view, in their full grandeur, shut in on the opposite side by barren craggy precipices, from which numerous ravines and valleys branch out in all directions: the sides of the mountains, covered with an endless variety of excavated tombs and private dwellings, presented altogether the most singular spectacle we ever beheld."—*Captains Irby and Mangles*, p. 422.

PROPHECY.

FULFILMENT.

"I will make thee small among the heathen."
—Jeremiah xlix. 15.

"I will make thee despised among men."
Jeremiah, *ibid.*

"Concerning Edom, thus saith the Lord of Hosts, Is wisdom no more in Teman? Is counsel perished from the prudent? Is their wisdom vanished?"—Jeremiah xlix. 7.

"And thorns shall come up in her palaces, nettles and brambles in the fortresses thereof."—Jeremiah xxxiv. 13.

"The owl, also, and the raven shall dwell in it."—Isaiah xxxiv. 11.

"And there shall not be any remaining of the house of Esau."—Obadiah 18.

"The name of this capital, in all the various languages in which it occurs, implies a *rock*, and as such it is described in the Scriptures, in Strabo, and Al Edrissi."—*Vincent, Commerce of the Ancients*, vol. ii. p. 264.

"The barren state of the country, together with the desolate condition of the city, without a single human being living near it, seem strongly to verify the judgment denounced against it."—*Irby and Mangles*, p. 439.

"When Mr. Banks applied, at Constantinople, to have Kerek and Wady Mousa (Petra) inserted in his firman, they returned for answer, 'that they knew of none such within the Grand Seigneur's dominions.'"—*Irby and Mangles*, p. 336.

"The Arabs, who show through their monotonous life little feeling for the vicissitudes of empires, have given this ruin (of a temple) a ridiculous, indeed an indecent name, which has no connexion whatever with its original destination, and yet seems not ill applied to it in its state of decay: to prove the utter fragility of our works, besides the injury capable of being wrought by time, only one thing more is wanting—the *ridicule of mankind*."—*Laborde*, pp. 155, 156.

"But if the question now be asked, Is understanding perished out of Edom? the answer may be briefly given. The minds of the Bedouins are as uncultivated as the deserts they traverse. The simple but significant fact that the clearing away of a little rubbish, merely to allow the water to flow into an ancient cistern, in order to render it useful to themselves, is an undertaking far beyond the views of the wandering Arabs,—shows that understanding is indeed perished from among them."—*Keith*, p. 221.

"They look," continues Keith, "upon a European traveller as a magician, and believe that having seen any spot where they imagine that treasures are deposited, 'he can afterwards command the guardian of the treasure to set the whole before him.'"—*Burchhardt*, p. 429.

"It is truly a strange spectacle—a city filled with tombs, some scarcely begun, some finished, looking as new and as fresh as if they had just come from the hands of the sculptor; whilst others seemed to be the abode of lizards, fallen into ruin, and covered with brambles."—*Laborde*, p. 157.

"The screaming of the eagles, hawks, and owls, who soared above our heads in considerable numbers, seemingly annoyed at any one approaching their habitation, added much to the singularity of the scene."—*Irby and Mangles*, p. 413.

"The Idumeans were, soon after the commencement of the Christian era, mingled with the Nabatheans. In the third century their language was disused, and their very name, as designating any people, had utterly perished. (Origin, lib. iii. in Job.) And their country itself, having

PROPHECY.

"Whereas Edom saith, We are impoverished, but we will return and build the desolate places; then saith the Lord of Hosts, They shall build, but I will throw down. And your eyes shall see, and ye shall say, 'The Lord will be magnified from the borders of Israel.'—Malachi i. 3, 4.

FULFILMENT.

become an outcast from Syria, among whose kingdoms it had long been numbered, was united to Arabia Petraea, while the posterity of Jacob had been 'dispersed in every country under heaven,' and are 'scattered among all nations,' and have ever remained distinct from them all; and while it is also declared that 'a full end will never be made of them,' the Edomites, though they existed as a nation for more than seventeen hundred years, have, as a period of nearly equal duration has proved, been cut off for ever; and, while Jews are in every land, there is not any remaining, on any spot of earth, of the house of Esau."—*Keith*, p. 231.

"The order of the architecture shows that the citizens of Petra did build after the era of the prophets, while the fragments of ruins of Grecian and Roman architecture, as well as of more ancient date, which are strewn over the ground, shows that those buildings whose doom was pronounced before their erection, have, according to the same sure words, been thrown down."—*Keith*, p. 202.

"It is surprising to reflect that monuments of so vast a scale should be executed subsequent to the Roman conquest. In the approach to this tomb there were arched substructions of great extent, now fallen into ruins."—*Irby and Mangles*, p. 430.

THE INFLUENCE OF CLIMATE ON THE MIND.

This question must be entirely decided by facts; but it would be extremely unjust to draw them merely from polished society, for here *moral* causes have the greatest share in forming the human character. As we are endeavouring to find the effect of a physical cause, we must look amongst those nations and countries where the original stamp of nature has been least altered and defaced by civilisation.

Neither, I apprehend, would it be just to judge of the mental faculties of a human creature merely by his quickly comprehending the subtleties and perceiving the beauties of a logical disquisition. No; it is from firmness of character, from undaunted courage, from his imagination, from a certain noble daring, a spirit of independence, enterprise, industry, and research, that we ought to conclude what manner of man he is. Shall we despise the mind of the untutored savage because it is obscured by the mists of ignorance? As well and as justly might we lay to the charge of the glorious God of light the lowering of the sky, when heavily in clouds comes on the day. The rough diamond has its intrinsic value, although, to undiscerning and ignorant eyes, it may appear inferior to polished glass. The polish of the diamond *shows*, indeed, but does not *make*, its value.

If we are to rate the powers of intellect which any nation may possess, only by the resemblance which their customs may bear to the manners of modern Europe, we can never come to any just conclusion on the question; but if we take what I have mentioned above as our touchstone, by which to try the nature of the human faculties, we shall find—although opinions and manners vary in different parts of the world, and change in almost every age—that it will be a fit test for every region of the habitable globe, by which we may judge of man from the age of Noah down to the age of William the Fourth.

It is universally acknowledged, that the body exerts a considerable influence on the mind; and hence it follows, that whatever affects the corporeal frame of man, must, through that medium, possess a power over his mind. Now, as no one can deny that climate does affect the human body, it is clearly proved that it must have some influence on the mind of man. We have only to consult the relations of historians and geographers, to see whether this conclusion be correct or not.

By those who consider the mental powers of mankind as being influenced by climate, it is affirmed that extreme cold, especially if accompanied with a thick foggy atmosphere, benumbs

and, as it were, seals up the mental faculties of man;—that intense heat has the effect of enervating and giving such a degree of lassitude to the soul, as to render it unwilling to exert its latent properties;—and that it is in the temperate climes alone where man attains his greatest dignity. How far these assertions are borne out by facts, it is our business now to inquire.

The most uncivilised region of the globe, the one in which man acts most according to the dictates of nature, is the immense continent of North and South America. And if we turn our attention to the inhabitants of the tract lying between the 50th and 65th degrees of north latitude, how dead do they appear to all the lively feelings of the human breast! Deaf to the call of ambition, and to almost all the other passions of our nature, they appear scarcely to be blessed with half the soul with which the favoured people of climes less rigid are endowed. Man is a being considered as capable of progressive improvement; but the inhabitants of these climates appear to have existed in the same state of ignorance for ages. Their miserable huts have never been changed into more comfortable dwellings, or collected together so as to deserve the name of a town. They seem to have little idea of the pleasures of society, and, compared with other men, are little elevated above the brutes that perish; for the sole apparent purpose for which they draw their breath is to provide themselves with food and to propagate their species.

This is not only the character of those who inhabit the frozen regions of North America, but of those who live within the degrees of latitude mentioned above, nearly throughout the world; it is not only due to the Esquimaux and to the natives of Greenland, but likewise to the Laplanders, the Simoides, and the wandering tribes of Kamschatka.

If we examine more temperate climes, and contemplate the character of the inhabitants, what a most striking contrast will be exhibited to our view! We shall find men who alternately overwhelm us with astonishment, and freeze us with horror, by the extremes of conduct which they manifest. All the powers of their minds are brought into full exercise. Here we behold people divided into different nations, and each individual jealous of the honour of his particular tribe, subtle in forming schemes, and bold and prompt in executing them, possessing a spirit of enterprise, a patience and a courage which the greatest difficulties and dangers cannot subdue. When sacrificed to the revenge of his enemies, he suffers himself to be bound to the stake for the fancied glory of his clan, while the savage warrior stimulates his companions by the war-song of defiance, and, by recounting to them the numbers he has slain in battle, urges them to ply all the torments which the most diabolical

imagination can suggest, in order to accomplish his purposes. The savage chieftain, by the customs of his country, must undergo multiplied privations before he can attain to the rank at which he aims. Spurred on by ambition, he would prove that he is worthy of his office, by showing that his mind has gained a complete ascendancy over his body, and is not to be subdued by the most excruciating tortures.

Although, perhaps, they may not excel in the fine-turned period and well-chosen simile amongst these uncivilised clans, yet the hoary-headed chief possesses a nervous manly eloquence, which, if to be judged of by the effects it produces, is only to be surpassed by the orators of Greece and Rome. Roused by the injuries his nation may have sustained, stimulated by revenge and the hope of plunder, he possesses the power of inflaming the minds of his people almost to a degree of frenzy. The war-song, and more horrid war-dance, succeed, and they go to battle with all the vigour with which the hope of revenge and booty can inspire them. It is not only in the temperate zones of America that men manifest that savage greatness of soul of which I have been speaking, but the description suits the character of men in similar climates over the whole world; it will apply to the ancient inhabitants of these isles, to the Gauls and Germans, and to the wandering tribes of Tartars in Asia.

Now let us examine those countries that lie in warmer latitudes, and see whether they will equally bear out the assertion, that heat of climate enervates the mind, and renders the people inclined to indolence. That, in the southern parts of America, it has this effect, is very evident from the ease with which a handful of Spaniards subdued whole kingdoms, and rendered their abject slaves treble their own numbers. How different from the northern aborigines, who, at this day, are the terror of the frontiers of the United States, and even oblige them to pay an annual tribute for a considerable part of their territories! If we examine the dispositions of the natives of Paraguay, we shall find little difference between them and the ignorant Hottentots of Africa, or the quiet and inoffensive race who cover the sultry plains of Hindostan. It is a singular but remarkable fact, that the inhabitants of these countries are now become a prey to more bold and enterprising nations.

History is, in this case, rather barren of information, as it only shows us the fatal power of luxury in advancing, by slow but sure steps, the ruin of the morals and strength of a nation. Yet there is one fact upon record which must have a considerable influence in deciding the present question. When Rome, from being merely a petty city in Italy, became, by the continued successes of her arms, the mistress of the then known world,—having her military forces dis-

seminated over the plains of Numidia, the provinces of Egypt, of Judea, Syria, Mesopotamia, Lydia, Greece, and Macedonia, at the same time that one part of her legions were pursuing their victories in Gaul, Spain, Britain, and Germany,—it was manifest what power climate exerted over the character of man. When ambition stirred up the civil commotions which deluged the conquered countries with the blood of the conquerors, it was evident that men born in the same city, and subject, during their youth, to the same laws and customs, acquired opposite characters merely by the influence of climate. Those chiefs who had the good fortune to attach to their interest the troops who had borne the cold and changeable seasons of the northern provinces, were always successful over their enemies, who had only the enervated legions of the south to oppose to them.

To this circumstance Cesar was, in a great measure, indebted for the uncommon power he acquired. And Constantine could never have withstood, and much less have overcome, his numerous and powerful rivals to the throne, but by the support of the hardy soldiers of the north. That penetrating historian, Gibbon, attributes the success which accompanied the arms of Constantine solely to this cause.

From what I have said, I would by no means wish it to appear that it was climate alone which affected the human mind in the cases I have mentioned, since I am always willing to allow that moral causes possess an influence, nay, a superior influence, over it. But the question is, Does climate possess any power in this respect? and I think myself warranted in stating my conviction that it does.

MERCATOR.

THE AMERICANS.

(From "*American Society*," by Miss Martineau.)

THE hospitality of the country is celebrated; but I speak now of more than usually meets the eye of a stranger—of the family manners, which travellers have rarely leisure or opportunity to observe. If I am asked what is the peculiar charm, I reply, with some hesitation, there are so many. But I believe it is not so much the outward plenty, or the mutual freedom, or the simplicity of manners, or the incessant play of humour, which characterises the whole people, as the sweet temper which is diffused like sunshine over the land. They have been called the most good-tempered people in the world; and I think they must be so. The effect of general example is here most remarkable. I met, of course, with persons of irritable temperament, with hot-tempered and with fidgetty people, with some who were disposed to despotism and others to contradiction; but it was delightful to see how persons thus afflicted were enabled to keep themselves in order—were so wrought upon by the general example of cheerful helpfulness, as to be restrained from clouding their homes by their moods. I have often wondered what the Americans make of European works of fiction in which ailing tempers are exhibited. European fiction does not represent such in half the extent and variety in which they might be truly and profitably exhibited; but I have often wondered what the Americans make of them, such as they are. They possess the initiatory truth in the variety of temperaments which exist among themselves, as every where else, and in the moods of children; but the expansion of deformed tempers in grown people must strike them as monstrous caricatures. Of course, there must be some general influence

which sweetens or restrains the temper of a whole nation, of the same Saxon race which is not every where so amiable. I imagine that the practice of forbearance, requisite in a republic, is answerable for this pleasant peculiarity. In a republic, no man can, in theory, overbear his neighbour; nor, as he values his own rights, can he do it much or long in practice. If the moral independence of some, of many, sinks under this equal pressure from all sides, it is no little set-off against such an evil, that the outbreaks of domestic tyranny are thereby restrained, and that the respect for mutual rights which citizens have perpetually enforced upon them abroad, comes thence to be observed towards the weak and unresisting in the privacy of home.

A passenger on board the "*Henry Clay*," in which I ascended the Mississippi, showed in perfection the results of a false idea of honour. He belonged to one of the first families in Kentucky, had married well, and settled at Natchez, Mississippi. His wife was slandered by a resident of Natchez, who, refusing to retract, was shot dead by the husband, who fled to Texas. The wife gathered their property together, followed her husband, was shipwrecked below New Orleans, and lost all. Her wants were supplied by kind persons at New Orleans, and she was forwarded by them to her destination, but soon died of cholera. Her husband went up into Missouri, and settled in a remote part of it, to practise law, but with a suspicion that he was dodged by the relations of the man he had shot. One day he met a man muffled in a cloak, who engaged with him, shot him in both sides, and

stabbed him with an Arkansas knife. The victim held off the knife from wounding him mortally, till help came, and his foe fled. The wounded man slowly recovered, but his right arm was so disabled as to compel him to postpone his schemes of revenge. He ascertained that his enemy had fled to Texas; followed him there; at length met him one fine evening, riding with his double-barrelled gun before him. They knew each other instantly. The double-barrelled gun was raised and pointed, but before it could be fired its owner fell from the saddle, shot dead like the brother he had sought to avenge. The murderer was flying up the river once more when I saw him, not doubting that he should again be dodged by some relation of the brothers he had shot. Some of the gentlemen on board believed that if he surrendered himself at Natchez, he would be let off with little or no punishment, and allowed to settle again in civilised society; but he was afraid of the gallows, and intended to join some fur company in the north-west, if he could, and if he failed in this, to make himself a chief of a tribe of wandering Indians.

Dr. Channing was one day paying toll, when he perceived a notice of gin, rum, tobacco, &c., on a board which bore a strong resemblance to a gravestone. "I am glad to see," said the doctor to the girl who received the toll, "that you have been burying those things."

"And if we had," said the girl, "I don't doubt you would have gone chief mourner."

Some young men travelling on horseback

among the White Mountains, became inordinately thirsty, and stopped for milk at a house by the roadside. They emptied every basin that was offered, and still wanted more. The woman of the house at length brought an enormous bowl of milk, and set it down on the table, saying, "One would think, gentlemen, you had never been weaned."

I was solemnly assured by a gentleman that I was quite wrong on some point, because I differed from him. Every body laughed; when he went on, with the utmost gravity, to inform us that there had been a time when he believed, like other people, that he might be mistaken; but that experience had convinced him that he never was, and he had, in consequence, cast behind him the fear of error.

We were often told that it was "a dreadful fine day;" and a girl at an hotel pronounced my trumpet to be "terrible handy." In the back of Virginia these superlative expressions are the most rife. A man who was extremely ill, in agonising pain, sent for a friend to come to him. Before the friend arrived the pain was relieved, but the patient felt much reduced by it. "How do you find yourself?" inquired the friend.

"I'm powerful weak, but cruel easy."

A dashing Kentuckian intimates to you the richness of the soil, by saying, "If you plant a nail at night, 'twill come up a spike next morning."

TO THE DEPARTED.

I STAND where late we both have stood;
On every side I see
Objects that won our twin regards—
All, all are here but thee.

Winter, since through these paths we roam'd,
Hath swept from flower and tree
The sunny tints, the dancing leaves,
And he hath taken thee.

But spring is forth again, and, lo!
Through meadow, wood, and lea;
Myriads of things start back to life,
Yet spring restores not thee.

All flowers that blossom had thy love,
And never might the bee
Revel 'mid sweeter scents than these;
But they are not for thee.

Each sense is dead, those eyes are stone,
Thine ear may never be
Aroused, save by the final trump,
When I shall rise with thee.

The voices of our little ones,
Their shouts of infant glee
Which, smiling, we together heard,
Are now unheard by thee.

Our little ones! Endearing words!
They are a charm to me,
Binding me to this dreary world—
Dearest since it owns not thee.

For them, for them I still will bear
A gallant heart, nor flee
The turmoil and the strife of life,
For they are part of thee.

But of, though in, the busy world
'Tis mine no more to be,
My heart, my lone and widow'd heart,
Is confined deep with thee.

Swanscombe Wood,
May 18th, 1834.

N.

GEMS.

INDOLENCE.—None so little enjoy life, and are such burdens to themselves, as those who have nothing to do, for

"A want of occupation is not rest,
A mind quite vacant is a mind distress'd."

Such a man is out of God's order, and opposing his obvious design in the faculties he has given him and the condition in which he has placed him. Nothing, therefore, is promised in the Scriptures to the indolent. Take the indolent with regard to exertion: what indecision! what delay! what reluctance! what apprehension! The slothful man says, "There is a lion without, I shall be slain in the streets." "The way of the slothful man is as a hedge of thorns, but the way of the righteous is made plain." Take him with regard to health: What sluggishness of circulation! What depression of spirits! What dulness of appetite! What enervation of frame! Take him with regard to temper and enjoyment: Who is pettish and fretful? Who feels wanton and childish cravings? Who is too soft to bear any of the hardships of life? Who broods over every little vexation and inconvenience? Who not only increases real, but conjures up imaginary evils, and gets no sympathy from any one in either? Who feels time wearisome and irksome? Who is devoured by *envious* and spleen? Who oppresses others with their company, and their questions, and censorious talk? The active only have the true relish of life. He who knows not what it is to labour, knows not what it is to enjoy. Recreation is only valuable as it unbends us; the idle know nothing of it. It is exertion that renders rest delightful, and sleep sweet and undisturbed. That the happiness of life depends on the regular prosecution of some laudable purpose or lawful calling, which engages, helps, and enlivens all our powers, let those bear witness who, after spending years in active usefulness, retire to "enjoy themselves." Prayer should be always offered up for their servants and wives, and for themselves too. They are a burden to themselves.—*Jay*.

PRaise.—There is nothing easier than to persuade men well of themselves. When a man's self-love meets with another's flattery, it is an high praise that will not be believed.—*Bishop Hall*.

THE BEGINNING.—The Scripture historian says, "In the beginning God created the heavens and the earth, and the earth was without form and void." Philosophy says, "In the beginning various atoms floating about in unbounded space, drew into union with themselves other atoms, forming substances of different qualities, and possessing suitable energies." We therefore demand, without hesitancy, whence came these first atoms? and philosophy is struck dumb. She argues for centuries, wastes volumes upon volumes, and has never been able to tell us whence came the first materials. Here the lamp of history has gone out, and the poet's wing has dropped, through the whole succession of pagan research and imagination. Moses alone assigns to matter its origin.—*Scripture an Appeal to the Senses*.

EXISTENCE OF GOD.—The physical history of our globe, in which some have seen only waste, disorder, and confusion, teems with endless examples of economy, and order, and design; and the result of all our researches is, to fix more steadily our assurance of the existence of one supreme Creator of all things, to exalt more highly our conviction of the immensity of his perfections, of his might and majesty, his wisdom and goodness, and all-sustaining providence, and to penetrate our understanding with a profound and sensible perception of the high veneration man's intellect owes to God. The earth, from her deep foundations, unites

with the celestial orbs that roll through boundless space, to declare the glory and show forth the praise of their common Author and Preserver; and the voice of natural religion accords harmoniously with the testimonies of revelation, in ascribing the origin of the universe to the will of one eternal and dominant intelligence—the almighty Lord and supreme First Cause of all things that subsist, "the same yesterday, to-day, and for ever," "before the mountains were brought forth, or ever the earth and the world were made, God from everlasting, and world without end."—*Dr. Buckland*.

PHILOSOPHY.—Philosophy fails of its noblest object, if it does not lead us to God; and, whatever may be its pretensions, that is unworthy of the name of science which professes to trace the sequences of nature, and yet fails to discover, as if marked by a sunbeam, the mighty hand which arranged them all; which fails to bow in humble adoration before the power and wisdom, the harmony and beauty, which pervade all the works of Him who is eternal.—*Alecrombie*.

EDUCATION.—Education is often insufficient, owing to the absurd belief that to teach reading and writing is sufficient, and that we may rest satisfied with the good work we have performed. As well might we say that if we could but turn the river into our grounds, it would be a matter of perfect indifference whether we led it to the mill, or allowed it to inundate the corn-field. If we wish to regulate and rejoice in the effects of education, we must not only fill the mind, we must form the character; we must not only give ideas, we must give habits; we must make education moral. When we invite men to exertion, and make easy to them the paths of ambition, we must give them, at the same time, good desires and great designs.—*Mrs. Grant*.

A GOOD NAME.—Who shall pretend to calculate the value of the inheritance of a good name? Its benefit is often very great, when dependant upon no stronger ties than those which accident or relationship have created; but when it flows from friendships which have been consecrated by piety and learning, when it is the willing offering of kindred minds to departed worth or genius, it takes a higher character, and is not less honourable to those who receive than to those who confer it. It comes generally from the best sources, and is directed to the best ends; and it carries with it an influence which powerfully disposes all worthy persons to co-operate in its views. Nor is this all. The consciousness of the source from which it springs is wont to stimulate the exertions and to elevate the views of those who are the objects of it; and many instances might be enumerated of persons who have laid the foundation of the very highest fortunes upon no other ground than that which this goodly inheritance has supplied.—*Bishop Otter*.

CHARITY.—Is an universal duty, which it is in every man's power sometimes to practise; since every degree of assistance given to another, upon proper motives, is an act of charity; and there is scarcely any man in such a state of imbecility, as that he may not, on some occasions, benefit his neighbour. He that cannot relieve the poor may instruct the ignorant; and he that cannot attend the sick may reclaim the vicious. He that can give little assistance himself may yet perform the duty of charity, by inflaming the ardour of others, and recommending the petitions which he cannot grant, to those who have more to bestow. The widow that shall give her mite to the treasury, the poor man who shall bring to the thirsty a cup of cold water, shall not lose their reward.—*Dr. Johnson*.

EXTRACTS FROM THE JOURNAL OF A NERVOUS MAN.—No. 1.

1834. *Jan. 20th.*—I DREAMED that one of my friends died, and though I had important business with him, I was afraid of seeing him; I thought he might be ill of the influenza, and that I should take it. He called on me at night, but I dared not see him, lest he should fall down dead, which would have shocked me.

Jan. 21st.—It was suddenly suggested to me this morning that I should be choked to-day. I therefore ate no breakfast, and fasted till noon, when I thought my throat was growing up. I procured a gargle of Cayenne pepper, a piece of which went the wrong way. I then felt, as sure as destiny, that my end was near. I signed my will, called my family together, who were amazed to see me dripping with a cold sweat; when an old woman, who happened to be in the house, came rudely into the room, and said, "La, meister! what are you doin'? Drink a cup o' cold water, and walk sharp about the room, and ye'll be better anon." I did so, and behold, at night, when I expected to be "laid out," I was quite recovered.

Jan. 22nd.—Awoke this morning, after a troubled sleep, in which I had seen about five hundred fiends, of all sizes, dancing in a large field, among whom were some goat-like bipeds, who led the ring. After breakfast, felt uncommonly calm; thought this boded no good, for as the calm precedes the tempest, and a supernatural invigoration often goes before death, I felt convinced that I should not outlive the day. A violent agitation then followed; all my flesh seemed to heave, and every vein throbbled; I felt as if my muscles had tightened, and thought I should every moment burst, and ordered the new carpet to be taken up, that it might not be covered with blood. But nothing happened, except that I broke three glasses, which fell from my hands.

Jan. 23rd.—At breakfast, I noticed one of my nails was blue, and felt certain it was premonitory of the cholera. Sent for the doctor, who, cruel man, broke into boisterous laughter, told me to put on my thick boots, walk six miles, and left by wishing me good morning. I put on my boots; but I had read the day before of a gentleman who dropped down dead as he left his door, and I thought I should do the same. I tried, however, to go, but I felt a crack in my breast, and I thought one of the vital muscles was broken, so I returned to the house, as my servant told me, "white as paint." This confirmed my suspicion, and I got all my medical books down, and concluded that I had the *angina pectoris*, and that, therefore, I ought not to walk.

Jan. 24th.—Dreamed that I should be choked with a fish bone. It so happened that we had fish for dinner; dared not eat any. Thought it

must then apply to some of my children, or to Mrs. N.; and, as one of my sons was seized with a cough after dinner, felt convinced that I was right. Examined his throat, and saw what I considered a bone, sticking in one of the tonsils; but all the family said they could see nothing, and the cough went off. At tea, I suspected the water was poisoned, scolded the maid, who gave me notice to quit; but as I vomited much that night, thought I was right.

Jan. 25th.—After breakfast, thought I would ride. Had the horse saddled, but as he had been well fed, with no work, he capered; and as I saw, in my mind's eye, in a moment, the following obituary in the next paper, I dismounted, gave a man half-a-crown to lead him home, and reached it myself, all trepidation:—"Last Saturday, by a fall from his horse, Mr. J. N——, aged 47, much respected. He has left a large family." After tea, I thought the room was full of silver bubbles, and supposed I was going blind. Sent for the doctor, who ordered me to bed, and went out in a huff.

Jan. 26th.—Changed my doctor, sold my horse, bought another, which was about seventeen years old. As he was warranted quiet, tried him in harness, and he would not pull, but ran back. Sold him, with 5*l.* loss, and determined to keep no more. Towards evening, it was suddenly impressed on me that I had a brain fever. Had my head shaved, and leeches applied; sent for my new doctor, who laughed to see me bald, ordered me a warm wig immediately, with a cordial, and to bed. Felt my pulse all night, for I could not sleep; examined my tongue, thought it was blue, got my son to examine with a microscope; and, as well as I could, I did it at the glass, and thought it was covered with animalculæ. I washed my mouth with Cayenne water, examined again, and behold my mouth was all blisters.

Jan. 27th.—Could not eat for soreness of mouth. Took a little laudanum, which sent me to sleep, when I fancied all the world was in a dance. Trees jumped out of the ground, the stars darted out of the sky, and I saw Orpheus fiddling, surrounded by bears and elephants, and dancing pigs and camels. When I awoke I began to moralise on the follies of mankind, and thought it a sin to shave. Told Mrs. N—— I had made a vow to shave no more.

Jan. 28th.—After breakfast, for which I had given orders that I would have some boiled turnips and a gammon of bacon, served up in the old trenchers that belonged to my great grandmother, and which had been in our kitchen, unused, for the last fifteen years, the barber came. I paid his bill, denounced his craft, gave him all my old razors, and told my son to clear the ware-

house from all such modern follies. Looked at all the old portraits, with beards, in my books, and sent for Mr. P., the portrait painter, to see if he could not put a beard on a painting of myself, which he had not long before executed. He promised to do it.

Jan. 29th.—At breakfast, I perceived one of my finger nails bent inwards, and thought it a sign of consumption. Sent for the doctor, told him I had found out what ailed me, and desired him to sound me with his stethoscope; I watched his face; he shook his head, and I fainted, because I perceived he admitted my conjectures, and I knew I was not fit to die. He dashed cold water all over me, and I soon recovered, and heard him telling Mrs. N., "His lungs are as sound as a bell, and ring like brass."—"But, Doctor," said I, "did you not shake your head?" "Yes, I did, sir, but you see my hair is long, and it was falling into my eyes, and was tickling me just then."

Jan. 30th.—This morning I thought I had a spinal disease, and reclined nearly all the day. Had it examined by the doctor, and my servant man rubbed it for an hour with the flesh-brush; felt very alarmed, and determined to write to Mr. St. John Long. After tea, changed my mind, and thought I would visit the south of France. Before bed-time, changed again, and thought I would go with the whale fishers next season, and

wrote to Hull for terms. Fancied I could eat a steak for breakfast, from a young horse's rump, and gave orders accordingly.

Jan. 31st.—Awoke with thoughts about the elements of moral metaphysics. Every one appeared wrong. Made new governments, discovered the longitude, and a way to the moon; formed several new sciences, one of which was, that every person was to be found out from the signs of the nose. This I called Nosology. Proposed to write a new encyclopaedia, and felt assured that I was born for something great, and that Providence was leading me through this original experience to qualify me to bring about a new order of things. Felt thankful and better.

Feb. 1st.—I rose with a stiff knee, and concluded that it was a white swelling; sent for the leech woman, who told me of many sad cases, and said the leeches would be always used by the doctors, but that they were all rogues, and this simple remedy would break up the craft. Thought the woman seemed honest, and told her to put on what she thought best; and she applied twenty-five leeches, at sixpence each; but it appeared afterwards that my leg was only asleep, from having been pressed by the other. At night, cut my great toe-nail, which was pared too close, and thought it would mortify, so could not sleep till seven next morning, when I arose at ten, and breakfasted on black pudding and ale.

BRITAIN.

CHAPTER III.

BEFORE we proceed to the second period of our history, we may glean up two or three facts connected with our last chapter.

In war, the men used a narrow target, and a short dirk lodged in the girdle, while a heavy sword, fastened with an iron chain to the waist, and a short staff, at one end of which was a rude kind of brass bell and a spear, finished the equipment of the warrior, whether on horse or foot; to whose talents and courage both Greeks and Romans bear reluctant witness. The British rode on powerful, well-trained, and swift horses; which, when the rider dismounted, stood still while he fought. Their wheeled carriages were of five kinds, and called by the Romans the "*benna*," which would hold several persons, and was used by the chiefs for travelling; the "*petarum*," which was so called either because it had four wheels, or would carry four persons; the "*carrus*," or the burden carriage; the "*covinus*," or war chariot, which was light, would hold but one person, and had hooks and scythes to its wheels; the "*rheda*" was like the last, but larger; and Cassibelanus is said to have had, on one occasion, 4000 of them in battle.

The northern Britons mostly burnt the dead, with their favourite animals, weapons, slaves, and

even children and friends: hence the number of British urns containing bones which at various times have been excavated. But these in the south burnt their dead equipped in arms.

The funeral, if the deceased had been distinguished, was accompanied with songs recounting his virtues; if he died inglorious, the song was omitted. Husbands had absolute power over their wives, and fathers over their children; and, notwithstanding some apparent deference to the women, such was the condition of a wife that a husband might divorce her for disagreeable breath! and if a woman conspired the death of her husband she was burnt, which was the punishment of robbers and murderers.

At death, a man's property was equally divided between his relations; his sons and daughters taking precedence by age: if any advantages, however, were given, nature was so far heard in those times that the youngest received it.

The British laws appear to have been unavoidably arbitrary, indiscriminate, and severe, singularly illustrative of ignorance, and otherwise adapted to human nature. For a long time it would appear that the *lex talionis* prevailed; which at length necessity superseded by a compensation of property, by which the value of

every thing was settled, to the milk of a cat, or the hoof of an ox; while the greatest criminals often ended their race by being smothered in a bog. The laws were all repeated, but not written, in verse; were considered the commands of the gods, and the Druidic priests, therefore, their only authorised expounders.

It must be admitted, that though the preceding excerpts are from the best authors, yet as many of them were not witnesses, and nearly all of them were enemies of the Britons, there is reason to fear that they would often take the appearance for the fact, and the exception for the rule; even allowing that they were always candid, and did

——— "nothing extenuate, nor
Aught set down in malice."

We turn now to

THE ROMANO-BRITISH PERIOD.

Thus lived the Britons, when, through the Gaulish merchants, a rumour alarmed them that the fame-hunting Cesar had resolved to invade them; to avert which they sent ambassadors to divert his purpose, by making their submission to the Romans. Cesar had collected the merchants and travellers who had visited Britain, and inquired into the subjects of importance to an invader; but not satisfied, he sent a galley, with Volusenus, who, after no long absence, if he ever entered the island, returned with such intelligence as decided Cesar upon an instant expedition. Two legions were embarked near Calais on the twenty-fifth of August, A.C. 55, and the next day arrived off Deal, where the Britons, seeing their conciliations of no avail, made a spirited but an unsuccessful resistance; for a landing was effected by the soldiers, though fighting breast-deep in the sea. The genius of Cesar, as great at intrigue as in the field, by the fourth day devised a truce, when the loss of his cavalry and ships by the storm and tides, and the consequent dismay of his soldiers, inspirited the humbled Britons, who, after several unsuccessful sallies on the Roman camp, were again obliged to submit; and Cesar, about the fifteenth of September, abruptly returned to Gaul. But in the following year, with a fleet of above 800 ships, 6 legions of soldiers, and 2000 cavalry, in all about 30,000, he returned to Britain, which he entered near the same spot, and found the inhabitants dismayed at his forces, and fled to the interior. Leaving a fragment of the army, under Atrius, to watch the ships, he went in search of the Britons, whom he found on a river flanked by a wood near the present Canterbury. That night another storm partly destroyed the Roman ships, which, to avoid the recurrence of damage, were drawn, in the space of ten days, within the fortifications of the camp. In the meantime, the Britons were gathering their forces, which were given to the command of Cassibelanus, chief of the Cassi, who, for want of co-operation

from the people, after some temporary successes, returned to his own tribes, and left the Romans to march without molestation into the country; which, through the jealousies of the foolish chiefs, and quarrelling tribes, who would not coalesce, was easily subdued. Cassibelanus, indeed, deserted by the other tribes, made a treaty with Cesar, who, immediately after, having sustained much loss among his ships, sailed to Gaul, September 24, in the same year. This is the account derived from Cesar himself, who has very probably given much too favourable a history of the expedition, as far as it concerns Roman affairs; as indeed Diodorus, Strabo, and others intimate; for Cesar neither passed through the island, built a town, or considerable fortification, or left any durable pledges of his victory, claimed a foot of land, nor ever returned. Yet a thanksgiving of twenty days was ordered at Rome, for the conquest of the *alium orbem*, as Cesar called Britain. After the departure of the Romans, the British tribes, for about sixty-eight years, paid no taxes, and recurred to their ancient animosities and battles, from which they who had most favoured the invader would naturally be the first to suffer. Augustus, who levied a tax on the British exports to Gaul, Tiberius, and Caligula, had often threatened to invade Britain, which, from policy, cowardice, or other causes, they, however, never effected. But Claudius, at the instigation of a renegade named Beric, sent Aulus Plautius with about 50,000 men, or four legions, (who were reluctant to come, till a meteor gliding before their ship was regarded as a favourable omen,) who were sub-commanded by Vespasian, into Britain. These, conducted by Beric, often defeated the Britons who took reprisals by drawing them into bogs, where vast numbers, with their *elephants* and horses, perished. At length, invited by Aulus, Claudius himself came, and obtained an easy subjugation of the southern part of the island, as much, probably, by his name, as by his sword; and after a stay of three or four months he returned to Rome, while Vespasian prosecuted the war with the Britons. This general, in the course of a few years, fought thirty-two battles with the natives, reduced the Isle of Wight, the Belgæ, and the Deuotriges, and destroyed above twenty towns; while Aulus waged war with success more internally; was A.D. 47 recalled to Rome, and in A.D. 50 was succeeded by Ostorius Scapula. The latter adopted the maxim of the Roman soldiers, "a terrible beginning;" lined the Severn with forts, and treated the Britons with shameful severity, which greatly protracted the wars, in which the Romans were mostly victors. This was not done, however, without much bloodshed and inconceivable sufferings on the part of the Britons, whose courage and solemn self-denial to preserve their liberty it is to be lamented they had no Tacitus to record.

In this war, Caractacus, a British chief, who for nine years had successfully defeated the Roman arms, was captured, through the perfidy of Cartimandua, queen of the Brigantes. He was carried with his family to Rome, where in a triumph being publicly exposed in chains, with the spoils of his former victories, and his wealth, he addressed Claudius in a short but dignified speech, the force of which reached the vanity, if not the heart, of the emperor, who disenthralled him; while the senate decreed the triumphal ornaments to Ostorius, and made some ridiculously pompous harangues, which illustrated how fast "the eternal city" was *then* degenerating. Shortly after, this Ostorius died of chagrin in Britain, was succeeded by Aulus Didius, who did little more than skirmish with the inhabitants till the fourth year of Nero, who recalled him, and sent in his stead Veronius, who died within a year after his arrival.

To Veronius succeeded Suetonius Paulinus, who subdued many of the British tribes, raised numerous garrisons, spoiled the isle of Anglesea, and extirpated the Druids, whom he odiously murdered. And after similar acts of oppression, by bending the spirit of the conquered too far, he produced a desperate resistance of the Britons, (who were obliged to borrow from Seneca 10,000,000 drachma to pay the tribute.) Overwhelming the Roman garrison, buildings, and settlers, they almost annihilated the invader's power; for upwards of 70,000 Romans are said to have been killed at Camolodunum, where the Romans had built a temple to the divinity of Claudius, as the victor of Britain, as well as at London and Verulamum.

Yet very speedily, though the Roman army was reduced to 10,000 men, Suetonius in a battle utterly routed the Britons, of whom 80,000 are said to have been slain; and the queen com-

mitted suicide. This would probably have ended the British war if Suetonius had graced his victory by generosity and tenderness, of which he was destitute. In a little time he was displaced by Petronius Turpilianus,* who, by a pacific policy, for three years suspended the wars. Similar measures were pursued by Trebellius Maximus, whose humane disposition conciliated the Britons, but displeased his own blood-loving soldiers, who, inflamed by their seditious leaders, especially Cilius, mutinied, and drove Trebellius to Rome.

A governor was for some time wanting in Britain, to which afterwards Vettius Bolanus was commissioned, but he effected little, and was recalled at the accession of Vespasian; who sent in his room Petilius Cerialis, a man more infected with Roman ambition and cruelty than with the zeal of the discoverer. He was assisted by the celebrated Agricola, who commanded the 20th legion. To Petilius succeeded Julius Frontinus, who aided in the further subjection of the inhabitants. At the removal of Frontinus, Agricola was preferred by the 20th legion to the governorship of Britain, which he severely scourged in the beginning of his rule; but after having subdued the northern enemy in eight severe campaigns, he is said to have practised great clemency, taught the Britons the most useful arts, educated their youth, clothed the inhabitants like Romans, and, by other ameliorating measures, charmed the wild country into a peaceful and wealthy province of the falling empire.

A.D. about 85. Agricola was soon recalled by Domitian; who appointed Sallustius Lucullus in his room, which he occupied only a short time, for he was killed, because, having invented a new weapon, he allowed it to be called after his name.

and hoarding within her thousand homes the stricken and fated children of humanity; hiding from the rude gaze of the world the wrongs and woes of a thousand bruised and breaking spirits. What a confused and gathering multitude are mingled together in one vast focus! The high and the low, the proud and the debased, the profligate and the pauper, all commingle together, and pour into the scale of destiny the amassed wealth of innocence and crime. Yet through this vast and endless mass of human existence, Vice and Death, like conquering kings, ride triumphant. The gambler revels over his gains, the profligate over his illicit sin; the prisoner laughs loud in his dungeon, and the murderer dreams of his victim; but suddenly, in the dead of night, or in the broad golden glare and life of day, the link is snapped, the chain is swiftly shattered, and the hearts that beat with the quiet pulse of innocence, or the bounding beat of the more wrathful passions, become hushed and stilled in the quiet sleep of death.

III.

There is placed within the breast of every one a certain and intimate consciousness of mental power—a restless desire to prove the nobility of intellect—a proud impulse stirring within us to do the deeds which may confer upon us the wreath of intellectual pre-eminence. We may not resist its impulse, for if we fight against the divinity within us, languor, idleness, discontent, and envy, will raise up such a tumult and storm of jarring passions, as will eventually strangle us in our efforts to escape from the cord and the chain which have thus mystically enwoven themselves around our very existence.

IV.

How immortally beautiful is that love which springs from the heart that is broken and bowed down! How seraphic are those affections which spring from the depths of a bruised spirit, ever burning, unwavering, and unquenched, though the winds of passion may press around them, and the floods of sorrow may threaten to overwhelm them! Such love belongeth not to the affections which are born of hollow refinement and luxury: with them, the beautiful and holy have no communion. The feelings of the heart that are born in lordly halls are of the earth, earthy. The endearments which shed a halo around the dwellings of the meek and lowly, pure and spiritual, scorned by the world, flee from it to those shrines where all is of the heaven, heavenly.

V.

Disease, sickness, and sorrow! they are often viewless, yet always present; they hover like shadows over the path that leads from the womb

to the grave. Every day brings its hour of sorrow; every night brings its weight of heaviness. We bear the burden lightly in youth, the time of "sore vexing" is not then come, and the wearied groanings of sickness are then scarcely heard. Health abides most frequently with the young, and sickness may not claim its resting-place within the frail tenement of the body until age shall have numbered many years, and the sands of life have been washed and swept by the multiplied rising tides of sorrow and suffering. But as health may be protracted, so surely will sickness come with a heavier visitation. The instruments of disease and anguish are ordained before birth. Beauty is born to fade for very trouble,—the soul to be sore vexed, and the bones to become unhealed,—the body to be wearied with groaning,—and the night-couch to be moistened with tears: such is the frail and fragile lot of man's mere mortality.

VI.

As in the earlier days when mankind learned the science of navigation by following with their frail barks, over the trackless seas, the lustrous guiding of the stars in the midnight heavens; so during the days of our degeneracy and darkness here upon earth, if we would steer our course carefully and wisely over the seas of life, we must fix our hearts, our hopes, our thoughts, and our aspirations upon the more sublime and holy objects of heaven

VII.

View man in any or in every relation of life which he is permitted to enjoy here below, and he will be found ever oscillating and wavering between the two extreme and awful alternatives of hope and fear. Distant as the poles, asunder as these are, in the relative agitations with which they shake the slumbering conscience, there is no aid from mortal man that can reconcile them, or quiet their irregularities. Religion teaches, that peaceful resignation and submission to the will of the Eternal can alone effect this.

VIII.

Life! what is it? It is that mysterious and abiding principle which gives motion (active or passive) to every created being inhabiting the surface of the earth or the elemental spaces surrounding it. It had its birth in the earliest days of the annals of creation; and, in the earliest sunshine of the happy Eden-world, it was chosen by the Eternal as the first of his attributes which he would develop upon the earth; and it was, therefore, by the awful fiat of his will, spread abroad, in countless shapes of beauty and power, over the mountains and valleys of Paradise. That glorious garden-land was its appropriated and selected birth-place; its forests and its plains, its lofty mountains and lowly valleys, its shadowy

defts and silent glens, its streams, its rivers and its mighty seas, were all formed on a most perfect and glorious scale of beauty, commensurate with the high and lofty purposes which they were destined to fulfil. They were to be the first recorded dwelling-place of the earliest-created animal existence. The eternal Mind watched over their creation through the bright hours of the new morning and evening of time, until their completion, when He proclaimed, and saw, "and behold they were very good."

IX.

Genius, genius! O what art thou? A rich and regal gift, that king and emperor, priest and potentate, might well wish to obtain. A writer has somewhat quaintly observed, that genius is but the odour, still lingering upon this earth, of one of those delicious boughs of the tree of knowledge that grew in the midst of the first and earliest Paradise, the leaves and fruit of which still give forth lessons and reminiscences of rich wisdom and beauty.

X.

Early manhood! O how many are there who have sighed, and still sigh, for the arrival of this phantasmal hour of this life's existence! It is one of its most important epochs. Its arrival notes the first hour in which we begin to think of, and to feel the pressure of the shroud and the pall. There is an impress of grandeur and solemnity given to the mind peculiar to this period. It is one of the first resting-places on life's road, whence we can look back upon the misspent hours and the sullen joys, on the cankering cares and the bitter regrets whose poisons, though yet new, have still begun to ulcerate every feeling over which they have spread. The *Æolian* music of life is gone, its wealth of sweetness is scattered and lost for ever. The fair fields and the bright green pastures of life, over which our early thoughts, like young birds, had floated, have all vanished and faded away; and we turn yet in hope to gaze through the dimness that covers the golden prophecies which we form of the future. The paths of life spread before and behind us. We have trodden the past, we are to tread the future; we must trace the one, we cannot retrace the other. The burden presses heavier on our shoulders; the sands of life ebb as quickly, but they give a duller echo: the step is more grave, the music more solemn; we exchange the dance for the dirge, the revel for the requiem. The pulse bounds not so lightly, and the heart beats on with its unwavering motion; but its thrill is not so elastic, and its changing vibration is less sudden, but more sure. We thus pause on this early upland of life, and we gather up the wasted dews of thought, of which we have been so prodigal, into a more sacred and shadowy recess, and we heap up the scattered

fragments of memory around the altar of home. The echoes of past follies and errors (those stings with which fate has poisoned all mortality) ring with a disturbing sound; and conscience, in our moments of reflection, becomes the monitor of future wisdom. Experience becomes to us the wealth of profit; and if her garments are more tattered from prodigal waste, we gather up her relics with more care; and, with the solemn brooding of the dark future upon us, we deposit them in the choicest golden chalice. The richest gold must be burned ere it be purified; and memory may bring up the visioned ghosts of the past, to forewarn us of the danger of the coming future.

XI.

In every man's heart and character there are ever two predominant and overruling principles: self-preservation is the first of these. It appeals, with the heartfelt force of a religious truth and doctrine, over the wide universe; amidst all orders and classes of existence, all ranks and stations of society, this principle sways with paramount and supreme sovereignty. Neither law, nor judgment, nor wisdom, will move it from its pride of place. It may be shaken, split, and shattered, but it will surely re-unite again, and re-assert its positive sway and supremacy above and over all else. The second of these principles is restlessness. Place man in any station of contentment and comfort, strew around him, or within his reach, the calm delights and untroubled satisfaction of domestic happiness, and he will yet show the strong desire to mingle with the busy throng of restless and adventurous spirits who seek for fame or renown, as they wear the mask and disguise of happiness. Contentment appears comfortless, and satisfaction, idleness. They feel that they alone are idle amid the ever busy throng around them; they rush again to the warfare of an uncertain and perilous contest, in which they surely wreck happiness, wealth, and character. Over the dead bodies of these appear the ghostly forms of Dissimulation and Envy. Want, stern and savage, demands that these should be leagued in the unequal and unholy strife for life; but the struggle lasts not long, and Death claims the eventual triumph over them all, and joins them to the awful number of the antecedent and uncounted millions of his kingdom.

XII.

A lonely and neglected brooklet is one of the solitary companions of an outline of natural scenery; its wanderings and murmurings are carelessly wasted upon solitude and shade; its voice dies and is born again, but it meets with no sister echo upon its banks or in the circumambient air above; there is neither fertility nor waste along its banks; it has neither gentleness nor anger in its ruffled wave; and the sun only

reveals its settled languor and pining desolation; fortune throws no freight upon its bosom, nor does pleasure spread her silken sail upon its tide; no moody lover or musing idler wanders along its banks; it has no association with any creation of human fellowship; no beautiful spirit bends over its waters, nor does the syren sing to the rising moon her anthem of saddening melancholy over its waves; it is alike desolate, forsaken, and unblest; it receives none of the loveliness that hallows the beautiful earth around it. Lonely and sullen, through storm and through sunshine, it repines along its desolate way, and catches, through the thick boughs that throw a wizard shadow over it, the far and fitful beams of the stars, whose beautiful light is mirrored, in spectral loveliness, beneath the dark aspect of its waters. They look down upon it as angels look from their bright dwelling-place upon the dark aspect of a thousand human hearts. Their looks in heaven are all peace, and loveliness, and beauty; upon earth they become distorted and disfigured, by the cold and callous contact with sin; they tremble and are broken by the very turbulence of the surface upon which they fall.

XIII.

A great man is one of the noblest objects to contemplate; in every aspect and circumstance by which he is surrounded we anticipate the cognizance of mental nobility. We look for a nature proud and lofty, an intellect grand, extensive, and richly matured in its principles and developments; a mind whose energy is lofty, soaring, and sublime; a reach of thought, and an amplitude of imagination, that can trace the stars, and track the skies in their extent and vastness, their sublime space, and their incomprehensible eternity.

But if from this high and lofty eyry the falcon-flight should stoop, and the eagle-wing droop and falter, how painful is the apprehension! how mournfully sad and humiliating is the spectacle! In the dry and arid mass of folly and error with which human nature is interlarded, and of which its materials are mostly composed and aggregated, there is so little to afford either a hope or a chance of redemption to better things, that where, amid the miry clay and the filthy ore, we meet with a vein of pure gold, we cherish and regard it. The contemplation of an intellectual creation, freed from the grosser vices, and purified from the darker alloys of sinful infirmity, is a thing to esteem, to love, and to reverence. The feelings which spring out of such susceptibilities hallow the very affections which they create, and constitute within us a festival and sabbath for the mind. The elasticity and freshness of life's earlier years will bring these sentiments with more fondness and frequency to our hearts. Every day, every hour will rob us of our enjoyment of this gratification,

as of all others; and the fruit that was rich and pleasant in summer will become rancid in the autumn of life; and, as we decay, the objects of our esteem and admiration droop and decay with us. Time, that robs us, will take from them. We shall each sit down at the festivity of death; and the prison of the charnel, and the ceremonies of the grave, will alike be prepared for each and for all.

XIV.

Who that has dwelt upon and studied the minute philosophies and trivial arts which raise up a man in the esteem and envy of the world, but must have noticed how nearly allied fear is to the love which first awakes in the human bosom. How much do we love in proportion to our fear of losing the beloved object of our affections! It affords an example of the reaction of the more particular feelings of the human heart: the love produces the fear, the fear reproduces the love. And this is one of the deep oracular secrets of the untold and anxious tenderness of woman's love. May this not, also, be one solution of that deep secret which goes to prove that absence vivifies and enriches the affections of the heart?

XV.

Life! what is it? This question would be variously responded to, as it might be answered by the philosopher, the poet, or the worldling; for into these three great divisions has every tribe of the earth been divided, from Adam even until this day, and will again divide itself even onwards until the death of the last man. To each one is the kaleidoscope of mortal existence held up, and we each see the colours and the shadows; and as we see, so do we believe; as is our bodily sight, so is the mental picture portrayed to us. The darkness and beauty of one futurity is different from another, even as "one star differs from another star in glory." There is no vision or prospect in the life of one being which perfectly resembles that one shown to his neighbour; they are all made up of the same substances and shadows, but these are all variously and differently united together, and they exert separate influences and powers over every mind and over every existence. Shake up each day a pile of flowers in an urn, and you will find their fragrance and their glory differ each time, as the hemlock or the rose predominate, or as the violet or the wolf's-bane shine forth. As among the dwelling-places of man this difference is found, so is it met with as widely diffused and as extensively spread out over the wide realms and regions of nature. Every tree, every plant, every flower, every shrub teaches us a different lesson; every wind has a thousand varying murmurs; every wave has its thousand multitudinous echoes, all joining together in the wide universal

chorus that hymns night and day around the thrones and the dwelling-places of the lofty and ransomed spirits of heaven.

XVI.

In youth the earlier thoughts bask in an eternal warmth and sunshine. In that hour of life's elysium when

"Heaven lies about us,"

our emotions and feelings resemble that leaf which, when warmed and nourished, displays its tender richness and beauty to the sun; but when chilled, it closes up its verdure, and presents an aspect of thorns and briars which were hidden and concealed before.

O, is there not a something very sad in the solemn gorgeousness of returning spring, when we reflect, that beneath all this verdure, and freshness, and beauty, there lies a cold and sullen winter that can never be refreshed or revived!

Age is naturally cold and repulsive, and, like a gay masker, frequently puts on the semblance of a former period of life, whose bloom and beauty no sunshine will ever restore again. Every careworn lineament and furrowed wrinkle betrays a warring thought and a deceptive purpose. Youth is ever open as the sunshine, and glad as are the flowers that bloom beneath a summer's heaven.

He who hath received from above the distinguishing gift of a love for solitude and retirement, is in possession of a sense and a sentiment which is beyond the limit of the naturally-formed perception of man; for the reverential attachment to solitude which is thus born within us, is assuredly to be considered not as amongst the lesser preservatives against the ills of life.

A parable is a sweet thing when told unto a sorrowful man, so is a jest when whispered into the ear of a mirthful trifter.

XVII.

Youth holds the balance of life with but an unsteady hand; extremes of feeling alternately sway the beam. As youth acts, so it believes. In proportion as we raise up in our hearts the ideal and the beautiful, so do we enrobe them in garments that would befit an angel, until we bow down before the idol to whom we have long given our thoughts, and thus turn our fancy into worship. And this deceptive feeling we carry with us into the crowded courts of the world; it becomes the very sunshine of our youth, the starlight of our boyhood. And the beautiful deception carries long with us, until the first jarring string utters its dissonance in our ears, and thus mars all our melody. The ideal standard of excellence which we had raised of others is shattered and cast down, and the scale that had risen so high now falls as low, and from

optimism we turn to misanthropy, hating all others, and imagining that all others hate us. We soon, however, weary of ourselves, and return back again into the world, our better thoughts purified, our affections sanctified, and the inward strivings of a naturally-generous and benevolent spirit leading us back again, through a more placid and serene atmosphere, to the dwelling-places of kindred creations. Led anew by this guiding thought, we find the brightest ore where all before was dross, and the sincerest meetings of friendship where all before was cold calculation; dishonesty of purpose becomes sincerity of feeling. We learn more truly to prize the good we meet; and the evil that crosses our way we learn to endure and forgive. From believing in one doctrine we extend our faith to many creeds; and if the experience (of whose uncertain substance we yet see but the shadow) we now prize so dearly, how shall we not learn to value it when we see not each other's vices as through a glass darkly, but learn to judge with discretion of frailty and with correctness of virtue?

XVIII.

O, Eulanie! Eulanie! never have I forgotten thee! thy remembrance has clung to me as the worshipper clings to the altar. Every night, before I lay my head upon my widowed and lonely pillow, have I knelt down and lifted up my heart to heaven, blending the hopes of that heaven with the memory and vision of thee. Prayer has led up my soul to the Eternal, and to the living throngs of rejoicing spirits by whom his throne is for ever surrounded. The toils and the cares of this life all fade and dissolve away in the forethought of a more sublime and happy state of existence by which we shall be perpetually surrounded. There again shall we meet, and there I may love thee with a love as pure, as holy, and as undying as thine own. Oft through the silent hours of night do I surrender up my spirit to the contemplation of the heavenly Eden-home in which thou dwellest. In these enchanted hours I believe that thy spirit hovers around me—thy voice murmurs like a lyre—thy kiss falls on my cheek, like dew upon the flower. I close mine eyes, and believe that I behold thee.

XIX.

What a strangely sad and mystic communion is that which is kept up between the living and the dead! What a shadowy chain of spectral links binds up the present with the past! The student who reads in his lonely cell of the classic learning and autobiographical ancestry of the departed days of Greece and Rome, may see for a while "the shadowy dead" pass in mental array before him. When they wrote, he was of the unborn future; whilst he reads, the very

worms are revelling amid their dust. This intercourse thus kept up in the soul's semblance, between the living and the dead—this strange intertwining between that which breathes, and lives, and moves, and is, and that which is alike unknown to mortal feeling and vital influence, is sufficient to crush the delusive falsehood of the unbeliever, and to harrow self-delusion into a mingled state of awe and terror. This study of the antique past may lay open the mirrored revelations of the mind to the reception of a milder, brighter, and purer light than it hath ever reflected. We may look upon the picture of a past day and of a gone being, and as the lights and shadows of it may be those of a fitful and chequered existence, as they pass before us we may watch for some epoch which may, with a strange and familiar sadness, resemble our own.

XX.

From whatever stage or epoch of life we look back, disappointment (that signet seal set upon the surplus of life's frailties) will assuredly meet us. If the path be bright and radiant as heaven, it will still have its cloud, hiding from us those brighter prospects which, as we look upon them, are only lit up with the colours of a fading sunset. There is no one period of life during which these feelings more strongly preponderate than when we are about to leave the shining floors of our earlier youth, and pass under the stern ionic portico that leads to the sterner dwelling-place of early manhood. The dazzling sunshine of life in which we have so long and so joyously basked now recedes from us; we look upon it

from afar, and the sober cloud-light only is around us. Truth has torn off the garments of falsehood; and the correcter estimate which we now begin to form of the world around us, however repulsive and difficult its early instruction may be, the page is new to us; we soon learn the first easy lessons, but we never learn them all: it is the immutable fiat of destiny that mortal will shall be the tutor to mortal wisdom. One of the most important lessons which this epoch of life tutors us to, is a true estimate of the gift and possessions of the affections in their highest and most exalted sense. The first woman was seraphic in her nature until she fell; and as we read, so do we believe. But sin has changed the seraph into the mortal; and the high ordination, the ethereal nature, and the angel-heart which fiction has given to the daughters of clay, has been replaced by emblems to which mortal existence holds a nearer affinity. How many a noble heart has been bowed down and broken in this fancy-worship! How have we not gone from fountain to fountain to slake our thirst at changing waters, that, when once tasted, were found to be Marah-like and bitter! How often have we gathered the pearl of rich price, and found it clay; or gathered the fine gold, but to see it become dim; or plucked the shining fruit, whose only core was ashes. Affection, if it has now less of warmth, has assuredly more of sincerity. The idolising passions melt away before serener hopes and feelings, and love lies down to rest on a bosom in a repose from which it never wishes to wake again.

ERHON.

THE SUICIDE.

One bitter night he paced near Whitehall stair:
The bridge looked lone and tenantless; the lamps
Cast o'er the murky stream a fitful glare,
Paling the gathered gloom; the vapouring damps
Condensed upon his brow; whilst lonely there,
In dirt-bedabbled drapery, that stamps
The carnal sinner, some poor straggler roved—
Heart-struck and faint—a victim, that had loved.
It was a bitter night—a bleak March night—
Rainy and raw—the fog crept to the bone:
In the dim haze, she faded from his sight,
Leaning her head in anguish on the stone
Of the cold granite block: her brow—how white—
How marble pale! why droops she there alone,
Sad and forlorn? moaning as one in dread,
Her clouded eyes fixed on the river-bed,
Sullen and glazed, and bloodshot,—with the tear
Quenched in their sockets: such a look of care,
So wild and wo-begone, seemed past all fear
Of mortal suffering; for black despair
Coiled round her bosom, desolate and drear,
Blasting the founts of hope: she staggered there,
Struck by an icy pang, and bowed her knee,
And gasped and shuddered in her agony!
The veins upon her brow rose purple deep,
Yet ghastly pallid was her lip and skin,
As if her gore grew stagnant; then the steep
She clomb, and strove the parapet to win:

The last cold shivers through her bosom creep;—
She shrinks—she hides her face, down plunging in:
A stifled shriek, a plash upon the river,
A struggle, and her breath is quenched for ever.
The gushing waters carried her away,
And whirled her, in an under-current strong,
Beneath a stranded barge; where white she lay,
Fretting for weeks: in vain the exploring throng,
The men of the "Humane," the livelong day,
Dragged for the sunken corse with their life-prong:
One arm was fiercely driven by the flood
Under the keel, and fettered in the wood.
They dragged another day—yet vain the search—
That sand-bank was her burial-place; there darted
Forth from their gulfy pools the pike and perch,
And glanced in circles round the corse, then started
Back to the glassy depths—till, with a lurch,
The river-shark dashed at it, and disparted
A portion from the breast—and bit away,
A finny glutton, at the human prey.
Then slime, and mud, and shells, fast settled o'er
The decomposing body, and the scent
Gathered together, from the sewer and shore,
The land-rats fierce, and down the element
Greedy they dived, and with their keen tusks tore
The clotted eyeballs, and the nostrils rent;
And fish, and vermin, and the conger eel,
Fed ravenous, and daily made their meal.

THE DESTRUCTION OF SCIO.

THE island of Scio, the ancient *Xios*, is one of the finest in the Archipelago; it is one hundred and thirty miles in circumference, and contained within it all the elements of beauty and prosperity. We passed by it on our way, and saw it peaceful, smiling, and lovely. It has been in all ages celebrated and visited; but it was particularly noted for the pleasing manners of its people, and the excellence of its wine, which at one period, with that of Falernum, divided the taste of the world. The pure climate of the island, and the natural disposition of the inhabitants, combined to form that gaiety and vivacity of character, which gave rise to the proverb, "that it would be easier to find a green horse than a grave Sciot;"* and Parthenius, a Neapolitan poet, represents them as gaining the affection of strangers by their pleasing manners, kind services, and agreeable wine.†

In more modern times it was esteemed as the only place which had escaped the debasing influence of Turkish oppression. The soil was not "sterile and neglected, and the inhabitants poor and profligate," according to the reproach of Modern Greece. It had been early granted by the Turkish sultans to some sultana who stood in a certain degree of relationship to the reigning monarch, as a source of revenue, with power to regulate its interior concerns. These females were generally of amiable and upright dispositions, and the Sciots prospered greatly under their gentle sway. The land was elaborated to the highest degree of cultivation by the skill and industry of its peasantry, so that it supplied the greater part of the fruits and vegetables consumed at Constantinople, and every house had a Sciot, as the only person capable of managing a garden.

The people were distinguished among all the Greeks for their higher tone of moral and mental improvements; the merchants were by far the most rich and well-informed of the Levant; and the women were equally eminent for their beauty, accomplishments, and propriety of manners. They are represented by all who visited the island as exceedingly interesting, gentle, cheerful, and innocent; devoted to domestic duties, yet endearing themselves to strangers by their kind and affectionate hospitality. In the days of Plutarch they were so distinguished for the correctness and purity of their lives, that he says there had not been a case of adultery on the island for seven hundred years,‡ a reputation which they still maintained. They were famous for their manufactures of silk, and I send you some of their beautiful purses, as a memorial of the taste and elegance of those amiable, but now most unfor-

tunate beings. Besides the city, the island contained sixty-six villages. Of the latter, twenty-three were engaged in the cultivation of mastic. This is a gum which exudes from a species of the pistacia,* and is used by all the oriental ladies, who constantly chew it, as giving an odoriferous fragrance to the breath, and preserving the teeth and gums. The population, lately returned by the Greek archbishop, was seventy thousand, some of them members of the Latin church. Of these, fifteen resided in the city, thirty in the mastic villages, and twenty-five in the remainder. Besides these there are about two thousand Turks and one thousand Jews. Other calculations make the inhabitants more numerous, exceeding one hundred thousand. Though the governor was a Turk, called a Muzzelim, the people themselves elected four *Γεροντες*, or seniors, to conduct their affairs, one of them being of the Latin church, as representative of the people of that persuasion. The governor seldom interfered in their proceedings—they exercised a legislative and judicial authority—raised and regulated the tribute; and were so respected, that a musselim who displeased them was immediately recalled on any complaint.

Among the recent proofs of the high state of improvement and prosperity this island attained to, is a college established and opened some years ago, to complete which one of its merchants contributed a hundred thousand crowns. This was supplied with professors in all the languages and sciences, and the youth of Greece were sent to it for education from the most distant places. It contained six hundred students, and a library of six thousand volumes, with a printing-office, from whence new books were daily issuing, particularly editions of the ancient classics. In fact, this lovely island was the beacon that was lighting the degenerate descendants of Aristides and Epaminondas in the way of their ancestors, and was accordingly looked up to as the hope of modern Greece. When the insurrection burst out, they took no part in it: devoted to the arts of peace, and believing that the time, though approaching, was not yet arrived for their liberation, they continued undisturbed in the quiet progress of improvement. Knowing their indisposition to engage in revolutionary scenes, a very feeble Turkish garrison on the island was considered quite sufficient.

It was their usage, that one of every mercantile house should reside on the island, while another conducted business at some European city. That of Rhalle had establishments in Vienna and London, and others in other places. They alternated the residence, so that there was a succession of intelligent men continually returning to the island, and bringing with them the lights and

improvements of the country from whence they came. Quite disengaged from business, they devoted their whole attention to the improvement of themselves and the younger branches of their families, and in cultivating their land or their gardens. Hence it was that the society of Scio was exceedingly pleasing to strangers, particularly to the English. Every one who went with letters was hospitably received into the house of an educated family, the master of which, having no mercantile pursuits to engross his time, directed all his attention to his guest; and no one ever visited the island in this way but spoke highly of the pleasure they received from improved and cultivated minds and kind and hospitable hearts. There resided at Constantinople at this time a number of Sciot merchants, who formed by far the most respectable part of the trading community of their countrymen.

When the Greek squadron first sailed the year before, they visited Scio, among the other islands of the Archipelago, with a view to engage it in the general cause. An Ipsariot sailor landed, and went through the village distributing the revolutionary proclamation; but he found the inhabitants quite reluctant to expose their present security and prosperity to the hazard of what they supposed to be an impracticable attempt; they begged of their countryman to depart, and the emissary returned without effecting his purpose. In order to guard against any further attempt, the principal inhabitants raised contributions among themselves for the purpose of procuring a larger Turkish force than that on the island, and sufficient to protect them against a similar indiscretion of their own countrymen. The Turks accordingly sent them a Pasha as governor, and four thousand men to reinforce the garrison; and the Sciots, to show their entire dependence on them, agreed that a certain number of themselves should be sent to the fortress as hostages—the Archbishop Plato and the four gerontes voluntarily entered it. On the pretext of sending them to visit their families, ten more were demanded; these also entered, though the others were not suffered to depart. More were added under various pretexts, till at length the Turks held seventy-four heads of the principal families of the island in custody, as guarantees for the good behaviour of the rest.

The contiguous island of Samos had taken an early and decided part in the insurrection, and had every where exterminated the Turks. They established a regular revolutionary government, elected a senate, and enrolled an army. They were of an enterprising, military character and many of them had served in the Russian armies, where they had improved themselves in the art of war, and in feelings of hatred and contempt for the Turks. A corps of three thousand such men was regularly organised, and they not only formed an effectual protection to the island, but they

planned expeditions to the continent, and kept the Turks there in continual alarm. They carried off various kinds of plunder, with the Mohammedans to whom it belonged as slaves, and liberated many Christians; and the island became an asylum for all who could escape from the neighbouring coast.

Among these was an enterprising man, who had lived for some time at Smyrna, where he kept, I think, an apothecary's shop, or drug bazaar; but being of an ardent temperament, he returned to Samos when the insurrection broke out, to take a leading part in it. His name was Logotheti, a common family one among the modern Greeks, to which he added the ancient one of Lycurgus, as many had adopted in a similar manner those of their respected ancestors. He was joined by a Sciot, named Antoniaki Boorna, who had been in the French army, but had abandoned it, as every other Greek had all foreign services, to hasten home and assist their own countrymen. He had been in the Morea, and proposed to Demetrius Ypsilantes a plan for stimulating the languid zeal of his countrymen, and exciting the important island of Scio in the general cause: but Ypsilantes was well aware of their indisposition, and, indeed, incapacity for such an undertaking. The ardent Sciot, however, returned home, collected some of his fellow-islanders at Samos, and proposed to Logotheti to make an attempt on Scio. They set out with a body of five hundred Samiotes, and a hundred and fifty Sciots, and landed in a bay at a short distance from the capital. Among the peasantry were some who were discontented at the contributions they were called on to pay for the additional Turkish force, and they joined them on landing. The scattered Turks immediately fled before them in all directions, many were killed, and the rest escaped into the fortress. They established a provisional government of ephori on the island, collected cannon and reinforcements from Ipsara and other places; and, as a regular Greek government was now established at Argos, they dispatched messengers thither for a sufficient reinforcement to keep possession of their conquest. They then directed the means they had against the fortress. In these events the respectable inhabitants took no part; they considered it a desperate enterprise of a few adventurers, who were even already beginning to quarrel among themselves, and they not only discountenanced it in the strongest manner, but many of them took refuge in the fortress with the Turks, and many more hastened to leave the island.

The news of these events arrived at Constantinople in the latter end of March, and seemed to paralyse the capital. It was the most decided proof they yet had of the extent of the insurrection and power of the insurgents, and it was an event they least expected. They at once prepared all their energies to suppress it. The

Turkish squadron was at this time lying in the harbour, just opposite my windows, preparatory to being drawn out into the Bosphorus to proceed on its summer cruise. It was got ready before the usual time, with a promptitude quite astonishing in the motions of the Turks. They wanted men, but they soon found them. It was given out, that the island was to be surrendered to the adventurers who chose to engage in the expedition; the riches, and timid character of the men, and the beauty of the women, were equally notorious, and the prospect of plunder and slaves, with little risk, attracted multitudes. The caiqueges, or boatmen, who before refused, now came in crowds. Every ruffian who could command a knife or a pistol offered himself in the cause; and the fleet, thus manned, sailed in a few days. The Capitan Pasha was not the eccentric, good-natured Delhi Abdalla, whom I have described to you before, but his successor, Kara Ali, a person of unsparing ferocity, and exactly fitted for the enterprise. As he returned to port, from his last expedition, with struggling Greeks hanging to his rigging, so he now left it with a similar exhibition. Some of his officers, whose zeal in the cause did not keep pace with his own, incurred his displeasure. He immediately caused them to be hung up; and the last sight of his ships displayed them struggling in the air.

When he arrived opposite the island he cast anchor at Tcheshmé, and here he took in a reinforcement of assassins. All the desperadoes on the coast were invited to join in the expedition. Every fellow that came on board with a weapon of death was received as welcome, and others were called on to follow in scampas, misticoes, or whatever conveyance they could find; and in this way about ten thousand Asiatic ruffians were added to those of Europe, among whom were many hummalls, or porters, from the quays at Smyrna. From hence he stood across to the devoted island, and entered the harbour on the eleventh of April, with seven sail of the line and six frigates and corvettes. His first act was one of apparent moderation. He sent on shore a flag, with directions to the insurgents to lay down their arms, and submit to mercy, in eight hours; and to give greater influence to his proposals, he made a semblance of admitting the consular agents of the European powers on the island to become mediators. They promised to the Greeks pardon and protection in the name of the sultan. A number of persons at once accepted of the terms; they were received and placed apart in the convent of St. Minas. The Samiotes, however, held out, killed the Turkish officer who proposed terms, and continued to fire on the fortress. They retired to some distance, and, with the Sciots who had joined them, made still a show of opposition. A detachment of three thousand men was sent against them, who soon dispersed them. They retired to the opposite

side of the island, where they found a conveyance to cross the narrow passage, and took refuge in Ipsara. All opposition had ceased with their departure; and there was hardly a single person left in Scio who had a weapon of defence in his hand. Many of the inhabitants, who had fled from danger, met the Turkish fleet entering the harbour, came back with it as with friends and protectors, and in perfect security returned to their houses.

It was now that the meditated destruction burst upon the devoted island. Nine thousand fellows, of the description I have mentioned, were landed from the fleet, and as many more joined them from the opposite shore: the rumour had gone abroad of the prey held out to them—they hastened to the coast, and were seen swarming across the channel that divides the island from Asia, and every mistico poured forth a banditti of robbers and murderers. The town of Scio is entirely open and unprotected, and the inhabitants, feeling confidence in the retreat of the Samiotes and the presence of the Turks, had commenced their ordinary business, when this horde rushed upon them. They filled the streets, stabbing and shooting every person they met, without distinction of age or sex, and then burst into the houses. Here also they killed every one they found, and then began to plunder. The town contained about six thousand houses, and the greater number of them decorated in a costly manner, evincing the taste and opulence of the possessors. There was not one of them spared. When all the visible valuables had been seized, they proceeded to search for what they supposed was concealed. Walls were torn down, and foundations upturned, so that the whole was literally left a mass of ruins—heaps of disjointed stones, with dead bodies crushed under them.

Meanwhile other parties had spread themselves over the villages in the country, which were similarly ruined. All who were met were immediately massacred,—all who could escape from immediate destruction fled to the hills. Here they were sometimes followed by bands of murderers, to seize whatever property they might have carried away on their persons. Rather than fall into the hands of their pursuers they rushed to the edges of precipices, and threw themselves down, so that the base of many a rock was a charnel-house strewn with crushed bodies. Scio is an island of gardens; in every one is a well, or cistern, forming a reservoir of water to be used in the heat of summer. In the appalling terror of the scenes around them, mothers ran with their daughters to these places, and on the first entrance of a Turk in the garden threw their children in, and then followed them; so that many of these reservoirs were found choked up with bodies. When every thing valuable was plundered or destroyed, the marauders began to make slaves of those who were left alive, and

every blood-stained ruffian was seen returning to embark for his own abode with a troop of women and children as slaves, loaded with their own property as plunder.

In several places the affrighted inhabitants had taken refuge in convents and other asylums, hoping, if they escaped the first burst of cruelty, that they might be allowed to survive. But no indulgence seemed to satiate the thirst for blood and pillage. A crowd of females and children had fled for refuge to the convent of Neamoni. They pursued them thither, and burst open the doors;—they first murdered the monks whom they met in the cells and passages, and then seized on the sacred utensils, which they collected in a heap, and then divided it, with the women and children who had sought refuge here, among them. A story was current at Constantinople, of their conduct at this monastery, that exceeds belief. They generally reserved all females to sell as slaves, and as their value was enhanced by their purity, the avarice of the captors often subdued their sensual passions. But here the latter was predominant—many of them gratified it on the spot, and then stabbed their victims, alleging that they could not now sell them, or their own children might become slaves. Similar scenes were acted in other convents, where they burnt out the eyes of some of the priests, and put others to death. In one place in the country they had shut up about seven hundred persons, and prepared to divide them as usual, but not being able to agree about the proportions, one of them proposed that, to avoid dissension, the best way was to put them all to death. The proposition was just such as was agreeable to men whose highest enjoyment was shedding human blood;—they were all massacred on the spot, every man killing his share.

To these murders the Pasha himself set an official example. The islanders who had surrendered on the first offer of pardon, and were shut up for security in the convent of St. Minas, were now brought out in parties and shot. Several hundred gardeners, who had been seized on to discover any treasure which they knew to be concealed, and were supposed to be accessory in burying, were first forced to confess all they knew, and then shut up in the fortress with the hostages. There were besides, on board the admiral's ship, a number of respectable persons, who had been apprehended on suspicion, or who had fled thither for protection. On the eighth of May he ordered thirty-five of them to be hanged on different parts of the rigging. This was a signal for a similar execution in the fortress: the hostages, including the archbishop, were brought out, and hanged just opposite on the walls, in regular lines; and, that no one in his hands should be allowed to escape with life, the gardeners were strangled in the court-yard.

When every thing was exhausted by which

cupidity could be satiated or cruelty gratified, and not till then, did the pillage and carnage cease. The most valuable part of the plunder, and beautiful and respectable of the women, were brought on board the fleet, to gratify the officers, and were conveyed thither under a triumphant discharge of artillery. Some of the rest were divided among the regular soldiers, but the greater part was carried off by the marauders who had joined the expedition. Of the whole of the rich edifices and neat houses that formed the city and the villages, to the amount of twenty thousand, not one was uninjured—the greater number was totally destroyed. Of the whole population, exceeding seventy thousand as some, and one hundred thousand as others calculate it, in the middle of April, not more than nine hundred existed on the island in the beginning of July; the rest were murdered or made slaves, with the exception of a comparative few, who had escaped to Ipsara and the neighbouring islands. Twenty thousand, it was supposed, of all ages and both sexes, were left weltering in their blood on the island, and thirty thousand were carried off and sold in different places in Asia, Africa, and Europe.

The Greeks had made some ineffectual attempts on the Turkish fleet, which were now discontinued; and on the eighteenth of June the latter was lying between Tchesmé and Scio, in perfect security. It was the Ramazan, and the evenings were passed with even more gaiety and enjoyment than usual at such a time on board the admiral's ship, revelling in the midst of the indulgence which the destruction of the island afforded. She was gaily lighted up, and decorated with a variety of flags which are displayed at that season, and all on board had given themselves up to enjoyment. Several captains of other ships had been invited, and drums, and cymbals, and all kinds of Turkish music, announced their festivity. Two small brigs were now seen weathering the northern point of the island, and bearing down channel. One of them seemed a bad sailer, and was left behind; but the other pursued her course, with a view of proceeding on her way through the Turkish fleet. Full of joy and hilarity, it is probable little notice would have been taken of one of the many small ships passing up and down the canal of Scio; but this bore the Austrian flag, and, that being seen, no further attention was paid to her. It was a remarkable fact, that the Capitan Pasha had been port-admiral at Constantinople, and, as part of his duty, rigidly enforced the orders for searching every ship, to ascertain if the cargo corresponded with the invoice, and the Franks were subject to many annoying vexations, by the strict observance of it; but by some fatality he never thought of exercising it on the present occasion. The brig ran alongside—the crew talked with the Turks on deck, and while

some engaged their attention by complaining of treatment they had received from the Greek cruisers, others had lashed the shrouds of the brig to the chains of the man of war. The first suspicion the Turks entertained was seeing the Greek crew, consisting of twelve men, get into a boat and push off. They had hardly done so, when the vessel they left burst into a blaze, which immediately communicated with the ship of the Capitan Pasha. Efforts were vainly made to stop the rapid progress of the fire; it communicated in a very short time to the magazine, and the vessel blew up. The Capitan Pasha attempted to escape in a boat to another ship, but as he descended the side, part of a blazing mast was precipitated on his head—he was dashed, crushed and bloody, into the boat, where he immediately after expired.

The fire-ship had been conducted by the celebrated Canaris, who immediately joined his consort, Pepenos, and then proceeded against other Turkish men of war. They attached the remaining fire-ship to the vessel of the Capitan Bey, on board of whom much of the plundered treasure was accumulated. She was partly consumed, but the fire was extinguished; six others were entangled by the burning ships in the confusion, and greatly injured. The whole of the large and small craft lying off Scio, and filled with slaves and plunder, cut their cables and ran foul of each other in the greatest dismay; and it was generally supposed that, if the Greek fleet had been at hand to avail themselves of the confusion, the Turkish squadron would have been destroyed, and the greater part of the Sciots and their property recaptured.

On board the Capitan Pasha's ship were two thousand five hundred persons, of whom two thousand perished; among them were the principal officers of other ships, and eight or ten

of the best pilots in the Archipelago. It would be deeply to be regretted that many of these were captives, particularly females, some distinguished for their rank, and some for their personal beauty; but the sudden and awful judgment that fell upon their brutal oppressors only snatched them from a life of intolerable misery and degradation. Besides the plunder accumulated, the military chest, with all the money to pay the troops, was on board; the ship had also been fitted up in a splendid style. The Capitan Pasha was a man as vain and luxurious as he was cruel and avaricious. He had a splendid service of plate and other costly furniture on board, with which he proposed to entertain all officers of such European ships of war as he should meet on his victorious return to the Dardanelles.

Many of these details were communicated to me by a friend who was proceeding in a Maltese vessel to Constantinople, and was detained in the canal of Scio by the Turks on the memorable night. He was not far from the Capitan Pasha's ship when it blew up. The next morning the sea was covered with fragments of wrecks and burnt timbers, to which men were clinging. One of them was Ibrahim Pasha, an officer of rank belonging to the admiral's ship, whom he picked up and sent on board a Turkish man of war.

The Turks themselves were greatly struck by this sudden and awful visitation. A principal Imaun of the Great Mosque at Smyrna ascended the pulpit on the Friday after the event, and called the attention of the people to it. After describing, with more than Turkish eloquence, the massacre and horrors of Scio, he said the burning of the Pasha's ship was effected by no mortal hand—it was a bolt of lightning, hurled by the hand of Allah himself, against the guilty perpetrator of these atrocities.—*Walsh's Constantinople.*

INDIGO.

Of all the vegetable dyes, indigo is certainly the most valuable, both for beauty and durability of colour. The colouring matter of indigo is contained in more than one plant. Dyer's woad, (*Isatis tinctoria*), one of the *cruciferae*, which grows wild in England, and on the continent of Europe, even as far north as the shores of the Baltic, has from time immemorial been used in giving a blue stain to wool and vegetable fibre; and several species of a leguminous plant, which is a native of warmer climates, and which gets the name of *indigofera*, (or indigo bearing,) contain the same matter, in more abundant quantity, and of better quality. These are,—

Indigofera tinctoria, which grows indigenously in India and China, but which is also cultivated and produces immense crops, has been known, and the dye prepared from it and used, from the

very earliest period at which we have any account of the state of the arts in India. It is rather a delicate plant, but produces more abundantly than any of the other sorts. In Asia, it varies with the country in which it is produced, so that it is difficult to ascertain whether there be more than one species. It grows to the height of about a foot and a half. It has not been very clearly ascertained whether the vegetable dye, described by Pliny under the name of *indicum*, was or was not the prepared colouring matter of this plant; but it is ascertained that, though the dye itself was known, the plant was not in 1582.

Indigofera anil is an eastern plant, much cultivated in America, larger and more hardy than the former, and yielding indigo of very good quality, but not in great abundance. This is the plant from which the indigo of Guatemala is

obtained, though *I. Guatemala* is also used. This last grows to double the height of the *tinctoria*, and the produce is perhaps superior in quality to that of any of the others, but it is not nearly so abundant as that of the *tinctoria*.

Indigofera argenticola has lighter-coloured leaves than the others. It produces what is called "bastard indigo," and is said to be a native of Africa, and found abundantly in the state of Tunis.

All these varieties of indigo are small perennial shrubs, which emit a very peculiar odour, which makes cattle avoid them. The base of the dye is in the juice, which is green, and assumes the blue colour only by the absorption of oxygen. If the juice of the leaves, or twigs, be rubbed upon cloth it leaves a greenish stain; but if the cloth be long enough exposed to the atmosphere the stain changes to blue, and is permanent.

Indigo is raised from the seed. The ground for it should be rich, but not marshy, though, in dry weather, the plants require to be watered. The plants ought not to be placed too close, as in that case the shoots are small and weak, and yield little produce. Neither should they be allowed to stand too long, as the younger the shoots are, if they have come to maturity, the more abundant and the better is the indigo. The shoots come to perfection in two or three months, and they are most productive just before flowering. On favourable soils, and when the ground is kept clear of weeds, four, or even five, crops or cuttings may be obtained in the year; but by this overcropping the stools get exhausted, and require to be renewed. One acre of well-managed plantation will, in the course of the year, yield about five hundred pounds of indigo, while the management of it is not over work for a single labourer.

When the indigo has come to that state, at which the experience of the planter has taught him it will be the most productive, it is cut with hooks, and carried to the works as speedily as possible.

The works for the steeping and preparation of indigo consist of three or four vats, so placed that the top of every following one is on a level with the bottom of that immediately before it in the series. When there are only three cisterns, the first is a *steeper*, the second a *beater*, and the last a *settler*; when there are five, there are two beaters and two settlers. The holes, by which the water from the steeper is let into the beaters, and those by which the beaters are discharged into the settlers, are close by the bottom of the vessels; but those by which the water is finally let off from the settler are a little higher. The steeper is usually about ten feet square and four feet deep; when there is but one beater it is about the same size, but when there are two they may be of smaller dimensions. When the

beating is performed by hand instruments, the beaters are about the same depth as the steeper; but when it is done by machinery, a greater elevation of the sides is required, in order that no part of the liquor may be lost.

The plants are, sometimes after a little drying, and sometimes not, laid in the steeper, pressed down, and covered with water, generally cold. In fact, this part of the process very much resembles the steeping of flax in this country. The fermentation begins in a few hours; the plants swell, give out heat, bubbles of carbonic acid are discharged, and patches of a copper-coloured scum rise to the surface, and are soon changed into a fine blue, by the action of the air. The water also acquires a green colour, but without any turbidity save the scum on the surface. When the fermentation has proceeded to some length, the peculiar smell of the plants is exchanged for a peculiarly offensive putrescent odour; which, as well as the evolution of the carbonic, and the appearance of scum, increase as the operation proceeds. The water is partially decomposed; a portion of its oxygen combining with the base of the indigo, produces the greenness, and the scum is changed to blue by the absorption of more oxygen from the air. Hydrogen, combined with the essential oils, ammonia, and other volatile parts of the plants, occasions the offensive odour. This part of the process requires to be watched with much skill, as the time between getting only a small part of the indigo and losing the whole of it is very short. Unless the leaves and smaller twigs, which yield most abundantly, be just at the point of absolute putrefaction, the greater part of the indigo is undetached; and if they have passed that point, the whole is spoiled. This critical point is ascertained, partly by the appearance of the fermentation, and partly by heating a little of the liquor. If an alkali be mixed with the liquor at this stage of the process, a fine green precipitate is formed.

When the fermentation has been carried to the proper extent, the liquor is run off into the beaters, where it is churned and agitated either by hand-buckets or by machinery. The object of this is to combine the base of the indigo with a greater portion of oxygen; and as it absorbs oxygen, it granulates or forms into little flocculæ, and the evolution of carbonic acid ceases. To determine the proper quantity of beating or churning, is just as nice a point as the former. Experience teaches it, however; and when it is arrived at, the liquor is run off into the settler, where the flocculi are allowed to subside. At first the precipitation is promoted by the addition of a little clear water to the liquid, and then by an alkaline lie. The last throws down the indigo in sky-blue flocculi, which, after they are dry, assume a much darker tint. So long as the least greenish tinge re-

mains in the water, a portion of the base remains in it, combined with carbonic acid, and can be separated only by renewed churning or exposure to the air. When the precipitation has been complete, the liquor has the colour of Madeira wine, and in that state it is let off.

What remains in the bottom of the settler is the indigo, in the form of a thin paste, which is dried and consolidated in cauldrons, but the heat must not be raised to the boiling point. In some cases the paste is put into bags, and allowed to dry in a current of air, by which means the quality of the dye is said to be improved, and there is no danger of its being spoiled. After it has been sufficiently dried, the indigo is ready for market and for the dyer.

For a considerable time the indigo of Guatemala was accounted the best in the market. There were three varieties of it: *flava*, of a fine blue, and the most valuable; *sobré saliente*, of a violet colour, and inferior; and *conti-color*, of a coppery hue, and the least valuable of the three. The indigo of the East Indies, since it began to be manufactured in large quantities by the English, is accounted the best, and fetches the highest price in the market.

The Chinese, by treating a plant which they call *tsai* in the same manner as indigo, obtain a precipitate which forms a permanent dye, of a

beautiful emerald green. The substance is said to resemble indigo before it is saturated with oxygen; but it is not the same substance, as the green of indigo changes to blue when exposed to the air. Specimens of green indigo have been sent from India to this country, under the name of *barasatuvi*; but they have been found not only incapable of communicating a green colour, but to consist of common indigo, adulterated with a sort of carbonaceous matter, which latter communicated no dye at all. Indeed, no substance is so much adulterated as indigo; whether intentionally, or from the impossibility of separating it from foreign matter, is not known; that of the very purest sort not containing above half its weight of pure indigo. The purer it is, it is of the less specific gravity; and therefore it has been suggested to re-agitate the paste in deep vessels, and while it is dispersed through water, decant off the upper part for the finest indigo.

The principal part of the indigo now used in Britain is grown in India, chiefly on the rich Delta of the Ganges. The quantity annually imported is between nine and ten millions of pounds, and the value about two millions sterling. The indigoes are *cicerina* or vetches, nearly allied to the clovers. The plants are harmless; but the prepared dye is a poison.

GEMS.

NON-EXISTENCE OF MATTER.—Whatever purpose was intended to be served by such a tenet, surely its real consequences must be detrimental to the cause of Christianity. If all about us is mere mockery and illusion, the very foundations of all evidence, all faith, and all practice, are undermined; nor will it be possible to determine which position most contradicts my senses, or offers most violence to my conceptions,—that which avers the non-existence of matter, or that which maintains the transubstantiation of it in the holy sacrament.—*Hawkins's Bampton Lecture.*

DIFFICULTIES.—There are few difficulties that hold out against real attacks; they fly, like the visible horizon, before those who advance. A passionate desire, and an unwearied will, can perform impossibilities, or what seem to be such to the cold and feeble. If we do but go on, some unseen path will open among the hills. We must not allow ourselves to be discouraged by the apparent disproportion between the result of single efforts and the magnitude of the obstacle to be encountered. Nothing good or great is to be obtained without courage or industry; but courage and industry must have sunk in despair, and the world must have remained unornamented and unimproved, if men had nicely compared the effect of a single stroke of the chisel with the pyramid to be raised, or of a single impression of the spade with the mountain to be levelled.—*Sharpe's Letters and Essays.*

HISTORICAL RESEARCHES.—It is a cruel mortification, in searching for what is instructive in the history of past times, to find that the exploits of conquerors who have desolated the earth, and the freaks of tyrants who have rendered nations unhappy, are recorded with minute, and often with disgusting accuracy; whilst the discovery of useful arts, and the

progress of the most beneficial branches of commerce, are passed over in silence, and suffered to sink into oblivion.—*Dr. Robertson.*

VOYAGE OF LIFE.—The analogy between a voyage and a man's life has been frequently and beautifully noticed. The principal moral of these allegorical allusions centres in the uncertainty of every thing in this life, and that from the examples of the vessel's getting safe into port, after being exposed to the most imminent danger of sinking, we should learn not to give up hope in adversity, but, invoking the Divine aid, use our best endeavours to meliorate our condition; on the other hand, that, in a prosperous state of things, we should not be too confident because we seem to have a favourable gale, a placid sea, and the sun shining upon us; for, like the vessels which, after leaving port with all these advantages, have been overtaken by the tempest, and perished in the storm, the advantages of birth, fortune, friends, and abilities may all prove insufficient. You may fail in the most desirable and commendable pursuits in life, whilst others, wanting at their outset all these advantages, may finally attain the object of their pursuits: the one failing, perhaps, through that negligence which arises from too much confidence in the advantages they possess; the other succeeding, through that diligence and circumspection which the consciousness of the want of every other advantage naturally inspires. Remember, therefore, this advice:—never let the advantages with which you may begin life's voyage lull you into confidence and negligence, nor the want of them depress your minds into hopelessness and inactivity; but, humble and moderate in prosperity, and firm and patient in adversity, persevere in that path which reason and justice point out, and then despair not of reaching your desired port.—*Hamlet.*

ADAM; OR THE FIRST SIN.

WHEN man first awoke to conscious existence he found that the earth had been prepared as a glorious palace for his reception; for he was the last, as well as the best, of God's earthly works. In his production there was this peculiarity which distinguishes him from all his posterity—that he did not pass through the period of childhood—that he was not born an infant, but created a man, with all his physical and intellectual powers in full maturity. He was created in the image of God—in his sovereign—intellectual and moral image. His understanding was all light—his will all rectitude—his affections all love, ascending like the flames of a sacrifice in ardent devotion to God. He received and returned the smile of God. His understanding, says South, "was the leading, controlling faculty; all the passions wore the colours of reason; it did not so much persuade, as command; it was not Consul, but Dictator. Discourse was then almost as quick as intuition; it was nimble in proposing, firm in concluding; it could sooner determine than now it can dispute. Like the sun, it had both light and agility: it knew no rest, but in motion; no quiet, but in activity. It did not so properly apprehend as irradiate the object; not so much find as make things intelligible. It did arbitrate upon the several reports of sense, and all the varieties of imagination; not like a drowsy judge, only hearing, but also directing their verdict. In sum, it was vegete, quick, and lively; open as the day, untainted as the morning, full of the innocence and sprightliness of youth; it gave the soul a bright and a full view into all things, and was not only a window, but itself the prospect."

Thus constituted, he could not but be happy. But joy then "was not that which now often usurps the name: that trivial, vanishing, superficial thing, which only gilds the apprehension, and plays upon the surface of the soul. It was not the mere crackling of thorns, a sudden blaze of the spirits, the exultation of a tickled fancy or a pleased appetite. Joy was then a masculine and a severe thing; the recreation of the judgment, the jubilee of reason. It was the result of a real good, suitably applied. It commenced upon the solidities of truth, and the substance of fruition. It did not run out in voice, or indecent eruptions, but filled the soul, as God does the universe, silently and without noise. It was refreshing, but composed; like the pleasantness of youth tempered with the gravity of age; or the mirth of a festival, managed with the silence of contemplation." But God, out of pure beneficence, proceeded to enlarge his happiness. He placed him in Eden, the garden of the Lord, the paradise of God. How beautifully is this scene imagined in our great Epic, where Adam relates to the affable archangel—

"On a green shady bank, profuse of flowers,
Pensive I sat me down; there gentle sleep
First found me, and with soft impression seized
My drowsy sense, untroubled, though I thought
I then was passing to my former state
Insensible, and forthwith to dissolve:
When suddenly stood at my head a dream.
———One came, methought, of shape divine,
And said, 'Thy mansion wants thee, Adam, rise
First man, of men innumerable ordained
First father!——I come, thy guide
To the garden of bliss, thy seat prepared;
So saying, by the hand he took me, raised,
And over fields and waters, as in air
Smooth sliding without step, last led me up
A woody mountain; whose high top was plain,
A circuit wide enclosed; with goodliest trees
Planted, with walks and bowers, that what I saw
Of earth before scarce pleasant seemed. Each tree
Laden with fairest fruit, that hung to th' eye
Tempting, stirred in my sudden appetite
To pluck and eat; whereat I wak'd, and found
Before mine eyes all real, as the dream
Had lively shadowed."

Next, the benevolent Creator instituted the Sabbath; on which—though every day was to be sacred to God—man was especially to enjoy communion with the Father of spirits, and to expect peculiar expressions of the divine favour. And as man was formed for society, the Almighty, to promote and complete his happiness, made for him a helpmeet, in the person of Eve. Thus constituted, and thus situated, man was only a little lower than the angels.

But, like the angels that kept not their first estate, he fell by transgression. As a test of his obedience, his Maker had laid on him but one positive command, the observance of which was as easy as it was reasonable. Had no such test been appointed, it would have been only natural in Adam to have desired one; to have said to his Divine Benefactor, condescend to lay on me some command—to point out some plan by which I can evince my love. thou hast laid me under infinite obligations, Lord, what wilt thou have me to do to express my sense of gratitude and show my love? In appointing him a test of obedience, therefore, God was only gratifying what must have been the spontaneous and ardent wish of man's own grateful heart. And in appointing a test so simple, so easy,—requiring him only *not* to do something, to *abstain* in a single particular—God was showing him how easy was the rule, how paternal and kind the government, under which he was living.

But a principle of evil was at large in the universe. In the person of the Tempter, it invaded Eden, and man fell. From that moment, man became a mere mutilation of the Divine image. The creatures shook off his yoke, and revolted from his dominion. His own passions rebelled, each of them asserting its right to reign. The light that was in him became darkness; in this fearful eclipse of the soul, he calls evil good,

and good evil, and suffers all the inconveniences and evils which can attend the blind when led by the blind. Conscious of guilt, he vainly attempted to elude the eye of God; but detected, arraigned, and convicted, the sentence went forth against him—Thou art degraded and doomed to mortality: henceforth, thou shalt every moment be liable to death. The first crisis had come in the eventful history of man. Mercy interposed, and promised a Deliverer. How far man at first understood the evangelical meaning of that promise, we cannot say. The language in which it is couched would necessarily save him from despair—awaken his hopes—encourage him to look upon God as merciful and gracious—and lead him to anticipate a time when One should arise from his own posterity who should rescue them out of the hands of the Enemy, and achieve in their behalf a glorious deliverance.

Glancing at the sequel, we behold him expelled from that paradise whose happiness he had forfeited, and left to seek his home and his subsistence, in the wide world around. He felt in himself, and beheld in every thing else, the dreadful effects of his departure from God. He became a father to become a mourner. Oh! what agony must have harrowed up the parent's soul when first he looked on death—beheld him in his family—and beheld him enter in a way which made the trial tenfold more insupportable. Having lived to see the earth filled with sin and covered with confusion, at the age of 930, the dissolution of his body, in accordance with the Divine sentence, closed the scene of his earthly pilgrimage.

What amazing events did the first man witness! How astonishing the change which he experienced in himself! How widely did his end differ from his beginning! In him the perfection of human nature was displayed; and in him our nature received that shock which will continue to be felt to the latest posterity. He saw the world in its bloom and glory, and he lived to see it despoiled of that glory, crowded with guilt and woe, cursed by the God who made it, and yet placed under a process of Divine restoration.

Fools make a mock at sin. They make a mock even at this sin, though it was so fearful as the first act of rebellion in this part of God's dominions, blasting a world, and entailing on mankind innumerable and endless evils. But why do this? Because they estimate sin by a false standard. There are two modes of measuring the evil of sin—by its effects in relation to man—and by its intrinsic evil in relation to God. Now the standard by which men generally estimate sin is the former—its effects in relation to man. If it does not violate any human law; or if it does not directly injure society to any serious degree, they view it as harmless, and allow it to pass. As if they were all the universe—as if they, poor worms of the earth, were every thing, and the

infinite and eternal God were nothing—they stop not to inquire how He may view it, but allow it to pass. But it is evident that as He is the only Being in the universe who is absolutely perfect, his perfect law is the only right standard by which to estimate the demerit of sin. Accordingly this is the rule by which he tries it—by comparing, or rather contrasting, its nature with his own nature. Now let the same sin be estimated by those two different standards, and see how differently it appears. Let it be supposed, for instance, that a man steals a small casket which he supposes to contain something, but *what* he knows not. He is detected and seized. Now the sin is already committed in the eye of God—the sin of dishonesty—of violating that law which says “thou shalt not steal?” the law of God does not wait to see *what* is in the casket—the sin of theft has been committed, and is registered in the book of God's remembrance. But man has another mode of dealing with the affair; he estimates it according to its effects upon society, and therefore before he pronounces on the act he must open the casket and see *what* it contains. On opening it, the contents may prove to be straw, literally worth nothing; or they may prove to be diamonds worth millions. If the former, the affair perhaps is laughed at, or dismissed with a warning; if the latter, it is treated as a most criminal act, and the nation rings with the account of it. Thus, according to human opinion, the amount of guilt is made to depend on *circumstances*—on the value of the contents of the casket. But, in the sight of God, who estimates actions according to their own nature, that circumstance was as nothing. He looked on the act itself, and he saw in it the spirit of disobedience to him, the violation of one of his own holy and universal laws, so that He could not overlook it without proclaiming himself to the universe the Patron of sin, the Friend of unrighteousness.

Now this is the light, and the only true light, in which to contemplate the first sin. Men, ignorant and ungodly, are prone to estimate it by their own false and worldly standard; and because it does not appear to be very heinous by that standard, they make a mock at it. Though they are to be reminded that the more trifling that first transgression appears, the more kind was God in making the test of obedience so easy—the more easy must it have been for man to obey it—and consequently the more guilt for disobeying it. But the only true light, we say, in which to contemplate the first sin is in its own nature in relation to God. This is the view in which the first sinner himself regarded it, and hence he trembled at it—he could not treat it lightly. This too is the light in which Satan viewed it: he did not think lightly of it—he hailed it as a prodigious triumph of sin and hell against God. And this is the light in which the

great God regarded it. He looked at the *spirit* of the act—and he saw in it the most shameful ingratitude and discontent—he saw in it the germ of a proud and ungovernable spirit, that aspired at independence of God, and equality with God—he saw in it a guilty spirit of unbelief, which made God a liar, and believed Satan in preference—he saw in it the first step towards a league between earth and hell against his divine government—he saw in it the seed of all the guilt and rebellion which have since covered the earth. In his sight, the first sin was a horrible thing and a wonder.

Now if we look at sin in this light we shall see how true it is that there are no little sins, no insignificant transgressions. The least sin we ever committed contained in it the same dreadful elements of guilt as the first sin did; and had that least sin of ours been the first sin in the world, it would have been condemned and attended with the same direful consequences as Adam's was. For "he that offendeth but in one point is guilty of the whole law"—the spirit of disobedience in which he has indulged is an insult to the spirit of the whole law. In this point of view, the sin of Adam was a representation of every sin that would be committed by his posterity to the end of time. Every man has had a spiritual fall. Each of us has had his first sin; though probably it was committed so early in life that we do not remember it. Yet in the book of *God's* remembrance there stands recorded against us a first sin. The record of that, was the record of our personal fall—"another fall of

man." Had the reader never sinned till to-day—had he contracted pollution to-day for the first time, what an era would it have been in his existence! what a subject for mourning, lamentation, and woe! Alas for man, that daily falls and years of accumulated guilt should leave him to sleep as soundly as if his first sin had not yet been committed!

But "as by one man's disobedience many were made sinners, so by the obedience of one shall many be made righteous." The seed of the woman *has* bruised the serpent's head. The reader can be made righteous and be restored to the divine favour.

What a proof did God give in his conduct towards Adam that he willeth not the death of a sinner: no sooner was the sin committed than the Saviour was proclaimed. And thus God would have the parent to tell his children of salvation as soon as ever they became capable of actual sin. And thus too would he have every sinful man sought out, and drawn from his subterfuges and retreats as Adam was, that he might be prepared to hear of the great deliverance. Did Adam fall in paradise? Let him that thinketh he standeth, take heed lest he fall. Let him regard himself as planted on a new probation; let him remember that "God is able to make him stand;" and that the promise is, "to him that overcometh will I give to eat of the tree of life which is in the midst of the paradise of God"—a paradise which no serpent enters, and the inhabitants of which fear no fall.

BRITAIN.

CHAPTER IV.

FROM this time to that of Hadrian, a period of thirty years, it is not well known who were the Roman governors under Nerva and Trajan, (in the reign of the latter of whom, the military roads are thought to have been made,) except that Julius Severus was governor in the former part of that reign, and was followed by Priscus Licinius. Hadrian himself visited the island; in which, from the mouth of the Tyne to the Solway Frith, he built an earth wall, as a northern boundary to the province.

Antoninus Pius deputed Lollius Urbicus to Britain, the northern tribes of which he subdued, and raised another rampart similar to that of Hadrian. Marcus Aurelius Antoninus then sent Calphurnius Agricola to quell the same Caledonians; who again revolted under the infamous Commodus, by whom was sent Ulpino Marcellus, who subdued them partly by conciliatory measures, which displeased his own soldiers, and occasioned his deprivation of office. He was followed by Petennius, who was scourged and

beheaded by his soldiers. To extinguish the mutiny, Pertinax came, in which having succeeded, he returned. He was followed by Clodius Albinus, in whose time the vast throes at the heart of the empire almost dismembered the remotest provinces, and Britain again swarmed with the Caledonians. Virius Lupus was then despatched by Severus, who, though aged, at the request of this governor, himself unable to quench the fires, came over, and brought his sons Caracalla and Geta, by whose help, and with the loss of 50,000 men, in a dangerous campaign in Caledonia, he restored the province to peace. Severus then employed his army two years in building—a little north, but parallel with the mound of Hadrian—a stone wall, twelve feet high by eight feet thick, mounted with towers; and afterwards, worn out with age, fatigues, and the seven-edged grief of having unnatural sons, he retired to York and died, February 4th, A.D. 211. During the seventy following years the Roman writers scarcely mention Britain, of which little

is known beyond the names of some governors. But when Dioclesian reigned, this island first attracted the Saxons and Franks; to repel whom, Carausius was sent from Rome, who, having subsequently assumed the purple, was murdered at York. To Carausius succeeded Constantius, who is said to have married a British princess, and to have also died at York, where his son Constantine was first saluted emperor. Britain then successively fell to the three sons of Constantine; the youngest of whom appointed Gratianus Funarius to be his governor or deputy, which office he soon lost. In A.D. 360, Julian, to punish an incursion of the Caledonians, then called Picts, sent Lupicinium, who made peace; but about the next year these invaders returned, and though Valentinian first sent Severus and then Jovinus to repress the incursion, they pillaged the country for at least three years, when Theodosius expelled them, repaired the wall of Severus, adjusted the government, moderated the taxes, and, amidst the praises of the British people and the Roman writers, he departed. Maximus then assumed the purple in Britain, and again disturbed the tranquillity of the island. After his death, Theodosius the Great sent Chrysantus his deputy to drive back the Saxons; who seeing the decrepitude of the Roman state and the growing fitness of their victim, hovered upon the British coast, from which they were repulsed by Victorinus, who was soon after recalled with all the Roman troops, in which most of the British youth were drafted for the ceaseless broils of the emperors. Their withdrawal gave spirit to the Picts, who for a time were resisted by the Britons, aided by the settled veterans, who, however, soon left a country in which government, liberty, and public spirit had expired. Several times did the Britons sue at Rome for a continuance of their virtual slavery, and were answered by the loan of a few soldiers, who having expelled the Caledonians, repaired the fortifications, and besought the natives to defend themselves, finally left the island about A.D. 420—475 years after the first invasion by Cesar.

The Britons, when thus abandoned, though in possession of a fertile country, with numerous cities and towns connected by good roads, and defended by excellent fortifications, were not only unable to repel the Picts, but even to refrain from civil wars, which occasioned inconceivable harm. Tillage neglected, and the trades forgotten, brought forth famine, the certain mother of pestilence, which soon buried a great proportion of the infatuated inhabitants. This scene was several times repeated, when with unmanly solicitations they petitioned Cælius for help, which he could not give. Added to these disasters was a report that the Caledonians would depopulate South Britain, to which they had not then advanced; and, to avert this, a council of the chiefs was called by Vortigern, chief of the Silures,

when it was proposed to seek the aid of the Saxons. And Hengist and Horsa, then riding in the channel with a small force, came; as if the lamb should seek alliance with the wolf to be freed from the noise and impertinence of the wool-stealing crows!

Governments are trees of gradual growth, and the following outline of the Roman government in this island, is only such as it was when matured by more than a century's growth. The invaders began by making alliances with some of the native tribes, on whose kings they lavished favours of more apparent than of real worth. When it was once believed that to be an ally of the Romans was an advantage, others sought the favour, until they were sufficiently confederated with each other to allow the Romans to plant colonies, nine of which they did at Lincoln, York, Chester, Colchester, London, Richborough, Gloucester, Bath, Caerleon, and Chesterford; the principal towns of which colonies were stocked with Italians; while, in a little time, London and Verulanum were dignified with the title of "free cities," the inhabitants of which were citizens of Rome, and who, indeed, possessed some real advantages.

The capital of every colony was a little representative of Rome, and had its statues, theatres, courts, and temples, to erect which, forests were felled, mines and quarries were sunk, marshes drained, reservoirs, fountains, and baths made; fields enclosed, the trades located, and the arts cultivated; which in a very short period would seem to the Britons like another creation. Charmed with the novelties, and astonished at the cultivation which had produced them, they lost their savage tastes, and invariably, in dress, abodes, tillage, food, war, language, customs, and pleasures, imitated their conquerors, whom the Romans state they rivalled.

At the close of the second century there appear to have been about 140 Romano-British towns, of which

Britannia prima had	40;	{ this was the richest province.
_____ secunda...	15	
_____ Cesariensis	50;	{ and this was the largest.
_____ Maxima ...	25	
_____ Valentia ...	10.	

These towns were of several kinds; for either they were stipendiary, or such as were governed by Roman officers, paid taxes, and felt the immediate weight of slavery; or, secondly, colonial towns, inhabited almost solely by Romans, and had a mint, and could choose their own governors; or, thirdly, those which for the good conduct or other claims of their inhabitants had the *jus Latii*, or were called Municipium.

At that time, the whole island amounted to five provinces, called, Britannia prima, Britannia secunda, Flavia Cesariensis, Maxima Cesariensis, and Valentia, the last two of which had consular

governors: the other three were presidial. The limits and form of the provinces may be seen by a reference to any good map. Through these provinces the Romans made four capital roads, named, from local considerations,

The Watling-street, from Dover through London to Cardigan.

The Fosse-way, from Totness through Lincoln to North Britain.

The Ikeneld-street, from Southampton through York to Newcastle.

The Ermine-street, from Saint David's to Southampton.

From these there were many lateral roads to other towns and stations.

In the fulness of the Roman power, the principal officers in this island were,

1. The governor, lieutenant, prefect, or proprietor, who was supreme.

2. The procurator, or master of the revenue, often a spy of the emperor.

3. The governors of the five provinces.

4. The count of the Saxon shore, whose duty it was to preserve the south-east coast from invaders, to accomplish which, nine forts, with their accompaniments, were built at the coast towns, mentioned below. Under this officer were 2200 foot and 200 cavalry.

5. The duke of Britain, who had 14,000 foot and 900 horse under him, posted at thirty-seven fortified places, each having for its governor either a prefect or tribune, along the northern boundary of the island.

6. The count of the Britons, who, with 3000 foot and 600 horse, governed in the interior.

The chief governor had immediately under him a general officer, a principal secretary, two auditors of accounts, a prison keeper, a notary, and half a dozen inferior assistants. An inferior staff belonged to each of the other principal officers which formed their court; from which, and from all places of power, the natives, forbidden to marry with the Roman officers, were excluded. A standing army of probably more than 20,000 foreigners, who in times of peace were the artisans of the provinces, was supported by the resources of the island, which is thought to have then annually raised more than 2,000,000*l.* of our present money, much of which it is to be feared was obtained by open rapine, while the greater part arose from the following taxes:—

A 10th of the produce of the land.

A 5th ditto orchards.

A tax on cattle.

A tax on meadows.

A 10th of the produce of the mines.*

A 20th of all property not left to relatives,

A 25th of the price of slaves.

A part of the proceeds of all sales.

A poll tax.

* See the note concerning gold mines.

A tax on dead bodies before they could be buried.

A tax on buildings.

Ditto fire-places.

Ditto prostitutes.

Ditto artists.

Ditto exports and imports.

The following is a list of stations of either the Roman towns, forts, or camps, taken from the *Iter Antonina*:—

* Here the sixth legion, *Victrix*, was stationed.

The legions were formed of such Roman soldiers as were citizens, each composed of different numbers, of which the greatest was about six thousand, four hundred of which were cavalry; they were distinguished by numerical figures, and any honorary surname which they could acquire, as *Victrix*, &c. Each legion was commanded by a legate, and divided into ten cohorts, governed by a tribune; each cohort into ten centuries, governed by a centurion; and each century into ten decuries, governed by a decurio. Each century had a vexillum, or standard of colours, defended by ten of the best soldiers; and all the standard-bearers in a legion were called its *verillation*. Attached to each legion was an equal body of foreign soldiers, called auxiliaries; never employed in their native country.

† The twentieth legion was stationed at this city.

These stations had each a small body of soldiers to preserve the conquest of the island; to secure its taxation; to protect the Roman colonists; of which there were great numbers during the presence of the army, supposed not to have been less than 86,000, which other settlers would swell to 100,000 Romans.

Commerce. If the Roman tyranny crushed all that was noble, free, and intellectual in the polished provinces, not to be otherwise enslaved; in the more barbarous, otherwise useless to the conquerors, it introduced a vastly improved era. When Claudius sent his army, the island was often called "Horrida Sylva," but such was the activity of Roman art, and the comprehension of its intelligence, that in a few years it *exported* to Italy, and thence to all other countries, lead, iron, tin, gold, silver, gems, pearls, hides, skins, wool, cheese, horned cattle, sheep, jet, horses, some of the swiftest in the world; corn, to the quantity of 800 vessels a year; three or four species of original dogs; bears for sport; marl, lime, and chalk, the last of which had been an old English manure and export. On the other hand, Britain then imported, among trees, the vine, box, laurel, plane, chestnut, elm, poplar, pear, damascene, melon, cherry, peach, apricot, quince, and the rose; of herbs, and flowers, and shrubs, rosemary, lily, thyme, violet, poppy, mint, lettuce, fennel, radish, cucumber, peas, beans, hemp, flax, and asparagus; and of animals, the hare-bound and the ass, whose milk the Roman ladies used, to procure a white skin. While among the trades mentioned in the Romano-British colonies, we find the innkeeper, apothecary, farrier, bleacher, mercer, turner, metal-worker, barber, paper-maker, coiner, miller, and salt-maker. To these may be added, that there were in common use, honey, pepper, sugar, ginger, salt, cordage, the water-mill, (of which there was one at every considerable town,) nearly all which were brought and left in this country by the Romans. The principal trade ports were London, Dubris, Clausentum, Rhotupæ, Lemanis, Anderida, Novus, Adumun, Sistimian, Felix, and Ribchester, where Roman publicans or excisemen lived to secure the customs, which are thought to have amounted at one time to 500,000*l.* a year. Many of these towns had a market, to which the merchants were obliged to bring their commodities for sale. If they were sold, a fortieth share went to the government; if not, a less sum, for the liberty of offering to sale. London and Verulum were celebrated places for commerce and wealth.

Before the Roman invasion, it is stated that forty different coins of money, of which some were silver, were issued by Cunobelinus, who had been probably instructed in this art by the Gaulish

merchants. At the time of Cesar, however, the Britons chiefly used money made of brass rings, and iron plates, whose value was decided by weight, which probably continued till the fulness of the Roman power, when they were superseded by its own perfect and numerous coins, of which loads have been dug up from different parts of the British empire. The British coins which were also issued by Cassibelanus, Prosutagius, Boadicea, Beric, Cartismandua, Caractacus, and other chiefs, were all round but not flat; made of unmingled gold, silver, and brass; and bore, at first, impressions of animals and trees; afterwards of the king's name, the place of coinage, and other devices expressed in Roman letters. The power to coin was taken from the natives, and its resumption severely forbidden; but many of the natives acquired large fortunes in Roman money, which was all again withdrawn when the Romans finally departed, and which accident alone would partly overthrow the British commerce.

In proportion as trade advanced, water carriage came into use; and in the times of the Romans the Britons abandoned their wattle skiffs* for large boats and fleetier galleys, of which, in the time of Constantius, there were more than a thousand in the harbours of Romanised Britain.

It is impossible to draw precisely the outlines of the domestic state of the Britons while the Romans continued here. Their statues, baths, paintings, music, learning, games, &c., of all which there was no lack in the stations, villages, the thirty-three new Roman townships, the colonies, and the fortifications built by the foreigners, radically altered the habits of the British mind, and meliorated the public manners, so that in the course of a century or two the resemblance between them would be entire, except in so far as the Romans, who omitted nothing which clipped the wing of liberty, kept up the distinction.

EMBLEMS OF ACTIVE LIFE AND CONTEMPLATIVE EXISTENCE.

(From Schlegel's "*Melodies of Life*.")

THE SWAN.

My peaceful life is spent among the waves; its traces are the light furrows which are lost in the distance; and the undulations, scarcely moved, as a pure mirror repeat my form without a change.

THE EAGLE.

The craggy rocks are my abode; I wander in the air in the midst of the storm; in the chase, in fight, and in peril I trust to my adventurous wing.

THE SWAN.

The azure of the cloudless heaven rejoices me; the fragrance of plants draws me gently towards the brink, when at sunset I balance my snow-white wings on the purple waves.

THE EAGLE.

I glory in the tempest when it tears up the oaks of the forest, and I ask the thunder if it delights in ruin.

THE SWAN.

Invited by the kind regard of Apollo, I dare bathe myself in the waves of harmony; and, reposing at his feet, I hear the songs which resound through the vale of Tempe.

THE EAGLE.

I dwell even on the throne of Jupiter; he gives a sign, and I go to seek the thunder for him; and, during my sleep, my drooping wings cover the sceptre of the Universal King.

THE SWAN.

My prophetic view frequently contemplates the stars and azure vault which are reflected in the waves; and deep regret calls me to my country, in the region of heaven.

THE EAGLE.

From my earliest years, it has been with pleasure that, in my flight, I have gazed upon the immortal sun; I cannot stoop to the dust of earth, I feel myself the companion of the gods.

THE SWAN.

A quiet life yields easily to death; when it comes to loose me from my bonds, and to give my voice its melody, my song, even to my latest breath, shall celebrate the solemn hour.

THE EAGLE.

The soul, like a glowing phoenix, rises from the pile, free and unveiled; it hails its lofty destiny; and the flame of death renews it.

THE GRAVE.

"The grave! The grave! what buried hopes are there!" Who does not at the sound of that word, instinctively, as it were, summon up before the mind's eye the beloved forms of some, with whom the most cherished and endeared recollec-

tions are associated. We dwell with melancholy pleasure on the events of the past; we feel a kind of chastened delight in calling to remembrance scenes we have witnessed, when some were by our side, whose presence made nature

* Pliny says that in these boats the inhabitants sailed, in six days, to a certain island, which was probably Ireland.

more beautiful, and added a charm and a loveliness to each object that appeared to claim our admiration. We seem again to behold the bright blue eye reading in ours the pleasurable emotions that were rising in our minds—the gentle pressure of that soft hand, at whose touch the heart thrilled with delight, is once more felt—the silvery tones of that voice, that was as music to the soul, are again heard—the deep azure heavens are hanging above us, the streams are glittering in the vale below, and the flowers are laughing in beauty at our feet; we leap over the bounds of envious time, and for a while are young again:—youth's dreams of bliss pass over our spirits—the world is a scene of enchantment—and hope an elevating and delicious feeling. But then the sad reality—the grave! Oh, how soon the vision—which the busy imagination had called up, and depicted in such beauteous colours,—fades away; and the gloom and the silence and the sadness of the tomb strikes awe into the trembling and mourning spirit.

To some, a churchyard presents a scene which never fails to call into exercise the better emotions of the heart. Not a few of the resting-places of the forgotten dead, in the rural districts of England, are the most lovely spots I have ever beheld; and I delight, whenever I am travelling, to stop for awhile among such scenes, and, wandering amid the tombs which weeping relatives have erected to the memory of beloved friends, read the simple and affecting tributes to departed worth the rudely sculptured monuments present.

There is, in the quiet seclusion of a village churchyard, something that is calculated to soothe and tranquillise the mind, so often harassed and perplexed with the cares and anxieties of the present world. It is a place for solemn musings; and an hour's calm meditation on themes which are naturally suggested by the objects by which we are surrounded, can scarcely fail to make us better men—at least, the feelings that are awakened cannot have an injurious effect upon us. We are treading over the ashes of the forefathers of the hamlet—they have gone to their rest, and their places are occupied by others. Yet through that churchyard often had their feet wended their way in youth's bright morning, in manhood's prime, and when the shades of the night of death were fast falling around; when the mild and mellow tones of the Sabbath bells were floating on the breeze, and inviting the children of men to the worship of God. Beneath that porch they had sat from the time of "auburn locks to reverend grey;" over that same landscape their eyes had wandered; the roof of that sacred house had echoed their songs of praise; but "the fathers, where are they?" One by one were they borne to their last home; and they who wept at their departure from earth were themselves soon lamented as participants in the "com-

mon lot." "The dust returned to the earth as it was, and the spirit returned unto God who gave it."

It is a solemn thing to die—and the stoutest heart at times must tremble, even though the consolations and the supports of religion are afforded. To die—to be shut up in the cold dark grave, from which no honours, no wealth can snatch us, nor the tender solicitude of friends redeem us—to say "to corruption, Thou art my father: to the worm, Thou art my mother and my sister"—this is a solemn—this is an affecting thing. The grave is the bar of separation between friend and friend; and when once it has claimed its victim no more will his cheerful voice gladden the fireside circle, dispirited at his absence, no more will his cheerful and smiling countenance enliven the home once so happy by his presence. How affectingly true are the words of the poet,

"O Death! all eloquent, you only prove
What dust we dote on when 'tis man we love."

I have often witnessed the funeral solemnities in some of our country churchyards, and could never help contrasting the simplicity of sorrow then expressed, with the "pomp of woe" at which the heart sickens, and which is too often to be seen in the streets of our crowded metropolis. I have seen the aged mother follow her boy, her only child to the grave, and with heartrending anguish gaze for the last time on the coffin which contained all that remained of him who had solaced her widowed heart; and a few weeks more, I have seen her borne thither to sleep by his side.

I have stood by, and wept with those that weep, when youth and beauty—than whom the flowers that were thrown into the grave were not more fair—withered by the untimely blast of death, have been consigned to the dust. I have seen the man of hoary hairs, and the man of matured and vigorous strength, laid side by side in the house appointed for all living; but among the most affecting have been the interments of infants. It is agonising for parents to lose their offspring just ripening into youth, or springing up to manhood; but to the heart of the young mother to lay her sinless cherub in the earth—no more to hear his prattling voice, or see his playful wiles—no more to feel his rosy fingers parting her hair, or his ruby lips seeking the maternal kiss—it is much more rending.

"'Tis hard to lay her darling
Deep in the cold damp earth;
His empty crib to see,
His silent nursery,
Once gladsome with his mirth."

I remember well an affecting incident of this nature, which occurred in a distant part of the country. A young woman, on her way to Liverpool, whither she was going to take passage for

the sister island, stayed a night at the beautiful little village of W—. She had married an Irish sailor, who dying suddenly two years after their union, had left her with a babe six months old, in extreme indigence, to struggle with affliction in a pitiless world, where real distress is often scorned and ridiculed, and real suffering often unalleviated. But desolate as was her condition, great as was her poverty, she had one solace—her babe, which she bore in her arms many a weary league, without a momentary murmur. Often, when the inhumanity and unkindness of the world pressed on the trembling spirit of the unhappy widow, and when she lamented with bitter tears the loss of her dearest earthly friend, the playful wiles of her infant would beguile her from her sorrows, and her heart would swell with grateful emotions because that one solace was still left. The bright blue eye of the father beamed forth again in that of her boy, and his features daily grew more into the resemblance of his deceased parent. But who shall calculate on happiness here? The night she arrived at our village the child was taken ill—three long days and nights did the agonised mother watch over him, and minister to his wants. But all her care and solicitude were in vain; the fourth morning light had scarcely dawned, when, with a gentle sigh, the spirit of the little sufferer flew to its rest. The mother spoke not—moved not: before the inanimate remains of her child she stood, with her hands meekly folded across her bosom, the image of sorrow. The fount of Nature's grief appeared exhausted—not a tear moistened her eye, to relieve her burning brain; and until the child was buried she seemed to be unconscious of every thing around her. As his little coffin retreated from her view, her loud sobs told of the conflict that was passing in her bosom: and when, at the conclusion of the funeral service, she leaned over the brink of the grave to gaze at it for the last time, it was with difficulty she was restrained from throwing herself upon it. Poor thing! all around her looked upon her with pity and compassion—the good clergyman wiped a tear from his eye, for her sad tale of sorrow was not unknown to him; and even the rude sexton, although familiar with scenes like this, dashed his hand across his sunburnt cheek to remove an unusual visitant that was lingering there.

The poor woman prepared to leave the village, but with far different feelings from those with which she entered it. Bereft of her only source

of joy, she was indeed desolate—the world was before her, but it wore another aspect now. The dark clouds which had been slowly breaking in her horizon, had again closed, and were more gloomy than before. Life yet remained to *her*, but the object for which she wished to live was for ever gone; and the world had lost its most powerful charm.

I saw her the morning she left W—, it was at the grave of her child. The sun had just arisen—the fresh morning air was sighing around the venerable elms that environed the churchyard—the glittering dew was reflecting the early rays from a thousand blades of grass—and the path she had taken from the pavement that divided the burial-ground to the spot where her infant was reposing, was made distinctly visible by a dusky track. She was kneeling with one hand pressed to her forehead, and with the other something the moulds of the grave; while, during this humble act of affection, her tears fell plentifully, and her suppressed sobs told of her deep affliction. When she had levelled the newly moved earth she placed a few early spring flowers at a short distance from each other on the sides of the grave; and rising from her recumbent posture gave a glance of speechless agony at the little hillock her maternal feelings had prompted her to attempt to adorn. I thought her sorrow too sacred for intrusion, and repressed the desire I felt stirring within me to advance and endeavour to administer consolation.

She stood for some minutes gazing silently on the grave of her child—her only—her firstborn child—the lovely pledge of affection of one who had prematurely passed away. I have her image still before me—her face sunk in her bosom, and hands closed together in mute agony—while the only article of mourning apparel her poverty would admit of her wearing, was a black handkerchief that was thrown over her shoulders, and a dark-coloured ribbon that crossed her faded bonnet. The world may smile, but the tears I shed then welled fresh and unbidden from my heart. The poor weeping mother turned from the spot, so hallowed and cherished by the charge it had lately received, and slowly departed;—every few steps pausing, and looking back to the place where the flowers were gently howing their heads to the morning breeze—until passing round an angle of the venerable and ivy-covered church—I lost sight of her for ever. Poor reft and sorrowing mother! my heart bleeds for thee still!

THE HUDSON AND THE RHINE.

I HAD been familiar with the Hudson from childhood. The great thoroughfare of all who journey from the interior of the state towards the sea, necessity had early made me acquainted with its windings, its promontories, its islands, its cities,

and its villages. Even its hidden channels had been professionally examined, and time was when there did not stand an unknown seat on its banks, or a hamlet that had not been visited. Here then was the force of deep impressions

to oppose to the influence of objects still visible.

To me it is quite apparent that the Rhine, while it frequently possesses more of any particular species of scenery, within a given number of miles, than the Hudson, has none of so great excellence. It wants the variety, the noble beauty, and the broad grandeur of the American stream. The latter, within the distance universally admitted to contain the finest parts of the Rhine, is both a large and small river; it has its bogs, its narrow passages among meadows, its frowning gorges, and its reaches resembling Italian lakes; whereas the most that can be said of its European competitor is, that all these wonderful peculiarities are feebly imitated. Ten degrees of a lower latitude supply richer tints, brighter transitions of light and shadow, and more glorious changes of the atmosphere, to embellish the beauties of our western clime. In islands, too, the advantage is with the Hudson; for, while those of the Rhine are the most numerous, those of the former stream are bolder, better placed, and, in every natural feature, of more account.

When the comparison between these celebrated rivers is extended to their artificial accessories, the result becomes more doubtful. The buildings of the older towns and villages of Europe seemed grouped especially for effect, as seen in the distant view, though security was in truth the cause; while the spacious, cleanly, and cheerful villages of America must commonly be entered to be appreciated. In the other hemisphere, the maze of roofs, the church towers, the irregular faces of wall, and frequently the castle rising to a pinnacle in the rear, give a town the appearance of some vast and antiquated pile devoted to a single object. Perhaps the boroughs

of the Rhine have less of this picturesque or landscape effect, than the villages of France and Italy, for the Germans regard space more than their neighbours, but still are they less commonplace than the smiling and thriving little moats that crowd the borders of the Hudson. To this advantage must be added that which is derived from the countless ruins, and a crowd of recollections. Here the superiority of the artificial auxiliaries of the Rhine ceases, and those of her rival come into the ascendant. In modern abodes, in villas, and even in seats, those of princes alone excepted, the banks of the Hudson have scarce an equal in any region. There are finer and nobler edifices on the Brenta, and in other favoured spots, certainly; but I know no stream that has so many that please and attract the eye. As applied to moving objects, an important feature in this comparison, the Hudson has perhaps no rival in any river that can pretend to a picturesque character. In numbers, in variety of rigging, in beauty of form, in swiftness and dexterity of handling, and in general grace and movement, this extraordinary passage ranks among the first in the world. The yards of tall ships swing among the rocks and forests of the highlands; while sloop, schooner, bright and canopied steamboat, yacht, periagua, and canoe, are seen in countless numbers, decking its waters. There is one more eloquent point of difference that should not be neglected. Drawings and engravings of the Rhine lend their usual advantages, softening, and frequently rendering beautiful, objects of no striking attractions when seen as they exist, while every similar attempt to represent the Hudson, at once strikes the eye as unworthy of its original.—*The Heidenmauer.*

TO THE EVENING STAR.

SHINE in thy glory, thou beautiful star!
Flinging thy beams o'er the mountains afar,
Lighting the path to the blossoming bowers,
Rich with the breath of the languishing flowers.
Waken thy music, thou bride of the sky!
With thy fair and thy shining brow,
Come, for the even is breathing her sigh,
And the voice of the world is low.
Forth, in thy bright and thy glittering car,
Ride in thy glory, thou beautiful star!

Soft is the song of the murmuring stream,
Bright is the light of thy tremulous beam,
Soothing the flowers of beauty that lie
Streaked with the hues of the orient sky;
The voice of the syren that loves the night,
Is heard in the shadowy groves,
And the glowworm has lit up her beacon-light,
To welcome the hour she loves.
Forth thou hast come from thy home afar,
Robed in thy glory, thou beautiful star!

Of hast thou shone on my vine-clad home,
When the visions of bliss to my soul have come;
Of, when the eye of the sleeper is dim,
Watching, I've murmur'd the holy hymn.
When the silent night, from the deep-blue skies,
Her tears of dew was weeping,
And the wandering sephyr's breathed their sighs
O'er the earth, so calmly sleeping,
Thou didst look down from thy throne afar,
Smiling in gladness, thou beautiful star!

Bright is the sun with his glorious light,
As he wakes up the earth from the dream of night;
Fair is the morn with her shadowy smile,
Flinging her beams o'er the mouldering pile,
When the ivy-clad tower, the village green,
And the crowded city lie
Bathed in the light of the virgin queen,
As she shines in the silent sky;
But I love thee most, in thy glittering car,
Riding in glory, thou beautiful star!

T. W. A.

TURKISH CRUELITIES TO THE SCIOTS, AND THE TORTURE IN TURKEY.

Our readers, we doubt not, still shudder at the remembrance of the heartrending tale of the savage destruction of Scio. The following will not fail to excite still stronger indignation against the barbarous murderers, who, in a few hours, laid desolate one of the fairest portions of the earth, and massacred, in cold blood, so many thousands of innocent and defenceless human beings. The carnage was resumed at Constantinople, and the Sciot merchants fell, the unresisting victims of treachery and blood. The narrative, after this event, proceeds :—

According to the Turkish axiom, "that every individual is responsible for the acts of his people," the Sciots, resident in Constantinople, were now every where hunted out after the execution of the merchants, as the Moreotes had been after that of the patriarch. All that resided at the Khan fled and disappeared. The English residents had hitherto felt little sympathy for the Greeks; but this last act of Turkish atrocity seemed to "come home to their business and bosoms." With a generous disregard to any consideration but compassion for the hunted victims, every house afforded them an asylum, even at the personal hazard of the proprietor. Disguises were obtained, and passages secured for them in ships, and the greater part of them were safely conveyed to Russia, folded up in sails, or packed up in casks. In fact, all disinclination to be entangled in the passing events of the country which the Frank residents had hitherto shown was now removed, and no one hesitated, in the cause of suffering humanity, to disregard the edicts of a government that had itself disregarded every law which is recognised in civilised society. The principal British merchant in Pera, as kind-hearted as he is opulent, was very active on these occasions. He had three Sciot gentlemen concealed. He had them shaved, and dressed with hats and coats; and when every thing was prepared, they took the arms of him and his friends, and boldly walked down to the custom-house, in the open day, through the Turks, on their way to the ship. One of them was so overcome that he could hardly support himself, and nearly betrayed the whole party. They, however, got safely on board, were put under a false bottom, supported on casks, and arrived at Odessa. An unfortunate young man had applied also to me for an asylum, and I could not deny it. I dressed him in my clothes, and the next Sunday brought him to our chapel. After the service, I mentioned the circumstance to some of my congregation. They suffered him also to take their arms, walked quietly down the town, and put him on board a vessel about to sail, in which he escaped.

My amiable old friend, the Padre Paolo, whom I had left behind in the Lantern of Demosthenes, at Athens, had now arrived at Constantinople,

and was appointed chaplain to the French embassy. He resided in the convent of St. Louis, contiguous to the French palace, where I paid him a visit. I found him in his little cell, with three gentlemen, who, though in Frank dresses, had something exceedingly awkward and uncouth in their air and manner, as if they knew not how to adapt themselves to their clothes. Before me, no concealment was thought necessary; so I was introduced to the men in their proper persons. They were Sciots, who had narrowly escaped the pursuit of the Turks by rushing into the convent. Here the good old man would sooner lay down his life than suffer them to be injured; so he provided the Frank dresses, and, when opportunity presented, had them conveyed to places of safety.

But the asylum in which the greatest number, perhaps, took refuge together, was the British palace-garden. The proscription extended to all classes, and the meanest man who had the misfortune to be born on the island was equally doomed to death with the most respectable. A large portion of the artisans of the capital were Sciots, who were esteemed for their integrity, as well as ingenuity; but the majority were gardeners. Nicolia, the palace-gardener, was from the island. An order was issued that they should all appear at the Porte, and the poor man came to me to know what he should do. I strongly advised him not to go, and took upon myself any responsibility for his absence. All who did appear were seized and thrown into confinement; and as it was generally known that death immediately followed imprisonment, many of the rest in a panic ran to their countrymen in the English palace-garden. Every bush concealed two or three unfortunate fugitives; and as it was necessary to give them employment, in order to afford a pretext for their being there, they were all engaged as labourers, digging the ground. They were of different trades, which ill assorted to their present employment; but Lady Strangford, whose kindness and humanity was ever accompanied by some playful fancy, made us laugh, in the midst of the peril and confusion, by directing that the bakers should be sent among the flowers, and the tailors among the cabbages.

Mr. Leeves had at this time received a number of copies of the New Testament, translated into Romaic, or modern Greek. Many of them had been bought by the poor Sciots, and were now a source of comfort in their affliction. One took the book, and a group sat round, and listened as he read to them the sacred word in their own language, which they heard with profound attention. On one evening I saw several groups so engaged, and I never before witnessed in so strong a degree the great consolation which the word of God could impart. Many of the poor people expected every moment that they would

be sought out, and demanded by the Turks, and consigned to that death which so few of their countrymen escaped; and under this impression they applied to the book as their only support in peril. The Turks, however, did not demand them. By degrees they dispersed: most of them escaped to the islands; and some few returned to their employment, when the heat of persecution had passed. But the persons who suffered most acutely were the clerks and cashiers of the merchants. It has been the practice of the Turks at all times to seize the saraffs, or bankers, of any victim who has fallen under their suspicion or displeasure, and compel them to discover any property confided to their care. In this spirit, such of the persons in the counting-houses of the Sciot merchants as did not escape were seized and tortured. Now, as you seem to doubt the existence of this practice, and say that the Turks never employ torture to extract confession, and that the rumour of it was one of the many exaggerations circulated of the country, I have been at some pains to satisfy you.

The place of torture is within the walls of the Seraglio, and called the oven, because it had been used as such, and this use makes still a part of the torture inflicted there. Before the Greek insurrection, rich bankers, or saraffs, had been those on whom torture was generally inflicted here, particularly Armenians: they were employed by viziers, or other great officers of state, or by the females of the sultan's family, and they were almost always involved in the ruin of their employers. They were the depositories of the money laid up for themselves if they survived, or for their families if they did not. This, for the greater secrecy, was intrusted to them without any acknowledgment. On the death or deposition, therefore, of any public minister, the way to get at his property was to torture his banker. He is first applied to for any money in his hands, and as the return he makes is never believed, and as there is no existing document to ascertain the amount, he is frequently compelled, by the application of torture, to surrender more than he has received, even to the whole amount of his own property. De Tott mentions the horrible inflictions suffered by an Armenian and his partner, saraffs to Rachub Pasha, the grand vizier, who had married the sultan's sister; and Thornton states, that he had often heard personally from the survivor himself the torture he had endured. The executioner would dip his hands, covered with their blood, into the dish served up for their miserable repast. His partner expired in the act of infliction.

Among the unfortunate men arrested as a Sciot, was one who is called a baccul, that is, a little merchant, who sells all sorts of goods in his shop. It appeared, however, that the man was not a Sciot, but a Cerigote, and so, as belonging to the Ionian Islands, was, fortunately for himself,

under English protection; and our ambassador sent over with great promptness and humanity to claim him as a British subject. He was immediately restored to one of the janissaries attached to the palace, who brought him back in safety, and at a critical moment. The prison in which he was confined was that of the Bostangee Bashi. I mentioned to you before that it is attached to the Seraglio, and is, therefore, supposed to be under the eye of the sultan. It had been my intention to have gone over with the janissary to the prison, which is one of those in which torture is inflicted, and I was greatly vexed that a circumstance occurred to prevent me. I charged, however, another, who did go, to report to me faithfully what he saw and learned on the spot, and I had the following details from him, which were generally confirmed by others.

There were thirty-six Greeks confined there, who were subject to various inflictions of bodily pain, some of which he saw them undergo, by looking through an aperture in a door, and others were told to him. One man was stripped naked. He was then suspended by the feet, till the blood accumulated in his head, and he was nearly smothered. Presently two men came in with large clubs, and in that situation they struck and goaded him till he was left without sense or motion. Whether he died on the spot, or lived to undergo the torture again, my informant could not say.

Another was suspended by the ears on iron hooks, with a weight appended to his feet, till the muscles of his face were all displaced, and the features so distorted that his mouth appeared on his forehead.

A third had a sharp instrument stuck with needles applied to the ends of his fingers, till the points penetrated through the quick, and appeared out at the back of his nails.

A fourth had a screw pressed on his wrists till the joints were dislocated, and the back of his hands occupied the place of the palms.

A fifth had a screw applied to his head in such a way as to press upon the temples. This was closed by degrees, till at length the compression was so great as to force the eyes out of their sockets.

A sixth had a metal cap applied hot to the head. The Greeks wear a small red cap, called a fez, on the crown, under the turban, about the shape and size of a saucer, which fits quite close to the scalp. This was plucked off, and one of red-hot metal, of the same shape, size, and colour, applied to the head in its place.

But the last punishment was one which may be added to the many existing proofs of the unchanging permanency of customs in the east. The oven, or furnace, was made hot, and into this the victims were thrust, till their beards and the hair of their heads were singed, and the skin blistered off their bodies. The punishment of the

burning fiery furnace, which the king of Persia inflicted on the persecuted Jews, was the model, perhaps, upon which the modern Nebuchadnezzar within the walls of his palace inflicts punishment on his Christian subjects; and these, too, men convicted of no offence, but, like Shadrach, Meshach, and Abednego, the most upright and excellent of his people.

When I heard these details, I considered that it was not without reason I shuddered at the cruel scowl of the white of his eye when I found myself in his presence, though at that time I knew nothing, and, in fact, like yourself, was inclined to doubt the report of these practices.

The Turks seldom suffer those they torture to escape with life, and they are exceedingly vigilant that no one should pry into the secrets of this prison-house. There are few, therefore, who can attest them. I have seen and conversed, however, with more than one who had undergone these inflictions. The first was a Greek slave, who stood chained, with a ring about his leg like others, at the gate of the prison called the Bag-nio. His wrists and ancles were distorted by the application of screws, and his whole body so crushed that he supported himself on crutches. The torture was applied to him to extort confession and make discovery, among the first who were taken up, when the insurrection commenced.

A second was known to me at the patriarchal press, at the Fanal. He had been stripped, and

a small cord tied round his body across his breast, and under his arms; by this he was suspended till it cut the flesh into the bone. He fainted with the agony, and was taken down insensible. He did not know how long he had suffered, but was informed for three days. I knew also the Greek superintendent of the foundry. He had three sons, mere lads. At the commencement of the insurrection they were all cast into prison on suspicion. Some persons, through negligence, set fire to a press, containing some papers, and it was considered as a design to burn down the foundry. The father was decapitated, and the lads tortured to confess what they could know nothing of at the time, as they were in confinement. After great suffering, they were beheaded also.

Thus, then, you see the application of torture to extort confession is not yet extinct even in the fairest portion of Europe. These people not only brought with them every thing that was barbarous in Asiatic manners, but they will not suffer to die whatever was so in Europe. The horrid practices of our rude and ignorant ancestors, which every other nation has abolished for ever, as too revolting to the habits and feelings of the present day, the Turks catch at and engraft upon their own; and they exhibit at this moment some of the very worst features of the worst periods of Asiatic and European barbarism.—

Walsh's Residence at Constantinople, vol. II.

REVIEW.

THE REV. ROWLAND HILL.*

ARTICLE I.

WE know not a better introduction to the following brief notice of the distinguished individual to whom it refers, than Mr. Sherman's preface to Mr. Jones's Memoir; but we must content ourselves with a few extracts.

"The life of the Rev. Rowland Hill must ever be deeply interesting to the churches of Christ in Britain, as it embraces a portion of their history in which the most momentous events connected with their present prosperity have transpired. The mental darkness and opposition to the gospel which pervaded all ranks of society when he commenced his ministerial career, required men of more than ordinary courage, influence, zeal, and holiness, to hold forth the torch of divine truth amidst the surrounding moral gloom. It pleased God at this period to raise up a band of eminent champions for Christ, who, careless of the world's esteem, ardently loving their Saviour, highly valuing immortal souls, and believing the Gospel to be the only remedy for guilty men, went forth preaching every where, the Lord working with them, and confirming the word with signs following.

The subject of this Memoir was one of these excellent men. The honourable family from which he descended—the noble sacrifices he made to publish Christ to his countrymen—the energy with which he prosecuted his labours—the friendship he displayed towards all sections of the church of Christ—his liberality to institutions for the education of the poor and the diffusion of divine truth—his arduous struggles for civil and religious liberty—his extensive usefulness in awaking multitudes from a death of sin to a life of righteousness—and his uniformly consistent character; must, to every reflecting mind, render him an object of veneration and love, as a minister

eminently qualified by God for the times in which he appeared, and the important station in the church which he occupied."—(pp. vii., viii.)

Speaking of two former attempts on the life of Mr. Hill, (made in the form of Memoirs,) Mr. Sherman closes his just censure of one of the writers, with a spirited vindication of what some have deemed the erratic course which Mr. Hill and others thought proper to pursue, considering the state of the church and the world at the commencement and during the progress of their career.

"I seize the present opportunity to express my fear that in some sections of the church of Christ, party spirit is evidently increasing, and that narrow-minded sentiments in the memoirs of liberally-minded men, contribute much to maintain and perpetuate it. Surely the walls of separation are lofty enough, and the distance between Christians of different denominations already too great, without heightening the one and increasing the other. The Bible, which, happily, is now in almost every one's possession, shows such conduct to be inexcusable. If a man of God follow the mode of instruction which primitive ministers adopted, which Christ himself sanctioned, and which the Holy Ghost commended, why should it be considered necessary to apologise for him—to guard the public mind from the contagion of his example,—and to lessen, as much as possible, the influence of his labours?

In the Memoir of that eminently devoted man, the Rev. Mr. Walker, of Truro, it is more than intimated that the revival of religion in this country, which followed the labours of Whitefield, Wesley, Hill, and others, has been erroneously attributed to them, instead of to those servants of Christ who confined their labours to a limited circle, and to regular and canonical services. Let nothing be detracted from the part which such excellent men took in the revival of religion; let them receive from the whole church the due acknowledgment of all the successes attending their regular labours, which all who love Christ must appreciate and commend; but let not party feeling

* "Memoir of the Rev. Rowland Hill, M.A." By William Jones, author of "Testamentary Counsels." With a Preface, by the Rev. James Sherman, of Surrey Chapel. Fisher, Son, and Co., London.

dictate a sentiment which is as contrary to universal testimony as it is to the ordinary operations of Divine Providence. If these holy men, after considering the claims of immortal souls, the duties of their stations, and their accountability to their Master, could not see it right to expose themselves to ecclesiastical censure, by preaching beyond prescribed limits, let due credit be given them for acting up to their conscientious convictions of duty, and their persuasions that they could serve Christ better, and accomplish more good, by moving in a regular, rather than in an eccentric, orbit; but let no uncandid attempts be made to tarnish the lustre of the names, or lessen the effect of the labours, of those who were at least equally holy and devoted men; and who, after a diligent investigation of their Saviour's commands, a study of the conduct of his apostles, and filled with yearnings of compassion for the miseries of their fellow-immortals, felt it to be their imperative duty to go out into the highways, and into the streets and lanes of the city, to compel men to come in, that God's house might be filled. These holy men showed their sincerity by sacrificing the esteem of the great and learned, the love and respect of their kindred, and the hopes of worldly advancement, and by subjecting themselves to obloquy, scorn and personal danger, to save souls from ruin. Statesmen, and philanthropists, and historians, and ministers, have planted on their graves evergreens and sweet-blooming flowers, full of fragrance and beauty; and if any sacrilegious hand, in the darkness of bigotry, attempt to uproot them, the whole Christian church, with the sword of truth, will keep guard around their graves, and preserve them from the spoiler."—(pp. viii.—x.)

In the conventional and heraldic sense of the term, Mr. Hill was born a gentleman. His father was a baronet, Sir Rowland Hill; to this title his brother succeeded. The present Lord Hill, the commander-in-chief of her majesty's forces, is his nephew. But there is no dignity of birth, or distinction of fame that can be for a moment compared with the nobility which eminent talents, consecrated to the highest purposes, confer upon their possessor. In every view we therefore consider the Rev. Rowland Hill as the most illustrious member of his family.

"The Rev. Rowland Hill was born at Hawkestone on the 23rd of August, 1744. His disposition was lively, and he was fond, in his early days, of those sallies of wit and playfulness which enlivened the passing moment, and to which he often referred even till the close of life. This liveliness of spirit remained with him all his days; and many incidents are recorded in the memories of his faithful domestics, in which he displayed that happy cheerfulness which was one of his distinguishing characteristics.

"Mr. Hill obtained the first rudiments of knowledge at the royal grammar-school of Shrewsbury, which was founded by Edward VI., and has been in high repute for many years.

"The honoured parents of Mr. Hill were distinguished for their upright and correct conduct, and stood deservedly high in the esteem of all who knew them. There is, however, reason to fear that the youthful steps of their child were not guided by them into 'the narrow way which leadeth unto life.'

"The mind of Sir Rowland does not, indeed, appear to have been greatly opposed to evangelical truth; since, when the rector of his parish refused his pulpit to a faithful minister and friend of his son Richard, he, 'with the greatest kindness and candour, told him, that he should be welcome to preach in his chapel; an offer which was accepted with thankfulness.'

"At an early age Mr. Hill appears to have been the subject of religious impressions, from reading Dr. Watts' beautiful hymns for children, which were presented to him by a Christian lady. These impressions were afterwards strengthened by hearing his brother Richard read a sermon by Bishop Beveridge, supposed to be the one on 'Behold the Lamb of God.'

"On Mr. Hill's removal to Eton, Mr. Richard Hill felt deeply interested in the spiritual welfare of his brother. His pious sister Jane also pointed out to him the great importance of early devotedness to God. It is said that Sir Richard was accustomed to place his hand upon his brother's shoulder, and exclaim, 'Rowland, Rowland, if you do not repent, and believe on the Lord Jesus Christ, you will be eternally lost.' Assuring him that before he was at his age, it pleased God to show him the necessity of caring for his soul, although he often neglected the convictions which he then felt. He affectionately admonished Rowland 'not to be led away by the bad example of his school-fellows.'

In 1761, Mr. Hill was sent to Eton when he was about seventeen years of age, whither he was followed by the advice and prayers of his beloved relatives. Here he was exposed to those peculiar temptations which have proved fatal to many promising young men. At this time he was occasionally the subject of deep distress, from the recollection of the words 'The end of these things is death.'—(pp. 31—34.)

A long and interesting letter, about this time, was addressed to him by his brother, Sir Richard, which powerfully impressed his mind, and greatly aided the good work already begun in his heart.

"It was soon after he reached the age of eighteen, that Mr. Hill entered into his Master's 'sweet service,' as he frequently termed it. He was fond of illustrating his grateful feelings at that time, by relating the tale of a poor negro who had been kindly treated by his employer. After he had been some time in his service, the master kindly said to his slave, 'Now you are of age, you may go where you please, and serve any master you think proper. I did not buy you to keep you as a slave, but that you might enjoy the sweets of liberty. You can leave my house to-morrow if you like.' The poor slave was melted by the power of kindness, and, with the deepest emotion, he exclaimed, 'Me leave you, my dear massa; oh! not for all de world. Me want no wages to serve you; if massa turn me out as one deer, me will come in as de deer.'—(pp. 42, 43.)

"During his residence at Eton, Mr. Hill frequently displayed the wit and humour which, through life, enriched his conversation. There was once a discussion among the scholars on the letter H. Some contended that it had the full power of a letter, but others thought it was a mere aspirate, and that it might be omitted altogether, without any disadvantage to our language. Mr. Hill earnestly contended for its continuance, adding, 'To me the letter H is a most invaluable one, for if it be taken away, I shall be *ill* all the days of my life.'

"At the close of 1764, Mr. Hill removed to Cambridge. He first entered as a pensioner at St. John's, but afterwards he became a fellow commoner. At this time he was decidedly devoted to God, and this was his strong defence against the peculiar temptations to which he was then exposed. Miss Jane Hill, when writing to Lady Glenorchy, refers to Rowland's residence at Cambridge, and gives a painful description of the times. 'I trust,' she remarks, 'that he will ever stand faithful to the cause of his crucified Master, whether he be admitted as a minister of the Gospel, to preach in his name, or not, but, alas, to such a deplorable apostasy is the world come, that young men who are steadfastly attached to the church, and live exemplary lives, can hardly get their testimonials signed for orders.'

"Even at this period, there were a few persons at Cambridge who were willing to deny themselves, to take up the cross, and to follow Christ. The late Rev. David Simpson, of Macclesfield, Pentyreos, of Wallingford, and others, counted it all joy to suffer persecution for their Master's sake."

"Mr. Hill, in the following extract, describes the occupations of the pious band of his friends, during their residence at Cambridge:—

"Our custom was to read with each other the Greek Testament, and other evangelical publications: these meetings we always concluded with prayer. The university was almost in total darkness. No wonder, therefore, if, for such exercises, and for some other strong symptoms of a *methodical* life, we were specially marked, and had the honour of being pointed at as the curiosities of the day. This did good. Others soon joined us, to the number of ten or twelve: some of them were *Nicodemian disciples*; others have proved bold and useful ministers; and some of them, I trust, have been taken to glory."—(pp. 45—48.)

"Under the counsels of Mr. Berridge, and other friends, Mr. Hill preached 'the unsearchable riches of Christ' before he had completed his collegiate course. His first attempt appears to have been in a cottage on his father's estate, where he expounded to the poor people portions of Holy Scripture. He afterwards preached in the neighbourhood of Cambridge; and, accompanied by Pentyreos, Simpson, and others, he visited in jails, workhouses, and sick rooms, calling sinners to repentance."—(pp. 49, 50.)

"The early path of Mr. Hill was not without thorns. He found that through much tribulation he had to enter the kingdom of God. Not only were his parents opposed to his religious course, but his tutor strongly condemned his irregularities. In his latter years he occasionally referred to parental opposition, but always with the feelings of a great mind. Never did he forget the Divine command, 'Honour thy father and mother.'

"There is a statement in circulation in the neighbourhood of Hawkestone, that an affecting scene was once witnessed in the family mansion. The parents of the youthful preacher insisted on his giving up his erratic career, while the son respectfully but firmly contended for liberty of conscience. At the moment a positive threat of exclusion from the family circle was issued, the Divine words cheered the sufferer, and kept him steadily to his purpose: 'When my father and my mother forsake me, then the Lord will take me up.'

"The mind of Mr. Hill was formed in too sensitive a mould not to feel most keenly the opposition he experienced on his return to the beautiful and splendid scenery of Hawkestone; though surrounded by the most lovely attractions of nature, he found no peace. His own remark on the subject strongly describes his condition. 'Hawkestone is now a furnace indeed.' But he was enabled, through the timely grace given to him, 'to glorify his heavenly Father in the flames.' 'At the close of his life he was walking on the terrace at Hawkestone,' states Mr. Sidney, 'when he remarked to a lady who was with him, and who had witnessed the affectionate attentions which were paid him by Sir John Hill and his family, 'You have seen how I am now received here, but in my youth I have often paced this spot bitterly weeping; while, by most of the inhabitants of yonder house, I was considered as a disgrace to my family.'

* Lady Glenorchy's life, page 89.

† First Journal, page 4.

But,' he added, whilst the tears fell down his aged cheeks, 'It was for the cause of my God.'

"The father of our venerable friend allowed him but a small annual income, on account of his strong disapproval of his conduct. It was, therefore, a common occurrence for him to travel in his Master's service, not having a shilling in his pocket, and without knowing in the morning 'where he should rest at night.' His mother, from her mistaken notions of religion, was his strongest foe. Mr. Hill felt very deeply her removal from the world, and improved the event at the Tabernacle in London, from 2 Samuel xxiii. 5, 'Although my house be not so with God; yet he hath made with me an everlasting covenant, ordered in all things, and sure: for this is all my salvation, and all my desire, although he make it not to grow.'

"Notwithstanding, Mr. Hill found his greatest spiritual foes to be those of 'his own household,' yet he continued to preach the word, 'in season and out of season.'

"In his village labours he was often insulted by the people, and considered by them a wild enthusiast, although he spake 'the words of truth and soberness.' He frequently referred to these seasons with calm delight, persuaded that he was then made the means of leading many souls to the Redeemer."—(pp. 54–56.)

"Early in the year 1766, Mr. Hill obtained the degree of B.A. He was a diligent student, notwithstanding his numerous engagements, and though 'a fellow-commoner,' his name appeared in the list of honours.

"Immediately after the completion of his studies at Cambridge, he was anxious to obtain ordination, but his irregular course threw many difficulties in his way. On this subject he says, 'For visiting the sick and imprisoned, and expounding the Scriptures in private houses, I met with no less than six refusals, but he gained admission into the established church,—but, blessed be God, all this proved for the furtherance of the Gospel. "The wrath of man shall praise him, and the remainder thereof shall he restrain."'

"The mind of Mr. Hill was kept in painful suspense for nearly four years on the subject of ordination. During this period, however, he was 'instant in season and out of season,' in his Master's work. He not only preached in dissenting chapels, but he continued his itinerant tours through many parts of England. He was pelted with eggs and stones, lampooned, and burnt in effigy; but 'none of these things moved him.'

"On the death of Whitefield, in 1770, it was generally supposed that Mr. Hill would succeed him at the Tabernacle and Tottenham-court chapels; but this was not the will of God. Mr. Hill was anxious for episcopal ordination, and he was not disposed to take a step which might have excluded him altogether from official connexion with the established church. Mr. Hill's labours in both chapels were greatly blessed by the Holy Spirit, and under one sermon at Tottenham-court many sinners were led to enquire, 'What shall I do to be saved?'—(pp. 63–65.)

"In 1771, on the Sabbath evening of the 17th of June, Mr. Hill preached, for the first time, in the market-place of Wotton-under-edge, Gloucestershire, from Eph. v. 19; the good effects of the attempt he then commenced have continued to this day. In that town he afterwards built a tabernacle for God, endowed almshouses for its members, and made it his summer residence. There many sinners have been led to God, and the 'despised itinerant,' by his hill, has made arrangements for supporting the religious interest which he established in that town.

Mr. Hill appears at this season 'to have experienced it to be all joy that he was counted worthy to suffer persecution' for the sake of his dear Master. Though he was passing through the paths of tribulation, yet all his trials were to be overruled for the promotion of his Saviour's cause. The Christian plant must often be watered by affliction, ere it comes to maturity; or its beauties can be fully developed."—(pp. 65, 66.)

"After much trouble and anxiety, Mr. Hill was ordained a deacon, by Dr. Willis, the bishop of Bath and Wells, on Trinity Sunday, 1773, without any promise or condition whatever. The little parish of Kingston, near Taunton, in Somersetshire, furnished him a title for orders. He remained there as curate about twelve months, where

'A man he was to all the country dear,
And passing rich with forty pounds a year.'

In that church he preached his first sermon, on June 20, 1773, from 1 Cor. ii. 1, 2, which he afterwards printed, with the title 'The Gospel Message,' and dedicated it to the rector of the parish."—(p. 70.)

"The refusal of several bishops to ordain Mr. Hill did not induce him to discontinue his 'irregular' mode of proclaiming the gospel to sinners, which led the bishop of Caillie to refuse him priest's orders. He was therefore obliged to pass through life 'wearing only one ecclesiastical boot.'

"After leaving his curacy at Kingston, Mr. Hill preached in the neighbourhood of his father's residence at Hawkestone, who continued his opposition to his son, with the hope of bringing him back into that vineyard in which it was his desire that he should exclusively labour.

"Mr. Hill sought a temporary retirement in Yorkshire, and remained for a season with an old college friend, who greatly encouraged him in his course. At Leeds he was the means of enlightening many souls, and thus he had the approbation of

God with him, though many men were speaking evil of him. He afterwards preached with great success at the Tabernacles in London, Plymouth, and Bristol. At this period of his life he walked by faith, through a clouded path. All earthly things were against him, and yet he believed that he was pursuing the course which was agreeable to his heavenly Father's will. His itinerant labours were eminently useful, particularly among the colliers at Kingswood, near Bristol.

"In 1773 Mr. Hill contemplated a most interesting change in his condition of life. He had formed a strong attachment to Miss Tudway, whose brother represented the city of Wells in Parliament."—(pp. 76, 77.)

"In the year 1774 Mr. Hill appears to have enjoyed unparalleled popularity. 'He preached charity sermons in many of the London churches, where the churchwardens and overseers turned Methodists *pro tempore*, and had their plates filled by the contributions of Mr. Hill's followers. He was frequently at St. John's, Wapping, where he sometimes gave way to his natural disposition for drollery, which he afterwards deeply regretted. On one of these occasions, observing that his auditory was unusually large, and made up of seafaring persons, who were not celebrated for overmuch religion, he remarked, 'I am come to preach to great sinners, notorious sinners, profane sinners,' and, with peculiar emphasis, exclaimed, 'yea, to Wapping sinners.' This climax operated like an electric shock through all the congregation, and highly offended some of the inhabitants of that polite part of the town, who conceived themselves materially insulted by such a debasement of their place of abode.'"

"No one could be intimate with Mr. Hill without discovering the evident satisfaction he enjoyed when requested to occupy pulpits in the church; and, on the contrary, the severe mortification it gave him to be excluded from them."—(pp. 93, 94.)

"After having preached with great success in the churches and chapels, streets, fields, and commons of London and its vicinity, he was anxious to enjoy a more settled life. In the year 1780 Mr. Hill felt a strong desire to introduce the Gospel into the south side of the metropolis; and after much prayer for Divine guidance, 'the cloud rested' on the spot where Surrey chapel now stands."—(p. 97.)

"On the 24th of June, 1782, the first stone of Surrey chapel was laid by Mr. Hill, on which occasion he preached from Isaiah xxviii. 16, 'Therefore, thus saith the Lord God, Behold I lay in Zion for a foundation, a stone, a tried stone, a precious corner-stone, a sure foundation; he that believeth shall not make haste.' On this occasion great numbers were collected together. After the sermon, suitable addresses were delivered by the Rev. Messrs. Willis, Piercy, and Medley; and fervent prayer was offered up that the new tabernacle might be filled with the glory of God."—(p. 103.)

"On the 8th of June, 1783, the chapel was solemnly opened for Divine worship, when Mr. Hill delivered his first sermon, from 1 Cor. i. 23, 'But we preach Christ crucified, unto the Jews a stumbling-block, and unto the Greeks foolishness; but unto them which are called, both Jews and Greeks, Christ the power of God and the wisdom of God.'† The evening sermon was preached by the Rev. Mr. Piercy, from the text, 'Arise, O God, and plead thine own cause.'

"An attempt was successfully made, during the service, to disturb the congregation. A report was raised that the foundation of the building was insecure, and was giving way. The confusion that ensued was very great. Mr. Hill, from the pulpit, endeavoured in vain to still the tempest. Many persons were materially injured, though no lives were lost. At a subsequent period a ball was fired at Mr. Hill while in the pulpit, which providentially passed over his head; but the miscreant was never discovered."—(p. 105.)

"Mr. Hill printed this sermon, to prevent all misunderstanding as to the doctrines which he intended to preach, his address on laying the foundation-stone having been grossly misrepresented. He was soon the subject of a violent attack from one of the reviewers of the day. His sermon was called 'the first-born child of absurdity;' and it was stated that only a depraved mind could give currency to the sentiment 'that the imagination of man's heart was only evil, and that continually.' This strange ignorance of the Scriptures will remind the reader of the remark made by a learned barrister, who complained of the bad taste of the evangelicals, in comparing man's own righteousness to 'filthy rags.'

"Mr. Hill, in a preface prepared to his first sermon, refers to his reviewer's remarks: 'Their ignorance also taught them to tell the public how my insatuated hearers would walk for miles uncovered, during the severest rain, by the side of my carriage, singing hymns; that I have frequently spoken till I have spit blood, and much injured my constitution by my extraordinarily energetic mode of delivery. Now, it would be the greatest piece of ill manners to presume to say I am well, when a body of such learned gentlemen pronounce me to be sick; yet, such are the wonderful effects of my fanaticism, that I feel no more bad consequences from my much-injured constitution, than if my zeal had never exceeded the completest representative of laziness in a caa-ock.'

"The weekly services at the chapel have been since regularly held on the morning and evening of the Sabbath-day, and on Monday evenings, when the members of the church meet together and receive an address from the pastor; and also on Tues-

• Ecclesiastical Biography, vol. iv., p. 571.

† See Religious Tract Society Catalogue, 364.

• Mr. Hill's salary was forty pounds.

day evenings and Friday mornings. On the Lord's day, the scriptural service of the Church of England is read, somewhat abridged, particularly by the omission of the communion service, which is only used at the time of the monthly administration of the ordinance.

"An excellent organ was erected for the use of the congregation, which is still considered a very superior instrument, and was long played by the late Mr. Jacob, who rose to great eminence for his musical talents."—(pp. 106, 107.)

"After the settlement of Mr. Hill at Surrey chapel, he generally resided in London from November until the close of May, when he retired for a season to his beautiful residence at Wotton-under-edge, or commenced his much-loved itinerating labours. During his absence from London his pulpit was supplied by ministers of different denominations, all holding the essential doctrines of the Gospel. The venerable Berridge,

Pentycroft, Glasscott, Venn, and Scott, the commentator of the established church, preached faithfully the truth as it is in Jesus, at Surrey chapel."—(p. 116.)

The most eminent dissenting ministers co-operated with these liberal clergymen in sustaining the labours and extending the usefulness of the pastor of Surrey chapel.

"For nearly fifty years the Rev. William Jay, of Bath, has paid his annual visit to the congregation; and his services are as acceptable, now 'the almond-tree flourishes,' as when 'the dew of youth' was upon him. He has confirmed many in the faith, and led many thoughtless prodigals to the Saviour of sinners."—(pp. 120, 121.)

GEMS.

AGREEMENT OF PROPHET AND APOSTLE.—The agreement of the predictions of the prophets with the things themselves, and the preaching of the apostles following, make up one organ or great instrument tuned by the same hand, and sounding by the same breath of the same Spirit of God.—*Leighton.*

MAGNIFICENCE AND SUBLIMITY OF THE HUMAN FORM.—There needs no better proof of our instinctive feeling of the immense expression of which the human figure is capable, than the uniform tendency which the religion of every country has betrayed towards Anthropomorphism, or attributing to the Deity the human form. And behold the effects of this familiar object every day: no acquaintance with the secrets of its mechanism, no degrading views of human nature, not the most swinish compost of mud and blood that was ever misnamed philosophy, can avail to hinder us from doing involuntary reverence to any exhibition of majesty or surpassing beauty in human clay.

THE WARRIOR.—While the philanthropist, a fellow-worker together with God, in exploring and giving effect to the benevolent tendencies of nature, is devising means to mitigate the evil, and augment the happiness of the world; the warrior is revolving in the gloomy recesses of his mind plans of future desolation, terror, and ruin. Prisons crowded with captives, cities emptied of their inhabitants, fields desolate and laid waste, are amongst his proudest trophies! The fabric of his fame is cemented with tears and blood: and if his name be wafted to the ends of the earth, it is in the shrill cry of suffering humanity; in the curses and imprecations of those whom his sword has reduced to despair.—*R. Hall.*

AFFLICTION.—As the snowdrop comes amid snow and sleet, appearing as the herald of the rose, and the harbinger of summer, so religion comes amid the blight of affliction, to remind us of a perpetual summer, where the sun never retires behind a wintry cloud.—*Temple.*

MEN AND THINGS.

LAKE OF TIBERIAS.—About eight o'clock we reached Tiberias, having travelled about two hours along the side of the lake; we had occasion to observe that more pains appeared to have been taken to construct the road where it was very rocky, than in most parts of Syria which we had visited. The modern town of Tiberias is very small, it stands close to the lake of Genesareth, and is walled round with towers at equal distances. At the northern extremity of the ruins are the remains of the ancient town, which are discernible by means of the walls and other ruined buildings, as well as by fragments of columns, some of which are of beautiful red granite. South of the town are the famous hot-baths of Tiberias: they consist of three springs of mineral water. We had no thermometer; but we found the water too hot to admit of the hand being kept in it for more than fifty seconds. We endeavoured to boil an egg, but without success, even out of the shell. Over the spring is a Turkish bath, close to the lake's side, which is much resorted to, particularly by the Jews, who have a great veneration also for a Roman sepulchre which is excavated in the cliff near the spot, and which they take to be the tomb of Jacob. Beyond the baths, a walk runs from the lake to the mountain's side, which rather perplexed us when we were taking the measures of the ancient walls of Tiberias; but it has since appeared evident that the walls did not extend so far to the south, and that this was the fortification of Vespasian's camp, as appears from Josephus, who places it in this position. The lake of Tiberias is a fine sheet of water; but the land about it has no striking features, and the scenery is altogether devoid of character.—*Irby and Mangies.*

CHINA.—Kien Long, Emperor of China, inquired

of Sir G. Staunton the manner in which physicians were paid in England. When, with some difficulty, his majesty was made to comprehend the manner of paying their physicians so well in England for the time they were sick, he exclaimed, "Is any man well in England who can afford to be ill? Now I will inform you how I manage my physicians: I have four, to whom the care of my health is committed: a certain weekly salary is allowed them; but the moment I am ill, their salary stops till I am well again. I need not inform you that my illnesses are very short."

SPAIN.—A learned and witty Frenchman, during his stay in Spain, went to visit the celebrated library of the Escurial, and was astonished at finding the librarian an exceedingly narrow-minded and ill-read man. The King of Spain condescended to ask the learned Frenchman's opinion of the library. "Sire," he replied, "the library is admirable, excellent; but you should promote the librarian to the office of minister of finance—for he is quite clearly a man who never meddles with the treasure intrusted to his care."

PORTUGAL.—My guide said that the wood abounded in wolves, and desired me to observe the stump of a tree recently felled, telling me that a young man, assailed by three of those ferocious animals, had taken refuge in its branches, and had afterwards cut it down, as a memorial of his escape, and in testimony of his gratitude. I thought this an odd mode of returning thanks, and tacitly determined never to endanger my safety for an inhabitant of Meleahada. Different nations have certainly different modes of expressing their sense of services conferred: a Portuguese fells a tree for the same reason that an Englishman would effectually protect it.—*Portugal and Galicia.*

THE PENSIONER.

A few years since, for the restoration of my health, I resolved to visit the waters of Lake George, and the country adjacent. This section of country is well known; for, independently of its neighbourhood to the fort and battle-grounds of Ticonderoga, where many a warrior bled in our Revolutionary struggle, its scenes, in themselves, are objects of great interest. The passing stranger can scarcely refrain from feeling very sublime emotions, as he rambles over the grounds, and surveys the ruins of the old fort, now almost gone to decay. He cannot well refrain, if he possess a tolerable share of imagination, from calling to his mind the heroes and struggles of other times. He will fancy he can almost hear the savage yell, and see uplifted the murderous tomahawk;—can almost hear the roar of thundering cannon, and see the fall of groups of the dying. But awful and interesting as may be the emotions which imagination and recollection awaken, while recalling the deeds of days gone by, they can scarcely transcend those which he feels while he surveys the sublime scenes opened to his view, in every direction, around Lake George. The beautiful transparency of the waters, and the grandeur of the neighbouring mountains, which seem to rise out of the very waves, and by which they are pent up in one vast reservoir, produce in the mind of him who loves to contemplate nature in her noblest and richest apparel, a state of the most interested and delicious feeling. What traveller has passed this way, and did not feel himself transported at the sight of Rogers' Rock, stretching its proud summit to the sky? Often does the stranger, as he is gliding swiftly in his boat down the lake, when he comes in full view of this rock, request the watermen to rest on their oars, that he may contemplate its sublimity in silence. I can distinctly recollect my emotions when I first saw it. I had heard its story, and the circumstances which gave name to it, and fancied I could almost see the bold Rogers, and his daring followers, descending its steep and then icy declivity, with the rapidity of lightning, and the astonished and blood-thirsty savages shouting above on its bleak summit, and looking down with the keenest vexation upon those who so lately had been their prisoners, and who were to have been burnt alive on that very summit, whence none but themselves would have dared to descend. It was such scenes that I intended to make my study and delight, as I left home, and in two days arrived at the borders of the lake.

If any of my readers have passed from one end of this lake to the other, they may have observed on the eastern shore, about ten or eleven miles from the outlet, a little cottage. It stands at the bottom of a narrow glen, a few rods

distant from the waters edge. A little cove puts up from the lake, between the rugged mountain on one side, and the southern skirt of the glen on the other. The clouds in a lowering day are always seen to rest on the summit of the mountains which arise on each side of the ravine, which stretches off to the east of the cottage. Half way up these heights the eagle builds her nest, without fear of molestation, and seems to look down from her conscious elevation in defiance of man below. The whitewashed cottage and the swelling mountains have a pleasing and imposing effect, when viewed from the water. It was here, one evening, I requested the boatmen to land me, as I was returning from the excursions of the day.

There are seasons in the life of almost every man, when he needs not the formality of an introduction to a stranger to enable him to commence an acquaintance. The mind is in such a state of buoyancy and good feeling, that we feel every stranger whom we meet to be an acquaintance, and every human being our brother. Such were my feelings, as I walked leisurely towards an elderly and venerable looking man, who sat beside his humble dwelling, enjoying the calm pleasures of the evening. After the usual salutation of strangers, he invited me to take a seat outside him. I soon found that I had introduced myself to a plain, open-hearted, but poor man, upon whose head probably sixty winters had shed their snows. His countenance was intelligent, though there was an expression of sorrow upon it. He seemed to possess an intellect endowed with good sense, of a sober, meditative cast. He portrayed in lively colours the beauties of the scenery around him, which showed that he had not yet become insensible to the charms of nature by the lapse of years. He adverted also to the fast approaching hour when he should no longer be animated by these scenes. "Stranger," said he, with seriousness and emphasis, "see you that setting sun? Though it may set to-night in darkness, yet it will rise again to-morrow, and rise perhaps in far brighter glory. But soon my sun will set to rise no more." It may rise, said I, in eternity. The poor pensioner, for such I learned he was, was silent; and I could see the tear standing in his eye, as with a worthy hospitality he invited me into his cottage to remain for the night. I could not accept the invitation, but promised to call on the following morning. I then took my leave of him; and as we glided swiftly down the lake, aided by a stiff breeze, I could not help revolving in my mind the adventures of the evening. Early in the following morning, I left my lodgings for the pensioner's cottage. The aged man was waiting to receive me, and did receive me with all the cordiality of

an old acquaintance. I found in the cottage of this poor but worthy man, all that neatness and industry could do to make him comfortable and happy; for at best his health was but poor, and he appeared to be sinking to the grave under the accumulated weight of infirmity and years. Though he seemed to possess an imagination which could soar above the mountains which surrounded him, and visit the busy abodes of man beyond them; yet he appeared like one insulated, and shut out from the bustle and perplexities of the world, and, with few regrets, could have parted with it for ever. There was, however, the love of one tender object which attached him to life. Nothing could exceed the filial affection of his lovely daughter, over whom the fond father had doated for seventeen years. Her mother had died in her infancy, and to the bereaved father had been left the sole care and superintendence of the education of his infant child. His other children had been snatched away, one after another; and it was not a wonder that the affections of the mourning father had taken such firm hold of his daughter, since she was all that now remained of a once numerous family. The war-worn veteran gave me a minute history of his life. He related his most interesting adventures in the Revolutionary struggle. He had been advanced to a station of some honour and trust in the American army, was placed near the body of his general, and had served in many daring and hazardous enterprises. He had cultivated the fields of this little glen, while he had been able to labour, and from them he had gleaned a scanty though comfortable support. In one corner of his little farm, he pointed out the graves of his wife and children. "My sweet Jane," said the old man with tears, "is the very image of her mother, whom I laid here almost seventeen years ago. She has the same temper, and manifests the same assiduity to make me happy. She knows little of the mother she has lost; though often, as she has sat on my knee in her childhood, has she wept when I told her the story of her mother. I used often to tell her of the virtues of her of whom both she and myself were bereft, that I might, if possible, form her mind upon the same model; for it was that very mother who taught *me*, that to be conversant with virtue is, in a measure, to become virtuous ourselves." And was your daughter always assiduous to promote your welfare as now? "No, she was not always so. Though she possessed an amiable temper, yet she used sometimes to manifest the waywardness of youth. Never shall I forget the prayers of my poor dying wife, that her infant child might be spared in mercy to its father, and be to me all that she would have been had her life been prolonged. Never shall I forget her last petition for her little offspring, as she pressed it to her expiring bosom for the last time, and then holding it in her feeble

arms, she said, 'Blessed Saviour! I beseech thee to be the God of my child, as thou hast been my God—to sanctify its heart as I hope thou hast sanctified mine. I know thou art able to save it. I dedicate my child to thee. I leave it in thy arms. Thou wilt not suffer it to perish from thy own arms. Thou wilt remember thy ancient covenant and promise. I give my child to thee. Blessed Saviour! accept my humble offering.'—Her voice failed. These were her last words;—she soon expired. Oh! Mr. E., you know not how good a woman my wife was. I have often heard her in the thicket, just by us, or yonder, where once stood a little hovel, earnestly engaged in prayer for me. If any are Christians, I have no doubt she was one. And my beloved Jane was not so like her mother as she is now, till two years ago, when a missionary called here two or three times, and gave her that little Bible you saw standing upon her shelf. For a time I wished my daughter had never seen the missionary, she was so unhappy. She could do nothing but read her Bible, and weep. But after a time her mourning was turned to joy, and she has been ever since beseeching me to be a Christian. She is just what her mother used to be, and often have I heard her praying for me, in the same manner and place as her mother used to pray. I was once a disbeliever in the Christian religion—thought it all to be the device of man; and, for a long time after I married my wife, I thought she was a visionary, under the influence of a heated imagination. But upon a candid and impartial examination of her feelings and conduct, I was fully convinced that they sprang from pure and steady principles, of which I had no experience. To witness, as I do daily, how religion influences all the conduct of my Jane, and makes her happy under all circumstances, serves to make me believe how blissful is the lot of those who possess it." He drew a deep sigh, and would have proceeded; for I perceived he was interested in the subject. But the approach of a boat to the shore drew our attention, and we walked forward to meet it. It conveyed a small party of young people, who had called to pay their compliments to the pensioner and his daughter. As the day was far spent, I took my leave of the whole party, not without leaving a promise that I would call frequently. I had become but little acquainted with that lovely daughter on whom the old man leaned for support. There was something so retiring about her, and yet so winning; so simple, and yet so elegant; so humble, and yet so exalted, that I could not but admire a character made up of such contrasted qualities. I had learned enough to know that she was intelligent without ostentation, and modest without awkwardness. There was something in the character of the old man which I did not understand. He was frank and generous, but he seemed not to admit me to the deepest

feelings of his bosom. He was cheerful, but he was not happy. Something seemed to lie with weight upon his mind.

With almost the dawn of the first fair day, I betook myself to my boat, intending to take the cottagers by surprise, and sit down with them to their cheerful breakfast. The sun had risen, and was beginning to pour down his cheerful beams along the ravine, between the high mountains, when I arrived at the glen. All was still, except the far-off whistling watermen, who were urging their boats in various directions over the clear blue lake; and I saw no living creature around the cottage, except the large Newfoundland mastiff, which lay by the door. As I approached the dwelling I thought I heard a voice. It was the clear sweet voice of the daughter, reading the parable of the Prodigal Son. I approached nearer. She read with an emphatic but tremulous tone of voice, "I will arise and go to my father; and will say to him, Father, I have sinned against Heaven, and before thee, and am no more worthy to be called thy son; make me as one of thy hired servants." At this moment I heard a sobbing, and the old man burst into tears. In a few minutes all was hushed. "Father," said the daughter, beseechingly, "God will receive you if you go to him as the prodigal went to his father." "Kneel down beside me, my dear Jane," said the pensioner. "Oh! Thou, who didst cause light to shine out of darkness, shine into my benighted soul. Thou who didst receive the repenting, returning prodigal, receive me, who am worse than the prodigal." After a pause—"It will not do—I cannot—Oh, Jane pray for me." Jane did pray for him; and I could not but weep as I listened to her earnest supplications for her poor father, and joined my prayers with hers for his relief. She soon ceased, and I would have retreated. But I could not go; for now was explained what had been so mysterious, and I desired to learn what I had failed to learn before, and if possible to administer relief. The old man opened the door, and seemed surprised at seeing me; but such was his salutation that I knew I was not unwelcome. He was aware that I was acquainted with his situation, and did not endeavour to conceal it. I stepped forward and took from the shelf a neat little Bible, which seemed to have been preserved with care though much used. The eyes of the daughter, which lately had been suffused with tears, now beamed with joy and hope. I opened at the fifty-first Psalm, and read it. I commented upon the nature, necessity, and reasonableness of true repentance. I endeavoured to show that repentance would be acceptable to God, through the sacrifice and mediation of Jesus Christ. The old man was moved, and the countenance of his daughter brightened with joy as she said, "Father, I know repentance to be a happy feeling." The interest this little family manifested in my welfare was

much increased by this morning's visit. I had been revealed to them in a new character, and they regarded me not only as a friend, but also as a Christian. I learned from the daughter the history of her father's feelings for several months past. It was more than six months since he began to look forward, with seriousness, to a future world; and for many weeks he had been in much the same state of mind as that in which I now saw him. In my further intercourse with him that day, I was convinced that he was anxious to secure the better portion; but he was selfish. He was deeply convinced of sin, yet he would not repent. His anxiety was not produced by fear but by conviction.

For several successive days I was a constant visitor at the cottage. I endeavoured to instruct him; but all was to no purpose. Indeed it was not necessary. He was well instructed in his duty. But there seemed to be an unyielding obduracy in his heart which endeavoured to reject every offer of mercy. His obstinacy was not so open and tumultuous as steady and persevering. He knew it to be wrong, but he would not overcome it. The principles of a depraved heart were in vigorous and successful exercise.

One evening, as I was returning from the excursions of the day, I thought I would run my boat into the cove by the pensioner's dwelling. A heavy cloud was hovering in the west, which seemed to presage a storm; and, as I was alone, I scarcely dared to attempt the voyage homeward. On going on shore I found the old man; but his daughter had gone. I was told she had been sent for by a sick friend, whom she had been accustomed to visit. It was about sunset when we walked down to the beach, to look out for the boat which should bring home the sole comfort of her anxious father. "I do not much like that dark cloud yonder," said the old man, as we stood upon the shore. "Though my sweet Jane has never slept from under the paternal roof, I hope she will not attempt to return to-night." The shadows of evening were fast falling. As we could descry nothing of the daughter, we returned to the cottage. It was not long before the portending storm came on with great violence, and the waters were swept by one of those terrible gusts with which Lake George is sometimes visited. The heaving and white foaming billows of the lake made a gloomy contrast with the surrounding darkness. A deep dusk hung over the face of things, and we could discern only enough to see the havoc which the storm was making abroad. As we sat silently by the window, looking out upon this scene, we thought we heard cries of distress. In a moment we were upon the beach, but it was so dark that we could distinguish objects only at a little distance. All was again hushed, except the troubled billows and howling blast, and we stood listening in breathless silence. Again we heard a cry. It

was the last. The old pensioner's heart died within him, for he knew it was the voice of his daughter. The sound seemed to proceed from some one not far from the shore. At this moment the mastiff, which stood beside us, plunged into the waves. He was gone a long time, but at length returned, dragging by his mouth the drowned girl. We made every effort to resuscitate the lifeless body, but all was unavailing. The soul had left its earthly tenement, and flown to another and heavenly world. We carried the body of poor Jane into the cottage, and laid it on the humble couch it had so often occupied. The poor old man seemed alive to all those heart-rending pangs which his forlorn condition now made him realise. His feelings were the feelings of despair. He sat down by the bedside of her who lately was so lovely—hid his face in both his hands, and burst into a flood of tears. I would have soothed him, but I knew I could not. After the first paroxysms of agony and grief had subsided, by degrees he grew more calm. But I thought his calmness was incapacity to endure such poignant grief, and that he was exhausted by the tempest of his feelings. I could see by his countenance that there was not peace within. The cottage was still as the mansion of death. While the bereaved father sat, intently viewing the inanimate features of his child, the last ray of hope seemed to expire, and there was no longer a tie to bind him to earth. That night was dreadful to us both. The storm was raging fearfully without, while all was hushed like the silence of the tomb within. The old pensioner was the first to interrupt the stillness. "I did not think that the flower, which bloomed so sweetly in the morning, would be so withered and dead at night. Oh! Jane, Jane! it is hard to part with thee—for ever too!—in one short hour torn from my aged arms!" His feelings were too big for utterance, and his voice faltered. But he struggled hard for self-possession, and soon resumed: "I was always poor—but never so poor as now. Oh! Jane, how fondly have I nourished thee! Seventeen years thou hast been my sole companion! How kind wast thou to me, my daughter! Thou art gone. Shall I never more hear from thee the fervent prayer for thy poor father—never more hear thy kind entreaty to be reconciled to God? Ah, never! Oh! that I might be what thou wast, when thou left thy father's dwelling! But there is no hope for me." Here the old man again burst into tears. After a short pause,—“Yes, I have one resource: I *will* arise, I *will* go to my Father, and will say, Father, I have sinned against Heaven, and before thee, and am not worthy to be called thine. Oh! Saviour of sinners! let me come to thee—let me call thee my Father! I have no friend but thee. I have abused thee—abused thy mercy—I am the chief of sinners! Oh! gracious Saviour, I come to thee, ashamed and guilty. If I

perish, I will perish at thy feet. Here, Lord, I am—do with me as seemeth good to thee.”—The pensioner ceased—his heart was melted within him. The thoughts of the dead no longer occupied his mind. There was a glow of fervour upon his countenance. His soul seemed to be elevated above this world, holding communion with its God. We were both silent; but I trust we both prayed. I cannot tell all that happened on that night. It is sufficient to say that we spent the night in prayer by the bedside of Jane. The murmuring spirit of the father seemed to be hushed into meek submission. He could kiss the hand by which he was smitten, and thank his heavenly Father for the chastisement. There was a pleasing serenity upon his countenance, even in the chamber of death, which seemed to say, “*All is well.*”

With the early light of the next morning, I went out to visit the neighbouring settlement, to invite the attendance of two or three female friends, to perform their last offices of kindness for the deceased, and to make the other necessary arrangements for her funeral. As I walked along towards my boat, I observed a little skiff stranded upon the beach. It was the same which conveyed Jane so near the paternal dwelling the preceding evening. This circumstance, and a hat, which lay at a little distance, told me that Jane Mandeville was not the only person who had been the victim of a watery death. The melancholy tidings of the catastrophe of the preceding evening were soon spread wide, and deep was the feeling excited in every breast along the shores of Lake George. The next day was the Sabbath; and there was sadness upon the countenances of those who convened at the glen. The mourners were not relatives; for old Mandeville had none remaining. But they had known Jane in her childhood—had known her in her riper years; and many were the tears which were shed that day upon her coffin. The missionary who called at the glen two years before, stood among the mourners. He had heard of Jane's death at the settlement, and hastened to pay his last tribute of respect to the deceased, and to comfort the bereaved father in his affliction. But there was no need; for he felt a consolation in his bosom of more value than worlds,—a consolation which nothing on earth could have imparted. As the funeral procession moved slowly towards the burial-place of the old pensioner's family, there was a deep and thoughtful silence throughout the little concourse. The bearers placed the coffin beside the grave. The missionary uncovered his head, and addressed a few words to the assembly. They were tender and appropriate, and flowed from a feeling heart. The coffin was lowered into its narrow cell. I looked upon the old pensioner. A tear was standing in his eye, but there was peace and tranquillity in his bosom. He advanced to the head of the grave, and, after

looking into it, he looked round affectionately upon the assembly, and said, "My friends, there is sorrow in my heart, but it is not a sorrow without hope. I think I can thank the great Shepherd that he has taken this lamb from me; for, before, I was a lost and wandering sheep, and would not hear the voice of the Shepherd, calling me to his fold. I was a prodigal, perishing with hunger, and would not return to my Father, who had bread enough, and to spare. I shall soon see my dear Jane again. She will not always sleep here. The trump of the archangel will reach the bottom of this grave. This narrow house will soon be the resting-place of us all. I feel and am assured that I must soon lay these limbs beside hers. Let us be like her, and I trust we shall meet in heaven." The missionary invoked the blessing of God upon the assembly, and they silently dispersed to their boats.

For a few days I was a constant resident at the glen, and had the satisfaction of witnessing daily in the old pensioner an increasing and fervent piety. He was now happy, rejoicing in hope. We conversed; we joined our prayers and praises at the throne of grace; and precious were the seasons which I spent in his cottage. He sometimes wept at the grave of his beloved daughter. But there was joy even in his grief. The Bible of Jane was now his constant companion, and much was he consoled and animated by its promises. The day at length arrived when I must take my final leave of the scenes of Lake George. The morning was fine, and we spent an hour in walking about the glen. We conversed—we prayed. It was the last time we were

to be together on this side of the grave. I had endeavoured, as far as possible, to ascertain the true character of his views and feelings, and was satisfied that he had commenced a new and happy existence, which would only bloom here, and would ripen in eternity. He accompanied me to the boat. As we were about to part, I expressed my apprehension that he would be lonely. "I am not alone," said he; "and though to go and be with Christ would be far better, yet all the days of my appointed time will I wait till my change come. I hope to meet you in heaven. Farewell." Farewell, said I, and he returned to the cottage. The dwelling of the pensioner, and the little glen, soon vanished from my view.

A few months since I had occasion to visit Lake George. I called at the glen. The cottage of the old pensioner was there, but it was without an inhabitant. I visited the garden, and Jane was lying between her parents. On inquiring at the neighbouring settlement, I was told that the old man had died a few weeks previously. I learned, with great satisfaction, that he had lived in such a manner as to carry conviction to the minds of all, that the grace of God had been performing in his heart its perfect work. He had spent his time, from the period at which I took leave of him, in pious devotion to his Saviour, and died in the triumphs of faith and the hope of a blessed immortality. "Blessed are the dead who die in the Lord: Yea, saith the spirit; for they rest from their labours, and their works do follow them."—*American Christian Spectator*.

BRITAIN.

CHAPTER V.

Religion. Tertullian, Eusebius, Theodoret, and Gildas, all intimate that Christianity was brought to Britain about the middle of the first century; which is probable from the fact that it was very prevalent at Rome, between which and Britain there was a frequent intercourse of soldiers, prisoners, merchants, women, and slaves. Pomponia Grecina, the Christian wife of Aulus Plautius, who was governor here, might introduce it between A.D. 43 and A.D. 47; and many think the Claudia mentioned by Paul, 2 Tim. iv. 21, was the same that is lauded by Martial in his fourth and eleventh epigrams for her virtue and charms. Many of the learned have iterated that James the apostle was the first to preach Christianity here, which is not only without proof but doubtful, for he was killed by Herod A.D. 44. See Acts xii. Others have nominated Simon Zelotes for this honour; while the magniloquent Baronius and Metaphrastes say it was Peter, which is equally without proof. Other conjecturists, among whom are Jerome, Clemens,

Romanus, and Theodoret, affirm, with more probability, that it was Paul, of whose life, from A.D. 58 to A.D. 67, there is no very precise account, and which may have been partly spent in Britain.

It is more certain that, in the days of that fiddler and fiend Nero, many of the Christians fled to Britain to escape his rabid ire, and spread the flame which he scattered them to extinguish. Other claimants to the honour of having first preached the Gospel in Britain would be too much noticed by disproof. Why should it be thought necessary to decide? Do we want a national saint?

A.D. 286—303. In the time of Dioclesian the first British persecution began, and, according to Gildas, continued two years. St. Alban, an inhabitant of Verulamium, was the first martyr. Aaron and Julius, of Euerlem, and many hundreds besides, perished. This persecution was terminated by Constantius, the father of Constantine, who was at York when he was

chosen emperor. His son Constantine favoured the Christians, and, according to some, stained, but according to others, perfected the glory of the church. Of the government of the British churches little is really known, or of their wealth and numbers, unless they are adumbrated from the fact that at the council of Arles five English clergymen were present,—Restilus, bishop of London, Eborus, bishop of York, Adelfus, bishop of Lincoln, and, of the same city, Sacerdos, a presbyter, and Arminius, a deacon. Constantine gave the Christian teachers exemption from military and civic offices, the goods of all those who had been recently martyred, and died without relatives, power to receive bequests in favour of the Christian religion, and, in 359, he offered to maintain all the bishops of the western empire, *which was peremptorily refused by all except the three from Britain.* The British churches were little infected by the Arian heresy, as it appears that Athanasius, Jerome, and Chrysostom lauded their orthodoxy. Constantine, who for his favours to the church received great powers from its inconsiderate teachers, is said, by the profoundest ecclesiastical scholars, to have arrived at a government in the church the counterpart of that in the empire; and Dr. Henry says, "new ecclesiastical dignities, as patriarchs, metropolitans, and archbishops, were established in the church, to correspond with the *præfecti, pretorii, vicarii, et presides provinciarum* in the state;" but of this let every reader judge. It seems, however, to be agreed, that the bishop of Rome had then no power over the English churches, which preserved their simple purity longer than their wealthy and more refined neighbours. Yet they were not perfect, for they were especially addicted to the follies of pilgrimages to see the Holy Land, and the spiritual antic, Simon Stylites, who, as a proof of his elevation of mind, lived in Syria fifty-six years on a pillar. Christians then began to form themselves into societies, and were called "monks;" of which, at Banchor Monachorum, there was at this time a settlement; from the simplicity of which they have grown into as erudite, superstitious, wealthy, and intriguing bodies as ever existed. Pelagius and Agricola, who were natives of Britain, broached new opinions of Adam's sin, of its results upon others, of the present consequent state of human nature, and of the extent of necessary Divine aid, which, defended with learning, apparent acuteness, and a real fervour, and addressed to minds disposed to receive new opinions, were extensively adopted. To refute these sentiments, the English churches, probably defective in learning, invited Lupus of Troyes, Severus of Treves, and Germanus of Auxerre, who, having weathered a natural sea-storm, defeated Pelagius at St. Albans, and founded schools for the benefit of the Christian teachers, returned; but not before Germanus,

heading a party of Britons, had routed some piratical Picts and Saxons, by the iterated shout of "Hallelujah!" in the neighbourhood of some hills, which, reverberating this singular war-whoop, drove the invaders into a river, and originated a conquest which was called "the hallelujah victory." Germanus is said to have brought with him many relics, which he deposited in the tomb of St. Alban, and thus to have inoculated our simple forefathers with that fatal error which was, in a malign sense, their *luxa infer minores*. After he had left, however, the Pelagians revived. Germanus returned, argued eloquently, and—if we can believe it—wrought miracles, and raised a successful persecution against his stubborn antagonists; after whose banishment, the churches had rest till the times of the Saxons.

Such is an outline of the history of the British church under the Romans; at whose departure the profession of Christianity was general, and continued until destroyed by the Saxons.

Roman Antiquities in Britain. Among the proofs of the Roman ascendancy in this island, are the yet extant antiquities, from which a splendid register has been constructed, to illustrate the otherwise dark parts of this period.

Coins in great abundance and varieties, (of which see the plates in Camden,) baths, pavements, walls, inscriptions, pedestals, vaults, urns, foundations of ancient cities and temples, armour and weapons of war, implements of trade and agriculture, fortifications and embankments, have been all discovered by diligent antiquarians, and mostly in the neighbourhood of Roman stations or towns. To which may be added, skeletons of elephants, war horses, soldiers in armour, and various articles of domestic life.

None of the Roman antiquities, however, are so remarkable as the three walls successively built across the island between England and Scotland, whose barbarous Meets, though often dreadfully chastised, especially under Galgacus, by Agricola, were always the indomitable horns of the Romano-British government. The first of these walls was built by Hadrian, of turf, from Solway Frith to the Tyne, a space of more than sixty miles; its height was twelve feet, defended by a ditch eleven feet wide and nine deep, which, however, was found but a miserable defence against the iron souls of the Caledonians. Antoninus Pius raised the second, which was only forty miles in length, twelve feet thick, built also of turf, but based and lined with stone, flanked by a ditch ten or twelve feet wide, and mounted by eighteen towers, which were a little more than two miles apart, of easy communication with each other, and contained a great number of soldiers, under the best commanders. This wall was built by the second legion, the vexillations of the sixth and twentieth, and one cohort of auxiliaries, making a body of workmen of about seven or eight thousand.

But the most remarkable of these barriers was the wall of Severus, built a little to the north of that of Hadrian, of solid stone, and sixty-eight English miles in length, twelve feet high, besides the coping, and eight feet wide, mounted with three hundred turrets, each twelve feet square, with eighty-one castles, sixty-six feet square, and eighteen stations, each of which could accommodate six hundred men; and to make the communication with all its parts certain and speedy, it was inlaid with iron tubes, and faced by a broad and perfect military way, along which any of the troops could be instantly removed, at all periods of the year.

This prodigious labour, whose ruins are extant, is equalled by nothing in history but the

great Chinese wall; and it is not the least wonderful that it should have been raised under such a man as Severus, who is said to have fought seven hundred times as a gladiator. It kept off the Caledonians for two hundred years, is thought to have been built by the second and the sixth legions, and to have had stationed upon it, and at its base—the business and affairs of which were like those of so many towns—ten thousand well-disciplined soldiers. In the best state of Romano-Britain, many computations have been made, which seem to justify the opinion that there were not less than three millions of inhabitants, inclusive of the natives. It is not according to the method of our history to be tedious.

BAZAARS OF CONSTANTINOPLE.

(From "*Willis's Pencillings by the Way; or, Sketches by an American.*")

Being all the shops in New York, Philadelphia, and Boston together round the City Hall; remove their fronts, pile up all their goods on shelves facing the street; cover the whole with a roof, and metamorphose your trim clerks into bearded, turbaned, and solemn old Mussulmen, smooth Jews, and calpacked and rosy Armenians, and you will have something like the grand bazaar of Constantinople. Yet you can scarcely get an idea of it without having been there. It is a city under cover. You walk all day, and day after day, from one street to another, winding and turning, and trudging up hill and down, and never go out of doors. The roof is as high as those of our three-story houses, and the dim light so favourable to shopkeepers comes struggling down through skylights never cleaned except by the rains of heaven.

Strolling through the bazaar is an endless amusement. It is slow work, for the streets are as crowded as a church-aisle after service; and, pushed aside one moment by a bevy of Turkish ladies, shuffling along in their yellow slippers, muffled to the eyes; the next by a fat slave carrying a child; again, by a *kervas* armed to the teeth, and clearing the way for some coming dignitary, you find your only policy is to draw in your elbows, and suffer the motley crowd to shove you about at their pleasure.

Each shop in this world of traffic may be two yards wide. The owner sits cross-legged on the broad counter below, the height of a chair from the ground, and hands you all you want without stirring from his seat. One broad bench or counter runs the length of the street, and the different shops are only divided by the slight partition of the shelves. The purchaser seats himself on the counter, to be out of the way of the crowd, and the shopman spreads out his goods on his knees, never condescending to

open his lips except to tell you the price. If he exclaims "*bono*," or "*kalo*," (the only word a real Turk ever knows of another language,) he is stared at by his neighbours, as a man would be in Broadway who should break out with an Italian *bravura*. Ten to one, while you are examining his goods, the bearded trader creeps through the hole leading to his kennel of a dormitory in the rear, washes himself, and returns to his counter, where, spreading his sacred carpet in the direction of Mecca, he goes through his prayers and prostrations, perfectly unconscious of your presence, or that of the passing crowd. No vocation interferes with his religious duty. Five times a-day, if he were running from the plague, the Mussulman would find time for prayers.

The Frank purchaser attracts a great deal of curiosity. As he points to an embroidered handkerchief or a rich shawl, or a pair of gold-worked slippers, Turkish ladies of the first rank, gathering their *yashmaks*, or veils, over their faces, stop close to his side, not minding if they push him a little to get nearer the desired article. Feeling not the least timidity, except for their faces, these true children of Eve examine the goods in barter, watch the stranger's countenance, and if he takes off his glove, or pulls out his purse, take it up and look at it, without ever saying "by your leave." Their curiosity often extends to your dress, and they put out their little henna-stained fingers and pass them over the sleeve of your coat with a gurgling expression of admiration at its fineness; or if you have rings, or a watch-guard, they lift your hand or pull out your watch with no kind of scruple. I have met with several instances of this in the course of my rambles; but a day or two ago I found myself rather more than usual a subject of curiosity. I was alone in the street of embroidered hand-

kerchiefs, (every minute article has its peculiar bazaar,) and, wishing to look at some of uncommon beauty, I called one of the many Jews always near a stranger to turn a penny by interpreting for him, and was soon up to the elbows in goods that would tempt a female angel out of Paradise. As I was selecting one for a purchase, a woman plumped down upon the seat beside me, and fixed her great, black, unwinking eyes upon my face, while an Abyssinian slave and a white woman, both apparently her dependants, stood respectfully at her back. A small turquoise ring (the favourite colour in Turkey) first attracted her attention. She took up my hand, and turned it over in her soft, fat fingers, and dropped it again without saying a word. I looked at my interpreter, but he seemed to think it nothing extraordinary, and I went on with my bargain. Presently my fine-eyed friend pulled me by the sleeve, and, as I leaned towards her, rubbed her forefinger very quickly over my cheek, looking at me intently all the while. I was a little disturbed by the lady's familiarity, and asked my Jew what she wanted. I found that my rubicund complexion was something uncommon among these dark-skinned Orientals, and she wished to satisfy herself that I was not painted! My Constantinople friends inform me that such liberties are not at all particular.

In the centre of the bazaar is situated what is called the *bezestein*. You descend into it from four directions by massive gates, which are shut, and all persons excluded, except between seven and twelve of the forenoon. This is the core of Constantinople—the soul and citadel of orientalism. It is devoted to the sale of arms and to costly articles only. The roof is loftier and the light more dim than in the outer bazaars, and the merchants who occupy its stalls are old and of established credit. Here are subjects for the pencil! If you can take your eye from those Damascus sabres, with their jewelled hilts and costly scabbards, or from those gemmed daggers, and guns inlaid in silver and gold, cast a glance along that dim avenue, and see what a range there is of glorious old grey-beards, with their snowy turbans! These are the Turks of the old *régime*, before Sultan Mahmoud disfigured himself with a coat like a “dog of a Christian,” and broke in upon the customs of the Orient. These are your opium-eaters, who smoke even in their sleep, and would not touch wine if it were handed them by houris! These are your fatalists, who would scarce take the trouble to get out of the way of a lion, and who are as certain of the miracle of Mohamet's coffin as of the length of the pipe, or of the quality of the tobacco of Shiraz!

I have spent many an hour in the *bezestein*, steeping my fancy in its rich orientalism, and sometimes trying to make a purchase for myself or others. It is curious to see with what perfect

indifference these old cross-legs attend to the wishes of a Christian. I was idling round one day with an English traveller whom I had known in Italy, when a Persian robe of singular beauty, hanging on one of the stalls, arrested my companion's attention. He had with him his Turkish dragoman; and as the old merchant was smoking away and looking right at us, we pointed to the dress over his head, and the interpreter asked to see it. The Mussulman smoked calmly on, taking no more notice of us than of the white clouds curling through his beard. He might have sat for Michael Angelo's Moses. Thin, pale, calm, and of a statue-like repose of countenance and posture, with a large old-fashioned turban, and a curling beard half mingled with grey, his neck bare, and his fine bust enveloped in the flowing and bright-coloured drapery of the East, I had never seen a more majestic figure. He evidently did not wish to have any thing to do with us. At last I took out my snuff-box, and addressing him with “*Effendi!*” the Turkish title of courtesy, laid my hand on my breast, and offered him a pinch. Tobacco in this unaccustomed shape is a luxury here; and the amber mouthpiece emerged from his moustache, and putting his three fingers into my box, he said, “*Pekkhe!*” the Turkish ejaculation of approval. He then made room for us on his carpet, and, with a cloth measure, took the robe from its nail, and spread it before us. My friend bought it unhesitatingly, for a dressing-gown, and we spent an hour in looking at shawls, of prices perfectly startling, arms, chalices for incense, spotless amber for pipes, pearls, bracelets of the time of Sultan Selim, and an endless variety of things rich and rare. The closing of the *bezestein* gates interrupted our agreeable employment, and our old friend gave us the parting salaam very cordially for a Turk. I have been there frequently since, and never pass without offering my snuff-box, and taking a whiff or two from his pipe, which I cannot refuse, though it is not out of his mouth, except when offered to a friend, from sunrise to midnight.

Wishing to buy a piece of Brusa silk for a dressing-gown, my friend conducted me to a secluded khan. Entering by a very mean door, closed within by a curtain, we stood on fine Indian mats, in a large room piled to the ceiling with silks, enveloped in the soft satin paper of the East. Here again coffee must be handed round before a single fold of the old Armenian's wares could see the light; and fortunate it is, since one may not courteously refuse it, that Turkish coffee is very delicious, and served in acorn cups for size. A handsome boy took away the little flagree holders at last, and the old trader, setting his huge calpack firmly on his shaven head, began to reach down his costly wares. I had never seen such an array. The floor was soon like a shivered rainbow, almost

paining the eye with the brilliancy and variety of beautiful fabrics. There were stuffs of gold for a queen's wardrobe; there were gauzelike fabrics, inwoven with flowers of silver; and there was no leaf in botany, nor device in antiquity, that was not imitated in their rich borderings. I laid my hand on a plain pattern of blue and silver, and half shutting my eyes to imagine how I should look in it, resolved upon the degree of depletion which my purse could bear, and inquired the price. As "Green-door-and-brass-knocker" says of his charges in the farce, it was "ridiculously trifling." It is a cheap country the East. A beautiful Circassian slave for a hundred dollars, if you are a Turk; and an emperor's dressing-gown for three. The Armenian laid his hand on his breast, as if he had made a good sale of it; the coffee-bearer wanted but a sous, and that was charity; and thus, by a mere change of place, that which was but a gingerbread expenditure becomes a rich man's purchase.

We entered a street of confectioners. The East is famous for its sweetmeats, and truly a more tempting array never visited the Christmas dream of a schoolboy; even Felix, the *pâtisier nonpareil* of Paris, might take a lesson in jellies. And then for candy, of all colours of the rainbow,—not shut enviously in with pitiful glass-cases, but piled up to the ceiling in a shop all in the street, as it might be in Utopia, with nothing to pay,—it is like a scene in the Arabian Nights. The last part of the parenthesis is almost true, for with a small coin, of the value of two American cents, I bought, of a certain kind called in Turkish "peace to your throat," (they call things by such poetical names in the East,) the quarter of which I could not have eaten even in my best days of sugar candy. The women of Constantinople, I am told, almost live on confectionery; they eat incredible quantities. The sultan's eight hundred wives and women employ five hundred cooks, and consume two thousand five hundred pounds of sugar daily. It is probably the most expensive item of the seraglio kitchen.

One of the regular "lions" of Constantinople

is a *kibau* shop, or a Turkish *restaurant*. In a ramble with our consul, in search of the newly-discovered cistern of "a thousand and one columns," we found ourselves, at the hungry hour of twelve, opposite a famous shop near the slave-market. I was rather staggered at the first glance: a greasy fellow, with his shirt rolled to his shoulders, stood near the door, commending his shop to the world by slapping on the flank a whole mutton that hung beside him, while, as a customer came in, he dexterously whipped out a slice, had it cut in a twinkling into bits as large as a piece of chalk, (I have stopped five minutes in vain to find a better comparison,) strung upon a long iron skewer, and laid on the coals. My friend is an old Constantinopolitan, and had eaten *kibau*s before. He entered without hesitation; and the adroit butcher, giving his big trousers a fresh hitch, and tightening his girdle, made a new cut for his "narrow-legged" customer, and wished us a good appetite: (the Turks look with great contempt on our tight pantaloons, and distinguish us by this epithet.) We got up on the platform, crossed our legs under us as well as we could; and I cannot deny that the savoury missives that occasionally reached my nostrils bred a gradual reconciliation between my stomach and my eyes.

In some five minutes a tin platter was set between us, loaded with piping hot *kibau*s, sprinkled with salad, and mixed with bits of bread; our friend the cook, by way of making the amiable, stirring it up well with his fingers as he brought it along. It was very good eating, I soon found out, and my fingers once greased, (for you are indulged with neither knife, fork, nor skewer in Turkey,) I proved myself as good a trencherman as my friend.

The middle and lower classes of Constantinople live between these shops and the *cafés*. A dish of *kibau*s serves them for dinner, and they drink coffee—which they get for about half a cent a cup—from morning till night. We paid for our mess (which was more than any two men could eat at once, unless very hungry) twelve cents, or sixpence sterling.

DIFFERENT OPINIONS.

[Few works of late have excited more attention than "The Great Metropolis," by the author of "Random Recollections," who has brought to his task great industry, considerable literary tact, and a desire at once to instruct and amuse his readers. From his second series of "The Great Metropolis," we intend to extract some two or three passages which cannot fail to interest our readers. The first relates to the difficult circumstances in which a worthy bookseller was placed as to the publication of a fashionable novel. We could ourselves unfold not dissimilar tales, but for the present we hear our author.]

SOME years since, a gentleman well known in the fashionable and military world, and who

had in addition the magical appendage of an M.P. to his name, called on the bibliopole, and begged to introduce to him a young gentleman, his friend. After the usual civilities had been exchanged, the latter stated the object of his visit was to see whether he and the bibliopole could come to any arrangement regarding the publication of a work which he had almost ready. Knowing that the young gentleman belonged to a respectable family residing in St. James's Square, and hearing him warmly eulogised for

his literary taste by the gallant M.P. who introduced him, the bibliopole undertook the publication of the work, and to give 200*l.* to the author, without even seeing the manuscript. This was certainly an adventurous step on the part of the publisher, where the work was the author's maiden production. The author being in want of money, the bibliopole drew out a bill at once for the amount. In about a fortnight afterwards, the manuscript was sent to the publisher, and he handed it over to one of his literary men, with a request that he would read it carefully, and state his opinion of it; but without mentioning that he had already bought and paid for it. The gentleman called on the publisher some days afterwards, when the latter asked him whether he had read the manuscript.

"I have gone through the first volume,"* said the literary gentleman.

"And what do you think of it?" said the bibliopole, eagerly. "Favourably, I have no doubt."

"The greatest trash, without exception, I ever read," said the other.

The vender of literature turned pale. He was quite confounded, and a few minutes elapsed before he was able to utter a word. "You don't mean to say it's *so* very bad," he at length stuttered out.

"It is, I assure you, the most consummate nonsense that ever soiled paper," observed the literary man.

The bibliopole rubbed his hands in an agony of mortification.

"But perhaps, though deficient in literary merit, it may display a knowledge of high life, and consequently sell," he observed, after a momentary silence.

"A knowledge of high life!" exclaimed the other, making a wry face; "why, if we may judge from the style and sentiments of the work, the author knows no more about high life than if his occupation were to sweep crossings."†

The bibliopole thrust his hands into his small-clothes pockets, and made two or three hasty paces through the apartment.

"But you have not read the whole through: possibly if you finish the manuscript you may think better of it," said the patron of literature, as he loves to be considered.

"Read the whole through!" exclaimed the literary man, "why I would not wade through the other two volumes for fifty pounds. It is, you may depend upon it, the most unadulterated nonsense that ever emanated from the human mind."

The bibliopole looked at a heap of papers which lay on the table, scratched his head, and

then muttered out, "Well, bring me back the manuscript, if you please."

The literary man quitted the place, and the poor publisher was left to ruminate on the folly, as he now thought it, of buying a pig in a poke. He vowed in his own mind that he would never afterwards purchase any work of an unknown author, without first examining the manuscript. But what was to be done touching the 200*l.*? The loss of the money haunted him like a spectre. While reproaching himself as the greatest fool in Christendom, his other "literary man" chanced to drop in. A thought struck the bibliopole. "Good morning, Mr. Thompson."

"Good morning, sir," responded the other.

"A gentleman has promised to send me the manuscript of a fashionable novel. Will you set to work and read it carefully through as soon as you can, and let me know your opinion of it."

"Certainly," said Mr. Thompson.

"I expect it here every minute," said the vender of literature. "I will send it to your house the moment it comes, as I am quite impatient to know what you think of it."

"It shall have my immediate and best attention," remarked Mr. Thompson.

"The manuscript was forwarded to the latter, and carefully examined. His opinion of it was the very reverse of that of the other "literary man." He pronounced it the best work of fiction he had ever read, and assured the bibliopole he had been entranced by it, and that it would create a great sensation among the higher classes, with whose habits the author manifested a most intimate acquaintance.

The patron of literature was now thrown into a state of utter perplexity. "Who shall decide when doctors differ?" was a remark he had often heard before, but the full force of which he had never until now experienced in his own person.

To lose his 200*l.* was an evil of no ordinary magnitude; but it would be a less evil than the loss of 500*l.* or 600*l.* by printing and advertising a book which would not sell. If, therefore, both his "literary men" had concurred in condemning the work, he would have consented to the loss of his 200*l.*, on the principle of choosing the least of two evils. Here, however, their opinions as to the merits of the book were the very antipodes of each other. If the judgment of the first literary man were correct, the loss incurred by the publication would be enormous; if that of the other were sound, the bibliopole must make a little fortune by the work. To what decision, then, was the perplexed publisher to come? He waddled through the room, knit his brow, and heaved two or three broken sighs, as he thought of the dilemma in which he was placed. He had often experienced the sorrows of a publisher before; but here were sorrows of a new class, or, to use his own words, a "new series." He thought

* The work was a fashionable novel, in three volumes.

† In order that the judgment of these literary men may be unbiased, the publishers always conceal the name of the author of the manuscript.

with himself that if the unknown poet who begins his touching lines, "Pity the sorrows of a poor old man!" had been alive at the time, and been aware of his distressing perplexity, he would have made it—"Pity the sorrows of a bibliopole!" While in this pitiable state, an acquaintance of mine, who was in the confidence of the publisher, chanced to call on him. "O, Mr. Thomas, I'm so glad you're come!" he exclaimed, as the other entered his room.

"What's the matter!" said the latter.

"O, these two rascals of readers! (another of his terms,) what a couple of vagabonds they are!" he answered.

"What have they done?" inquired Mr. Thomas.

"Why the one pronounces a fashionable novel I have given him to read to be the most arrant trash ever penned, and says the author knows nothing of fashionable life; while the other represents the work as the best he ever read, and says the writer displays a most intimate acquaintance with the habits of the higher classes."

"Well, that is differing with a vengeance, certainly!" said Mr. Thomas.

"It is, indeed," observed the literary merchant; "and what am I to do between the two rogues?"

"Stop a moment," said Mr. Thomas, putting his hand to his head and looking thoughtfully. "Stop a moment! I think I know how you may

decide at once as to whose judgment is to be relied on."

"By what means can I decide the point?" said the bibliopole eagerly, his little countenance brightening up as he spoke.

"Of course you know the author?" said Mr. Thomas.

"O yes, certainly," replied the perplexed publisher.

"Then you must know whether he be a man accustomed to move in the higher circles of society: and as the one literary man affirms that he knows nothing of the manners of the upper classes, while the other says he evinces a most intimate acquaintance with fashionable life, the fair presumption is that the one who is right as to that point, is also right as to the literary merits of the work."

"Bless me! I never thought of that," said the publisher, overjoyed at the discovery of Mr. Thomas, and amazed at his own stupidity in not having made it himself.

The literary man who pronounced the work to be of transcendent merit, having been the party who expressed his conviction that the writer was in the habit of mixing with the upper classes of society, the bibliopole, of course, at once determined on publication. The work appeared; it made a great noise, and the author is now one of the most popular writers of the day.—pp, 227—236.

HAIR-BREADTH ESCAPES.

No. V.

THREE VIRGINIANS.

SINCE I last wrote to you I have explored several more of those limestone caverns with which the country abounds, one of which, indeed, is said to extend, like an enormous cellar, beneath the village of Abingdon, a flourishing county town about twenty miles from this place; but no cave that I have yet seen compares with the natural tunnel in Scott county. It is a vaulted passage-way of two hundred yards, through a mountainous ridge some five or six hundred feet high. The ridge lies like a connecting mound between two parallel hills, of about the same elevation as itself; and a brook that winds through the wooded gorge between these hills, appears to have worn its way through the limestone rib that binds the two together. The cavernous passage is nearly in the form of an 8. The entrance at the upper side is through a tangled swamp, where, in following down the stream, you come in front of a rude arch, whose great height, from the irregular face of the cliff being covered with vines and bushes, it is difficult to estimate, until you attempt to throw a stone to the top of the vault. The ceiling drops a few

yards from the entrance, till, at the point where, from the peculiar shape of the cavern, the shadows from either end meet in the midst, it is not more than twenty feet high. The vault then suddenly rises, and becomes loftier and more perfect in form as you emerge from the lower end. Finally it flares upward, so that the edges of the arch lose themselves in the projecting face of the cliff, which here rises from a gravelly soil to the height of four hundred feet, smooth as if chiselled by an artist, and naked as death. The width of the tunnel varies from fifty to one hundred and fifty feet, the small stream winding through its centre.

The sun was in the centre of the heavens as I stood beneath that stupendous arch, watching the swallows wheeling around the airy vault above me, and yet more than half the glen was in deep shadow. I had been told, whether jestingly or not, that the place was a favourite retreat for bears and panthers; and while following down the brook a few yards, I was somewhat startled, upon casting a glance into a recess in the rocky bank above me, to meet a pair of

bright eyes glaring from the bushes which sheltered the nook. But the sudden movement of drawing a pistol frightened the wild animal from its covert; and it proved to be only an opossum, that glided along the trunk of a fallen tree, and disappeared in the thickets above. I paused again and again, in retracing my steps through the sinuous vault, to admire its gloomy grandeur, and then mounted my horse, which was tethered in the swamp at its entrance.

My road led immediately over the tunnel, but the thick forest on either side precluded a view from the top of the precipice, unless by approaching its edge. This it was necessary to do on foot. The glen, thus viewed, presents the appearance of a mere fissure in the mountain side; but the chasm is so sudden and deep that the first glance is startling when your foot presses the edge, and your eye swims when it would pierce the shadowy gorge below. The tall sapling growths of buckeye and linden that spring within the dell, and lift their slender stems and sickly-coloured leaves so aspiringly, yet faintly, towards the light, sink into mere shrubs when viewed from this eminence, while the pines and oaks around you, which had appeared equally insignificant when viewed from below, seem now almost to interlace their branches over the gulf. A thrilling incident is said to have occurred here a few years since. There is a cavernous recess about midway in the face of the precipice, whose height, you will recollect, is estimated at more than three hundred feet; and some bold adventurer determined to be let down to explore this fissure. He easily found some of his acquaintance who consented to assist in the experiment; and, standing on the edge of the chasm, they began to lower him down by a rope attached to his body.

After descending some forty or fifty feet, our adventurer discovered that the side of the precipice shelved so much inwardly, that it was impossible for him to touch the wall even at so short a distance from the top. It was necessary, then, to provide some pointed instrument by which he could hold on to the face of the cliff as he descended. He was accordingly pulled up once more, and then, after providing himself with a "gig," or long fishing-spear, much used in the adjacent rivers, he started anew on his perilous voyage. The gig appeared to answer its purpose extremely well, though the task of thrusting it, from time to time, in the crevices of the rock, as the cord was gradually slackened from above, was both tiresome and exhausting. The point proposed was just attained, and the patient adventurer was about to reap the reward of his toil, and plant his foot in the fissure, when his companions shouted from above that their coil of rope had run out.

It was too provoking to be thus a second time disappointed, when his object seemed almost

within his grasp, and but a few more yards of cord would have enabled him to complete his purpose. He had given too much trouble, and encountered too much peril, now to abandon his design completely. Thus reasoned the bold cragsman, as, clinging like a bat to the wall, he hung midway between heaven and earth; and determining not to give up his point, he shouted to his comrades to splice a grapevine to the end of the rope. The substitute was easily procured, and being quickly attached, more line was at once payed out from above. He had now descended so far, that the shelving precipice projected far over his head, almost like the flat ceiling of a chamber; but still his fishing-spear enabled him to keep close to the face of the rock, and practice now taught him to handle it with dexterity and confidence. He was at last opposite to the cavernous opening he would explore, and, without waiting to measure its depth, he balanced himself against a jutting point of rock with one hand, while the other struck his javelin at a crevice in the sides of the deep recess before him. The spear fell short, the adventurer was at once detached from the face of the cliff to which he had been so carefully adhering, and the great angle at which the rope that sustained him had been now drawn, sent him swinging like a pendulum over the frightful gulf. The grapevine—so strong and secure as long as there was a perpendicular pull upon it—now cracked and split, as if its fibres could not bear the strain, while the weight at the end of it spun round in the air, and the frayed bark fell in strips upon the alarmed cragsman, as he watched it grate off upon the edge of the precipice above him. He maintained his self-possession, however, while his companions pulled carefully and steadily upon the fragile cable. He soon saw the knot at which the rope was tied to it in their hands, and a shout of triumph hailed his approach to the top, where he was at last safely landed, perfectly content, one may conceive, to forego all the pleasure that might have arisen from a more satisfactory examination of the recess, from which he had made so expeditious and involuntary an exit.

The hair-breadth escape of this cool climber of crags reminds me of one equally thrilling that I received from the lips of the hero of it, soon after entering these mountains.

I had heard of a remarkable saltpetre cave within a few miles of the inn where I was staying, at Cumberland Gap, and was anxious to explore it. There was an individual in the neighbourhood who was said to have worked in the cavern, in manufacturing saltpetre, at a time when there was a great demand for gunpowder, during the last war. This man I attempted to procure as a guide; but though he acted as a pioneer for me to several wild scenes, nothing could persuade him to take me to this. He at

length, with some emotion, assigned his reasons, which will better appear after I have given you the features of the place, as they were described to me.

The opening of the cavern is in West Virginia, on the side of the Cumberland Mountains, but one of its branches has been traced far into the adjacent state of Kentucky, and there are said to be several chambers of it in Tennessee. I have myself, indeed, in exploring one of its supposed passages, that opened two miles from the main embouchure, passed the dividing line of two of these states. The most direct of its branches has, in former years, been measured with a chain, to the extent of seven miles. The form of the cavern is as remarkable as its size, as, just far enough within the entrance to shroud it in darkness, there is a precipice of more than two hundred feet; (two hundred and sixty-two is said to be the measured depth;) and the only mode of advancing farther into the cave is by descending here, when you come to a flat surface, whereon your farther progress is unimpeded. The sides of the precipice are marked here and there by ledges of rock; and the persons employed in manufacturing saltpetre had, with considerable ingenuity, adjusted a chain of ladders from one ledge to another, so as to form, apparently, a continuous staircase down the perpendicular side of the cliff.

At the close of the war, twenty years ago, the cave became deserted. The population then was not dense around, and there being but little travelling along the nearest highway, the place was seldom mentioned, and never resorted to. It chanced one day, about six years since, that the man whom I wished now to guide me thither, passed the mouth of the cavern with a companion, in hunting; sitting down near it to refresh themselves, they began to recall their recollection of those who had worked in the cave in bygone years; and the period seemed so recent, that they thought it worth while to look

whether none of their implements then used were yet to be found in the pit, determining that any of the tools that might be left, after so long an interval, would be a fair prize for themselves.

Entering the cavern, they first, by the light of a pine torch, carefully examined the wooden ladders, which had now been for sixteen years exposed to the damps of the place: they had been made of cedar, and still appeared sound. The cautious hunters agreed that all was right, and both descended. They reached the bottom in safety, and, as expected, they found several neglected tools still remaining there; and selecting a pickaxe and a spade, they commenced their ascent upon the ladders. The first flight was soon accomplished, but their steps became slower as they got farther from the bottom; and as the implements which they carried could not be balanced upon the shoulders, each had but one hand upon the ladder, and, of course, as that became tired, each was compelled to move more and more carefully. Patience and steadiness, however, at last brought them near the summit; in fact, the upper round of the ladder was in view, when the foremost man taking hold of one more decayed than the rest, it broke in his grasp, and he fell backward with his whole weight upon the chest of his companion; the other reeled and staggered with the blow, but still kept his one-handed hold upon the ladder. The iron tools went clanging to the bottom. There was a moment of intense anxiety whether he could sustain his comrade, there was another of thrilling doubt whether his comrade could regain the ladder, and both were included in one mortal agony of fear and horror. But the falling man clutched the ladder instantly, and laying a frantic grip, with both hands, upon the sides, they gained the top at last together. "Stranger," concluded the man, while his voice faltered at the end of the tale, "we knelt to God at the mouth of that cave, and swore never to enter it more."—*A Winter in the Far West.*

THE GUITAR.

It is rather hard that, after commemorating every thing that squeaks, or squalls, or hums through the nose, no other mention should have been made of the descendant of the cithara of the ancients, the lute of our well-favoured ancestresses. A murrain on the man who hath no leaning towards gentle antiquity! If instruments were estimated by their effect, divided by their magnitude, the guitar, with its hundred tones, would hold considerable rank. But musicians love to come forth and call upon their gods; and think scorn to commune with an instrument that brings an orchestra to every man's hearth, for about the cost of an alderman's dinner. It is true, its scale is not absolutely the

purest, for it is that division of the octave into twelve equal intervals which was the subject of great expectation with musicians while it was thought difficult and rare. But this is of small import in an age which finds beauties in untunableness, and believes exact intonation would be an evil and a loss. Its intonation is, in some keys, inferior to the pianoforte's; but the pianoforte cannot warble, or articulate, or sigh, or wail, or tremble like the human voice under emotion, as the guitar; it cannot effect that oblivion of human ills which a philosopher said was produced on him by a moonlight night. It may be assumed that, in every instrument, the power of expression will be in proportion to

the immediateness of the contact between the sounding materials and the performer. Hence, of all wind instruments, the bagpipe is the least sentimental; and strings are fully conscious of the difference between being touched by a maiden's fingers and a stick. None but the lute can have the *vox humana* tones—the distinct soprano, mezzo, contralto, and tenor voices which reside about the middle of the thinner strings, and the miniature dragonetti that lurks within the thickest, interchangeable at will with the cumbrous alacrity of the bassoon. The forte of the lute kind is imitation; not of beasts, or birds, or things material, but of musical expressions,—the conjuring up of all recollections that hang by sounds, from a simple melody to the triumphant *orquesta* of the Spanish cadet, who forsook Ferdinand and a lieutenancy for love—of his guitar. Of all dulcet sounds none can surpass a duet of Huerta's on the middle of the second and third strings, emerging from a wilderness of notes, deficient, indeed, in noise, but giving the liveliest idea in miniature of an overture by a full band. It is Lord Byron's image for sweet things—"the voice of girls." Or the same frail machine can produce a *retraite* that would draw two souls out of one adjutant; an old soldier may positively see the little drumboy straddle, or stir his barrack fire and think upon the dew-drop pendant at the bugler's nose; varied on the harmonies with a *ran plan plan* worthy of

him who at midnight musters his spectre guard with the palpable flavour of parchment, as it would come from his marrowless knuckles across the ghastly heath. And then can come pipes, and reeds, and oaten stops, and distant choirs, priests chanting merrily, or mass, or requiem, or poor lost Italy, (curse on all traitors and *justes milieus* of the earth!) and fair romantic Spain, and floating forms, and dark mantillas, and castanets that turn the air to rhythm. All these cannot be had from a spinet; but they require some husbandry—a parlour twilight, or a turret lone, when gabbling boys are fast a-bed; and there is one peculiar tone, whatever be the cause, that is never brought out but in the small hours of the morning. Above all, these things are hid from simpletons who seek them in a crowded theatre, and then declare they nothing heard. They might as well line the stage with miniatures, and view them from the upper boxes. But he has missed the strangest effect of music who has not heard the "Carnival of Venice" in the long gallery that leads down to the tombs of the Pharaohs. Organs would have been pompous mockeries; but the small voice of the guitar said, "All flesh is grass," in a way there was no resisting: it was as if the *domus exilis* *Platonis* was piping the joys and cares that four thousand years have swept into eternity.—*Westminster Review*.

THE OAK.

WOODMAN, spare that tree!
Touch not a single bough!
In youth it sheltered me,
And I'll protect it now.
'Twas my forefather's hand
That placed it near his cot.
There, woodman, let it stand,
Thy axe shall harm it not!

That old familiar tree,
Whose glory and renown
Are spread o'er land and sea—
And would'st thou hack it down?
Woodman, forbear thy stroke!
Cut not its earth-bound ties;
Oh, spare that aged oak,
Now towering to the skies!

When but an idle boy
I sought its grateful shade;
In all their gushing joy
Here, too, my sisters played.
My mother kissed me here:
My father pressed my hand—
Forgive this foolish tear,
But let that old oak stand!

My heartstrings round thee cling,
Close as thy bark, old friend!
Here shall the wild bird sing,
And still thy branches bend.
Old tree! the storm shall brave!
And, woodman, leave the spot!
While I've a hand to save,
Thy axe shall harm it not. EPSON.

REVIEW.

THE REV. ROWLAND HILL.

ARTICLE II.

FOR several years prior to the erection of Surrey chapel, Mr. Hill was stigmatised by the enemies of religion as the most notorious itinerant preacher of his day. On the death of Whitefield, he took up the falling standard, and bore it manfully through the three kingdoms: thus making known, in every place, the Gospel of the grace of God.

"At the time Mr. Hill commenced his itinerant labours, he

had not only to endure the cruel persecutions of the world, but also the frowns of the cold orthodox party, who had strong objections to a man being righteous overmuch. His zeal exposed their criminal indolence. Though every where spoken against, he had grace to persevere. Stones were often thrown at him, and he was frequently pelted with rotten eggs and other filth. All these things he bore patiently, and, in the spirit of his Master, could pray for his vilest persecutors.—'Father, forgive them, for they know not what they do.'—(J. 1:7, 13:8.)

Some curious incidents relating to these itinerant excursions are recorded by Mr. Jones. We extract the following:—

"It was during one of his visits to Bristol, where his labours had been most useful, that Mr. Hill was actively engaged in preaching in the streets of the city. This course of labour of the devoted itinerant appears to have excited his father's displeasure, who sent his brother Richard to Bristol to admonish him. On reaching the city he heard that Rowland was to preach at Kingwood to the colliers, to which place he proceeded. There he heard Rowland most affectionately talking to the multitude about the Saviour's love, and witnessed the tears of penitence flowing down their cheeks. The preacher observing Richard in the crowd, told the people that he had no doubt his brother, Richard Hill, Esq., would speak to them on the following day, upon the great truths of the Gospel. Richard was taken by surprise; his Christian feelings overcame all other considerations, and, at the appointed time, he preached that Redeemer who humbled himself that he might gloriously exalt his people. This is the correct account of the tale, the scene of which has been frequently, though inaccurately, laid at Marchingly, a beautiful village adjoining the park at Hawkstone."—(pp. 143, 144.)

"Some years since, an aged lady called on Mr. Hill, and, in the course of conversation, inquired, 'Do you remember preaching at Wrexham, oh, about fifty years ago, in a field not far from Pen-y-Bryn?' 'O, yes, I remember the time very well.' Both the parties smiled, when the lady remarked, 'I see you remember the pig, sir.' 'Indeed I do, and never shall forget it.' After the aged couple had enjoyed a hearty laugh at the recollections of the past, the lady said, 'I was then very young, and was led by curiosity to hear you preach; and I hope the word then came with power to my soul.' Mr. Hill afterwards described the scene which had impressed the service on his mind. Near the spot where he preached there was a tenter-field, on which a fine kind of thread or yarn was exposed to the air. Several women were taking care of it. They observed a number of persons assembling together to hear a sermon, and were tempted to quit their employ for a short season. The gate of the field was left open, when several large pigs walked in. In a few moments the intruders got the iron pierced through their snouts entangled in the twine, and the more they shook, the more they found themselves imprisoned. The loud cries of the pigs alarmed the women, who soon found out the mischief which had been done. They ran to the spot, and a general pursuit took place. Mr. Hill, while preaching, observed several of the women falling upon the poor animals, turning them on their backs, and then endeavouring to disentangle their heads from the twine. This trifling event produced considerable amusement, and, for a time, interfered with the service."—(pp. 145-147.)

"Mr. Hill's first memorable tour in Scotland was commenced on the 15th of July, 1798. He was invited by James Haldane, Esq., to travel through the country, and preach to the people wherever he could find access to them. In an account of this tour, he calls his lay friend 'his much-respected brother and fellow-labourer in the Gospel of God our Saviour.' He tells him, 'You were educated for the maritime life; and, from a situation creditable and lucrative, commenced a peddling preacher, crying your wares from town to town at a low rate indeed—without money and without price.'

"At this time Mr. Hill describes himself 'an old stager in the itinerant work.' 'In preaching through England, Scotland, Ireland, and Wales, I always conceived that I stuck close to my parish: we are to preach the Gospel to every creature, even to the end of the world.'"—(pp. 150, 151.)

"This visit to Scotland," says Mr. Jones, "was a pentecostal season."

"The preacher's great subject was 'repentance towards God, and faith in our Lord Jesus Christ.' The most powerful impressions were produced on the multitudes who flocked to his ministry. An old friend, who heard many of the sermons, has frequently remarked, 'Whenever I listened to him eternally appeared to be next door to me; and this was the case with many others. His little anecdotes produced a wonderful effect on a people who had always been accustomed to dry, logical discourses. During this tour, it was known that several hundred souls were added to the church of Christ.'"—(pp. 156, 157.)

We refer to the work itself for an interesting account of Mr. Hill's second visit to the north. "The General Assembly, in their wisdom, had issued a Bull against all irregular preaching; and especially against lay preachers. They had even expelled Mr. Greville Ewing and others from their body, for these offences against ecclesiastical discipline. Sunday-schools they also denounced, as well as bringing together assemblies of people in the fields, or in places not intended for public worship." This bigotry of the rulers of the Scottish church provoked Mr. Hill's individual intol-

ance. "In every sermon he preached," we are told, "he displayed wonderful ingenuity in holding up these venerable bodies (the Assembly and the Synod) to the public contempt. He was completely led from his great work, and appears to have preached more against the established and secession churches, than against the kingdom of Satan." A friend, who was present, says of him, "In every sermon he fired red-hot shots against the General Assembly and the General Associate Synod. It was astonishing how he varied his mode of attack on every occasion."

"It is to be feared that very little good resulted from this second visit. A friend who resided in Scotland at the time, after the lapse of thirty years has remarked, that 'he never heard of a single conversion from the labours of that tour.' How important, then, is it for ministers fully to preach the Gospel, and not to be led away from their great work by the angry disputes of the times in which they live.

Mr. Hill, in his latter days, regretted the spirit he had displayed during this second tour, and resolved that if God should permit him again to visit Scotland, he would preach only the 'unsearchable riches of Christ.' He was able to accomplish his wishes in the summer of 1824. He reached Edinburgh in safety—had a profitable tour—no unhappy event transpired—and he returned to his resting-place at Wotton-under-edge, believing that his labours had not been in vain in the Lord."—(pp. 165, 166.)

Ireland was also visited by this excellent man, in 1798, and a second time in 1799. He was heard with attention by the warm-hearted Irish, and he appears to have much enjoyed his visit. On returning home after his last tour, he had a merciful preservation from shipwreck, to which he often referred with much gratitude. The captain of the vessel was addicted to the wicked and ungentelemanly habit of swearing. Mr. Hill thus wisely checked him: 'Captain, let us leave fair play; you must not have all the swearing yourself; it's my turn next. You must not swear again till I have quite done.' This wise admonition had the desired effect.

In the last sermon which Mr. Hill preached, a few days before he died, he referred with much satisfaction to his itinerant labours. He said, 'I almost wish to be made young again, if I could but again see such days as when I first preached at Tottenham-court chapel, and was in the habit of preaching in the streets and lanes for want of room. O how I love to recollect what I then felt!'

"Until the close of life, Mr. Hill felt a strong objection to the ministers of religion being confined by any geographical limits as preachers of the Gospel."—(pp. 167, 168.)

With a noble liberality, with a holy enthusiasm, the Hon. and Rev. B. W. Noel has advocated the same sentiments, and pleaded for the practice, as loudly demanded by the spiritual destitution which still continues to disgrace the country, in which is established the richest hierarchy in Christendom. In urging it upon the Bishop of London, Mr. Noel, after several striking statements and remarks, goes on to observe:—

"The practice of Christ and his apostles seems to me conclusive: what was right in them must, in similar circumstances, be right in us. Led by the reason of the case, and warranted by these high precedents, the church has had outdoor preaching at different intervals from that time to the present. The disciples of Wickliff went from town to town, and from county to county, to preach their doctrine, not only in churches and churchyards, but also in the midst of markets and fairs, and, indeed, in all places where multitudes were convened." At the Reformation the most eminent preachers of the kingdom—Grindall, Scory, Jewell, Sandys, Sampson, Coverdale, and others—used to preach at Paul's Cross to multitudes assembled in the open air, among whom were the mayor and aldermen of London, with distinguished persons from the court.

"After referring to other examples of itinerant and public preaching, particularly to Whitfield and Hill, Mr. Noel remarks, 'If myriads, remaining still untainted, you call upon your clergy to do their duty, by providing curates to officiate in rooms, to be licensed for that purpose, in every part of the metropolis; thousands more may be instructed. If this does not fully meet the evil, another experiment may be made, (and since Christ must, if possible, be preached to all, no experiment by which we may hope to approximate to that end should go untried,) you may call forth from among the ministers of the establishment other Whitfields and Hills, and may see the signal effects of their ministrations renewed in our days. Should you fail to find them in the establishment, (which I do not in the least contemplate, and, for one, am ready, at your lordship's command, to make the experiment myself,) then necessity has no law—Christ must be preached to perishing sinners. Before this necessity all forms, however venerable, all rules, however salutary, must give way.'"—(pp. 171, 172.)

† State of the Metropolis Considered, p. 84.

• First Journal, p. 69.

Mr. Jones, in continuing the narrative, refers to Mr. Hill's more regular and pastoral employments. After the erection of Surrey chapel, he resided in London half the year, and then retired into the country, labouring with great earnestness at Wotton-under-edge, and the neighbourhood, often preaching every evening in the week except Saturday. There too, as in London, he was engaged in numerous benevolent and religious objects, for the moral and spiritual good of the inhabitants. He was the philanthropist as well as the preacher.

Mr. Jones relates the following, which is certainly very characteristic of the singular being it felicitously describes:—

"The pastor of Surrey Chapel was a *laborious* minister. He occasionally preached more than twenty sermons in a week when travelling for the cause of God. 'I do think,' he would say, 'that once in my life I did earn my daily bread. I was spending several weeks with a friend in North Wales, and she made me preach for every meal, so that before breakfast, dinner, tea, and supper, I had to ascend the pulpit.' On one occasion, being present with a venerable minister, who had retired from active service, and only occasionally preached, he remarked, 'I would sooner wear out, than rust out.' He was fond of such remarks as the following: 'A good pulpit perspiration is a famous thing to keep a man in good health.'—'If some ministers were to be fed according to their preaching, they would not look so plump as they do.'—'Of all diseases a man can die of, to die of fat and laziness is the worst.'

"Like the apostle of old, he was in labours more abundant, and even till within a short period before his dissolution, after eighty-five winters had passed over his head, he would preach twice on the Sabbath-day, address the members of his church on the Monday evening, and preach lectures in his chapel on Tuesday evening and Friday mornings; and all this was done in addition to frequent occasional services. At the age of eighty-seven he left town to reach Wotton by a circuitous route. He arranged to preach every night in the week on his way to Leamington, where he had to supply on the Sabbath-day. His work was his constant delight.

"There were seasons when affliction kept him out of the pulpit, and he was confined to his room; but it was necessary to keep a kindly watch over him, as there was danger of his moving off to chapel as soon as he heard the distant notes of the organ. The evening of the new year was always a happy season with him, when the 'general communion of saints' was enjoyed at Surrey chapel. He was once confined with inflamed eyes, which were bound up. He most reluctantly consented to remain at home. Just as the people were approaching the table of the Lord, the venerable man made his appearance. He had on a large blue cloak, and had actually, though blindfolded, found his way from the house into the chapel alone. The excitement produced by his appearance cannot be described. There was one burst of affectionate feeling, when the people saw their beloved pastor pressing towards the communion table, while the officiating ministers were urging him to retire. In the midst of this scene he was heard loudly exclaiming, 'My dear people, they won't let me say one word to you.' He then pronounced a brief but touching benediction upon them, and retired from the chapel.

"On another occasion he left London to advocate the claims of Christian Missions. He had been much indisposed, and his friends thought it rather imprudent that he should engage in such duties. He, however, promised to be brief in his sermons, and a friend who travelled with him kindly undertook to check him when he found him forgetting his promised limits. At Leeds the venerable man addressed a great multitude in the cloth hall. He was excited by the scene, and became inattentive to the gentle admonitions which he received by a pull at his coat tail. At length he told the people what he had promised, and how his brother ——— had been pulling him by the coat. 'Never mind,' he added, 'let us have another pull, a strong pull, and a pull altogether, and who knows but what the devil's throne may fall from some poor sinner's heart.'

"Mr. Hill would occasionally very frankly tell the feelings of his mind as to his labours in the sanctuary. He said, 'When I am in the pulpit I think no one preaches so badly; but when I am out of it, then I think that no one preaches so well.' Though he would very often say that he wished he could see his successor, that he might give up the work; yet no one believed that he would ever retire from it until he was called into another world. For several years he was obliged to sit while preaching,—and he was in the pulpit urging his people to 'be steadfast and unmovable, always abounding in the work of the Lord,' only nine days before he was called to his eternal reward."—(pp. 222–225.)

A letter addressed by Mr. Hill to a minister who had retired from his public work, and, as Mr. Hill seemed to suspect, without a justifiable reason, is too favourable a specimen of the fine apostolic spirit which

he cherished, to be omitted, even in the slightest notice of his life and labours.

This faithful epistle is followed by two others, to the same individual. The close of the last, with Mr. Jones's pertinent remark and allusion, we must insert:—

"Surrey Chapel, March, 1830.

"My dear Friend.

"I have been under the necessity of writing to Mr. ———, respecting the wants of your people, which are painfully urgent, by your having altogether given up that sacred office to which you were solemnly designated by the imposition of hands. I fully supposed you only wanted a helpmate in the work, and that you would sooner resign your life than resign an office which you never should have undertaken, unless it had been your determination to die as a devoted servant in the sacred work. A truly devoted minister, I think, would be inclined to say, let me rather be shut up in my coffin, than shut out of the pulpit. Old, very old, as I am, yet still I trust I find it not less my privilege than my duty, to dedicate the very last of my declining strength to His glory, in the accomplishment of the sacred work. Should a physician tell me that my life may be in danger if I continue to preach,—I will answer him, 'Neither count I my life dear unto myself, so that I may finish my course with joy, and the ministry which I have received of the Lord Jesus, to testify the Gospel of the grace of God.' So said Paul, so says poor old Rowland Hill, and would to God my friend ——— may be enabled to say the same. Though I hope I shall be disappointed, yet I have my fears, that as I may not see you at Mr. ———, so a call upon you under present circumstances may prove painful to us both. Oh, what a mercy to be truly blest with a dedicated and devoted spirit, while it is most truly pleasant to meet such friends on every occasion. There are some few that keep going forwards; there are others who stand still; and there is a third class that are going backwards. How preferable is death to a state like theirs! How happy shall I be on my journey, to find that my friend, through some constitutional timidity, has only made a halt, that he may afterwards make a more firm and steady march in the sacred warfare, in which, as a minister, he is most solemnly engaged. Oh, that at all times I may be enabled to subscribe myself your most faithful and affectionate fellow-labourer in the vineyard of the everlasting Gospel of Christ,

"R. HILL."

"But you tell me of your constitutional weakness;—granted, that some there are of robust and athletic constitutions in appearance, but are not so in reality; but surely you are not so diseased and debilitated, at least it appeared so to us, that sufficient strength was not left you, so as to enable you occasionally to drop a short word of exhortation from the pulpit, or among the Lord's more immediate people, at the solemn time of your communion: nor could a short but solemn word of prayer have been more injurious to you in the house of God, than in your own dwelling,—nor would it have been a greater exertion to have entered into occasional conversation with your communicants; and as you are by no means advanced in age, you are not to conclude that your present weakness is to last for life. If even much caution might have been found necessary, yet surely a relinquishment of your office altogether is quite another story. If all the physicians in the world were to tell me I must renounce my ministry on account of my increasing debility, and that such debility would increase till a speedy death would be the result, I would keep my fee in my pocket, and labour till I died. Believe me to be,

"Yours very sincerely,

"R. HILL."

"These letters will remind the reader of the remarks of the immortal Whitefield, the beloved friend of Mr. Hill: 'I am now brought to the short allowance of preaching but once a day, and thrice on a Sunday. One physician prescribes a *perpetual bluster*, but I have found *perpetual preaching* to be a better remedy,—when this great catholicism fails, it is over with me.'—(pp. 232, 233.)

The sixth chapter of this Memoir is devoted to an exhibition of Mr. Hill's fidelity and success as a minister. His views were evangelical, in the noblest and best sense in which that term can be employed. The Church of England cannot boast of a divine more sound and accurate in his theological opinions, or whose preaching had a more direct tendency to produce the happiest practical results.

"True religion" he observes, "is doctrinal, experimental, and practical. If we possessed only doctrinal religion, it would lead to antinomianism; if only experimental, to enthusiasm; if only practical, to pharisaism: therefore, if we would be partakers of the religion of Jesus, all three must be united; we must not attempt to separate them."—(p. 246.)

EXTRACTS FROM THE JOURNAL OF A NERVOUS MAN.—No. II.

Feb. 2.—My great toe fomented with poppy-heads, fourteen hours. All said nothing ailed it; but as I had a dream that my great toe was nibbled by a rat, in bed, could not believe Mrs. N., nor the children and servants. Observed Crow (the pet spaniel belonging to my wife) looked amazed, wanted to lick the toe; on which, as it felt chill, and looked flabby, I ordered the leech woman to put ten leeches. Went to bed at two o'clock the next morning, but did not sleep; for the great toe seemed to fill every place. I saw great toes of all sizes, some spinning round, others racing together; some shooting up into the air, and others falling down; and wherever my eyes turned, I thought I saw my great toe, to which many of the others paid a sort of homage. Felt somewhat pleased at that.

Feb. 3.—Had the toe poulticed with linseed; kept up the foot all day; ordered two pairs of crutches—one black, for the house, the other mahogany, to go to church with on Sunday. N.B. Ordered the mahogany ones to have painted on them, in gilt letters, "Cursed be he that causeth the lame to go out of his way." Studied anatomy of the foot, that I might give scientific answers to those who inquired after my toe. Wrote down about twenty different answers to questions that I supposed might be asked. Scorned to send for the doctor, believing they were all quacks: for as women formerly practised the art of medicine, when our forefathers were such prodigies of valour and physical strength, thought the doctors the cause of many diseases which they undertook to cure.

Feb. 4th.—Rose at three o'clock, ordered the servants to get up and breakfast at five, after the good old fashion. Servants gave me notice to quit. Ordered dinner at ten o'clock, A.M. Put up all the plate in the iron chest; sent out the man to buy three dozen of wooden spoons; proposed to Mrs. N. to abolish the use of forks, as a modern innovation, because they looked finical, and, moreover, seldom got well cleaned. About two o'clock Mrs. N. had tea, when Mr. R. (our clergyman) and his wife, called to take a friendly dinner with us, as we had been used to dine at three o'clock. Mr. and Mrs. R. much surprised. Mrs. R. had tea with my wife; while Mr. R. held a long and learned dispute with me about singularity. Poor man! he is a conformist to the world.

Feb. 5th.—Received letters from Hull, containing terms for a voyage to the Whale Fishery: sums, 100 guineas for self, and 170 if a man servant with me. Ordered Joseph to pack up, ready to sail on the 19th instant. Laid out 49l. 10s. 10d. in suitable clothing, and got four folio manuscript volumes, ready to continue the journal, and three quarts of ink. Sent for
No. 30. JULY 26, 1837.—2d.] Vol. I.

Mr. Best to teach me how to sketch, as I contemplated publication of my travels, in a handsome quarto, with plates. Wrote to a publisher in London.

Feb. 6th.—Seven letters from friends came this morning; burnt them all, as they tried to dissuade me from my journey. Answered none of them, as it does not become a man to be warped from his purpose. Mrs. N. in tears all day, and the children very low; but thought it necessary for my health, and I felt that the world ought to know more about North Pole subjects. Had my crutches packed up carefully lest the toe should relapse, for it had certainly become better.

Feb. 7th.—When I awoke, felt as if my head had grown so large that I could never lift it up without help. Would have Mrs. N. get up at five o'clock, to make room for my head, which I thought was enlarging, and would want all the bed. At eight o'clock, James announced breakfast, but I could not get through the door. Ordered Joseph therefore to take out the sash, and let me down by a ladder. I thus got down into the yard, my head just clearing the jambs; but, alas! could not get in at the house door. Took out another sash; and not having foreseen such a calamity, abandoned the voyage, which pleased Mrs. N. greatly. N.B. Returned the same way to bed.

Feb. 8th.—Awoke by a tickling of the nose; believed it to be a carbuncle. Searched the medical books, and sent for the leech-woman, who applied twelve of Nature's physicians. Searched the medical books again! but the abominably unintelligible stuff which the physicians call technical language confounded me. Had a poultice to my nose, and read Aristotle and "*Boetius Consolatione Philosophiæ*," admired their depth, and pitied the shallow scholarship of modern times. Begun a translation of the fathers, which I possess in about one hundred and twenty-four folio volumes, which I propose to publish, with notes, in a hundred octavos, for the benefit of youth. Wrote to Mr. M., and drew up a prospectus.

Feb. 9th.—As I was gaping, at breakfast time, thought my jaw was locked; wife and all about said it was not, but was sure they were wrong. Could speak, however, and sent for the leech-woman, who seemed alarmed, desired to see my toe, and shook her head. I fainted; and when I revived, Sarah was bathing my head in cold water, and the quack doctor (an M.D. though) was sitting with the family at breakfast, talking about my systems of government for the day;—before, I had made seventeen new forms, which I had read to the family. Doctor ordered no tea, and to go out; but my head was too

large to get out conveniently, and as my toe felt singular, and Joseph would not carry the crutches, could not go.

Feb. 10th.—Awoke very cold; had a pain in my teeth; sent for the dentist, who drew three, and lanced the others, and ordered me to keep comfortably warm. Drew out a plan of a treatise on the teeth, founded on new principles; and another, to show the connexion between galvanism and theology. Counted the title pages of projected works to be finished by me, and found them fifty-four. Towards evening had a trance, in which my wife appeared to be multiplied into ten or twelve forms, and instead of eight children, there appeared to be about eighty or ninety in the room, and every thing else about me seemed to be tenfolded. Proposed to fast to-morrow, and to inquire into the moral design of this marvel.

Feb. 11th.—Rose at three A.M., and then drew out a plan for the morning study, as a preparative for inquiring into the design of the aforesaid trance. Plan was

- | | |
|-------------------------------|-----------------------|
| 1. Nature of being. | 7. Miracles. |
| 2. ——— metaphysics. | 8. Dreams. |
| 3. Corpuscles. | 9. Second sight. |
| 4. Organic laws. | 10. Presentiments. |
| 5. Mental agencies. | 11. Ideality. |
| 6. Supernatural intervention. | 12. Symbolical truth. |

Ate a biscuit at ten, and drank a glass of cold water, and then spent the rest of the day, in the investigation, and concluded that the vision meant that all things are of ten times more consequence than they are thought to be. Felt comforted, read the communion service, and thought of entering the church.

Feb. 12th.—Made a new will; counted the wooden spoons, found only six left; left off garters, because they promote white swellings; shaved off my eyebrows, because apt to catch the candle, counted my teeth, and made a model of a new pair of wings, to fly with. Thought if I could only substitute a whale muscle for the pectoral muscle of the birds, could reach the moon. Wrote to Hull, to get about twenty yards of that material, by the earliest opportunity. Received a letter offering me the presidency of —. Declined it, as my toe might not bear the climate, and supposed my head would enlarge again on shipboard, and then all would be lost.

Feb. 18th.—Turned all my servants away, and wrote to London for a French cook, and to Bristol, for a "nigger boy," to wait; experimented about the longitude and universal motion; made three new discoveries, one being an automaton image, to go on errands, for which I have taken out a patent, as I am weary of those worms of life, the servant tribe. Fancied I was descended from William the third: sent to the Herald's Office, to search. Thought candles likely to bring on the *gutta serena*, so would not have any burnt, and ordered the chandler to send no more. N.B. My wife and Sarah look very ill, must be examined to-morrow by the leech-woman; think they have a complaint in the kidneys. Before I went to bed, felt as if I should burst; read the medical books, concluded I was dropsical, and thought I would let the water out of my leg with my penknife; but when I tried it only bled, which frightened my wife, who sent for the doctor, but I would not see the rogue.

THE LAMENT OF THE CAPTIVE JEWS.

It was the golden sunset hour,
When evening breathes her sigh,
And day's last lingering glance was thrown
On the deep emblazon'd sky.

In Babel's bright and flowery vales,
Where the murmuring waters stray'd,
We met—a mournful captive band—
In the willows' lonely shade.

The brows of Judah's maids were pale,
And dim was their downcast eye,
When, as memory mused on the vanish'd days,
The dreams of years past by,

We wept for Salem's balmier groves,
For Zion's sacred shade,
Where our fathers bent with holy awe,
And their solemn offerings paid.

High on the drooping boughs we hung
Our harps of mournful song;
No trembling hand to wake their voice,
The wild chords swept along.

But the whispering zephyr kissed the strings,
And their music murmur'd low,

And as the light-winged breezes pass'd
They bore our plaint of woe.

They ask a song in a stranger's land,
When our home is far away;
For mirth, when the dreams of joy are fled,
And the flowers of hope decay.

How shall the song of joy be sung
Where Baal's temples rise,
Where the pining heart, in a stranger-scene,
In its lonely sadness dies?

Land of our homes! where once the voice
Of the mighty dead was heard,
Where the holy breath of the heavenly gale
The prophet's spirit stirred!

Ne'er to thy vales may the captive come
At evening's placid hour,
And waken the music of other days
In the radiant sunlit bower.

In vain, in vain does his trembling heart
For the groves of Salem sigh;
Still must he wear th' oppressor's chain,
And sad and lonely die. T. W. A.

SCIENCE.

THE object of the association is contained in its title; it is the advancement of science. Our object is not literature, though we have many literary associates, and though we hail and love as brethren those who are engaged in expressly literary pursuits, and who are either themselves the living ornaments of our land's language, or else make known to us the literary treasures of other languages, and lands, and times. Our object is not religion in any special sense, though respect for religious things and religious men has always marked these meetings; and though we are all bound together by that great tie of brotherhood which unites the whole human family as children of one Father, who is in heaven. Still less is our object politics, though we are not mere citizens of the world, but are essentially a British Association of fellow-subjects and of fellow-countrymen, who give, however, glad cordial welcome to those our visitors who come to us from foreign countries, and thankfully accept their aid to accomplish our common purpose. That common purpose,—that object for which Englishmen and Irishmen and Scotchmen have banded themselves together in this colossal association, to which the eyes of the whole world have not disdained to turn, and to see which, and to raise it higher still, illustrious men from foreign lands have come,—is SCIENCE; the acceleration of scientific discoveries, the diffusion of scientific influences.

And if it be inquired, how is this aim to be accomplished, and through what means, and by what instruments and process we as a body hope to forward science; the answer briefly is, that this great thing is to be done by us through the agency of the social spirit, and through the means, and instruments, and process which are contained in the operation of that spirit. We meet, we speak, we feel *together now*, that we may *afterwards* the better think, and act, and feel *alone*. The excitement with which this air is filled will not pass at once away; the influences that are now among us will not, we trust, be transient, but abiding; those influences will be with us long—let us hope that they will never leave us; that they will cheer, they will animate us still when this brilliant week is over; they will go with us to our separate abodes, will attend us on our separate journeys; and whether the mathematician's study, or the astronomer's observatory, or the chemist's laboratory, or some rich distant meadow, unexplored as yet by botanists, or some untrodden mountain-top, or any of the other haunts, and homes, and oracular places of science, be our allotted place of labour till we meet together again, I am persuaded that those influences will operate upon us all,—that we shall all remember this our present meeting, and look forward with joyful expectation to our next re-

assembling, and by the recollection and by the hope, be stimulated and supported. It is true, that it is the individual man who thinks and who discovers; not any aggregate or mass of men. Each mathematician for himself, and not any one for any other, not even all for one, must tread the more than royal road which leads to the palace and sanctuary of mathematical truth. Each, for himself, in his own personal being, must awaken and call forth to mental view the original intuitions of time and space; must meditate himself on those eternal forms, and follow for himself that linked chain of thought which leads, from principles inherent in the child and the peasant, from the simplest notions and marks of temporal and local site, from the questions when and where, to results so varied, so remote, and seemingly so inaccessible, that the mathematical intellect of full grown and fully cultivated man cannot reach and pass them without wonder and something of awe. Astronomers, again, if they would be more than mere artisans, must be more or less mathematicians, and must separately study the mathematical grounds of their science; and although in this, as in every other physical science, in every science which rests partly on the observation of nature, and not solely on the mind of man, a faith in testimony is required, that the human race may not be stationary, and that the accumulated treasures of one man, or of one generation of men, may not be lost to another; yet, even here too, the individual must act, and must stamp on his own mental possessions the impress of his own individuality. The humblest student of astronomy, or of any other physical science, if he is to profit at all by his study, must in some degree go over for himself, in his own mind, if not in part with the aid of his own observation and experiment, that process of induction which leads from familiar facts to obvious laws, then to the observation of facts more remote, and to the discovery of laws of higher orders. And if even this *study* be a personal act, much more must that *discovery* have been individual.

Individual energy, individual patience, individual genius, have all been needed to tear fold after fold away, which hung before the shrine of nature; to penetrate gloom after gloom, into those Delphic depths, and force the reluctant Sibyl to utter her oracular responses. Or if we look from nature up to nature's God, we may remember that it is written—"Great are the works of the Lord, sought out of all those who have pleasure therein." But recognising in the fullest manner the necessity for private exertion, and the ultimate connexion of every human act and human thought with the personal being of man, we must never forget that the social feelings make up a large and powerful

part of that complex and multiform being. The affections act upon the intellect, the heart upon the head. In the very silence and solitude of its meditations, still genius is essentially sympathetic; is sensitive to influences from without, and fain would spread itself abroad, and embrace the whole circle of humanity, with the strength of a world-grasping love. For fame, it has been truly said, is love disguised. The desire of fame is a form of the yearning after love; and the admiration which rewards that desire, is a glorified form of that familiar and every day love which joins us in common life to the friends whom we esteem. And if we can imagine a desire of excellence for its own sake, and can so raise ourselves *above* (well if we do not in the effort sink ourselves *below*) the common level of humanity, as to account the aspiration after fame only "the last infirmity of noble minds," it will still be true that in the greatest number of cases, and of the highest quality,

"Fame is the spur that the clear spirit doth raise,
To scorn delights, and live laborious days."

That mysterious joy—incomprehensible if man were wholly mortal—which accompanies the hope of influencing unborn generations; that rapture, solemn and sublime, with which a human mind, possessing or possessed by some great truth, sees in prophetic vision that truth acknowledged by mankind, and itself long ages afterward remembered and associated therewith, as its interpreter and minister, and sharing in the offering duly paid of honour and of love, till it becomes a power upon the earth, and fills the world with felt or hidden influence; that joy which thrills most deeply the minds the most contemptuous of mere ephemeral reputation, and men who care the least for common marks of popular applause or outward dignity—does it

not show, by the revival, in another form, of an instinct seemingly extinguished, how deeply man desires, in intellectual things themselves, the sympathy of man? If then the *ascetics* of science—if those who seem to shut themselves up in their own separate cells, and to disdain or to deny themselves the ordinary commerce of humanity—are found, after all, to be thus influenced by the *social spirit*, we can have little hesitation in pronouncing, that to the operation of this spirit must largely be ascribed the labours of ordinary minds; of those who do not even affect or seem to shun the commerce of their kind; who accept gladly, and with acknowledged joy, all present and outward marks of admiration or of sympathy, and who are willing, and confess themselves to be so, to do much for immediate reward, or speedy, though perishing, reputation. Look where we will, from the highest and most solitary sage, who ever desired the propagation of his own memory, and committed his lonely labours to the world, in full assurance that an age would come, when that memory would not willingly be let to die, down to the humblest labourer who was ever content to co-operate outwardly and subordinately with others, and hoped for nothing more than present and visible recompence, we still perceive the operation of that social spirit, that deep instinctive yearning after sympathy, to use the power, (and if it may be done,) to guide the influences of which, this British Association was formed. Thus much I thought that I might properly premise, on the social spirit in general, and its influence upon the intellect of man; since that is the very bond, the great and ultimate reason of this and all other similar associations and companies of studious men.—(From Sir W. R. Hamilton's *Address, delivered at the fifth meeting of the British Association, held at Dublin 1835.*)

IMPOSITION DETECTED.

[The following amusing paragraph is extracted from an interesting volume just published by Lieutenant Bacon, entitled, "First Impressions and Studies from Nature in Hindostan."]

Among the lower orders of natives it is no uncommon thing to find men who can counterfeit so skilfully the semblance of death, as to deceive even a medical man, until the hand is applied either to the heart or pulse; these men are frequently at very great pains to acquire this faculty, and practise it for many purposes. It serves sometimes as a means of concealment, but more frequently it is made available for the purpose of imposition.

The imitator of death is laid upon a *charpâhi*, or light native bed, and being painted as if covered with wounds and bruises, he is carried, in a state of complete nudity, to the house of an

European magistrate, or other civil functionary; here a pitiable story it related of his having been murdered in some remote village, and, with bitter tears and lamentations, the magistrate is entreated to send officers to make official investigation of the case, and, if possible, to bring the perpetrators to an expiation of the outrage. In the meantime, the friends of the unfortunate murdered man, having excited the compassionate interest of the Englishman, or of some of the inmates of his house, solicit a gratuity for defraying the expenses of the funeral, for which they aver that they have no means; and if the trick be new to the beholders, an ample shower of donations will most likely be afforded to the poor bereaved creatures. The moment their object is secured, the sorrowing family withdraw, carrying with them the corpse of their deceased rela-

tive, who, as soon as he is out of sight of the house where the imposition has been practised, returns to the mortal world, and again condescends to make use of his limbs, taking care to appropriate an adequate share of the bounty which his ingenuity has purchased. Having then cleansed himself from his stains and artificial wounds, the whole party disperse, to avoid apprehension when the fraud is detected.

I was once staying at the house of a civilian when one of his servants came in and reported that a murdered man had been brought to the door by a party of his friends, in the manner related above; he intimated at the same time that, from the appearance of the strangers, he was suspicious of their statement, and believed the dead man to be a counterfeit. We went out and found a squalid-looking corpse, with two or three wounds upon the chest, and with many marks of violence about other parts of the person.

The bed upon which the body lay extended was placed upon the ground, and all around it squatted the relatives and friends who owned it, howling, screaming, and groaning with a touching emphasis, which would have excited the sympathy of the most obdurate. My friend approached to examine the body, but was assailed with a thousand importunities not to pollute the corpse before the rites of sepulture had been performed. He therefore refrained from touching the body with his hand; but remarking to the people that wood could not defile it, he stuck the sharp end of his billiard cue—which he had in his hand—into the side of the

supposed corpse. This evidently disconcerted the surrounding throng; but as the body showed no signs of animation, or any fear of incurring a repetition of the test just inflicted, we began to think that the suspicion of the chupprassi had been unfounded. The blow was repeated with increased force, and until the sharp point of the cue penetrated the flesh between the ribs. A very slight quiver of the muscles, and an almost imperceptible movement of the head, discovered the cheat; and my friend then told the people that they had better take the body to the hospital, for that life was not yet extinct.

"Wa! wa!" said they, "why the man has been dead since cockcrow; how, therefore, can he be alive now?"—an idiom quite as purely Hindostani as it may be thought Irish.

"Bring a teakettle of boiling water!" shouted the gentleman, to the dismay of the family.

"Sir, great sir, what would you do with boiling water? the man is dead."

"Exactly so, my good friends; and that is the reason that you are all weeping and sorrowful?"

"What else, sir?"

"Why, I am a great physician, and know how to bring such dead men as these to life."

The poor fellows begged hard that the body might be spared; but the kettle was brought, and still the dead man moved not, until a small quantity was poured upon his foot, when he bounced from his *charpâhi*, and upsetting one half of his little brothers and cousins, fled like a spirit rather than an earthly body.

HAIR-BREADTH ESCAPES.—No. VI.

MRS. SPENCER SMITH.

CHAPTER I.

IN the year 1806 it was difficult to find, over the whole continent of Europe, a single corner which afforded shelter against the despotism of the emperor,* when it was his pleasure to exercise it. Italy was in his power, Germany almost subjugated, and even as far as the steppes of Russia there was no place which could be said to secure a refuge to the proscribed. Venice was no longer the beautiful and voluptuous city where the only condition imposed upon her inhabitants was to be happy. French domination extended even to the Lion of Saint Mark. The "Code Napoleon" punished the gondolier of the Bronta, and prohibited him from singing his barcaroles.

There was at this period a vast number of foreigners in Venice. The Marquis de Salvo, a Sicilian nobleman, then only twenty years of age, had quitted Sicily and Naples, and was

* Napoleon.

travelling in other parts of Italy. The marquis was, even at this early period of his life, distinguished for his talents and knowledge of the world; and he was most cordially received by all the foreigners of rank then in Italy. Of this number was the Countess Attems, the daughter of Baron Herbert, internuncio from Austria to Constantinople. The countess was a most amiable woman, and her house was the resort of the best company in Venice.

A younger sister of the countess had arrived a short time previously from Germany, for the purpose of recovering her health; this lady was Mrs. Spencer Smith, whose husband was the ambassador from England to Stuttgart. Mrs. Smith seldom quitted her apartment; but those who knew her declared that she was distinguished for grace and beauty,—that her mental attainments were of a very superior kind,—that she spoke seven languages with perfect purity,

was an excellent musician, and was familiar with the literature of every language she spoke. All that the Marquis de Salvo heard respecting this young lady, rendered him extremely desirous to become acquainted with her.

"I wish much that you would introduce me to her," said he to the Countess Attems; "pray do me this favour."

"The Countess Attems promised that she would; but her sister was almost always ill, and never could be prevailed on to appear in the saloon of the countess. One day, however, Madame Attems wrote to the marquis the following note, accompanied by the key of her box at the theatre San Samuel:—

"There is to be a new piece to-night, by the chevalier Guanni: go, and I will present you to my sister; she will be there."

The marquis would have put off any ten engagements to have accepted this; accordingly, before the appointed hour, he was seated in the box of the Countess Attems, who, on her arrival, was accompanied by a young lady whose delicate and elegant figure, fair and transparent complexion, light hair, and graceful deportment, rendered her, in the eyes of the marquis, one of the most beautiful creatures he had ever beheld. Her remarks on the performance evinced a penetration and a tact which led the Marquis de Salvo to observe, that she was as conversant with the Italian language as any of the best-educated Florentines.

"I claim no merit for that," replied she, "because I am passionately fond of Italian literature."

The marquis retired, delighted with the evening he had spent, and happy in the hope of improving his acquaintance with so charming a person. When he followed her into private life, when he saw her as the mother of a family, engaged in superintending the education of her two sons, Sidney and Edward, then the marquis joined to this admiration a feeling of veneration and profound respect, which nothing could eradicate.

Shortly after the Marquis de Salvo's introduction to Mrs. Smith, General Lauriston, one of Napoleon's aides-de-camp arrived in Venice, to exercise the functions of governor. Monsieur De la Garde then filled the post of director-general of the police. One night the Marquis de Salvo went to pay a visit to the Countess Attems, he found her drawing-room deserted; astonished at this solitude, he inquired the cause of it, and was informed that Monsieur De la Garde had that evening sent an invitation to Mrs. Spencer Smith, requesting her to call on him next morning at his office. This form of proceeding, so little in accordance with the usual habits of Monsieur De la Garde, whose politeness of manners is well known, alarmed the friends of Mrs. Spencer Smith. The effect of this invitation,

which Mrs. Smith in her frankness had thoughtlessly made known, was a signal for every one to desert her, as a person whose society it was almost dangerous to frequent, since she had come under the attention of the director-general of the police of Venice. The Marquis de Salvo was exasperated at this desertion of Mrs. Smith. He was then young, and he possessed a mind attuned to every noble and generous feeling. He offered to escort Mrs. Smith, the following morning, to the office of Monsieur de la Garde; she accepted the offer with thankfulness, and the next day, at eleven o'clock, he was before the palace of the Countess Attems with his gondolier, to conduct the lady to her mysterious and annoying interview. The director-general of the police received Mrs. Spencer Smith with every mark of respect and attention. He perceived she was greatly alarmed, and endeavoured to persuade her that the business was nothing of a serious nature. "Do not regard this affair with too much anxiety," said he, "I am convinced it has originated in some mistake; you need only be prudent. Perhaps you see too much company at the house of your sister. It is necessary that I should lull the suspicions which your name may have excited in Paris, by the assurance of a great reserve in your conduct. If you would be guided by me, I would suggest the propriety of your quitting Venice. This is a maritime city; there are many foreigners here. I think you had better reside in some other part of Italy. Hire a house near Padua. Your sister can go to visit you there; and all this will be much for the better."

Mrs. Smith, delighted to find that this dreaded interview had terminated thus happily, assured M. De la Garde that, within three days, she would follow his advice. Having taken leave of him, she proceeded to console her sister, who awaited her return with impatience.

On the following evening, as the family were grouped around Mrs. Smith and the marquis, whilst they were singing barcaroles, to which the mariners of the Lido responded, a great uproar was heard on the staircase of the palace; this was caused by four gendarmes, and a brigadier at their head, who communicated to Mrs. Smith that she must be a prisoner in her own apartment, and that they were desired to guard her there.

On hearing this order, not only discourteous as applied to a female, but barbarous in its execution, and revolting under all its forms, the family of the Countess Attems were panic-struck. The fair prisoner evinced an extraordinary share of courage at this trying juncture, and supported the fortitude of her sister. Though she felt anxiety for herself, still she appeared to have no other fear than that of being a source of inquietude to Count Attems and her sister. As to the Marquis de Salvo, he left the palace of Madame

Attems in deep distress of mind. Early on the following morning he waited on M. De la Garde, to inquire the cause of the severe measure adopted against Mrs. Spencer Smith. He became very uneasy on observing that M. De la Garde's manner was different from what it had been on the preceding day. He was embarrassed, and appeared desirous of concealing some unpleasant secret. At length, however, he determined to speak out, for his silence tended, in some degree, to involve him in the odium of this affair. "I must inform you," said he to the Marquis de Salvo, "that yesterday, after I had spoken to you and Mrs. Spencer Smith, a courier brought me fresh instructions, not from the viceroy, not from the minister, but from the cabinet of the emperor himself. These orders are severe. Doubtless the emperor has the most urgent motives for acting thus; and, in truth," —

"In the name of heaven, what are the orders you have received?" exclaimed the marquis, in evident alarm.

M. De la Garde hesitated for a moment, and then proceeded in an under tone:—"The order which I have received, and which is also addressed to General Lauriston, bears a formal injunction to remove Mrs. Spencer Smith from the city of Venice, with a strong escort of gendarmes, and to conduct her to Milan. She is to be first interrogated there by his imperial highness the viceroy, and afterwards conveyed to France, where it is probable she will be imprisoned in the citadel of Valenciennes."

The marquis here uttered an exclamation.

"Silence," continued M. De la Garde, "for otherwise you will but endanger yourself, without benefiting the lady. I have told you thus much because you are a friend of the family, and to enable you to communicate the intelligence to them, mitigated by the sympathy of friendship. Mrs. Spencer Smith must depart hence in six or seven days. She may travel as slowly as her health requires. Be assured it is painful to me to have to execute this mission; but you must be aware that my duty must be my first consideration."

"But what reason can be adduced for this?" exclaimed the Marquis de Salvo.

"I know not," resumed M. De la Garde; "nevertheless," added he, "I believe I may tell you, that the name of Smith is probably one cause of the severity which is shown towards this lady. You know she is the sister-in-law of Sir Sidney Smith, of St. Jean d'Acre, and the wife of Mr. Spencer Smith, the ambassador from England to Stuttgart. Recollect the affair of Drake, and you will then have a key to circumstances which appear mysterious."

The Marquis de Salvo left the director-general, distressed at the fate of Mrs. Smith. The state of his feelings would not permit him, at that moment, to call on the Countess Attems. He

found his way to the Lido, and endeavoured, by exercise and reflection, to calm his agitation. He formed many plans, but they were all undetermined and vague.

Since he had become acquainted with Mrs. Smith, he had discovered that she possessed a degree of strength of mind equal to her talents; but she was in a feeble state of health, and how could she be expected to bear the violent shock of learning that she—a young female of three and twenty years of age, up to that moment happy, surrounded by the attentions and the homage of all who knew her—she, Mrs. Spencer Smith, was a state criminal, threatened with a captivity not only severe, but perhaps eternal? The marquis shuddered at the thought of raising even a corner of that veil which concealed from the unfortunate lady so terrible a perspective; nevertheless, he resolved upon fulfilling his task.

"Doubtless, madam," said he to Mrs. Smith, "you are placed in a situation of great difficulty; but I will save you. Do not give way to grief; I will attend you on your journey, and even though I should perish, I will secure your escape."

Mrs. Smith raised her eyes to the marquis, whose handsome countenance was animated by an expression accordant with his ardent feelings.

"I cannot accept your generous offer," said she, with a grateful emotion which she did not attempt to conceal; "renounce your project, and leave me to my fate. I am innocent, and heaven will protect me."

"No," resumed the marquis, in a determined tone; "I am resolved to save you, and I will attempt it; I repeat that I will stake my life in the enterprise."

"Well," said Mrs. Smith, "return hither in a short time, and I will then show you a letter which you must read with attention; and I think you will be satisfied, after having read it, that you ought not to accompany me."

The marquis took his leave, and returned within an hour. A letter was delivered to him from Mrs. Smith, which he carried to the Café de Venice, to read without interruption; it was as follows:—

"I cannot accept the offer of your generous devotion, and I will candidly disclose to you my reasons for declining it. You are young. You have discovered in me some agreeable qualities which may possibly appear magnified by the unfortunate position in which I am placed, its singularity, and my desolate condition. You perhaps entertain towards me an exalted sentiment, which would lead you to undertake anything noble and generous; but this sentiment has its birth only in the ardent and impassioned imagination of a young man of twenty. Relinquish, I beseech you, this wild project. Think of yourself, think of your parents. Look to your fortune, for your property is in Sicily; the man

who pursues me will speedily lay his iron hands on your estates. You will be ruined, even admitting that your life should be saved, which is doubtful. Give me not cause for remorse in the tears of your mother. Raise not, on my account, an insurmountable barrier between yourself and your country; for my gratitude, great as it would certainly be, can never make you amends for these sacrifices."

On perusing this letter the young marquis was deeply moved. Hitherto, no feeling foreign to the purest generosity had mingled with his wish to serve Mrs. Smith. Had she been old and ugly he would have been ready to aid her as an innocent and unprotected woman. He felt deeply hurt at the doubt which she expressed. In his reply to her he protested, upon the honour of a gentleman, that no unworthy thought had, for a moment, mingled with the offer of his protection.

"Have I not a motive for protecting you in this moment of affliction?" said he. "You know my attachment to the royal family of Sicily. Is it not gratifying to me to lend my aid to the sister-in-law of the man who is at this very moment protecting my unfortunate sovereigns. Your noble relative Sir Sidney Smith, madam, ought, however, to have familiarised you with acts of disinterested devotion. Let me, by saving you from unjust persecution, show my gratitude to England, the country which has done so much for my sovereigns. As to my fate, there is nothing to be apprehended; heaven will protect the good cause. And if Providence should ordain otherwise, you need feel no remorse for the tears of my mother; I know her well enough to be assured that she would feel no regret if her son should perish in accomplishing the mission of a man of honour. Once more, madam, be assured that all will be well. With regard to the sentiment by which you suppose I am actuated, you must pardon me when I assure you, that however much I may admire you, I entertain for you no other affection than that of a brother. Accept, then, my most sacred word of honour, that as soon as you shall be placed in safety, and restored to your family and children, I will leave you without asking to pass another hour near you. I make this solemn pledge to you and to your sister. Spurn not the services of a sincere friend, and allow me to save you."

The lady was much affected by this letter, which certainly bore the tone of truth and sincerity. The countess Attems overruled her sister's scruples, and the marquis at length received permission to make arrangements for the execution of his project.

He possessed great courage and coolness. One of his first steps was to secure the safety of the two sons of Mrs. Smith, Edward and Sidney. These two children, although the one was only seven and the other five years of age, might

have been retained as hostages after the escape of their mother. It was then about the 15th of April: that season of the year is most delightful in Venice, and Mrs. Spencer Smith's children went frequently to be rowed in the gondolas. One day the marquis accompanied them to Fasina; having reached that place, he said to their tutor, "Here are one hundred louis; take a post-chaise, get into it with your two pupils, and proceed as speedily as possible to the Countess of Stassoldo's, at Gratz, in Styria; remain there until Mrs. Smith shall again join her children. Depart without delay."

The tutor, an honest German, who was devoted to his patrons, obeyed the marquis, and fulfilled his commission.

On his return to Venice, the marquis advised Mrs. Smith to write to the principal authorities, stating that she did not consider it safe to undertake so long a journey with no companion but a female servant, and requesting permission for a friend of her family to accompany her,—that friend being the Marquis de Salvo.

In answer to Mrs. Smith's letter, general Lauriston replied, that he was most happy to find his instructions did not oppose his ready acquiescence in her demand.

The Marquis de Salvo accordingly received permission to accompany Mrs. Smith.

On the twenty-fifth of April, 1806, Mrs. Spencer Smith quitted Venice for Milan, escorted by four gendarmes, and a brigadier named Amédée. This latter rode in the carriage of the prisoner, together with the marquis, and Louise the waiting woman. The marquis was the more confirmed in his determination to secure Mrs. Smith's escape, since he well knew that she must otherwise be imprisoned in the citadel of Valenciennes. The emperor's displeasure had been excited against her in consequence of Drake's affair. Her husband had, happily for him, reached England; but Napoleon had received intelligence, either true or false, which represented that his wife was on the continent as the agent of her husband. Her extraordinary talents, and the number of languages which she spoke with facility, added to her beauty,—which was in itself a powerful fascination,—all tended to confirm the emperor's suspicions, and prompted him to adopt measures so extremely severe towards a female. The Marquis de Salvo reasonably feared that the lady's captivity would be rendered most rigorous; and these apprehensions having been confirmed by something which he heard prior to leaving Venice, he renewed most emphatically to the Count and Countess Attems, the solemn assurance that he would save their sister. They departed in a gondola of the Lagunes; the carriage was to be in readiness for them at Padua.

General Lauriston and the director-general of the police, in consideration of Mrs. Smith's state of health, had authorised the gendarmes to stop

in the fortified towns, when the prisoner should require them to do so, and even to halt for several days, if required.

It was at Verona that the marquis counted on carrying into effect his plan of escape. There was in that city a friend of his childhood whom he loved as a brother, and upon whom he believed he could implicitly rely; this friend was Leonardo Grimani. The marquis had directed Mrs. Smith, in English, to say that she was fatigued, and required rest. On alighting from the carriage the Marquis de Salvo hastened to the hotel of Count Grimani. It was closed; he learned from the porter at the gate that the count was in the country, more than three leagues distant. The marquis was much disappointed; this first obstacle in the way of his project appeared to him to augur badly. He immediately wrote a letter to Count Grimani, in which he said, "An affair in which my life and my honour are engaged compels me to appeal to your friendship. I have need of your assistance; but it is necessary to keep this a profound secret. And since you are not in Verona, it is also requisite that our interview should not be known. Come here to-night; at one o'clock you will find me in the Arena,* I shall be under the seventh arch to the left; and by clapping your hands you must give me notice of your arrival."

With that warmth of feeling which is so natural to youth, and which is always accompanied by confidence in others, the marquis sought from his friend only that which he himself would readily have offered him had he required it.

Never doubting that the count would make his appearance, though the postilion whom he had

sent with the letter had not returned, the marquis retired to his chamber, which he had purposely chosen on the ground floor. When he was certain that the inmates of the house were asleep he softly opened his window, and having wrapped his cloak well round him he repaired to the Arena. The weather was stormy, and the moon, which was then in her first quarter, gave only a weak and unsteady light. The marquis hastened to the place of rendezvous; he reached the seventh arch on the left as the clock of San Domino struck one; but no one was there, profound silence prevailed. The marquis clapped his hands, but received no signal in reply; it was evident that no one was there. He awaited the arrival of his friend with an anguish which it would be difficult to pourtray. But time was flying on, and no footstep broke the melancholy silence which pervaded the Arena. It rained, and the wind forcing its way under the long vaults, seemed to the marquis like the howling of purgatory. At length the clock struck four; the darkness of the night now began to diminish; a broad streak upon the horizon announced the dawn of day. The marquis in despair returned home. In passing the post-house he stopped to inquire for his postilion, who he found had arrived. He had brought the answer of count Grimani, who had discovered, by the incoherent style of the marquis's letter, that the affair in which he requested his assistance might possibly compromise him. He did not deem it prudent to serve his friend at the risk of his own safety. The Marquis de Salvo angrily tore in pieces the letter of Grimani. "And this is what is called a friend!" cried he, burning with indignation.

EAST INDIAN SLAVERY.

(From Bacon's *"First Impressions and Studies in Hindostan."*)

UPON our return to our tents we found there a man waiting our arrival with a very different sort of merchandise to any we had hitherto seen. He had with him two young girls, whom he had brought down from the Punjab, and these he was anxious to dispose of as slaves, offering the eldest, who was the least comely of the two, and about sixteen years of age, for one hundred and fifty rupees; and the other, who had really some pretensions to beauty, and was younger by about four years, for two hundred. The poor little things, putting their hands before them in attitude of supplication, begged earnestly that we would purchase them, declaring that otherwise they should starve, and vowing to be faithful and obedient to us. Finding that we were not inclined to become purchasers, the man took them away, and the same proffer was made at every tent. They were ultimately purchased by a native gentleman residing in the neighbour-

* The Grand Circus at Verona.

hood of Delhi, for about half the sums above mentioned.

This traffic in slaves is considered to have been long since abolished, but it is still surreptitiously practised throughout the upper provinces, and at any of these fairs girls may be purchased. They are generally from Georgia, Cashmeir, Kabul, the Punjab, or Moultan.

One of my servants, a mussulman, had a slave-girl whom he had purchased for the sum of twenty-four rupees, about £2. Her history, so far as she was herself acquainted with it, is a very romantic one, and the reader will perhaps excuse my giving a slight sketch of it, which may be condensed in a very few pages.

The name of the girl was Rahmea; she was handsome, not more than seventeen or eighteen years of age, a native of Almora; her parents were not Ghorkas, as might be thence naturally inferred, but settlers from some large town upon

the banks of the Ghinab, in the district of Kish-tawar; the girl herself was ignorant of the name of the town. Her mother had been exceedingly beautiful, and, though poor by birth, had been exalted to great honour and dignity, as the wife, or favourite concubine, of a petty rajah, who, by virtue of his comparative wealth, was looked upon as the principal man of the town; but he was a dissipated, debauched character, according to his wife's account, and she, therefore, thought it no sin to decamp from his bed and board, and furnish herself with a more sober, though less consequential, lord and master; and being in fear of vengeance from him upon whom she had turned her back, she quitted the neighbourhood and fled with her new spouse to Almora. Here they continued to live in peace and happiness for several years, having a bond of unity in the existence of a little daughter, who was considered the beauty of the place.

When the daughter had arrived at the age of ten years, she was one day playing, with others of her acquaintance, in the neighbourhood of the temples, when she was accosted by an old man, in the guise of a *fakhr*, who asked her many questions about her father and mother, their names and history; the child unhesitatingly gave the religious man all the information in her possession, and further told him that her father lay at home sick of an ague, which no medicine would cure. Upon this the holy professor tendered his services, and was gladly conducted by the little girl to the habitation of her parents, who, unsuspecting of evil, thankfully received the advice and remedies which he proffered them.

The drugs having been administered, the symptoms of the patient grew more and more alarming; but the loving pair were comforted by the fakhr's assurances that all would be well, and that a very few hours would suffice to free the sufferer from his malady. In company with the beautiful matron,—who, contrary to the general rule among eastern women, was still fascinating, even though she had been ten years a mother and twice a wife,—the disinterested old priest sat and watched the sick man, giving him from time to time fresh draughts to quench his thirst; until at last, as midnight approached, the patient declared his conviction that life was fast ebbing, and would no longer credit the assurances of his physician. The old stranger was still arguing the point with him, when suddenly the poor man's features became dreadfully con-

vulsed, and after lingering about an hour in the most exquisite torment, he expired, affirming with his last breath that the fakhr had poisoned him.

"Even so," said the disguised rajah, for it was he, the lady's former lord; "even so, I have poisoned you; would that your pangs had been doubly, aye, tenfold more excruciating. And now, Luchmi," said he, turning to his *quondam* love, "what better fate do you expect from your injured master? Your nose is my first demand, and your matchless daughter is the next;" and then, at his command, the hut was immediately filled with armed men.

The beautiful Luchmi was gagged and bound, and her ruthless captor, with his own hand, severed her nose from her face; she was then placed on horseback, under the charge of one of the rajah's followers, and was conveyed away, the daughter knew not whither; certainly with no very happy purpose, for nothing of love or tenderness was seen in the tyrant's bearing. There can be little doubt that, if suffered to live, she must have been confined for life, her only lot protracted misery; but there is better reason to believe that the ruffian would have destroyed her, when the heat of his reproaches and abuse had in a measure evaporated.

As for the poor child Rahmea, she was carried to the rajah's zenana, and continued, for a few months, an unwilling concubine of the murderer of her father; but having made more than a few attempts at self-destruction, she was ultimately cast adrift upon the wide world, with no fortune but her native comeliness. This gave her value in the eyes of one of the rajah's dependants, who obtained permission to take her into his house; and business soon after carrying him to Delhi, he disposed of her to my servant, Secundur Kahn, for the trifle above mentioned, being wearied of the poor girl's unbending indifference.

At the time that Secundur Kahn related this tale to me, the girl had become greatly attached to her master, having been with him about six years, and being the mother of three fine children. I expressed a wish to see her, and my servant instantly complied. She was quite as handsome as he had described her; but I could elicit from her no intelligible replies to my inquiries touching her history, or that of her mother. This, apparently, did not arise from shyness or stupidity, but from a disinclination to converse upon the subject with a stranger; and therefore I forebore to probe her further.

AN ADVENTURE OF THE STOCK EXCHANGE.

(From the Great Metropolis, second series.)

As illustrative of the sudden and singular vicissitudes of fortune which men sometimes undergo in that place, I may mention a curious

instance in the case of Mr. F——, the present proprietor of one of the most extensive estates in the county of Middlesex. He had been for

some years a member of the Stock Exchange, when, on becoming unfortunate, he had to suffer the indignity of having his name chalked on the black board; an indignity to which poverty more frequently than dishonourable conduct is subjected. The loss of a handsome fortune, coupled with the treatment he had received from the committee, worked his feelings up to such a state of frenzy, that chancing to pass London Bridge a few days after the battle of Waterloo, he, in his despair threw the last shilling he had in the world over the bridge into the water. For a few moments afterwards he stood motionless on the spot, leaning over the parapet, and gazing vacantly on the water. The emotions which then passed through his mind were of a nature which no second party could describe; and which, indeed, even he himself could not by possibility convey, with any thing like their vividness or power, to the minds of others. His predominating feelings—but no idea can be formed of their burning intensity—were those of envy of the insensate stones, and of a wish that he himself were, like his last shilling, at the bottom of the river. That moment, but for the crowds of persons who were passing and repassing, he would have thrown himself over the parapet of the bridge, and ended his woes by ending his existence. From that instant, he did form the purpose of committing suicide; and he began to move slowly towards home with that view. Before he reached the other end of the bridge, he was met by a Frenchman with whom he had been on terms of great intimacy. He would have passed by the Frenchman, so absorbed was he with the wretchedness of his condition, without recognising him. The latter, however, advancing towards Mr. F——, seized him by the hand, and inquired how he was. He managed to lisp out an "O, how are you?"

"This is a most important affair to both countries," said the Frenchman.

"What affair?" inquired the other, partially recovering himself from the frightful reverie to which he had been giving way.

"Why the great battle," observed Monsieur.

"The great battle! What great battle?"

"The battle of Waterloo."

"You are surely dreaming. I have not heard a word about it: the newspapers make no mention of any battle having been lately fought."

"I dare say they do not. How could they? Intelligence of it has only reached town within the last two hours. The foreign secretary and the French ambassador alone know any thing of it. Government have received the tidings of it by telegraph: it is not an hour since I parted with the French ambassador, from whom I had the information: Napoleon is signally defeated."

Mr. F—— felt as if he had started from a deep sleep. He felt as if he had become a new man. The advantage to which such important

intelligence might be turned on the Stock Exchange, the scene of so many disasters and so much degradation to him, immediately shot across his mind.

"And the battle was an important one?"

"Most important," said the Frenchman, with great emphasis. "It will prove fatal for ever to the prospects of Bonaparte. His usurpation is at an end," he added, with evident joy, being a great adherent of the Bourbon family.

"Were the numbers on either side great?"

"I have no idea of the exact numbers, but the battle was the greatest which has been fought in modern times, and it lasted a considerable part of three days."

"Mr. F—— cordially shook the Frenchman by the hand, and said he would call on him in a day or two. Hastily returning to the city, he hurried to a certain firm on the Stock Exchange, informed them that he had just become exclusively possessed of some important information, and expressed his readiness to communicate it to them on condition that he should receive the half of whatever profits they might realise on any operation they might have in the Stock Exchange in consequence of that information. They agreed to his proposal: he told them the result of the battle of Waterloo: they rushed into the market and purchased consols to an enormous amount. In the meantime Mr. F—— proceeded to another large house, and told them also that he possessed information of the most important character, of which he was sure they had heard nothing. They admitted they knew of nothing that was not in the public prints. He made the same proposal to them he had done to the other firm; they also, not supposing Mr. F—— had spoken to any other party on the subject, at once closed with the offer, and, on the intelligence being communicated to them, one of the partners called the other aside—there were only two in the counting-house at the time—and whispered to him, not on any account to let Mr. F—— out of his sight, lest he should allow the important intelligence to transpire to some one else—adding that he would that instant hurry to the Stock Exchange, and employ various brokers to purchase consols to a large amount. "You'll recollect what I have said," he observed to his partner, as he hastened out of the counting-house. "I'll take special care of that," said the other. "Leave such matters to me," he added in his own mind. A thought struck him. "Mr. F——, will you just step into the parlour," pointing the way, "and have a lunch?" Mr. F—— assented. They both proceeded to an apartment in another part of the house. A lunch was brought. Mr. F——, whose state of mind had deprived him of all appetite for some days past, now eat rather heartily. While busy with the things set before him, the other, rising from his seat said, "You'll excuse me for a moment, Mr.

F——, while I transact a small matter in the counting-house." "Certainly," said Mr. F——, "take your time." The other quitted the room, and, on getting to the outside, locked the door, unknown to Mr. F——, and put the key in his pocket. In about half an hour the first partner returned from the Stock Exchange, and stated that the funds had already, from some cause or other, risen in an hour two or three per cent. The cause, it is unnecessary to say, was the immense amount of consols which had been purchased by the first house to whom Mr. F—— gave the information. Both partners proceeded to the apartment in which they had shut up their prisoner, and apprised him of the rise which had taken place, adding that they did not think it advisable to purchase at the advanced price. He urged them to do so, expressing his firm belief

that when the news of so important a victory by the allied powers had been received, the funds would rise at least ten or twelve per cent. The parties acted on his advice, and made immense purchases. The event justified the soundness of Mr. F——'s counsel, and the accuracy of his opinion: for on the day on which intelligence of the battle was made general, the funds rose to the amazing extent of fifteen per cent., which is the greatest rise they were ever known to experience. Mr. F——'s share of the profits between the two houses in one day exceeded 100,000*l*. He returned next day to the Stock Exchange, and very soon amassed a large fortune, when he had the wisdom to quit the place for ever, and went and purchased the estate I have alluded to, which he still possesses.—(Vol. ii. pp. 64—71.)

THE ACCESSION TO THE THRONE.

Our readers are all acquainted with the fact of the decease of our venerable and beloved monarch William IV., and the happy accession of our lovely queen Victoria. We have judged it desirable to place on record the following articles referring to these events; the first of them was written by one of our own correspondents for a morning paper; for the latter we are indebted to the pages of the "Athenaeum."

THE DEATH OF KING WILLIAM IV.

THE shades of death have closed around our king,
He with his fathers sleeps, in hope reposing,
And British hearts their mournful tribute bring,
In tears of love their grief sincere disclosing.

His sway, benignant, merciful, and kind,
Will long to grateful memory endear him;
History his amaranthine wreath shall bind,
And generations yet unborn revere him.

The negro free, his broken chain surveys,
Thinks of the monarch who so nobly saved him,
And in the falling tear his love displays,
Forgets the tyranny that long enslaved him.

The culprit doomed to die his mercy knows,
And lives to bless that pity which restored him;
Before his Maker's footstool lowly bows,
Seeking the grace which life and hope afford him.

The father of his people, and the friend
Of all mankind, justice to none denying;
His subjects' equal rights proud to defend,
Corruption's herd of sycophants defying.

Reform—the lasting glory of his reign,
And Britain's long-despaired regeneration:
Tyrants shall now confederate in vain
To trample down the bulwarks of the nation.

Reform—the key-stone of that lofty arch,
Fixed on our ials to his renown immortal,
Through which the sons of freedom dauntless march,
And leave oppression dying at the portal.

Camdenwell, June, 20, 1837.

R. S.

THE YOUNG QUEEN.

"THIS awful responsibility is imposed upon me so suddenly, and at so early a period of my life, that I should feel myself utterly oppressed by the burden, were I not sustained by the hope that Divine Providence, which has called me to this work, will give me strength for the performance of it."—*The Queen's Declaration in Council.*

THE shroud is yet unspread
To wrap our crowned dead;
His soul hath scarcely hearkened for the thrilling word
Of doom;
And death, that makes serene
E'en brows where crowns have been,
Hath scarcely time to meeten his for silence of the
tomb.

St. Paul's king-dirging note
The city's heart hath smote.
The city's heart is struck with thoughts more solemn
than the tone—
A shadow sweeps apace
Before the nation's face,
Confusing, in a shapeless blot, the sepulchre and
throne.

The palace sounds with wail,
The courtly dames are pale,
A widow o'er the purple bows, and weeps its splendour
dim;
And we who clasp the boon
A king for freedom won,
Do feel eternity rise up between our thanks and him.

And while all things express
All glory's nothingness,
A royal maiden treadeth firm where *that* departed
trod.
The deathly-scented crown
Weighs her shining ringlets down;
But calm she lifts her trusting face, and calleth upon
God.

Her thoughts are deep within her;
No outward pageants win her
From memories that in her soul are rolling wave on
wave;

Her palace walls enring
The dust that was a king ;
And cold beneath her tender feet she feels her father's
grave.

And one as fair as she,
Unreck'd of cannot be,
Who held a lifeless babe instead of all a kingdom's
worth.
The mourned, blessed one,
Who views Jehovah's throne,
Aye, smiling to the angels, that she lost a throne on
earth.

And eke our youthful Queen
Remembers what has been,
Her childhood's peace beside the hearth, and sport
upon the sod !
Alas ! can others wear
A mother's heart for her ?—
But calm she lifts her trusting face, and calleth upon
God.

Yea ! call on God, thou maiden
Of spirit nobly laden,
And leave such happy days behind, for happy-making
years !
A nation looks to thee
For steadfast sympathy—
Make room within thy bright clear eyes, for all its
gathered tears.

And so the grateful isles
Shall give thee back their smiles ;
And as thy mother joys in thee, in them shalt thou
rejoice ;
Rejoice to meekly bow
A somewhat paler brow,
While the King of kings shall bless thee by the
British people's voice !

E. B. B.

VICTORIA'S TEARS.

"O maiden, heir of kings,
A king has left his place ;
The majesty of death has swept
All other from his face.

And thou upon thy mother's breast,
No longer lean adown—
But take the glory for the rest,
And rule the land that loves thee best."
The maiden wept ;
She wept, to wear a crown.

They decked her courtly halls—
They reined her hundred steeds—
They shouted at her palace gate,
"A noble Queen succeeds !"
Her name has stirred the mountains' sleep,
Her praise has filled the town :
And mourners, God had stricken deep,
Looked hearkening up, and did not weep !
Alone she wept,
Who wept, to wear a crown !

She saw no purples shine,
For tears had dimmed her eyes :
She only knew her childhood's flowers
Were happier pageantries !
And while the heralds played their part
For millions shout to drown—
"God save the Queen," from hill to mart—
She heard through all, her beating heart,
And turned and wept !
She wept, to wear a crown.

God save thee, weeping Queen,
Thou shalt be well beloved !
The tyrant's sceptre cannot move
As those pure tears have moved !
The nature, in thine eyes we see,
Which tyrants cannot own—
The love that guardeth liberties.
Strange blessing on the nation lies,
Whose sovereign wept,
Yea, wept, to wear its crown.

God bless thee, weeping Queen,
With blessing more divine ;
And fill with better love than earth's
That tender heart of thine ;
That when the thrones of earth shall be
As low as graves brought down,
A pierced hand may give to thee,
The crown which angels shout to see.
Thou wilt not weep,
To wear that heavenly crown. E. B. B.

REVIEW.

THE REV. ROWLAND HILL.

ARTICLE III.

We have in this section of the work several striking facts illustrative of Mr. Hill's great success as a preacher, especially in awakening consideration and deep feeling in the minds of the thoughtless and careless. The following presents an affecting scene, drawn by the person who witnessed it.

"After Mr. Hill had preached for the Missionary Society in Princess-street chapel, Devonport, two tall, venerable-looking men, upwards of seventy years of age, appeared at the vestry door. After a short pause they entered, arm-in-arm, and advanced towards Mr. Hill, when one of them, with some degree of trepidation, inquired, 'Sir, will you permit two old sinners to have the honour to shake you by the hand ?' He replied, with some reserve, 'Yes, sir ;' when one of the gentlemen took his hand, kissed it, bathed it with tears, and said, 'Sir, do you remember preaching on the spot where this chapel now stands,

fifty years ago ?' 'Yes I do,' was the reply. The old man then proceeded to say, 'O sir, never can the dear friend who has hold of my arm or myself forget that sermon. We were then two careless young men in his majesty's dockyard, posting to destruction as fast as time and sin could convey us thither. Having heard that a young clergyman was to preach out of doors, we determined to go and have some fun ; we loaded our pocket with stones, intending to pelt you ; but, sir, when you arrived our courage failed ; and as soon as you engaged in prayer we were so deeply impressed, that we looked at each other and trembled. When you named your text, and began to speak, the word came with power to our hearts ; the tears rolled down our cheeks ; we put our hands into our pockets, and dropped the stones one after another, until they were all gone ; for God had taken away the stone from our hearts. When the service was over we retired, but our hearts were too full to speak until we came near to our lodgings, when my friend at my elbow said, 'John, this will not do, we are both wrong. Good night.' This was all he could utter. He retired to his apartment, I to

mine; but neither of us dared to go to bed, lest we should awake in hell. From that time, sir, we humbly hope we were converted to God, who, of his infinite mercy, has kept us in his ways to the present moment. We thought, sir, if you would permit us, after the lapse of half a hundred years, to have the pleasure of shaking you by the hand before we go home, it would be the greatest honour that could be conferred on us.' Mr. Hill was deeply affected, the tears rolled down his venerable cheeks in quick succession; he fell on the necks of the old men, quite in the patriarchal style; and there you might have seen them, locked in each other's arms, weeping tears of holy joy and gratitude before the Father of mercies. The writer is aware he cannot do justice to the scene, though he feels, at this distance of time, something like celestial pleasure in recording what he witnessed."—(pp. 272-274.)

Early in the present century Mr. Hill felt deeply interested on the subject of vaccine inoculation. He wrote a pamphlet in its defence, became a member of the Royal Jennerian Society, and enjoyed the pure satisfaction of knowing that, next to Dr. Jenner, he had personally saved more lives than any other living person. This is his testimony: "I have now solemnly to assert, that having inoculated, in different places, not less (fewer) than 4,840 subjects, besides 3,720 and upwards which have been inoculated in the Surrey chapel school-room, I have not as yet met with one single failure."

Mr. Jones tells us, that Mr. Hill "was the decided friend of liberal men and liberal measures; and we are glad to find him ranging himself with the advocates of religious liberty. On the passing of the Catholic Relief Bill, Mr. Jones relates an amusing anecdote. Among his congregation, on this point, there were different opinions entertained. There were a few who greatly feared that this measure would be followed by the fires of Smithfield.

"The lions are now safe," said they, "let us not let them out of confinement." There were others who took different views of the question, and had no fears as to the effect of the measure. The press, they thought, was their protection against the waning power of the pope. At that time the discussions in parliament greatly excited the public mind. Mr. Hill was requested, by both parties, to preach a suitable sermon on the subject. Each side expected an advocate of his own peculiar views. The good man, on the Sabbath morning, took a suitable text, and dwelt on very general topics. Just before the close of the sermon he archly remarked, "There are some of you saying, We should like to hear the old gentleman's opinions on the subject of catholic emancipation. Should you, —oh? The old gentleman is too old to give them. If he should do so, and they were not like your own, you might say, Poor dear man, he gets old, and his intellects are rather dull." Then raising himself in the pulpit, and appearing as if anxious to lull the fears of the timid, he added, in a deep and mellow majestic tone, "But, to tell you the truth, beloved, I don't think that the faggot will grow for the next hundred years, which will burn the next protestant martyr to popish intolerance in our country."—(pp. 366, 367.)

Mr. Hill was the uncompromising foe of slavery; and employed against it all the power and influence he could command. He once stated the following fact:—

"A poor negro called on me some years since, and told me that 'his massa beat him very bad,' and inquired what he should do. 'Do!' said I, 'why, run away from your cruel master as hard as you can.' 'Ah! massa,' replied the negro, 'we cannot run away, for me poor slave.' 'Slave! no such thing; the moment you touched British ground you were free; we have no slaves here.' The poor negro, delighted with the intelligence, said, 'Then me will run away, as good massa say;' and off he went accordingly."—(pp. 372.)

Mr. Jones justly remarks, "The History of Mr. Hill is intimately connected with the rise and progress of many of the religious and benevolent institutions of the times in which he lived." These, especially such as were associated with the congregation at Surrey chapel, he has enumerated. This part of the work conveys some information, and details a full proportion of twaddle and gossip. This indeed is the great blemish of the memoir. Mr. Jones was not sufficiently acquainted with Mr. Hill's contemporaries; we therefore read venerable names, but there are no

reminiscences of these men, no traits of their character.

It is recorded in these pages, highly to the honour of Mr. Hill, that "immediately after the erection of Surrey chapel he was anxious to train up his newly formed congregation to the habit of 'devising liberal things,' and he did not labour in vain in effecting his object. His church became a local blessing,—a fountain whence the waters of life flowed to refresh the neighbouring wilderness. It was a repository to which the lame, the halt, the sick, and the blind repaired, and met with a rich supply for all their temporal necessities. The annual contributions at Surrey chapel, for many years averaged nearly £2000, in addition to the subscriptions for supporting the preaching of the Gospel."

The biographer of Mr. Hill has devoted a chapter to the exhibition of his opinions on ecclesiastical polity.

No doubt the subject of this Memoir was, in principle and feeling, a churchman; and if he had followed the natural bent of his mind, and commenced his ministry as a regular clergyman, in all probability he would have been as stiff and as exclusive as the generality of the evangelical clergy of the present day. An impulse which he could not resist, at the beginning of his career, stamped irregularity upon his clerical name, drove him out of his course, and compelled him for ever after to move in an eccentric orbit. His opinions of ecclesiastical polity naturally arose out of his practice: we regard with admiration and gratitude the latter; and though we are far from adopting, we are not disposed very severely to censure the former. It was well for thousands of sinners, perishing for lack of knowledge, that Mr. Hill had not the fear of bishops, nor the love of filthy lucre, in the form of preferment, before his eyes, when he determined to go every where, and to consecrate every place by preaching the Lord Jesus. For our parts, we should be glad to see hundreds of his clerical brethren following his example. While the necessity, instead of diminishing, rather grows upon us, and an ignorant, unchristianised population are increasing by thousands, and perishing in a tenfold ratio, surely the clergy who undertake the cure of these souls, and who must answer for them another day, may be well excused if they are found in highways and hedges, in courts and allies, in garrets and in cellars, labouring in their proper vocation. Official regularity, a nice conformity to clerical etiquette, may be pleaded by the mere man of the world, but bishops, rectors, and curates, who are moved by the Holy Ghost to take upon them the office of spiritual shepherds, must be also moved like their great Exemplar to go forth, to seek and to save those sheep which are lost. Mr. Hill, acting under the pressure of this necessity, made the world his parish, and resembled more the good Samaritan than his brother priests and Levites, who affected to be shocked at his clerical operations. But though in this he was encouraged by the conduct of the Dissenters, and availed himself of the toleration afforded them by the state, we are persuaded that he cordially hated dissent; and though he cultivated a catholic spirit towards his dissenting brethren and coadjutors, he would have found this a less difficult task if they had been Clergymen. It always appeared to us that, in all his intercourse with Dissenters, and especially with Dissenting Ministers, Mr. Hill regarded them with a patronising air. So have we seen a bishop stretch out his sleeve of lawn, and give his lordly hand to some hard-working brother of the craft. We say not this disparagingly of Mr. Hill; it was the infirmity of a good man, and to which, on some occasions, he rose superior. Nor did it ever affect his practical co-operation with any denomination of Chris-

tians who had catholicity enough to act with him on a scale of general usefulness. In every society, and among all religionists, he was a Christian; but among Churchmen he appeared a Dissenter, and among Dissenters a Churchman.

In the following passage we catch a glimpse of the man, in the anomalous position in which he delighted to place himself:—

"When I speak of episcopacy, I beg at all times to be understood as pleading for such a reduced episcopacy as was recommended by those learned and pious episcopallians, the archbishops Usher and Leighton, which they conceived was the episcopacy of the primitive church. Bishops then claimed no other power than was delegated to them by the elective voice of the presbyters and people at large. In the purer days of the church this election naturally fell on the most spiritual and wise of the body. Around him they voluntarily collected, as toward a centre; they gave an affectionate submission to him, as a father; and their government was thereby both strengthened and simplified.

"A mere shadow of such an episcopacy still remains in the English church; for upon the death of a bishop, the king gives his *conseil d'élire*, or 'leave to elect,' to the presbyters of the cathedral church, at the same time recommending a person for their choice; which recommendation they no more dare refuse than they dare to eat a red-hot salamander. One extreme generally produces another. However I might be disposed to vote for the reduction of the episcopacy of the English church, yet I had much rather be under the right reverend fathers in God with us, than under the jurisdiction of the most reverend mothers in God among the stricter Independents."*—(pp. 456, 451.)

In the next chapter,—which treats of the kind of church order and discipline adopted at Surrey chapel, and which, to be sure, is practical dissent, with one *real* ruling elder, and *that* the minister, with several nominal ones to agree with him in all things,—we have several useful hints; and we are not disposed to find fault with a system which, for more than half a century, has worked well, and united thousands together in the bonds of Christian fellowship, for their mutual advantage, and the wider diffusion of true religion around them.

The following is amusing:—

"At the time when Mr. Hill had completed his plan for building almshouses for the reception of aged female Christians, there was an alleged revival of religion among the venerable women, some of whom were anxious to join the church. On one occasion a poor female made her appearance at the church-meeting, when Mr. Hill made his usual inquiry, 'Is there any friend present who wishes to be proposed as a member?' The aged dame rose, and made an unusually low courtesy. The following dialogue then took place:—

"Minister. So you wish to join the church?
 "Applicant. If you please, sir.
 "Min. Where have you been accustomed to hear the Gospel?
 "Ap. At your *blessed* chapel, sir.
 "Min. O, indeed! at my *blessed* chapel! dear me! and how long have you attended with us?
 "Ap. For several years.
 "Min. Do you think you have got any good by attending at chapel?
 "Ap. O yes, sir! I have had many *blessed* seasons.
 "Min. Indeed! Under whose ministry do you think you were led to feel yourself to be a sinner?
 "Ap. Under your *blessed* ministry.
 "Min. Indeed! And do you think your heart is pretty good?
 "Ap. O, no! sir, it is a very bad one.
 "Min. What! and do you come here with your bad heart, and wish to join the church?
 "Ap. O! sir, I mean that my heart is not worse than others; it is pretty good on the whole.
 "Min. Indeed! that's more than I can say; I'm sure mine's bad enough. Well, have you heard that we are going to build some *blessed* almshouses?
 "Ap. Yes, sir, I have.
 "Min. Should you like to have one of them?
 "Ap. Dropping a very low courtesy, Yes, sir, if you please.
 "Min. I thought so. You may go about your business, my friend, you won't do for us."—(pp. 475, 476.)

Though an enemy to indiscriminate communion, yet, we are told, he could unite with *all* Christians at the table of the Lord:

"Still it would have been well," adds his biographer, "had he believed that conscientious motives alone induced his strict-

communion Baptist brethren to keep him from their fellowship. On one occasion he had preached for a Baptist minister on the ordinance Sabbath, and afterwards took his seat in one of the pews. 'I am sorry, sir,' said one of the deacons, 'you cannot sit down at our table.' 'At your table!' replied Mr. Hill, 'I thought it was the Lord's; and I know I should be welcome there.' He then retired from the place."

We cannot follow the Memoir through all its topics, criticisms, and observations; but we feel ourselves detained and delighted with those portions which relate to the closing scenes of the life of this venerable servant of Christ. The last letter written with his own hand is exceedingly interesting, on account of the calm view which the writer takes of his past ministerial labours:—

"Wotton-under-edge, Aug. 2, 1831.

"My dear friend,

"Long as I have been enabled to resist the imperious consequences of old age, yet I find at length I must submit; and no wonder—before the conclusion of this month I shall pass into the eighty-eighth year of my age. During this last winter I have been visited with such an inflammation in one of my eyes, that I can scarcely see what I write, nor can I read the plainest-printed chapter in the Bible but with difficulty, unless by a previous recollection of its contents; add to this, an injury done to the shin-bone, during the missionary week, has greatly crippled me, while a small open wound still continues to demand attention and care. I am at length compelled to have a young friend with me to attend to the short services belonging to this place alone, while a few efforts, occasionally, to serve some of the smaller congregations in the vicinage, seem to be the utmost my exhausted strength will admit. After this, you will naturally expect me to add, that an autumnal visit to Bristol cannot be expected from me, as I now feel it cannot be accomplished by me. I now feel that I cannot do the things that I would, and it grieves me that I must at length give up; and while I am obliged to cease from what is called labour, may I wait with holy patience for my eternal rest in Christ. That day, with me, I am now sure, is very near at hand. That Gospel which I have preached, I may say, many thousands of times to others, is now the only solid resting-place of my soul; though in this letter I scarcely see what I write, yet in this I feel what I write. Though I don't lament over what I have preached, yet I greatly lament that I have not preached the same truths with more spirituality, fervour, and devotedness of heart. Though I cannot charge myself as having been a lazy drone, yet, as a busy bee, O that I had been better taught how to collect the sacred honey from those hills from whence all our hopes of salvation come.

"Though, while I write, I scarcely see what I write, yet one word shall further be written, as flowing from the heart of

"Yours, very affectionately,

"ROWLAND HILL.

"Love to your family and friends."

—(pp. 593, 594.)

The April of 1833 was a memorable period to Mr. Hill and his numerous and affectionate friends. From the second of that month till the eleventh, he was rapidly declining to the tomb, or rather, hastening towards his crown of heavenly glory.

"On the Wednesday before his death," remarks Mr. Weight, "I enjoyed much conversation with him. He told me, if he could live over his life again, he would preach the very same truths as those he had been accustomed to deliver. 'I have to deplore nothing but that I have not preached them with more of the Holy Ghost sent down from heaven.' I asked him if he felt his personal interest in Christ. 'I can see more of the Saviour's glory than of my interest in him. God is letting me down gently into the grave, and I shall creep into heaven through some crevice of the door.'

"In the evening his mind occasionally wandered. He called up his servant, and desired him to read to him. He read the fifth chapter of 2 Corinthians. Mr. Hill commented on the fourth and seventeenth verses. About ten that night he sent for me to conduct family prayer by his bedside, refusing to rest until I had done so. On Thursday the collection of phlegm in his chest prevented his speaking very audibly; but I could hear him softly repeating verses of Scripture and hymns, particularly 'Eye hath not seen, nor ear heard, neither have entered into the heart of man the things which God hath prepared for them that love him;' and, 'Christ also hath once suffered for sins, the just for the unjust, that he might bring us unto God.'

"About ten o'clock that morning I repeated to him a verse that had often been on his lips—

'And when I'm to die,' &c.

He showed me that he understood what I was saying, but he could not articulate. And this was the last evidence of sensibility he gave. At half-past five the same day, (11th of April,) without a sigh, groan, or struggle, he gently expired.

* First Journal, p. 108.

"How bless'd the righteous when he dies,
When sinks a weary soul to rest!
How mildly beam the closing eyes!
How gently heaves th' expiring breast!

So fades a summer cloud away,
So sinks the gale when storms are o'er,
So gently shuts the eye of day,
So dies a wave along the shore."

—(pp. 617-619.)

We have no wish to sketch the character of the Rev. Rowland Hill; we may, however, observe, that its features are strongly marked, that its lights and shadows are equally prominent: if he was generous, he was also apt to exact obsequiousness for kindness; if he was zealous, he was likewise vain, and remarkably open to flattery; if he was sincere in his attachments, there are those who, for twenty years, were made to feel that he was equally vindictive in his resentments; and it is well for Mr. Jones that the good man whose eulogy he has pronounced, with some slight reference to his frailties and imperfections, is in a world where his book will not reach him, or where, if its contents be known to him, he is equally above its praises or its censures.

Mr. Jones has made a passing allusion to an admonitory epistle which was addressed to Mr. Hill in consequence of his publishing a second edition of his "Sale of Curates." This subject, if introduced at all, should have been fairly and honestly treated. Mr. Jones's quotation from Mr. Ball's pamphlet is not so creditable to his candour as we could wish. The statement it contains is substantially false. Mr. Hill was cognisant of the publication of the second edition of the "Spiritual Characteristics;" it was printed by a sycophant who was always hanging about Surrey Chapel-House, the printer and counsellor of Mr. Hill at the time; and copies of this very edition were distributed, at Mr. Hill's residence, to his personal friends, and disposed of more openly in a more sacred place. The admonitory epistle, which originated in no personal enmity to Mr. Hill, was, in part, the production of a very young man, who afterwards withdrew it from circulation, out of regard to Mr. Hill's feelings, and who, at the same time, declared that he had the highest respect for Mr. Hill, and had, in the publication in question, merely treated him as he had treated the clergy of his own church; and that as Mr. Hill viewed it as a personal attack, likely to affect his usefulness, he was willing, in every way in his power, to neutralise the wrong he had unwittingly inflicted. His regret, we have reason to know, was sincere; but his offence was never forgiven. The admonitory epistle contains nothing more severe, either in spirit or manner, than is at least insinuated by Mr. Jones in the following passages, which we extract from the Memoir:—

"Dr. Jamieson, perhaps, was not far from the truth when he called our departed friend, 'a bigot for liberty!'"

"Mr. Hill was conversing with an Independent minister, when he remarked, with much feeling, (*temper*), 'I hate Independency.' 'Yes, sir,' replied his Congregational friend, 'and you hate dependency just as much.' This was about the truth." —(p. 342.)

"Amidst all that was 'lovely, and pure, and of good report,' there were some things that for a season appeared to cast a cloud over this 'burning and shining light.' He certainly too often listened to flatterers, who sometimes made him an easy prey to their cunning and designing purposes. At Surrey chapel there were a few persons who kept near this weak side of the holy man. Hence they always expressed their regret to him at his absence; and asserted that no supply preached like him. After these premises, out came some unkind expressions against certain individuals; and in this way they often succeeded in their object. If they knew that Mr. Hill had an unfavourable opinion of a minister, they would assiduously collect all the news about him; and the pastor's mind becoming prejudiced, he appeared to possess an unforgiving spirit. His antipathies became very strong when once they had possession of his mind. On the other hand, he was often unguarded in the selection of

his friends, and received, more than once, a scorpion into his bosom. There are many persons at Surrey chapel who can remember a lamentable instance of this kind, which, for a season, led Mr. Hill to appear in an unfavourable light to several esteemed clergymen." —(pp. 339, 340.)

"In intercourse with the venerable man, it was found that he expected that his friends should possess some practical knowledge of the doctrine of passive obedience. In reference to a devoted minister whom he had been the means of leading to God, and who possessed much independence of mind, Mr. Hill shrewdly remarked, 'He is a nice lad, but he will have his own way.'" —(p. 341.)

Earwiggers and toad-eaters gained too easy access to the interior of Surrey Chapel-House; and we could "tales unfold" of their pernicious influence over a mind naturally candid, and a heart more than usually susceptible of the kindlier feelings of humanity. The history of the admonitory epistle would furnish two or three of these, which, if publicly known, would involve the parties in utter disgrace.

We refer to the work from which we have quoted thus copiously, for what appear to us the most correct views of Mr. Hill's talents as a preacher, and works as a writer.

One anecdote Mr. Jones has not correctly reported, and we will, therefore, give it as we heard it from Mr. Hill's own lips. It refers to his travelling with Mr. Whitefield, and to a circumstance highly characteristic of that extraordinary man. On one occasion Mr. Hill remarked, "I accompanied Mr. Whitefield to visit a poor woman whose clothes had caught fire, and who was languishing in a sorry apartment, to which access could only be obtained by means of a ladder. We ascended together. Mr. Whitefield endeavoured to amuse the poor sufferer, who appeared to be in a state of stupor; but after various vain attempts, he left her bedside, which she perceiving, earnestly called out to him to return. He kindly obeyed; but, exhausted with the effort, she had sunk again into apparent insensibility. The good man prayed, and then renewed his endeavours to call her attention to her fearful condition and prospects, but with no better success. Several times he essayed to quit the scene, and as often was he detained by the momentary excitement and imploring cries of the woman. At length," said Mr. Hill, "I gently urged him to depart, when, hearing the same request, urged in the same affecting manner, he replied to my entreaties, 'No, I cannot go, she still calls me back; is it not said, 'He is able to save to the very uttermost?' and who but a God can tell how far the uttermost of a God can go?' These words reached not only the ear, but the heart of the dying person, and she was enabled to listen to the words of life eternal."

Mr. Jones's version of this incident is in the fifty-second page of the Memoir.

Among the specimens of Mr. Hill's extemporaneous and unstudied addresses, the following ought to obtain a place:—

"One Friday morning, when he was surrounded by his old women, as he was accustomed facetiously to call his hearers on those occasions, he was familiarly describing the difference between a merely superficial profession and its reality in the heart, when tried by tribulation and suffering. 'The empty professor of religion,' said he, 'is a butterfly—all surface; the pattering shower of a summer's day will beat it hither and thither; and after a vain struggle it descends, tangled and soiled, to the earth, from whence it cannot rise again. But the Christian is a dove, a strong-plumaged bird; she will meet the thunder-storm in her course, and will tack about and tack about, and give even the winds to know that she has a nest, a home,—that her heart is there, and that she must gain it.'"

It is to be regretted that Mr. Hill has not yet met with a biographer who has given us any notion of his colloquial powers. His table-talk, properly winnowed, and judiciously managed, would place him high among the extraordinary men of his age.

THE DISCOVERY OF AMERICA.

Be not alarmed, gentle reader; we shall not renew the dispute, as to whether the new world was first reached from the old, by Christopher Columbus, by Amerigo Vespucci, or by the Cambrian Madoc, whose vessel, according to Southey,—

“Laboured on the labouring sea;”

and, according to those who have “judgment” without any “vision,” was delivered of an idle story, but who, according to the pedigree, is said to have cultivated leeks in Arkansas, before the Atzec eagle crossed “the river of separation,” (Behring’s Strait?) or the children of the sun made their avatar on the banks of Titicua, to teach the red men of the south to make conquests and—cotton night-caps.

These matters, and all matters on which, from their indeterminate nature, words may be spoken without end, are no doubt

“Mighty motes to microscopic eyes,”

and precious in the sight of those who love a subject the better the more incomprehensible it is, well knowing that, though the javelin of truth can and may pierce through the plated mail of the most stubborn error, it cannot so much as “play dirl” on the flimsy and unreal shade of absolute ignorance.

We waive those small matters of antiquarian wrangling, the decision of which, one way or the other, would not benefit the world or any of its inhabitants a single chaff, which the winds have winnowed round the globe; and we shall conclude that the truly illustrious Columbus *was* the first navigator whose keel so divided the waters of the Atlantic as to reveal the wonders of America to the nations of the east. But still, after having thus put aside and thus admitted, one question remains in its full force.

“Did *Columbus* discover America?” Was this addition to the world, as known to the nations of the east, a matter of what we call mere human discovery; or did it form a link in that more mighty chain of events, in which we can alike trace the physical and the moral government of the Omniscient and Almighty Ruler? We do not deny that Columbus was the instrument in this; and we think that any one who reads the memoirs of Columbus will be ready to admit that there was in him a disposition toward this work, and a preparation for the accomplishment of it, which cannot be accounted for upon any theory of mere human nature. It would not, we think, be difficult to prove from these memoirs alone, that Columbus was an instrument specially prepared, because specially appointed for this work, inasmuch as the events of his life

cannot be brought into a connected series of causes and effects, upon the ordinary judgment and doctrine of experience, which is the only rational foundation that we can have for actions which are wholly of human origin.

This, however, would be limiting to the case of one individual an argument which we feel to be perfectly general, and as important as it is general, though one which has been, rather unaccountably, overlooked, by those who could, and who should, have used it to very great advantage. Let us therefore, take the range of it a little wider; and in order that we may have a fixed centre, toward which all the parts of it may converge, let us state our proposition in a direct and categorical manner. It will stand thus:—

Before Columbus discovered America, there was a preparing of the people of the east to be fit colonists for America; and there was a preparing of that country for their reception.

It must be admitted, that there could be no human purpose or design in either of these preparations. That the people of the eastern continent could have any design or purpose of preparing themselves for the colonisation of the western, when they were in utter ignorance of its existence, is so monstrous an absurdity, that any attempt at its refutation would be quite thrown away. Yet we have illustrative instances upon a smaller scale, in the case of every man who, honestly and meritoriously, wins a distinguished name, of himself, and without the assistance of what we call the ordinary means; which means, by the way, often fail, and where they do succeed, the success is very often owing to causes which the parties are most solicitous to keep out of view.

It would be, if possible, still more absurd to suppose that the American continent prepared itself for the reception of the Europeans; for, besides the fact that countries can have no knowledge, *our* experience of countries is all the other way. If man slackens the hand of his working, wild nature returns and obliterates all the traces of his art. It is true that the earth must be adapted for his working, otherwise his labour will be in vain; but still he must work—there never was a civilised people who lived, or who could live on the produce of wild nature; and thus, whatever the natural capability of the earth may be, man must “know and do,” in the way of cultivation, and of every other means by which the comforts of civilisation, and the stimuli to improvement are obtained, otherwise he must remain in the wretchedness of the savage, which produces no comfort at the time, and is barren of every germ of improvement.

Still, there is a preparation of the earth for the labour of man; and if this has not been

made the labour is in vain. The grape and the fig from the cultivated trees are very different from these in wild nature; but still man must have the vine and the olive plant before he can improve them by culture. The evil, too, may be ameliorated, and the wild ox may be trained to labour on the farm; but in these cases, and in every case, there must be a preparation for man, before his labour can in any way prosper in his hands. This preparation cannot, in the nature of things, be of man himself, because it is of necessity prior even to the very first glimmering of knowledge on his part; and we need not add, that it cannot be of that which man is to improve, be it soil, plant, animal, or any thing else; for that these should have any knowledge, would be contrary to their very nature. There is but one other source to which we can look for the cause of this preparation; and, though we are sometimes prompted by our ignorance or our vanity to lose sight of it, it holds in every case, the small as well as the great—the moments of a humble man's life, as well as the discovery of a new continent, or the commanding of a world or system of worlds to arise out of nothing.

But though the glory of the working is to God alone, the tracing of the progress is for man's instruction, as well as the result, properly used, is for his advantage; and if we look with an eye of understanding at the history of the human race previous to the discovery of America, we shall find that these were the forecast shadows of something too mighty for having proper scope on the eastern continent and all its islands. The weights of military and mental slavery had pressed upon the human mind, and compressed it beyond the point of endurance; and it had begun to react, and gave proof that the time was on the wing when it should become the master principle, and be, in its turn, the instrument in ruling the world. This involves a consideration which ought never to be lost sight of, because there is consolation in it, both for individuals and for nations, even in the depth of the most grievous oppression that can be inflicted upon them by human means. In the antagonist powers of nature, where both are equally and immediately from and of the law of the Creator, we find that there invariably is a reaction, and that the excess of the one tends directly to awaken and give strength to its antagonist. The recession of the planet from the sun involves in it the cause of the return; and the return involves in it the cause of a new recession. The summer of nature actually brings on the winter repose; and the repose of the winter is the beginning of a new summer. It is the same whithersoever we turn; the one power accumulates a surplus which it hands over to the antagonist; and in the alternation of the two the life and action of the system consist.

Much more must there be a reaction in the

human mind against the slavery, whether of the sword or of superstition. These powers, which depress it, are wholly human, and partake of the finitude, the frailty, and the perishableness of all that originates with man. The mind, on the other hand, is the creature of God, and as such partakes of that inherent principle which, diversified according to their several natures, he has given to all his creatures as the law of their very being. Therefore, though it has not perhaps been studied to that extent which would bring it within the scope of our ordinary philosophy; and it is no easy study, we can easily see that there is a point at which the human mind must react, though the way in which this reaction displays itself is quite another matter. The reaction against the wand of the tyrant does not consist in drawing the sword of rebellion; and the fetters of superstition are not broken by arguments addressed to the abettors of that superstition. In many attempts of this kind the cure has proved to be worse than the disease, and in none has it been better. The elasticity must display itself in something new, which shall draw the mind out of the fetters; and men, the most essential human agents in this, may be, and indeed generally are, ignorant of the result of the mighty work which is so effectually forwarded by their labours.

This was very remarkably the case in that preparation of the people of Europe which preceded the discovery of America by Columbus. The induction might be made from the whole recorded history of the people of Europe, Western Asia, and Northern Africa; for though these people were often at war with each other, yet, in so far as they were civilised and knew each other, they were one people, their history was one history; and much as they fought and squabbled, they really worked together for one progress of the race, in what direction soever that progress might appear to be at any particular time.

To go into the details of this progress, in any thing like a satisfactory manner, would require years of labour and volumes of writing, for the subject is ample, and this view of it is wholly new, we must, therefore, content ourselves with the mere mention of a few points in the history of that century, the fifteenth of the Christian era, in which the discovery of America took place. In doing this we shall not notice the conflicts of kings or the squabbles of parties, for though these form the conspicuous part of the written works, they are the mere bubbles on the stream of history, borne by it, but not in any way originating or affecting its current.

In the early part of this, the fifteenth century, the spirit of inquiry led to the establishment of various universities which, though they now lag somewhat behind the tide of the present times, were useful in their day, and their institution is

still useful, as indicating a thirst for knowledge when they were founded. About the same time, the doctrines of the Reformation which had been taught by Wickliffe in England, forty years before, were kept alive by John Huss and Jerome of Prague. Painting in oil; and engraving and copperplate printing were invented. Printing from types, the grand means of giving extension and duration to knowledge, was invented. Engraving on wood was invented. The Portuguese felt their way along the vast coast of Africa, and discovered and doubled the Cape of Good Hope; and four years after this Columbus landed on St. Domingo. We have mentioned but a few particulars; but in the printing, the engraving, and the more extended navigation, we have the substantial rudiments of much of the greatness of modern times; and we must not omit, that the light which the early reformers had shown from the sacred volume caused the publication of the celebrated work, called "The Vulgate." Such were some of the means by which the people of the east were prepared; and they were by and for the people, without any apparent reference, *pro* or *con*, to their rulers, or to the system of government, civil or ecclesiastical. Had these been aware of the power of a fount of types, the name of John Guttenberg would have been on the list of martyrs.

The preparation of America for the reception of Europeans, is a matter in the history of which the facts are comparatively few; but few as they are, they are very striking. South and central America are the portions which have had the greatest influence on the character of the human race; and, therefore, it is to them chiefly that we must look. With the conduct of the Spaniards toward the native Indians in the mining countries, or with that of the agricultural colonists, of whatever nation, toward the most iniquitously imported people of Africa, we have, in the meantime, nothing to do; for, whatever atrocity there may have been in the management, there can be no question that the products of those veins and of that agriculture, gave a new and wonderful impulse to the human race, an impulse, the effects of which are increasing daily, even at the present time.

Now, we say, that there was a very obvious preparation in that part of the world. The mines we leave out of the question; because we are totally ignorant of the time when, and the process by which, metals are collected into veins or lodes, so that they may be available to the miner. In respect of the soil or surface of the country, the case, though still shadowy in itself, and perfectly indeterminate as to dates, is more within those analogies which have been established by observation.

In South America and the West India Islands, at the time of their discovery, there was a soil of the greatest fertility. But there were other

elements of successful cultivation wanting, and these could be supplied only by importation. The plants were wanting, and so were the animals. Sugar, now the most profitable in the agriculture of those parts of the world, is an importation; and so is coffee, and one of the cotton plants. There might, perhaps, have been found among the native plants all that was requisite in the way of vegetables; and the potato, with the dahlia, and countless other leading beauties of the garden, show that in the vegetable kingdom, South America had much to give, both for use and for ornament. But of no one of these did the natives avail themselves to the proper extent, until they were visited by Europeans; and even now many of the plants which have been introduced from that country are far superior in Europe to what they are in their native localities. This circumstance alone speaks volumes; because it shows that there is a preparation of distant parts of the earth for a growth of the plants of each other, superior to what each can have in its own; and as the transfer cannot be made without the intervention of man, the purpose of the Almighty would be incomplete, if we did not admit that he prepares the discoverer, and guides him on his way, whether the discovery be the first knowledge of the existence of a country, or the knowledge of how any one of its productions may be turned to valuable account on the spot, or what it can give and what receive, in order to increase the general value of the globe as the residence of civilised man, and make man stimulate man for mutual advantage, in every land which is visited by the sun.

Thus, when we examine this question, even in its merest beginnings, as we have very briefly done, (for our object is to stimulate the reader to reflection, not "to lull him with lectures,") so many results spring out of it, not only above all human anticipation, but beyond, and often contrary to, all human expectation, that we must come to the conclusion, that man is a mere instrument, even in those cases in which we are most disposed to give him full credit for being, of his own powers and without higher assistance, a discoverer or an inventor.

When we consider, with this view, the progressive history of the human race, and of the earth as adapted for their habitation, and for stimulating their powers, we cultivate a branch of what is called "Natural Theology," but ought to be called "The Harmony of Nature and Revelation," which is of far more importance than that which is drawn from one part of nature taken singly from all the parts together, without reference to man, or from the mere structure of the human body.

The progressive adaptation of central and South America for those animals which are indispensable in the right cultivation of the soil,

and their total absence from that part of the world previous to their introduction by Europeans, forms a very important part of the argument for a Divine Providence, in the discovery, the discoverer, and all the results, as affecting

the progress of the whole human race; but it is by much too important for being made a subordinate part of any one paper, we shall, therefore, take occasion to revert to it as a principal subject.

LADY HAMILTON'S GRAVE.

THE only thing respecting which I felt interested when passing through Calais, on my route for Italy, was to find out the spot where this female—who was under the protection of Lord Nelson, and the once-admired, courted, and flattered beauty—was interred, which is little known; and, alas! after having lived to experience want, disgrace, and scorn; and as to whom much had I heard in many parts of the Mediterranean.

The fate of this unhappy and—truth compels me to add—most unprincipled woman, might have supplied Johnson with a striking illustration for his admirable imitation of Juvenal's Satire; his nervous pen would have compressed into a few couplets her follies and infamies, the triumphs of her earlier career, the deep and bitter wretchedness of her closing life. To the pseudo liberal this will appear to be unwarrantably harsh, but the really charitable require not to be informed, that to hold up such characters to reprobation, to exhibit them as wholesome warnings to the inconsiderate and inexperienced, is not unjust severity to the dead, but mercy to the living. Let those of her sex who may be thrown into circumstances at all similar, profit by that lesson she has bequeathed to them. With such an example before their eyes, let none flatter

themselves that they shall be able to tread the same path without encountering similar perils. So flattering was the aspect of Lady Hamilton's fortune, it would have been considered as an act of madness to predict, at its zenith, the reverse that afterwards overwhelmed her, leaving her to perish in the most horrible state of destitution, cut off from all sympathy. Nor let it be urged that hers was a most extraordinary fate. Quite the reverse, for it is in the common course of events that profligacy and misconduct should lead to misery and wretchedness. It is the success of vice that forms the exception to the general rule; and if it appears to be otherwise, it is because we take no note of the myriads who perish in their folly, while envy or curiosity fixes men's gaze on every instance of prosperous profligacy.

The grave of the once lovely and adored Emma, who ruled this great commander of the British navy, and made so distinguished a figure at the court of Naples, might sober even the giddiest into serious reflection. She was actually buried in a ditch outside of the walls of Calais, and by a subscription from her countrymen. "Sic transit," &c.—*Rae Wilson's Travels in France and Italy.*

HAIR-BREADTH ESCAPES. No. VI.

MRS. SPENCER SMITH.

CHAPTER II.

NEXT morning, at breakfast, the marquis had to inform Mrs. Smith that the hopes of that night had been thwarted. She endeavoured to calm him. But he was not only mortified by the failure of his hopes: he was disappointed in his friendship; a wound which his young and ardent mind felt most sensibly. They stayed at Verona, till the following morning. Then the little caravan took the road to Brescia, where it arrived on the first of May 1806.

I have now to communicate the details of a most extraordinary romance, and one which is the more interesting inasmuch as every fact recorded in it is strictly true, and satisfactorily authenticated.

The refusal of count Grimani was the more vexatious, as there remained for the fugitives no asylum to elude pursuit, allowing that they could steal away from the gendarmes. This circumstance

above all others increased the difficulties; for it was in the chateau of count Grimani that the marquis reckoned upon concealing Mrs. Smith. Suddenly, however, a thought crossed his mind. The lake of Guarda occurred to him with its shady banks, and above all its boats—those boats which had so often, the preceding year, conveyed him to parties of pleasure at Riva. A few moments sufficed for him to arrange every thing in his mind; and he communicated his plan to Mrs. Smith in English. On arriving at Brescia he endeavoured to obtain lodgings which might be favourable to the execution of his project. He wished to obtain apartments on a ground floor; but in this he did not succeed, and he was obliged to content himself with a very inferior lodging, at the Due Torre inn. It was on the first floor.

When Mrs. Smith had retired to her chamber,

the marquis sent for Amédée, the chief of the four gendarmes. He was an honest fellow, and always fond of a joke, especially if a woman was mixed up in the matter.

"My dear Amédée," said the marquis, "I cannot tell you how much I repent the step I have taken in thus accompanying Mrs. Spencer Smith. We shall soon be at Milan—I shall find myself in the presence of Prince Eugène! Judge of the awkward situation in which I am placed. He has rendered me very great services; and I owe him many obligations. What will he think when he finds me escorting a prisoner of state? I am alarmed for my property in Naples. In fact, I am alarmed for myself. In short, Amédée, I believe the best thing I can do, is to separate here from Mrs. Smith. I will join her again, but it must be beyond Milan."

"I have long wished to speak to you on this subject," answered Amédée, with an air of importance. "After all, what can you do for the poor lady? We will take care of her: I do not say," continued he, with a horse-laugh, "that we shall be as useful to her as you. But at least, she will be safe, and with this assurance you may depart."

"Yes," said the marquis, "but I cannot tell her this myself. Do me the favour to inform her, my dear Amédée, that I am going to make preparations for my departure. On my return, I should wish to bid her farewell; but without a witness; you understand."

"Perfectly," said the gendarme, winking his eye. "You may take your farewell without interruption."

The marquis immediately procured a horse, rode to Salons, and hired two boats. One of these boats was for himself and Mrs. Smith, the other was to convey the post chaise which was also ordered with the horses. These arrangements occupied nearly three hours. On the other bank of the lake were the passages of the Tyrol, Saltzbourg, and the frontier of Styria.

The marquis returned to Brescia, made several purchases, wrote a long letter explaining all to Mrs. Smith, and then went to her. Amédée kept his word, she was alone though still guarded. The marquis could say but little for the day was advancing. The poor captive trembled and wept. The marquis trembled too on seeing the height of the windows. At length they separated, after some final instructions given by the marquis, the most important of which was, that Mrs. Smith should fasten a cord to her window at nine o'clock that night, for the purpose of drawing up a packet and a rope-ladder.

The marquis employed the rest of the day in preparing this ladder. He was far from expert at his task, but determination surmounts difficulties. Before evening he had completed a ladder of ten or twelve feet long, and sufficiently strong to bear the fugitive.

At nine at night, he repaired to a little narrow

obscure passage, opposite to the inn of the Due Torre. From thence he saw a light in Mrs. Smith's apartments. The window on the left belonged to the chamber adjoining her own, and which the gendarmes never quitted. Her own window was softly opened, when the nearest clock struck nine, and the marquis saw a cord descend. He approached with caution, but it was scarcely necessary, the street being deserted by that hour, and the weather was bad. The marquis tied a packet to the cord, and it was quickly drawn up again. He then returned to his hiding place. This was a barn, in which was the cabriolet and the horse which he had ordered for forty-eight hours. The barn was close to the gate, through which they must pass to go to Salons. The marquis threw himself upon the straw to endeavour to sleep, for he foresaw, that if he was not shot the following morning, he must remain many days without rest. The packet which he had carried to Mrs. Smith contained a suit of boy's clothes, the rope ladder, the letter explaining every thing she would have to do, and a phial, in which were five and twenty drops of laudanum. The laudanum was intended as a narcotic for the waiting woman, if she should decline to aid the flight of her mistress. The hour appointed for Mrs. Smith's escape was eleven. The anxiety which the marquis suffered during the interval from nine o'clock till eleven, it is impossible to describe. At length the clock struck half-past ten, and the marquis ventured from his retreat. He had on a large military cloak, and a three cornered hat, and he walked with the greatest confidence in order to avoid suspicion.

On reaching the narrow lane opposite the inn of the Due Torre, which had already served to conceal him, he trembled, and fancied for a moment that all was discovered. The window next to Mrs. Smith, which belonged to the room occupied by the gendarmes, was open, and no light appeared. Was this done the better to surprise them? He was overwhelmed at the thought of being wrecked so near to port. At the instant eleven o'clock struck from all the churches of Brescia. The marquis then saw a light glimmer through the white curtains of Mrs. Smith's window. The sash was raised, and the lady appeared in the balcony dressed in male attire. Louise threw a packet to the marquis, and then lowered a casket which contained Mrs. Smith's jewels. All this was done in profound silence. At length came the moment which the marquis dreaded. Mrs. Smith, after a short prayer, got over the balcony, and placing her feet on the ladder began to descend, but the unsteadiness of the ladder, the height of the window, the danger to which she was exposed,—all made such an impression upon her, that she felt her senses failing. Shutting her eyes, whilst at the same time she clung with all her strength to the lad-

der, she exclaimed in an under-tone to the marquis:—"I am lost, I can neither descend nor go up again!"

"Courage, madam, and all will be well. See how well every thing has succeeded thus far. Try to descend a few more steps. Fear nothing, throw yourself down, and I will catch you." The lady hesitated, footsteps were heard in the street. "We are undone," exclaimed the marquis, "we are lost if you do not instantly follow my advice. Some one approaches."

Agitated by the dread of falling, and the fear of being discovered, Mrs. Smith let go her hold of the ladder, and dropped into the arms of the marquis, who fell to the ground with her, but without sustaining any hurt. Whilst they were both recovering themselves, two men passed singing on the other side of the street, without even noticing them. In a few moments the fugitives reached the barn in safety.

"Oh!" exclaimed the unfortunate lady, as she threw herself upon the straw, "what a night of horror. If you knew all!" In uttering these words, she appeared to shudder at some terrible recollection.

"Compose yourself," said the marquis, "I conjure you, in the name of your children, of your mother, of your sisters. Do not create any obstacle to the success of an enterprise which has proved thus far so fortunate."

Mrs. Smith wept. "Oh poor Louise! if you knew how nobly she has acted. She at first wished to follow me, but afterwards, when she saw that was impossible, she told me that lest she should make any answers which might lead to a discovery of my track, she had drunk the laudanum. 'This,' said she, 'will make me sleep, and will prevent my saying a single word which may endanger you.' And before I could prevent her," continued Mrs. Smith, "she had swallowed the whole contents of the little phial. I am alarmed for the consequences."

After they had reached the barn, the marquis recollected that he had left the rope ladder at the window of the inn. He hoped that Louise had removed it before break of day; but after what he had just learned, he thought it was not likely she could have done so, and the first person passing by might give the alarm. He ran to the inn of the Due Torre; but the ladder was gone from the window, Louise had returned to the balcony to see if her mistress was out of

danger, and perceiving the ladder, she immediately understood all that was to be done.

On his return the marquis found Mrs. Smith more calm, and more mistress of herself. She remarked that it was nearly three o'clock.

"Shall we depart?" said she.

"How can we?" said the marquis. "Brescia is a closed town. We cannot get out before the opening of the gates. But stay, a thought strikes me!"

He took from the cabriolet a blue cloth cap, with a gold band and tassel, and having put it on his head, he handed the lady into the cabriolet. Mrs. Smith, it will be recollected, was in male attire. He seated himself by her side, wrapped up in his cloak, and the cabriolet was in a few moments at the gates of the city.

"Hollo! how is this?" exclaimed the marquis, with an oath.

"What, the guard of the gates not at his post! I will cashier him."

The man appeared half undressed, with the keys in his hands. "Who is there?" cried he in an affrighted tone.

"The colonel of the third regiment," answered the marquis, assuming a gruff tone of voice. "You received notice last evening that I was going into the country to-day. I will break you."

"Colonel, I assure you that I knew nothing of the matter."

"Go and open the gates, and do not stand babbling there."

The guard opened the gates, holding his cap in his hand, and closing them again he returned to his bed, whilst the fugitives drove rapidly to Salons.

On arriving there they entered their boat, and took the direction of Riva. They now breathed again, and were able to render thanks to heaven for their success of their attempt.

Day was dawning, and the first rays of morning sparkled on the surface of the lake, whose limpid waters and luxuriant banks presented a picture of unusual beauty. The lake of Guarda is more picturesque than either the lake Maggiore or the lake of Como. It is one of those remarkable spots which are always visited by travellers in Italy. Mrs. Smith had not before seen it, and she admired it with the enthusiasm of an elevated mind and a poetic imagination. They landed at Riva.

THE COSMOGONY OF MOSES.

PART IV.

ON a review of the events which we have sketched with a rapid hand, a multitude of thoughts crowd upon the mind: a few of which we will proceed to exhibit and arrange, as subjects for profitable meditation. And,

First, What an impressive manifestation is afforded by the creation, of the existence, the greatness, the wisdom, and the goodness of the Supreme Being. The Cosmogony of Moses expressly recognised one first intelligent Cause

of all things, self-existent and eternal, at a period of almost universal idolatry; when the true God was unknown, and religious worship had degenerated into the most debasing and abominable superstition. His account of the works of the Almighty seems to have a special reference to the existing and most prevalent idolatries of his time. Whatever was an object of veneration and devout homage among the besotted nations, the writer of Genesis singles out and describes as the mere creature of that Power, whose worship he was anxious to revive. The heavens, the earth, and the seas, with all their inhabitants, are traced to one origin. They have a maker, and that maker is God. The voice of Moses, in this revelation, was but the echo of the universe. Yet men heard it not. Alas! they hear it not at this moment. They all worship, but they know not what; and give the glory of the Creator to the creatures, to four-footed beasts, and even to reptiles and creeping things. Yet where is the people, where is the language in which nature does not speak and proclaim her divine Original?

Oh! that, with a poet's eye and a Christian's heart, man would but walk abroad amidst the grandeur and the loveliness of creation. Then would even the desert become a paradise—and the bleak and hoary mountain the bright seat of the enthroned Divinity. He is not to be envied; indeed, he is an object of the deepest pity, who can abandon himself to the persuasion that the universe has no parent—who is unconscious of the pervading presence and influence of that awful Being who is nature's essence mind, and energy. Oh! for the spirit of him, in his happiest mood, who, standing in Chamouny's vale, with Mount Blanc above him, and his five incessant torrents rushing at his feet, could thus, in strains so like inspiration, that when we repeat them the divine afflatus seems to come over us, invoke the voice of sweet song:—

“Thou first and chief, sole sov'reign of the vale!
Oh, struggling with the darkness all the night,
And visited all night by troops of stars,
Or, when they climb the sky, or when they sink;
Companion of the morning star at dawn,
Thyself earth's ROSY STAR, and of the dawn
Co-herald! wake, O wake and utter praise!
Who sunk thy sunless pillars deep in earth?
Who made thee parent of perpetual streams?
And you, ye five wild torrents fiercely glad!
Who called you forth from night and utter death,
From dark and icy caverns called you forth,
Down those precipitous black jagged rocks,
For ever shattered, and the same for ever?
Who gave you your invulnerable life,
Your strength, your speed, your fury, and your joy,
Unceasing thunder, and eternal foam?
And who commanded, (and the silence came)
Here let the billows stiffen and have rest?
Ye icefalls! Ye that from the mountain's brow
Adown enormous ravines slope again—
Torrents, methinks, that heard a mighty voice,
And stopped at once amid their maddest plunge;

Motionless torrents! silent cataracts!
Who made you glorious as the gates of heaven
Beneath the keen full moon? Who bade the sun
Clothe you with rainbows? Who with living flowers
Of loveliest blue, spread garlands at your feet?
God! Let the torrents like a shout of nations
Answer! and let the ice-plains echo God!
God! sing ye meadow streams with glad some voice!
Ye pine-groves, with your soft and soul-like sounds;
And they too have a voice, yon piles of snow
And in their perilous fall shall thunder—God!
Ye livery flowers! that skirt the eternal frost!
Ye wild goats! sporting round the eagle's nest!
Ye eagles, playmates of the mountain storm!
Ye lightnings, the dread arrows of the clouds!
Ye signs and wonders of the elements!
Utter forth God, and fill the hills with praise.
Once more, hoar mount! with thy sky pointing peaks,
Oft from whose feet the avalanche, unheard,
Shoots downward, glittering through the pure serene
Into the depth of clouds that veil thy breast—
Thou too again, stupendous mountain! Thou
That as I raise my head, awhile bow'd low
In adoration, upward from thy base,
Slow travelling with dim eyes suffused with tears,
Solemnly seemest like a vapoury cloud,
To rise before me—Rise, Oh! over rise,
Rise like a cloud of incense from the earth!
Thou kingly spirit! throned among the hills,
Thou dread ambassador! from earth to heaven.
Great Hierarch! tell thou the silent sky,
And tell the stars, and tell you rising sun,
Earth with her thousand voices praises God!”

The greatness and majesty of God are wonderfully conspicuous in his works; and thus manifested, he is entitled to the adoring-reverence of all intelligent creatures.

Revelation leads us to the origin of only one system of worlds; and it rather announces the existence of that system than describes it; but Philosophy has taken up the question where Revelation abandoned it, and has introduced us to the knowledge of a universe, which the more we contemplate astonishes us still the more, and impresses us with the idea of the utter inconceivableness of the greatness of the Divine power, wisdom, and goodness. I know not whether the discoveries of the microscope or the telescope convey the most overpowering impressions of the Divine majesty: whether a drop of water and a star of the first magnitude are not equal miracles of creating and sustaining energy. Here we have an inhabited world, teeming with myriads of beings; we conclude that the other is the same and no more; the creation of either or of both supposes infinity in the agent by whom it is accomplished. By the eye of observation, assisted by the latter instrument, how are we amazed at the variety, the profusion, and the multitude of those objects which display the sagacity of creating wisdom, and the munificence of all bounteous Providence!

St. Pierre observes in reference to his great work, “that after he had collected with the greatest industry and perseverance all the materials necessary to a History of Nature, he found himself in the condition of a child, who

with a shell had dug a hole in the sand to hold the water of the ocean." "Nature," he continues, "is of unbounded extent, and I am a human being limited on every side. Not only her general history, but that of the smallest plant far transcends my highest powers. Permit me to relate on what occasion I became sensible of this:—

"One day in summer, while I was busied in the arrangement of some observations which I had made, respecting the harmonies discoverable in this globe of ours, I perceived on a strawberry plant, which had been accidentally placed in my window, some small winged insects, so very beautiful that I took a fancy to describe them. Next day a different sort appeared, which I proceeded likewise to describe. In the course of three weeks, no less than thirty-seven species, totally distinct, had visited my strawberry plant: at length they came in such crowds, and presented such variety, that I was constrained to relinquish this study, though highly amusing, for want of leisure, and to acknowledge the truth for want of expression. The insects which I had observed were all distinguishable from each other, by their colours, their forms, and their motions. Some of them shone like gold; others were of the colour of silver and of brass; some were spotted, some striped; they were blue, green, brown, chesnut-coloured. The heads of some were rounded like a turban; those of others were drawn out into the figure of a cone. Here it was dark as a tuft of black velvet; there it sparkled like a ruby. There was not less diversity in their wings: in some they were long and brilliant, like transparent plates of mother of pearl; in others, short and broad, resembling network of the finest gauze. Each had his particular manner of disposing and managing his wings. Some disposed theirs perpendicularly, others horizontally, and they seemed to take pleasure in displaying them; some few spirally, after the manner of butterflies; others sprung into the air, directing their flight in opposition to the wind, by a mechanism somewhat similar to that of a paper-kite, which in rising, forms with the axis of the wind an angle, I think of twenty-two degrees and a half.

"Some alighted on the plant to deposit their eggs; others merely to shelter themselves from the sun. But the greatest part paid this visit from reasons totally unknown to me; for some went and came in an incessant motion, while others moved only the hinder part of their body. A great many of them remained entirely motionless, and were like me, perhaps, employed in making observations.

"I scorned to pay any attention, as being already sufficiently known, to all the other tribes of insects which my strawberry plant had attracted: such as the snail, which nestles under the leaves; the butterfly, which flutters around;

the beetle, which digs about its roots; the small worm, which contrives to live in the *parenchyme*, that is, in the mere thickness of a leaf; the wasp and honey-bee, which hum around the blossoms; the gnat, which sucks the juices of the stems; the ant, which licks up the gnat; and, to make no longer an enumeration, the spider, which, in order to find a prey in these, one after another, distends his snares over the whole vicinity.

"However minute these objects may be, they surely merited my attention, as Nature deemed them not unworthy of hers. Could I refuse them a place in my general history, when she had given them one in the system of the universe? For a still stronger reason, had I written the history of my strawberry plant, I must have given some account of the insects attached to it. Plants are the habitation of insects; and it is impossible to give the history of a city, without saying something of its inhabitants. Besides, my strawberry plant was not in its natural situation, in the open country, on the border of a wood, or by the brink of a rivulet, where it could have been frequented by many other species of living creatures. It was confined to an earthen pot, amidst the smoke of Paris. I observed it only at vacant moments. I knew nothing of the insects which visited it during the course of the day, still less of those which might come only in the night, attracted by simple emanations, or perhaps by a phosphoric light, which escapes our senses. I was totally ignorant of the various species which might frequent it at other seasons of the year: and of the endless other relations which it might have with reptiles, with amphibious animals, fishes, birds, quadrupeds, and above all with Man, who undervalues every thing which he cannot convert to his own use.

"But it was not sufficient to observe it from the heights of my greatness, if I may use the expression, for in this case my knowledge would have been greatly inferior to that of one of the insects, who made it their habitation. Not one of them, on examining it with his little spherical eyes, but must have distinguished an infinite variety of objects, which I could not perceive without the assistance of a microscope, and after much laborious research. Nay, their eyes are inconceivably superior even to this instrument; for it shows us the object only which are in its focus, that is, at the distance of a few lines; whereas they perceive, by a mechanism, which we have no conception, those which are near and those which are afar off. Their eyes therefore, are at once microscopes and telescopes. Besides, by their circular disposition round the head, they have the advantage of viewing the whole circuit of the heavens at the same instant, while those of the astronomer can take in, at most, but the half. My winged insects accord-

ingly must discern in the strawberry plant, at a single glance, an arrangement and combination of parts, which, assisted by the microscope, I can observe only separate from each other, and in succession. On examining the leaves of this vegetable with the aid of a lens, which had but a small magnifying power, I found them divided into compartments, hedged round with bristles, separated by canals, and strewed with glands. These compartments appeared to me similar to large verdant inclosures, their bristles to vegetables of a particular order; of which some were upright, some inclined, some forked, some hollowed into tubes, from the extremity of which a fluid distilled; and their canals, as well as their glands, seemed full of a brilliant liquor. In plants of a different species, these bristles and these canals exhibit forms, colours and fluids entirely different. There are even glands, which resemble basins, round, square, or radiated.

"Now, Nature has made nothing in vain; wherever she has prepared a habitation, she immediately peoples it. She is never straitened for want of room; she has placed animals furnished with fins in a single drop of water, and in such multitudes, that Leeuwenhoek, the natural philosopher, reckoned up thousands of them. Many others after him, and among the rest Robert Hook, have seen, in one drop of water as small as a grain of millet, some ten, others thirty, and some as far as forty-five thousand. Those who know not how far the patience and sagacity of an observer can go, might perhaps call in question the accuracy of these observations, if Lyonnot, who relates them in Lesser's *Theology of Insects*, had not demonstrated the possibility of it, by a piece of mechanism abundantly simple. We are certain, at least of the existence of those beings whose different figures have actually been drawn. Others are found, whose feet are armed with claws, on the body of the fly, and even on that of the flea.

"It is credible, then, from analogy, that there are animals feeding on the leaves of plants, like the cattle on our meadows, and on our mountains; which repose under the shade of a down imperceptible to the naked eye, and which, from goblets formed like so many suns, quaff nectar of the colour of gold and silver. Each part of the flower must present to them a spectacle of which we can form no idea. The yellow anthers of flowers, suspended by fillets of white exhibit to their eyes double rafters of gold in equilibrio, on pillars fairer than ivory; the corolla, an arch of unbounded magnitude, embellished with the ruby and the topaz; rivers of nectar and honey; the other parts of the floweret, cups, urns, pavilions, domes, which the human architect and goldsmith have not yet learned to imitate.

"I do not speak thus from conjecture; for having examined one day by the microscope the

flowers of thyme, I distinguished in them, with equal surprise and delight, superb flagons, with a long neck, of a substance resembling amethyst, from the gullets of which seem to flow ingots of liquid gold. I have never made observation of the corolla simply, of the smallest flower, without finding it composed of an admirable substance, half transparent, studded with brilliants, and shining in the most lively colours.

"The beings which live under a reflex thus enriched, must have ideas very different from ours, of light, and of the other phenomena of nature. A drop of dew, filtering in the capillary and transparent tubes of a plant, presents to them thousands of cascades; the same drop, fixed as a wave on the extremity of one of its prickles, an ocean without a shore; evaporated into air, a vast aerial sea. They must, therefore, see fluids ascending, instead of falling; assuming a globular form, instead of sinking to a level; and mounting into the air, instead of obeying the power of gravity.

"Their ignorance must be as wonderful as their knowledge. As they have a thorough acquaintance with the harmony of only the minutest objects, that of vast objects must escape them. They know not, undoubtedly, that there are men, and among these learned men, who know every thing, can explain every thing, who, transient like themselves, plunge into an infinity on the ascending scale, in which they are lost; whereas they, in virtue of their littleness are acquainted with an opposite infinity in the last divisions of time and matter.

"In these ephemeral beings, we must find the youth of a single morning, and the decrepitude of one day. If they possess historical monuments, they must have their months, years, ages, epochs, proportioned to the duration of a flower; they must have a chronology different from ours, as their hydraulics and optics must differ. Thus in proportion as man brings the elements of nature near him, the principles of his science disappear.

"Such therefore, must have been my strawberry-plant and its natural inhabitants in the eyes of my winged insects, which had alighted to visit it; but supposing I had been able to acquire with them an infinite knowledge of this new world, I was still very far from having the history of it. I must have previously studied its relations to the other parts of nature; to the sun which expands its blossom; to the winds which sow its seeds over and over; to the brooks whose banks it forms and embellishes. I must have known how it was preserved in winter, during a cold capable of cleaving stones asunder; and how it should appear verdant in the spring, without any pains employed to preserve it from the frost; how, feeble and crawling along the ground, it should be able to find its way from the deepest valley to the summit of the Alps, to

traverse the globe from north to south, from mountain to mountain, forming on its passage a thousand pieces of chequered work, of its fair flowers and rose-coloured fruit, with plants of every other climate; how it has been able to scatter itself from the mountains of Cachemire to Archangel, and from the Telices, in Norway, or Kamschatka; how, in a word, we find it in equal abundance in both American Continents, though an infinite number of animals is making incessant and universal war upon it, and no gardener is at the trouble to sow it again.

"Supposing all this knowledge acquired I should still have arrived no farther than at the history of the *genus*, and not that of the *species*. The varieties would still have remained unknown, which have each its particular character, according as they have flowers single, in pairs, or disposed in clusters; according to the colour, the smell, and taste of the fruit; according to the size, the figure, the edging, the smoothness, or the downy clothing of the leaves. One of our most celebrated botanists, Sebastian le Vailant, has found, in the environs of Paris alone, five distinct species, three of which bear flowers without producing fruit. In our gardens we cultivate, at least, twelve different sorts of foreign strawberries: that of Chili, of Peru, the Alpine or perpetual, the Swedish, which is green, &c. But how many varieties are there to us totally unknown? Has not every degree of latitude a species peculiar to itself? Is it not presumable, that there may be trees which produce strawberries as there are those which bear peas and French-beans? May we not even consider as varieties of the strawberry the numerous species of the raspberry and of the bramble, with which it has a very striking analogy, from the shape of its leaves, from its shoots, which creep along the ground, and replant themselves; from the rose form of its flowers, and that of its fruit, the seeds of which are on the outside? Has it not, besides, an affinity with the eglantine and the rose tree as to its flower; with the mulberry as to its fruit: and with the trefoil itself as to the leaves, one species of which, common in the environs of Paris, bears likewise its seeds aggregated into the form of a strawberry, from which it derives the botanic name of *trifolium fragiferum*, the strawberry-bearing trefoil? Now, if we reflect that all these species, varieties, analogies, affinities, have in every particular latitude necessary relations with a multitude of animals, and that these relations are altogether unknown to us, we shall find a complete history of the strawberry plant would be ample employment for all the naturalists in the world."

If observation, assisted by the microscope, be thus prolific in discovery, how immensely is the field enlarged, when we avail ourselves of the telescope. Without its aid, and to a mind unacquainted with the science of these enlightened

times, the heavens present a great and an elevating spectacle—an immense concave reposing upon the circular boundary of the world, and the innumerable lights which are suspended from on high, moving with solemn regularity along its surface. What a sublime spectacle is unveiled by a nocturnal sky when the moon and stars are visible! How does it lift the soul to pious contemplation! That moon and these stars, what are they? they are detached from the world, and they attract you above it. You feel withdrawn from the earth, and rise in lofty abstraction from this little theatre of human anxieties. The mind abandons itself to reverie, and is transferred in the extasy of its thoughts to distant and unexplored regions. It sees nature in the simplicity of her great elements, and it sees the God of Nature invested with the high attributes of wisdom and majesty. But what can these lights be? The curiosity of the human mind is insatiable; and the mechanism of these wonderful heavens has in all ages been its subject and its employment. It has been reserved for these latter times to resolve this great and interesting question. The sublime powers of philosophy have been called to the exercise, and astronomy may now be looked upon as the most certain and best established of the sciences. We all know that every visible object appears less in magnitude as it recedes from the eye. The lofty vessel as it retires from the coast shrinks into littleness, and at last appears in the form of a small speck on the verge of the horizon. The eagle with expanded wings is a noble object, but when it takes its flight into the upper regions of the air, it becomes less to the eye, and is seen like a dark spot upon the vault of heaven. The same is true of all magnitude. The heavenly bodies appear small to the eye of an inhabitant of this earth only from the immensity of their distance. When we talk of hundreds of millions of miles, it is not to be listened to as incredible. For remember that we are talking of those bodies which are scattered over the immensity of space, and that space knows no termination. The conception is great and difficult, but the truth is unquestionable. By a process of measurement, which it is unnecessary at present to explain, we have ascertained first the distance, and then the magnitude of some of those bodies which roll in the firmament; that the sun which presents itself to the eye under so diminutive a form is really a globe, exceeding by many thousands of times the dimensions of the earth which we inhabit; that the moon itself has the magnitude of a world; and that even a few of those stars which appear like so many lucid points to the unassisted eye of the observer, expand into large circles upon the application of the telescope, and are some of them much larger than the ball which we tread upon, and to which we proudly apply the denomination of the universe.

ENCOURAGEMENT OF LITERATURE BY THE STATE.

(From the second volume of Lord Mahon's History of England.)

During the reigns of William, of Anne, and of George I., till 1721, when Walpole became prime minister, the Whigs and Tories vied with each other in the encouragement of learned and literary men. Whenever a writer showed signs of genius, either party to which his principles might incline him was eager to hail him as a friend. The most distinguished society, and the most favourable opportunities, were thrown open to him. Places and pensions were showered down in lavish profusion; those who wished only to pursue their studies had the means afforded them for learned leisure, while more ambitious spirits were pushed forward in parliament, or in diplomacy. In short, though the sovereign was never an Augustus, almost every minister was a Mæcenæus. Newton became master of the mint; Locke was a commissioner of appeals; Steele was a commissioner of stamps; Stepney, Prior, and Gay, were employed in lucrative and important embassies. It was a slight piece of humour at his onset, and at his introduction—the “City and Country Mouse”—that brought forth a mountain of honours to Montague, afterwards Earl of Halifax, and first lord of the treasury. When Parnell first came to court, Lord Treasurer Oxford passed through the crowd of nobles, leaving them all unnoticed, to greet and welcome the poet. “I value myself,” says Swift, “upon making the ministry desire to be acquainted with Parnell, and not Parnell with the ministry.” Swift himself became dean of St. Patrick’s, and, but for the queen’s dislike, would have been bishop of Hereford. Pope, as a Roman catholic, was debarred from all places of honour or emolument; yet secretary Craggs offered him a pension of three hundred pounds a-year, not to be known by the public, and to be paid from the secret service money. In 1714, General Stanhope carried a bill, providing a most liberal reward for the discovery of the longitude. Addison became secretary of state. Tickell was secretary in Ireland. Several rich sinecures were bestowed on Congreve and Rowe, on Hughes and Ambrose Philips. Looking to those times, and comparing them with ours, we shall find that this system of magnificent patronage has never been revived. Its place has, however, in some degree, been supplied by the large increase of readers, and the higher price of books, and, consequently, the far superior value of literary labour. A popular writer may now receive a liberal income from the sale of his works; and, according to the common phrase, needs no other patron than the public. It is often boasted, that the latter state of things far exceeds the former in independence; yet, however plausible this assertion, it is not alto-

gether confirmed by a closer survey. I cannot find that the objects of such splendid patronage were at all humbled by receiving it, or considered themselves, in the slightest degree, as political or private bondsmen. I cannot find that Swift or Prior, for example, mixed with the great on any other footing than that of equal familiarity and friendship, or paid any submissive homage to Lord Treasurer Oxford, or Secretary St. John. In Bolingbroke’s “Correspondence” we may still read the private notes of *Mat* to *Harry*, and of *Harry* to *Mat*. The old system of patronage in literature was, I conceive, like the old system of patronage in parliament. Some powerful nobleman, with large burgage tenures in his hands, was enabled to place in the House of Commons any young man of like principles and of promising abilities. That system, whether for good or for evil, endured till the Reform Bill in 1832. But, whatever difference of opinion may exist concerning it, there is one point which will be admitted by all those who have observed its inward workings—although we often hear the contrary roared forth by those who never saw it nearer than from the strangers’ gallery—that a man brought into parliament from his talents felt no humiliating dependence on him by whose interest he was elected—no such dependence, for example, as would be imposed among gentlemen by what seems a far less favour, a gift of fifty pounds. The two parties met on equal terms of friendship. It was thought as desirable for the one, that his principles should be ably supported, as for the other, that he should sit in the House of Commons. Thus, likewise, in literary patronage, when Oxford made Swift a dean, or Bolingbroke made Prior an ambassador, it was considered no badge of dependence or painful inferiority. It was, of course, desirable for Swift to rise in the church, and for Prior to rise in the state; but it was also desirable for the administration to secure the assistance of an eloquent writer, and of a skilful diplomatist. It may, moreover, be observed, that literary profits do not in all respects supply the place of literary patronage. First, there are several studies, such as many branches of science or antiquities, which are highly deserving of encouragement, but not generally popular, and therefore not productive of emolument. In these cases, the liberality of the government might sometimes usefully atone for the indifference of the public. But even with the most popular authors, the necessity of looking to their literary labours for their daily bread, has not unfrequently an unfavourable effect upon the former. It may compel, or at least induce, them to over-write

themselves, to pour forth hasty and immature productions; to keep, at all hazards, their names before the public. How seldom can they admit intervals of leisure, or allow their minds to lie fallow for a season, in order to bear hereafter a larger and a better harvest! In like manner, they must minister to the taste of the public, whatever that taste might be, and sometimes have to sacrifice their own ideas of beauty, and aspirations of fame. These are undoubted evils, not merely to them, but to us; and as undoubtedly are they guarded against whenever a

fixed and competent provision can be granted to genius. I am therefore clearly of opinion, that any minister who might have the noble ambition to become the patron of literary men, would still find a large field open to his munificence! that his intercourse with them on the footing of equal friendship, would be a deserved distinction to them, and a liberal recreation to himself; that his favours might be employed with great advantage, and received with perfect independence.

TEMPERATURE, AND ATMOSPHERIC PRESSURE.

[The following observations are extracted from the notes to Archdeacon Paley's Works, now publishing by Mr. Smith, of Bouverie-street, in his "Imperial Classics," a series of works which promise to combine more editorial care, beautiful execution, and moderation in price, than any other we have yet met with.]

THE power possessed by man of inhabiting all parts of the earth, bearing all degrees of heat and cold, and differences in atmospheric pressure, is an instance of the adaptation of animated bodies to inanimate nature, worthy of particular consideration. This natural power is alone possessed by man, who having, by the will of his Creator, dominion over the earth and over all animals, was of necessity obliged to be endowed with superior powers, to resist the extremes of heat and cold in all parts of the globe. He is accordingly constituted in a manner different from all other animals; he can dwell in all climates, and at all elevations of the earth's surface.

"The situations occupied by our species," says Mr. Lawrence, "extend as far as the known surface of the earth. The Greenlanders and the Esquimaux have reached between 70° and 80° of north latitude, and Danish settlements have been formed in Greenland.

"Three Russians lived between six and seven years on Spitzbergen, between 77° and 80°. The Negro lives under the equator, and all America is inhabited, even to Terra del Fuego. Thus we find that man can exist and propagate his species in the hottest and coldest countries of the earth."

M. Gmelin, in 1735, observed the greatest natural cold; the quicksilver froze in the thermometer, the sparrows and other birds were all killed. The same was observed by Pallas. At the English settlements in Hudson's Bay the cold is just as extreme; brandy freezes even in rooms where there is a fire. Yet in such a temperature as this the Canadian savages hunt and fish.

"Some of the Dutch," continues Mr. Lawrence, "who wintered in Nova Zembla, under Hemserkerk, perished; but those who moved enough, and were in good health at first, with-

stood the dreadful cold which the polar bear, (*ursus maritimus*), apparently born for these climes, seems to have been incapable of supporting; for their journal states, that as soon as the sun sinks below the horizon, the cold is so intense that the bears are no longer seen, and the white fox (*isatis canis lagopus*) alone braves the weather. The power of the human body to withstand severe cold will seem the more remarkable when we observe what heat it is capable of bearing. The mean temperature of Sierra Leone is 84°; the thermometer is frequently at 100°, and even 102° and 103° in the shade. Adamson saw it at 108° in the sun, at Senegal; and according to Buffon, it has been seen at 117°. When the sirocco blows in Sicily, the thermometer rises to 112°. Dr. Chalmers saw it at 115° in the shade, in South Carolina; and Humboldt at 110° to 115° in the deserts on the banks of the Orinoco."

In some experiments of Dr. Fordyce, Sir Joseph Banks, and others, a room was artificially heated to 260°; into this room these gentlemen walked, in company with several others, and remained some time without inconvenience, although their watch chains were too much heated to be touched without pain; and eggs were cooked in a few minutes by merely remaining on a plate in the room. The oven girls of Germany sustain even still higher temperatures, and this is the true secret of many a feat of legerdemain.

Then, again, as regards resisting diminutions of atmospheric pressure, man is singularly endowed. The ordinary pressure upon the surface of an adult's body is calculated, by Mr. Lawrence, to be equal to 32,325lbs. on a level with the sea, when the barometer is at thirty inches; but at a height of twelve thousand feet, or that of many inhabited plains in South America, the barometer sinks to twenty inches and a quarter, and the pressure is then only equal to 21,750lbs.; yet Condamine and Bouguer lived for three weeks more than two thousand feet higher than this. The city of Mexico is 7475, and Quito 9550 feet above the level of the ocean. The

hamlet of Antisana, in South America, is supposed to be the most elevated inhabited spot in the world, being 13,500 feet above the sea. M. Humboldt ascended Chimborazo to more than 19,000 feet. Gay Lussac, in a balloon, attained to 23,000; and yet some of the peaks of the Himalaya Mountains, in India, exceed even this great elevation.

The power of the human body to withstand increased pressure is equally extraordinary, the barometer often ranges considerably above 30; and in diving into deep waters, as, for instance, in the diving bell, a pressure is sustained equal to several atmospheres.

Thus is man unrestrained by temperature or atmospheric pressure to any particular section of the globe, a freedom which no other being possesses; even vegetation is located to particular spots; the fruits and palms of the equator gradually disappear as we approach the temperate regions of the earth, as those of our climate are

equally unknown in the tropics; and as we still progress in a northerly direction, we find one vegetable product leaves us after another. The rose and the violet, the oak and the elm, speedily depart; the pine and the birch cling to us much longer, but as we travel northward these are no longer seen. The heath and the arctic raspberry, (the *rubus arcticus*;) at last, are our only vegetable companions; but even they cannot live beyond a certain latitude, they, too, disappear; and yet man is still seen hunting and fishing, as if in defiance of the climate, and triumphing over all the obstacles of nature.

Lawrence's Lectures, p. 189; Philosophical Transactions, 1775, pp. 111, 484; Dr. Aiken, Manchester S. M., vol. i., p. 95; Barrow's Voyages, chap. ii.; Chalmers, on the Diseases of South Carolina; Winterbottom on the Native Africans, vol. i., p. 32; Mémoires de l'Académie, 1744, p. 262.

WEDDING RINGS.

INQUIRIES into such of our popular customs as appear to owe their existence to times long gone by, have often afforded me an interesting and, I may add, in most cases a profitable amusement, during the hours of relaxation from severer studies.

The use of a ring in the nuptial ceremony is one of those established customs which lay claim to very ancient origin. We find that with the Romans it was usual to present one to their betrothed wives even before the day of marriage, as appears from the following passage in Juvenal:—

"Digito pignus fortasse dedisti."

"Perhaps you have already put the ring upon her finger."

Pliny informs us that the ring used on such occasions was a plain one, unadorned with jewels, and made of iron; but Tertullian observes, that at one time it was made of gold, which being the purest metal, and continuing the longest without rust or tarnish, might perhaps indicate that permanent affection which ought to subsist between married persons: and for the same reason, no doubt, the ring was selected as a gift in preference to other ornaments, the circle being that figure which the ancients used as an emblem of eternity.

It is further remarkable, that the ring is to this day placed on the same finger of the same hand, on which it was worn by the Roman matrons. The reasons given, why the fourth finger of the left hand is chosen for this purpose, are various; some supposing the ring to be least exposed to injury and at the same time most conspicuous when on that finger; thus Alexander ab Alex. "Former ages placed the wedding ring on the left hand, that it might not be worn

in pieces:" whilst others think that it was worn there under the idea of a nerve proceeding from that finger to the heart. This latter opinion seems most favoured by those authors who have noticed the custom; particularly Aulus Gellius, who has a passage in the tenth book of his "Attic Nights," to this purport:—"Apion says, that, in dissecting bodies, previous to their being embalmed, the Egyptians have found a nerve running to the heart, from the finger we have mentioned, and from none else, wherefore it seems proper that this, being so intimately connected with the heart, should be distinguished from the rest by such an ornament." Of these two reasons, however, the former is without dispute the more probable, especially as the latter is founded on an anatomical error.

The Jews, also, had a custom of this sort in their marriages, as well as the Romans, which I believe is continued by their descendants to the present day; and what is more worthy of notice, they made use of rings bearing some short and applicable motto, generally the words, *Mazal tob*; that is, "Be it done in a good hour;" an admonition which may prove as useful in our days, as it was thought appropriate when first inscribed on the ring of a Jewish bride.

Thus it appears, that we still retain, in all its peculiarities, a custom of universal use amongst the Romans and the Jews, to the latter of whom the invention may be attributed, if not with certainty, at least with great probability; one thing we may be assured of, from the knowledge we have of that once-favoured people, that they would not be likely to adopt such a custom in imitation of those by whom they had been subjugated, whilst, on the other hand, it

cannot be supposed that the Romans, fully aware of the rank which the Jews once held in the scale of nations, would think an imitation of their ceremonies derogatory to their own dignity.

What were the emblematical significations of the "wedding ring," has been shown above, but its real use was as the token of a covenant made between the parties, and binding them to each other for life; in this sense we retain it, and with this signification it was used by the primitive Christians.

The actual as well as the allegorical meanings of the "wedding ring" still continue, though

their institutions are no more remembered; and notwithstanding the inscription, *Mazal tob*, no longer appears upon it, yet its import ought to remain firmly impressed upon the mind. Engagements which are to last for life should be made "in a good hour;" they should be undertaken with cautious reflection. Were this always attended to, I am enthusiast enough to believe that they who entered on the married state, would find it a real Utopia; as the beginning would be propitious, so its continuance would be happy.

S. I. L.

SANGUINARY PUNISHMENTS.

TRAVELLING one morning in autumn in a stage-coach across a neighbouring country, I was pleased with a view from a hill near Sheffield of the wide expanse around me. My pleasure was increased by the appearance of a suffusion in the cloudless horizon, modestly intimating the approach of the rising sun. Before his actual appearance my eye strayed over the objects in the west, and was richly rewarded with witnessing the effects of the morning light on the remaining foliage in a half-grown plantation. As the sun slowly advanced, his rays, far exceeding in effect the pencil of the most eminent artist, gradually heightened the colouring of the different objects, till admiration itself was satisfied.

Through the anatomised forms of the ash and the larch might be seen the dark shade of the lofty elm and the darker hue of the Scotch pine, serving as a back-ground. Interspersed between these and the former, appeared at irregular distances the various yellows occasioned by autumnal frosts, from the lively citron to the dark tinge of the tenacious oak, burnishing into gold by the action of increasing light upon the dewy surface of the leaves. To be fully appreciated, these and the surrounding beauties must be seen: they reminded me of Addison's "sweet but fading graces of inspiring autumn," and excited a feeling in unison with that of the poet,

—"Thyself how wondrous then!"

Losing the wood, not the emotions it had raised, I turned my eye to the east, and perceived that the sun had completely risen from beneath the horizon, and was smiling on every object ready to receive him. A stately mansion, surrounded with trees, appeared on my right, and received, in common with the poorest cottage, the cheering influence of the morning beams. Transition of thought from the edifice to its inhabitants was easy. Certainly, said I, the good will of their Creator daily solicits their acceptance, as the sun every morning courts entrance at their windows, and possibly these

elevated characters may, at this moment, be opening avenues for them both.

On my left I could discern the humbler shed of the labourer, whose door and windows had been long thrown open, to anticipate the earliest dawn of day. May this class of men be increased, and each individual duly weigh the advantages of the station, for above most others it is favourable to the attainment of the best riches, as opposing fewer barriers to the rays of the Sun of righteousness. On a summit stood a farm-house flanked with a group of corn-stacks, neatly thatched with straw. And what preserves these fruits of the field from the malice of the incendiary?—so much exposed,—so easily destroyed.—The law? Alas! why then, in the face of the law and within the hearing of its dreadful language,—*hanged, drawn, and quartered*—why have the infatuated criminals, left for execution in this county, imagined wicked devices against their fellow-men?

I love society, I honour the government, I respect law, but I detest its sanguinary punishments. Must my country be the last? ought Britain to have been second in ceasing to apply these inefficient remedies? O that her governors would substitute in the place of them the fear and the love of God.—But is this possible? In one sense it is: they can give by not withholding, as they can bestow life by not taking it away.

But shall this ever come to pass? Will governors become promoters of the truth? Why not? This newly-risen sun shall in due time attain his mid-day glory,—and Britain will reach hers. Her light is already reflected on her infant poor, from the systems of Bell and of Lancaster. Her rays have entered the noisome prison of the felon, and the dreadful bastiles of the insane. She is penetrating into various other recesses of the poor, which have been too long concealed in darkness. She has illumined the dark shores of Africa, and is sending round the globe rays of pure scripture-truth, the best of all written

testimonies to the only true source of everlasting light.

Let her proceed; let her learn war no more, that she may have leisure to proceed in these acceptable services. Let her cause the heart of the oppressed poor, of every class, to glow with thankfulness for the improvement of their condition. Let labour and confinement be substituted for banishment and death. Let her discourage theatrical performances. Let her lessen the

revenue rather than adopt ways and means inimical to the best interests of the people; and who can say that it will not please the Disposer of all events to accept these first-fruits of her righteousness, and to give to her rulers the power to dispense to the people (so far as it is required of rulers to dispense) those precious, powerful, and certain preventives of all crimes—the fear and the love of their Creator?

THE INTRODUCTION OF CHRISTIANITY TO THE SOUTH SEA ISLANDS.

THE sun of truth has poured its radiance here;
The captive soul is freed from error's chain;
Those hills the melody of heaven-hear,
That once re-echoed to the battle strain;
And they who raised the war-whoop's deadly wall
Now lift the voice of prayer. Nor e'er again
Shall trembling crowds within the idol fane

Adore; while men shall shudder at the fearful tale
Of dark infanticide. The passing gale
Shall waft the song that youthful voices raise,
While answering hills prolong the notes of praise.
Now dove-like Peace is brooding o'er each vale,
And to the sons of southern isles is given
The hope that breathes of endless life in heaven.

T. W. A.

ENGLAND AND ITS MANNERS.

ANCIENT ENGLAND.—Gildas, an ancient British author, who wrote about 1160 years ago, thus describes his country:—"The Island of *Britannia* placed in the balance of divine poising hand (as they call it) which weigheth the whole world, almost the uttermost bound of this earth towards the *west* and *west*, extending it self from the *south-west*, out towards the *north* pole, eight hundred miles in length, and containing two hundred in breadth, besides the farre outstretched forelands of sundry promontories, embraced by the embowed bosoms of the ocean sea; with whose most spacious, and on every side (saving only the southern straits, by which we sail to *Gallahelpike*) unpassable enclosure (as I may call it) shee is strongly defended; enriched with the mouths of two noble floods, *Thames* and *Serwa*, as it were two arms, (by which outlandish commodities have in times past been transported into the same) besides other rivers of lesser account, strengthened with eight and twenty cities, and other castles, not meanly fenced with fortresses of wale, embattled towers, gates, and buildings (whose roofs being raised aloft with threatening hugeness were mightily in their aspiring toppes compacted) adorned with her large spreading fields, pleasant seated hills, even framed for good husbandry, which overmastereth the ground, and mountains most convenient for changeable pastures of cattell, (whose flowers of sundry colours, trodden by the feet of men, imprint no unseemly picture on the same,) as a spouse of choice, decked with divers jewels; watered with cleere fountains, and sundry brookes, beating on the snow white sands together with silver streams sliding forth with soft sounding noise, and leaving a pledge of sweet savours on their bordering bankes, and lakes gushing out abundantly in cold running rivers."

A LANCAIRE ROAD IN 1770.—In Arthur Young's "Tour in the North of England," published in 1770, we find the following statement as to the condition of the turnpike road between Preston and Wigan, a spot which is now become a centre for railway operations. This description of a turnpike-road exhibits an extraordinary contrast with the safety, comfort, and celerity presented by the more modern improvement. "I know not in the whole range of language terms sufficiently expressive to describe this infernal road. To

look over a map, and perceive that it is a principal one, not only to some towns, but even whole counties, one would naturally conclude it to be at least decent; but let me most seriously caution all travellers who may accidentally purpose to travel this terrible country to avoid it as they would the devil, for a thousand to one but they break their necks or their limbs by overthrows or breakings down. They will here meet with ruts, which I actually measured, four feet deep, and floating with mud, only from a wet summer;—what, therefore, must it be after a winter? The only mending it in places receives, is the tumbling in some loose stones, which serve no other purpose but jolting a carriage in the most intolerable manner. These are not merely opinions, but facts, for I actually passed three carts broken down in these eighteen miles of execrable memory."—*Companion to the Almanac for 1837.*

FACTORY CHILDREN.—There are hundreds of thousands of people whose condition is that of twelve hours' toil in an occupation which exercises only the very lowest of the faculties of human intelligence. They are mere watchers upon the work of the steam engine. They are for ever poring upon the whirling spindles, "piecing" the thread when it gives way, walking backwards and forward, or rather from side to side, within a few yards' space, from twenty to twenty-five miles every working day! This is done even by children of twelve years' old, done in an atmosphere artificially heated to a high degree, with the clank and whirr of machinery on every side, and with minute, impalpable fibres of cotton floating in the air, which are inhaled at every breath.

WILLIAM III.—When Lord Molesworth published his celebrated account of Denmark, many passages in that work were found extremely offensive to the reigning monarch, who by his ambassador, complained of the insult, and demanded from our William III. the head of the author. "Tell his Danish majesty," said King William, "that I cannot by my own authority, dispose of the heads of my subjects, nor can I grant to his majesty any redress, except that I can communicate to Lord Molesworth the nature of this application, who will, I dare say, insert it in the next edition of his book."

MR. CANNING.—The following instance of Mr. Canning's eccentricity is given in the "Foreign Quarterly Review." It relates to a proposed commercial treaty betwixt the government of the Netherlands and our own. The negotiation languished, and Mr. Canning and Mr. Huskisson were tired out. In January, 1826, Sir Charles Bagot, our ambassador at the Hague, received, while attending the King's Court, a despatch in cipher, very short, but accompanied by every indication of urgency and importance. Unfortunately he had not with him the key of the cipher, and he was kept in a state of great anxiety during the interval occupied in procuring it; at last the letter was deciphered, and the following is a literal copy of the important communication, made by the command of his Britannic Majesty to his minister at the Hague:—

"In matters of commerce, the fault of the Dutch,
Is giving too little and asking too much;
With equal advantage the French are content,
So we'll clap on Dutch bottoms a twenty per cent.
Twenty per cent.
Twenty per cent.
Nous frapperons Falck with twenty per cent.

"GEORGE CANNING."

FEMALE EDUCATION.—One of Daniel De Foe's projects was an academy for the education of women; on the evils resulting from the want of it, he expressed his opinion in the following terms:—"A well-bred woman and well taught, furnished with the additional accomplishments of knowledge and behaviour, is a creature without comparison. Her society is the emblem of sublimer enjoyments, her person is angelic, and her conversation heavenly; she is all softness and sweetness—peace, love, wit, and delight; she is every way suitable to the sublimest wish; and the man that has such a one to his portion has nothing to do but rejoice in her and be thankful. On the other hand, suppose her to be the same woman, and deprived of the benefit of education, and it follows thus:—If her temper be good, want of education makes her soft and easy; her wit, for want of teaching, renders her impertinent and talkative; her knowledge, for want of judgment and experience, makes her fanciful and whimsical. If her temper be bad, want of breeding makes her worse; and she grows haughty, insolent, and loud. If she be passionate, want of manners makes her a termagant and a scold. If she be proud, want of discretion (which is ill-breeding) makes her conceited, fantastic, and ridiculous."

STUDENTS AT CAMBRIDGE IN FORMER TIMES.—In a sermon preached in 1550, by T. Lever, fellow of St. John's, Cambridge, he has drawn the following interesting picture of that university, when they had been deprived of some of their revenues:—"The small number of poor godly students now remaining in Cambridge, be not able to tarry and continue their study in the university, for lack of exhibition and help. There be divers there, which rise daily betwixt four and five of the clock in the morning, and from five until six of the clock use common prayer, with an exhortation of God's word, in a common chapel, and from six until ten of the clock use ever either private study or common lectures. At ten of the clock they go to dinner, where they be content with a penny piece of beef among iiiiij, having a few porridge made of the broth of the same beef, with salt and oatmeal and nothing else. After this splendid dinner, they be either teaching or learning until five of the clock in the evening, when they have a supper not much better than their dinner. Immediately after which they go either to reasoning in problems, or unto some other study, until it be nine or ten of the clock; and then, being without fire, are fain

to walk or run up and down half an hour to get a heat on their feet, when they go to bed."

USE OF FORKS IN EATING.—A foreigner remarks, in his work on Great Britain, that an Englishman may be discovered any where if he be observed at table, because he places his fork upon the left side of his plate; a Frenchman by using the fork alone, without the knife; and a German by planting it perpendicularly into his plate; and a Russian by using it as a toothpick. Holding the fork is a national custom, and nations are characterised by their peculiarity in the use of the fork at table. An affectation of the French usages in this respect seems now to be gaining ground in this country.

REMARKABLE INCIDENT IN THE HISTORY OF WINCHESTER.—During the minority of Edward III., a Parliament was held in the castle of this city, by appointment of the queen-dowager, before which Edward Plantagenet, third son of King Edward I., and Earl of Kent, was arraigned for high treason, and through the machinations of the dowager, and the Earl of March, condemned to lose his head, without being allowed the liberty of pleading, or of attesting his innocence. On the eve of St. Cuthbert's day, A.D. 1330, he was brought to the scaffold, erected in the middle of the market-place, where he stood till five in the afternoon, before any one could be prevailed on, either by threats, or the promise of reward, to undertake his execution. At length, a notorious condemned criminal, one who had laid a long time under sentence of death, in consideration of being rewarded with his liberty and life, undertook the cruel business, which was accordingly executed, but in a most barbarous and butcher-like manner, amidst a numerous multitude of weeping spectators.

WEARING STOCKINGS.—Two centuries ago, not one person in a thousand wore wove stockings: one century ago, not one person in five hundred wore them; now, not one person in a thousand is without them; yet, William Lea, the inventor of the stocking-frame, could get no person to patronise his invention, and he died of a broken heart.

COINING.—We sometimes behold that singularity of character which joyfully steps out of the beaten track for the sake of being ridiculous; thus the barber, to excite attention, exhibited in his window green, blue, and yellow wigs; and thus *Noah Bullock*, enraptured with his name, that of the first navigator, and the founder of the largest family upon record, having three sons, named them after those of his predecessor, *Shem, Ham, Japhet*; and to complete the farce, being a man of property, built an *Ark*, and launched it upon the Derwent, above St. Mary's Bridge: whether a *Bullock* graced the stern, history is silent. Here Noah and his sons enjoyed their abode, and the world their laugh. But nothing is more common than for people to deceive each other, under a mask. If they publicly ridiculed him, he privately laughed at them: for it afterwards appeared he had more sense than honesty, and more craft than either; for his disguise and retreat were to be a security to coin money. He knew justice could not easily overtake him; and if it should, the *deep* was ready to hide his crimes and his utensils. Sir Simon Degge, an active magistrate, who resided at Babington Hall, was informed of Noah's proceedings, whom he personally knew; the knight sent for him, and told him, he had taken up a new occupation, and desired to see a specimen of his work; Noah hesitated. The magistrate promised that no evil should ensue, provided he relinquished the trade. He then pulled out a sixpence, and told Sir Simon, He could make as good work as that. The knight smiled; Noah withdrew, broke up his ark, and escaped the halter.—*Hutton's History of Derby.*

GUILDFORD DOWNS AND FARNHAM.

Few relaxations from town labour, or town occupation of any kind, are more delightful, or more conducive to health, and the inspiring of fresh activity for the winter campaign, than drives over the surface of the more diversified parts of England; and though Margate, Ramsgate, and some other coast towns have, time out of mind, been the summer or early autumn retreats of the Londoners, until these places have become "London all over," and literally *urba in ruris*, yet in as far as locomotion is concerned, and pure air, health, and pleasure during that locomotion, which are the valuable parts of the whole matter, ten thousand reekings and rockings on board a Margate steam-boat are not worth one little mile over the inland countries to the south-west of London.

I am to speak chiefly of a district very limited in extent, but remarkably, and I may say delightfully diversified in its character,—the district between Guildford and Farnham, and the environs of the latter town. As the crow flies the distance, from centre to centre of these two towns is not above eight or nine miles; but so varied is the character of the country, that it is as great as would be met with in crossing the country in many other directions,—much greater indeed than one meets with on the whole line from Dover to Liverpool, or from London to Berwick-upon-Tweed.

Chalk, chalky loam, peat bog, and a deep and hungry sand, which is stratified, but little consolidated, are the prevailing characters; and though they alternate with each other, often at very short distances, each is so predominating in the place where it is found, that it gives a character to the whole vegetation.

In that particular spot the sand is the highest, and forms a considerably elevated ridge, more than three-fourths of the whole distance, with the public road along the summit of it. This forms what is called Guildford Downs. It lies nearly in the direction of east and west, and its cross section is short as compared with its length. The upper slopes of this are covered with very vigorous plantations of larches and other members of the pine family. But this occurs only in patches, though there is little doubt that the larch, which is a sturdy mountaineer, and by no means particular as to soil, would grow well over the greater part of the Downs. That this would be a great advantage to the inhabitants of a district where coal is expensive on account of its long carriage, notwithstanding the navigation of the Wey, through Guildford and Godalming, and so on by the Wey and Arun canal, and Arun to the English Channel. It would be also especially valuable at the Farnham extremity of the Downs, though Scotch fir rather than larch is the prevailing coniferous tree which has been planted there. The reason is as follows: the neighbourhood of Farnham is a hop country, not

in breadth indeed, but in patches of considerable extent, and admirably fitted for this species of crop, both in their soil and their exposure. Hop poles are a necessary and by no means a cheap article in hop culture; and the poles at present in use are chiefly, if not exclusively, grown in holts or copses, consisting of deciduous trees only. These must be grown on good soil, in order that they may shoot up with sufficient rapidity; and in order to draw them up in single stems, and prevent them from branching, they must be grown as close as possible. This mode of growth adds not a little to the beauty of the scenery in the summer season; because a very thick copse has the compound property of at once harmonising better with the field, and contrasting more strongly with it than a forest of large timber in which the trees stand much farther apart from each other, and daylight gets in between the naked boles, and causes the margins of such a forest to look ragged. Landscape gardeners are sometimes in the habit of trying to correct this, by letting the forest down upon the field: by means of an intervening copse, but neither the forest itself, nor they who use its timber, have any reason to be grateful for this species of ornamenting, in as much as thereby the trees are deprived of the free circulation of air, and the wood is of an inferior quality.

Copse grown poles of deciduous timber are, from the rich soil and the close shelter, of very weak and spongy texture; and they very soon fall at the wet and dry line, or just at the surface of the ground; at which line they are of course constantly exposed to the weather, from the time that they are required till the hops are ready for picking. Larch poles would be in a great measure free from this objection; they could be easily drawn up if planted thick enough; and as they would require to be planted, as larches do not stool at the roots, like deciduous trees, they might perhaps require longer time before they were drawn up to the requisite height; but still the ground which would suffice for growing larches is quite unfit for deciduous copses; and, therefore, there would be a gain at once in the value of the land; while the larch plantations would prevent the bleak places from being washed by the rains and scourged by the winds, almost down to the substratum of sand, as they are in their present exposed state.

This, however, is a small advantage compared with the greater durability of larch poles; and something also may be said in favour of their more elegant and appropriate shape. The pole of a larch is a perfect cone; and therefore a larch stuck root end into the ground is far more stable against the winds than a deciduous pole of the same dimensions. The greater durability of the larch, especially in the ground, and at

the wet and dry line, is its grand recommendation however, and it is no exaggeration to say that it would last ten times as long as a common copse pole; so that, without any reference to the advantage of occupying inferior land, and leaving the superior land for other purposes, it would not cost the hop grower above a fifth, or, at the most, a fourth of what the other costs. This, however, is a matter for the people themselves to consider; and though it would not be amiss to keep the words "get larch poles!" ringing in the ears of all who are interested in hop growing, we are not sure that the growing of larches would add much to the beauty of the district, or the pleasure of a drive across it, and that is my purpose in the meantime.

Bath, Guildford, and Farnham are situated on the Wey, which passes about northward through the former, between steep banks on both sides, but with the greater part of the town on the east, or right hand bank. Guildford, though a town of some size, in a fine situation, having an excellent county market, and presenting a great deal of business and bustle, is not a very pretty town. The descent to the bridge is very steep, and the bridge itself is awkward and ugly, so that after getting fairly across it, and beginning to ascend toward the Downs, one instinctively gives a shake to the shoulders to ascertain what approach there has been made to a laxation of any of the cervical vertebrae.

The Wey comes to this bridge in a sweep around the left side of the Downs; and the banks up to Godalming, and a little beyond it, are finely wooded; but they are soon lost sight of, as the old road, which, according to the old fashion of pack-horse engineering, took the bull by the horns on the eastern slope, now proceeds gradually, in a slanting direction along the north; and for some space no view southward is obtained. When the top is gained, it is certainly fine, and finer in August, or early in September, than at any other time of the year. It is a carpet of brown heather, which would do no discredit to the Grampians, and certainly put Drumthwacket to utter shame. The soil is as poor, certainly, as is that abomination of Scotland, and it is perfectly incorrigible, at least for every useful vegetable except potatoes, in consequence of the depth and unquenchable thirst of the sand below. But it has a southern climate, and the soft gales from the Atlantic are upon it, instead of the weeping breath of the weary north-east, which is always raining upon Drumthwacket, unless when it snows. The heath is but stunted, it is true, but then it is beautifully close, and I found it of one unbroken purple, softened a little by the brown green of the foliage, and exceedingly fragrant with honey, the odour of which, with the air, otherwise delightfully sharp and pure, was perfectly indescribable, and unobtainable in any other kind of situation.

The views from those elevated Downs are extensive; and they are beautifully diversified, quite refreshing as contrasted with the frowzy fields, and ragged hedge-rows on the clays to the northward of the Thames. In these last, fields, forests, and common, are so jumbled together, that there is no repose or relief about them—no grouping, no *chia oscuro*, to give character to the different features, and lead the mind to generalise and remember them. The trees, too, are often pollarded, which gives them the appearance of skeletons, or perhaps of trees turned upside down; and assuredly if the tops were stuck in the earth, and the roots turned up to the sky, they could not look more unseemly. In the landscapes around those south-western Downs the case is very different, because the diversity to which I have alluded, in the nature of the subsoil, determine a variety of characters. In one place, there are meadows of the finest grass, and sheep-walks of more scanty herbage, upon the chalks. Then, every slope and ravine too steep for the plough, has its copse; forest trees are by no means wanting in some places, the grass and corn lands rise into fine swells, and are scooped into equally fine hollows in the alternate parts, the hedge rows are neat, the highways are like a bowling-green; and as one looks round with almost indescribable enjoyment, a large patch of brown heather, sometimes more and sometimes less elevated, gives all the richer parts the contrast arising from the very last approach to sterility which one is prepared for in a temperate climate.

The Farnham end of the Downs is, as we have said, more wooded than the other, and the prevailing tree on much of the high ground is fir. In passing along where the improvement of the roads has cut down the sand bank from those firs, the roots have played freaks which I at least never saw played by the roots of the same trees. The removal of the soil from the one side, first, by the cutting down, and then by the embanking, has not only deprived the roots next the road of all nourishment, but has acted as a complete drainage to those which go the other way. In consequence of this, the top root has struck downwards in the open air to a considerable length, and acquired a diameter not much less than that of the bole above; and from the lower extremity of this a number of new roots have been put out in a horizontal direction, so that, as seen from the bank, the tree presents the curious spectacle of an upper and a lower story of roots, with a foot and a half, or two feet, of straight bole between them.

This is a curious habit of the fir, and one which is well worthy the attention of those who wish to improve those surfaces over deep sand, which will not bear the expense of any species of farming. The lower story of roots, which the tree has put out, to serve its necessity, go into

the pure sand, and the trees (for I observed several) are as healthy and vigorous as any of the rest; therefore it establishes the fact, that firs will grow in pure sand. The same fact is established in those places of Bagshot heath, and other expanses of heather, which have been planted with this kind of timber, only the trees must be planted in masses, so that the one may shelter the other, as planted firs seldom or never are worth any thing, either in shape or size when they stand singly.

One is apt to wonder why all the choice honey contained in the blooms of those extensive heathy districts is suffered to be washed away by the autumnal rains, and carried to the ocean. We send to Narbonne, and Cape Roses, and many other heathery districts of the Pyrenees for honey, and pay a high price for it, at the same time that we allow to be lost from our own heaths a hundred weight, yearly, for every pound that is imported. If this is wisdom, where shall we look for folly in such matters? There are a good many hives about the margins of some of these expanses of heather; and where there are cottages there are some spotted over here and there; but they are comparatively few, and the honey which is obtained is not a drop in the bucket as compared with that which is lost; and therefore, if government, or whoever else may have the control of those places, will not turn them to any better purpose, surely, they might contrive to stock them with bee-hives while the heather is in bloom, as the rest of the country is rich and flowery enough for preserving the stock of bees during the rest of the year.

In escaping from the fir plantations on the western slope of the Downs, one speedily comes in sight of Farnham. The grounds here are very beautiful. The surface is much diversified and so is the soil. There are still some naked heights in view, and there are hanging woods and copses, and osier beds, and a great variety of legumeous vegetation. But there are very fine open glades, rich fields in good cultivation, and hop gardens to a considerable extent, and apparently of the best soil, and kept in the finest order. The hop ground in most of this part of England is a light coloured clayey soil, but at the same time containing a considerable admixture of chalk and flint earth. I believe a great

part of it is formed of the substance of a white splintery rock below, which moulders with the rain and frost. It is of course expensive to farm, as all hop grounds are, but it pays well. In the present year, I was informed that many of the gardens have been sold at one hundred pounds an acre, the purchaser to pay the expense of gathering and preparing the crop. The rents and expenses of those first rate gardens are of course both high; but still in favourable years the profit to the grower must be very great. I heard that some of the very choice gardens are worth twenty pounds an acre in rent, but I cannot speak to the fact as of my own knowledge. It seems, however, that the present is an extraordinary hop season, at least in that part of England, and that there has been nothing like it for ten years at the least. The hop gardens are certainly exceedingly beautiful, the poles are high, the binds fine and strong, the leaves, where they can be seen for clusters, are perfect, the produce is exceedingly abundant, there is no trace of blight or of fly, and the whole crop is a perfectly uniform and fine colour. Of course there are differences, arising from difference of soil and management, but I allude only to those gardens which are held to be of first rate quality.

In such a season, the hop picking time is a joyous one. Men, women, and children from all parts of the country, and women and children especially, in waggon-loads from London, were thronging towards Farnham, or crowding round the habitations of the hop growers; then there was a general carrying of those barrow trussels, across which the poles are laid, and a falling and carrying of poles—the labour chiefly of the men; while the hands of the women and children were nibbling and picking, and the whole was going on with no lack of heartiness and glee. Autumn is the season for the country, just when decay tips the extremities of the trees with their first tint of russet; the country air at this time is also more healthy than in the season of growth, and the labour is more delightful, because the reward is now in the hand of the labourer. Farnham is beautifully situated and remarkably clean; and a ride along the Downs from Guildford to Farnham would amply repay the two or three hours which it requires from an admiring visitor.

T. E.

MENTAL AND MORAL EDUCATION OF CHILDREN.

SECOND ARTICLE.

As the child advances in age, new passions and affections call daily for our notice; and as its mental education simultaneously progresses, and it is constantly acquiring an increased knowledge of external objects, we are furnished by this pro-

gress and knowledge with additional and powerful instruments for influencing its moral nature. He displays but a small acquaintance with the human heart who hopes by an apothegm to extinguish the passion of jealousy, or to repress

the cravings of ambition by a dry statement of the unquestionable truth that all is vanity. But still the natural feeling of emulation, which is the commencement of jealousy, can be restrained within just and wholesome limits, by calling into play the family affection and compassion, which are equally original elements of the moral constitution: and the love of reputation may be prevented from growing into a dangerous ambition, by encouraging, along with the affections just mentioned, a development of the conscience, or moral sense, and of the sense of property, both of which we conceive to be inherent in our nature. The child may in this way be practically shown, that while a generous rivalry in its sports and lessons is not forbidden, still that benevolence and natural affection for its brothers and playmates teach it to stop short, in every instance, of carrying this so far as to wound the persons or feelings of others; and, again, that while it may be lawfully anxious to obtain credit and praise from its teachers, still that its sense of property forbids it to seek for either, by making an unpermitted use of the labour of others, and its conscience peremptorily interdicts any advantage which might be attained by the assertion of an untruth. In this way we avoid overtaxing nature,—we do not vainly denounce or attempt to obliterate forces which are as much part of our moral frame as hunger is of our physical;—we do not tell the hungry man he shall not eat, because gluttony is a vice, but we furnish him with a guide as to the quantity and quality of food which is wholesome and necessary. Above all, the restraining principles, (if one may be preferred to another,) we should be inclined to endeavour with most care to bring into activity the sense of property and conscience, or the moral sense, as Dr. Chalmers terms it. Upon these the well-being of society mainly depends: if not encouraged in early childhood, they are of all others the most likely to remain dormant; but if once well developed in the child, they require a long course of vice for their overthrow.

The progress of mental knowledge may be brought into useful operation, by directing the growing faculties of the child to such portions of the general plan of nature as may be within its comprehension. Admiration for the skill of Providence may, at a very early age, be excited, by calling attention to the more obvious adaptations of means to ends in the forms of animals, in the benefits conferred by the mode of distribution of water over the earth, &c., and a perception of beauty can be called up in a very young mind, by the colours and fragrance of flowers, and the influence of music. From all these the watchful parent can derive practical lessons of humility and love, which would be sought in vain in the maxims of a dry morality. To work out in practice the principles which we have attempted to lay down, we are well aware

would require qualifications, on the part of the parent or teacher, of no ordinary kind; but the nearer we can approach to them, the more likely are we to produce the *mens sana*, which we feel confident is fully as certain of producing as of inhabiting the *corpus sanum*.

We have not spoken of religious instruction as a part of moral education, because we have been considering the management of the moral faculties as they exist in the natural man; we are deeply convinced, however, of its necessity and importance; and we are firmly of opinion, that in no way can we promote the interests of an individual, both as regards himself and his relations with society, so effectually as by encouraging in him early habits of religious observances; in no way can we so surely call forth and strengthen his best affections, as by early setting before his view the living truths of revelation.

During the period of childhood, (that is, until the eighth year,) education should have for its main object the cultivation of the moral qualities; and that, during the same period, the intellect will be pretty fully occupied in obtaining such most necessary information as can be acquired by the use of the senses without much *formal* assistance, and therefore that schooling, properly so called, should not be commenced, at the very earliest, before the termination of the sixth year. Until then, the confinement of a school is injurious to the bodily health, and not required for the mental improvement of the child. In coming to these conclusions, we may appear to undervalue those useful inventions of late years—infant schools. We conceive, however, that they have a specific purpose, and that, when well regulated, they effect that purpose usefully—namely, to take charge of the children of the poor in large cities, when their parents are engaged in their daily labour, and unable to attend to their wants. In this view, their value is inestimable; but still they are but the substitution of a lesser for a greater evil; all the ties of social affection, of well regulated obedience, and of mutual co-operation, which constitute the bonds of society, are learned by the infant in the domestic circle, and can be learned no where else; and if we can leave it in the care of an intelligent mother, and in the society of its brothers and sisters, we should not send it to an infant school, where it is governed by and associated with strangers, with none of whom it is likely to have natural sympathies. What the child may be expected to gain specifically in these schools, beyond mere protection, can only be regularity of habits, which certainly is of great importance, but not so great as to counter-vail the advantages of a well regulated domestic circle. We conceive that infant schools, though most serviceable in large cities for the poor, are totally unfitted for children of more opulent parents. With the latter, the system might be

characterised, as Dr. Chalmers has done another artificial system, as "a taking to pieces of the actual framework of society, and re-constituting it in a new way or on new principles—

which is altogether fruitless of good, and often fruitful of sorest evil, both to the happiness and virtue of the commonwealth.

BEGGARS AND PAUPERISM.

"But why," said Erich to his neighbour, "are you disgusted with most of the works of the Flemish school here?"

"Because they represent so many tatterdemalions and beggars," answered the rich man, "nor are these Netherlanders the sole objects of my dislike; I hate particularly that Spaniard, Murillo, on that account, and even a great number of your Italians. It is melancholy enough that one cannot escape this vermin in the streets and market places, nay, even in our very houses; but that an artist should require me besides to amuse myself with this noisome crew upon a motley canvass, is expecting rather too much from my patience."*

"Perhaps, then," said Edward, "Quintin Matsys would suit you, who so frequently sets before us, with such truth and vigour, money-changers at their counters, with coins and ledgers."

"Not so either, young gentleman," said the old man; "that we can see easily, and without exertion in reality. If I am to be entertained with a painting, I would have stately royal scenes, abundance of massy silk stuffs, crowns, and purple mantles, pages, and blackamoors; that, combined with a perspective of palaces, and great squares, and down broad straight streets, elevates the soul; it often puts me in spirits for a long time, and I am never tired of seeing it over and over again."

"Undoubtedly," said Erich, "Paul Veronese, and several other Italians have done many capital things in this department also."

"What say you to a marriage of Cana in this manner?" asked Edward.

"All eating," replied the old man, "grows tiresome in pictures, because it never stirs from its place; and the roast peacocks and high-built pasties, as well as the cup-bearers half-bent double, are in all such representations, annoying things. But it is a different case when they are drawing a little Moses out of the water, and the king's daughter is standing by, in her most costly attire, surrounded by richly dressed ladies, who might themselves pass for princesses, men with halberds and armour, and even dwarfs and dogs: I cannot express how delighted I am when I meet with one of these stories, which in my youth I was forced to read in the uneasy confinement of a gloomy school-room, so glo-

riously dressed up; but you, my dear Mr. Walther, have too few things of this sort; most of your pictures are for the feelings, and I never wish to be affected, and least of all by works of art; nor, indeed, am I ever so, but only provoked."

"Still worse," began young Eisenschlicht, "is the case with our comedies. When we leave an agreeable company, and, after a brilliant entertainment, step into the lighted theatre, how can it be expected that we should interest ourselves in the variety of wretchedness, and pitiful distress that is here served up for our amusement? Would it not be possible to adopt the same laudable regulation which is established by the police in most cities, to let me subscribe once for all for the relief of poverty, and then not be incommoded any farther by the tattered and hungry individuals?"

"It would be convenient, undoubtedly," said Edward, "but whether absolutely laudable, either as a regulation of police, or a maxim of art, I am not prepared to say. For my own part, I cannot resist a feeling of pity towards the individual unfortunates, and would not wish to do so, though, to be sure, one is unseasonably disturbed, impudently importuned, and, sometimes, even grossly imposed upon."

"I am of your opinion," cried Sophia, "I cannot endure those dumb blind books, in which one is to write one's name, in order placidly to rely upon an invisible board of management, which is to relieve the distress as far as possible. In many places even it is desired that the charitable should engage to give nothing to individuals; * but how is it possible to resist the sight of woe? When I give to him who complains to me of his distress, I, at all events, see his momentary joy, and may hope to have comforted him."

"This is the very thing," said the old merchant, "which, in all countries, maintains mendicity, that we cannot and will not rid ourselves of this petty feeling of soft-headed vanity and mawkish philosophy. This it is, at the same time, that renders the *better*† measures of states abortive and impracticable."

"You are of a different way of thinking from those Swiss whom I heard of," said Edward, "it

* Surely H. B. must have read this.

* This man was an economist of the worst kind, without knowing any thing of political economy.

† This is the very essence of the new blasphemy. This general system will be found to require modification in a small parish of fifty souls; how can it be enforced throughout a whole nation without frightful suffering?—S. T. C.

was in a Catholic canton, where an old beggar had long been in the habit of receiving his alms on stated days, and, as the rustic solitude did not allow much trade and commerce, was accounted, in almost every house, one of the family. It happened, however, that once, when he called at a cottage, where the inmates were extremely busied in attending a woman in labour, in the confusion and anxiety for the patient, he met with a refusal. When, after repeating his request, he really obtained nothing, he turned angrily away, and cried as he departed, 'Well, I promise you, you shall find I do not come again, and then you may see where you can catch another beggar.'

All laughed, except Sophia, who would have it that the beggar's threat was perfectly rational, and concluded with these words, "Surely if it were put out of our power to perform acts of benevolence, our life itself would become poor enough. If it were possible that the impulse of pity could die, in us, there would be a melancholy prospect for our joy and our pleasure. The man who is fortunate enough to be able to bestow, receives more than the poor taker. Alas, it is the only thing," she added with great emotion, "that can at all excuse and mitigate the harshness of property, the cruelty of possession, that a part of what is disproportionately accumulated is dropped upon the wretched creatures who are pining below us, that it may not be utterly forgotten that we are all brethren."*

The father looked at her with a disapproving air, and was on the point of saying something, when Edward, his beaming eyes fixed on the moist eyes of the maid, interposed with vehemence, "If the majority of mankind were of the same way of thinking, we should live in a different and a better world. We are struck with horror when we read of the distress that awaits the innocent traveller in wildernesses, and deserts of foreign climes, or of the terrible fate which wastes a ship's crew on the inhospitable sea, when in their sorest need, no vessel or no coast will appear on the immeasurable expanse; we are struck with horror when monsters of the deep tear to pieces the unfortunate mariner. And yet do we live in great cities, as upon the peak of a promontory, where, immediately at our feet, all this woe, the same horrible spectacle displays itself, only more slowly, and therefore the more cruelly?"† But from the midst of our concerts and banquets, and from the safe-hold of

* I know nothing so ludicrous, and, at the same time, so affecting, as this little incident, and the after remarks of Sophia: the very essence of femininity seems to speak in the few and delicate, yet true and touching words. I am not ashamed to say, that when I first read them, the tears came into my eyes, and often, as I have read them since to others. I cannot refrain from praying inwardly that the time may be far distant when such sentiments shall be scouted by our women.—S. T. C.

† Say selfishness, for the opulent have not a monopoly of cruelty.

our opulence, we look down into this abyss, where the shapes of misery* are tortured and wasted in a thousand fearful groups, as in Dantes' imagery; and do not venture even to raise their eyes to us, because they know what a cold look they meet, when their cry rouses us at times out of the torpor of our cold apathy."

"These," said the elder Eisenschlicht, "are youthful exaggerations: I still maintain, the really good citizen, the genuine patriot, ought not to suffer himself to be urged by a momentary emotion to support beggary. Let him bestow on those charitable institutions as much as he can conveniently spare; but let him not waste his slight means, which ought, in this respect, also to be subservient to the higher views of the state. For in the opposite case, what is it he does? He promotes by his weakness, nay, I should be inclined to call it a voluptuous itching of the heart, imposture, laziness, and impudence, and withdraws his little contribution from real poverty, which, after all, he cannot always meet with or discern. Should we, however, be willing to acknowledge that overcharged picture of wretchedness to be correct, what good, even in this case, can a single individual effect? Is it in his power to improve the condition of the wretch who is driven to despair? What does it avail to give relief for a single day or hour? The unfortunate being will only feel his misery the more deeply, if he cannot change his state into a happy one; he will grow still more dissatisfied, still more wretched, and I injure instead of benefitting him."

"Oh, do not say so," exclaimed Edward, "if you would not have me think harshly of you, for it sounds to me like blasphemy. What the poor man gains in such a moment of sunshine! Oh, sir, he who is accustomed to be thrust out of the society of men,—he, for whom there is no holiday, no market-place, no society, and scarcely a church; for whom ceremony, courtesy, and all the attentions which every man usually pays to his neighbour, are extinct; this wretched creature, for whom, in public walks and vernal nature, there shoots and blossoms nothing but contempt, often turns his dry eye to heaven and the stars above him, and sees there even nothing but vacancy and doubts; but in such an hour as that which unexpectedly bestows on him a more liberal boon, and enables him to return to his gloomy hovel, to cheer his pining family with more than momentary comfort, faith in God, in his Father, again rises in his heart; he becomes once more a man, he feels again the neighbourhood of a brother, and can again love him and himself. Happy the rich man who can promote this faith, who can bestow with the visible the

* Say, rather, the punishments the selfish seek to inflict upon those by and through whom they have the opportunity of punishing. All men might be improvident, and all would be better if all were lavish, profuse, and generous. It would not be possible for all to be selfish and grasping.—S. T. C.

invisible gift; and woe to the prodigal who, through his criminal thoughtlessness, deprives himself of those means of being a man among men; for most severely will his feelings punish him, for having poured out in streams in the wilderness, like a heartless barbarian, the refreshing draught, of which a simple drop might have cheered his brother who lay drooping under the

load of his wearisome existence." He could not utter the last words without a tear; he covered his face, and did not observe that the strangers and Erich had taken leave of their host; Sophia too wept, but she roused herself and recovered her composure, as her father returned.—*Coleridge*.

BRITAIN.

CHAPTER VI.

THE SAXO-BRITISH PERIOD.

THE Saxons, who spoke a dialect of the Teutonic, and who, like the Greeks and Egyptians, boasted of being god-descended, obeyed the invitation of the Britons; for Hengist and Horsa, in three rude ships, were soon in the channel,—served their masters six years, and, when weary, invited other Saxons, to the number of about five thousand; who, having placated the Picts, and wanting provisions, attacked the natives, and,

after much bloodshed, founded the kingdom of Kent. Success encouraged others, who, when weary of plunder, colonised; but it was one hundred and fifty years before the last swarm, under Credda, had seated themselves in the fair fields of Britain.

The following table exhibits several things of importance relative to the heptarchy, that is, seven kingdoms, or octarchy, (Northumbria at first having been named Deira,) as sometimes the Saxon government was called:—

1. The kingdom of Kent, founded by Hengist in . . . 475 and ended in 823	} including	Kent.	It had seventeen kings in its
2. West Saxons, or Wessex, founded by Cerdic 575 ended 1060			
3. East Angles, founded by Uffa 575 ended in 793	} including {	{ Cornwall, Devon, Dorset, Somerset, Wilts, Hants, Berkshire.	} It had nineteen kings.
4. South Saxons, or Sussex, founded by Ella in 491 ended in 600			
5. East Saxons, or Essex, founded by Erchowin 527 ended in 746	} including {	{ Norfolk, Suffolk, Cambridgeshire, and Isle of Ely.	} It had fourteen kings.
6. Northumberland, founded by Ida 574 ended in 792			
7. Kingdom of Mercia, founded by Credda 582 ended in 847	} including	Sussex and Surrey.	Governed by ten kings.
	} including	Middlesex and part of Hertford,	had thirteen kings.
	} including {	{ Durham, Cumberland, Westmoreland, Northumberland, and Scotland to the Frith of Edinbro',	} had twenty-four kings.
	} including	All the middle of Britain.	It had twenty kings.

Among these, one was often superior to the rest; and out of the Saxon kings, seven are mentioned who had the title of Bretwalda, or Britain-wielder,—namely, Ella, Ceardlin, Ethelbert, Redwald, Edwin, Oswald, and Oswin.

The Britons resisted their settlement with irregular, heartless, and infatuated forces; and were so mutually at variance, and lost to patriotic feeling, that while the Saxons were pillaging their fields, gardens, orchards, and vineyards, burning their towns and libraries, destroying their churches, statues, and fortifications, steeping their land with blood, and crowding it with idols, and laying in the roots of eight distinct kingdoms, the Britons were engaged against the Visigoths on the continent. From the foolish multitude must be excepted Natanleod, Ambrosius, a Roman-Briton, Dorniu, Arien, and Arthur, the

burden of poets, who, having despised the wretch Vortigern, yet, for want of the co-operation of their countrymen, resisted in vain; for in a battle at Wippidfeest, twelve British chiefs fell, and thousands of the people; and in a few years after, in another as fatal battle, Hengist established himself, and finally broke the spirit of the natives. Tillage was neglected, the trades were useless, the merchant was afraid, and the scholar, and multitudes besides, withdrew to Britany, while the old British population, slaughtered in frightful heaps, melted gradually to the banks of the Severn, and ultimately beyond the Welsh mountains, where, with time to repent of their pusillanimous expatriation, they slid back again to savagism. Others, who escaped this happiness, and fell to the Saxon, of whatever sex, age, or station, were made absolute slaves, and either

sold, given, or chaffered about to the victors, with the lands which they had lately owned. These never rose in defence of their rights, but the emigrants to Wales made desperate efforts, till 853, to force themselves back upon their pillaged houses, which was impossible. Temporary advantages they indeed gained, and many thousands of the Saxons perished in these incursions; but the roots of their power lay too deep to be easily eradicated; for having ruined the Roman-Britons, they stuck fast to the soil, living in hovels of mire, on mutual plunder, for nearly two centuries after they had arrived, before they emerged either from their idols or their barbarity.

Before the Saxons went to war, they had numerous tricks of divination; hence the diviner, sorcerer, and the augur, were common but powerful characters, and charms, omens, and presages, were countless. They often tried to procure one of their enemies, and matching him with one of themselves, found out his modes of warfare. Before a war or a piratical expedition, even after they became Christians, they would confess to their priest, fast, and take the sacrament. They advanced to battle in wedge-like form, with yells, songs, and the utmost uproar they could raise with their arms.

The Saxons were of gigantic stature, of sanguine complexion, of beautiful shapes, (so fine were the shapes of these Saxons, that prisoners and criminals were often, on this account, liberated,) haughty and hospitable, had reddish hair, blue eyes, were capable of any fatigues, were long lived, desperately courageous, and credulous. They had no cavalry. When they first came, their ships were planks sided with osiers and skins. Their weapons were a target on the left arm, a spear, a sword, and a heavy battle-axe. Afterwards they used the war horse, which they almost worshipped, but slit his nostrils and plugged his ears, to make him insensible to the noise of battle; and they soon constructed a rude description of war-ships. They were all bound to some chief, than whose countless and ferocious contests nothing can be more tedious. The nobility was at first a rabble, whose distinction depended on chance and power, which as often sunk them to disgrace as raised them to command; which it was a rare fortune indeed for one to retain. The Saxons wore their beard till they had slain an enemy; breeches of woollen; belts, often studded or gilt, in which their swords hung; a close tunic, ornamented with bits of skins of beasts; and the great wore bandages and wood shoes; others were barefoot and without stockings; the monks, often, not excepted. The women were very attentive to their hair, which was not bound up till after marriage; and adultery was punished, among other things, by the loss of the hair. The men also wore their hair long, which the envying monks, ashamed of their own tonsure, often de-

nounced. A square, thick mantle, fastened on the right shoulder, served the Anglo-Saxon for a surtout, which was discountenanced by Charlemagne. This garment was of purple, scarlet, or blue cloth, or of silk, according to the station of the wearer. The difference was little between the dress of the sexes, except that the female used more linen, and went open-breasted; but their tunics more completely covered them. Bracelets were worn on each arm by both sexes, and furs, from those of the cat and lamb, upward. Many of them appear to have been abstemious, often making only *four* full meals in a day, at which, in all forms, they had that ancient luxury horse-flesh; and if strangers were present they were served before the inmates. At the same time, the Britons in Wales had but one meal in the day, and were inordinate fasters. Among the drinks used in the tenth century, were ale, mead, wine, cyder, morat, and pigment, which was the nectar of the age; and morat was honey and mulberry juice, which they drank in abundance. With these they used but one cup; and the not knowing how much was drunk by each, often produced quarrels and death. At length Edgar had the cup marked by little metal protuberances at certain intervals; and if any one dipped into his neighbour's measure he was fined. A barrel or palmas of mead was then sold for £15 of our money; as much spiced ale for half that sum, and common ale for one-fourth. They sat on benches round the oblong square table, still preserved in our halls and kitchens, in an order which was not more formal than rigidly observed, for if any one took a wrong seat he was pelted with bones, without redress. The male members of a family were called the "spear-side," and the females the "spindleside."

The sports of many of the Saxons necessarily resembled those of the ancient Britons, especially running, both equestrian and pedestrian, swimming, leaping, wrestling, dicing, chess, and, some say, backgammon, riding and fighting, rowing, throwing the lance, skating, dancing among the points of swords, and hard fits of drinking, which, while they continued pagan, were thought to be the pastimes of the gods. But the satraps only condescended to indulge in hawking, hunting, and in racing the horse "with a bit of yellow gold in his mouth," which, it is to be feared, often occurred on the Sabbath. Hawks—no improper emblem—were inseparable companions of the nobility, who never parted with them. The Anglo-Saxon hawk-laws were manifold, and highly ludicrous. One of these sacred birds a slave might not possess; and an ordinarythane could possess only one particular kind of hawk.

A chariot was now as rare as it had been before common. Wells and fountains of water had an iron or brass cup chained to them for passengers. The monasteries, in later times, were the

inns where the great were sure of a welcome and the best tables and company. Kings travelled with a swarm of housecarles or attendants, who pillaged the country through which they passed, although they bore his tuffa or standard, which was a round ball on a pole, crowned with feathers, and intended to guarantee his subjects. As a further picture of the seventh century, it may be mentioned, that of all the towns of Roman-Britain only twenty-seven in the south existed, no one of which—Winchester and London excepted—contained ten thousand inhabitants. York had one thousand four hundred and eighteen houses, of which five hundred and forty were unoccupied; Warwick two hundred and twenty-three, and Exeter two hundred and fifteen.

Marriages, at first, resembled, in some things, the practice of the Britons. Every woman was under a guardian, whose permission was first sought, then her own, by gifts settled by rule; which required only half as much for a widow. Her guardian was her nearest male relative; and if she had none, the king. Consent obtained, a delay only of a few weeks intervened, during which the man found sureties for his good behaviour, settled the lady's usufruct or pin-money, and invited their mutual relations within the third degree of consanguinity to their marriage-feast. When this occurred, the presence of the mundbode was essential, because he uttered the binding words, which the flamins, and afterwards the clergy, only confirmed by a benediction in the church, to which they went with music, &c. The previous night having been spent in feasting the friends of the bridegroom, they went, on the morning of this day, with their arms, to the bride, whom they conducted with all possible pomp, and accompanied by an elderly woman called the bridewoman, and younger ones as the bridesmaids.

They returned from the church covered with garlands (for it was mostly in summer) to the best feast the husband could afford; when he received a gift from each attendant, and opened the festivities of the day, which at night were closed by good wishes, a formal introduction of the newly-married to their bedchamber, when the marriage-cup of the best drink they possessed was freely used by all the party, and the bridal dresses were laid up to be no more used.

The wives of the Saxon grandes were not nurse their own children, for which they were reproved by pope Gregory, and preached against by the priests; the common women, from necessity and other causes, followed the advice of that excellent but much-neglected gentlewoman—nature, and nursed their own children. The courage of children was tried by putting them on the roof of a house; if they cried they were fore-doomed cowards, if not, heroes. The husband could, by law, give his wife three blows any where, if she slandered him, wasted his property, or plucked his beard. The education of children was confined to war, riding, wrestling, hunting, and the games.

The dead were buried on the level ground, in the midst of great lamentations, and feasts, and apparent mirth, and that even in churches; and heaps were, when possible, raised upon them, and called "barrows." This abuse of the churches made the floors incapable of use, and was soon protested against by councils; and afterwards, the dead of the poor were buried according to the present method—below the surface. Kings were, for a long period, mostly buried at the monasteries. No person dying could make a valid will without the permission of the king, or the thane to whom he did homage.

MARRIAGE HYMN.

[We extract the following hymn from Mr. Conder's recently published beautiful volume "The Choir and the Oratory," a book which abounds in genuine poetry, and amply deserves extensive patronage. This hymn, beautiful as it is, is far from being the best in the volume; but as the law of marriage has just been changed, it is quite probable that singing at the celebration of that rite will be more frequent than it has been heretofore.]

O God! who didst an equal mate
For Adam of himself create,
Flesh of his flesh, bone of his bone,
That both might feel and love as one,
Make these thy servants one in heart:
Whom thou hast joined let no man part.

Lord of the church! whose bleeding side
Gave life to thy redeemed bride,
Whose grace, through every member spread,
Joins the whole body to its Head,
O, let thy love the model be
Of this their nuptial unity!

O Thou who once, a guest Divine,
Didst turn the water into wine!
Thy presence, not unsought, afford;
Fill thou their cup, and bless their board
And while each heart thy word obeys,
May all their joy be turn'd to praise!

Spirit of grace and holiness!
Who dost these vital frames possess
As living temples, which to stain
Were God's own temple to profane,
May these thy servants, honouring thee,
Be kept in love and purity!

Now to the undivided Name
The church adores, her rites proclaim—
Seal'd with the gift of pentecost—
To Father, Son, and Holy Ghost,
All praise be given,—in every state
Be soul and body consecrate.

CAUCASIAN ANECDOTES.

(From the "*Voyage aux Indes Orientales*," &c. By M. C. Belanger.)

THE LESGHIS.

LIKE all the Caucasian highlanders, the Lesghis are savage, cruel, and of predatory habits. They are considered as among the bravest of the Caucasian nations, and are always ready to serve as mercenaries in the wars of their neighbours; and their fidelity may be relied on so long as they are regularly paid. The pay of an armed horseman is, besides food and forage, about two pounds, English money, for a campaign, the duration of which never exceeds four months. The Beladi, or commander on these occasions, having been selected, all who desire to serve under him present themselves, and each offers to him a piece of rotten wood or firebrand, saying, "May I become such if I betray the fidelity to which I am now swearing, or if I abandon you." He then takes the right hand of the chief, and presses it between his palms, so long as the latter speaks to him on the subject of his visit. If there be two or three brothers in the same family, one only is permitted to join a predatory expedition; should the family be more numerous, one out of every three brothers may absent himself. As among all savage and half-civilised people, personal courage with the Lesghis is the highest virtue, the mother excites her son to valour, from his tenderest age, by constantly relating to him the achievements of his ancestors, and those of his parent; and she herself arms him for his first expedition, and conducts him to the limits of the tribe's territory, exhorting him to remember the reputation of his family, and either to return covered with glory and laden with spoil, or die the death of the brave. Before the Russians occupied the Caucasian isthmus, the alliance of the Lesghis was courted by all the belligerent princes in the neighbouring countries, and their intervention in a quarrel was generally decisive. The major part of the Lesghian tribes are Mohammedans of the Soonni sect; but, amongst a few, faint vestiges of Christianity may be discovered. The weak bonds of society are maintained only by hospitality and the law of retaliation.

COOBISHA.

COOBISHA is a large town, on which depend eight villages. The inhabitants are known throughout the east under the name of Zer Kherans, or manufacturers of mail-coats. Some writers have asserted that they are Frenghi, or Europeans, but they resemble in every respect the Lesghis, who surround them; and their language is but a dialect of that of Acoosha.

They manufacture splendid arms, which, as well as their cloth, called *Coobisha shawl*, are highly prized, not only in the Caucasus, but even in Persia, and the countries beyond the Caspian. It is indeed strange to find in the midst of the rude barbarians who inhabit these highlands an industrious and laborious population. The Coobisha, however, neither till the ground, nor rear cattle, but exchange the produce of their industry for the necessaries of life. As the Coobisha furnish the other Lesghis with arms, they always live with them on good terms, and court their friendship. Notwithstanding this harmony, the Coobisha are constantly on their guard, and carefully watch the only two passes which lead to their habitations, and which are defended by fortifications provided with small copper cannons cast by themselves. They never make war or pay any tax or impost whatever, and are governed by a council of twelve ancients, chosen by themselves. Their disputes are settled by arbitrators, to whose decisions they submit without murmuring.

THE MISTDJEGHIS OR KISTES.

These tribes occupy that portion of the Caucasian chains which lies between the mountains of the Lesghis, the Soodja, and the Upper Terek. The Chechenzies are the more powerful of these, and are nearly as great robbers as the Lesghis. The Russians have never been able to subjugate them. To keep them in check, General Yermoloff, who was long Governor-General of the Caucasian provinces, established a military line defended by forts and redoubts, but, notwithstanding, they continued to make inroads on the Russian Territory. It is, in consequence, even now necessary to send an escort of 150 men to protect a courier bearing official despatches from Mozdok to Vladicavcas; from thence to Tiflis there is less danger. M. Belanger had a narrow escape from these barbarians. Whilst engaged in botanizing, he had strayed from his escort, which no sooner disappeared behind a rock round which the road wound, than he heard the tramp of horses, and was immediately surrounded by a dozen armed highlanders, many of whom had already dismounted in order to secure him, when the escort, alarmed at his absence, returned and drove them from their prey. They usually undertake their predatory excursions into the Russian territory in small parties. Having crossed the Terek, they conceal themselves in the woods which grow on its banks. As soon as they dis-

cover a traveller without an escort, they seize on him, put a gag into his mouth, drag him to the river; and having put goat skins inflated with air under the captive's arms, and a rope with a noose round his neck, they throw him into the water. To avoid being strangled, the wretched prisoner is obliged to hold fast with his hands to the rope, and he is thus drawn to the opposite bank. They rarely kill those prisoners from whom they expect ransom, but they treat them with great barbarity.

THE OSSETES.

THE Russians have made several attempts to subdue them, but have not yet succeeded in establishing their authority, except over a few villages, situated in the valleys of the Terek, through which passes the military road leading from Russia to Georgia. In the reign of the Empress Elisabeth, the Russian clergy formed a project to bring the Ossetes under the denomination of Russia, by converting them to Christianity; and a petition was presented to the empress, from which the following is an extract:

—“The Ossetes, a nation rich in gold and silver, who inhabit the Caucasian highlands, and who, since the overthrow of the kingdom of Georgia by the Turks and the Persians, are left without a master, were formerly converted to the Christian religion, but they have unfortunately relapsed into paganism. Some travellers, who have visited their country, inform us, that the Ossetes are very anxious to return to Christianity,” &c. In consequence of this petition, an ecclesiastical commission was appointed to meet at Mozdok, in 1752. The commission proceeded to build a convent in the highlands, and established missionaries there, whose apostolical labours, however, consisted simply in baptising the pagans,—most of whom repeatedly presented themselves to go through the ceremony, because the Russian government granted to every convert twelve arshines of coarse linen, some salt fish, and a metallic cross. Mineralogists were, at the same time, sent by the government of Russia to examine the mines of the country; and as soon as it was discovered that the riches which had been anticipated did not exist, they ceased to take interest in the salvation of the highlanders.

TO THE DEPARTING BIRDS OF PASSAGE.

Why do you leave us beautiful birds
On your pinions wild and free?
What is the charm that lures ye hence
To the isles of the far-off sea?

Are not our flowrets rich and rare,
And our groves as green and high
As those that wave to the spicy breath
Of the glowing eastern sky?

“Bright is your land and beautiful,
Ye favoured of the earth,
But your many crimes have cast a shade
O’er its glory and its mirth.

“And though its forests be green and high,
Yet no longer may we stay,
For our hearts are yearning to regain
Our homes so far away.

“We hasten from the stormy blast
Of the coming wintry hours—
From the leaves now falling mournfully
And the sadly fading hours.”

Alas! ye are false friends, dear birds,
For ye bask in the summer’s shine;
But see like thoughtless flatterers by,
From her slow and sad decline.

“Nay, call us not false friends, we fly
In the parting summer’s train;
But when winter hath called off the snow,
We shall herald the spring again.

“And ever are our wings be spread,
— From a true and grateful heart,
We warble forth our sweet farewell
To the land whence we depart.

“For we love it, though its bloom be o’er,
And its summer-glories dying,
But brighter far than the shores we leave,
Is that to which we’re flying.”

Oh! true sweet birds, is the tale ye tell,
There are fairer lands than ours,
Shadowed by more majestic trees,
And decked with lovelier flowers.

But there is a land more glorious far
Than all this earth can show,
Where the sunshine reigneth eternally,
And the flowrets for ever blow.

Thither our fainting hopes we turn,
When all earthly comforts fail,
When the stricken-heart mourns silently,
And the care-worn cheek is pale.

Oh, may we learn from you, sweet birds,
Mid these dim scenes to dwell,
As strangers waiting patiently
To bid them a last farewell.

So when our earthly task is done,
And life’s brief summer o’er,
We shall speed our flight, on joyful wings,
To a brighter and better shore! — W. G

HAIR-BREADTH ESCAPES.—No. VI.

MRS. SPENCER SMITH.

CHAPTER III.

BUT new disasters awaited the fugitives. In order to obtain fresh horses at Trent, it was necessary that Mrs. Smith's passport should be shown. That of the marquis bore his real description, but it contained the word *Cameriere*, which he had altered to *Cameriera*. Mrs. Smith having resumed her female attire, the officer would probably have let them pass, but it happened to be the commissary of police who examined the passport. Probably out of humour at being roused from his bed, he discovered that the passport was almost a false one. However, as he must have a more careful examination of the parties, and as by not giving the order for the horses which were required, he was very certain to find them again on the following morning, he postponed until eight o'clock the further examination of the passport, and returned to bed.

"There is no time for hesitation," said the marquis, "we must proceed on foot; otherwise we are lost."

Mrs. Smith was overcome with fatigue; but on seeing the imminent danger in which she stood, she determined to follow the advice of the marquis. He had observed the countenance of the master of the inn; he appeared to be a kind-hearted man. He went to him and made some inquiries about the road they were to take. The worthy man looked at the travellers with interest and pity. A thought which might naturally occur under such circumstances, perhaps, at that moment crossed his mind.

"It is impossible that the young lady can undertake the journey on foot in the middle of the night," he observed. "You are not here under any *surveillance*," added he; "and if you will give me your word of honour that you have committed no offence against the government of my country, I will sell you a cabriolet. I can also spare you a horse, which will very well bear a long journey. Depart then, and may heaven protect you."

He himself put the horse to the vehicle, and mounted it himself, in order to answer his name to the guard at the gates. In this manner they passed without difficulty. It was two o'clock in the morning when they left Trent. The good landlord of the inn, delighted at having saved them, left them at a distance of one league from the city. Mrs. Smith did not complain; but at every jolt of the vehicle, the marquis saw pain depicted in her countenance. Towards the morning she felt herself so weak, that she implored the marquis to drive at a slow pace, but he did not think it safe to do so. At intervals

they heard at a distance an indistinct sound like the rolling of a carriage, and the smacking of a whip. This sound proceeded from the direction of Trent. At length it came so near upon them that Mrs. Smith became greatly terrified.

They were then at the top of a very deep valley, at the foot of which flowed a little river or rather a torrent. On the other side was a steep and well wooded mountain. The marquis did not hesitate; he saw at some distance behind them a calèche full of men in uniform. Were they then pursued? This was probable, if not certain. From the position of the two carriages, the marquis could clearly distinguish every thing, whilst the sun shone in the eyes of those who approached, so that they could not perceive him.

"Do not be alarmed," said he to Mrs. Smith, and taking the horse by the bridle, he led him down rapidly to the bottom of the valley, and having urged the animal across the little torrent, he entered a thicket, formed by the young trees, which grew at the foot of the mountain. He penetrated it with some difficulty, and then imparted to Mrs. Smith the reason for the course he had adopted. "Heavens!" exclaimed she, clasping her hands "why, should I thus struggle to save a miserable existence? Why not have waited for them! What have I to hope for?—I cannot always escape. The whole of Europe is under the dominion of that man, and I must submit to my fate. Monsieur de Salvo, let us return to Milan; you will leave me at the entrance of the city, and you can afterwards go to some other part of Italy!"

The marquis represented to her, that, of all expedients, the worst was that which she had just suggested. The flight had commenced fortunately, and its termination might be equally happy. "Think, above all, of your children, of your mother, of your husband. It is your duty to preserve yourself for their sakes."

"At that moment the rolling of the carriages was heard on the heights. The noise was at first loud, then it became more distant, and at last it ceased altogether. Mrs. Smith again clasped her hands and offered thanks to God. "Let us go on," said she; "Providence has ordained that I shall escape them! But how are we to get out of this thicket?" Truly it was no easy matter: the marquis sallied forth to reconnoitre. On his return, he said, "I have found a footpath, it may almost be called a road. The carriage can pass through it; we must take this way, for it is advisable we should avoid the towns and high roads."

He then explained to Mrs. Smith that his object was to gain the frontier of Styria, by passing along the border of the territory of Saltzburg. The trial which they had made of their passport at Trent was not calculated to give them confidence on passing through the cities. It was necessary then to proceed by bye roads, and, above all things, to guard against being met and recognised. The escape had been known for three days past. A description had been circulated of their persons, and the situation of the fugitives was in every respect more perilous than it had been before their flight from Brescia. Mrs. Smith was aware of this, and she gave renewed proofs of that fortitude of mind which she had evinced throughout her misfortunes. She suffered much from fatigue, but one might say of her:—

In corpo debile, anima forte!

She ascended the mountain on foot. When they had reached the summit, they perceived with delight a solitary house which appeared to be a farm. The heat was excessive, and the unfortunate lady had nothing to quench her thirst but a little water, so heated by the sun, that it was scarcely drinkable. They arrived at length before the door of the house. It was closed, and the barking of two or three dogs was at first the only answer they could obtain. At length, a window above the door was opened and a young woman asked them in no gentle tone what they wanted.

"We wish to rest here for a little time, and to have, upon paying for it, some milk, and something to eat."

"This house is not an inn," replied the woman. "And how did you find your way here? The road by which you have come is known only to my husband, and some of the inhabitants of the other valley." And saying this, the young woman cast a glance of curiosity and distrust at the two fugitives.

"I am the professor of botany at the university of Pavia," answered the marquis, "My wife accompanies me always in my journeys. This has been a longer one than usual, and we have lost our way. But open the door, and give us something to eat,—you shall not repent it."

The woman was prevailed upon to let them in; she showed Mrs. Smith into a parlour well furnished, the refreshing coolness of which restored her falling strength. Whilst she washed the dust from her hands and face, the young woman served up dinner. They had just finished their repast, when a man presented himself at the door. He was armed, as it is necessary to be in those solitary mountains. His countenance was unprepossessing, and an expression of dissatisfaction, which he could scarcely conceal on perceiving the two strangers, alarmed

Mrs. Smith. The young woman explained to him that the persons he saw were their guests. He divested himself of his arms, that is to say, his sabre and his pistols, retaining on his person a long poniard. While he paced sulkily up and down the apartment, he suddenly cast his eyes on the little casket of jewels which Mrs. Smith always carried about with her. It contained diamonds of great value. By a sudden movement, which it was impossible to prevent, he took up the casket which was closed by a small golden key then in the lock. He opened it, and the jewels sparkled before the astonished eyes of the man and his wife.

"Ah! ah!" he exclaimed, "then I am not deceived.—Your timid manner—your appearance in a place which can only serve as a retreat from justice,—all made me suspect you to be adventurers. But this is a more serious matter.—You are thieves! and possibly," added he, "you may be murderers."

Mrs. Smith fell back in her chair, and uttered a shriek, the distressing tone of which went to the heart of the young woman. She flew to her aid, and gave her a little water.

"You are not common travellers," continued the husband. "It is my duty to arrest you, young man, and to go to the neighbouring town to find assistance to conduct you to the prison of Trent."

He advanced towards the marquis, whose pistols were in the cabriolet, and who now trembled on thinking of the consequences which might result from being conveyed under such suspicious circumstances to Trent, whence he had fled on the preceding night.

"Hear me," said he, to the man, drawing him aside, "take care of what you are doing." And with ready invention fabricating a story, he told them that they were emigrants, that the jewels were his wife's property, and concluded by offering him twenty piastres to allow them to depart.

"If you would give me forty, I would not," answered the man. "It is plain that you are eluding justice. Come, go before me," pursued he, at the same time taking one of his pistols. "Obey, or I will shoot you."

The marquis refused to move, and the man was about to take him by the arm to force him forward, when his wife threw herself at his feet, supplicating him to allow the strangers to depart. The tears of Mrs. Smith had moved her, and she was under the influence of that powerful spell which the beautiful outlaw exercised over all who saw her, and conversed with her. The woman interceded so urgently in their behalf, that at length her husband's pity was moved, and he himself put the horse to, with which they were to resume their journey. It was already late; but in spite of all the offers and entreaties of Mrs. Smith, he refused to allow them to pass the night in his house.

"Begone!" he said. "All I can do for you is to let you depart. May heaven pardon me if you are guilty!"

The marquis and Mrs. Smith resumed their journey; it was then quite dark. They travelled on until nearly day-light amongst the mountains, and in the morning found themselves near a fortified farm, of which there were many at that period in the Tyrol. At this farm they breakfasted. They then again set out on their melancholy and dangerous pilgrimage.

They bent their course towards Berthold-Scalden, which is a watering place. It was necessary to avoid passing through the town. The marquis was slightly acquainted with the suburbs of Berthold-Scalden, and drove towards the lake of Zell. They arrived at a small inn situated on the margin of the lake. The master of the inn was a great news-monger, and had a variety of journals upon his table. Eager to see if any description had been given of them, the marquis seized the first which lay before him. It happened to be a Trent paper. He read, under the head Milan, that the police of Trent declared Mrs. Spencer Smith and the Marquis de Salvo to be fugitives, and authorised any of the inhabitants of the kingdom of Italy to arrest them, if they should be discovered, and to send them under a safe escort to Milan, where the marquis would be brought to trial for having favoured the escape of a prisoner of state of the French empire. Unwilling to alarm Mrs. Smith by explaining to her the new danger that had arisen, he merely informed her that they must immediately depart.

"We shall turn Berthold-Scalden," said he, "and probably reach the frontier of Styria to-night."

At this moment the sound of military music was heard. The marquis advanced to the window, and beheld in a little meadow near the house several squadrons of cavalry. On inquiring of the landlord of the inn, he learned, that they were troops that had been about a week in Berthold-Scalden, and that they occasionally came to do their exercise on the banks of the lake. The marquis knew a great many officers in the Bavarian as well as the French regiments. He was obliged to renounce all idea of passing these troops;—a fatality seemed to pursue the unfortunate fugitives.

"What is to be done?" ejaculated Mrs. Smith, weeping. "I will deliver myself up, and do you save yourself in the Tyrol; a man may easily escape."

The marquis's countenance showed that this new proposition to abandon her was almost offensive, and Mrs. Smith held out her hand, at the same time asking his pardon for having wounded his feelings. The unfortunate lady knew nothing of the Trent journal, which the marquis had thrown into the fire.

"We must cross the lake," said he, "and find refuge in the neighbouring mountains. Courage, I beg of you, and all will be well again." But at that moment he himself had not such hope.

They crossed the lake, and steered their boat towards the hermitage. The marquis's plan was to solicit an asylum of the clergyman, which he knew he could grant without peril to himself. This was their only alternative. They passed two days in the chapel, which was situated in the midst of a wood of fir trees, and but little frequented by the inhabitants of Berthold-Scalden. In the evening of the second day they heard the sound of military instruments. As soon as the sun had gone down, the marquis crossed the lake to obtain some information. The regiments had continued their march towards Saltsbourg, and the fugitives could now proceed. They determined to depart immediately, and, cautioned by the advice of the hermit, they avoided Berthold-Scalden, by going round it. Next day they passed through Rastadt, a large town, in which they stopped to dine. They were then not more than two leagues from the frontier of Styria.

"At length we are safe!" ejaculated the marquis.

Alas! they were now less safe than ever. They cheerfully resumed their route, after having dined, and reached without difficulty an interior barrier which opened on the road to Styria. They confidently presented their passport. The guard read it, then began to laugh, ran to his desk, took out another paper, compared them together, and again laughed very heartily. When people laugh, there is generally nothing alarming; nevertheless the fugitives inquired the reason of this hilarity, and the man still laughing, presented to them the paper, which he had compared with the passport, and on reading it, they commenced laughing as heartily as he did. The marquis thought they were mystifying him. At length he learned the truth, which was sufficiently amusing.

The young Princess de F——g had fallen in love with a bookseller's clerk at Vienna. This feeling of tenderness was mutual, and the two lovers had fled, in order to escape from the power of the lady's family, and from the imperial authority, which is always exercised to punish unequal matches of this kind. The Austrian government had sent a description of the two fugitives to all the large cities of Germany, France, and Italy, accompanied by an order to the chief authorities to transmit the description of the two individuals to all the places through which they were likely to pass.

The guard of the barrier of Styria had received this description in common with others. It represented the young lady to be fair, and the young man dark. This circumstance had excited his risibility; for he thought it droll that

they should have come so unsuspectingly to deliver themselves up, especially the young man, who had reason to apprehend severe chastisement. Mrs. Smith showing to the guard the two descriptions, explained to him that the fair and the dark complexions were the only points of resemblance between the fugitives and themselves, who were unoffensive travellers. The man was convinced of the truth of what she said, but nevertheless would not take upon himself the responsibility of letting them go.

"Hark ye," said he, "Salzburg is not far off, go thither—get your passport examined there, and then you shall pass. But you must be aware that a passport from Venice, which has

not been examined at any place, since it was given, looks a little suspicious.

The man was certainly right.

"We are lost," said Mrs. Smith, "difficulties seem to multiply. I have no longer any hope! What is to be done?"

"A very simple thing," replied the marquiss. "This is the season when the flocks quit their winter for their summer pastures. They go in large flocks. We must disguise ourselves as shepherds. We will leave the cabriolet and the horse, and set off in the middle of the night with one of these flocks of sheep. The shepherds will not know but what we are of their party."

REVIEW.

The Monk of Cimici. By MRS. SHERWOOD.

THIS work is one of a most numerous class which in the present day have sprung up, and which have to a certain extent obtained a respectable number of readers, owing to the fortuitous circumstance that they are written in a light and sketchy manner, and, therefore, make but little demand upon the faculties of thought and reflection. The professed intent of the writers of this style of fiction may be, we doubt not, a most praiseworthy one; they consider that the Catholic axiom, which implies that the means sanctify the end is quite sufficient for them; that however dark and dismal the scenery, and however revoltingly degenerate may be the characters which they delineate, the one will assuredly be brightened, and the other rendered spotless ere they pass from the imagination of the reader, and the last successful issue, and mental regeneration of the hero, or heroine, as it may be, is quite calculated to enchant the reader, and absolutely to blind his perceptions to all the vice and wickedness through which he has passed in order to arrive at the full fruition of his perfection. The above error, into which almost every writer of this class has fallen, is undoubtedly a great one; but it becomes trifling when we compare it with another—we mean that of bringing in the honest sentiments of religion, and the most sanctified revelations of truth, to assist in the display which it is their wish and object to make. The characters which they delineate are in their outward actions all just and good; but at heart they are talented hypocrites of a most fearful and vicious order; outwardly they are clad in sheep's clothing, but inwardly they are ravening wolves. They hesitate not, upon every occasion, to take the words of Scripture upon their lips, and the fearful repetition of such, which we have met with in this volume, leads us almost to the painful conclusion that they must be regarded by the author as pass-words, to be casually employed upon every worldly and irreverent occasion.

The results to which the perusal of such senseless works of fiction as these must lead are also of the very worst description. We can suppose it highly probable that a parent, at a casual glance over such a volume may see very many pages abounding in scriptural quotations, and relying on this circumstance, that the work is a good one, may place it in the hands of a young person, whose future welfare may be an object of the greatest interest and solicitude, fondly believing that in such a young heart and mind it may be the means of working much good, that the soil of the

young spirit may become rich and fertilised, and bring forth fruit abundantly. But instead of the truths of religion being placed in a clear and attractive light, (which the dark and sinful state of our moral natures requires,) there will be such an abundance of abstruse theological argument and doctrine, and a commingling of all the lights and shadows of human character sufficient to puzzle even minds of greater depth and judgment than those for whose benefit we presume these works were written, but for whom we hesitate not to assert that they are most decidedly unsuited.

The sanctity of religion should ever be kept inviolate; and its truths should not be brought forward in all times and at all seasons without some preparation by prayer and solemn meditation. The design of such works as "*The Monk of Cimici*" would be, we are apprehensive, to level and degrade it; to bring it into a revolting contact with the things of "the earth earthy;" to make it subservient to the worst and vilest of purposes; and to render it as a cloak for the darkest and most treacherous designs.

We have said that in these works the strange scenes of vice and iniquity, through which the reader is led, are generally rendered subservient to the illumination which in the last twenty pages of the volume generally breaks in upon the miserable creature, whose previous darkness and delusion has been made the object of such absurd and meretricious display; but it so happens that the ignorance of the writers generally prevents the accomplishment of their desires; they make their characters, at best, but respectable moralists—leaning to heaven, but clinging all the while to the earth, unwilling to lose the one, and loth to forego all chance of the other.

We have been led to make these remarks from a perusal of the work whose title stands at the head of this article. Its hero, Edmund Hetherington, is placed before the reader as a young man of most ambitious character, the son of a high dignitary of the church, with a mind naturally weak and indolent, and incapable of either understanding or appreciating the shallow theological doctrines which are instilled into him every day by his parent. We may here remark, that the power of delineating or describing character is evidently not the authoress's forte; and where we find the exception occurring to this rule, it is generally from the predominance of the more evil principles in those characters described that she succeeds. We shall enlarge on this topic more fully presently. A very great error of judgment is evidenced in describing the hero, as allured by the more seductive doctrines of a

Dr. Watson, (to what class of church or dissent this gentleman belongs we know not,) whose arguments generally fall on those points which have involved a larger share of biblical controversy than any other; whilst the simple church doctrines of the hero's parent seem as little relished as understood by him. The first bold essay which our hero makes before the reader is to fall in love, and in the very worst manner, for he loves one sister lightly, that he may the more easily loosen the coil in favour of the other, should her physical and mental qualifications prove superior. This eventually proves the case, and he is afterwards described as tortured by the basest and most unholy feelings and passions, and forms altogether a fine example of filial disobedience and shameless vice. Surely when we read such descriptions as these, on which the authoress has displayed the weakness of her power, (for we can describe it in no better manner,) we cannot abstain from expressing regret that a volume such as this should be placed for perusal before those whose minds are yet young, and happily inexperienced in the pestilential anatomy of vice. Surely such baneful principles of guilt and evil are not those which an affectionate parent would desire to inculcate into the minds of his children. Ambition, deception, falsehood, and fraud, can never be painted so bright as to cover the hideous and unnatural deformity inherent in them; and we would fain shrink from the consideration of what that mind must be whose imaginative powers could set before its young readers no brighter example of a young man just entering upon life, with the blushing honours of an early priesthood thickening around him. The natural inherent weakness of our hero forms an appropriate peg on which to hang a species of temptation, which we have found few fictitious heroes able to withstand—we mean that of a jesuitical and crafty Catholic priest, who puts many artful contrivances in his way, to withdraw him from the pure Protestant faith of his forefathers. In this he succeeds to a certain extent, but finding the footing on which he stands somewhat insecure, this gentle creature, who is denominated the Abbé Beauregard, summons to his assistance another spirit, more deceitfully vile and crafty still. To ensure the snare more securely, this second deceiver, Saciepaate, (who is a very bad copy of the Schedoni of Mrs. Radcliffe's "Italian,") is introduced as the ghostly counsellor and adviser of Edmund Hetherington, whilst the latter is sleeping on a sofa in a drunken dream. This is the first instance which we have met with of intemperance being rendered subservient to the cause of religion. Having premised thus far, our readers will not be surprised that iniquity and impiety, though robed in the brightest garments, occupy many of the ensuing chapters of the narrative, which here terminates this part of the story, by the hero's flight from England, in the melancholy character of a fratricide. A convent, among the Italian Apennines, is the chosen abode of Saciepaate, and thither our hero proceeds in his company; he is of course admitted as a reclaimed heretic, "a brand plucked from the burning," although the sequel proves him to be but a very mediocre Catholic, and altogether a man of no fixed or steady principle, which (though the authoress does not even allude to it) is the evident cause of his thorough degradation and downfall. From a monk he is raised to the office of officiating priest, and is appointed confessor of the neighbouring nunnery of La Madonna. Here we are again introduced to one of the sisters, whose earlier affections he had trifled with. The constancy of woman's affection leads her to take the veil

in this nunnery, that she may be near him; and we are introduced to a very singular conversation, in the confessional box, in which the priestly virtues of the confessor do not shine in the most orthodox light. Jealousy now occurs between Saciepaate and our hero, and he in consequence, through the instrumentality of the porter, is obliged to fly from the convent, on the eve of the interment of the young English nun, whose affections he had so basely returned. He is directed, by the *fides Achates* of the convent, to the monastery of Cimies, near Nice; where, after remaining for a short time, he again elopes, and meets with some friends, who had been sent from England to search him out, and once more reaches his native shores, a happier and a better man.

The above is a mere outline sketch of the adventures of the principal character, whose weak and deluded mind seems throughout the entire narrative to be rendered purposely subservient to the crafty designs of those immediately around him. We have before alluded to the predominating portraiture of vicious feeling and design which this volume shows, and this remark is amply justified by the base characters of Beauregard and Saciepaate being constantly held up before the reader's attention; and, as an apology for the puerility of style, which the authoress so frequently betrays, and a proof of her partiality for the doctrines of the Catholic religion, we find many pages more than half occupied by long extracts from the French Theological Catechism of the Jesuits; generally inserted with the view of proving the truth of every assertion which she puts in the priest's mouth. Whilst on this topic, we may remark, that from those persons best acquainted with the authoress and her writings, we have heard many observations which go far to prove that she inclines more closely to the Catholic than to the Protestant orthodoxy,—a circumstance much strengthened by our perusal of the "Monk of Cimies." We might here allude, did our space permit, to the numberless errors, both of style and diction, which this volume displays; her powers of description are evidently her best, and we might instance the hero's flight by night, from the monastery, as a proof of this, which contains the finest touches of graphic description in the volume. The outline of the narrative is good, but the manner in which it is filled up is decidedly worthless—it is one thing to plan an idea, and another thing to execute it. We suppose that the volume has been written *to order*, as a companion to her previous volume of "The Nun," for in no other way can we reconcile to ourselves the numberless evidences of hastily-written pages which it displays.

We have regretted much being obliged to deprecate the evil principles which this volume disseminates, where the authoress's intention might doubtless have been good; but if it is our duty to hold up the good and virtuous principles which literature may spread abroad to the admiring gaze of the world; so it is equally incumbent upon us not to shrink from the painful task of severely reproofing those errors which in the present day so unusually abound in the pages of our modern literary works. The interests of religion are our own individual interests, and we shrink no more from supporting the one than we should from advocating the other. If Mrs. Sherwood would take as example for her future volumes from the pages of such works as "No Fiction," and "Father Clement," or the yet more recent "Pictures of Private Life," by Miss Stickney, our task will for the future be the more agreeable one of praise, rather than the more painful one of censure.

BRITAIN.

CHAPTER VII.

THE SAXONS were idolaters when they first came, and persecuted the British Christians severely. Their gods were Odin, or Woden, who had about one hundred and twenty-eight laudatory titles. He was the father of all the gods, and ruler of the seasons; and was worshipped on Wednesday, supposed to be the true god under some mythic name. Frea, his wife, the mater deorum, was the earth; she was the Saxon Venus, and did the offices of Lucina to the Saxon ladies, and was worshipped on a Friday.

Hence the names of the days:

1. Sunday, or, Sun's day.
2. Monday, or, Moon's day.
3. Tuesday, or, Tico's day.
4. Wednesday, or, Woden's day.
5. Thursday, or, Thor's day.
6. Friday, or, Frea's day.
7. Saturday, or, Seterne's day.

Thor, their eldest son, was god of winds, meteors, thunder, lightning, &c. his palace was fabled to have five hundred and forty halls.

The months were thus named by the Saxons: Balda was the god of light.

Niord, of fishermen and waters.

Tyrr, of heroes.

Heimdall, of rainbows, and janitor of the gods.

Brage, of scholars, orators, and poets.

Lothe was a pest to the gods, a Shakspearian Puck.

Eira was the goddess of medicine.

Gefone virginity.

Fulla dress.

Vara vows.

Lofra reconciliation.

Snotra politeness.

All these gods had many songs, rites, and sacrifices sacred to them. Of the last the following are some—(See the *Voluspa*, translated in *Turner's Saxon History*):—The falcon, cock, the bull, the dog, and horse, were daily offered to Odin, to whom there was an old town called Wodensburg (Wednesbury) dedicated.

The best swine Frigga.

Horses, and fat bulls . . . Thor.

Such were their sacrifices; which were slain near the altar, where their blood was caught and sprinkled on the people, while from the entrails the priest spelled out the popular fortunes. Their feasts were frequent, but some of the most important were at the winter solstice, Yule, or Iule, which was the beginning of the Saxon year. This feast, at which there was much mirth, was dedicated to Thor.

Another feast was in the second moon, and a third, sacred to Odin, was in the spring. At these the worshippers drank largely to the healths

of their gods, to whom they attributed their successes, for which they drank and worshipped more, to requite them. If unfortunate they also attributed it to the gods, whom they then defied, spit at, and discharged their weapons and jests at the heavens, and used the most menacing threats in speech and gesticulation. At this time the priesthood was hereditary. Each division of the heptarchy had a leading priest who, though obliged to follow the camp, was neither allowed arms nor horses: it was also his duty to flog the soldiers. They were no great zealots, as the old Britons, having neither statues nor temples, had little to teach, and less to do; for their creed was sublimely laconic, being only to do no harm, to worship the gods, and fight bravely. When, afterwards, they worshipped in rude circles of unhewn stones, the altar was covered with sheet-iron, on which a ceaseless fire burnt; while near stood the blood vessel and the sprinkling brush. They had their statues of Odin in armour, of Frigga, and of Thor, which was garlanded with stars, and had in his hand a large club. The Saxons had also priestesses, who were ladies of rank, very powerful, esteemed oracular, and addressed their worship and services to the goddesses. The Anglo-Saxon heaven was called Valhalla, which was filled with the delights which they valued on earth. It was the abode of warriors, who spent their time in hacking each other to pieces, though, at the end of the fight all fell, according to the Lucretian hypothesis, into their right places again.

Their hell was called Nifheim, whose threshold they named Precipice, the palace Anguish; the table Famine; the waiters Expectation; the appearance Terror; the bed Leanness, &c. Both, with all their inmates, had the prospect of conflagration, from whose ashes Gimle, another heroic heaven, made of gold, and Nastrande, a Tartarus built with snakes, were to rise. The worst part of this mummary passed away when they received Christianity.

When Germanus left Britain, his two disciples taught schools, and raised other competent Christian teachers, who, without any thing extraordinary in the toils of such a life, preached with comparative success, and enjoyed considerable peace.

At length Austin, with forty Gaulish and Italian companions, after having turned back, and been threatened and coaxed by Pope Gregory, arrived in the isle of Thanet. They were introduced to Ethelbert, who, to disarm their potential charms, received them under an oak; and from regard to his Christian wife, and his British slaves, who were also Christian, he gave them temporary

support, liberty to preach, and an old British church, called St. Martin, in Canterbury, of which they took possession in train, chaunting "By thy great mercy, O Lord, turn away, we beseech thee, thine anger from this city and thy holy temple, for we are sinners: Hallelujah." This had its effect, roused the attention of the Saxons, who, visiting them, admired, felt, believed, and followed their doctrines; and in the following year Ethelbert himself and ten thousand of his subjects were baptised on Christmas day. Austin, ordained by the Archbishop of Arles, and endowed with Canterbury by the king, repaired the old church for his palace, built a monastery for his monks, and, having sent to the pope, was dignified with the pallium; received several coadjutors, among whom were Paulinus, Justus, and Militus; also books, the customary paraphernalia, wondrously potent relics, and instructions about the future church of England, one of which was, that the popular prejudice and usage should be as little as possible disturbed. Austin, who was a vain, cunning, tyrannical, and passionate man, strictly obeyed the pope in this last command; for the heathen temples became churches, the idol statues stood for saints, and the feasts and rites received a more Christian nomenclature: as a specimen of which we may mention, that it was an old Saxon custom to pledge their gods when drinking, but, instead of continuing this, they were allowed to drink to the health of St. Peter, the Virgin, and Jesus Christ! The bishoprics of Rochester and London were soon founded, where Ethelbert built churches. Paulinus received a house, land, and church at York, from Edwin, and the pallium from the pope. The British bishops, however, did not acknowledge the power of Austin, until seven of them, together with the abbot of Bangor and a hermit, had stoutly disputed with them; for by this time Austin had set about their reformation. The disputes were concerning the time of keeping Easter, and the form of the tonsure, the British wearing it crescent-wise, and the Romans in a circle; about which they disputed with great learning at Whitby, where, after much magnificent nonsense and spiritual foolery, with Oswin on their side, the Austinites are thought to have won; and at the point of the sword, from motives of war, gain, pride, regard to women, with the ruling passions in their favour, Christianity was under the new form in a sense forced upon the people. Thus the south of the isle, but chiefly Kent, was evangelised by the missionaries from Rome, and the northern parts from Scotland, whose clergy were much hated by the others, which originated the different customs for a long time practised in the English church. The order in which the kingdoms of the heptarchy are said to have received the gospel is Kent, Essex, Northumbria, East Anglia, the West Saxons, Mercia, and Sussex: the political conversion of nearly all which originated from

intermarriages and conquest. Before this was achieved, countless were the feuds, battles, and murders. Councils in 465, 512, 516, and 519, were called, sees were established and destroyed, and Lichfield and other places possessed a temporary archbishopric. Great good, however, resulted; for while the priests spent too much of their time in dressing the newly baptised in white robes and chrismal fillets, which they wore eight days; in settling their barbarous casuistry and new-born distinctions, even the partial effects of their doctrines began to make it fashionable to compassionate and manumit the slaves, to open and endow schools, to acquire the little real knowledge of their teachers, to build in better taste, to cultivate the softening arts, and to follow gainful pursuits. For the clergy were at first itinerants, living either with their bishops and preaching to their neighbourhood, or engaged in long journeys. They scattered the little knowledge they possessed, gained other places of settlement, which in turn became centres of similar influence. Besides, the clergy were early taught some mechanic art, and were obliged to pursue it and teach it to their inferiors; which, added to the fact that they were not allowed arms, made them certainly, though not innocent, by far the most useful men of their age, which would have been more their debtors if the following things could not have been said.

Every church had a painted image of its patron saint, and many had Saxon idols in them; for this superstition was far from being destroyed in 625, when there stood one of their great temples at Godmandham, of which Cerfic the priest, after railing on the Saxon gods for their ingratitude to him—a long and self-denying worshipper who had suffered great reverses—became a Christian. But long after the reception of Christianity by the Saxons, so imperfectly were they informed, that when, in the twenty-second year of Oswin, a solar eclipse, in the beginning of May, occasioned a dry summer, a fiery appearance of the sky, and the yellow plague, they attributed these evils to the anger of their old gods. The plague ravaged Ireland, though not Scotland, and destroyed numbers of eminent persons in church and state. At that time archbishops and the other clergy claimed exemption from all taxes and assistance to the state; and of one of them it was said by the pope to an English king, that he could raise souls from the bottom of hell to the port of heaven. All decrees of councils were then signed with the cross, without which they were effete. At the death of a bishop the people were required to sing thirty psalms in the church, then covered with paintings; while the other bishops and abbots were to say one hundred and twenty masses, and six hundred psalms. The clergy, then called *mass thanes*, were keepers of the weights, managers of ordeals, and *oafas*, (valued according to the

station of the swearer,) and had to protect the slaves, apportion their labour, confer with the judges, and to "prevent the sprouts of pravity from springing up." Churches were then built of wood, wicker work, and mire, and covered with reeds; such was the first York Cathedral, which, when a few years subsequent it was built of rude stone, was thought to be prodigiously effectual on that account, and unequalled in the island.

About this time it was appointed that fifty psalms should be sung at the church on Friday for the king, that children should be dipped in baptism instead of sprinkled, which was the ancient practice; then, also, pilgrimages to Jerusalem, to Rome, and other places, celebrated in the evangelic history, were in great repute, especially among the English, who thronged the roads to such a degree that princes through whose lands they went derived fortunes from their tolls.

New councils were held A.D. 664, 673, 701, 705, 747, and 850, from which, however, little is to be learnt, except the creeping of the ecclesiastical power through all the roots and branches of the state; and except as they cast a lateral light upon the age, in which we see occasionally the mangled bodies of some exemplary monks, hundreds of whom often resisted the bishops' bowing their flocks for the first time to auricular confession; the seditious Wilfred shaking the kingdom with his devout antics for nearly forty years; the first imposition of the kirk-scot demanded from every village, and which, with

intermissions, continued till Ethelwolf gave the tenth of the lands to the church, confirmed by Edwin in 928; the first appointment of week services; swarms of rogues trooping over the country in the monk's garb; the busy relic-trade, which left no one without a thumb, a toe-nail, a nose, or a tooth, of some saint; the bustle of a thousand rising churches; the ceaseless roar of the rude organ; or the dismal monotony of a thousand priories and nunneries, barred and moated, and containing kings and queens among their inmates; the Grecian artist with his ideal of beauty which none courted; the expatriated Roman mechanic with his grand art which no one relished; and the broken-hearted genius in tears over the dark ages in which he was cast; the scholar without a press or a pen, and the pupil without a teacher; the king crossing for his signature, and the queen commending herself for her great learning, because she could read the *pater noster*; hundreds of men, on the whole devout, publicly spiritualising dreams, and giving serious credit to visions; the people given to all sorts of sorcery, jabbering out Latin prayers to which Boniface had allowed them to affix any signification; the mass-priest, without shoes and stockings, administering the sacrament in horn and wooden cups; an age in which satire was in its cradle, and liberty confined in the castle's keep; science a fugitive upon the plains of Europe, and true religion shut up in the triple mail of superstition, where, if her ethereal spirit had been possibly mortal, she must have expired.

A SWISS TRADITION.

In the course of an excursion, during the autumn of last year, a traveller through the wildest and most secluded parts of Switzerland took up his residence, during a stormy night, in a convent of Capuchin friars, not far from Altorf, the birth-place of the famous William Tell. In the course of the evening one of the fathers related, in an impressive manner, the following tradition, which, in some of its characteristic features, bears a striking resemblance to Lord Byron's drama, "Manfred."

"His soul was wild, impetuous, and uncontrollable. He had a keen perception of the faults and vices of others, without the power of correcting his own; alike sensible of the nobility, and of the darkness of his moral constitution, although unable to cultivate the one to the exclusion of the other.

"In extreme youth, he led a lonely and secluded life in the solitude of a Swiss valley, in company with an only brother, some years older than himself, and a young female relative, who had been educated along with them from her

birth. They lived under the care of an aged uncle, the guardian of those extensive domains which the brothers were destined jointly to inherit.

"A peculiar melancholy, cherished and increased by the utter seclusion of that sublime region, had, during the period of their infancy, preyed upon the mind of their father, and finally produced the most dreadful result. The fear of a similar tendency in the minds of the brothers, induced their protector to remove them, at an early age, from the solitude of their native country. The elder was sent to a German university, and the younger completed his education in one of the Italian schools.

"After the lapse of many years, the old guardian died, and the elder of the brothers returned to his native valley; he there formed an attachment to the lady with whom he had passed his infancy; and she, after some fearful forebodings, which were unfortunately silenced by the voice of duty and of gratitude, accepted of his love, and became his wife.

"In the meantime, the younger brother had left Italy, and travelled over the greater part of Europe. He mingled with the world, and gave full scope to every impulse of his feelings. But that world, with the exception of certain hours of boisterous passion and excitement, afforded him little pleasure, and made no lasting impression upon his heart. His greatest joy was in the wildest impulses of the imagination.

"His spirit, though mighty and unbounded, from his early habits and education naturally tended to repose; he thought with delight on the sun rising among the Alpine snows, or gilding the peaks of the rugged hills with its evening rays. But within him he felt a fire burning for ever, and which the snows of his native mountains could not quench. He feared that he was alone in the world, and that no being, kindred to his own, had been created; but in his soul there was an image of angelic perfection, which he believed existed not on earth, but without which he knew he could not be happy. Despairing to find it in populous cities, he retired to his paternal domain. On again entering upon the scenes of his infancy, many new and singular feelings were experienced—he was enchanted with the surpassing beauty of the scenery, and wondered that he should have rambled so long, and so far from it. The noise and the bustle of the world were immediately forgotten on contemplating

"The silence that is in the starry sky,
The sleep that is among the lonely hills."

A light, as it were, broke around him, and exhibited a strange and momentary gleam of joy and of misery mingled together. He entered the dwelling of his infancy with delight, and met his brother with emotion. But his dark and troubled eye betokened a fearful change, when he beheld the other playmate of his infancy. Though beautiful as the imagination could conceive, she appeared otherwise than he expected. Her form and face were associated with some of his wildest reveries,—his feelings of affection were united with many undefinable sensations—he felt as if she was not the wife of his brother, although he knew her to be so, and his soul sickened at the thought.

"He passed the night in a feverish state of joy and horror. From the window of a lonely tower, he beheld the moon shining amid the bright blue of an Alpine sky, and diffusing a calm and beautiful light on the silvery snow. The eagle owl uttered her long and plaintive note from the castellated summits which overhung the valley, and the feet of the wild chamois were heard rebounding from the neighbouring rocks; these accorded with the gentler feelings of his mind, but the strong spirit which so frequently overcame him, listened with intense delight to the dreadful roar of an immense torrent, which was precipitated

from the summit of an adjoining cliff, among broken rocks and pines, overturned and uprooted, or to the still mightier voice of the avalanche, suddenly descending with the accumulated snows of a hundred years.

"In the morning he met the object of his unhappy passion. Her eyes were dim with tears, and a cloud of sorrow had darkened the light of her lovely countenance.

"For some time there was a mutual constraint in their manner, which both were afraid to acknowledge, and neither were able to dispel. Even the uncontrollable spirit of the wanderer was oppressed and overcome, and he wished he had never returned to the dwelling of his ancestors. The lady was equally aware of the awful peril of their situation, and without the knowledge of her husband, she prepared to depart from the castle, and take the veil in a convent situated in a neighbouring valley.

"With this resolution she departed on the following morning; but in crossing an Alpine pass which conducted, by a nearer route, to the adjoining valley, she was enveloped in mists and vapour, and lost all knowledge of the surrounding country. The clouds closed in around her, and a tremendous thunder-storm took place in the valley beneath. She wandered about for some time, in hopes of gaining a glimpse, through the clouds, of some accustomed object to direct her steps, till, exhausted by fatigue and fear, she reclined upon a dark rock, in the crevices of which, though it was now the heat of summer, there were many patches of snow. There she sat, in a state of feverish delirium, till a gentle air dispelled the dense vapour from before her feet, and discovered an enormous chasm, down which she must have fallen if she had taken another step. While breathing a silent prayer to Heaven for this providential escape, strange sounds were heard, as of some disembodied voice floating among the clouds. Suddenly she perceived, within a few paces, the figure of the wanderer tossing his arms in the air, his eye inflamed, and his general aspect wild and distracted; he then appeared meditating a deed of sin; she rushed towards him, and, clasping him in her arms, dragged him backwards, just as he was about to precipitate himself into the gulf below.

"Overcome by bodily fatigue and agitation of mind, they remained for some time in a state of insensibility. The brother first revived from his stupor; and finding her whose image was pictured in his soul lying by his side, with her arms resting upon his shoulder, he believed for a moment that he must have executed the dreadful deed he had meditated, and had waked in another world. The gentle form of the lady was again reanimated, and slowly she opened her beautiful eyes. She questioned him as to the purpose of his visit to that desolate spot: a full

explanation took place of their mutual sensations, and they confessed the passion which consumed them.

"The sun was now high in heaven, the clouds of the morning had ascended to the loftiest Alps, and the mists—into their airy elements resolved—were gone. As the god of day advanced, dark valleys were suddenly illuminated, and lovely lakes brightened like mirrors among the hills; their waters sparkling with the fresh breeze of the morning; the most beautiful clouds were sailing in the air, some breaking on the mountain-tops, and others resting on the sombre pines, or slumbering on the surface of the unilluminated valleys. The shrill whistle of the marmot was no longer heard, and the chamois had bounded to its inaccessible retreat. The vast range of the neighbouring Alps was next distinctly visible, and presented to the eyes of the beholders 'glory beyond all glory ever seen.'

"In the meantime a change had taken place in the feelings of the mountain-pair, which was powerfully strengthened by the glad face of nature; the glorious hues of earth and sky seemed indeed to sanction and rejoice in their mutual happiness. The darker spirit of the brother had now fearfully overcome him; the dreaming predictions of his most imaginative years appeared realised in their fullest extent, and the voice of prudence and of nature was inaudible amidst the intoxication of his joy. The object of his affection rested in his arms in a state of listless happiness, listening with enchanted ear to his wild and impassioned eloquence, and careless of all other sight or sound.

"She, too, had renounced her morning vows, and the convent was unthought of and forgotten. Crossing the mountains by wild and unfrequented paths, they took up their abode in a deserted cottage, formerly frequented by goatherds and the hunters of the roe. On looking down, for the last time, from the mountain-top, on that delightful valley in which she had so long lived in innocence and peace, the lady thought of her departed mother, and her heart would have died within her, but the wild glee of the brother again rendered her insensible to all other sensations, and she yielded to the sway of her fatal passion.

"There they lived, secluded from the world,

and supported, even through evil, by the intensity of their passion for each other. The turbulent spirit of the brother was at rest; he had found a being endowed with virtues like his own, and, as he thought, destitute of all his vices. The day-dreams of his fancy had been realised, and all that he had imagined of beauty or affection was embodied in that form which he could call his own.

"On the morning of her departure the dreadful truth burst upon the mind of her wretched husband. From the first arrival of the dark-eyed stranger, a gloomy vision of future sorrow had haunted him by day and by night. Despair and misery now made him their victim, and that awful malady which he inherited from his ancestors was the immediate consequence. He was seen, for the last time, among some stupendous cliffs which overhung the river, and his hat and cloak were found by the chamois hunters at the foot of an ancient pine.

"Soon, too, was the guilty joy of the survivors to terminate. The gentle lady, even in felicity, felt a load upon her heart; her spirit had burned too ardently, and she knew it must, ere long, be extinguished. Day after day the lily of her cheek encroached upon the rose, till at last she assumed a monumental paleness, unrelieved save by a transient and hectic glow; Her angelic form wasted away, and soon the flower of the valley was no more.

"The soul of the brother was dark, dreadfully dark, but his body wasted not, and his spirit caroused with more fearful strength. 'The sounding cataract haunted him like a passion.' He was again alone in the world, and his mind endowed with more dreadful energies; his wild eye sparkled with unnatural light, and his raven hair hung heavy on his burning temples. He wandered among the forests and the mountains, and rarely entered his once-beloved dwelling, from the windows of which he had so often beheld the sun sinking in a sea of crimson glory.

"He was found dead in that same pass in which he had met his sister among the mountains; his body bore no marks of external violence, but his countenance was convulsed by bitter insanity."

SLAVERY.

MINUTES OF A CONVERSATION BETWEEN ALEXANDER, EMPEROR OF RUSSIA, AND THOMAS CLARKSON, ESQ.

Saturday, Sept. 23, 1815.

WHEN I arrived at Paris, the Emperor of Russia had just left it to review his armies on the plains of Vertus, which occupied some days.

On his return to Paris, I wrote him a letter, stating therein, in substance, that having heard when he was in London, from the Duke of Gloucester, from Mr. Wilberforce, from Mr. Robert Wilson, and from the three good men of the

religious society called Quakers, Mr. Grillet, Mr. Wilkinson, and Mr. Allen, to whom he had granted an audience of two hours, of the interest which he, the Emperor, had taken in the abolition of that traffic so oppressive to the unhappy Africans, I had sent him a complete set of my books through the hands of Lady Waven, which she delivered to Count Nesselrode, as a small testimony of the respect and esteem I felt for him on that account; but that on a further consideration of the subject, I had not been satisfied with myself, and that hearing he was at Paris, which was comparatively but a short distance, I had determined to go thither, in order to thank him in person for all his efforts on behalf of this injured people, and to implore, should any future opportunity offer, a continuance of his favour towards them.

This letter I carried to the Baroness Rendem, a Russian lady, and sat and conversed with her upon the subject of it for nearly an hour. The Baroness is a lady of most exemplary merit; she devotes her time to religion. The Emperor of Russia generally calls upon her every evening at 7 o'clock, in order to converse with her on spiritual subjects. It was on this account I carried my letter to her, and also one from the Duke of Gloucester to the Emperor, which was intended as an introduction of me to the latter person.

The Baroness assured me she would deliver them both into his Majesty's hands, as soon as she should see him. In the course of two days, I received a message from the Baroness that the Emperor had received and read both the letters in her presence, and seemed much pleased with them. He desired her to instruct me to thank the Duke for his letter; and, with respect to my own letter, that part of it had given him peculiar satisfaction wherein I had mentioned the names of those three good men whose conversation had so much interested him when in England. He desired her to add, that he was exceedingly occupied, but that in a short time he would make arrangements for seeing me.

On Friday, September 22nd, I received a message from the Lady Rendem, that the Emperor desired my attendance at her house, the next morning, at eleven o'clock. Accordingly, I attended, and expected to find him there; but it appeared he had sent there one of his own domestics to show me the way to him. This servant I followed closely to the Palais des Bourbons. When I arrived there, he conducted me through several rooms, and at length left me in a spacious apartment, in which were two or three Russian officers, who were on guard for the day. Here I remained, till another of his domestics came up, and desired me to follow him. He led me through three other rooms into a fourth, in which was a gentleman, who said "The Emperor is in the next room and expects you."

I felt a little embarrassed as to what I should say; but I was instantly relieved from this feeling, by the affability and condescension of the Emperor. He came to meet me to the very door; he then took my hand into his own, led me into the room, and immediately broke silence by addressing me in English. He said (still continuing to hold my hand) that he considered I had done him honour by coming from England expressly to see him: he was not in the habit of making compliments, he meant what he said, he should not easily forget my visit.

I had only done him justice in considering him to be the friend of the poor Africans. He had always been an enemy to the slave trade. He had, indeed, formerly known nothing more of it than other people; he knew only that the Africans were taken from their country against their will, and that they were transported to the colonies of foreigners, for whom they were made to work under a system commonly reported *cruel*; but this he considered to be an outrage against human nature, and this alone made him a determined enemy to the slave trade; but when in after-time he had read those books which had furnished him with particulars on the subject, and when he had seen the print of *the slave ship*, he felt he should be unworthy of the high station he held, if he had not done his utmost, in all the late conferences on that subject, to wipe away such a pestilence from the face of the earth. After this he let go my hand, and we stood talking face to face. There was no other person in the room. I told him I had long ago understood that his disposition towards the oppressed Africans had been such as I now had the satisfaction of learning from his own mouth; that his kind disposition was now generally known and duly appreciated by the friends of the cause in England—that it had gratified them beyond measure to find that this injured people had so powerful a protector and friend; and that I could not doubt (should any opportunity yet offer) the Emperor would continue to advocate their cause. He replied, he would never desert it.

In the original treaty with France, he had taken a very active part in their behalf—but the obstacles were so very great on behalf of the French Government, which at that time had great, extravagant schemes in prospect, that he found it impossible to realise his wishes. In a period succeeding this, viz. during the Congress at Vienna, he had exerted himself again, and had united himself with the British Ministers in their favour; and though new and great obstacles had risen up on the part of the other nations concerned in the odious traffic, he trusted that some further advantages had been gained there. Something like the foundation of new treaties on this important subject had been laid there; and at a subsequent period (very lately) since

his arrival in Paris, he had again taken up their cause, and in conjunction with the British Minister, had been so successful, that France had agreed to give up four years' continuance, being the remaining term of this trade. So that another nation had been added to the list of those who had already abandoned the infamous traffic. I replied, that we were all of us sensible that great things had been done, for which we could not be too thankful, and that the Emperor had been a most powerful instrument, under Providence, in accomplishing them; but those in England who had been the means of developing and bringing to light the mass of crimes and sufferings contained in the slave trade, and whose feelings had been more than ordinarily excited upon this subject, and whose feelings had perhaps led them to be so sanguine in their expectations, had been disappointed—(I hoped his Majesty would excuse the freedom with which I was going to speak.—Here he nodded assent). I then resumed,—had been disappointed at finding the Allied Sovereigns at Vienna had not proclaimed the slave trade to be *piracy*. This would have been a noble declaration in the face of the world in favour of *justice and religion*, and it would only have accorded with principles which all of them were obliged to confess daily, in the administrations of their respective governments. They were all obliged to *punish*, and thus try to put an end to *robbery and murder*. This was essentially necessary, or their governments could not go on, but the slave trade was a complication of robbery and murder; and it was deeply to be lamented, in my opinion, under this and every other view of the subject, that such a noble decree had been overlooked.

The Emperor, with great condescension, admitted the truth of what I had said.

He admitted it would have been more worthy the Congress to have passed the decree now mentioned; and, moreover, that the continuance of the slave trade by the Allies was at variance with their own principles as governors; but we could not cure great evils at once; besides, the difficulties at Vienna were much greater than I had any notion of. The decree that I had suggested might have passed, if some of the most powerful of the sovereigns had agreed upon it, and if at the same time they had agreed to use force. But the Congress at Vienna consisted of sovereigns united, and in alliance for one great object, viz. the future safety, peace, and tranquillity of Europe, where harmony was essentially necessary, as far as it could be obtained. This harmony must have been broken, if such a decree had been insisted upon.

He trusted, however, that one great object would be finally accomplished, in consequence of what had already taken place; indeed, he did not doubt it. Great progress had been made. A new nation (France) had now fully come into

the measure. He did not doubt, from what he had heard, that *Spain and Portugal would follow*. If any other exertions were necessary on his part, it was only for us to point them out, and he should attend to our suggestions on the principle of duty. I might return to England with the assurance from himself, that he would never desert the cause of the injured Africans. He would never disappoint our hopes, and if I myself, as one of the individuals who had laboured in the glorious cause, should be disposed to write to him, I was at liberty so to do; but I must write to him *freely* and without ceremony, as to a *friend*, acting in unison for the same great object. He added, "I trust we have so laboured in the Congress, that the result will be very satisfactory to all Christian people."

This last sentence was uttered in a pause, and as if it had come out unexpectedly, so that I was at a loss to determine whether it related to the slave trade, or whether to some arrangements at Paris, respecting religious toleration, or any other religious subject. While I was reflecting upon it, the Emperor turned to another subject, and asked me how Mr. Allen, Mr. Wilkinson, and Mr. Grillet were, and where they now were. I replied, that the two former were in England, and were well when I saw them; but the latter had gone home to America to the bosom of his family.

The Emperor then said, that the two hours' conversation which he had held with them in London were among the most agreeable hours he had spent while in England. The religious opportunity which he then had with them had made a very serious impression on his mind, such as he believed he should never forget; and he could not but have a high regard for the society to which three such good men belonged. With respect to the society itself, it appeared to him as if its members, taken in the plainness of their dress and appearance, and the simplicity and yet independence of their manners, approached nearer to the primitive Christians than any other people.

He might say the same of their doctrine—their first *grand doctrine* of the influence of the Holy Spirit was the very corner-stone of religion. Here he abruptly asked me, if I myself were a Quaker. I replied, I was not so in name, but I trusted I was in spirit—I was nine parts out of ten of their way of thinking. They had been fellow-labourers with me in the great cause; the more I had known them the more I had loved them.

The Emperor said, putting his hand to his breast, I embrace them more than any other people—I consider myself as one of them.

I told him, as he had such a value for the Quakers, I would furnish him with one or two anecdotes, which I had no doubt would please him to hear, but more particularly if he had not

heard them before. His predecessor, Peter the Great, had professed an attachment to the Quakers; similar to what the Emperor had just expressed. He was acquainted with the great William Penn, and others of the first founders of the Society, and when he worked at the Dock-yard at Deptford, in order to learn practically the rudiments of naval architecture, he frequently attended the Quakers' Meeting, where he conducted himself with due solemnity and decorum.

The Emperor said he had known this anecdote before. I said that, with his permission, I would relate another. The same Peter the Great, about 16 years after he had left England, went with his army to Frederickstadt; on his arrival there, one of the first questions he asked was, whether there were any of those good men called Quakers in the place? and being told there were, he signified his intention of attending one of their meetings. He accordingly attended, accompanied by his suite; he heard the discourse that followed, with great attention and interest, and bestowed his commendation upon it. The Emperor might remember this was precisely his own case, when last year he attended the Quakers' Meeting-house in St. Martin's-lane; so that he had, probably, without knowing it, trodden in the footsteps of his great predecessor.

The Emperor thanked me for this anecdote, which was new to him, and said he could not follow a better example than that of Peter the Great, and desired to follow him in whatever he had done that was good.

He then asked me if Mr. Wilkinson and Mr. Allen were of any profession? I replied, that Mr. Wilkinson was a preacher of the gospel, and that he devoted himself to his religious office; and that Mr. Allen was in trade, but that he spent his time chiefly in doing good. Here I could not resist the impulse I felt to do justice to the character of my friend by an eulogium, in which, however high it may appear, I did not exceed the bounds of truth. After which I said that, of the many objects which occupied Mr. Allen's attention, that of forming public schools was among the foremost, and that I knew he wished that similar establishments might be formed in the Emperor's dominions. He replied, abruptly, that he supposed I knew there were schools in Russia, but, perhaps, they were not so improved a plan as those in England.

I answered him by saying, the difference lies there. I then said a few words on the mechanism of the English schools, and that in consequence of the great number of boys which one master could teach, education became cheap, so as to be even within the power of the poor. I then enlarged on the benefits of education. I observed, his own empire was great and powerful; but what would it be if his subjects were improved by a wise and universal education? his Empire would be more powerful, more permanent, and more happy. Nothing contributed more to make subjects useful, orderly, virtuous and happy, than an acquaintance with the truths of the Gospel and education, inasmuch as it taught them to read, and was one of the outward means of enabling them to know those truths. In this point of view, these schools were of inestimable value! He replied, that there was no sure foundation for peace, order, and happiness, among men, but the Christian religion, and added, this is quite as necessary for kings as for people. I then informed him that Mr. Allen, and those who laboured with him on this subject, were not labouring for a private or particular good, their views extended to the whole world, and for this purpose they were educating foreigners of different nations to qualify them to carry the system of the British education into the countries to which they severally belonged. They had lately educated one from Denmark, and another from France, and they would be very glad to educate one from Russia, with the same design.

On hearing this, the Emperor seemed to be well pleased, and said, *You may be sure I should be glad to promote the system in Russia. He said he was very sorry to take his leave of me so soon; and he had more engagements than, he feared, he could perform while he stayed in Paris.*

He added, "Remember me kindly to Mr. Allen, and his good friends the Quakers; and tell Mr. Allen I wish him to write to me on the subject of his schools. He may depend upon my countenance in Russia." He then took hold of my hand again, saying, "My best wishes accompany you to England, and if I can at any time be useful to the cause of the poor Africans, you may always have my services by writing me a letter."

HAIR-BREADTH ESCAPES. No. VI.

MRS. SPENCER SMITH.

CHAPTER IV.

"HEAVENS!" exclaimed Mrs. Smith, with the feelings natural to an elegant and refined woman, "how do you imagine I could put on the filthy

cast-off clothes of those miserable shepherds? I should prefer the prison of Valenciennes to that."

The ~~marquis~~, however, insisted upon returning to Rastadt to purchase their disguises. They arrived there at sunset, and they had to depart again at midnight, in order to meet the flocks at the moment of their passing, which was generally at break of day. The marquis, who undertook the office of making up the story, told the hostess that, wishing to surprise his sister, whom they were going to meet, his wife and he wished to dress themselves as shepherds. He requested her to purchase the two costumes, and gave her several pieces of gold. The good hostess speedily executed the commission. By one of those unlucky chances which happen but too often to the unfortunate, the man of whom the dresses were purchased was attached to the police of the little town of St. Maria, two leagues from thence. He questioned the woman; she told the truth, and that truth was sufficient to warrant the arrest of a whole town. He said nothing, but sold her the two dresses. Scarcely had she turned her back when he saddled his horse, and hastened to St. Maria, to give information of what had occurred.

The disguises were put on amidst bursts of laughter; the fair fugitive enjoyed one of those moments of quiet which frequently, it is said, precede misfortunes. At midnight, having liberally rewarded their good hostess, they were about to step into the cabriolet to drive to the Styrian frontier; but as they were passing through an obscure corridor, which led from the parlour to the court-yard, the marquis felt the points of two bayonets touch his sides, whilst Mrs. Smith was rudely seized by two soldiers, and dragged back to the parlour. There a commissary of police was seated. He eyed the lady for a long time with an air of insolence. "What is your name?" he at length inquired.

"Mrs. Spencer Smith, the daughter of baron Herbert, the internuncio from Austria to Constantinople, and the wife of the ambassador from England to Stuttgart."

Mrs. Smith immediately perceived that she could only serve herself and her companion by avowing the truth. She was now upon the Austrian territory. The government might not be sufficiently strong to save her, but the subalterns might be overawed by her tone of authority, and let her go. In fact, the commissary seemed for a moment overwhelmed by this litany of great names, though he looked as if he did not believe she was telling truth.

"And why this costume?"

"Because I choose to wear it; this is a matter which does not concern you."

"Humph! And where are you going?"

"To the residence of my sister, the Countess Strassoldo, at Gratz, in Styria."

"Who is this man who accompanies you?"

"My valet-de-chambre."

"I cannot come to any decision in your case,"

said the commissary: "If you must accompany me to St. Maria," ~~the commissary then~~ All this time the marquis was under guard in an adjoining chamber; but he had heard the questions and answers, and that was sufficient for his guidance in his examination. Next morning they all departed for St. Maria, Mrs. Smith in a carriage, and the marquis on foot, between two soldiers.

St. Maria is a very small garrison-town of the Tyrol. On arriving there, the commissary related the affair to a superior officer who was commandant of the town, whose first impression was, that this female was an adventurer. He went to Mrs. Smith, and interrogated her himself.

It happened that, during the preceding year, Mrs. Smith had been at Inspruck with her husband. They had given a ball; the room was small, and they were obliged to refuse many applications. I mention this fact that the reader may be the better enabled to understand what follows.

The officer questioned Mrs. Smith with that politeness which a man naturally shows to a pretty woman; but he seemed to change his tone when she described herself to be Mrs. Smith.

"You assume a respectable name, madam," said he, "and this imposture may bring you into trouble. You are not Mrs. Smith. Tell me the truth, and perhaps I may serve you."

Mrs. Smith was very near-sighted; she therefore had not at first remarked the officer's countenance; but by degrees it struck her that she had seen him before, and she was speedily assured of the fact.

"And am I not Mrs. Spencer Smith, sir?" said she with a smile; "have you, then, so treacherous a memory? Can you have forgotten, sir, that when Mr. Spencer Smith, the English ambassador at Stuttgart, came last year to Inspruck, his wife, who was with him, gave a ball, to which many officers were invited? Several of them could not get admittance, in consequence of the smallness of the apartments; and one of those gentlemen, Baron de —, yourself, sir, came recommended by a lady of Inspruck, his relative; through that recommendation he obtained a preference over many of his friends."

"Madam, madam!"—exclaimed the baron, dropping on his knee before Mrs. Smith, and kissing her hand, for he now recognised the graceful form and beautiful face of the enchantress who had given so many delightful parties at Inspruck—"madam, can you pardon me; I am a most unfortunate man. Deign, then, to be as kind as you are amiable and beautiful, or I am lost."

Mrs. Smith raised him, and, laughing, assured him that every thing was forgotten. "But," said she, "I am very anxious to reach my sister's, and the day is advancing. I hope I shall be

permitted to continue my journey," added she, smiling.

"I should like," exclaimed the baron, "to see any one prevent you. I am now your champion."

"He went to the commissary of police, to whom he certified, upon his word of honour, that this lady was Mrs. Spencer Smith.

"Indeed!" said the commissary, "so much the worse for her; I have just been reading the Trent Gazette, which my secretary has handed to me. Read this paragraph."

The baron here read the paragraph which the marquis had seen at the inn on the lake of Zell. He knew not what to do. France had then such long arms that she could reach her victims wheresoever they might fly.

"We must not compromise ourselves in this affair," said the commissary of police; "I must send the lady and her valet-de-chambre to Saltzbourg. But it is needless to make enemies anywhere; therefore you had better conduct her thither, as a mark of respect."

"Not I," said the baron; "I will not play the part of gendarme to so lovely and amiable a woman."

"Would you wish her to have four soldiers and a corporal for her escort?"

"Certainly not."

"It must be you or they, there is no choice. I will inform her that we cannot take upon ourselves the responsibility of allowing her to proceed."

They departed for Saltzbourg, which, by the recent treaty of Presbourg, belonged to Austria. The marquis mounted the box along with the coachman, and during the journey, which lasted a day and a half, he waited at table as expertly as if he had been accustomed to the duties of a valet. On arriving at Saltzbourg, the prisoner—for such she still was—was conducted to the principal inn in the town; and the baron went to apprise the authorities of Mrs. Smith's arrival, having first placed two sentinels at her door.

The director-general of the police at Saltzbourg was a shrewd, clever man; he probably thought it ridiculous that a woman should be charged with political offences; and though very polite, he threw a little sarcasm into his interrogatory.

"Who is the man who accompanies you, madam?"

"My valet-de-chambre."

"His name?"

"Francesco Raimondo."

"How long has he been with you?"

"Three months."

The director-general left the apartment, making a very low bow.

The marquis was guarded in one of the chambers of the house. He was conducted to the hotel of the police, where an interrogatory was

commenced which threatened to prove dangerous to him. This he well knew, but he was upheld by a noble and generous feeling, which, under such circumstances, is a great support. The room in which the director-general and himself were, looked out upon the Saar, which runs at the foot of the castle, and surrounds the town of Saltzbourg. On the opposite side were beautiful hills, clothed with the most delightful vegetation. The marquis having answered the questions put to him, looked out upon the prospect, and exclaimed, "What a beautiful country! it is almost as fine as Italy!" The director-general smiled; he asked no questions, but he rang a bell, when a tall thin old man entered, who, by his bunch of keys, might be recognised as a jailor. The marquis was consigned to his safeguard, and, in a few moments, he was in a chamber, or rather a cabinet, ten feet long by seven feet wide, under the castle, at two hundred feet below the ground. They brought him some soup, bread, and water, and then left him to enjoy himself at his ease. Towards evening a man entered his prison, and said to him in Latin, "Your mistress is saved, my friend; she has departed for Lintz."

"Is it true?" exclaimed the marquis; "Heaven be praised!"

"Truly," said the man—smiling at the facility with which the prisoner understood his Latin,—“you are a very attached and devoted servant; but for yourself, who will save you, my friend?"

"God," answered the marquis, making an allusion to the motto of his house.*

"He is, doubtless, a good protector; but we are ourselves frequently the arbiters of our destiny. You would do well to speak the truth."

The marquis made no reply. Some moments after, he was ordered to ascend to the cabinet of the director. "Do you know the Marquis de Salvo?" he inquired abruptly.

"Certainly, I know him well; he is my master," said the marquis, without appearing disconcerted.

"Why did you leave him?"

"By his order, to follow Mrs. Smith, and to endeavour to save her; and my only regret is, that I have not entirely succeeded."

"At what town did you leave your master?"

"At Venice."

They remained in silence for some time; the director of the police then rang a bell in a peculiar way, as he had done on the first occasion, and immediately a man came in whose looks were not more propitious than those of his late jailor. He conducted the marquis to another place of confinement, which was entered by a low wicket door. The dungeon contained only two seats and a litter of straw; it had all the

* *In Deo salus*,—the device of the Salvo family, and the origin of their name.

appearance of a place whence a prisoner could hope to be released only by death. For the first time, the Marquis de Salvo felt his fortitude begin to fail him; he stretched himself on the straw litter, and fatigue and anxiety of mind soon threw him into a profound sleep. He had slept for a considerable time, when the jailor entered, and respectfully requested him to follow him to the director of the police. The latter, as soon as the marquis entered his cabinet, flew to embrace him—"My dear marquis," said he, "why did you oblige me to treat you with such severity? this was not fair."

The marquis, fearing that this was a snare laid to entrap him, at first denied that he was himself; but the director showed him a letter from Mrs. Smith, who had arrived at Lintz, where she was to remain until the receipt of Count Stadion's answer, and where the marquis was to join her. Nothing could have happened more luckily, for the marquis had well nigh paid for all, inasmuch as the police of both Venice and Milan were in pursuit of him. A description of his person had been posted up in all the public thoroughfares, and those who might conceal him were threatened with severe punishment. He was now liberated, and he immediately set off for Lintz, where he joined Mrs. Smith; and after the lapse of two or three weeks the answer arrived from Vienna. It was arranged that Mrs. Smith should assume the name of Muller, and embark at one of the northern ports. She immediately left Lintz,

and proceeded to Gratz, where she joined her sister, the Countess Strassoldo.

It will be recollected, that when at Venice, Mrs. Smith rejected the offer of the Marquis de Salvo; he assured her of his disinterestedness by promising, that as soon as he should have restored her to her family, he would not even ask the reward of spending another hour in her society. As soon as they arrived at Gratz, the marquis hired a post-chaise and went to fetch Mrs. Smith's children, Edward and Sydney, who were at some little distance from the town. Presenting the two boys to their mother, he said, "Here are your children and your sister; you are now safe under the roof of your family, I therefore bid you adieu. I leave you, and I hope I have convinced you that a man of honour is capable of performing a generous action without the hope of a reward."

Mrs. Smith, overpowered by her feelings of gratitude, held out her hand to him; she begged that he would remain in safety under her sister's roof, and not again expose himself to the dangers which he had incurred for her sake. He complied with her request. Shortly after, they proceeded to Russia, and embarked at Riga on her return to England.

On his arrival in London, the Marquis de Salvo received the thanks of Mrs. Smith's family; and Queen Charlotte, the consort of George III., publicly expressed her satisfaction of his conduct.—*Memoirs of the Duchess d'Abrantes.*

LORD BYRON AND MRS. SPENCER SMITH.

At Malta, Lord Byron became acquainted with Mrs. Spencer Smith, the "Fair Florence" of his "Childe Harold." Struck with her romantic history, and charmed and interested by her manners, and even her eccentricity, she became one of those beings who were mixed up with the poetry of his life and thoughts; and his remembrance of her produced many beautiful stanzas expressive of his admiration and regard; the following, which were addressed to her, were written at Malta:—

TO FLORENCE.

"Oh, Lady! when I left the shore,
The distant shore, which gave me birth,
I hardly thought to grieve once more,
To quit another spot on earth:

Yet here, amidst this barren isle,
Where panting Nature droops the head,
Where only thou art seen to smile,
I view my parting hour with dread.

Though far from Albin's craggy shore,
Divided by the dark-blue main;
A few, brief, rolling seasons o'er,
Perchance I view her cliffs again.

But wheresoe'er I now may roam,
Through scorching clime and varied sea,
Though Time restore me to my home,
I ne'er shall bend mine eyes on thee:

On thee, in whom at once conspire
All charms which heedless hearts can move,
Whom but to see is to admire,
And, oh! forgive the word—to love.

Forgive the word in one who ne'er
With such a word can more offend;
And since thy heart I cannot share,
Believe me, what I am—thy friend.

And who so cold as look on thee,
Thou lovely wanderer, and be less?
Nor be, what man should ever be—
The friend of Beauty in distress.

Ah! who would think that form had past
Through Danger's most destructive path,
Had braved the death-winged tempest's blast,
And 'scaped a tyrant's fiercer wrath?

Lady! when I shall view the walls
Where free Byzantium once arose;
And Stamboul's oriental halls
The Turkish tyrants now enclose;

Though mightiest in the lists of fame,
That glorious city still shall be—
On me 'twill hold a dearer claim,
As spot of thy nativity :

And though I bid thee now farewell,
When I behold that wondrous scene,
Since where thou art I may not dwell,
'Twill soothe to be where thou hast been."

He also apostrophises the same lady in the stanzas beginning "Chill and mirk is the nightly blast," published in vol. vii. p. 311, of his "Life and works;" they were written during the thunder-storm which he encountered at Zitza, in the mountains of Pindus; and in a letter to his mother, he says:—"This letter is committed to the charge of a very extraordinary lady, whom you have doubtless heard of, Mrs. S—— S——, of whose escape the Marquis de Salvo published a narrative a few years ago. She has since been

shipwrecked; and her life has been, from its commencement, so fertile in remarkable incidents, that in a romance they would appear improbable. She was born at Constantinople, where her father, Baron Herbert, was Austrian ambassador; married unhappily, yet has never been impeached in point of character; excited the vengeance of Bonaparte, by taking a part in some conspiracy; several times risked her life; and is not yet ~~four~~ and-twenty. She is here, on her way to join her husband, being obliged to leave Trieste, where she was paying a visit to her mother, by the approach of the French, and embarks soon in a ship of war. Since my arrival here I have had scarcely any other companion. I have found her very pretty, very accomplished, and extremely eccentric. Bonaparte is even now so incensed against her, that her life would be in danger if she were taken prisoner a second time."

THE BITER BIT.

"THERE," said he, "you'll see the great Daniel Webster. He's a great man, I tell you; king William, No. 4, I guess, would be no match for him as an orator; he'd talk him out of sight in half an hour. If he was in your House of Commons, I reckon he'd make some of your great folks look pretty streaked; he's a true patriot and statesman, the first in our country, and a most particular 'cute lawyer. There was a Quaker chap too 'cute for him once, tho'. This Quaker, a pretty knowin' old shaver, had a cause down to Rhode Island; so he went to Daniel to hire him to go down and plead his case for him; so, says he, 'Lawyer Webster, what's your fee?'"

"Why," says Daniel, "let me see; I have to go down south to Washington, to plead the great insurance case of the Hartford Company; and I've got to be at Cincinnati, to attend the convention; and I don't see how I can go to Rhode Island without great loss and great fatigue; it would cost you, may be, more than you'd be willing to give."

Well, the Quaker looked pretty white about the gills, I tell you, when he heard this; for he could do nothing without him, no how, and he did not like this preliminary talk of his at all; at last he made bold to ask him the worst of it, what he would take.

"Why," says Daniel, "I always liked the Quakers, they are a quiet, peaceable people, who never go to law if they can help it; and it would be better for our great country if there were more such people in it; I never seed or heard tell of any harm in 'em except going the whole figure for General Jackson, and that everlastin', almighty villain, Van Buren. Yes, I love the Quakers; I hope they'll go to the Webster ticket yet, and I'll go for you as low as I can

any way afford; say one thousand dollars." The Quaker well nigh fainted when he heard this, but he was pretty deep too; so says he, "Lawyer, that's a great deal of money; but I have more causes there; if I give you the thousand dollars will you plead the other cases I shall have to give you?"

"Yes," says Daniel, "I will, to the best of my humble abilities."

So down they went to Rhode Island, and Daniel tried the case, and carried it for the Quaker. Well, the Quaker, he goes round to all the folks that had suits in court, and says he, "What will you give me if I get the great Daniel to plead for you? It cost me one thousand dollars for a fee; but, now, he and I are pretty thick, and as he is on the spot, I'd get him to plead cheap for you." So he got three hundred dollars from one, and two hundred from another, and so on, until he got one thousand one hundred dollars, just one hundred dollars more than he gave.

Daniel was in a great rage when he heard this. "What!" said he, "do you think I would agree to your letting me out like a horse, to hire?"

"Friend Daniel," said the Quaker, "didst thou not undertake to plead all such cases as I should have to give thee? If thou wilt not stand to thy agreement, neither will I stand to mine."

Daniel laughed out, ready to split his sides, at this. "Well," says he, "I guess I might as well stand still, for you to put the bridle on this time, for you have fairly pinned me up in a corner of the fence, any how." So he went good-humouredly to work, and pleaded them all. *Slick, of Slickville.*

REVIEW.

Melanie and other Poems. By N. P. WILLIS. Edited by Barry Cornwall.

ARTICLE I.

THE poems in this volume are divided into three parts, each part being inscribed to some English friend of the author—an American by birth and education, and now resident in this country. It consists of several new poems, the longest of which are "Melanie," and a dramatic sketch called "Lord Ivon and his daughter," and a copious selection from Willis's earlier poems, most of which were previously familiar favourites of his countrymen. In our comments upon these poems, we shall follow the order in which the author has seen fit to publish them.

Melanie is a simple tale, but very gracefully told; the scene is laid in Tivoli, and the story related during a walk round the Cascatelles, by the hero of it—a lonely traveller, who has revisited Italy, and while gazing around him, upon scenes familiar to his eye under other and happier circumstances, narrates the incidents on which the poem is founded. He had previously visited Italy, accompanied by a young and lovely sister, his only remaining relative. While wandering among the beautiful scenes of that classical region, they meet by accident a young painter, between whom and the sister a sudden attachment springs up. The lonely wanderer feels his loneliness increased and his sorrows deepened, by the near prospect of losing a sister so dear to him. This mood of mind is very happily conceived and gracefully described by the poet. The attachment is finally to be consummated by a marriage. On the morning of the appointed day they repair to the convent of St. Mona, where the bridal ceremonies are to be performed. Among the listeners there is a nun whose profoundest attention is given to the sacred ceremonial; suddenly she catches a view of the brother's face, and wildly asks, "De Brevern, is it thou?" The painter is the child of the sun, the offspring of her shame. The seducer was the father of De Brevern and his sister. The sudden horror of this *éclaircissement* is too much for the delicate frame of the lady, and she drops dead on the spot. Out of the incidents of this slight sketch Mr. Willis has woven a very interesting tale. His verse has a smooth and melodious flow, well suited to the subject and the scene; and the picture of human emotions is heightened by the graceful tracery of allusion and imagery which the poet has skillfully thrown around it.

The following lines are exceedingly beautiful:—

We came to Italy. I felt
A yearning for its sunny sky:
My very spirit seemed to melt
As swept its first warm breezes by.
From lip and cheek a chilling mist,
From life and soul a frozen rime,
By every breath seemed softly kissed—
God's blessing on its radiant clime!
It was an endless joy to me
To see my sister's new delight:
From Venice, in its golden sea,
To Pestum in its purple light,
By sweet Val d'Arno's tinted hills,
In Valldimbrosa's convent gloom,
And Terni's vale of singing rills,
By deathless lairs in solemn Rome,
In gay Palermo's golden shell,
At Arethusa's hidden well,
We loiter'd like th' impassioned sun
That slept so lovingly on all,
And made a home of every one—
Rust, and rain, and waterfall—
And crown'd the dying day with glory
If we had seen, since morn, but one old haunt of story."

And the description of a spring morning at Tivoli, contained in the following lines, gives us a most lively feeling of its beauty:—

"It was a morn of such a day
As might have dawned on Eden first,
Early in the Italian May;
Vine-leaf and flower had newly burst,
And on the burthen of the air
The breath of buds came faint and rare,
And far in the transparent sky
The small, earth-keeping birds were seen
Soaring deliciously high,
And through the clefts of newer green
Yon waters dash'd their living pearls,
And with a gayer smile and bow
Troop'd on the merry village girls,
And from the Contadino's brow
The low-slouch'd hat was backward thrown,
With air that scarcely seemed his own,
And Melanie, with lips apart,
And clasped hands upon my arm,
Flung open her impassion'd heart,
And bless'd life's mere and breathing charm,
And sang old songs, and gathered flowers,
And passionately bless'd once more life's thrilling hours."

In a different strain, and on a higher theme, are the following exquisite lines:—

"But, Melanie, I little dream'd
What spells the stirring heart may move;
Pygmalion's statue never seem'd
More changed with life than she with love.
The pearl tint of the early dawn
Flush'd into day-spring's rosy hue;
The meek, moss-folded bud of morn—
Flung open to the light and dew;
The first and half-seen star of even
Waxed clear amid the deepening heaven;
Similitudes perchance may be,
But these are changes oftener seen,
And do not image half to me
My sister's change of face and mien;
'Twas written in her very air—
That love had passed and entered there."

"Lord Ivon and his Daughter" is a dramatic sketch of great beauty and power, and the moral, we think, is very successfully evolved; it is, however, merely a sketch, and a rapid one. Lord Ivon calls his daughter to his side and shows her a portrait—the portrait of that daughter's mother. The dialogue proceeds, and Lord Ivon relates the events of his life. He was born a peasant, but in early boyhood his latent ambition was roused by

"A book of poetry,
With which he daily crept into the sun
To cheat sharp pain with the bewildering dream
Of beauty he had only read of then."

He resolved to better his condition, and wandered—with a proud heart beating beneath a minstrel's garb—to the lofty palace, which was afterwards his own. He became the favourite and attendant of the noble lady Clare, the youthful and beautiful mistress of that splendid mansion. He falls desperately in love, of course; and his manner of declaring his passion is described in the following spirited lines:—

"A summer, and a winter, and a spring,
Went over me like brief and noteless hours.
For ever at the side of one who grew
With every morn more beautiful; the slave,
Willing and quick, of every idle whim;
Singing for no one's bidding but her own,
And then a song from my own passionate heart,
Sung with a lip of fire, but ever named
As an old rhyme that I had chanced to hear;
Riding beside her, sleeping at her door,
Doing her maddest bidding at the risk
Of life—what marvel if at last I grew
Presumptuous?"

"A messenger one morn
Spurr'd through the gate—'A revel at the court!
And many minstrels, come from many lands,
Will try their harps in presence of the king;
And 'tis the royal pleasure that my lord
Come with the young and lovely lady Clare,
Robed as the queen of fairy, who shall crown
The victor with his bays."

"Pass over all
To that bewildering day. She sat enthroned
Amid the court; and never twilight star
Sprung with such sweet surprise upon the eye
As she with her rare beauty on the gaze
Of the gay multitude. The minstrels changed
Their studied songs, and chose her for their theme;
And ever at the pause, all eyes upturn'd
And fed upon her loveliness."

"The last
Long lay was ended, and the silent crowd
Waited the king's award, when suddenly
The sharp strings of a lyre were swept without,
And a clear voice claim'd hearing for a bard
Belated on his journey. Masked, and clad
In a long stole, the herald led me in.
A thousand eyes were on me, but I saw
The new-throned queen, in her high place, alone;
And, kneeling at her feet, I pressed my brow
Upon her footstool, till the images
Of my past hours rush'd thick upon my brain;
Then, rising hastily, I struck my lyre,
And, in a story woven of my own,
I so did paint her in her loveliness,
Pouring my heart all out upon the lines
I knew too faithfully, and lavishing
The hoarded fire of a whole age of love
Upon each passionate word, that, as I sunk
Exhausted at the close, the ravish'd crowd
Flung gold and flowers on my still-quivering lyre;
And the moved monarch, in his gladness, swore
There was no boon beneath his kingly crown
Too high for such a minstrel."

"Did my star
Speak in my fainting ear? Heard I the king?
Or did the audible pulses of my heart
Seem to me to articulate? I rose,
And tore my mask away; and as the stole
Dropped from my shoulders, I glanced hurriedly
A look upon the face of lady Clare.
It was enough! I saw that she was changed,
That a brief hour had chilled the open child
To calculating woman; that she read,
With cold displeasure, my o'er-daring thought;
And on that brow, to me as legible
As stars to the rapt Arab, I could trace
The scorn that waited on me. Sick of life,
Yet, even then, with a half-rallied hope
Prompting my faltering tongue, I blindly knelt,
And claim'd the king's fair promise."

ISIDORE.

For the hand

Of lady Clare?

LORD IVON.

No, sweet one; for a sword."

After this he went to the wars, and returned with
brilliant renown, having performed miracles of valour;
but returned only to be pitied by her, the hope of
whose favour had spurred him desperately on.

"She knew her sometime minion,
And felt that she should never be adored
With such idolatry as his, and sighed
That hearts so true beat not in palaces.
But I was poor, with all my bright renown,
And lowly born; and she—the lady Clare!"

His wanderings were again renewed, in search of
wealth. Twenty years after he stood, an old man, at
the same palace gate.

"I had been a slave
For gold that time. My star had wrought with me,
And I was richer than the wizard king,
Throned in the mines of Ind. I could not look
On my innumerable gems, the glare
Pain'd so my sun-struck eyes. My gold was countless."

He met upon the threshold—not the lady Clare,
but her young and lovely daughter.

"Her very self—all youth, all loveliness,
So like the fresh-kept picture in my brain,

That for a moment I forgot all else,
And staggered back and wept. She passed me by
With a cold look."

He proceeds to describe the change that his bound-
less wealth had wrought in the manner of lady Clare
towards him:—

"But what a change
Waited me here! My thin and grizzled locks
Were fairer now than the young minstrel's curls;
My sun-burnt visage and contracted eye
Than the gay soldier in his gallant mien;
My words were wit, my looks interpreted,
And lady Clare—I tell you—lady Clare
Lean'd fondly—fondly! on my wasted arm.
O God! how changed my nature with all this!
I, that had been all love and tenderness,
The truest and most gentle heart, till now,
That ever beat, grew suddenly a devil;
I bought me lands and titles, and received
Men's homage with a smooth hypocrisy;
And—you will scarce believe me, Isidore—
I suffered them to wile their peerless daughter—
The image and the pride of lady Clare—
To wed me."

ISIDORE.

Sir, you did not!

LORD IVON.

Ay; I saw
Th' indignant anger when her mother first
Broke the repulsive wish, and the degrees
Of shuddering reluctance, as her mind
Admitted the intoxicating tales
Of wealth unlimited. And when she looked
On my age-stricken features, and my form
Wasted before its time, and turned away
To hide from me her tears, her very mother
Whispered the cursed comfort in her ear
That made her what she is."

ISIDORE.

You could not wed her,

Knowing all this!

LORD IVON.

I felt that I had lost
My life else. I had wrung, for forty years,
My frame to its last withers; I had hung
My boyhood's fire away, the energy
Of a most sinless youth, the toll, and fret,
And agony of manhood; I had dared,
Fought, suffered, slaved, and never for an hour
Forgot or swerved from my resolve; and now,
With the delicious draught upon my lips,
Dash down the cup."

ISIDORE.

Yet she had never wrong'd you!

LORD IVON.

Thou'rt pleading for thy mother, my sweet child,
And angels hear thee; but if she was wrong'd,
The sin be on the pride that sells its blood
Coldly and only for this damning gold.
Had I not offer'd youth first? Came I not
With my hands brimm'd with glory to buy love?
And was I not denied?

ISIDORE.

Yet, dearest father,
They forced her not to wed!

LORD IVON.

I called her back
Myself from the church threshold, and, before
Her mother and her kinsmen, bade her swear
It was her own free choice to marry me;
I showed her my shrunk hand, and bade her think
If that was like a bridegroom, and beware
Of perjury her chaste and spotless soul,
If now she loved me not."

ISIDORE.

What said she, sir?

LORD IVON.

Oh! they had made her even as themselves;
And her young heart was colder than the slab
Unsun'd beneath Pontelicus. She pressed
My withered fingers in her dewy clasp,
And smiled up in my face, and chid 'my lord'
For his wild fancies, and led on."

ISIDORE.

And no

Misgiving at the altar?

LORD IVON.

None. She swore

To love and cherish me till death should part us,
With a voice clear as mine.

ISIDORE.

And kept it, father.

In mercy tell me so.

LORD IVON.

She lives, my daughter.

Long ere my babe was born my pride had ebb'd,
And let my heart down to its better founts
Of tenderness. I had no friends, not one.
My love gush'd to my wife. I rack'd my brain
To find her a new pleasure every hour,
Yet not with me; I fear'd to haunt her eye,
Only at night, when she was slumbering
In all her beauty, I would put away
The curtains, till the pale night-lamp shone on her,
And watch her through my tears.

One night her lips

Parted as I gazed on them, and the name
Of a young noble who had been my guest,
Stole forth in broken murmurs. I let fall
The curtains silently, and left her there
To slumber and dream on; and, gliding forth
Upon the terrace, knelt to my pale star,
And swore, that if it pleased the God of light
To let me look upon the unborn child
Lying beneath her heart, I would but press
One kiss upon its lips, and take away
The life that was a blight upon her years.

ISIDORE.

I was that child."

After his daughter's birth, he had prepared to
execute his purpose; but the catastrophe is described
in the following lines:—

"Yes—and I heard the cry
Of thy small 'piping mouth' as 't were a call
From my remembering star. I waited only
Thy mother's strength to bear the common shock
Of death within the doors. She rose at last,
And, oh! so sweetly pale! And thou, my child!
My heart misgave me as I looked upon thee.
But he was ever at her side whose name
She murmured in her sleep; and, lingering on
To drink a little of thy sweetness more,
Before I died, I watched their stolen love,
As she had been my daughter, with a pure,
Passionless joy that I should leave her soon
To love him as she would. I know not how
To tell thee more."

• • • Come, sweet! she is not worthy
Of tears like thine and mine.

She fled and left me
The very night! The poison was prepared—
And she had been a widow with the morn
Rich as Golconda. As the midnight chimed
My star rose. Gazing on its mounting orb,
I raised the chalice—but a weakness came
Over my heart; and taking up the lamp,
I glided to her chamber, and removed
The curtains for a last, a parting look
Upon my child.

Had she but taken thee,
I could have felt she had a mother's heart,
And drained the chalice still. I could not leave
My babe alone in such a heartless world!

ISIDORE.

Thank God! Thank God!"

This poem shows, we think, very considerable dramatic power. The character of old Lord Ivon is well conceived, and the gradual development of it, as shown in his narration to his daughter, is admirably executed. The sketch points out a feudal and romantic age, the characteristics of which are well hit off, and the sentiments naturally and beautifully expressed. The influence of youthful ambition on a susceptible mind, chained down to the vulgar walks of life; the uncontrollable ardour of an aspiring passion, kindled by patrician beauty in a low-born though poetic bosom; and the outpouring of that passion by the disguised minstrel at the court revel, are all admirable in their way. The blank verse, in which this sketch is written, is delicately and harmoniously constructed; and, being mostly narrative, is free from that occasional dimness, which weakens the effect of some of Willis's writings.

The remainder of this Part consists of shorter poems, of various degrees of merit. "Birth-day Verses," addressed to the poet's mother, are written in a tone of deep filial tenderness. The lines are free and flowing, and the language is marked by a natural and unaffected elegance, the appropriate and tasteful expression of the profoundest feelings of the heart.

"Florence Gray," is an elegant and graceful little poem, in which the recollection of a child at Rome mingles fancifully with the historic scenes among which the poet wandered.

NATURAL CURIOSITIES.

MIGRATION OF BIRDS.—The migration of birds deserves notice, for it is one of the most surprising instances of God's providence for preserving animals in circumstances most conducive to their welfare. This remarkable phenomenon early attracted attention, for, five-and-twenty hundred years ago it was remarked, "the stork knoweth her appointed times, the turtle, and the crane, and the swallow, observe the time of their coming." (Jer. viii. 7.) It is certain that a deficiency of food, a painful alteration of temperature, may render their present abiding-place to them uncomfortable; these circumstances might gradually drive them, without any cause for wonder, from one extremity of a continent to another; but who has taught them that a happier state of things exist at a distance of hundreds of miles across the ocean?—a distance that they traverse with wearied wing, and which proves fatal to many of the companions of their flight. What informed the swallow at Senegal that a genial and desirable climate was, at a particular period, and that period only, to be found in Britain? How

came the Solan goose to conceive, in its high northern home, that there was one diminutive island,—that of the Bass, in the Solway Firth,—and that only, to be found upon our shores, that would be favourable to its residence during the time of incubation? Who, to use our Homer's verse,

"Who bids the stork, Columbus-like, explore
Heavens not his own, and worlds unknown before?
Who calls the council, states the certain day,
Who forms the phalanx, and who points the way!"

Let the same great poet answer these queries:—

"Reason raise o'er instinct as you can—
In this 'tis God directs, in that 'tis man."

—Notes to Paley, in Smith's Imperial Classics.

OCEANIC ANIMALCULÆ.—The ocean teems with life; the class of polyps alone are conjectured by Lamarck to be as strong individuals as insects. Every tropical reef is described as bristling with corals, budding with sponges, and swarming with crustacea, echimi, and testacea, while almost every tide-washed

rock is carpeted with fuel, and studded with corallines, actinia, and mollusca. There are innumerable forms in the seas of the warmer zones which have scarcely begun to attract the attention of the naturalist; and there are parasitic animals without number, three or four of which are sometimes appropriated to one genus, as to the *Balsena*, for example. Even though we concede, therefore, that the geographical range of marine species is more extensive in general than that of the terrestrial, (the temperature of the sea being more uniform, and the land impeding less the migrations of the oceanic than the ocean of the terrestrial,) yet we think it most probable that the aquatic species far exceed in number the inhabitants of the land. Without insisting on this point, we may safely assume, as we before stated, that, exclusive of microscopic beings, there are between one and two millions of species now inhabiting the terraqueous globe; so that if only one of these were to become extinct annually, and one new one were to be every year called into being, more than a million of years would be required to bring about a complete revolution in organic life. *Lyell's Geology*.

SILVER.—A correspondent of professor Silliman's journal states, that the mines employed at the amalgamating mines in Mexico are opened after death, and that from two to seven pounds of silver are often taken out of their stomachs. He says that he is in possession of a specimen, which is perfectly pure and white.

MONSTROUS FISH.—In Kilburne's "History of Kent" we find the following story, which, however improbable it may seem, is confirmed by the late reverend and learned Mr. Lewis, in his account of the Isle of Thanet:—On the ninth of July, 1574, a monstrous fish shot himself ashore on a little island called Fishness, where, for want of water, he died the next day. While he lay on the beach, his roaring was heard more than a mile. His length was sixty-six feet; his nether jaw opened twelve feet; one of his eyes was more than a cart and six horses could draw; and a man stood upright in the place from whence his eye was scooped out. The thickness from his back to the bottom of his belly was fourteen feet; his tail was fourteen feet broad; the distance between his eyes was twelve feet. Three men stood upright in his mouth; some of his ribs were sixteen feet long; there were two cartloads of his liver; and a man might creep into each of his nostrils.

INTERNAL TEMPERATURE OF THE EARTH.—About thirty years ago the late professor Leslie expressed the opinion that the earth was surrounded by a crust from thirty-eight to forty miles in thickness, and that the rest of the internal element was liquid fire or luminous ether. He was, at the time, almost singular in this opinion; but Dr. Buckland, of Oxford, appears to have adopted the theory, which was then regarded as something very fanciful. The French professor, M. Arago, has taken great pains to put the opinion to a variety of tests, by having registers kept of the comparative temperature of the different Artesian wells throughout the departments of France and elsewhere; and the fact of the temperature increasing by descent has been satisfactorily established. Some of the Artesian wells (wells made by boring to a great extent) throw the water to a very considerable height; and the quantity is so large, as to supply towns of five or six thousand inhabitants, and turn mills besides. Another circumstance which goes very far to establish the fact that the temperature is increased by descending into the bowels of the earth, is, that some of the

most valuable silver mines in South America have been abandoned in consequence of the heat becoming so great that the workmen could no longer bear it.

THREAD OF THE SPIDER.—The thread of the silk-worm is so small, that many folds are twisted together to form our finest sewing thread; but that of the spider is smaller still, for two drachms of it by weight would reach from London to Edinburgh, or four hundred miles.—*Arnott's Physics*.

MANNA.—In the month of June it drops from the thorns of the tamarisk upon the fallen twigs, leaves, and thorns which always cover the ground beneath that tree in the natural state. The manna is collected before sunrise, when it is coagulated; but it dissolves as soon as the sun shines upon it. The Arabs clean away the leaves, dirt, &c., which adhere to it, boil it, strain it through a coarse piece of cloth, and put it into leathern skins; in this way they preserve it till the following year, and use it, as they do honey, to pour over their unleavened bread, or to dip their bread into. I could not learn that they ever make it into cakes or loaves. The manna is found only in years when copious rains have fallen; sometimes it is not produced at all, as will probably happen this year. I saw none of it among the Arabs; but I obtained a small piece of last year's produce in the convent, where, having been kept in the cool shade and moderate temperature of that place, it had become quite solid, and formed a small cake. It became soft when kept some time in the hand; if placed in the sun for five minutes it dissolved; but when restored to a cool place it became solid again in a quarter of an hour. In the season at which the Arabs gather it, it never acquires that state of hardness which will allow of its being pounded, as the Israelites are said to have done. (Numbers xi. 8.) Its colour is a dirty yellow; and the piece which I saw was still mixed with bits of tamarisk leaves. Its taste is agreeable, somewhat aromatic, and as sweet as honey. If eaten in any considerable quantity, it is said to be slightly aperient.—*Burckhardt*.

SHIRT TREE.—The numerous and well-known voyages to the South Sea Islands, &c., have made us all well acquainted with what is called the "bread-tree," as well as another kind, known under the name of the "butter-tree." But it remained for the indefatigable M. Humboldt to discover, in the wilds of South America, a tree which produces ready-made shirts. "We saw on the slope of the Cerra Duida," says M. Humboldt, "shirt-trees fifty feet high. The Indians cut off cylindrical pieces two feet in diameter, from which they peel the red and fibrous bark, without making any longitudinal incision. This bark affords them a sort of garment which resembles sacks of a very coarse texture, and without a seam. The upper opening serves for the head, and two lateral holes are cut to admit the arms. The natives wear these shirts of marima in the rainy season; they have the form of the ponchos and ruanos of cotton, which are so common in New Grenada, at Quito, and in Peru. As in these climates the riches and beneficence of nature are regarded as the primary causes of the indolence of the inhabitants, the missionaries do not fail to say, in showing the shirts of marima, 'In the forests of the Oronoko garments are found ready made on the trees.' We may add to this tale of the shirts the pointed caps which the spathes of certain palm-trees furnish, and which resemble coarse net-work." *Tilloch's Magazine*.

AN EXTRACT FROM MY MEMOIRS.

No. 254. From the years 1815 to 1821, I was in the neighbourhood of F—n—y, where existed the extensive cotton factories of the late Sir Robert B——, baronet. I was much interested in the machinery, but all my pleasure was destroyed when I turned my attention to the work-people—squalid and white-faced wretches, all of stunted growth, many of them crooked in form, and decrepid at twenty-five or thirty years of age; in short, a blighted population without protectors, huddled together by hundreds in mill-houses, whose only comfort appeared to be derived from the clandestine pleasures of an almost indiscriminate sensuality. These mills, out of which their baroneted proprietor extracted nearly the whole of his colossal fortunes, were worked by successive supplies of what were called “parish apprentices.” I could never ascertain what number of them was actually penned up in the “prentice-house,” but I know there were sometimes brought, from the distant parishes of large towns, two or three hundreds of orphan or friendless children, varying from the ages of seven to ten years, of both sexes, to be bound apprentice to Sir Robert till they were twenty-one years of age. They were, after the first day or so, sent into the mills, and at once initiated in the most unhealthy trades, and the most vicious society in the neighbourhood. I have often seen, from my bed-room window, their little images moving about at work in the thousand-windowed mills, till ten, eleven, and even twelve o’clock at night; and when trade was good, a relay of similar infant workers was then brought into the mill, while the little jaded creatures who, from fatigue, could scarcely walk away from the “jinney,” or the spinning-wheel, went to the warmed beds which their fellow-slaves had just left, to snatch a little hurried slumber, till their companions were equally worn out, and were then driven to the same places of repose. On an average, however, I learned they worked less than sixteen hours a day, and frequently I have seen all the mills at work till towards the evening of Sunday. Their food was correspondent to their employment, for they lived only on porridge, gruel, broths, and the coarsest fare that was compatible with enabling them to work. The boys were dressed in coarse grey cloth, and the girls in blue-striped cotton gowns, with hempen aprons; and their stench was invariably so disagreeable, that I have often found myself unable to eat after having been near them. They were, to all intents and purposes, in my view, as perfect slaves—abating the limited time which they were bound to Sir Robert—as the blacks in the West Indies. They had overseers over them, who were rewarded according to the work they could extract from the “cotton children,” who

were also flogged, pinched for food, or confined, according to the overseer’s pleasure. They were sometimes walked to church on a Sunday in a body, under control, and they sat in church altogether, in a corner, much after the fashion of many of the culprits whom I have seen in the prison chapels. As they grew older they were allowed a pittance for what was properly enough called “overwork;” and as the poor girls were without mothers to teach them, or instructors as substitutes, they always spent that money in procuring the finery which the son of their baroneted proprietor has described by—

“Where tawdry colours
Strove with dirty white.”

What struck me as the most awful part of this cotton paradise, out of which Sir Robert drew all his fortunes, was, that in the course of six years’ observation of it, during which I lived within “a gunshot of the ‘prentice-house,” though several thousands of these female apprentices entered and left the mill in that time, I scarcely ever heard of one who possessed the reputation of being a virtuous woman. The number of illegitimate births was in awful disproportion to the number of the whole population of F—n—y; and though I have reason to believe that there were not many cases of infanticide, a very small number of the children survived the age of two years. A great portion of the boy-and-girl parents (for they were not men and women) were evidently syphilitic, and the females were considered a pestilential nuisance to the neighbourhood. The proportion of deaths among the apprentices was, I should think, four to one to the ordinary proportion of similar ages; and by the period they were “out of their time,” they were often worn out; and I never could actually tell who became of them, but they always disappeared. A few were left, and worked for wages in the mills; many ran away before the expiration of their apprenticeship; and, I suppose, some of the more spirited went to the great cotton marts of Lancashire; and a very minute fraction indeed laudably abandoned the life-absorbing mill, and either went to service or to some of the trades. From the better looking girls that remained in the parish, and who either became prostitutes or the wives of those who had been brought up in the same school, there arose such a progeny as I shall never forget; for they were often knock-kneed, bow-legged, crooked, crippled, or paralysed, which was mostly the result of overworked mothers or hired nursing. Oh, I have often thought, as I saw Pickford’s wharf crowded with the bales of printed calicoes, if we could but bring the British women to see how their sisterhood here produce the finery which sets

off their beauty, they would teach their children to turn the name of cotton-mill into a synonyme for transportation, dub Sir Robert "Jack the Giant Killer the Second," and would mob the parliament with petitions to look into the condition of the cotton factories, the workwomen of which even an agricultural labourer, or an artizan, when I was at F——, always considered it a disgrace to marry. In those six years, more than fifty serious accidents occurred in the mills, which either ended in the loss of life or limb, or to the permanent detriment of the poor victims of the wheel. Since that time I have visited other mills in various parts of the country, and I found the same evils substantively predominant in them all. I make these remarks for the benefit of my children; and I hope they will never fail to lift up their voices against such slave establishments in the land of freedom; nor be discouraged if they are often answered, as I have profoundly been, "Oh, the poor creatures are used to it." Of all the orphanised population, that streamed through the mills of Sir Robert, in the above mentioned years, I never became acquainted with more than two cases where there was any approach to mental superiority; one was the case of Henry Clegg, and the other that of Mary White. The first is soon told. He had a taste for music, and was religiously disposed; and after striving against the host of temptations in his unpropitious station, he escaped from the mill, and became a sad pluralist in the church; for he held the offices of singer, sexton, door-keeper, and errand-boy for the clergyman. Mary White's tale is somewhat longer. She was tall, slim, very straight, and had such a symmetry and gait as would, I am certain, have made Chantrey immortalise her form, if he had once beheld her; her features were somewhat large, but very fine; and there was so much of the supernatural about her, when compared with the pigmy creatures that were yet her spindle companions, that I often thought her parents must have been superior persons, who, either from shame or necessity, had thus disposed of their offspring. My suppositions were the more confirmed when I remembered, that a tall handsome man, of gentlemanly bearing, mustachod and spurred, occasionally went to the mill and desired to see Mary White, the interview with whom was, however, never private. Still the stranger left Mary at the mill, and there she continued lifting her fine neck and head above the cadaverous dwarfs of the sisterhood, as the stately palm in Palestine does above the juniper bushes. I saw many of the other girls die, and all of them wither shortly, in this palace-royal of disease; but still the beauty of Mary White appeared to brave the midnight lamps, and the monotonous din of ten thousand wheels; but, in 1819, she was seduced by —, a gentleman who, in passing over the works, had been enamoured of her

charms. The hedges of virtue once broken, new gaps are easily made; especially when its possession is considered no merit: and from Captain —, she descended to be the criminal companion of one of the overseers. But still there was no ordinary vigour about the character of Mary White. She appeared to become sensible of her degradation; and by one noble effort of courage, she returned to her former circumspection; but the struggles, the persecutions, and sufferings, which followed her restoration, were too much; and she became insane. In this condition, I was called to see her, and I can never forget her voice quivering, at a supernatural elevation, while she continued to sing, over and over again, the following song, which, for composition, I could never explain. Nor did I know that Mary White could read, until, on inquiry, I found that she wrote beautifully also, and some of the girls said, "her could talk French as well."

"Hark! see the boiler's steam,
It is music mellowing;
And the thunder-crash, and the gleam
Of lightning revelling.
The mountain storm,
A haggard form,
A cloud surcharged,
A demon enlarged,
Are my choice company.

The lofty cataract's war,
Plunging down fearfully;
The eagle's dauntless soar,
Sweeping on endlessly;
A witch with her scream,
A horrible dream,
The gurgling groan,
And the guilty moan,
Are sweet to a thing like me.

The blaze and the night-fires of war,
The wail of the sorrowing;
The earthquake's crooked jaw,
A city engulfing;
The madness of famine,
A cave with its ravine,
The torches by night,
The mildew and blight,
Are sweet to a thing like me.

The tumult and throes of the sea,
Groaning in agony;
The ship far away from the bay,
Foundering suddenly;
Or a fire at sea,
Despairing glee;
The shipwreck'd crew,
The floating fow,
Are sweet to a thing like me.

Are sweet to a thing like me;
With an eye mindless
I none see, and none see me;
A Spirit restless.
Come, yell and shout,
Come maniac rout;
Bosoms bare,
Dishevell'd hair,
Are seen by a thing like me."

POCKETS.

(From the "Doctor." Vol. I.)

"La tasca è proprio cosa da Christiani."

BENEDETTO VARCHI.

My eldest daughter had finished her Latin lessons, and my son had finished his Greek, and I was sitting at my desk, pen in hand and in mouth at the same time, (a substitute for biting the nails, which I recommend to all onychophagists,) when the Bhow Begum came in with her black velvet reticule, suspended, as usual, from her arm by its silver chain.

Now, of all the inventions of the tailor, (who is, of all artists, the most inventive,) I hold the pocket to be the most commodious, and, saving the fig-leaf, the most indispensable. Birds have their craw, ruminating beasts their first or antestomach, the monkey has his cheek, the opossum her pouch; and so necessary is some convenience of this kind for the human animal, that the savage who cares not for clothing, makes for himself a pocket, if he can. The Hindoo carries his snuff-box in his turban. Some of the inhabitants of Congo make a secret fob in their woolly toupet, of which, as P. Labat says, the worst use they make is to carry poison in it. The Matolass, a long-haired race who border upon the Caffres, form their locks into a sort of hollow cylinder, in which they bear about their little implements: *certainly*, a more sensible bag than such as is worn at court. The New Zealander is less ingenious; he makes a large opening in his ear, and carries his knife in it. The Ogres, who are worse than savages, and whose ignorance and brutality is in proportion to their bulk, are said—upon the authority of tradition—when they have picked up a stray traveller or two more than they require for their supper, to lodge them in a hollow tooth, as a place of security, till breakfast; whence it may be inferred, that they are not liable to toothach, and that they make no use of toothpicks. Ogres, savages, beasts, and birds, all require something to serve the purpose of a pocket. Thus much for the necessity of the thing. Touching its antiquity much might be said, for it would not be difficult to show—with that little assistance from the auxiliaries *must*, and *have*, and *been*, which enabled Whittaker of Manchester to write whole quartos of hypothetical history in the potential mood—that pockets are coeval with clothing; and as erudite men have maintained that language, and even letters, are of Divine origin, there might, with like reason, be a conclusion drawn from the twenty-first verse of the third chapter of the book of Genesis which it would not be easy to impugn. Moreover, nature herself shows us the utility, the importance, nay, the indispensability, or, to take a hint from the pure language of our

diplomatists, the *sinequanonness* of pockets. There is but one organ which is common to all animals whatsoever: some are without eyes, many without noses, some have no heads, others no tails, some neither one nor the other, some there are who have no brains, others very pappy ones, some no hearts, others very bad ones; but all have a stomach; and what is the stomach but a live inside pocket? Hath not Van Helmont said of it, "*saccus vel pera est, ut ciborum olla?*"

Dr. Towers used to have his coat pockets made of capacity to hold a quarto volume, a wise custom, but requiring stout cloth, good buckram, and strong thread well waxed. I do not so greatly commend the humour of Dr. Ingenhousz, whose coat was lined with pockets of all sizes, wherein, in his latter years, when science had become to him as a plaything, he carried about various materials for chemical experiments, among the rest, so many compositions for fulminating powders in glass tubes, separated only by a cork in the middle of the tube, that if any person had unhappily given him a blow with a stick, he might have blown up himself and the doctor too. For myself, four coat pockets of the ordinary dimensions content me; in these a sufficiency of conveniences may be carried, and that sufficiency methodically arranged. For, mark me, gentle or ungentle reader, there is nothing like method in pockets, as well as in composition; and what orderly and methodical man would have his pocket-handkerchief, and his pocket-book, and the key of his door, (if he be a bachelor living in chambers,) and his knife, and his loose pence and halfpence, and the letters which, peradventure, he might just have received, or peradventure he may intend to drop in the post-office—twopenny or general—as he passes by, and his snuff, (if he be accustomed so to regale his olfactory conduits,) or his tobacco-box, (if he prefer the masticable to the pulverised weed,) or his box of lozenges, (if he should be troubled with a tickling cough,) and the sugar-plums and the gingerbread nuts which he may be carrying home to his own children, or to any other small men and women upon whose hearts he may have a design;—who, I say, would like to have all this in chaos and confusion, one lying upon the other, and the thing which is wanted first fated away to be undermost?—(Mr. Wilberforce knows the inconvenience)—the snuff working its way out to the gingerbread, the sugar-plums insinuating themselves into the folds of the pocket-handkerchief, the pence grinding the lozenges to dust for the benefit of the pocket-book, and the door key busily employed in unlocking the letters?

Now, forasmuch as the commutation of female pockets for the reticule leadeth to inconveniences like this, (not to mention that the very name of "commutation" ought to be held in abhorrence by all who hold daylight and fresh air essential to the comfort and salubrity of dwelling-houses,) I abominate that bag of the Bhow Begum, notwithstanding the beauty of the silver chain upon the black velvet. And per-

ceiving at this time that the clasp of its silver setting was broken, so that the mouth of the bag was gaping pitifully, like a sick or defunct oyster, I congratulated her as she came in upon this further proof of the commodiousness of the invention; for here, in the country, there is no workman who can mend that clasp, and the bag must, therefore, either be laid aside, or used in that deplorable state.

THE ANCIENT FAMILY CLOCK.

BY MRS. SIGOURNEY.

So, here thou art, old friend,
Ready thine aid to lend,
With honest face;
The gilded figures just as bright
Upon thy painted case,
As when I ran with young delight
Thy burnish'd robe to trace;
Forbidden still thy garniture to touch,
I gazed with clasped hands, admiring long and much.

But where is she who sate
Near, in her elbow chair,
Teaching, with patient care,
Life's young beginner, on thy dial-plate,
To count the winged minutes, fleet and fair,
And mark each hour with deeds of love?
Lo! she hath broke her league with Time, and found
The bliss above.

Thrice welcome, ancient crone!
'Tis sweet to gaze on thee,
And hear thy busy heart beat on.
Come, tell old tales to me,
Old tales such as I love, of hoar antiquity.
Young lips their love have told
Into the thrilling ear,
Till midnight's watching hour waxed old,
Deeming themselves alone, while thou wert
near.
In thy sly corner hid, sublime,
With thy "tick! tick!" to warn how Time
Outliveth Love, boasting itself divine,
Yet fading like the leaf which its fond votaries twine.

Th' unutter'd hopes and fears,
The deep-drawn rapturous tears
Of young paternity,
Were chronicled by thee.
The nursing's first faint cry,
Which from a bright-hair'd girl of dance and
song,
The idol, incense-fed, of an adoring throng,
Did make a mother, with her quenchless eyes
Of love, and truth, and trust, and holiest
memories,
As Death's sharp ministry
Doth make an angel when the mortal dies.

Thy quick vibrations caught
The cradled infant's ear,
And while it mark'd thy face with curious fear,
Thou didst awake the new-born thought,
Peering through the humid eye,
Like star-beam in a misty sky;
Though the nurse, standing still more near,

Saw but the body's growing wealth,
And praised that fair machine of clay,
Working, in mystery and health,
Its wondrous way.

Thou uttered'st the death-knell,
Chiming in sadness with the funeral-bell,
When stranger-feet came, gathering slow,
To see the master of the mansion borne
To the last home—the narrow and the low,
From whence is no return.

How slow thy movements to the anxious breast,
The expecting maiden, or the waiting wife!—
"He comes to-morrow," but the day unblest,
Still like a wounded snake its length did draw;
Then wert thou watched and blamed, as if the
strife
Of wild emotion should have been thy law,
Though thou wert pledged, in amity sublime,
To crystal-breasted Truth, and sky-reporting Time.

Thou hast the signal given
For the gay bridal, when, with flower-crown'd
hair,
And glowing brow, the youthful pair
Stood near the priest, with reverent air,
Dreaming that earth means heaven.
And thou hast heralded, with joyance fair,
The green-wreathed Christmas, and that other
feast
With which the hard lot of colonial care
The pilgrim-sire besprinkled; saving well
The luscious pumpkin and the fatted beast,
And the rich apple, with its luscious swell,
Till the thanksgiving sermon duly o'er,
He greets his children at his humble door,
Bidding them welcome to his plenteous board,
While, gathering from their distant home,
To knit their gladden'd hearts in love, they come,
Each with his youngling brood, round the grey father's
board.

Thou hast outlived thy maker, ancient clock!
He in his cold grave sleeps, but thy slight
wheels
Still do his bidding, yet his frailty mock,
While o'er his name oblivion steals.
O, man! so prodigal of pride and praise,
Thy works survive thee,—dead machines per-
form
Their revolution, while thy sithe-shorn days
Yield thee a powerless prisoner to the worm;
Thou darest to sport with Time, while he
Consigns thee sternly to eternity—
Make peace—make peace with Him who rules above
the storm.

ANECDOTE OF NAPOLEON BONAPARTE.

BONAPARTE, appointed in the beginning of 1796 to the command of the army of Italy, after having gained the bloody battles of Lodi and Castiglione, heard that General Wormser had concentrated his forces near Roveredo. This well-built town in Tyrol, in the valley of the Adige, with about twelve thousand inhabitants, is, by its situation, of great military importance. Bonaparte, fully aware of this, resolved to surprise Wormser before he could unite all his forces; and taking but a part of his army under General Massena, he left his baggage and every thing which could impede his rapid march, and attacked suddenly the camp of the Austrians, at seven o'clock in the evening of the third of September, 1796. Not having succeeded in carrying the position, both armies slept on the battle-ground, and at daybreak the bloody work began again to rage, which was decided on the fourth of September, at about sunset. General Wormser was completely beaten, with the loss of about six thousand men and thirty-two canons, and retired in disorder toward the mountains.

The French army having made forced marches, and worn out with fatigue and hunger, could scarcely stand on their feet; Bonaparte perceiving this, and being himself very much fatigued, ordered that the army should remain for the night to rest on the gained battle-ground.

As their march had been rapid, and lasted five days, in order to surprise General Wormser, Bonaparte had left waggons and baggage behind, and ordered a distribution of rations for four days, which each soldier carried with him as well as he could. The soldier, like the sailor, cares not much for what might happen the next day; his principle is, "To-day alive and healthy, to-morrow wounded or shot; let us enjoy the present moment, be merry, and eat and drink as long as it will last." In consequence of this soldier-philosophy, there was in the whole French army a great scarcity of provisions. Bonaparte and his generals, without any retinue, were destitute of the usual means of subsistence; the soldiers soon lighted large bivouac fires, but searched in vain for food. It was exposing one to the pain of death to go in search of provisions, as the peasantry were armed against the marauders, and had already given striking proof of their military spirit. The soldiers found some water, but nothing to eat; but, satisfied with their victory, they laid quietly down on the grass, their knapsacks serving for pillows, and were soon fast asleep.

As there was in the neighbourhood neither city, town, farm, nor even a single hut, Bonaparte, attended by one servant, chose a retired spot under a tree, and tried to sleep, after having made his usual tour to inspect the outposts,

piquets, grand guards, &c., so as to render a surprise impossible. In vain did he search for sleep, he could not. For twenty-four hours he had not found any thing to eat; his servant brought him some dirty water, which he drank with great reluctance, but no food. The servant was like his master, exhausted, weak, hungry, and scarcely able to move; he laid down under another tree, and was soon fast asleep. Bonaparte called him at various times in vain; he heard him soon snoring heartily. Not wishing to disturb him, the general stood up and directed his steps towards the nearest camp fire. There he found one single soldier awake, very busily engaged in opening his knapsack, searching with great precaution and looking carefully around him, as if fearing to be observed. As soon as he saw the general approaching, he hastily shut up his knapsack, and stretched himself on the ground, putting carefully the sack under his head, and beginning to snore lustily, as if asleep. Bonaparte, who had observed this whole manœuvre, curious to know the reason of such strange behaviour, advanced and shook the grenadier rudely by the arm, whispering into his ear, "I command you, on pain of death, to rise immediately; I wish to speak with you."

The grenadier, on opening his eyes, saw, by the rays of a sparkling fire, the well-known features of his commander, sprang up, and said to him in a whisper, "My general, make no noise, do not speak so loud, awake not my comrades, if you do I lose all."

"What all?"

"Only a poor ration of bread which I have saved three days in my knapsack; and if the company, as hungry as myself, had known it, how could I have divided it among so many? I waited, therefore, until they were fast asleep, so that I might eat in peace these crusts of bread, though I am much fatigued, but could not sleep for hunger."

"And so am I, my brave; I was just coming amongst you in search of something to put under my tees."

"What! you hungry, my general? Here, here, take all, take my whole ration; I am sorry you had not spoken sooner."

And in saying this he kneeled on the grass, emptied his knapsack, and handed him the whole piece of bread. "Take it, my general, you are heartily welcome to it. I feel not the least hunger any more."

Bonaparte, highly pleased, took the soldier's short sword and cut the whole in two pieces. "Choose, grenadier, the largest piece," said the general, "and let us eat; we are both hungry. I accept your offer on condition that you take one

part, and I the other, for which I am much obliged to you."

They separated highly pleased with each other.

The great importance of the following events had entirely effaced the generous action of this grenadier from the mind of Bonaparte.

In 1805, being at the camp of Boulogne, after having passed the review of his fine guards, a sergeant of the second regiment of the Chasseurs on foot found an opportunity to remind the emperor of the above-mentioned circumstance.

"Is it you, then, who that evening had divided your supper with your general?"

"Yes, my emperor, it was me; I am only sorry that the *liquids* were wanting, for both of us were very dry!"

"It is true! I remember," said Napoleon, smiling. In saying this, he made a sign to Berthier, who approached. Napoleon said some words to him in a whisper, after which he advanced towards the sergeant, detaching from his button-hole the Cross of the Legion of Honour.

"Tell me, how long serve you now?"

"Eleven years, my emperor, nine wounds, eight campaigns, and—"

"It's well! it's well! Have we been together in Egypt?"

"My emperor, we were a short time together in Egypt, and the best proof is, that when you came to visit the quarter of those attacked with the pest, it was I to whom you first spoke. Do you remember?"

"Yes, yes, certainly; I do now recollect you perfectly well. Well, my brave, it is just now that I in my turn divide with you; I have two crosses, that of the Legion of Honour, and of the Iron Crown, thou hast none; here, take this," (and thus saying, he fixed his own cross, in our presence, at the button-hole of the sergeant's uniform.) "But this is not all; if sometime ago I have been the cause of thy bad supper at Roveredo, to-day I wish you should have a good dinner. Berthier will take care to let you drink my health, if perchance the *liquids* may not fail," added the emperor, smiling.

"Oh! certainly—my emperor!—they surely are not wanting here!" stammered the sergeant.—"The liquids!—Oh!—never may they be wanted—to drink the health of—my—emperor!"—He could scarcely speak, being so greatly moved and excited.

Some hours after an aid-de-camp of Major General Berthier came in search of him, to call him to dine with Berthier. In removing his napkin he found on his plate the brevet by which he was named Knight of the Legion of Honour.

TRUTH.

ARTICLE I.

THERE have been, perhaps, few subjects of mental inquiry which have involved the admirers of accurate metaphysical definition in more intricate labyrinths of discursive speculation than the simple inquiry—"What is truth?" From the olden days of the Jewish economy, when Pilate put this celebrated question, even down to our own, the same diversity of opinion on this subject has existed. We purpose in this and another paper to bring before our readers a few condensed remarks on this question, as well as on its bearings generally on the understanding, as a source of pleasurable perception.

"What is Truth?"—Truth has been defined to be an agreement of the mental perceptions with things seen and known; and when expressed in language, it gives to the hearer or the reader the conception which the words represent. However simple Truth as viewed in the abstract may be, and therefore difficult accurately to define, its origin may be traced, or rather the circumstances may be stated, under which a feeling of truth arises in the mind. The earliest recorded sensation of any thing is called consciousness, and however slight this may be, it has been argued, that it is more than suf-

ficient, as regards the first development of truth within the mind. It has been stated, that "truth is no real being, but it is a relation perceived between certain feelings and the facts which they indicate,"—so subtle, so exquisitely fine is this attribute to be considered—this moral sensation within us, emanating from the Father of all spirits. The judgment and the understanding assist us in forming our ideas of truth, and aid us (as in all other processes of mental reasoning) in deducing conclusions from previous relations. We are fully aware that the religion of Christ is true, and the reasons for our adapting our powers of belief to the revealed words and testimonies of the prophets and apostles are numerous and manifold. We believe that the inspiration which awoke the loftiest mental energies in the minds of the writers in the Old and New Testaments, bade them reveal facts and circumstances which were both obvious to their senses, and of which their memory gave them the most assured confidence and certainty. The predictions of the prophets were not the revealed testimonies of the past, but of the future; the power that was upon them was from above, and that which to the mass of mankind was a dark

and cloudy future, was to them as clear, bright, and shining as the radiance and glory of the noonday sun. The lapse of succeeding ages since the periods of the prophets has fully revealed the truth of their predictions, and thus we may assert that the volume of inspired revelation is the volume of Truth. But why we place the faith of our belief in that for which we have only the evidence of our mental and visual impressions—or why we confide in the recorded testimony of others, we cannot (speaking according to strict metaphysics) tell. When we thus arrive at this part of our argument, we are lost—we can penetrate no further—our pilgrim-guide here leaves us—the stream we have thus far wandered by is lost—the beautiful fountain is dried up, and the refreshing banks are buried in the interminable oasis of a wilderness. An able writer has summed up this portion of the inquiry by observing, that “truth is a mere relation of coincidence,” which the judgment or understanding can alone perceive, and the final decision which is to be arrived at is simply this, “that one thing is not another, or that truth is not falsehood.”

It may, however, be useful, and in many instances most appositely available, that some signification corresponding with the ideas generally received of truth, should be employed, and to minds of unequally balanced and corresponding sentiment, it may be convenient to describe truth as “the correspondence and agreement of our words or ideas, with the actual nature, existence, and state of things.” Such a definition of an abstract principle or sentiment may be very useful as serving aptly to illustrate the meaning of the term “truth,” amongst those whose penetrating glance and close grasp of the subtleties of human reasoning may enable them to attain to the reach of each other’s powers of mental perception, as well as to qualify them for the attainment of a clearer notion of the subject in question, which is, in itself, a pre-existent requisite for the proper understanding of all science, whether physical or moral. The above definition is, however, in itself of too complex a nature and construction for the beautiful and subtle simplicity of the term, as its abstract meaning involves. In its employment as an active exercise of the mental economy, we bring to our aid the relative assistance of those powers which are implied by the terms of judgment,

reason, and understanding; but to analyse and dissect the precise meaning of truth as a simple essence may be, perhaps, as difficult as to premise a pure and exact meaning to consciousness itself.

That same understanding, however, to which we have alluded, and which we consider as a concomitant to truth in its active state, informs us of its high power of immutability. Truth and falsehood, youth and age, summer and winter, cannot be co-existent at one and the same time, in simple and single relationship. These premises rest on the unshaken foundation of truth itself—truth indivisible and eternal. Knowledge and truth are here in undivided union; they mutually embrace and strengthen one another, and give a brighter aspect and a richer value to the principle we are now contemplating, and cannot fail to secure and retain for it the highest feelings of love and admiration. The principle, as thus developed, is calculated to arouse and enchain the hearts of thousands; its progress through the world would be like that of a conqueror; falsehood and ignorance would be bound to its chariot-wheels, and the multitudinous declamations of all ranks and ages of mankind, would increase and swell the pomp and magnificence of its triumph. Sensations and thoughts are the active and energetic portions of our minds. We cannot for one moment doubt of the nature and reality of the impressions which they convey to us. But beyond this we are forbidden to proceed—these impressions are not susceptible of analysis. We are not sure that the ideas which we receive through the operations of sight, sound, and smell, are correct. We believe them to be so, but can avail ourselves of no further account or information respecting them. We can only use our senses in proportion to the power in them which has been vouchsafed to us, and can only judge through their media of the external relationship of all things around us. But these arguments do not operate to the prejudice of that truth which makes an ideal impression on the mind through the exercise of the internal and external sensibilities. The only solution which can be placed between things which are, and things which might be, is to believe that the powers of judgment which are given to us are sufficient for the purposes which our Creator had in view in granting them to us. EPHON.

BRITAIN.

CHAPTER VII.

MUCH as we could rake up from the dunghill of history to the dishonour of the clergy in that age, they were the main lights of the world. The

monastery had a library, tempted the incipient scholar, sought out and rewarded the artist in glass, in music, in weaving, in dyeing, and in

architecture; it had a sanctity about it, which oaths could not give to the castle, nor spears to the court; and was often spared when some horde of savages swept over the lands in a night, like a waterspout, which left the morning to look upon an unexpected deluge and ruin. It was through the monastery that a road to Rome was always kept open, by which a savour was brought from the sepulchres of the pagans and the Christian prodigies, which successively vitalised the mind and sublimed the manners of the Anglo-Saxons. It was in the monastery that the fragments of the encyclopædia of antiquity were preserved from the horny hands of the Goths, and the puerile zeal of the Iconoclasts, that the orators and poets of Greece, the lawgivers and prophets of Judea, the sublimely severe spirits of Rome, enshrined in their own tombs of taste, stood patient, in tongues almost unknown, for a thousand years, till the *effete* taste of Europe had been reinvigorated from the young veins of a new age. Let the monks then be forgiven that they magnified themselves, that they got all clever men into the monastery, that they amassed by infamous means half the wealth of the kingdom, that none might speak against them with impunity, that they gave it out in the tenth century that the judgment was dawning, and profited by the dismay, *which charters yet prove*; that one of them made a Danish chieftain drunk, and cajoled him of his estate, that another preached against lawful love, that a third published indelicate sermons, and that another was ashamed of the tonsure, and played the fable of the tailless fox. Many of them were perfectly studious and domestic in their habits, and interfered not with the commotions of the time, as the extraordinary longevity, induced by temperate diet and pacific minds, will prove.

Father Clarenbald, at Crowland, *obit* about 973, *etate* 168.
 Father Swarling - - - - - 142.
 Father Turgar - - - - - 115.

The church then had for its support the following voluntary offerings:—

A tithe of young animals, at Pentecost;
 The plough-alsms, fifteen nights after Easter;
 Peter-pence, at Lammass;
 A church-scot, at Martinmas;
 A corn-tithe, at All Saints;

And a light-scot, and a soul-scot, and an alms fee at other times;

Besides the produce of the third of the English land which it then possessed, the immense presents often made to the clergy, the proceeds of their legal trade, teaching, and the gains of relics, consecrated oil and unction.

A list of sins which the notorious Dunstan, who from 961 to 969 expelled great numbers of the married, that is, of the secular clergy, appointed to be confessed:—

All sins committed by the body; the flesh;

the bones; the skin; the reins; the sinews; the gristle; the tongue; the lips; the palate; the teeth; the marrow, and the hair.

For which the following are some of the appointed penances:—

If a layman, his arms were to be removed;
 Long pilgrimages were to be performed;
 A fresh bed to be used every night;
 Never to cut the hair, nails, or beard;
 Never to bathe in warm water—a necessary

to a Saxon;

Never to eat flesh nor drink strong liquor;
 To build or endow churches and monasteries;
 To fast for several years. Happily for the penitent, however, he could fast by proxy, and commutations for the rest were not impossible.

About the same time, the church officers in an ordinary church were—

1. An ostiary, or door keeper.
2. The lector, who read God's word.
3. The exorcist, or dispossessioner of devils.
4. The acolyth, or taper holder at the mass, and reader of the Gospels.
5. The deacon, who baptized, and read the Scriptures.
6. Subdeacon, who kept the sacred vessels, relics, &c.
7. The mass-priest, who did the higher offices of the church.

And the following were some of the books necessary for such a priest—

- | | |
|----------------------|------------------------|
| 1. The Gospel book. | 7. The passional. |
| 2. The Epistle book. | 8. The kalendar. |
| 3. The psalter. | 9. The penitentiary. |
| 4. The mass book. | 10. The reading book. |
| 5. The hand book. | 11. The legend book. |
| 6. The song book. | 12. The martyr's book. |

Most of these books were on parchment, written; some in wretched Latin, and others in Saxon. The priests were obliged to sing the seventide songs, in the following order:—

1. The night song, at an early hour.
2. The prime song, at seven o'clock, A.M.
3. The undern song, at nine, A.M.
4. The mid-day song, at twelve, A.M.
5. The none song, at three, P.M.
6. The night song, at nine, P.M.

Among other miscellaneous notices of the time, it may be proper to mention that the priests were at ordination obliged to find twelve sureties that they would pay the fines; on Good Friday the people kissed the cross; on Easter day the priest consecrated bread enough for a year's mass; about the year 1000 the English churches did not receive transubstantiation; Sunday was kept from Saturday at noon till Monday. An arm of Austin, of Hippo, sold for 60 lb. of gold.

The Anglo-Saxon population consisted of about eight classes.

The lowest division of people were slaves, of whom there were three kinds.*

The villain, or those who lived in the country. The domestic slave, who was a household servant.

The mechanic slave, frigalin, or freed slave.

The ceorl, the lowest freeman or husbandman, called also fingalin.

The thanes, or nobles, of which there were four or five kinds, but substantively the same.

The cliones, or princes, of which the elder was called the Atheling.

The King.

The official persons and courts of the Anglo-Saxon monarchy, after the times of Alfred, may be seen in the next paragraph, which begins with the lowest court and its officers.

I. The borseholder, or tithing man, whose authority was over a decennary, or ten families, by whom a court was held, of which the tithing man was president; who, with the rest, by vote, (used in all the Saxon courts,) settled their contentions, received new, or dismissed, with a testimonial, old residents. From this decennary, the clergy, thanes, and slaves, who were all in separate fraternities, were excluded. The members were bondsmen for each other's good conduct.

II. The hundreder, or centenary, who governed ten tithings; he was mostly a thane; the office was gainful, because he had a third of the fines which were imposed; his duties were similar to those of the borseholder.

The hundred was governed by him, and had a monthly meeting, when the members, armed, were to be present; and from the examination of their weapons, it was called the weapon tak, or wapen tac, because all touched the hundredary's weapon with theirs, which was a renewal of their obedience. The bishop, and occasionally the arch-deacon presided; and matters, either civil or spiritual, were discussed. No person, however, was to lose his life, from the authority of these courts.

III. The town-grieve, or port-grieve, had simi-

* The Saxon slavery was worthy of its name. Mutual strife, wars, crimes, debts, poverty, games of chance, misfortune, and propagation, increased the number of slaves which the Saxons found here. They might be sold, whipped, given away, branded, killed by the owner for a trifle, and by any one else for a pound, and they were forbidden the use of arms, or the harp, and some of the games. But when Christianity began to elevate the general mind, to the eternal praise of the Anglo-Saxon bishops, they did perhaps all in their power to procure their emancipation. For it was then forbidden to sell a slave to a Jew, or to transport him beyond the sea; and at the death of a bishop, the protector of the slaves in his diocese, three of his own slaves, and the same number of each of the other bishops and abbots, were liberated. There is not a more refreshing page among the barbarities of the age than that which informs us with what zeal and eloquence Wulstan went monthly to preach to the inhabitants of Bristol, then the most notorious slave-market, to which their agents were collecting them by purchase from poor parents out of all parts of England.

lar authority in a town to the hundredary in the country.

The court, in the town, was called the burg, or folk-mote; it assembled monthly, and oftener if the mote bell rung, when the arms were examined, disputes settled, bargains made, and criminals were punished.

IV. The trithing man, who governed in a similar manner three or four hundreds, or laths. At his court appeals from the three inferior were judged, wills were read and acknowledged, and estates were sold.

V. The heterogen, duke, or earl, who presided at the shire motes, the third of whose fines he claimed. It was very powerful over all subjects. Several of these courts some of the ambitious thanes possessed, and hence at length the presidency became hereditary.

The heterogen, assisted in this office by the shire grieve, who was responsible for knowing the laws, was at first chosen by the king, afterwards by the shire gemote.

This court was held in full in the spring and autumn; but in an inferior mode monthly, when the bishop, the inferior officers of the other courts, the thanes, the clergy, the lawyers, and the landowners, attended. It was opened by a speech from the bishop on spiritual subjects, and by a lawyer on the laws; and contests, ecclesiastical, regal, and local, were then judged, and the business of the other courts was reviewed, and the laws read for the instruction of the people.

The disputes of these courts originated the lahymenræd boran, or the law explainers, who assisted the shire grieve, who at first had three, afterwards seven, and then twelve, in that employ, to which they were admitted by oaths, which were made on the relics.

The Witanegemote national parliament, or mickle mote, assembled at the three great festivals, and if necessary oftener, was summoned by the king, who appointed the place of meeting, which was in a plain, on the sands, in a church, or wherever was the court, then always migratory.

The members of this council were the great thanes, the cliones, the most important officers of the other courts, the influential clergy, and not unfrequently ladies; though it appears there were seldom, in all, present sixty, often not more than thirty, members. The work of the witanegemote, or assembly of the wise, was to choose the king, to pass laws, to levy taxes, to determine on wars or peace, to appoint the chief officers of the other courts, to regulate the mint, though they gave also to large towns, to kings, and to archbishops, power to issue coin. The qualification of membership was at first the possession of five hides of land, and in the time of the Confessor forty; either of which, if a ceorl, by chance, good conduct, industry, or talent, could obtain, (though the lowest freeman,) he was en-

titled to be of the witangemote, which might explain the fact, that many of its members were well-known, infamous robbers.

The infantry were the lowest class of freemen, the ceorls, who had a right to carry a spear until the endless accidents among such a testy people made it penal. The cavalry were of the higher classes, who had a shield, a spike, and often a club. Their saddles were without cruppers and stirrups. Numbers of carts followed the camp, and at night made its safeguard. The troops, as they went to battle in the wedge form, often sung, which sometimes decided the contest, as did single combat, or the harper's tune.

The king, though president of this court, was by no means absolute, for he had no power to revoke its decisions, or those of any other judge, though he might commute the punishment; nor could he grant hereditary titles of honour, or dispose of the crown lands. He named his successor, commanded the army, and, after the appointment became dangerous to the kingdom, chose the great ecclesiastics, and disposed of the confiscated and conquered lands. His revenues were the usufruct of the crown lands, his own personal inheritance, forfeitures, hereotage, the produce of vacant sees, presents, a third of the national punishments, which were pecuniary fines, and, from 991 to 1136, when it was abolished, the Danegeld, or a shilling on each of the two hundred and forty-three thousand six hundred hides of land in England, which made a sum equal to the present currency of 365,000*l.*; soon after its imposition it rose to 2*s.* a hide, and subsequently 7*s.*, which made it equal to 2,555,000*l.* of our money. The design of it was to repel the Danes.

The king had about him a number of powerful persons divided into thirds, of which each party served him four months, and constituted his constant council. To this court a president was afterwards appointed, called Justiciary, who occasionally took the name of half king, and answered to the present Lord Chancellor.

Dr. Henry states, in his valuable though imperfect history, that the officers of the Welsh court were at that time like those of the English king, who then had the following dignitaries under him.

1. A mayor of the palace; he was supreme among the attendants.

2. The priest of the household, who gave thanks at the table, and chanted the paternoster.

3. The steward, whose duty was to rule in the king's cellar and kitchen, to locate the guests, to set one dish at the head and another at the foot of the table, to taste all the king's liquors before drunk; he had a tax-free estate, and as much of every barrel of ale as he could reach with his middle finger, &c.

4. The hawk master, who was only allowed to drink thrice at table. When he was successful the king did him great honours, and held his stirrup.

5. The household judge, who was obliged to be learned, and not cut his beard. His office was to compose the strifes of the household, to decide the merits of the contesting poets, musicians, and other judges.

6. The hall sterc, or master of the horse, who with the five preceding had a seat at the royal table.

7. The chamberlain, who slept in the royal bed-room: he provided clean rushes and straw for the beds, and fuel for the fire, and preserve the king's rings, horns, cups, and other trinkets.

8. The bard, whose daily duties were to sing the Divine praise, the king's virtues, and a general theme: hence their popularity. In Wales it was his duty to head the incursions into England for plunder, and to sing a song called the "Old British Monarchy," which is supposed to have been commendatory of their ancestors and their own right to the soil.

9. The silence keeper, who called for silence when any uproarious tendencies appeared.

10. The huntmaster, who attended the court from Christmas to February; and it was his privilege in a court to swear by his horse or dogs!

11. The feet-warmer, whose duty it was to sit against the fire with his majesty's feet in his bosom to keep them warm during the time he dined.

12. The master-cook, who served up the last dish with his own hand,

13. The candle-holder, who held a taper near the dish from which the king eat. These officers had three suits of clothes at the great festivals, when the king found the woollen, and the queen the linen cloth.

14. Another great personage was the chief smith, who had right to a draught from every cup of drink which came into the hall when he was present.

PERPETUITY OF MORAL EVIL.

We shall here endeavour to show that it is the natural tendency of moral evil to extend and perpetuate its debasing influence; and that this

circumstance is fitted to suggest and perpetuate itself, is as much a matter of experience as it is the declaration of Scripture, nor can it, in fact,

be otherwise among apostate and depraved creatures; and it is equally undeniable, that, in consequence of this very tendency, the guilt of one individual may go to aggravate that of multitudes with whom he never had an opportunity of being brought into contact. To what extent such an individual may be directly chargeable with the iniquity which he has thus contributed to augment, or on what principle he will be reckoned with when all the consequences of his crimes are laid open, and the connexion between these and the offences of others is distinctly traced, are questions which we presume not to determine. The Judge of all the earth will do that which is right. But that such a connexion does exist, and that it is recognised, too, by Him who will render to every man according to his deeds, is most distinctly taught in the history before us; and when we represent this connexion as contributing to swell the amount of personal delinquency, we only state what the testimony of conscience will be found to confirm; for we do not hesitate to assert, that if the sinner is ever awakened to a sense of his guilt, one of the bitterest and most agonising of his reflections will be, that he has contributed to corrupt or to harden others, without the possibility of repairing the injury that he has done them.

But neither is the application of the subject to be confined to such as have, either by deliberate attempts or the influence of a vicious example, succeeded in corrupting others, and have thus given a new impulse, as it were, to the strength of prevailing iniquity. Upon the principle which is laid down in the text, and which we have now endeavoured to illustrate, it is evident that, from every unholy action that is performed, and every unsanctified expression that is uttered, there must be going forth a corrupting and debasing influence;—that, though the effects of this influence may not be immediately perceived, it may, nevertheless, have left impressions that will never again be effaced; and that if it has once taken effect, no human wisdom can estimate or foretell the consequences. And if this principle be admitted, then where is the man—let his past life have been as free of flagrant transgressions, and the sphere of his influence as limited as it may—who will venture to allege that he has never contributed to the moral and spiritual injury of his fellow-men, that none have ever imbibed from him an unholy sentiment, or that none have been encouraged, by his example, to persevere in the ways of sin? So long as he is a stranger to the power of the Gospel, there will be something in his character which, in spite of all the decencies of an external profession, will indicate a spirit of hostility to vital godliness; and though the symptoms of this hostility may seldom or never be perceived by those with whom he holds only a slight or occasional intercourse, yet they will manifest them-

selves in a thousand ways to his more intimate associates, and may be exercising an influence over them which, though unseen by others, and scarcely felt by themselves, will as effectually estrange them from divine things as if they were exposed to an apparently stronger and more dangerous temptation. The very tone and manner in which divine truth is spoken of, may weaken the impression of reverence that was once felt for its authority; one expression of levity, or a single profane allusion, may lessen the abhorrence that was entertained for the deformity of sin; and a conversation which to him might appear too trifling to be remembered, may have made a fearful inroad on the moral principles of others, and loosened the salutary restraints which conscience imposes on the sinful propensities of the heart. In all this, indeed, he may see nothing wherewith to upbraid himself; and while he is not chargeable with having deliberately attempted to draw others into the actual commission of gross and flagrant immoralities, he may flatter himself that he has never incurred the guilt of injuring the spiritual interests of any. Very different, however, is his character in the sight of God, and very different will it be in his own estimation, should he ever be awakened from his dream of self-security. He will then see that it is no light thing to have ministered to the delusion of a fellow-sinner, and contributed to strengthen him in his alienation from God;—that the life which he once thought so blameless has not only been unprofitable, but positively mischievous;—that every day which he spent in a state of estrangement from his Maker was productive of injury to others as well as to himself; and that the amount of this injury is such as he cannot estimate, and never will be able to repair.

These, I think, are reflections which can hardly fail to occur to the Christian, on looking back to that period of his life when he was living without God and without hope in the world; and though he may never have made any deliberate effort to corrupt or mislead a fellow-sinner, yet he will still have enough to remind him how unprofitable it was to himself, and how injurious it must have been to others. He knows that in all the intercourse which he then held with his fellow-men, he was as little inclined as he was qualified to attempt advancing their spiritual interests; and though it is but comparatively little of that intercourse that he can now remember, he cannot doubt that much of it was calculated to efface, rather than to strengthen, their impressions of divine things; and that the influence of many a sentiment and action which he has long ago forgotten, may yet be operating on the life and character of those with whom he associated. And while these reflections awaken feelings of the deepest humiliation and self-abasement, need I urge upon believers the powerful motive which

they suggest, to be active and diligent in labouring to counteract that principle of evil which is so fearfully prevalent, and which they themselves have been instrumental in strengthening? Were their own unaided efforts, indeed, the only agency that is to be looked for to give success to such an attempt, it would assuredly prove a very hopeless enterprise, as the very subject which we have been considering does abundantly testify; and they might be ready to resign themselves to the desponding reflection, that while every sinful action of their lives may have contributed to strengthen the opposition of others to the government of God, they will never be able to effect any thing in the way of disarming that opposition. They are not abandoned, however, to the feebleness of their own strength, nor left to dwell with unavailing complaints on their own helplessness; the Spirit of God has himself undertaken to counteract this malignant principle; their own deliverance from the dominion of a depraved heart is itself a proof that his agency is at work; and if sinners, in their unregenerate state, do mutually minister to one another's spiritual debasement, they are employed as instruments, also, in effecting one another's spi-

ritual regeneration. And can believers reflect on the unsearchable wisdom, and the marvellous condescension of such an order of things, without feeling and habitually acting under a sense of the obligations hereby laid on them to labour for the spiritual welfare of others? Though the infectious example of moral evil among creatures already depraved is more than sufficient to resist the efforts and counteract the influence even of the holiest of the children of God, yet the Spirit can impart to the latter a power and an energy before which that resistance will give way; the Christian is encouraged to believe that, through this divine influence, he may carry with him a purifying, as he once did a corrupting, influence among his brethren around him; opportunities are thus afforded him of redeeming the time that he misspent, and remedying, in some measure, the evils which he occasioned; and while the Scriptures tell him of the retribution that awaits those who have not only sinned, but also made others to sin, they tell him likewise that "they that be wise shall shine as the brightness of the firmament, and they that turn many to righteousness, as the stars for ever and ever."—*Gordon.*

THE BRECHE DE ROLAND.

(From Murray's "*Summer in the Pyrenees.*")

LET the reader imagine a wall of rock, from three to seven hundred feet high, raised between France and Spain, and actually separating them; let him then suppose that Roland, mounted on his war-horse, and anxious to pass the barrier, has cut, near the centre, with a stroke of his sword, a breach three hundred feet in width, and he will then have an idea of what the mountaineers have called the "*Breche de Roland.*"

Here the wind, compressed by the sides of the breach, acquires, at times, so tremendous a force, that its rage and roar may be heard at the distance of many miles. Our travellers passed through it at such a time.

The haze increased in thickness and the wind in force, as we ascended the side of the gorge; and by the time we arrived at the chamber of the murdered Spaniard the blast was fearful; the loosened stones were rolling down the precipices, and the wall above seemed shaking with its violence. We entered the cave, for a moment, to avoid the storm, while we considered of the best mode of passing through the Breche. This place I had quitted the preceding day, and exposed myself to the scorching sun, rather than look upon its blood-stained walls. Four-and-twenty hours after, wet and cold, I sought its shelter, and felt grateful for its existence.

There was now no time to think about the danger of the undertaking, or the chance of one or all of us being blown down the glacier, or over the precipice; it was too late to retreat, and advance we must, or remain where we were, and die of cold. Frenchmen, talkative as they are, can be silent on some occasions; and, upon this, our arrangements were made as quietly and silently as if we were about to commit an act in which we were afraid of being discovered.

Rondo's plan of walking arm in arm was now adopted, and we sallied towards the Breche. The plan was excellent: no single man could have stood the fury of the blast, and, linked together, we staggered like drunken men before it. The wall of the Breche once gained, we crept through the gateway, clinging to the projections of the rock, until, turning round its flank, we were in a moment completely sheltered from the wind. I had heard the wrathful wind whistling through the rigging of a vessel, and rushing through a forest; but through this funnel of the mountains it roared, and, wreaking its fury upon the narrow plain of snow between us and the commencement of the glacier, it carried whole layers of it before it, tossing and whirling them about ere they disappeared in the mist.

A SUBSTITUTE FOR WALKING THE HOSPITAL.

(From Sir A. Halliday's "West Indies.")

ALL knowledge which the natives possess of the virtues of plants has been handed down by tradition. They have no written language, yet they can cure ulcers, destroy the poison of venomous snakes, and allay the symptoms of various diseases, with perfect success. Their doctors are a distinguished and a greatly privileged class; they are called "Peijmen," pronounced *Pe-ai-men*; and before the young aspirant can obtain his degree, he has to undergo a rather severe apprenticeship. It is thus described by my excellent friend Dr. M'Turk, who was at pains to make himself master of the whole proceeding:—

"The person who is desirous of learning the art, or whatever it may be called, applies, either personally or through his father, to the elders of the family of the peijman who is to teach him. The peijman hears the applicant patiently, who relates to him his history, and that of his family, and where he resides. These statements proving satisfactory, the peijman takes his pupil, the first night, apart from every house or dwelling, and sings and bellows over him the whole night, occasionally puffing tobacco-smoke in his face. This ceremony being over—which commences at six o'clock in the evening, and continues till six o'clock in the morning, without intermission—he is put into the peij-house—a house built and used for no other purpose, closed in at top and sides, leaving only a small aperture for a door, which, when shut, renders the inside quite dark. Here the new initiated remains for a

week, seated night and day on a block of wood, no bed, hammock, or any article of furniture whatever allowed in the house. In this condition he is attended by the peijman every night, who performs the same ceremony as at the beginning; he also visits him daily, on which occasions he gives him to drink a quantity of tobacco-water, which vomits him until he is quite exhausted. The only food that is allowed him is about an ounce of cassava-bread, and about the same quantity of dried fish, and a little water, daily, which he can seldom use, from the disturbed state of his stomach. At the end of the week the peijman gives him, by way of a finale, a calabash full of paiwary—a drink made from toasted cassava-bread steeped in water, which forms a fermented, intoxicating liquor. This quantity (about a gallon) he has to drink at one draught, which is sure to vomit him. He is then taken out of the peij-house, looking more like a spectre than a human being. It takes some time before the new peijman can walk about, and until his strength is restored, or that he can take his departure for his home.

"The peij-houses are now very rare. About twenty years ago there was a large establishment of this sort on the Abanacary Creek, in the Essequibo River, where, at stated periods, the peijmen assembled to perform their exorcisms, and examine the younger peijmen. A father cannot teach a son, nor a son a father; at least, it is not the custom."

REVIEW.

Melanie and other Poems. By N. P. WILLIS. Edited by BARRY CORNWALL.

ARTICLE II.

THE first poem in Part Second, is the "Dying Alchemist." The title indicates the tone and character of the piece. The struggling aspirations of the visionary after an unattainable object, and his despair when the death damp steals over his brow, and the icy chill reaches his heart, are powerfully conceived, and powerfully, nay painfully, described. The whole scene is full of horror. The next poem is one of those celebrated Scripture-pieces, which are almost unique in our literature, "The Leper." The description of the Judean noble, in the pride of his beauty and the glory of his youth, is drawn with a most skilful hand; and then the coming on of the leprosy, and the contrast between the leper's present and his former state, are movingly described. We cannot forbear quoting the conclusion of the poem, which is conceived in Mr. Willis's best style.

"It was noon,
And Helon knelt beside a stagnant pool
In the lone wilderness, and bathed his brow,
Hot with the burning leprosy, and touched
The loathsome water to his fevered lips,
Praying that he might be so blest—to die!
Footsteps approached, and, with no strength to flee,
He drew the covering closer on his lip,
Crying, 'Unclean! unclean!' and in the folds
Of the coarse sackcloth shrouding up his face,
He fell upon the earth till they should pass.
Nearer the stranger came, and bending o'er
The leper's prostrate form, pronounced his name.
'Helon!'—the voice was like the master-tone
Of a rich instrument—most strangely sweet;
And the dull pulses of disease awoke,
And for a moment beat beneath the hot
And leprous scales with a restoring thrill.
'Helon! arise;' and he forgot his curse,
And rose and stood before him.

"Love and awe
Mingled in the regard of Helon's eye
As he beheld the stranger. He was not
In costly raiment clad, nor on his brow
The symbol of a princely lineage wore;
No followers at his back, nor in his hand
Buckler, or sword, or spear—yet in his mien

Command sat throned serene, and, if he smiled,
A kingly condescension graced his lips,
The lion would have crouched to, in his hair.
His garb was simple, and his sandals worn;
His stature modelled with a perfect grace;
His countenance, the impress of a God
Touched with the open innocence of a child;
His eye was blue and calm, as is the sky
In the sereneest noon; his hair unshorn
Fell to his shoulders; and his curling beard
The fulness of perfected manhood bore.
He looked on Helon earnestly awhile,
As if his heart was moved, and, stooping down,
He took a little water in his hand
And laid it on his brow, and said, 'Be clean!'
And, lo! the scales fell from him, and his blood
Coursed with delicious coolness through his veins,
And his dry palms grew moist, and on his brow
The dewy softness of an infant stole.
His leprosy was cleansed, and he fell down
Prostrate at Jesus' feet, and worshipped him."

"Parrhasius" is founded on a story told in Burton's "Anatomy of Melancholy," of an Athenian painter, who bought an aged captive, and subjected him to the most dreadful tortures, for the purpose of observing his expression and transferring it to the canvass. The subject is a shocking one; and, though we feel the poet's genius, in the fearful minuteness and horrible distinctness with which he goes through the scene, (a scene from which we start back with shuddering,) yet we must say we are sorry the poem was not left out of this edition.

The "Wife's Appeal" is a highly finished and delicate production. The scene is conceived in a style of brilliancy and beauty which bear the closest scrutiny. The description of the study, in which a wealthy and accomplished gentleman is pondering over "a volume of old time" is perfect. The approach of "the wife," who is met at the entrance by "a graceful bound," the little incidents of the interview, and her appeal to his latent ambition, are represented in a very delicate manner. The passage containing the husband's reply is in a high strain of poetry; and the conclusion is full of touching sentiment, heightened by an impressive moral. He has yielded to his wife's appeal, and gone out among the throng of men, and now for the issue.

"A year—
And in his room again he sat alone.
His frame had lost its fulness in that time;
His manly features had grown sharp and thin,
And from his lips the constant smile had faded.
Wild fires had burned the languor from his eye;
The lids looked fevered, and the brow was bent
With an habitual frown. He was much changed.
His chin was resting on his clenched hand,
And with his foot he beat upon the floor
Unconsciously the time of a sad tune.
Thoughts of the past preyed on him bitterly.
He had won power and held it. He had walked
Steadily upward in the eye of Fame,
And kept his truth unsullied—but his home
Had been invaded by envomed tongues;
His wife—his spotless wife—had been assailed
By slander, and his child had grown afraid
To come to him—his manner was so stern.
He could not speak beside his own hearth freely.
His friends were half estranged, and vulgar men
Presumed upon their services, and grew
Familiar with him. He 'd small time to sleep,
And none to pray; and, with his heart in fetters,
He bore deep insults silently, and bowed
Respectfully to men who knew he loathed them!
And when his heart was eloquent with truth,
And love of country and an honest zeal
Burned for expression, he could find no words
They would not misinterpret with their lies.
What were his many honours to him now?
The good half doubted, falsehood was so strong—
His home was hateful with its cautious fears—
His wife lay trembling on his very breast,
Frighted with calumny!—And this is FAME."

"The Scholar of Thebet Ben Khorat" contains a good deal of wild, impassioned poetry, touched with an Oriental hue, that appeals strongly to the imagination. But we must pass on to the "Healing of the

Daughter of Jairus." This is another of those "Scripture-pieces" of which we have spoken. The opening of this poem is exceedingly fine:

"Freshly the cool breath of the coming eve
Stole through the lattice, and the dying girl
Felt it upon her forehead. She had lain
Since the hot noontide in a breathless trance,
Her thin pale fingers clasped within the hand
Of the heart-broken ruler, and her breast,
Like the dead marble, white and motionless.
The shadow of a leaf lay on her lips,
And as it stirred with the awakening wind,
The dark lids lifted from her languid eyes,
And her slight fingers moved, and heavily
She turned upon her pillow. He was there—
The same loved, tireless watcher, and she looked
Into his face until her sight grew dim
With the fast-falling tears, and, with a sigh
Of tremulous weakness, murmuring his name,
She gently drew his hand upon her lips,
And kissed it as she wept. The old man sunk
Upon his knees, and in the drapery
Of the rich curtains buried up his face—
And when the twilight fell, the silken folds
Stirred with his prayer, but the slight hand he held
Had ceased its pressure, and he could not hear
In the dead, utter silence, that a breath
Came through her nostrils, and her temples gave
To his nice touch no pulse, and at her mouth
He held the lightest curl that on her neck
Lay with a mocking beauty, and his gaze
Ached with its deathly stillness."

And the passage following immediately upon this, containing a description of the scene, in which the Ruler found Jesus teaching, is finished with exquisite beauty. The conclusion of the poem is a perfect picture.

"Like a form
Of matchless sculpture in her sleep she lay—
The linen vesture folded on her breast,
And over it her white transparent hands,
The blood still rosy in her tapering nails.
A line of pearl ran through her parted lips,
And in her nostrils, spiritually thin,
The breathing curve was mockingly like life,
And round beneath the faintly tinted skin
Ran the light branches of the azure veins—
And on her cheek the jet lash overlay,
Matching the arches pencilled on her brow.
Her hair had been unbound, and falling loose
Upon her pillow, hid her small round ears
In curls of glossy blackness, and about
Her polished neck, scarce touching it, they hung
Like airy shadows floating as they slept.
'Twas heavenly beautiful. The Saviour raised
Her hand from off her bosom, and spread out
The snowy fingers in his palm, and said
'Maiden! Arise!'—and suddenly a flush
Shot o'er her forehead, and along her lips
And through her cheek the rallied colour ran,
And the still outline of her graceful form
Stirr'd in the linen vesture, and she clasped
The Saviour's hand, and fixing her dark eyes
Full on his beaming countenance—arose!"

The address "To a City Pigeon," is one of the sweetest poems in the volume. The train of thought running through it is delightfully refreshing. The metrical flow is rich, and fills the mind with a sense of surpassing melody. The poem "On a Picture of a Beautiful Boy," is in a very different, but an exceedingly beautiful strain. The following, "On the Picture of a Child tired of Play," we think absolutely faultless.

"Tired of play! Tired of play!
What hast thou done this livelong day?
The birds are silent, and so is the bee;
The sun is creeping up steeples and trees;
The doves have flown to the sheltering eaves,
And the nests are dark with the drooping leaves,
Twilight gathers, and day is done—
How hast thou spent it—restless one!"

"Playing? But what hast thou done beside
To tell thy mother at even tide?
What promise of morn is left unbroken?
What kind word to thy playmate spoken?
Whom hast thou plied, and whom forgiven?
How with thy faults has duty striven?
What hast thou learned by field and hill,
By greenwood path, and by singing-rill?"

"There will come an eve to a longer day,
That will find thee tired—but not with play!
And thou wilt lean, as thou leanest now,
With drooping limbs and an aching brow,
And wish the shadows would faster creep,
And long to go to thy quiet sleep.
Well were it then if thine aching brow
Were as free from sin and shame as now!
Well for thee, if thy lip could tell
A tale like this, of a day spent well.
If thine open hand hath relieved distress—
If thy pity hath sprung to wretchedness—
If thou hast forgiven the sore offence,
And humbled thy heart with penitence—
If Nature's voices have spoken to thee
With their holy meanings eloquently—
If every creature hath won thy love,
From the creeping worm to the brooding dove—
If never a sad, low-spoken word
Hath pled with thy human heart unheard—
Then, when the night steals on as now,
It will bring relief to thine aching brow,
And, with joy and peace at the thought of rest,
Thou wilt sink to sleep on thy mother's breast."

We pass over two or three little poems, breathing the finest spirit of grace and beauty, for the sake of extracting the beginning of one addressed to "The Belfry Pigeon." The thoughts and images are exquisitely natural, and the language cannot be surpassed.

"On the cross beam under the Old South bell
The nest of a pigeon is builded well.
In summer and winter that bird is there,
Out and in with the morning air.
I love to see him track the street,
With his wary eye and active feet;
And I often watch him as he springs,
Circling the steeple with easy wings,
Till cross the dial his shade has passed,
And the belfry edge is gained at last.
'Tis a bird I love, with its brooding note,
And the trembling throb in its mottled throat;
There's a human look in its swelling breast,
And the gentle curve of its lowly crest;
And I often stop with the fear I feel—
He runs so close to the rapid wheel.

"Whatever is rung on that noisy bell—
Chime of the hour, or funeral knell—
The dove in the belfry must hear it well.
When the tongue swings out to the midnight moon—
When the sexton cheerily rings for noon—
When the clock strikes clear at morning light—
When the child is waked with "nine at night"—
When the chimes play soft in the Sabbath air,
Filling the spirit with tones of prayer—
Whatever tale in the bell is heard,
He broods on his folded feet unstirred,
Or rising half in his rounded nest,
He takes the time to smooth his breast,
Then drops again with dimed eyes,
And sleeps as the last vibration dies."

The conclusion of the poem we do not like. It is prettily expressed, but the sentiment is not only unmanly in itself, but out of keeping with the preceding part, and with all the associations of the subject.

The "Blind Mother," the "Stolen Ring," and the lines addressed to the poet's mother from the *Apennines*, abound in fine images, and melodious expression; but we have no space for a particular criticism on each of them; and we pass now to the third and last division of the poems. This part contains a selection from Mr. Willis's early poems, and on some accounts is the most interesting portion of the volume.

"The Shunamite" is a beautiful poem, founded on the simple and affecting story in the second book of Kings. The whole scene, in its minutest and most touching circumstances, stand before us. We feel the heat of the "sultry day of summer time." We feel

"As if the air had fainted, and the pulse
Of nature had run down, and ceased to beat."

How finished is the following picture!

"Thy father is athirst—and from the depths
Of the cool well under the leaning tree
She drew refreshing water, and with thoughts

Of God's sweet goodness stirring in her heart,
She blessed her beautiful boy, and to his way
Committed him. And he went lightly on,
With his soft hands press'd closely to the cool
Stone vessel, and his little naked feet
Lifted with watchful care, and o'er the hills,
And through the light green hollows, where the lambs
Go for the tender grass, he kept his way,
Whiling its distance with his simple thoughts
Till, in the wilderness of sheaves, with brows
Throbbing with heat, he set his burthen down."

The following picture presents us with a touching picture of maternal distress over a dying child.

"They bore him to his mother, and he lay
Upon her knees till noon—and then he died!
She had watched every breath, and kept her hand
Soft on his forehead, and gazed in upon
The dreamy languor of his listless eye,
And she had laid back all his sunny curls,
And kissed his delicate lip, and lifted him
Into her bosom, till her heart grew strong—
His beauty was so unlike death! She leaned
Over him now, that she might catch the low
Sweet music of his breath, that she had learned
To love when he was slumbering at her side
In his unconscious infancy—

—"So still!

'Tis a soft sleep! How beautiful he lies,
With his fair forehead, and the rosy veins
Playing so freshly in his sunny cheek!
How could they say that he would die! O God!
I could not lose him! I have treasured all
His childhood in my heart, and even now,
As he has slept, my memory has been there,
Counting like treasures all his winning ways—
His unforgetten sweetness.—

—"Yet so still!—

How like this breathless slumber is to death!
I could believe that in that bosom now
There were no pulse—it beats so languidly!
I cannot see it stir; but his red lip!
Death would not be so very beautiful!
And that half smile—would death have left that there?
—And should I not have felt that he would die?
And have I not wept over him!—and prayed
Morning and night for him? and could he die?
—No—God will keep him! He will be my pride
Many long years to come, and this fair hair
Will darken like his father's, and his eye
Be of a deeper blue when he is grown;
And he will be so tall, and I shall look
With such a pride upon him! He to die!
And the fond mother lifted his soft curls,
And smiled, as if 'twere mockery to think
That such fair things could perish—

—"Suddenly

Her hand shrunk from him, and the colour fled
From her fixed lip, and her supporting knees
Were shook beneath her child. Her hand had touched
His forehead, as she dallied with his hair—
And it was cold—like clay! Slow, very slow,
Came the musing that her child was dead.
She sat a moment, and her eyes were closed
In a dumb prayer for strength, and then she took
His little hand and pressed it earnestly—
And put her lip to his—and looked again
Fearfully on him—and then, bending low,
She whispered in his ear, "My son! My son!"
And as the echo died, and not a sound
Broke on the stillness, and he lay there still
Motionless on her knee—the truth would come!
And with a sharp, quick cry, as if her heart
Were crushed, she lifted him and held him close
Into her bosom—with a mother's thought—
As if death had no power to touch him there!"

"Absalom" is another fine delineation of a Scripture theme. The introductory lines contain an exquisitely worded night-piece, ending with this noble thought:—

"How strikingly the course of nature tells,
By its light heed of human suffering,
That it was fashioned for a happier world."

The description of King David's mourning for his lost son, the princely rebel Absalom,—the sketch of Absalom, as he lay "straightened for the grave,"—and the lament of David over the dead body, are conceived and uttered in a tone of lofty poetry.

"Hagar in the Wilderness" is almost the finest

poem in the volume. It is wrought up to a higher point of elaboration, is full of higher passion, and flows with more earnestness and freedom than the others. It has, indeed, the germ of a tragedy. It delineates wounded affections, and blighted love, and deep despair. An injured woman, sent abroad to suffer and perhaps to die; with a son reduced to all the woes of orphanage, while his father yet lives; the sinking heart of a helpless and deserted one; these are the themes which fill this magnificent piece with a surpassing interest. The descriptive passages are finished with a more than usual skill; they are introduced with a more delicate perception of propriety; and the whole poem is wrought up with a finer sense of proportion, than any of the other pieces we have spoken of. The following passage, in energy of expression, and force of passion, reminds us of the *Medea* of Euripides.

"Should Hagar weep? May alighted woman turn,
And as a vine the oak hath shaken off,
Bend lightly to her leaning trust again?
O no! by all her loveliness—by all
That makes life poetry and beauty, no!
Make her a slave; steal from her rosy cheek
By needless jealousies; let the last star
Leave her a watcher by your couch of pain;
Wrong her by petulance, suspicion, all
That makes her cup a bitterness; yet give
One evidence of love, and earth has not
An emblem of devotedness like hers.
But, oh! estrange her once—it boots not how—
By wrong or silence, any thing that tells
A change has come upon your tenderness,—
And there is not a high thing out of heaven
Her pride o'ermastereth not."

"The Widow of Nain" is the last of the Scripture pieces. It is marked by the same characteristics as the others; fine description, delicate imagery, and minuteness of finish. We quote the following beautiful lines:

"'Twas now high noon.
The dull, low murmur of a funeral
Went through the city—the sad sound of feet
Unmixed with voices—and the sentinel
Shook off his slumber, and gazed earnestly
Up the wide street along whose paved way
The silent throng crept slowly. They came on,
Bearing a body heavily on its bier;
And by the crowd that in the burning sun
Walked with forgetful sadness, 'twas of one
Mourned with uncommon sorrow. The broad gate
Swung on its hinges, and the Roman bent
His spear-point downwards as the bearers passed
Bending beneath their burthen. There was one,
Only one mourner. Close behind the bier
Crumpling the pall up in her withered hands,
Followed an aged woman. Her short steps
Faltering with weakness, and a broken moan
Fell from her lips, thickened convulsively
As her heart bled afresh. The pitying crowd
Followed apart, but no one spake to her.
She had no kinsman. She had lived alone—
A widow with one son. He was her all—
The only tie she had in the world wide—
And he was dead. They could not comfort her."

The remainder of the volume is filled with shorter pieces, delicate trifles, which are all familiar to American readers of occasional poetry. "The Annoyer" is an exquisite little song, and universally popular in the musical circles. "André's Request to Washington" is remarkable for a terseness of expression, beyond any other in the collection.

We have thus gone over Mr. Willis's Poems in a cursory manner. The passages we have cited prove the truth, we trust, of the praises we have bestowed upon them. Upon a general view of these poems, we think we are justified in pronouncing Mr. Willis a poet of great and varied powers. In some attributes of the poetic character, we should hardly know where to look for his superior. His sensibility to beauty, whether of external nature, or of the human form, is ever alive. He enjoys richly and freely the breath of heaven, the sunshine, and the splendour of the star-crowned night: earth and sky are perpetual ministers

to his imagination. His language is almost always choice and descriptive. By the power of finely selected words, he brings every variety of landscape before us: and the myriad voices of nature seem to be uttered in his magical tones. Such is the richness, so captivating the sweetness of his verse, that many readers fail to discover the depth, variety, and power of his poetry. There is sometimes an over-daintiness of expression, that naturally enough makes a fastidious delicacy, rather than strength, to be regarded as his leading characteristic. But if we do not greatly err, the passages we have cited, bear incontestible evidence of the vigour and variety, as well as delicacy, of Mr. Willis's poetical genius. The dramatic sketch of "Lord Ivon and his Daughter," and the Scripture piece, "Hagar in the Wilderness," show his power of entering into, and nobly expressing, the higher passions of human nature. Still it must be acknowledged, that Mr. Willis has too strong an inclination for finely turned lines, and repeats too often a few favourite expressions. It must also be conceded, that fine phraseology sometimes, though rarely, tempts him away from the beaten path of distinct meaning. But this fault, Mr. Willis has in common with the most distinguished poets of England; in fact it belongs to the poetical character of the times. In other respects, his language is possessed of extraordinary beauty. In simplicity, force, and freshness, in descriptive power, and in the elegant blending of the Saxon and Latin elements of English, we know not where we should look for a style superior to it. In brilliancy of imagination, richness and variety of associations, and delicate transitions from the description of natural scenery, to human passions connected with it or breaking out in the midst of it, or to simple emotions growing out of the contemplation of it; in a nice feeling of just proportion, and a quick eye for small traits which individualise a scene or a person; and in an ever-varying richness of melody, the poetry of Mr. Willis may be compared to advantage with almost any writings of this age.—*North American Review*, No. 93.

THE STUDY OF INSECTS.—Is any thing that proceeds from the hands of the Great Creator too insignificant for man to investigate? A moment's reflection will apprise us that the most minute insect must necessarily be as fully perfected in its structure, in its wonderful apparatus of nerves, muscles, respiratory organs, and organs of the senses, and all their functions, and its system of circulation, (proved by recent discoveries,) as the largest, and, according to its rank in nature, the most gigantic animal, over which it possesses an infinite superiority of muscular strength; and when we find that there are insects scarcely discoverable without a lens, must we not exclaim, with wonder and admiration, at the stupendous power evinced in their construction, and should not this stimulate us to learn as much as we can concerning these miracles, that we may be better able to appreciate the marvellous power displayed in their creation, although we can scarcely hope to arrive at the perfect comprehension of their least attributes, the complexity of their organisation when even most simple, the multiplicity of their instincts, the quality of those instincts, and their very powerful agency in supporting the universal equilibrium of nature? Who then is bold enough to say, even to what his arrogance and assumption have dared to style a contemptible insect, "Thou art beneath my notice," when he feels that the pigmy might reply, "Thou, with all thy boasted superiority, dost not comprehend me!" Humility is the crown of humanity, and let us follow the words of Solomon, and learn wisdom from the ant.—*Foreign Quarterly Review*.

SELF EDUCATION.

CHAPTER I.

ONLY think of our temerity! To risk the credit of a new periodical on such a cast-off and charmless subject as education, in an age when every thing sober is very *justly* scouted, and when wisdom, to get an audience, must appear in the harlequin's dress, or resort to the style of the troubadours! *Self* education withal! Is that a blow at the craft? or a device of democracy? Is it not an heretic phrase? Has it no allusion to the destruction of the lords? Would it not bring on anarchy? or overstock the market with schoolmasters? Is it a discovery for educating a man in a week? or for reducing educational expenses from pounds to mites? Is the phrase found in our best writers? Being chary of our space readers, we say "to all and sundry" such inquirists, No. Read on, and let us not be interrupted further till you "read, mark, learn, and inwardly digest" what we, out of our sultan pleasure, and oracular fulness, deign to communicate to this fiction-loving generation.

Our hearts have long been divided between the passions of pity and contempt, when we have thought of the subject of education: contempt for the majority of the atom-souled beings who make merchandise of mind, and convert their ignorant conceits and magniloquent truisms into capital; and we feel pity for the misled, who are taught to believe that a few words in two or three languages, and a huddle of miscellaneous facts, called "history, geography," &c., with some smattering of the mechanical arts, of writing, and arithmetic, constitute education! Ill-starred word! What dolts and hypocrites have abused thee! In our judgment, education does not mean the acquirement of knowledge which seems to be its general acceptance, but the bringing of the intellectual, *sensible*, and moral faculties of man, into a state that will both qualify him for its acquirement as for its application and use. In other terms, education is not the knowledge in any degree of any subjects, but the proportionate and utmost development of all the capabilities of man. We have known men whose memories were wedged with facts, and whose faculties were almost as little educated or drawn forth as that of the savage; and others whose powers had, from a lack of books or leisure, received no ordinary self-training, but which appeared to great disadvantage for want of more extended acquaintance with facts. In the first instance it was as if a builder should bring an heterogeneous mixture of wood, bricks, stone, mortar, paint, paper, glass, iron, and brass, and pour them down in confusion on the site of his intended house: it was, in the second, as if a skilful workman should attempt to build a palace with a score of bricks

and one door: the abundance of materials does not insure the builder's skill, and his sagacity can never be their substitute: and so in the work of education. Nor is it less important to remember that education is not a mere equipment of the mind for this life, not a device to qualify man for hoarding so much gold, or successfully to manoeuvre for the most power, pleasure, or fame, while he is in his *terrene novitiate*, but a series of improvements, whose effect will, perhaps, never disappear from the character at any period of the duration in which we may have to measure our being by myriads instead of moons; and when the least advanced of the human spirits may bear as little resemblance with the most prescient among us as the eagle's egg does to the full grown bird.

A second error which bears on our subject, and prevents its success, is the general belief that our education is a performance which is *extra* personal, the work of another, and not chiefly our own labour, which we are bound to perform by obligations quite as solid, and more evident. This error is precious to the craft, and fatal to the deceived; and, as long as the opinion is prevalent that we must look to other persons for the best part of our education, instead of attempting it ourselves, the popular mind will carry the scholastic brand, which is like that in some of the Welsh horses.

A third mistake, fundamental to our education, is, that when it is not confined to the mere acquisition of knowledge from such sources as "Catechisms" and "School-books," (most of which are but new editions of "Tom Thumb" and "Cinderella,") but appears to approach to a "*cultivation* of the mind," that the training is disproportionate: the memory is trained by artificial systems, instead of being joined to the affections, its *essential* and natural partners; (for what we love and hate strongly we always remember.) As the judgment is flattered, forced, and separated from the imagination, or the whole of the thinking powers are disassociated from the moral, while the training of the senses, which are as the hands and feet of both, is overlooked altogether, though it is from them that we derive the *radices* of all our ideas. This is really as monstrous, if we could but embody its effects, as if by some disordered physical law the hands or the head should grow to maturity and leave the rest of the bodily frame in the proportions of childhood. Hence the common result: the mathematician and the metaphysician chiefly educate the reflective faculty, and the poet, the imaginative, the artist, the imitative powers; the fashionable, the manners, the scientific, the spirit

of inquiry ; and the student of nature, the senses ; while the moralist too often confines himself to the mere actions, and the large and many-hued class of underlings merely cultivate the powers of pleasing. Hence the frequent incongruities which we all meet: the acutest judgment with a mean memory ; the finest sensibilities on some points with a heart unfeeling as lead on others ; a moral sense, remarkable for its keenness, with but the resolutions of a child ; or the courage of a Cesar, with the thoughtlessness of an idiot ; or the foresight of a prophet, with the imprudence of a prodigal ; ingenuity without diligence ; an imagination which, like the golden eagle, with one stroke of its wing fetches a majestic compass about its cloudy nest, but feeding on the foul carrion of vice which pollutes the social atmosphere.

Look at the beautiful growth of the body : as the chest arches into the swell of manhood, the head rises with proportionate dignity, and the myriad and minor parts of the animal machine keep the same symmetries. This would be the method of the mental growth if there were no evil influences from "within and without" counteracting the laws of mind ; and that education alone is right which works in reference to the same law.

We will only refer to one more prefatory subject before we enter on our task. We consider man to be of a threefold nature : his body with its instincts and senses, which constitute him the first animal of creation ; his mind with its intellectual capabilities ; and his moral indisposition ; the union of which triple nature constituted him the miniature image of his Creator. While he continued perfect, his triple nature was an omnipotent mirror, showing him the Infinite Mind, which yet in every perfection surpassed him more than he did the ephemera to which the leaf is a universe, and the hour of their life an everlasting. Whatever interpretation we give of the *revealed accounts* of the depravation of man, we must agree in the fact, that all man's natures have been immense sufferers from hereditary, as well as personal causes, particularly his moral part, which, instead of being the ruler, has become a slave, while the instincts intended to be "the hewers of wood and drawers of water" for his higher faculties, are now generally supreme. Thus we conclude, that the human natures are unbalanced ; and, instead of, like "the sun, moon, and stars," working in silent, but magnificent harmony, we find them in everlasting opposition. This is the first fact of consequence in the *science* of solid education ; and a man who does not understand this will never have the first rudiment of self-knowledge, and never possess the primary qualification to educate ; for he will never aim sufficiently high ; will measure from a wrong mark, and his deepest calculations will be out ; or he will describe from a false centre, and his

circumference will be wrong. He will be in danger of cultivating what he ought to root up, and from his ignorance of moral husbandry, he may often pinch off the blossom-buds of greatest promise. Legitimate education will aim at the restoration of our disordered natures, as well as to develop the faculties and to store them with ideas ; and he will be the best adapted to the work who has the most comprehensive insight of the nature and extent of the damages which man has sustained. All efforts to educate, then, must aim at the re-adjustment of our natures.

We propose to arrange our sentiments on this subject under the following sections :—

I. The education of the intellectual faculties.

II. The education of the senses.

III. The education of the moral powers.

We have hinted at the difference between the acquisition of facts and the cultivation of faculties : the first is easy, and may be done by most imbecile spirits ; the second is a vaster work, demanding patience and continuous diligence, which should be only invigorated by difficulties ; and this, like all great works, is slow of accomplishment. There are not wanting abundant evidences that real education is materially checked by too premature and crowded a collection of ideas ; for the mental powers appear to be of the nature of some vegetables, which to thrive must be thinly planted ; or, like some bodies, which fare the best with scant feeding. Without some knowledge it were impossible to educate at all, because it is the instrument by which the mind works itself into form and vigour ; the compass by which it ascertains its position in the moral universe ; the rule by which it finds its stature ; the balance from which it ascertains its *specific and relative* gravity ; or the stethoscope through which it discriminates the pulsations of health from the smothered sounds of disease. Still few, and those as elementary and substantial facts as possible, should be at first acquired, until the mental powers have found out and learned their respective offices ; for it is of more importance to drill the mind to an accurate habit of thinking, to encourage and rectify that effort, called "imagination," that fugitive something called "taste," than to adorn it with all the beauties of Parnassus, to store with encyclopædian treasures, to bind the memory with the cramps of systems, or confound it with groups of languages. We never knew an exception to the physical law—that an overgorged stomach robs the limbs which it ought to feed ; nor to that of the mind, whose ethereal fire is damped when it is precociously crammed. Too much knowledge at *first* misleads, if it do not discourage ; it fills some with the inflations of prejudice and bombast ; in others it merely inspires wonder, which ends in servile imitations, while in most it issues in a habit of flippant and inaccurate generalisation. A few facts,

though "through and through," often compared, contrasted, or reversed, will *in time* produce more intellectual accuracy and vigour, and render the mind even more prolific, than the reading of a thousand volumes; for we have tried both methods in ourselves and others, and speak experimentally. Take a few specimens. It was from a profound acquaintance with a small number of plain facts in natural history, and with a few general laws of mathematical mechanics, that Newton excogitated that magnificent system of the universe which every subsequent discovery has appeared to corroborate, and which will probably last when the eternal pyramids of Egypt, that have presented their cold and silent front to the tempest for three thousand years, shall have disappeared. And was it not from a thorough digestion of half a dozen common questions in logic and mental philosophy that the plain but wondrous powers of Locke raised his work "On the Human Mind;" *which though certainly of far less consequence* (because less read) *than the meanest of the mawkish novel hordes*, has filled all the schools of Europe with his fame, to such a degree that titles and statues could not augment it? When Shakspeare first began to work off his mental shell, and to pour among his astonished auditors such unheard-of strains of original eloquence and comic satire, and passed at once from the state of stirrup-holder to that of an equal with the more erudite of the Greek tragedians, and the more polished comic writers of Rome, who had enjoyed the undisputed praises of the world for a dozen centuries, he was in most respects an ignorant man; but as a self-educationist he was far trained. Instead of learning nature from the pitiful copies of her beauty, and the grim accounts of her design,

which he found in the works of inferior poets, he "touched, tasted, and saw" every thing for himself, from the gossamer, of which he makes such pathetic use, to the tempest, which he describes in such soul-heaving images as have never been equalled. And instead of trusting for his knowledge of mankind to the mental philosophies of his day, we find him studying with tireless delight the human body, (the face especially,) as the commentary of the mind, and joining to it a keen inspection of all the passions and peculiarities of the heart, as they emerged in the different parts of life's play; and the result was, that he attained such a general acquaintance with all minds, and such special mastery of many, that his own generation attributed his pre-eminence to magic, and some of the critics of this have been more disposed to yield to him inspiration than to Paul or John. We might refer to many such instances; but our *present* limits leave us only room to remark, that if by any catastrophe Newton had had his natural indolence and his natural bias for reflection overcome by his schoolmaster, or if Locke had been "crammed" with the facts of all the systems of education that had ever prevailed, or if Shakspeare had been under the *modelling* of Busby or Lilly, great as they were, the world would most likely have never heard their names; and their works, which have been for the past century among the chief ingredients that have brought on the greater health and action of the national mind, would have been wanting. It is plain that all such men must be self-educated, and a spare feeding of the mind, with foreign ideas, at first ministers to its development, invention, and vigour.

THE LATE DUKE OF KENT.

As every circumstance relative to our youthful Sovereign must be interesting at the present period, when she has ascended the throne of these realms, the following sketch of the character of her illustrious father is given by Mr. Rae Wilson, in his "Travels in the Holy Land," in which the Duke of Kent had taken a marked interest.

The mind of his royal highness was cast in a peculiar mould. He was endowed with a vigorous, and sound practical understanding, to which a lofty and fearless independence of soul gave free scope, and whatever "his hand found to do," it was pursued with an indefatigable ardour and perseverance, in short, "with all his might," regardless of the taunts and frowns he encountered from many who were jealous of his superior talents and growing popularity. It cannot fail to be in the recollection of all who had

an opportunity of hearing him plead in behalf of the circulation of the mighty word of God, and the cause of the wretched, which were always the great objects of his deep solicitude, how much he was interested in them, when his glowing eloquence was rousing, commanding, and distinguished for sympathy, which made the strongest impression on all around. No man stood on higher ground than the duke, in the estimation of the thinking class of mankind, or exhibited a brighter example to persons of all ranks. In him there was nothing of duplicity, or worldly calculation; but an open, urbane frankness, and straight-forwardness characterised his deportment on all occasions.

To enter into particulars. The habits of his royal highness were most regular and systematical. He was the very reverse of a *bon vivant* or gour-

mand, a gambler, horse racer, or squanderer of time. Being highly distinguished for temperance, guarding in his most convivial moments against the slightest degree of excess, so did he reprobate such vices when he found them practised by others. Never was it known that he lent his countenance or company to profligates, or persons of immoral character, but, on the contrary, he courted the society of those who were useful in the world, and of "good report." Indeed I have the best access to know, that when he was forming an acquaintance with any man, the first question put to those who knew him personally was, if he was correct and sober in his deportment; and when he found him to be otherwise, he would withdraw his countenance from him.

Again, like his venerable parent, he rose at a very early hour, and was at his desk, laboriously occupied as a common clerk. For punctuality of correspondence no prince of the blood, nay, few men, in any situation of life, could approach him. His accuracy in this respect was universally acknowledged to be altogether unrivalled, nay, it was proverbial, and although the written despatches his royal highness received daily were often laid before him in heaps, an answer was immediately returned to each; for he had indeed the "pen of the ready writer." To mention merely one proof of his extraordinary activity, during the year previous to his most lamented death, he wrote five hundred and fifty letters on a multiplicity of topics, such as, for instance, his regiment, the benevolent institutions he patronised at home and abroad, and his own private affairs, which were copied into a book, and preserved with all the accuracy of a merchant.

It may in truth be said there never was a more sincere and firm friend; and it was one peculiarly marked trait in his character, which has been universally acknowledged—and would his example were followed by others—that he was never known to desert, under any circumstances, however adverse, those whom he had taken by the hand or befriended. Access to him was at all times easy, and he was the freest of all men from pride or conceit, not puffed up by "the pomp and pride of circumstance." There was no *hauteur* air of superiority, or "vain glory" assumed by him, but a kindness that won the hearts of all who approached him; for although he was a *prince*, yet he never did forget that he was a *man*, and that all were equal in the sight of the great Creator. He was strong in affection, never was the cause of the ruin of any one by a smile; his heart was warm, generous, and benevolent, keenly felt for the sufferings of his fellow-creatures, and had a "hand open as day for melting charity." The streams of the Duke of Kent's benevolence were poured forth into an infinite number of channels, for he had truly that

"charity which is kind and never faileth," and his ear was always open to those who were distressed "in mind, body, or estate." Would that I could only relate those sums he transmitted to me for the oppressed in those foreign lands through which I have travelled. In a word, he was the noble and tried friend of the lonely and mourning widow, miserable orphan, the brave British soldier, and his offspring. He never at any time could be ranked with those characters who "fashion their doctrines to the varying hour," but most steady to those political and liberal principles which on the fullest conviction he had embraced, and no power or interest on earth could shake or prevail on him to depart from them for one moment. Where, I would ask, is the benevolent institution in this great metropolis which he was solicited to patronise, that he did not support by all that eloquence and influence he could command. He was the mainspring, nay, the very life and soul of them, and those affecting and powerful addresses he delivered, when presiding at their meetings, never, at any time, failed to open wide the purse of all who heard him. In making these observations, let it not be understood that I speak the language of flattery, but of "truth and soberness," and I trust there are thousands who can vouch for the authenticity of this imperfect sketch of one of the first princes of the blood of Great Britain, whose noble example still speaketh from the tomb to persons, not only of his own exalted rank, but to others, to "go and do likewise."

To imitate, then, the virtues of the Duke of Kent will be the best proof of remembering them. Alas! his sun, instead of performing the usual course, set in its meridian; for in the mysterious visit of the Almighty, quickly was his royal highness snatched from us, in the midst of a most benevolent career in the vineyard of his great Master; but his name will be kept alive, and thousands unborn will lip his praise or those indefatigable exertions he had made in the great cause of universal education. Shade of the wise and good! receive this humble tribute so justly due to thee,—the testimony of one who knew, and so highly admired thy virtues, and by whom thy memory will be ever held most dear. Thine ashes will be moistened with the tears of our country, and thy exalted name be embalmed in the recollection of a grateful posterity, along with those of the other enlightened and distinguished benefactors of their species, amidst associations of the most endearing nature.

— "Perpetuus soror
Urquet! cui pudor et justitia soror
Incorrupta fides, nudaque veritas.
Quando ullum inveniet parem?
Multis ille bonis flebilis occidit."

THE BEGGAR AT THE BARRIER DE PASSEY.

(From the French.)

MANY years since, when I was a young man about twenty years of age, I used very frequently to spend the Sunday with my mother, who resided at Versailles, this being the only day of the week on which I could leave Paris. I generally walked as far as the Barrier, and thence I took a seat in one of the public carriages to my mother's house. When I happened to be too early for the diligence, I used to stop and converse with a beggar, whose name was Anthony, and who regularly took his station at the Barrier de Passey, where, in a loud voice, he solicited alms from every one who passed, with a degree of perseverance that was really astonishing. I generally gave him a trifle, without inquiring whether he deserved it or not, partly because I had got into the habit of doing so, and partly to get rid of his importunities. One day in summer, as I waited for the diligence, I found Anthony at his usual post, exerting his lungs, and bawling incessantly his accustomed form of petition—"For the love of heaven, bestow your alms on a poor man—Messieurs, Mesdames, the smallest trifle will be gratefully received."

While Anthony was in this manner pouring his exclamations into the ears of every one who came within the reach of his voice, a middle-aged man of respectable appearance joined me. He had a pleasant expression of countenance, was very well dressed, and it might be seen at a glance that he was a man in good circumstances. Here was a fit subject for the beggar, who quickly made his advances, proclaiming in a loud voice his poverty, and soliciting relief. "You need not be a beggar unless you please," replied the gentleman, "when you can have an income of ten thousand crowns."

"You are pleased to jest, sir," answered Anthony.

"By no means," said the gentleman, "I never was more serious in my life. Listen to me, my friend. You perceive that I am well dressed, and I tell you that I have every thing that a reasonable man need desire."

"Ah! sir, you are a fortunate man."

"Well, but, my friend, I would not have been so if I had sat and begged as you are doing."

"I have no other means of gaining my living."

"Are you lame?"

"No, sir."

"You are not blind, or deaf, and you certainly are not dumb, as every passer-by can testify. Listen: I shall tell you my history in a few words. Some fifteen or twenty years ago, I was a beggar like yourself; at length I began to see that it was very disgraceful to live on the bounty of others, and I resolved to abandon this

shameful way of life as soon as I possibly could. I quitted Paris—I went into the provinces—I begged for old rags. The people were very kind to me, and in a short time I returned to Paris with a tolerably large bundle of rags of every description. I carried them to a paper-maker, who bought them at a fair price. I went on collecting, until, to my great joy, my finances enabled me to purchase rags, so that I was no longer forced to beg for them. At length, by diligence and industry, I became rich enough to buy an ass with two panniers, and this saved me both time and labour. My business increased, the paper-makers found that I dealt honestly by them; I never palmed off bad rags for good ones; I prospered; and see the result—in place of being a poor, despised beggar, I have ten thousand crowns a-year, and two houses in one of the best streets in Paris. If, then, my friend, you can do no better, begin as a rag merchant, and here," he continued, "is a crown to set you up in your new trade; it is more than I had; and, in addition, please to take notice, that if I find you here another Sunday, I shall report you to the police." On saying this, the old gentleman walked off, leaving Anthony and myself in a state of great surprise. Indeed, the beggar had been so much interested in the history he heard, that he stood with open mouth and eyes in mute astonishment, nor had he even power to solicit alms from two well-dressed ladies who passed at that moment. I could not help being struck with the story, but I had no time to comment upon it, as the diligence had arrived, in which I seated myself, and pursued my way. From that period I lost sight of the beggar; whether the fear of the police, or the hopes of gaining ten thousand crowns a-year, had wrought the change, I was not aware; it is sufficient to say, that from that day forward he was never seen at the Barrier.

Many years after, it happened that business called me to Tours. In strolling through the city I stepped into a bookseller's shop to purchase a new work that had made some noise. I found there four young men, all busily employed, while a stout, good-looking man was giving them orders, as he walked up and down with an air of importance. I thought I had seen the face of the bookseller before, but where I could not for the moment tell, until he spoke, and then I discovered him to be my old friend Anthony. The recognition was mutual; he grasped my hand, and led me through the shop, into a well-furnished parlour; he lavished every kindness on me; and, finally, gave me his history from the time we parted at

the Barrier. With the crown of the stranger he began, as he had advised him, to collect rags; he made money; became the partner of a paper-manufacturer; married his daughter; in short, his hopes were fulfilled; his ambition gratified, and he could now count his income at ten thousand crowns. He prayed every day for blessings on his benefactor, who had been the

means of raising him from the degraded condition of a common beggar. Anthony is so convinced of the evil and sin of idleness, and of subsisting on the alms of others, that, while liberal and kind to those who are willing to work, no entreaties, no supplications, ever prevailed on him to bestow a single sous on those who would not help themselves.

MEDICAL THEORIES.

ARTICLE IV.

[We have in our former numbers presented our readers with three articles on this subject; but we plead our apology for adding another to the number, when we state that it is from the eloquent pen of Dr. Pritchard, of Bristol, the author of a most valuable work on the Physical History of Man.]

If we go back only half a century, or a little further, in the history of medicine, we shall find one decade of years, as it succeeded another, marked occasionally by some revolution in the state of opinion; one conjectural system of pathology superseding its forerunner, and after holding possession for a time of the schools of medicine, and exciting in its rise a surprising degree of proselyting zeal, and in its decline maintained with obstinate adherence, yielding at length to a new system, which was destined, in its turn, to go through the same round. But when we attempt to estimate the solid acquirements of knowledge resulting from the efforts with which each theory has been set forth, and afterwards defended, we shall find reason to doubt whether the exertions of its advocates have not been, in this point of view, altogether in vain. When the humoral pathology gained the ascendancy, it was held to be a successful attempt to substitute rational principles for the fanciful speculations which had before prevailed. The more intelligible methods of explaining phenomena, with reference to agencies for the most part mechanical, and similar to those which are recognised in operation under a variety of circumstances, seemed to place pathology upon a more secure ground than the vague and indistinct theories which had been current in preceding times. But the explanations which the humoral system afforded, were inadequate and conjectural; and the abandonment of this pathology made way for the prevalence of doctrines, the influence of which was still perceptible at the commencement of the present century. Some advantages ultimately resulted from this revolution of opinion, though it may be questioned whether the theories which originated in this country shortly before the period I have just mentioned, and which long continued not only to divide between them the physicians of Britain, but to produce even sharper contests in Italy

and Germany, were more truly philosophical than the speculations of Paracelsus and Van Helmont. They called in not less the aid of mysterious agencies. After generalising hastily a number of observations, and inferring thence a general fact, or law, so termed, of the animal economy, they gave to this general principle a significant name, and converted it into an agent, a designing and operative power. Such was the *vis Medicatrix Naturæ* of Dr. Cullen and his contemporaries. It had the same parentage with the *Spiritus Archæus* of earlier times, or we should rather say, that the "*deus ex machina*" of Van Helmont had only changed its name. But it had been reserved for Stahl and Cullen to advance one step further than the hypothetical theorists who had gone before them. The *Spiritus Archæus* had been the guardian of health, but the *vis Medicatrix* was capable of errors, and it governed occasionally so ill the affairs of the animal economy, that its mistakes came in to complete the explanations of morbid phenomena. An example of this kind is the celebrated theory of fever, so conspicuous among the doctrines of the Cullenian school, in which, after a part of the series of morbid actions had been explained by referring them to the sedative or depressing influence of an external cause, the *vis Medicatrix* was made to complete the result by imposing a spasm on the extreme vessels, and setting up that condition of the system which is termed fever, or *pyrexia*. It was a speculative attempt to assume the existence of a plastic principle organising and governing the structure and functions of the living body; but to proceed further, and to endow this assumed principle with that sort of limited intelligence which belongs to an individual agent, was to venture in too obvious a manner to personify a mere abstraction. Yet this absurdity prevented not the general acceptance, and the long prevalence of the theory, against which Dr. Brown exerted his ridicule, and in opposition to which he created a system equally fantastical. For what can be more fanciful than the scale of degrees, in inverted ratio, of excitability and stimulus, in which every disease was to find its place—apoplexy,

gout, and fever, being arranged like the marks of much rain, changeable, and fair weather, in a barometer? and what more chimerical than an entity, of which greater and lesser quantities were supposed to give existence to such various morbid states?

When we compare these speculations, which may be said to have divided between them, as votaries, the last generation of physicians, we may well ask, (if we can divest ourselves of partiality for the theories which almost belong to our own times, and in the belief of which some of us were educated,) whether they are all preferable to doctrines at least respectable by reason of antiquity, but long ago abandoned? and it is no matter of surprise to find one of the soundest philosophers of the present age declaring, in plain terms, that medicine, considered as a science, has scarcely made any progress since the days of Hippocrates.*

If we inquire by what steps a transition has been made into the way of thinking and reason-

ing on medical subjects, which characterises the present time, we shall find that one main part of this revolution has consisted in a partial abandonment of theoretical systems. It required a long training of the human mind, before it could be brought, in every department of science, to recognise the real boundaries of attainable knowledge. In no department are these boundaries more restricted than in medicine. Ultimate facts present themselves on every side: we neither know by what operation the most powerful morbid causes, such as miasmata, produce their effect upon the human body; nor how the most simple remedies act in restoring a healthy state. Every dose of jalap is given empirically, and is expected to purge, merely on the ground of analogy, and because other doses of jalap have been already known to purge. How, then, in relation to subjects of this nature, can a doctrine of causes and effects, or, in other words, a system of theoretical pathology, be erected on a secure foundation?

A HYMN FOR OLD ENGLAND.

ALL hail to thee, old England !—
The beautiful—the free,—
And thy ancestral glory,
Great empress of the sea !

Thy name hath been a beacon
When war's dark billows rolled,
And shook to their foundations
Proud monarchies of old.

The thunder of thy navies
Deep-sounding, ocean stirred,
And earth's remotest kingdoms
Thy trumpet-echoes heard.

Bowed down their gathered armies,
Like rushes in thy path,
As thou hurld'st upon the mighty
The terrors of thy wrath,

Oppression—demon-featured—
In every guilty land,
Beheld with scowling hatred
Thy gleaming red right hand ;

And fled from thy dread presence
Disordered and aghast,
As leaves before the tempest,
In fury sweeping past.

With thee the homeless exile
A generous shelter found ;
Thy pity sought the captive,
Thy hand his chains unbound:

The sanctity of ages
Is spread around thy throne,

By true affection guarded,
Not hireling arms alone.

From thy majestic altars
The steadfast martyrs came,
To die for their Redeemer,
In torture and in flame.

And still thy deathless pages,
With reverent joy display
Their names 'mid things too holy
And high to pass away.

Land of the kind and noble !
Land of the blazing hearth !
Home of the priceless virtues !
Unquenched be thy mirth !

Still may thy faith be steadfast,
Thy hope be set on high,
So shall thine arm be mighty,
Thy glory never die.

Blessings be on thy mountains,
Upon thy fruitful plains,
Thy towers and hamlet-dwellings,
And round thy time-worn fanes.

Plenty and peace be with thee,
Truth in thy gates abound,
Meek Charity and justice
Still guard their native ground.

So midst the wreck of nations,
Upon thine ocean-throne,
Thou shalt survive the tempest,
Triumphant and alone.

W. G.

* Dr. Thompson's History of the Royal Society.

STATISTICS OF ROYALTY.

[For the following paper we acknowledge ourselves indebted to the pages of the "British Annals of Medicine."]

THE KINGS OF ENGLAND.—AGE AT TIME OF ACCESSION, AGE AT DEATH, DURATION OF REIGN, AND FATAL DISEASES.

Kings.	Age at accession.	Duration of life.	Duration of reign.	Disease.
William the Conqueror. ...	42	63	21	Bruise of the belly—slow fever.
William Rufus.	27	40	13	An arrow pierced his heart.
Henry I.	21	57	36	Acute fever—died from eating lampreys.
Stephen.	31	50	19	Disease of the bowels.
Henry II.	22	57	35	Fever.
Richard, <i>Cœur de Lion</i>	31	42	11	Shot by an arrow, in a siege.
John.	32	49	17	Fever or Dysentery.
Henry III.	8	65	57	
Edward I.	34	69	35	Dysentery.
Edward II.	23	43	20	A red-hot iron thrust through a horn up the bowels.
Edward III.	14	65	51	
Richard II.	11	34	23	Starved to death.
Henry IV.	32	46	14	Fits, in which he was deprived of all sensation.
Henry V.	25	34	9	
Henry VI.	10	49	39	Murdered in the Tower.
Edward IV.	18	41	23	
Edward V.	13	13	0	Murdered in the Tower.
Richard III.	33	35	2	Killed in battle.
Henry VII.	31	52	21	Consuming sickness.
Henry VIII.	27	65	38	Consumption.
Edward VI.	10	16½	6½	Had small-pox and measles April 2, 1552; died July 6, 1553.
Mary.	38	43	5	Dropsy.
Elizabeth.	26	70	44	Heaviness, frowardness (affection of brain).
James I. (poisoned ?)	37	59	22	Tertian ague.
Charles I.	25	49	24	Beheaded.
Cromwell (poisoned ?)	52	59	7	Tertian ague.
Charles II. (poisoned ?)	30	55	25	A sudden fit, resembling apoplexy.
William III.	39	52	13	Fall from his horse—fracture of collar-bone.
Anne	38	50	12	Lethargic state.
George I.	55	68	13	Paralytic stroke.
George II.	40	73	33	Rupture of right ventricle of the heart.
George III.	22	82	60	Insanity—disordered bowels.
George IV.	57	68	11	Dropsy—disease of heart—diseased bladder.
William IV.	65	72	7	Inflammation of the heart.

29·97 52·5 22·5

This document possesses considerable interest. It shows the dangers that have surrounded the crown, and it points out, no less distinctly, the progress of civilisation, in the increased security of life enjoyed by those at the head of the government.

Of the thirty-four sovereigns, ten died a violent death, three died of accidents, two in battle, five were put to death.

Accidents.—William the Conqueror, William Rufus, William III.; but William the Conqueror was bruised by his horse starting on the ashes of a town he had laid in ruins; and we agree with Thiers, (*"Conquête d'Angleterre,"*) that the arrow that pierced the heart of William Rufus,

probably flew from a Saxon bow, and was directed by a Saxon eye.

Killed in Battle.—Richard Cœur de Lion was shot in a siege, Richard III. died at Bosworth-field.

Of the five put to death, Charles I. was beheaded; Edward II., Richard II., Henry VI. Edward V., were murdered in various ways. Four kings were put to death by kings, one by the people—if the self-constituted tribunal that condemned Charles I. can be conceived for a moment to have represented the nation. Charles I. was condemned after judicial forms, and beheaded; the four others were assassinated secretly and cruelly, by rival sovereigns. No

tions are more merciful than individuals, because the national will is the general result in which all individual decisions merge; and those cruel passions that agitate individuals never extend to the whole mass: humanity is merciful, just, good, and incapable of deliberate cruelty. If the question had ever been put to the people to poison or assassinate a sovereign, it would have been rejected with horror; yet this crime was committed four times by individual sovereigns in the period of these observations; and perhaps the death of Charles I. should be ascribed to men who, at the time, aspired to the crown. Suspicions of poisoning have been frequently entertained; the cases of James I., Cromwell, Charles II., not to mention others of recent date, are in point. Popular report has, perhaps, been wrong in many instances; still it is not improbable that this fatal, insidious instrument—then not easily detected—was sometimes employed. The improved state of medical science and of public feeling, as well as the greater publicity given to

the fatal diseases, are all guarantees of life for the sovereign.

Of the seventeen first sovereigns, seven died violent deaths; of the seventeen last, three only died violent deaths. The lives of the nobles partook of the insecurity of those of sovereigns in the early ages. The nobles were interested in the progress of civilisation, which prevented them from destroying each other.

Nothing appears, at first sight, more uncertain than the duration of kings' reigns; but, like all other organic phenomena yet examined, this is submitted to certain laws. The mean interval between generations was estimated by the ancients to be 33·3 years; they reckoned three generations to the century. This rule was applied to kings; Newton showed that it did not apply to reigns where eldest sons and brothers often succeeded.

The following observations are from Newton's "Chronology:"—

"According to the ordinary course of nature," says Newton, "Kings reign about 18–20 years.

	Years.	Each.
18 Kings of Judah (Solomon, &c.)	390	22
15 Kings of Israel (Solomon, &c.)	259	17½
18 Kings of Babylon (Nabonassar, &c.)	209	11½
10 Kings of Persia (Cyrus, Cambyzes, &c.)	208	21
16 Successors of Alexander, and of his brother and son in Syria, Seleucus, &c.	244	15½
11 Kings of Egypt (Ptolemy Lagi, &c.)	277	25
8 Macedonia (Cassander, &c.)	138	17½
30 Kings of England (William the Conqueror, &c.)	648	21½
24 First Kings of France (Pharamundus, &c.)	458	19
24 Next Kings of France (Ludovicus Babus, &c.)	451	18½
15 Next Kings of France (Philip Valesius, &c.)	315	21
64 All the 64 Kings of France	1224	19½

"189 Kings reigned 3597 years; the mean of all the reigns was 19 years."

The mean duration of the reigns of 34 English sovereigns was 22½ years; during nearly the same period (1060–1823), 31 kings reigned, on an average, 24 years in France; in Germany (1056–1792), 38 emperors reigned, a mean term, of 19 years; in Sweden (1066–1818), 41 kings reigned 752 years = 18 years each; in Russia, there were (1073–1825), 50 sovereigns in 750 years; each reigned on an average but 15 years.

The tenure of the sovereign's life increases as civilisation advances, as the following facts prove:—

	Number of Sovereigns.			
	Eng.	France.	Ger.	Popes.
500 years (800–1300)	29	25	29	96
500 years (1300–1800)	24	22	26	60

From Egbert the Great to Harold II., (800–1065,) 20 kings reigned in England; each reigned on an average 13 years, a shorter period, in this unsettled time, than the Czars of Russia, from Swatoslow II. to Alexander, the predecessor of the present emperor,

William the Conqueror to Edward V., 17 kings reigned 423 years; each 24·9 years.

Richard III. to William IV., 17 kings reigned 343 years; each 20·2 years.

The first 17 kings reigned 24·9 years on an average; the last only 20·2 years; but the mean age of the first 17 kings, at death, was only 48 years; of the 17 last kings the mean age, at death, was 57 years. This apparent contradiction is easily reconciled; the first 17 kings came to the throne at the mean age of 23 years, the 17 last at the age of 37.

The mean age of the 34 sovereigns at their accession was 30 years; and the mean expectation of life at that age is 34·3 years, according to the Carlisle table; they should, therefore, have died aged 64·3, but died actually at the age of 52·5; their life was, therefore 11·8 years shorter than it should have been, according to the rate prevalent among the middle classes of the present day.

	17 first Sovereigns.	17 last Sovereigns.
Age on Accession .	23·2 years.	36·8 years.
Expectation of life .	89·1	29·5
<hr/>		
Should have lived .	62·3	66·3
Actual age at death	48·1	56·9
<hr/>		
Below the standard.	14·2	9·4

The 17 last kings lived nearer the full term than the 17 first by 4·8 years. It may be maintained that Mr. Milne's table is too high, but if Mr. Milne's Swedish table, for males, be employed, the 34 sovereigns should have lived 61 years, while they lived but 52·5; according to the low Northampton table they should have lived 58·3 years. The reign in hereditary monarchies ought to correspond to the expectation of life at the time of accession; it should there-

fore vary with age. This is exemplified by the popes, who are raised to the head of the church at an advanced period of life; 156 successors of St. Peter filled the papal chair in 1023 years, (800-1828). Each continued pope, on an average, 6·56 years; if the charges of poisoning and destroying each other be against these venerable fathers of the church, their crimes have diminished latterly. A.D. 800-1073 each sat 4·71 years; A.D. 1073-1828 the period was prolonged nearly three years (2·94); it was 7·65.

The expectation of life of the dowager queen (age 45) is 24·46 years; if Parliament allows her 100,000*l.* a year, she may expect to receive 2,446,000*l.* from the people of this country.

The expectation of life of her present majesty, Queen Victoria, is 48 years.

THE LATE DR. TURNER,

PROFESSOR OF CHEMISTRY AT UNIVERSITY COLLEGE.

[For the following beautiful epitome of the character of this highly-gifted and excellent man, we are indebted to a well-written Memoir of him by his friend Dr. Christison, The "Address" which follows it was delivered over the grave of departed worth by one who was united to him in the bonds of Christian friendship—the Rev. Thomas Dale.]

Few words are needed to depict a character like Dr. Turner's, in which open sincerity of mind and simplicity of heart were the predominating qualities. He was the very soul of honour in every act and thought; without this quality, indeed, his reputation as a faithful and exact experimentalist never could have been established. Himself, undeviating in probity, and keenly alive to defects in the character and conduct of others, he was, nevertheless, gentle and indulgent to all. Of warm feelings, yet in constant possession of temper; energetic in action and thought, yet mild and winning in his deportment; unpretending, yet without reserve in his address and manner; he seldom failed to gain at once the esteem and confidence of those with whom he came in contact. During the many years we passed in one another's society, I have reason to believe that he never made an enemy, and never lost a friend. In his domestic relations he was a pattern of all that is good. The junior members of his father's family resided constantly with him, and received from him all a father's care and tenderness, as well as a brother's warmest love. Scarcely a scheme did he plan without their interests forming an essential element of it. In every recreation they were his never-failing companions. Throughout all the relations of life, with his pupils, his colleagues, his friends, and the world at large, he exhibited the same kindliness of feeling, the same disinterested conduct.

But in no respect was his character more

strongly marked than by his Christian principles and practice. At all times his mind was deeply imbued with the feeling of true religion; and—far from allowing the pursuit of science to withdraw him from religious contemplation, which has unhappily been the case with too many of its cultivators—his faith grew in purity with his knowledge. In his latter years, his favourite recreation was the study of the history and principles of the Christian church; and his great delight was to follow this study in company with the members of his family. Under such mental discipline, and the hallowing influence of long and increasing illness, his mind was purified of what remained of this earth's corruption. That his faith was as pure as the faith of man can be, we have the testimony of his intimate friend and former colleague, the vicar of St. Bride's, and the internal evidence of his own deportment on his death-bed. That death-bed was, in many respects, so solemn and instructive, as to have been taken by his reverend friend for the subject of a most eloquent and impressive funeral address to his congregation,* from which I need make no apology for borrowing the leading particulars of his closing scene.

During his final illness he had shown throughout the utmost resignation and cheerfulness. When at length told, for the first time, of his danger, he desired to receive the sacrament with his brother and sisters, in presence of the members of his household. Having communicated, he called his brother to his bedside, and bidding him feel his pulse, "Is it not," said he, "perfectly calm?"

* "The Philosopher Entering like a Child into the Kingdom of Heaven: a Sermon preached on the occasion of the Death of Edward Turner, M.D. By the Rev. Thomas Dale, Vicar of St. Bride's, London."

"It is," was the reply.

"Then what can make it so at such an hour? What but the power of religion? Who but the Spirit of God?"

After some time spent in occasional conversation of the same purport, symptoms at last came on whose indications he knew full well. Painfully struggling for utterance, he recovered his speech for a little, and spoke kindly and cheerfully to his relatives of his condition. "I could not have believed," he said, "that I could be happy on my death-bed. I am content my career should close."

The last effort of reason was to answer, soon afterwards, the question—put by an anxious relative—"Is not Christ as good as his word?"

"Yes," he faltered, "quite;" and with these words he became insensible, and expired.

ADDRESS AT THE GRAVE.

HE whom we have now deposited in his last resting-place was a man cast in no common mould, and by no ordinary train of mourners has he been followed to the tomb. On such an occasion, therefore, I may be permitted to address a few words to those who are here assembled to do honour to his memory; and I speak thus, not only with the sanction, but at the special request of the nearest friends and relatives of the departed. They are, indeed, well aware that our concern here is to admonish and impress the living, not to eulogise the dead; but they feel, also, that while he lived, the welfare of the students in his class was among the objects nearest to the heart of their beloved friend and brother; and they are anxious it should be understood, that not only as a votary of science, but as a disciple of Christ, he has bequeathed to those who lament him the invaluable legacy of an example "by which he being dead, yet speaketh."

You will not require from me any mention of his attainments in the science he professed and taught, which all know to have been various, extensive, and profound, and which will be more fitly commemorated in another place than this, and by abler lips than mine; nor yet need I recall his peculiar aptitude in communicating knowledge; or that simple but persuasive energy of manner, the power of which was felt by all, though it could be defined by none; or that affectionate interest in the pursuits and progress of the students by which, while informing their minds, he attracted their hearts, so that it might truly be said, not only that all who knew him loved him, but that those who knew him most loved him best. Still less would I dwell upon his excellences in domestic and kindred relations; *that* were to tear open a wound just inflicted which will be long ere it shall cease to

bleed. Rather let it be mine to speak of him in his best and highest character—that of a Christian; it is thus that his sorrowing friends most desire and delight to remember him, for hence alone can they derive the glad assurance that the loss to them—irreparable upon earth—is to him incalculable, inconceivable, unutterable gain.

It will not be expected that I should now trace our departed friend through the various stages of declining health, and detail the experience of his departing hours; such accounts will be more fitly reserved for that sacred edifice where he was wont, in past years, to receive from my lips the glad tidings of the Gospel of salvation, and where my hands have ministered to him the consecrated pledges of his Redeemer's love. Suffice it to state, that when "the flood came," it was found that he had "built upon a Rock," and that rock was Christ. The same principles of religion which had been the ornament of his life, were the support and solace of his death; and they who had thronged the spacious theatre to hear the philosopher discourse, might, with far greater profit, have gathered around the bed of death to behold in what peace a Christian could die. And of that peace, what was the ground? It may be best expressed in the fervent language of a distinguished statesman whose name is among the brightest that adorn the annals of our country,—"*I cast myself, without reserve, on the mercy of God in Christ.*"

And now that he is taken from the midst of us, and laid in the house appointed for all men living,—now that the eye which hath seen him shall see him no more, though long, very long will it be before the hearts which have known him shall forget,—in what words shall we bid farewell to the mortal relics of one so dearly loved, so prematurely lost? Unlike the enlightened yet dubious heathen, *we* can speak, not of a precarious contingency, but of a sure and certain hope; we know that there is an abode for pious souls, and that the immortal spirit is not extinguished with the perishable clay. You, then, who loved him living, and who have come hither to honour him in death, be not contented with the barren tribute of a few passing tears, which can be profitable neither to him nor to you; but lift up your eyes from the tomb which contains but his ashes, to the heaven in which, we trust, his purified spirit dwells, and be this the language of every heart's desire and prayer,—"Let me die the death of the righteous, and let my last end be like his."

And now, the last honours performed, depart in peace, ever bearing in mind, that the best remembrance of his virtues is the imitation of his example.

REVIEW.

Athens, its Rise and Fall. By EDWARD LYTON BULWER. Two Vols. Saunders and Otley.

THE attempt to bring before the attention of a modern reader a connecting chain of events whose birth and origin may be dated back several thousand years, may be well supposed to argue a richness in historical resource, and a freedom and boldness of composition, which, however well and aptly they may suit the mediocre capacity of that mind whose chief employment, either in labour or pastime, has hitherto been but to compile and arrange a series of romantic tales, will surely not apply with precision to the development of any period of the past history of the world. The Athenian people occupy no place in the map of the world's kingdoms; their lineage and dynasty are amongst the things that have been, and the results attending their resurrection in the present day would not appear to us to hold out any great chances of success. The early origin of every state of Greece, like Greece itself, was enveloped in obscurity; the researches of those great and able historians whose lives and labours have been spent in the historical service of Greece, have thrown the lights and rays of a partial truth over its earlier records; but we cannot give even this meed of praise to Mr. Bulwer, he has not even so much as moved away one single fold of that awful curtain which hides the past from our eyes.

It is, to use the words of another writer,—

"A natural consequence of the progressive civilisation of states, that their first beginnings soon come to be involved in obscurity. Before a people have arrived at such a pitch of importance as renders it interesting, even to themselves, to inquire into their earliest origin, and to commit their transactions to durable records, the circumstances of their infant state have been forgotten, or are preserved only in that uncertain and distorted tradition which becomes, like circles on the water, more variable and undefined the farther it recedes from the centre. The earliest historians of a state are its poets; and it is not often that the works even of these descend to posterity. Besides, the tissue of historical events forms but the woof of poetry, into which allegory and fable are so closely interwoven, that, after the lapse of ages, scarcely the keenest eye can discriminate between them. From this it follows, as a natural consequence, that even the first prose writers of history will crowd their pages with a mixture of facts and fables, of recorded truths and traditional falsehoods; so that the sphere of historical certainty is necessarily circumscribed. It has been the uniform complaint of historians, from Herodotus to Robertson, that the accounts which have been preserved of the earlier ages of different people are confused and contradictory. And when we find Thucydides acknowledging that even in his time it was impossible to do any thing more than form probable conjectures about the earlier transactions of the Grecian states,—when Herodotus, who wrote the first prose history of Greece, declares that the traditions of the Greeks were numerous and ridiculous,—how can we reasonably expect, at this time, to define with any degree of precision, those facts which were unknown more than two thousand years ago?

"It seems to have been the peculiar privilege of Greece, that the most remarkable periods in her history should be recorded by writers of great ability, who were contemporary with the events which they relate, and in which some of them bore a distinguished part. The celebrated expedition of Xerxes, the long and eventful war of the Peloponnese, and the subsequent contentions of rival states, to the battle of Mantinea, have been transmitted to us by a chain of history so luminous and connected, that we feel more familiar with those periods of remote antiquity, than with many of the occurrences of modern times. But of all these illustrious historians of the past, there is none who holds the foremost rank with stricter truth and justice than Herodotus. He is celebrated by Cicero as the first who embellished the dry details of the annalist with the graces and ornaments of language; and he has blended the information which he collected as a traveller, with the events which came before him as an historian. In his remarks on the geography and manners of the several countries through which he travelled, Herodotus has exhibited a minuteness and diligence of research which make his reader familiar with the scenes which are described, and seem to prove, beyond a doubt, that the writer had drawn his descriptions on the spot. But from the times in which he wrote, down to the present, Herodotus has been the mark for the foul envy, the malice, and the calumny of those who were

alike unwilling to bear record to the superiority of his language, or the truth of his remarks. But in spite of all the unjust cavilling and the ungenerous censure with which he has been assailed, the works of Herodotus have descended to the present time entire and un mutilated; the fame which they acquired at the festivals of Elis and Athens, above two thousand years ago, is now associated with feelings of veneration, and it is only justice to the memory of this great historian to allow that the more we have become acquainted, by the means of modern travellers, with the history and customs of the eastern nations, the less are we inclined to doubt whatever might at first excite our surprise or stagger our belief.

"The history of ancient Greece has been frequently written, but never, we think, in a manner worthy of the splendour and importance of the subject. Great industry and considerable talent have, indeed, been displayed; but no author with whose works we are acquainted has given such a comprehensive exposition of Grecian transactions, literature, philosophy, morals, and society, as fully to satisfy the curiosity of the speculative student.

"Political occurrences have been accurately detailed, contradictory dates reconciled, the exact position of places ascertained, motives of action explained, by several of the modern historians of Greece; but a picture of the mind and genius, of the reason and imagination of the most extraordinary people which the world ever saw, has never, we believe, been attempted. Rollin is a writer of merit, he possesses the art of agreeable narration, and his work is therefore well calculated for the perusal of youth; but he is, in general, a mere chronicler of events, and content to move with the current of undisputed facts; he rarely disturbs the calm surface of his narrative by plunging beneath and fathoming the depths of those thoughts and opinions which influenced the actions he describes. The authors of the "Universal History" deserve a large share of commendation for diligence, but no one will accuse them of much philosophy. Dr. Gillies gives us a little insight into the state of literature and art during some periods of the Grecian history, but though his information and erudition be respectable, his reflections seldom rise above the level of an ordinary capacity, and his style is more distinguished for its ambition than its power. In Mr. Mitford's works we meet with the evidences of acuteness and patient investigation; but in the accomplishments of an historian he is singularly deficient. In his writings we find no trace of that philosophical comprehension which can seize remote allusions or disjointed facts, and combine them into irresistible proof or powerful illustration; we regret the absence of that lofty eloquence which can describe, in language worthy of its theme, the triumphs of heroism and of genius; and we look in vain for the expression of that noble enthusiasm which kindles at the recollection of ancient glory, and communicates to the reader the warmth of sympathy and the aspiration to excellence. He confines himself entirely to a narration of the actions of men; he gives us a recital of what they did, but he never informs us how they thought; he describes the working of the animal machine, but he does not attempt to dissect its structure and lay open to our view the complicated organisation which sets it in motion; he brings to his task much acute and unwearied patience, in investigating the probable truth or falsehood of an event, but his history lacks that enlargement of inquiry, and that vividness of imagination, which can present the results of its researches in one luminous point of view, and collect the scattered rays of insulated facts, till they converge into an image of truth, for the delight and instruction of mankind.

"However much, in the earlier days of historical literature, it was deemed sufficient for its every purpose that it should consist merely of a narrative of actions, yet surely, in our present advanced state of labour and research, where, from the rich fields of wealth spread before us, we may gather up rich sheaves of information and instruction on numberless topics connected with the lives and ages of those who dwell in the dark era of the past; it is now high time to assert, for the province of the history, the high prerogative of being the interpreter of the thoughts, as well as the reciter of the deeds, of the eminent men who lived in the days of old. The spirit of philosophy is now pouring a flood of light upon this, as upon most other subjects of human investigation; it has already guided the researches of several able and excellent writers, and it is preparing the way for greater and more important improvements in this department of knowledge. The student is becoming wearied and tired with the trite and oft-repeated tale of wars and state-intrigues, and he now desires and expects to meet, in his historical researches, with personages more interesting and intellectual than mere commanders of armies and leaders of cabalists.

"History, conducted on the enlarged and enlightened principle to which we have alluded, will go far towards correcting those erroneous opinions and abuses which have been transmitted to us from age to age without examination; it will exalt our ideas of human nature by a picture of its beauties, instead of lowering them by an exposition of its deformities; it will give a place in its annals to those most worthy of commemoration, but who have hitherto been rarely introduced, or, if even ad-

mitted, have been dismissed with haste and impatience, in order to make way for personages of more splendour and pretension; it will carry us to the closet of the philosopher, and there exhibit him to our view engaged in speculations for the improvement of his fellow-creatures; it will discover the first conception of heroic and virtuous sentiment in the feelings and expressions of the poet, and trace it through the obscurity of ages, until its truth and efficacy are proved by the actions of the patriot. This is, no doubt, a task of some difficulty, but it becomes a necessary one if we would investigate the causes of things, and give the meed of commendation to those who deserve it. Why should we perpetuate misrepresentation in history, by attributing to the last agent that which is due to the prime mover? The firm resolve, the daring valour which win the battle, are engendered and nourished by the civil and literary institutions of a country, as much as by the mind of a commander. It is the eloquence of those who—from the fulness of their intellectual stores—pour forth exhortations to virtue, and reprehensions of vice, that really restrains the bulk of mankind from crime, and not the warrant of the magistrate. It is the intercourse of original and creative minds that prepares the public disposition for improvement, and guarantees the success of change, and not the formal decrees of the minister. Public men do little more than take off the impression and perpetuate the traces which have been marked by preceding and superior minds. In short, if, instead of wasting much laborious investigation in tracing political events to their causes, when, ninety-nine times out of a hundred, it is manifest that the events have depended upon causes beyond all human calculation and control, historians were to follow the first thoughts of reflecting and philosophic understandings through their varying processes and evolutions, and ascertain the degrees of influence which they exerted on different periods and societies till, matured by time, they expanded into the vigour of positive law and active benevolence, to coerce and ameliorate mankind; if they were to watch the first feeble efforts of imagination, slowly unfolding its faculties from its embryo state to its perfect development, and estimate the gradual change in public sentiment and feeling, and, consequently, in action, which such a transmutation would produce, their works would be infinitely more instructive, and the palm would be assigned to those who really deserved it. It would then appear that many of those who have hitherto neared the first places on the roll of history, are, in fact, not entitled to that pre-eminence; it would be shown that they have acted only a subordinate part in promoting the advancement of their species; and the great civilisers, the real benefactors of mankind, would be found amongst that class which the historian in general passes by unnoticed—that class which, in silence and solitude maturing the fruits of its speculations, prepares, by its writings, the community for the reception of those truths which confirm its improvement and advance its happiness."

This is the high ground which most modern critics agree that history should vindicate to herself. Mr. Bulwer, however, appears to consider a lower level as more easily attainable; and in this he has, therefore, indulged himself. We shall not, however, give our close attendance upon him through the whole course of his somewhat disjointed narrative, but extract such passages as, with all their faults, may place both the author and his work in the fairest light before our readers.

The earliest recorded inhabitants of ancient Greece were the Pelasgi, whose language contained the early elements of that which we now recognise as the Greek. They have been described as a vast race, divided into numerous tribes, varying in rank and civilisation. In one portion of the land they continued in their early state of savage barbarism, whilst in another, the inhabiting tribe would be found cultivating all the arts of civilised communities, exemplifying themselves, in the majestic language of Isaiah, as "dwellers in the wilderness, setting up the towers and the palaces thereof." Our author sums up his account of this nation by describing them as—

"A restless and various people, over-running the whole of Greece, found northward in Dacia, Illyria, and the country of the Getæ, colonising the coasts of Ionia, and long the master-race of the fairest lands of Italy. They have passed away amidst the revolutions of the elder earth, their ancestry and their descendants alike unknown; yet not indeed the last: founding their language and kindred with the blood of the later and more illustrious Hellenes, they still made the great bulk of the people in the various states, and through their most dazzling age. Enslaved in Laconia, but free in Athens, it was their posterity that fought the Medes at Marathon and Plataea,—whom Miltiades led, for whom Solon legislated, for whom Plato thought, whom Demosthenes harangued."

There are many evidences extant, both among the now majestic ruins of the eastern world, and in the

pages of historical writers, to prove that the first approach of civilisation among the Hellenes was from the inroads of the inhabitants of Egypt. Mr. Bulwer has given some very eloquent descriptive passages respecting the early origin and rise of the Grecian mythology, with its effects upon them as a social people: some of these we may, on a future occasion, transfer to our pages, they will afford the best examples of that style of composition in which he alone excels. We are at present considering his work as one of history, and can, therefore, only quote those passages which bear upon that point. The subjects of the heroic age when Greece first put on the helmet and awoke the world by the martial echoes of her renown, are slightly passed over; as are also the heroes of those times, Theseus and Minos; respecting the latter of whom it is ambiguously asserted, that "all accounts are uncertain." The constitution of ancient Sparta, and the life of Lycurgus, are but slightly dwelt upon; the narrative of the Spartan war is tamely told; the martial deeds of those heroes of a thousand fights find no responsive echo in the writer's bosom. But if, in the historical part of the narrative, we do not consider Mr. Bulwer as successful, we are happy to meet with some passages in the chapter on the state of letters in Greece, which abound with that beautiful prose-poetry which is so peculiarly his own. Of the lyrical poetry of Greece he thus writes:—

"The peculiar character of the Greek lyrical poetry can only be understood by remembering its inseparable connexion with music; and the general application of both, not only to religious, but political purposes. The Dorian states regarded the lyre and the song as powerful instruments upon the education, the manners, and the national character of their citizens. With them these acts were watched and regulated by the law, and the poet acquired something of the social rank, and aimed at much of the moral design of a statesman and a legislator; while, in the Ionian states, the wonderful stir and agitation, the changes and experiments in government, the rapid growth in luxury, commerce, and civilisation, afforded to a poetry, which was not, as with us, considered a detached, unsocial, and solitary art, but which was associated with every event of actual life—occasions of vast variety—themes of universal animation. The eloquence of poetry will always be more exciting in its appeals—the love for poetry always more diffused throughout a people in proportion as it is less written than recited. How few even at this day will read a poem!—what crowds will listen to a song! Recitation transfers the stage of effect from the closet to the multitude—the public becomes an audience, the poet an orator; and when we remember that the poetry thus created, embodying the most vivid, popular, animated subjects of interest, was united with all the pomp of festival and show—all the grandest, the most elaborate, and artful effects of music—we may understand why the true genius of lyrical composition has passed for ever away from the modern world."

The second book in the first volume opens with the conspiracy of Cylon, the democrat, who, by stratagem, and the voice of the Delphic Oracle, was enabled to overturn the oligarchic government of Athens—to conquer the Archons, who then possessed the supreme power and control. This brings us to the first appearance of Solon, "a man of distinguished birth, indirectly descended from the last of the Athenian kings." He was supposed to have incurred the consecrating misfortune of insanity, and appeared in the market-place wearing a cap—the peculiar badge that distinguished the sick. He addressed the assembled multitude in a poem, upon the loss of Salamis, reproving the people for their cowardice, and inviting them to war. Weak and degenerate as was the temper of an Athenian mob in those days, he was applauded to the very echo of the popular applause. A maritime expedition was immediately decreed and planned, and Solon was invested with the command. This was the first decisive step taken by him to obtain the supreme command over the state and the city. His life, and the adventurous narrative in which it is clothed, is well described, and the summary of his character affords a favourable specimen of the author's style of composition.

"Agreeably to the theory of his favourite maxim, which made moderation the essence of wisdom, he seems to have generally favoured in politics the middle party; and, in his own actions, to have been singular for that energy which is the equilibrium between energy and rashness. Elevated into supreme and unquestioned power—urged on all sides to pass from the office of the legislator to the dignity of the prince—his ambition never passed the line which his virtue detested to his genius. His natural genius was versatile and luxuriant. As an orator he was the first, according to Cicero, who originated the logical and brilliant rhetoric which afterwards distinguished the Athenians. As a poet, we have the assurance of Plato, that could he have devoted himself solely to the art, even Homer would not have excelled him. As a soldier he appears to have been a dexterous master of the tactics of that primitive day in which military science consisted chiefly in the stratagems of a ready wit and bold invention. As a negotiator, the success with which, out of elements so jarring and distracted, he created an harmonious system of society and law, is an unanswerable evidence, not more of the soundness of his theories, than of his practical knowledge of mankind. He was no gloomy ascetic, such as a false philosophy produces, affecting the barren sublimity of an indolent seclusion; open of access to all, free and frank of demeanour, he found wisdom as much in the market-place as in the cell. He spied no coxcombical contempt of pleasure, no fanatical disdain of wealth, hospitable, and even sumptuous, in his habits of life, he seemed desirous of proving that truly to be wise is honestly to enjoy. However he might feign or dissimulate, and end before him was invariably excellent and patriotic; and the purity of his private morals harmonised with that of his political ambition. What Socrates was to the philosophy of reflection, Solon was to the philosophy of action."

We have already spoken of the character of Herodotus, as considered by some eminent critical authorities; our readers will be enabled to judge wherein Mr. Bulwer differs from them, by the subjoined extract:—

"It was nearly a century after the invention of prose, and of historical composition, and with the guides and examples of many writers, not uncelebrated in their day, before his emulation, that Herodotus first made known to the Grecian public, and according to all probable evidence, at the Olympic games, a portion of that work which drew forth the tears of Thucydides, and furnished the imperishable model of picturesque and faithful narrative. This happened in a brilliant period of Athenian history; it was in the same year as the battle of Enophyta, when Athens gave laws and constitutions to Boeotia, and the recall of Cimon established for herself both liberty and order. The youth of Herodotus was passed while the glory of the Persian war yet lingered over Greece, and while the ascendancy of Athens commenced a new era of civilisation. His genius drew the vital breath from an atmosphere of poetry. The desire of wild adventure still existed, and the romantic expedition of the Athenians into Egypt had served to strengthen the connexion between the Greeks and that imposing and interesting land. The rise of the Greek drama with *Æschylus*, probably contributed to give effect, colour, and vigour to the style of Herodotus. And something, almost of the art of the contemporaneous *Sophocles*, may be traced in the easy skill of his narratives, and the magic, yet tranquil energy of his descriptions."

"Though Dorian by ancient descent, it was at Halicarnassus, in Caria, a city of Asia Minor, that Herodotus was born; nor does his style, nor do his views, indicate that he derived from the origin of his family any of the Dorian peculiarities. His parents were distinguished alike by birth and fortune. Early in life, those internal commotions, to which all the Grecian towns were subjected, and which crushed for a time the liberties of his native city, drove him from Halicarnassus; and, suffering from tyranny, he became inspired by that enthusiasm for freedom which burns throughout his immortal work. During his exile, he travelled through Greece, Thrace, and Macedonia,—through Scythia, Asia, and Egypt. Thus he collected the materials of his work, which is, in fact, a book of travels narrated historically. If we do not reject the story that he read a portion of his work at the Olympian games, when Thucydides, one of his listeners, was yet a boy, and if we suppose the latter to have been about fifteen, this anecdote is calculated to bear the date of the 81st Olympiad, B.C. 456, when Herodotus was twenty-eight."

"The chief residence of Herodotus was at Samos, until a revolution broke out at Halicarnassus. The people conspired against their tyrant Sygdamis. Herodotus repaired to his native city, took a prominent part in the conspiracy, and finally succeeded in restoring the popular government. He was not, however, long left to enjoy the liberties he had assisted to acquire for his fellow-citizens: some intrigue of the counter-party drove him a second time into exile. Repairing to Athens, he read the continuation of his history at the festival of the Panathena. It was received with the most rapturous applause; and we are told that the people solemnly conferred upon the man who had immortalised their achievements against the Medes, the gift of ten talents. The disposition of this remarkable man, like that of all travellers, inclined to enterprise and adventure,—his early wanderings, his later vicissitudes, seem to have confirmed a temperament originally restless and inquisitive. Accordingly, in his forty-first year, he joined the Athenian emigrants, that in the south of Italy established a colony at Thurium."

"At Thurium, Herodotus apparently passed the remainder of

his life, though whether his tomb was built there, or in Athens, is a matter of dispute. These particulars of his life, not uninteresting in themselves, tend greatly to illustrate the character of his writings. Their charm consists in the earnestness of a man who describes countries as an eye-witness, and events as one accustomed to participate in them. The life, the rascals, the vigour of an adventurer and wanderer, glow in every page. He has none of the refining disquisitions that are born of the closet. He paints history, rather than descends on it; he throws the colourings of a mind, unconsciously poetic, over all he describes. Now a soldier—now a priest—now a patriot—he is always a poet, if rarely a philosopher. He narrates like a witness, unlike Thucydides, who sums up like a judge. No writer ever made so beautiful an application of superstitions to truth. His very credulities have a philosophy of their own; and modern historians have acted unwisely in disdaining the occasional repetition even of his fables. For if his truths record the events, his fables paint the manners and the opinions of the time; and the last fill up the history of which events are only the skeleton."

"To account for his frequent use of dialogue, and his dramatic effect of narrative, we must remember the tribunal to which the work of Herodotus was subjected. Every author, unconsciously to himself, consults the tastes of those he addresses. No small coterie of scholars, no scrupulous and critical inquiries, made the ordeal Herodotus underwent. His chronicles were not dissertations to be coldly pondered over, and sceptically combed; they were read aloud at solemn festivals to listening thousands; they were to arrest the curiosity—to amuse the impatience—to stir the wonder of a lively and motley crowd. Thus the historian naturally imbibed the spirit of the tale-teller: and he was driven to embellish his history with the romantic legend—the awful superstition—the gossip anecdote—which yet characterise the stories of the popular and oral fictionist. In the basars of the Mussulman, or on the sea-sands of Sicily, still it has been lightly said, that a judicious reader is not easily led astray by Herodotus in important particulars. His descriptions of localities, of manners, and of customs, are singularly correct; and modern travellers can yet trace the vestiges of his fidelity. As the historian, therefore, was in some measure an orator, so his skill was to be manifest in the arts which keep alive the attention of an audience. Hence Herodotus continually aims at the picturesque; he gives us the very words of his actors, and narrates the secrets of impenetrable palaces, with as much simplicity and earnestness, as if he had been placed behind the arras."

Our limits will only allow of the following extract, from a very accurate and spirited translation of some of the "Tragedies of *Æschylus* and *Sophocles*." In the account of the "Agamemnon," there is the following lyrical passage of the answer of Clytemnestra to the Chorus, who demanded what message conveyed the intelligence of the capture of Troy.

"A gleam—a gleam—from Ida's height,
By the Fire-god sent, it came;
From watch to watch it leaped that light,
As a rider rode the flame!
It shot through the startled sky,
And the torch of that blazing glory
Old Lemnos caught on high,
On its holy promontory;
And sent it on, the jocund sign,
To Athos, Mount of Jove divine.
Wildly the while, it rose from the isle,
So that the might of the journeying sight
Skimmed over the back of the gleaming brine!
Farther and farther speeds it on,
Till the watch that keep *Mæstias* steep—
See it burst, like a blazing sun!
Doth *Mæstias* sleep
On his tower-clad steep?
No! rapid and red doth the wild-fire sweep:
It flashes afar, on the wayward stream
Of the wild Euripus, the rushing beam!
It rouses the light on *Messapion's* height,
And they feed its breath with its withered hearth.
But it may not stay!
And away—away—
It bounds in its freshening night."

Silent and soon,
Like a broadened moon,
It passes in sheen, *Asopos* green,
And bursts on Cithæron grey
The warder wakes to the signal rays,
And it swoops from the hills with a broader blaze,
On—the fiery *Glory* rode—
Thy lonely lake, *Goryŕpes*, glowed—
To *Megara's* mount it came;
They feed it again,
And it streams amain—
A giant beard of flame!
The headland cliffs that darkly down
O'er the *Saronic* waters frown,
Are passed with the swift one, lurid stride,
And the huge rock glaves on the glaring tide;

With mightier march and fiercer power
 It gained Arachne's neighbouring tower—
 Thence on our Argive roof its crest it won,
 Of Ida's fire the long descended Son!
 Bright Harbinger of glory and of joy!
 So first and last with equal honour crowned,
 In solemn feasts the race-torch circles round.
 And these, my heralds! this my sign of PEACE;
 Lo! while we breathe, the victor-lords of Greece,
 Stalk in stern tumult through the halls of Troy!"

In that beautiful tragedy of Sophocles, the "*Cedipus at Colonus*," we meet with the following lyrical passage, that Sophocles is said to have read to his judges, before whom he was accused of dotage. It is a beautiful description of "the white Colonus."

"Where ever and aye, through the greenest vale,
 Gush the wailing notes of the nightingale,
 From her home, where the dark-hued ivy weaves,
 With the grove of the god, a night of leaves;
 And the vines blossom out from the lonely glade,
 And the suns of the summer are dim in the shade,
 And the storms of the winter have never a breeze,
 That can shiver a leaf from the charmed trees,
 For there, O ever there,
 With that fair mountain throng,
 Who his sweet nurses were,
 Wild Bacchus holds his court, the conscious woods
 among!
 Daintily, ever there,
 Crown of the mighty goddesses of old,
 Clustering Narcissus with his glorious hues,
 Springs from his bath of heaven's delicious dews,
 And the gay crocus sheds his rays of gold.
 And wandering there for ever,
 The fountains are at play,
 And Cephaus feeds his river
 From their sweet urns, day by day.
 The river knows no death;
 Adown the vale the lapsing waters glide,
 And the pure rain of that pellucid tide
 Calls the ripe beauty from the heart of earth,
 While by the banks the Muses' choral train
 Are heard—there, and there, Love checks her golden
 rein."

It is much to be regretted that this work cannot be considered as a complete one in any respect; and, in committing the error of throwing the most powerful points of historic detail and narrative over the two eras which witnessed the rise and fall of the Athenian people

only, the author has omitted almost every point, excepting the bare mention of the events which followed the genesis of the one, and prophesied the exodus of the other. The terminating points of the chain may be of pure gold, though mixed withal with much alloy; the connecting links are of the baser and more impure metal of iron. When the first glorious gleam of historic erudition and narrative shone down upon the author's mental vision, he woke beneath the beautiful and steadfast influence of its light; but its early brightness soon wavered; the flame grew less intense, till it almost faded ere it sent up pyre-like its early brightness again, ere it died away into the shadowy darkness of oblivion. Our readers will be prepared for our assertion, that this very rise and fall in those peculiar points, in which all recorded historic excellence consists, renders the work a very unequal one in the impression which it conveys to the reader's mind as he peruses it. All historical narrative, we presume, must have its peculiar political bias; of this, however, it is not our purpose or our place here to speak; we leave that task to those of our contemporaries whose business it more appropriately is than ours.

Although in these volumes Mr. Bulwer has made some very apposite and beautiful remarks upon the literature, religion, and philosophy of the Athenian people, yet if we are to trust the preface we are to have two volumes more, especially devoted to the discussion of the Athenian literature and philosophy; a ground which we should suppose Mr. Bulwer would occupy with more deserved credit to himself. As an historic narrative, in the strict sense of that word, we consider this work to be a failure. It is one thing to graft an imaginative tale, like "*Rienzi*," on a chain of events, which in themselves embody much that is highly chivalrous and romantic, and another thing to give to a long link of historical record that high freshness and national characteristic which should ever be present in all history. If this work do not detract from what we suppose we must term the "fair fame" of Mr. Bulwer, we should be very scrupulous in asserting that it will add aught to it.

SERENADE.

"WAKE, love, wake!" for June's sweet morning
 blushes,

Aurora's tints are mantling to the view;
 The sun, with joy, the scenes of nature flushes;
 Oh! wake, while gently falls the early dew.

Hark! above the revel birds are singing,
 The skylark from his downy couch up-springs,
 Marlow, June 5th, 1837.

Flowers their balmy odours now are flinging,
 Woo'd by the pressure of a zephyr's wings.

"Wake, love, wake!" Oh! meet the breath of morn-
 ing,

Come pace along with me the meadows gay,
 The virgin buds of flowers, thy brows adorning,
 Shall waft an incense to the god of day.

T. S.

NOTES OF TRAVELLERS.

PALESTINE.—In the Harleian Miscellany there is the narrative of an English pilgrim who visited the Holy Land in the year 1660. The title of this singular work is, "*A True and Strange Discourse of the Travels of Two English Pilgrims, what admirable accidents befell them in their journey towards Jerusalem, &c., written by Henry Timberlake*." He gives the following pious reasons for the existing sterility he witnessed, in comparison with its ancient productiveness:—"My opinion is, that when it was fruitful, and a land that flowed with milk and honey, in those days God blessed it, and that as then they followed his commandments; but now being inhabited by infidels, who profane the

name of Christ, and live in all filthy and beastly manner, God curseth it, and so it is made barren; for it is so barren that I could get no bread when I came into it. One night, as I lodged short of Jerusalem, at a place called, in the Arabian tongue, Cuda Chenaleb, I sent out my Moor to a house not far from the place where we had pitched our tents, to get some bread, and he brought me word that there was no bread there to be had, and that the man of that house did never eat bread in all his life, but only dried dates, nor any of his household; whereby you may partly perceive the barrenness of the country at this day; only, as I suppose, by the curse of God that lyeth upon the same;

for that they use the sin of Sodom and Gomorrah very much in that country, whereby the poor Christians who inhabit therein are glad to marry their daughters at twelve years of age unto Christians. And to conclude there is not that sin in the world, but it is used there among those infidels that now inhabit therein, and yet it is called, Terra Sancta, and, in the Arabian tongue, Cutha, which is the Holy Land, bearing the name only, and no more, for all holiness is clean banished from thence by those thieves, filthy Turks and infidels, that inhabit the same. Having my certificate sealed by the guardian, and a letter delivered unto me, to show that I had washed myself in the river Jordan I departed from Jerusalem."

FIRE FLIES.—IN Jamaica, at some seasons of the year, the fire-flies are seen in the evening in great abundance. When they settle on the ground, the bull-frog greedily devours them, which seems to have given origin to a curious, though very cruel, method of destroying these animals:—if red-hot pieces of charcoal be thrown towards them in the dusk of the evening, they leap at them, and hastily swallow them mistaking them for fire-flies, and are burnt to death.—*Darwin.*

INHABITANTS OF THE FEROE ISLANDS.—They have one method of dividing time peculiar to themselves: they reckon the day and night by eight *skter* of three hours each; the *skters* again are reduced into halves, and are named according to the point of the compass where the sun is at the time; for example, east-north-east is half-past four in the morning; east is six; east-south-east, half-past seven.—*Lands's Description.*

LAPLAND.—In Lapland, during the summer, a bed of moss is as much prized as a heather-bed by the Highlanders of Scotland. The Laplanders also employ it as a substitute for bed-clothes in the cradles of their infants. In some places in England, where the *Polytrichum commune* grows luxuriantly, it is made into brooms. Mosses have also, to a trifling extent, been used in dyeing, and in former days great medical virtues were attributed to them.

SINGULAR EFFECTS OF COLD.—The following circumstance will serve to illustrate the absolute necessity of exercise during the exposure of the body to extreme cold. Dr. Solander, Sir Joseph Banks, and others, during their botanical excursions on the heights of Terra del Fuego, were exposed to extreme cold. Dr. Solander, who had more than once crossed the mountains which divide Sweden and Norway, well knew that extreme cold produces a torpor and sleepiness almost irresistible; he therefore conjured them to keep always in motion, whatever pain it might cost them, and whatever relief they might be promised by an inclination to sleep. "Whoever sits down will sleep," says he, "and whoever sleeps will wake no more." Thus, at once admonished and alarmed, they set forward; but while they were still upon the naked rock, and before they had got among the bushes, the cold was so intense as to produce the effects which had been most dreaded. Dr. Solander was the first who found the inclination—against which he had warned others—irresistible, and insisted upon being suffered to lie down. Mr. Banks (afterwards Sir Joseph Banks) entreated and remonstrated in vain; down he lay upon the ground, which was covered with snow; it was with difficulty that his friend could keep him from sleeping. One of his black servants began to linger, having suffered from the cold in the same manner as the doctor. Partly by persuasion, and partly by force, the party made them go forward. Soon, however, they declared

they would go no farther. Mr. Banks had recourse again to entreaty and expostulation, but these produced no effect, when the black was told, that if he did not go on he would shortly be frozen to death, he answered, "that he desired nothing so much as to lie down and die." The Doctor did not explicitly renounce his life; he said he would go on, but that he must first take some "sleep," though he had before told the company, "to sleep was to perish." They both shortly fell into a profound sleep: and after five minutes, Sir Joseph Banks happily succeeded in waking Dr. Solander, who had almost lost the use of his limbs, and the muscles were so shrunk, that his shoes fell from his feet; but every attempt to relieve the unfortunate black proved unsuccessful.

AN ELECTRIC EEL.—The governor at New Amsterdam has a large electric eel, which he has kept for several years in a tub made for that purpose, placed under a small shed near to the house. This fish possesses strong electrical powers, and often causes scenes of diversion among the soldiers and sailors, who are struck with astonishment at its qualities, and believe it to be in league with some evil spirit. Two sailors, wholly unacquainted with the properties of the animal, were one day told to fetch an eel which was lying in a tub in the yard, and give it to the cook to dress for dinner. It is a strong fish, of seven or eight pounds weight, and gives a severe shock on being touched, particularly if at all irritated or enraged. The sailors had no sooner reached the shed than one of them plunged his hand to the bottom of the tub to seize the eel, when he received a blow which benumbed his whole arm. Without knowing what it was, he started from the tub, shaking his fingers, and holding his elbow with his other hand, crying out, "I say, Jack, what a thump he fetched me with his tail!" His messmate, laughing at "such a foolish notion," next put down his hand to reach out the eel, but receiving a similar shock, he snapped his fingers likewise, and ran off, crying out, "Why, he did give you a thump! He's a fighting fellow; he has fetched me a broadside too. Let's both have a haul at him together, Jack, then we shall board his slippery carcass, spite of his rudder." Accordingly they both plunged their hands into the tub, and seized the fish by a full grasp round the body. This was rougher treatment than he commonly experienced; and he returned it with a most violent shock, which soon caused them to quit their hold. For a moment they stood aghast, then rubbing their arms, holding their elbows, and shaking their fingers, they capered about with pain and amazement, swearing that their arms were broken, and that it was the evil spirit in the tub, in the shape of an eel. They now perceived that it was not a simple blow of the tail which they had felt before; nor could they be prevailed upon to try again to take out the fish, but stole away, rubbing their elbows, and abusing "the trick about the cook and the eel."

The form of this fish is not so round as that of the common eel; the head is flatter, as is likewise the tail, and much broader; the sides are less convex and deeper; the back is wide, and the body tapers down somewhat abruptly, terminating at the belly in a thin membrane, forming a kind of fin. The shock communicated is sometimes very powerful, and precisely resembles that from the electrical machine, and may be received both from contact and by means of conductors. This fish once gave me a severe blow from touching it in the water with the end of a polished ramrod.—*Pinckard's Notes on the West Indies.*

SELF EDUCATION.

CHAPTER II.

WHAT method, then, do you recommend? We will explain ourselves. Of systems of mental philosophy we are utterly cured: we disbelieve them all, and yet think that most of them contain something good, and have, like all other evils, done some good to the world; for the demonstration of folly is as necessary to our wisdom and happiness, as the proof of truth. We consider that the unity of the mind has been overlooked, and that it has led to a barbarous nomenclature, which, however philosophical, is as likely to mislead as if we should apply fifty different names to any simple thing which we would teach our child. The customary effects of these philosophies would lead to the impression that the mind is a kind of house of manifold compartments, of which one is devoted to judgment, another to fancy, a third to will, a fourth to consciousness, a fifth to attention, a sixth to memory, and so forth;—an improvement on the Saxon *Nifleim*: or the mind is often described as if it were a machine, of which one part is to roll, another to strike, a third to shape, &c.: all this must mislead except very cautiously employed, and we shall endeavour to avoid the error which we condemn.

THE THINKING POWER.

The mind thinks, whether by an effort in which a part only or all its powers (if there be any division) is engaged, we do not know. The power of thinking, like all other powers, depends for its growth on proper exercise, and the want of that exercise will either limit the development of the power, or bring it into a state of uselessness. We recommend, then, some well-written treatise, (not on mathematics, however, at first,) as "Campbell's Treatise on Miracles;" "Moses Lowman's Demonstration;" "Para's work on Testimony;" "Chillingworth's Religion of Protestants;" "Justin Martyr's Apology;" "Erskine on Internal Evidence;" "Butler's Analogy;" "Foster's Essays;" "Beattie on Truth;" "Burke on the French Revolution," with "Paine's Answer;" "Claude on the Reformation;"* "Sir T. Browne's Urn Burial;" "the works of Ganganelli;" "Bishop Horsley's Sermons," &c. &c. We have mentioned these works, because they are specimens of different styles on different subjects, but the piece, to be attractive, must depend on the taste of the reader. Let every word and sentence be thoroughly understood, the connexion of them perceived, the dependence examined, the proofs compared with the objections, the conclusions weighed, and the premises reviewed. The piece selected should not exceed four moderate pages, (more or less, however, according to the reader's

convenience,) and not be studied above two hours at once. Let the careful reading of this be repeated six times; this will serve both for an effort of *thought, memory, and attention*: and if when committed to memory, *after* it is thoroughly understood, the student write down in *clear and brief, but different* language, every idea contained in the piece, it may also serve for a most beneficial exercise in composition. Then let its grammar be examined word by word, every declination parsed, and the rule to every example be perfectly understood. Let another piece be then selected and dealt with in a similar manner, and the result would confer, if this habit were rigidly and conscientiously pursued for 18 or 20 months, a greater benefit for life on the student, than a bursarship in Scotland, or a scholarship in Cambridge, for ten times that period, spent in the usual method of students and learners.

THE IMAGINATION

Is as much a primary element of mind as the preceding, and it varies as much in the degrees of its original gift and subsequent improvement.*

For the original peculiarities of mind we can seldom account, but we have the happiness of being able to modify them by a judicious use of stimulating or opiatizing discipline. Is our reader of fancy too active? We advise him to write down all his thoughts that *he* thinks the best, and then compare them with such of the best passages in Shakspeare, Milton, Burns, Spenser, or Cowper, as bear on the same subject; and make them undergo review, as we recommended in the previous paragraph. This often repeated, we are sure will cure the riot of rebellious images; but it *may* chill their beautiful parent, the fancy: this we deprecate, and we warn our young readers against such a self-maiming of the mind, under pretence of making it intellectual. Does our reader complain of uninventive and general torpor of this power of the mind? We then advise two courses: first, to *force* his mind into a study of the beauties of natural history. Strange remedy! Marvellous disease! To *force mind* to take an interest in this world of panoramic life, every individual being of which might instruct an angel, and has a special lesson* for man, which he scorns to learn, preferring mathematics to landscape, and logarithms to the birds of paradise! If this be impracticable, which, however, we do not the less recommend because it may be the antipode

* See a work on this subject, recently published by Robert Bayley, F. S. A., entitled "Nature considered as a Revelation," pp. 250.

employment to what would be selected by taste, we then advise that descriptions of natural objects should be *read and compared with the things themselves*; and for home subjects, we recommend Cowley, Bloomfield, Burns, Cowper, Ramsay, Wordsworth, and Crabbe; and for foreign subjects, the *travellers*: the student ever remembering our advice under the article "thinking power." This will never make him a Cowper, or a Burns, for *poeta nascitur* is eternally true, but it will give him a taste for natural objects, which is one of the primitive elements of mental wealth, and will quicken the powers of comparison and the susceptibilities of beauty.

MEMORY AND ATTENTION

Are dependent on the state of the taste and the affections, which are the true, indeed, the only securities for a high possession of memorial habits. For proof of our assertion, we only beg the reader to examine whether the things which he best remembers are not those which he most heartily loves or fears? and whether it is difficult to secure for such objects the exercise of attention? It may not be unimportant to our object, if we should succeed in impressing these facts relative to memory and attention on our youthful readers. We hear on all sides complaints of the treacherous memory and the volatile attention; hence the intellectual nostrums for the cure of these mental epidemics; mnemonical systems to keep the recollection, while fancy uses every art, by the mixture of amusement with instruction, to secure the attention of multitudes, whom neither the consequence nor the nature of a subject would charm. We repeat, it will both show the importance of our subsequent remarks on moral education, and afford a clue to the self-instructors, if we remember this fact thoroughly, that the vigour of the memory and attention mainly depends on the nature of the stores which are collected, or the objects studied. The artist neither feels the languor of the attentive power, nor the irregular memory when employed about his favourite model. The most charmless dates and decisions are as faithfully remembered by the aspirant lawyer, as objects of beauty by the poet, or as affronts by the revengeful. Things, which it were almost desirable to forget, if not impracticable to remember, are among the most common-place treasures of the antiquary, while the covetous never forget the fractions of compound interest, nor the frivolous, fluttering *fashionists* the wave of a handkerchief, or the curve of an arm. Let the young man then get his soul into love with knowledge, study its power, and solace its beauty and charms, and gone for ever will be the disease of infidelity from his attention and memory. Love has from the creation had the tutelage of these two powers, and if he direct, they either rise to the tops of the mountain, and

dare the storm at home, or sink to any degree without feeling themselves abased.

Now all this work is evidently personal and must be self-accomplished. The assistance required from others is, after all, little, soon given, and soon exhausted: though we are aware that most men rather glory in having sat at the feet of some Gamaliel, or served under some educational Theudas; that they have matriculated in some college, or sauntered through the classic halls of some ancient university, than that the mainspring of their mind was elastic enough to force them into self-expansion, or that they carried on the noble work of self-education in their own hearts in spite of the clamours of necessity, of the oaten cake, or the patched garment, the jeers of companions, or the pity of mistaken friends. But how much more creditable to be conscious of having worked unaided to such a consummation, than to divide the honour with Playfair or Smith; of having mastered opposition which others thought impossibility, and out of a mere passion for knowledge and self-culture, suffered nothing to divert our purpose, damp our ardour, or to dispirit our hope? Now it is one of the great laws of our being, that the most valuable services must be performed for ourselves. The oculist may mount the eye with glasses and telescopes, and utter his sounding discourse of optical laws, but the duller eye must exert itself to give efficacy to his aids. The cook racks her little brain for the most whimsical modes of preparing food, but what wretch is so pampered with servants as to desire another to eat for him? The physician counts the pulse, or measures the swell of the chest, but he cannot make the one strike nor the other heave. And one may supply books, another diagrams, a third instruments, but after all, this is only doing the slave's office; for who but the mind itself can proceed further? Who can do for his friend the acts of thinking, comparing, or recollecting? Who but himself can feel the motive or form the taste, whet the intellectual weapon to an edge invisibly keen, or trim the fancy's wing, whose feathers are of "purple and yellow gold?" Who is to range the ideas in place, or to make the mind not only reflect on external objects, but often to introvert its eye on itself? Who is to form the resolutions and modify or increase the adequate impulse? Who? Not universities nor titled professors; least of all that class of teachers whose representative we often see in an upright little personage, strutting in pedant airs, and glimmering his hazy way through pedagogical glasses, too poor to cast off his scorned avocation, and too idle to fall into the fit opening at the plough-tail, or in the mechanic's shop, which nature evidently intended for him. Not he, nor the mere worshippers of Homer and Horace, Eschines and Eschylus, (we mean ye no wrong, shades of the mighty dead! to whom we are much indebted,) nor the mat-

thematical madman, who imagines all knowledge to be contained in curves and parallelograms, in cubes and squares, in angles and segments: but he who desires to be well-educated must undertake the greatest part of the labour (it is labour too) for himself. For he is always present with his mind, sees it at its sports and in its graver moods, watches what effects are produced by the tempest and spring, the beauty and winter, the revolutions of a kingdom, or the laugh of a friend, the fall of a leaf, or the general motion of the universe. And certainly he alone can properly adjust the educational discipline. Who is conscious of its favourite aims and hopes, its weakest and its strongest sides, its guilt and fear, before what Delilah his mind falls prostrate, or under what influence it ascends? And who like ourselves will feel the reward of success, or the shame of defeat; is so interested in the quality of our opinions, or in the extent of their operation? Now who can possess such acquaintance with the heart but its owner, and on that account alone, who can pretend to effect such a series of internal changes in the character, as self-education implies, but ourselves? Who could have undertaken, with this view, John Milton, one of the finest specimens of self-education, who lived at a time when uniformity of thinking, on all subjects, was considered more attainable and beneficial than it will ever be again, at least, till the whimsical era of sidereal revolution has, like the ass in the mill, brought the universe round to the same spot in the circle of being? In religion, science, and politics, the fashion of thinking was then settled, both by the laws of the state, and by the customs of society; and to infract those laws was to slip the pack of hungry dogs, which ever bay at the heels of fashion, on the witless transgressor. In the former part of the life of Milton the ecclesiastical harness was still tight on the national limbs, and the papal Colossus still bestrode the ways of knowledge, bearing on its foot the impudent *ne plus ultra*, painted in letters of fire and blood. Milton emerged from his study, where he had been working his way down through the light but troublesome strata of prejudice, antiquity, and tradition, to the foundations of truth; in other words, self-educating his mind: and poured into the British ears such successions of stately eloquence, and original appeal, as left even the soarings of the "Paradise Lost" to feel their shadow. Or who could have educated Francis Bacon, who, when the long worshipped name of Aristotle shed a sickly light over the mental world, of which it had been for nearly twenty centuries the ascendant planet, during which, through his three false systems of morals, logic, and physics, Aristotle had exercised a despotism as unnatural as his of Russia; for all questions were submitted to the noisy claptrap of syllogisms, and taste for metaphysical abstractions

had diverted men's thoughts from the solid to the airy, from the actual to the possible:—at this time Bacon, perceiving that such a state of literary feudalism was the "*ultima Thule*" to improvement, published his "Restoration of the Sciences" and his *Novum Organum*, which ultimately blew to the regions of fable the Aristotelian phantasmagoria, of which we now seldom hear the mention, except in enumeration of antiquities and venerated shadows, or as one of the items in the *tabula naufragii*. Nor did Bacon with savage and selfish joy dance among the ruins of old systems which he had destroyed, but he set about teaching the human mind the discarded use of itself, and proceeded to clear out the old highroads of truth by patient, fearless, and persevering labour, and thus conferred a greater blessing on posterity, than they who have, in our own days, dug out those ancient cities of *Herculaneum* and *Pompeii* from the cinder-mountains with which their uncourtly neighbour Vesuvius had sepulchred them. And have we not a still finer instance of self-education in Benjamin Franklin, who was a kind of godfather to electricity when it was a science of guesses and hopes,—when, bubble like, it was merely gay with the prism of imagination's hues, and, like other bright bubbles, in danger of destroying, and being destroyed?—For he made the lightning itself to do its share in the demonstration, (for genius has a soldier's courage,) which if it had failed would have cost him his life. Nor was this all; for having risen from the daubery of a printer's shop to the honour of science, he then assumed the ambassador's dignity, and by his prescient wisdom, and his cool intrepidity, he contributed much to the settlement of the American Empire on that level of friendship which it has ever since sustained with the leading courts of Europe. One still more striking instance of self-educated men is all we will here allude to, and it is the case of Christopher Colon, or Columbus. He was a common weather-worn sailor for a great part of his life, and the sea and stars, with their consequent phenomena, had been his principal books, and his instructors experience and necessity. But he early adopted the opinion that the earth is globular, and he studied, with reference to that question, the tides, the winds, the weeds that lodged on the beach, the occasional pieces of bark, wood, or rag, that floated past him, as he sat unconsciously plying with his oar on the side of his boat: in short, whatever his susceptible genius could turn into a proof or probability of his favourite scheme. And after having nursed his thoughts till he felt something like what Virgil describes of his wasting day—

"*Et jam summa procul villarum culmina fumant,
Majoresque cadunt altis de montibus umbræ,*"

to be true of his life; having been branded as a heretic and a fool, suffered the jeers of his equals

and the contempt of his superiors, through incredible perseverance he obtained a meagre supply of ships and men to explore the westward on the Atlantic. Thus went forth this undaunted man, and for the first time, perhaps, that the human form had shadowed the middle waves of that ocean since the deluge; and though his men mutinied often, and murmured always, protesting that there could be no possible return, and hunger and disease, and "hope deferred"

assailed the heart of Columbus, who from excessive watching was almost obliged to prop open his sleep-courting eye-lids,—he, at last, leaped from his seat! He saw the land! His genius was substantively right; his enemies were defeated; he was immortal, rewarded, and overcome;—but he did not foresee in the new world the extent of his triumph, nor hear, as we do, his name rise on a thousand songs, or given to ten thousand children.

THE ACORN.

AN APOLOGUE.

"THOU wast a bauble once;—a cup and ball,
Which babes might play with;—

Time was when, settling on thy leaf, a fly
Could shake thee to the root!—and time has been,
When tempests could not."

COWPER'S "Yardley Oak."

A HIGH wind shook the last acorn from an old Oak. In the following night, the tree itself was thrown down by the tempest. It had lived through five centuries; but though in that period it had produced millions of acorns, they had all been devoured by swine, or perished where they fell. Yet there was a prophecy, nearly coeval with the deluge, in the family, that from the fruit of *this* Oak there should spring a mighty forest. Age after age the venerable tree, declining in strength, and decaying from the core, till the shell of the trunk, and a stunted branch bearing six leaves and a single acorn, were all the insignia of its ancient honours; age after age the venerable tree looked anxiously for tokens of the fulfilment of this prediction, in the growth of some sapling from one of its acorns. "Hope deferred maketh the heart sick; but when the desire cometh, it is a *tree of life*." The old Oak knew this; and to the last moment of its existence believing that He who had promised could not fail to perform, it prayed, even as it lay prostrate on the ground, that its orphan offspring, the sole survivor of its stock, might in due time be quickened, shoot up, and become the parent of a great family. While it was praying, the sap ceased to circulate through its rigid veins, and the old Oak died, lamented by all the trees of the field. A hoary-headed man, who appeared as far stricken in years as the tree itself, though but an infant in comparison with it, removed the relics, and built an hermitage of them in a solitary corner of his grounds, whither he was wont to retire for devotion, and where he was at length found dead, in the attitude of prayer, with the expression of hope full of immortality on his countenance.

The solitary Acorn had fallen into the deserted nest of a field-mouse, and the gigantic

trunk of its progenitor, descending close by, crushed the turf over its head, and buried it alive. In darkness, alone, and immoveably wedged, the poor Acorn gave itself over for lost: and yet it could not but remember how merrily it had lived on the little bough that nourished it, dancing in the breeze, drinking the dew, enjoying the light; it could not but remember the radiance of the sun, the beauty of the moon, the multitude of the stars, the verdure of the earth, the diversity of hill and dale, the river rolling at the root of its aged sire; it could not but remember the sounds of winds, and birds, and waters, the motions and colours of the clouds, the forms, voices, and actions of men and animals, which it had remarked during its nonage above; it could not but remember these, and remember them with regret,—regret, acuminate to despair, in the apprehension that soon it must cease to hear, and see, and feel for ever.

While the Acorn lay thus ruminating on its helplessness, insignificance, and misery, it heard, or thought it heard, a voice from heaven saying to it, "*Produce an Oak!*"—"Produce an Oak!" repeated the Acorn to itself; "that's impossible; no, it is *not* impossible; with God nothing is impossible; and if he commands me, I *can* do it, and I *will* do it." The Acorn had well learnt this lesson of faith from its parent, that the Ruler of the universe always gives power to his creatures to do what he requires of them.

Immediately through every nerve of its frame, it felt a spirit in motion; and the germ between its double kernel, though small enough to pass through the eye of a needle, received a consciousness, that a whole tree—roots, bark, bole, branches, leaves, and future fruit—lay folded, with exquisite minuteness, in the fairy casket of its bulb. There was no self-delusion in the Acorn; it had humbled itself, and it was about to be exalted. From that crisis, though the shell and the kernels began to waste away, the germ fed upon them; presently it swelled and put forth fibres which insinuated themselves through the soil to secure a permanent foot-hold.

In spring there appeared above-ground a tiny shoot; which opened and presented

——“two lobes protruding, pair'd exact.”

The new-sprung plant was lower than the blades of grass that rose in myriads around, and looked down contemptuously upon it as a stranger, whose shape was uncouth, and whose language they did not understand.

Hours, days, weeks, months, passed swiftly away, and so did the grasses, but the offspring of the Acorn survived them all, and continued to grow till it became a sprig, with two full-formed leaves, and a bud between them, which tempted the bee and the butterfly to alight on their way, while the grasshopper chirped at its foot, or skipped over its head; nay, so vigorously did it push forth on the right and on the left, as well as upward, that the cowslip was compelled to hang its blossoms awry to make room for the sylvan intruder. Now year followed year, till the sprig became a sapling, and one generation of men died after another, while the sapling expanded into an oak, and the oak advanced through two centuries towards maturity. All this time the tree from the Acorn had preserved its innocence and its humility; though rooted in the earth, it aspired towards heaven; the nourishment which it drew from the soil, and the river, and the atmosphere, it received as the bounty of Providence, and it was thankful.

Meanwhile, the occasional lightnings played harmlessly around its head, and the tempest that agitated it above, caused its roots to strike deeper below. Thus flourished the Oak, the pride and the admiration of the whole country. The birds roosted and sang amongst its branches. The cattle chewed the cud, and reposed under its shelter. The lambkins in April ran races round the mount which its roots had upheaved from the plain. Man approached it with veneration, and as he lifted up his eye at so magnificent a spectacle, he glanced beyond it to the sky, and thought, “How much glory can the Creator confer on one of his inferior works! How much of himself may be seen even in a tree!”

But one thing was wanting to consummate its felicity;—the Oak was barren; not an acorn had ever glistened in a rough cup on the most luxuriant of its boughs, though their foliage spread thick and beautiful to the sun, and rustled musically in the breeze; and though autumn in its turn brought a second spring of leaves, so delicately tinged, that they seemed to be the blossoms of the first. Now it came to pass, during a hard winter, that an old raven, driven by stress of weather from the sea-coast, and travelling far inland, alighted one clear cold morning on the topmost twig of the Oak. Though stripped of its summer-attire, the grace and majesty of its form were the more striking in the

fair proportions of its tall stem and naked branches, here and there tufted with brown clusters of dry leaves, of which now one, then another, fell,

——“slowly circling through the waving air,”

to the ground, where thousands of their brethren lay strewn at the feet of their parent, in all stages of decay; some brilliantly bespangled with pearls of ice, and many so curiously pencilled with hoar-frost, that every vein was distinguishable. The raven, who was thin of plumage, and iron-grey with years, looked as if he had seen better days, but would never see such again. Age and adversity had soured his disposition, if ever it had been good, so that he could no longer behold happiness without envy, nor contemplate innocence without hankering to betray it; for happiness he knew was inseparable from innocence, and rarely, if ever, associated with guilt. While he sat shivering in the wind, that lifted up his ragged feathers with every breath, his lank sides were exposed to the chaffinches and red-breasts that hopped on the lower boughs, peeping askance at the stranger, wondering whence he came, and thinking not a whit the less handsomely of themselves and their gay plumage in comparison with him.

Now Ralph was a soothsayer, and many an evil omen had he exhibited to the poor fishermen on the coast where his haunt was; soaring delighted in anticipation of the storm, and preying when it was over on the carcasses of shipwrecked mariners. As he understood all languages that were spoken in the day of fable, he quickly entered into conversation with the Oak, wormed out its whole history, and was sagacious enough to discover, what the tree itself scarcely suspected, that innocent and happy as it was, secret anxiety had begun to corrode its heart, lest, notwithstanding its health, strength, and virtue, and notwithstanding the ancient prophecy, it might at length die without issue, there being little hope, after such an age of sterility, that it would yet become fruitful.

The subtle raven caught his cue, and by a train of sophistry, of which history has not furnished the particulars, he succeeded in persuading the Oak, that it was such a favourite of Providence, that the course of nature was suspended with respect to its destination, and it was either governed by such a mysterious heavenly influence, or had within itself such an original power, that it could *do* or *be* whatever it pleased: thus, instead of propagating its species by acorns, it might continue to increase in bulk, in height, in breadth, in depth, in strength, in every thing, through an illimitable period to come, till the heavens were filled with its branches, and the earth overcanopied with its verdure.

The Oak listened unsuspectingly to the tempter, whose plausible insinuations soon perverted its simplicity, and it began indeed to think, that all

it was it had made itself, and it had only to go on growing for ever, by its own volition, to become as great and as glorious as the raven had prognosticated. "If," said the poor dupe within itself, "when I was an acorn I wrought myself out of the ground, and have since risen by my own choice to be the noblest tree in the universe, why should I rest here, and not go on to magnify my form, till my trunk towers above the clouds, and sustains in mid-heaven a burthen of boughs more numerous and ample than the forests on a thousand hills; thus in my own person accomplishing the ancient prophecy, instead of dying, as my predecessors have done, in the vain hope of leaving innumerable posterity?"

Off flew the raven to the left hand, the moment his blandishment had prevailed, and the innocence of his victim had departed from it; leaving it to the indulgence of proud imaginations, and to the sad consequences of its apostacy. Early in the succeeding spring, at the first motion of the sap from the root, when the noon-sun was warmly shining, the Oak heard the same voice from heaven, which once called it out of the kernel, saying *now* to it, "Produce Acorns!"—"Produce Acorns!" indignantly it repeated "*No*, I will produce *Oaks*! my slenderest twig shall be a tree as mighty and as ramified as I am myself at this hour." Forthwith, as it fondly imagined, the vain boaster began to exert its native energies, and to strain through every fibre to enlarge its dimensions; but its bulk remained the same as before; it had reached a standard which it never could exceed. Spring vanished, summer followed, and autumn found the Oak laden with—Acorns! They were shaken to the ground; the swine devoured them; none took root. The Oak was mortified, and enraged, but not humbled. "I will do better," it exclaimed, "next year:" and yet it scarcely believed itself, for there was a strange misgiving in its mind, which it durst not acknowledge, and feared to investigate.

The next year came, and the next year went. What did the Oak? In spite of itself it produced Acorns as before,—but only to feed swine; not a single one was quickened. Still it would have hardened itself in rebellion against its Maker, but during the first frosty night of the winter ensuing, it was awakened by a pang at the core, as if an arrow had glanced through it, and the wound had been instantly healed. An arrow *had* passed through it, but the wound was *not* healed; it was the arrow of death, and though the anguish at that time was only momentary, disease, decay, and dissolution had seized upon its vitals, never to relinquish their prey till they had consumed it atom by atom. The offender was roused to reflection; it was convinced at once of its mortality and its guilt. Shame, remorse, and self-abhorrence followed; the whole winter was a season of humiliation; till the Oak was contented to be whatever its Creator had made it, and re-

signed to suffer whatever his justice might hereafter inflict. The next spring had far advanced, but long storms and late frosts had retarded vegetation, when, with the appearance of the first swallow, hope revisited the heart of the penitent; and a few weeks afterwards, while the nightingale was singing from a lowly bush at its foot, a third time the Oak heard the voice from heaven, more welcome than before, and sweeter than all the sounds in creation beside, saying, "Produce a Forest!"—"Thy will be done!" replied the humbled tree; and immediately it felt as if a curse had been taken away, and a blessing poured down upon its head.

Ere long its buds unfolded into leaves, and in autumn its branches were bowed with the weight of fruit. Frequent and violent winds scattered the acorns abroad as they ripened, and heavy rains upon the adjacent hills, bringing down the soil upon them, or washing them into temporary channels, many remained buried during the winter; and ere the harvest of another autumn was ready to be shaken from the boughs of the parent tree, a nursery of its descendants was springing up in the neighbouring fields. Year after year the fruits of the oak were carried further, multiplied thicker, and rose higher, over the face of the country, till, at the close of its third century, it stood in the heart of the most flourishing forest in the world, itself to the eye still in fullness of vigour and beauty, and unrivalled by the stateliest of its progeny, though the death-wound received a hundred years before was invisibly undermining its strength, and hollowing its trunk.

About this time, the old raven, who still survived, (and like the wandering Jew, it was said of him, that he could neither die nor rest,) returned to that place; but his eye was so dim, and the scenery so changed, that he knew it not again, till the Oak, amidst the forest of its sons, saluted him as he flew languidly over their heads. Ralph alighted on one of the arms of his old acquaintance, and silently hearkened to the sequel of its story; at the close of which he fluttered for a moment on his perch, then uttering an ominous croak, fell headlong, and lay dead in the hollow of one of the protuberant roots of the tree, which he supposed had long ago been blasted by lightnings or mildew, for exercising the presumption he had taught it.

The Oak yet lived two hundred years; its offspring and their descendants to the fiftieth generation still increasing and multiplying, to the east and the west, to the north and the south, till the river, on whose banks it stood, and which for thousands of years had rolled in broad sunshine through a campaign of meadows, became half-overshadowed with the kindred branches that on either side stretched to intermingle their arms, but succeeded not entirely; a line of light, and a current of cool air passing uninterruptedly down the middle of the stream, amidst the depth of the

surrounding woodlands. At length came the last hour of the patriarch of trees. It fell not by the fury of the wind like its father, nor by the assaults of the axe, as thousands of its juniors had fallen before it; but on a calm and golden summer-even, just as the sun went down, the Oak sunk to the earth, under the silent weight of years, and at the gentle touch of nature, loosening at once its whole burthen of infirmities; it lay down so quietly to repose, that the squirrel and her young, whose nest was in the hollow of the fork, where the lowest branches diverged from the bole, were undisturbed by the motion, and wondered next morning to find themselves so near the ground. But the remains of the Oak were not left to rot

into dust and oblivion; man knew their worth; he removed them, and wrought the knotted fragment of the trunk, and the knee-timbers of the undecayed boughs, into the flanks and the keel of a vessel, which afterwards circumnavigated the globe.

Here is a long fable; where is the moral? Take it in the words of the Scripture; they are so brief that they might be written within the cup of the acorn, and so important that they ought to be engraven on the tablet of every heart:—"God resisteth the proud, but giveth grace unto the humble."

Sheffield.

J. MONTGOMERY.

ADONAIS.

BY PERCY BYSSHE SHELLEY.

[It is our intention to introduce, occasionally, to the notice of our readers the more meritorious works of the modern poets and poetical writers of the day. We have a large and extensive variety of these in our library; and besides being enabled in this manner to bring many deserved writers into notice, who might otherwise remain unremembered and forgotten, we shall also place before our readers those peculiar beauties of thought and expression which have given these authors that rich and rare mastery over the strings of the lyre, which is at once their fame and great joy.]

PERCY BYSSHE SHELLEY will ever hold a deservedly high rank amongst the poets of Great Britain. He is as a poet known, perhaps, to very few; but the devoted band of his followers and admirers cherish his poetry with a more deep and heartfelt regard from the very sarcasm and severity with which his high merits have been visited, by those whose duty it was to have held up his talents in that rich light of the world's sunshine and favour from which they so shamefully drove and expelled him.

There has been no poet in whose writings the faculty of imagination has been more richly and strongly developed; no one who has inlaid his verse with the sparkling gems of a more glorious fancy, or who has diversified the glittering colours of thought with a more vivid display of shining words and sentences, until stanza after stanza, and poem after poem, has been wrought up into a rich arabesque of pure gold.

One of the most intimate friends of Shelley was John Keats, the author of "Endymion, and other Poems," which we shall introduce into our series. In the heart and spirit of each of these gifted writers, friendship and poetry, like bonds of charming brotherhood, were mutually linked and mingled. Keats was of a mild and gentle spirit, of a fine imagination, and a devoted worshipper of Beauty. Shelley possessed a greater power, and was a worshipper of Truth,

wherever it was to be found; both were single-hearted, sincere, admirable men. Keats was of a most delicate physical frame, which soon became bowed, and wasted beneath the ravages of a burning hectic and consumptive fever. His poems met with a sad and savage reception from the "Quarterly Review" and "Blackwood's Magazine," who (as though urged on by fiendish rivalry) strove to outmaster each other in utterly condemning and vilifying the character of Keats as a poet. Such smarting severity of criticism, operating on a frame of great weakness, and a nervous system, strung to extreme sensitiveness, only fanned the lingering fire of disease, and in a short time Keats died, and was buried in the Protestant burial-ground at Rome. Shelley felt his loss most acutely, and the "Adonais" was written as an Elegy on his death. The poem opens with a most beautiful and touching apostrophe to the earth, and to the

Sad hours, selected from all years,

in which the poet died; and calls upon them to mourn for the loss which they have sustained. He bids Urania to "lament anew," and thus proceeds—

"But now, thy youngest, dearest one, has perish'd,
The nursling of thy widowhood, who grew,
Like a pale flower, by some sad maiden cherish'd,
And fed with true love-tears, instead of dew.
Most musical of mourners, weep anew!
Thy extreme hope, the loveliest and the last.
The bloom, whose petals, nipt before they blew,
Died on the promise of the fruit, is waste;
The broken lily lies—the storm is overpast.

To that high Capital, where kingly death
Keeps his pale court in beauty, and decay,
He came; and bought, with price of purest breath,
A grave among the eternal.—Come away!

Haste, while the vault of blue Italian day
Is yet his fitting charnel-roof! while still
He lies, as if in dewy sleep he lay;
Awake him not! Surely he takes his fill
Of deep and liquid rest, forgetful of all ill.

He will awake no more, oh, never more!—
Within the twilight chamber spreads apace

The shadow of white death, and at the door
Invisible corruption waits to trace

His extreme way to her dim dwelling-place;

The eternal hunger sits, but pity and awe
Soothe her pale rage, nor dares she to deface

So fair a prey, till darkness, and the law
Of mortal change, shall fill the grave, which is her
maw.

He then brings all feelings, thoughts, and
imaginings, to watch and weep around the bed
and the grave of the dying and the dead; the
extracted stanzas, in which this beautiful portion
of the poem is included, are many, but we must
not dilate where the nectar is so rich and over-
flowing:—

And one with trembling hand clasps his cold head,
And fans him with her moonlight wings, and cries,

"Our love, our hope, our sorrow, is not dead;
See, on the silken-fringe of his faint eyes,
Like dew upon a sleeping flower, there lies

A tear some dream has loosen'd from his brain."
Lost angel of a ruined paradise!

She knew not 'twas her own; as with no stain
She faded, like a cloud which had outwept its rain.

One from a lucid urn of starry dew
Wash'd his light limbs, as if embalming them;

Another clipt her profuse locks, and threw
The wreath upon him, like an anadem,
Which frozen tears instead of pearls begem;

Another in her wilful grief would break
Her bow and winged reeds, as if to stem

A greater loss with one which was more weak,
And dull the barbed fire against his frozen cheek.

Another splendour on his mouth alit,
That mouth, whence it was wont to draw the breath
Which gave it strength to pierce the guarded wit,
And pass into the panting heart beneath
With lightning and with music: the damp earth
Quenched its caress upon his icy lips;
And as a dying meteor stains a wreath
Of moonlight vapour, which the cold night clips,
It flushed through his pale limbs, and passed to its
eclipse.

And others came,—desires and adorations,
Winged persuasions and veiled destinies,
Splendours, and glooms, and glimmering incarna-
tions

Of hopes and fears, and twilight phantasies;
And sorrow with her family of sighs,

And pleasure, blind with tears, led by the gleam
Of her own dying smile instead of eyes,
Came in slow pomp;—the moving pomp might
seem

Like pageantry of mist on an autumnal stream.

All he had loved, and moulded into thought,
From shape, and hue, and odour, and sweet sound,
Lamented Adonais. Morning sought
Her Eastern watch-tower, and her hair unbound,
Wet with the tears which should adorn the ground,
Dimmed the aerial eyes that kindle day;
Afar the melancholy thunder moaned,
Pale Ocean in quiet slumber lay,
And the wild winds flew round, sobbing in their
dismay.

Few poets have left behind them a "solace of
song," more deeply thrilling than these stanzas
are; they will present to our readers some of the
peculiarities which more particularly distinguish-
ed the poetry of Shelley. He does not pour
out a wild lament of harrowing and disastrous
melancholy over the grave of his departed friend
and brother poet; he searches the inner haunt-
ing depths of his own imaginative and naturally
melancholy mind; and thence draws all those
kind agencies and tender sentiments which he
embodies in verse, giving to them all the life and
action of sorrowing sympathy, and robing their
words and accents in a sweet under-chaunt of
melancholy and lamentation.

Proceeding in his song he calls upon Urania
to visit the bier of the departed:—

—"The mournful place where Adonais lay."

Obedient to the high summons she speeds from
"her secret paradise,"

"Through camps and cities rough with stone and
steel,"

and reaches the home of the departed. The two
following stanzas speak in tender transports the
language of philosophy and love:—

In the death-chamber, for a moment, Death,
Shamed by the presence of that living might,
Blushed to annihilation, and the breath
Revisited those lips, and life's pale light
Flashed through those limbs so late her dear delight
"Leave me not wild, and drear, and comfortless,
As silent lightning leaves the starless night!—
Leave me not!" cried Urania: her distress
Roused death: death rose and smiled, and met her
vain caress.

"Stay yet awhile! speak to me once again;
Kiss me, so long but as a kiss may live;
And in my heartless breast and burning brain
That word, that kiss shall all thoughts else survive,
With food of saddest memory kept alive,
Now thou art dead, as if it were a part
Of thee, my Adonais! I would give
All that I am to be as now thou art!
But I am chained to time, and cannot thence
depart."

After many verses of beautiful lamentation
such as this, Urania leaves the dead form of the
poet, and the mountain shepherds come with
others to weep and sorrow over the dying; and
in this part of the poem occur the two following
stanzas, which a friend of Shelley has considered
as a picture which he has drawn of himself:—

"'Midst others of less note came one frail form,
A phantom among men, companionless
As the last cloud of an expiring storm,
Whose thunder is its knell; he, as I guess,
Had gazed on nature's naked loveliness,
Acteon-like, and now he fled astray,
With feeble steps, o'er the world's wilderness;
And his own thoughts, along that rugged way,
Pursued, like raging hounds, their father and
their prey.

A pard-like spirit, beautiful and swift,
 A love in desolation mask'd, a power
 Girt round with weakness; it can scarce uplift
 The weight of the superincumbent hour;
 It is a dying lamp, a falling shower,
 A breaking billow; even whilst we speak
 Is it not broken? On the withering flower
 The killing sun smiles lightly: on a cheek
 The life can burn in blood, e'en while the heart
 may break."

How well do those expressions "a pard-like spirit, beautiful and swift," "a love in desolation mask'd," "a power girt round with weakness," designate the sentiment and person of Shelley! But having given full vent to the sorrow he feels for his departed friend, he arouses from his "lair of lethargy," and bids hope and joy revive once more,—saying

"He lives, he wakes; 'tis Death is dead, not he;
 Mourn not for Adonais."

In a strain of beautiful and touching delight he expatiates on all the happiness and glory which are enveloped, like light, around the departed spirit. All who mourn for Adonais are told to look "beyond all worlds," unto the "shining land;" or, as though he deemed the thoughts of those who loved the poet best would cling to the earth whereon they last beheld and visited him, he bids them go to Rome, where, as he beautifully expresses it, the young poet lies,

—"gather'd to the kings of thought."

The subject of the imperial city was always a favourite one with Shelley; he drenched his spirit to intoxication in the deep blue sky of Rome. His favourite haunts were the ruined baths of Caracalla, or the labyrinths of the Coliseum. Poetry was to him what the air around him was—the very element of his being and his nature. The three following stanzas are solemnly and beautifully descriptive; the fourth (the last in the poem) is like the dying echo of an angel's psalm.

"Go thou to Rome, at once the paradise,
 The grave, the city, and the wilderness;
 And where its wrecks like shatter'd mountains
 rise,
 And flowering weeds, and fragrant corses, dress
 The bones of desolation's nakedness,
 Pass, till the spirit of the spot shall lead
 Thy footsteps to a slope of green access,
 Where, like an infant's smile, over the dead
 A light of laughing flowers along the grass is
 spread.

And grey walls moulder round, on which dull
 time
 Feeds like slow fire upon a hoary brand,
 And one keen pyramid, with wedge sublime,
 Pavilioning the dust of him who planned
 This refuge for his memory, doth stand
 Like flame transform'd to marble; and beneath
 A field is spread, on which a newer band
 Have pitch'd, in heaven's smile, their camp of
 death,
 Welcoming him we lose with scarce-extinguish'd
 breath,

* * * *
 The One remains, the many change and pass;
 Heaven's light for ever shines, earth's shadows
 fly;
 Life, like a dome of many-coloured glass,
 Stains the white radiance of eternity,
 Until Death tramples it to fragments. Die,
 If thou would'st be with that which thou dost
 seek!

Follow where all is fled. Rome's azure sky,
 Flowers, ruins, statues, music, words, are weak
 The glory they transfuse with fitting truth to
 speak.

* * * *
 The breath whose might I have invoked in song
 Descends on me; my spirit's bark is driven
 Far from the shore, far from the trembling throng
 Whose sails were never to the tempest given.
 The massy earth and spher'd skies are riven;
 I am borne darkly, fearfully afar,
 Whilst, burning through the inmost veil of
 heaven,
 The soul of Adonais, like a star,
 Beacons from the abode where the eternal are."

Such is this beautiful and affecting monody. We have not spoken of those rich, peculiar, and delicate expressions with which every one of the beautiful Spenserian verses which we have quoted abounds; our readers will detect these readily. The limits which we have assigned to ourselves prevent our entering, on this occasion, as fully as we could wish into the merits and demerits of Shelley's poetry—a subject which we shall be at liberty to discuss more fully in some future number of our Miscellany.

It is, indeed, much to be lamented that no correct or authorised account of his life and writings has yet appeared. Of his person, we are informed that "his frame was a mere tenement for spirit, and in every gesture and lineament showed that intellectual beauty which animated him. There was in him a spirit which seemed to defy the very adversaries who had waged so stormy a war against him, time, and suffering, and misfortune. His features were small, the upper part not strictly regular; the lower had a Grecian contour. He did not look so tall as he was, his shoulders being a little bent by study and ill health. Like Socrates, he united the gentleness of the lamb with the wisdom of the serpent, the playfulness of the boy with the profoundness of the philosopher. His aspect had a certain seraphical character that would have suited the portrait of John the Baptist, or the angel whom Milton describes as 'holding a reed tipped with fire;' nor would the most religious mind, had it known him, have objected to the comparison. The leading feature of his character may be said to have been a natural piety; he was pious towards nature, towards his friends, towards the whole human race, towards the meanest insect of the forest. He was like a spirit that had darted out of its orb, and found itself in another planet."

To these brief notices we may add those of an author whose remarks will prove that he has studied the writings of Shelley with a close and philosophic attention.

"I believe," says this writer, "that Shelley's poetry and writings have been influential, to a degree perfectly unguessed by those who look only to their popularity. In his impetuous, intellectual, and unworldly mind, he is the spiritualiser of all who forsake the past and the present, and with lofty hopes, and a bold philanthropy, rush forward into the future, attaching themselves, not only to things unborn, but to speculations founded on unborn things. He represents that which arises from the intellect, and belongs to the contemplative or the ideal; he bodies forth the beauty of a time to be, and, with a more daring and dramatic genius than Wordsworth, he is equally intellectual in his creations; and his poetry is of a remarkably ethereal and spiritualising cast; it is steeped in veneration; it is for ever thirsting for the heavenly and the immortal; and the Deity he questioned avenges himself only by impressing His image upon all that the poet undertook. Shelley's unsettled and presuming faculty of verse deals little with the seen and known; it is for ever with the spectral images of things, chasing the invisible echo, and grasping at the bodiless shadow. Whether he gives language to Pan, to Asia, to Demurgus, or song to the cloud, or paints the river-love of Alpheus for Arethusa, or follows, through all the gorgeous windings of his most wondrous diction, the spirit of poesy in Alastor, or that of liberty in the revolt of Islam; he is tasking our interest for things that are not mundane or familiar, things which he alone had power to bind to

nature, and which those who imitate him have utterly dis severed from her control. They, too, deal with demigods and phantoms—the beautiful invisibles of creation; but they forget the chain by which the Jupiter of their creed linked each, the highest to the lowest, in one indissoluble connexion, that united even the highest heaven to the bosom of our common earth."*

These sentiments are beautifully expressed, and include much that is true of the poet spoken of. Another tribute to his golden genius, and we close, for the present, our inquiry into his high merits as a poet:—

LINES

WRITTEN BY THE AUTHOR OF "THE BRIDE'S TRAGEDY," IN A BLANK LEAF OF THE "FROM-THUS UNBOUND."

"Write it in gold—a spirit of the sun,
An intellect, a blaze with heavenly thoughts,
A soul with all the dews of pathos shining,
Odorous with love, and sweet to silent woe,
With the dark glories of concentrate song,
Was sphered in mortal earth. Angelic sounds,
Alive with panting thoughts, sunned the dim
world;
The bright creations of a human heart
Wrought magic in the bosoms of mankind;
A flooding summer burst on poetry,
Of which the crowning sun, the night of beauty,
The dancing showers, the birds, whose anthems
wild,
Note after note, unbind the enchanted leaves
Of breaking buds, eve, and the flow of dawn,
Were centred and condensed in his one name,
As in a providence—and that was Shelley."

BRITAIN.

CHAP. IX.

NORMANO-BRITISH PERIOD OF 88 YEARS.

AFTER a preparation of eight months, with sixty thousand soldiers, (fifty thousand of whom were cavalry,) and about one thousand ships, William, Duke of Normandy, landed at Pevensey, September 20th, 1065, to dethrone Harold, who had just slain the two invaders, Tosti and Harold, of Norway, at York. A battle near Hastings followed, on the 14th October, when Harold and most of the principal nobility, after a day's hard fighting, were slain, their troops, which were all infantry, armed with spears, swords, and axes, were scattered; while the Normans lost fifteen thousand men, the conqueror himself having lost three horses from under him. The battle was begun by the champion Taillefer, singing on horseback the famous song of Roland

before the Roman army. Both armies shouted, as they went to the battle, the war-cri of the Normans, being "God is our help!" that of the English, "Christ's rood, the holy rood!" William appeared to moderate his joy at the victory, by giving thanks on the field, by offering no violence to the dead, who were decently interred, and if Harold indeed were slain, by allowing his body to be taken by his friends, of which however there are different accounts, and by building an abbey on the site of the battle. He marched to London, which was surrendered to him by the two archbishops, two bishops, some noblemen, and five principal citizens, headed by Edgar, who was afterwards pensioned with "a pound of silver daily." After the necessary disorders of

such events, he was crowned in a tumult in Westminster, where, before the ceremony was over, he, and the ecclesiastics who were engaged in it, were left alone; and the whole finished by a conflagration and slaughter, too symptomatic of the future. William having ordered fortifications to be built in London, went to live at Barking, where he received great presents, secured for himself all the possessions of Harold, of his family, and those of King Edward; alienated the lands of the deceased nobility to his attendants, sent presents to the pope, especially the standard of Harold, in return for a standard which, when blessed, had been sent to him by the pope; and to such churches as had prayed for his success he gave other benefits, and ordered castles to be built near all the principal cities of York, Lincoln, Nottingham, and Cambridge, that the inhabitants might be awed by the Norman shadow.

William the Conqueror retained Norwich for himself, commanded it to provide him with one hundred and ninety livres, and a good horse annually; and to the greater portion of many other of the chief towns, as York, Shrewsbury, and Dover, command was given to provide the king with contributions in kind. After the battle of Hastings, Arundel was given to Battle Abbey, Dorchester only escaped with eighty-eight houses and Wareham with sixty-two. Oxford, which had seven hundred and twenty, after the seizure of William only about three hundred were left. Derby lost a third of its houses, and Leicester was almost razed, while Lincoln lost one hundred and sixty-six houses out of a small number.

In six months after he had landed, having reappointed Peter-pence, William went to Normandy, to exhibit his conquests and immense treasures which he made many of the great men of England grace by their personal attendance. This allured swarms of the Norman emigrants; but the English revolted, and their new governor, on his return, revived the Danegelt, which ended in other oppressions, and caused many of the remaining English nobility to leave the country. From the English all arms were taken, and at eight o'clock in the evening, made known by a bell, the *couvre le feu* was to be put on the fire; when they were condemned to silence and darkness till the dawn, when another bell was rung which called them to exercise the active part of slaves.

The Saxons had deposited much of their wealth in the churches, which were thought by them to be consecrated, which, however, were all rifled by the Normans, who acted under the sanction of the infamous delegates of the pope.

Some of the larger towns attempted to recover their freedom, and inflicted great sufferings on the Normans, especially at York, to punish which, William laid all the country between York and Durham, on the authority of William

of Malmesbury, under the sword, which lay waste for nine years. This, with its consequences, destroyed one hundred and twenty thousand men, whose fifteen thousand dwellings, monasteries, and churches were razed, and every vestige of the towns and villages disappeared, while subsequently troops of robbers infested these lands. The estates which thus became tenantless were given to the Normans, as also were those of the great earls Edwin and Morcar, and many of the remaining monasteries were sacked.

But at length, when the work of plunder became familiar, many of the Norman soldiers grew weary and sought to return, which was politic; for the king no sooner conquered the Saxons than he taxed his own Normans, who in 1083 were each obliged to pay him six silver pennies; and the strifes between the Normans themselves, on this account, were many, and often led to disastrous consequences.

The king of Scotland, from whom many of the English nobles had obtained protection, (thus was founded the Scottish nobility,) often damaged the northern possessions of the tyrant, who retaliated. A most valorous body of Saxons under the romantic Hereward, the last of the resistless, intrenched in the marshes of Ely, withstood, for a time, the attacks of the conqueror, who admiring the leader's courage, restored him to his estates, and gradually subdued his followers. Many similar series of chivalrous actions were sustained by the northmen before they were perfectly subdued. At length, afflicted with the loss of his wife; with riotous, because oppressed, subjects; with real and threatened invasions; with the rebellion and ill-fortune of some of his children, of whom he had nine; William died of a wound in the belly, from the pommel of his saddle, leaving England to William, his second son, much money to the churches and monasteries, and liberty to the imprisoned nobles. Such was the indifference to him at his death, that he was left three hours neglected, and even in a state of nudity; for all his servants had fled to secure their property. He is said to have been corpulent, temperate, skilful in the martial games, and very superstitious; and much given to use the singular oath "by the brightness and resurrection of God." The Saxon Chronicle describes William to perfection, where it says "he was stark beyond all bounds to those who withstood his will." He was an infamous traitor against the rights of Englishmen, for in addition to his deceitful and cruel assumption of the throne, his reign was but a mosaic of oppression, and by the close of it there were none of the English who held any important offices either in state or church.

WILLIAM DE POICTOU.

William compelled the English to shave the hair from the upper lip, where they had always

worn it; troubled the great with vexatious regimes; and the small he reduced to slaves; robbed the English merchants; made every previous transfer of property null; encouraged foreign merchants by confining fairs and markets to the principal cities and fortified towns; prohibited slave selling to infidels; patronised learned men, and built many castles; while all his bishops and earls, as they received the estates of the English, also built castles to preserve them. The young should be taught to detest his character, and not to admire it because he had great military genius. The conqueror was so given to hunting that he destroyed thirty-six parishes, with their churches, and four monasteries, (though he had eighteen forests at the time,) to plant the new forest in Hampshire, where he might gratify his Dianan taste. To preserve this forest, originated the odious game laws, which have damaged so many families by occasioning so many deaths; for the most lenient punishment for poaching then was, whoever killed a deer or a bird, to lose his eyes!

William Rufus who had red hair, and received his surname from that accident, seized his father's treasures, then deposited at Winchester, and in value somewhat less than a million of our money, paid the legacies to the clergy, and obtained the crown not without considerable opposition, which, by insincere promises to the English, he at length crushed. He then warred upon his brothers, raised enormous taxes from his subjects to purchase Normandy, which his brother, about to crusade, mortgaged for three years. William Rufus afterwards attempted to humble the Welsh, but failing, built a line of castles along their frontier to check their incursions into the adjoining counties.

He was accidentally shot in the New Forest, where he had also lost his brother Richard, by Sir Walter Tyrrel, a Norman, who had discharged his arrow at a buck, August 2nd, 1099. He was conveyed to Winchester in a collier's waggon, (by a family, whose descendants, of the same name, still live in that town,) and buried the next day with kingly obsequies. Historians say of this king that he was haughty, robust, a great swearer, a drunkard, and much addicted to fornication. It is certain that he raised some of the greatest soldiers and intriguers, as Flambard, &c., to his bishoprics. He is said to have built the castles of Norwich, Exeter, Dover, and Windsor. In this reign, surnames are first mentioned, as Robert de Curthose, or short legs—John de Castra—Henry Beauclerk, &c. Westminster Hall, one hundred and seventy feet by seventy, (which the king said was but a closet compared with what he intended to build,) was built for the king's dining-room; London bridge, then of wood, was burnt and rebuilt; a rampart was raised round the London Tower; and the crusades were begun by Peter the hermit, a man

of as little judgment as magnificent fancy, and spiritual ambition.

Henry I., surnamed Beauclerk, then thirty years of age, brother of the preceding king, and who was in the forest at his death, galloped instantly to Winchester, seized the treasures, and consequently much of the royal power, and in three days procured his own coronation. To propitiate his subjects he deposed his brother's favourites; recalled some of the banished nobles and clergy, among whom was Anselm; revived the Confessor's laws; remitted many of the crown debts; banished the prostitutes from court; granted a favourable charter to the citizens of London; liberated some important prisoners; gave additional favours to the church; abolished the infamous curfew regulations; gave all leave to make their wills; corrected the currency; and peopled the castles on the Welsh boundary with foreigners. He was besieged by his elder brother Robert, when he returned from the crusades, who lost not only his kingdom but his liberty; for he suffered a cruel and most unnatural imprisonment in Cardiff, and other castles, for twenty-seven years, after having been deprived of his sight. Robert had sold his right to the English crown for an annuity of three thousand marks, which, finding it difficult to procure, he soon relinquished to save his liberty.

Henry was an oppressive governor, for he spent a great part of his time in Normandy, whose endless wars the English were taxed to support; besides an impost of three shillings a hide for a marriage portion to the king's daughter Maud. He governed mostly through his favourite the Earl of Mellent, whose death much grieved him. The king had a beloved son, whose name was William, who lost his life in returning from Normandy, with two hundred and thirty-two of the young nobles, and eighteen ladies of rank, all of whom were wrecked through the drunkenness of the sailors. When the king heard the calamity he fell on the floor, fainted, and resigned himself to the most violent grief; and is said never to have smiled afterwards; which is most likely to be false, for he subsequently married and engaged again in the wars of Normandy, where he died from eating forbidden lampreys, November 25, 1135, and was embalmed, wrapped in an ox hide, and buried at Reading. He left his kingdom to his daughter Maud, or Matilda, to whom he had, some time before, obliged all his nobles to swear allegiance. Henry had used to say "an unlearned king was a crowned ass." In this reign, Gloucester, York, Worcester, and part of London, which, like all other English towns, were then built of wood, were consumed by fire; Woodstock Park was laid out, and the order of Knights Templars founded.

Stephen, who had sworn fealty to Maud, after having seized the treasures of Winchester, sub-

omed a person to swear that Henry had left him the kingdom, to which there were five prior heirs. He, however, bribed the clergy, and was crowned at Winchester, where he promised what either the clergy or the barons were disposed to ask. The first he satisfied by granting more ecclesiastical privileges; the second, by allowing them to build castles, so that every one who was able built a castle, of which, besides one thousand one hundred and fifteen new ones,* some of which then belonged to bands of powerful robbers, many of the dilapidated were repaired at the beginning of this reign. While to court the people Stephen adopted an affable and jocular habit of talking to all whom he met, Maud, her brother, and the king of Scotland, who was defeated in 1138 in the battle of the standard, all attempted to dethrone the usurper, who successfully retained his seat till having quarrelled with the clergy, who inhabited many of the castles, he fell under their displeasure, which occasioned an invasion by Maud, who, after suffering much,

overcame Stephen in the battle of the barons, at Lincoln, where the king was taken prisoner. Maud enjoyed her prosperity but a few months, for, impolitic towards friends and enemies, she was soon deserted, and Stephen again restored. This was, however, more the effect of the respective parties of the nobles, whose strifes, besides the miseries of war, destroyed trade and agriculture, and induced a famine, in which the flesh of dogs, cats, and horses, was greedily eaten, while whole villages were to be seen without an inhabitant. Henry, son of Maud, invaded England, first obliged Stephen to a truce, and then to stipulate, over a narrow part of the Thames, that he should succeed to the crown, of which hostages were given. Stephen died October 25th, 1154, with whom ended the race of the Norman kings, some of the *minor* events of whose lives (which from the space they have occupied in most books, one would think, formed the principal objects of English history) may be thus condensed.

	Born.	Crowned.	Died.	Places where born and died.	Where interred.	Mode of death.	Where crowned.	No. of Children.		Wars.

NORMANS.

OUR YOUNG QUEEN.

FIRST ARTICLE.

[We copy the following paper from the two first numbers of the "Monthly Repository," which have been edited by Mr. Leigh Hunt, a man whose name, in connexion with the literature of our country, we can never mention without feelings of respect and esteem. The following is from his pen, and affords evidence of that sincere and charitable desire for peace and good-will unto all which has ever characterised his writings and private sentiments.]

We have now a queen on the throne whom we have known in youth, and youth only. We know her but publicly, however; we cannot be said to know any thing of her real character, and probably it is known to very few, if, completely, even to those—so truly feminine is the retirement in which she has been brought up. If the report, however, of her mother's intellectual and moral qualities be well founded, (and the fact of that tranquil education says much for it in many respects,) we may hope that England will experience the advantages, for the first time, of having a queen brought up in a mother's arms, and in a manner at once feminine and wise. We may, in that case, look to see womanhood on

the throne in its best character, and therefore such as may give life and advancement to what is best and manliest in the hopes of the world. But upon this prospect must rest, for some time at any rate, the awful doubt arising from all that is hitherto known of the unhappy chances of royal spoiling; which chances, however, should not prevent us from hoping and thinking the best, as long as we are prepared for disappointment, and commit no offences ourselves, either of adulation or the reverse. Her majesty's position, at all events, is a very serious one, both as regards us and herself; and her youth, her sex, her manifest sensibility, (whether for good or evil,) her common nature as a fellow-creature, and all those circumstances which will make her reign so blest beyond example if she turn out well, and so very piteous and unpopular if otherwise, but of which neither she nor any one else will or can have been responsible for the first causes, (those lying hidden in the mystery of all things,) combine to make every reflecting heart regard her with a mixture of pitying tenderness and hopeful respect, and cordially to pray that it may be consistent with the good of mankind and

* These castles are said to have been raised in nineteen years, and to have been as oppressive to the unwearied workmen as the notorious erection of the pyramids.

best for it, whatever be their particular opinions meanwhile, to see her fair figure continue hovering over the advancing orb, like the embodied angel of the meaning of her name.

We had the pleasure the other day of seeing the queen return from dissolving the parliament. Bells rung, and cannon thundered, and the crowd pressed together with cries of "Hats off!" and "She's coming!" and first appeared horse-soldiers clearing the way, then a gilt coach, very stately, containing lords of the household, and a grave little page behind a great hat and feathers, then another with ladies, and then (all moving slowly, and with abundance of beautiful black and cream-coloured horses, whom we rather fancied than saw) the great coach of coaches, out lord-mayoring the lord mayor, and presenting to the delighted eyes of her subjects the young and handsome queen, gorgeously attired, and crowned with a diadem of gold and diamonds. Most courteously, and with a face of good-humoured pleasure, she kept bowing to the exclamations of "God bless the queen!" "God save your majesty!" uttered in tones more fervent than loud; and so the huge coach went heavily on, putting "hats off" as it proceeded, and shining in the distance amidst a sea of heads and gazing windows, with the gilt crown on the top of its great gilt self.

It was the first time we had seen the queen since she was a child, walking prettily, hand-in-hand, in Kensington-gardens, with a young lady of her own age. Instead of a child somewhat formal in countenance, we now saw before us a fine-grown young woman, (woman is a higher word than lady,) of the order of figures called "buxom," but not inelegant; handsome, indeed, in face, (the person we could not so well see;) smiling self-possessed, but highly pleased; looking healthy, (for she had not the pale look so

often attributed to her,) and crowned, beside her diadem, with a profusion of light-brown tresses; altogether presenting an aspect luxuriant, good-humoured, and highly agreeable. It was the Guelphic face under its very best aspect, and improved, if we mistake not, with a straightness and substance of forehead certainly not common to that portion of her race. We had fancied her darker, from the recollection of her when a child, though, at the same time, more like her father than mother. She now appeared still like her father, with a mixture of something more gladsome and open-mouthed; (the upper lip, we believe, shows the teeth while speaking;) but her crown seemed to rest on a forehead derived from her mother and maternal uncle, (Leopold,) and, we thought, looked all the securer and happier for it. What a problem for the reflecting portion of the spectators to solve, as they stood looking at her on the occasion before us! How affecting to analyse one's own wonder as we gazed, to think of the causes of one's curiosity! How various are the lights (such was the natural reflection) in which this spectacle may be regarded! and how entirely it depends for any real dignity on the good connected with it!

Is it a mere show? Are these servants plastered with gold, these horses, all pride and ribbons, these soldiers, these ladies, these fine gilt coaches, and this wonderfully-superannuated old coachman, who looks as if he had come out of the century before last on purpose to vindicate his right of immortal drive, nothing better than an imposing sight, which might as well be spared, and merely sets idle people gaping? On the other hand, is the spectacle of any solid significance? and if so, is the solidity to be all on the side of the principal object in it? is it simply to add to her power? Then, besides being a puerile compliment to those who admire it, it is provoking to those who reflect, and perilous to all.

A DOUBT.

"Wisdom is oftentimes nearer when we stoop
Than when we soar."—WORDSWORTH.

I know not how the right may be,
But I give thanks whene'er I see,
Down in the green slopes of the west,
Old Glastonbury's towered crest.

I know not how the right may be,
But I have oft had joy to see,
By play of chance, my road beside
The cross on which the Saviour died.

I know not how the right may be,
But I loved once a tall elm-tree,
Because, between its boughs on high,
That cross was opened on the sky.

I know not how the right may be,
But I have shed strange tears to see,
Passing an unknown town at night,
In some warm chamber full of light,
A mother and two children fair
Kneeling with lifted hands at prayer.

I know not how it is, my boast
Of reason seems to dwindle down,
And my mind seems down-argued most
By forced conclusions not her own.

I know not how it is, unless
Weakness and strength are near allied,
And joys which most the spirit bless
Are furthest off from earthly pride.

H. A.

MR. WILLIAMS'S BOOK ON MISSIONS.

A Narrative of Missionary Enterprises in the South Sea Islands; with Remarks upon the Natural History of the Islands, origin, languages, traditions, and usages of the Inhabitants. BY JOHN WILLIAMS, of the London Missionary Society. London, 1837.

THE London Missionary Society, and the Missionary enterprise in which it has so nobly, liberally, and perseveringly laboured and suffered for the space of nearly forty years, have in this volume a splendid and imperishable monument, recording successful achievements in favour of human happiness, which are without a parallel in the history of the world. Christianity is the great civiliser—in the South Sea Islands this has been proved under every state of social degradation and wretchedness. But Christianity civilises, by truths spiritual in their nature, and by an influence Divine in its origin. The Missionaries, therefore, are not only the chief benefactors of their species, and take precedence of statesmen and legislators in the great work of social improvement; but they are the heralds to announce another and a brighter world; they build the edifice of an enlightened, wise, and beneficent civilisation on the basis of an immortal principle, which, by purifying and elevating the individual being, sheds its influence through every portion of society. The time is past for assailing with sophistical cunning or with virulent abuse these noblest of philanthropists; yet, with Mr. Williams, we cannot but regret that there are so few of the wise and the noble amongst us who countenance and contribute to aid their operations.

"To what can this be ascribed? Not surely to any thing in the Missionary enterprise which could dishonour or degrade those who identify themselves with it. Regarded in the lowest view in which it can be considered, as an apparatus for overthrowing puerile, debasing, and cruel superstitions; for raising a large portion of our species in the scale of being; and for introducing amongst them the laws, the order, the usages, the arts, and the comforts of civilised life, it presents a claim, the force and obligation of which every one who makes pretensions to intelligence, philanthropy, or even common humanity, ought to admit; and, if evidence in support of this claim be demanded, the author ventures confidently to assert that it will be found in the following pages. This, however, is taking but low ground. The Missionary enterprise regards the whole globe as its sphere of operation. It is founded upon the grand principles of Christian benevolence, made imperative by the command of the ascending Saviour, and has for its primary object to roll away from six hundred millions of the race of Adam the heavy curse which rests upon them;—to secure their elevation to the dignity of intelligent creatures and children of God;—to engage their thoughts in the contemplation, and to gladden their hearts with the prospects of immortality;—to make known 'the way of life' through the meritorious sufferings of the Redeemer;—in a word, 'to fill the whole earth with the glory of the Lord.' Surely to be identified with such an object must confer dignity on the highest stations, and throw lustre around the most brilliant talents. If, then, there be nothing in the Missionary enterprise to account for the indifference of the more opulent and literary of our countrymen, but every thing to condemn it, we are led to the conclusion, that such a state of things must be ascribed to the circumstance, that the important subject has not been brought sufficiently under their attention."

Mr. Williams modestly adds, that he "can scarcely indulge the hope, that a Narrative with so few pretensions to literary excellence, will meet the eye of those

to whom his remarks refer;"—we assure him, however, that its merits far transcend his appreciation of them. It is just such a work as an enlightened Missionary might be expected to write. Its pretensions regard the right objects; that which ought to be paramount maintains the first place throughout its pages. We have entitled this article, "Mr. Williams's Book on Missions," simply for the purpose of announcing to our readers, that, under this head, we shall furnish extracts, from time to time, which we deem illustrative of either of the divisions of our Miscellany, literature, science, and religion. In this number we begin with the notice of the life of Captain Wilson, who commanded the *Duff*—the vessel which conveyed the first Missionaries to the islands of the Southern Ocean. It is brief, but interesting:—

"The fathers and founders of the London Missionary Society began their labours upon an extensive scale. They purchased a ship, and sent out no less than twenty-five labourers to commence missions simultaneously at the Marquesan, Tahitian, and Friendly Islands. The vessel returned, after a most successful voyage; the Missionaries having been settled, and every thing having succeeded to the wishes and expectations of the friends and directors of the benevolent scheme. This, in a great measure, may be attributed to the skill of Captain Wilson, whom God raised up, and by a series of events, almost without a parallel in the history of man, qualified to take charge of the expedition. When in India, after having rendered invaluable services to the British army, he was unfortunately taken by the French; and, upon receiving intelligence that Suffrein had basely accepted a bribe from Hyder Ally to deliver the English prisoners into his hands, he determined to effect his escape, which he did by leaping from the prison walls, a height not less than forty feet. In his flight, the vast Coleroon, a river full of alligators, obstructed his passage; but, ignorant of the danger he was encountering, he plunged into its waters, and swam to the opposite shore. Flattering himself that his perils were passed, and his liberty secure, he ascended an eminence to survey the surrounding country, when, to his terror and surprise, he was perceived by some of Hyder Ally's peons, who galloped towards him, seized him, stripped him naked, tied his hands behind his back, and fastening a rope to them, drove him before them to head-quarters.

"When interrogated by one of Hyder Ally's chieftains, he gave an ingenuous account of his escape from the prison at Cuddalore. The chieftain immediately charged him with falsehood, adding that no mortal man had ever swam over the Coleroon, and that if he had but dipped his fingers in its waters, he would have been seized by the alligators. Upon being convinced however, of the fact, they all gazed at him with astonishment, and the Turk exclaimed, 'This is God's man.'

"After this he was chained to a common soldier, and driven naked, barefoot, and wounded, a distance of 500 miles. He was at length loaded with irons of thirty-two pounds weight, and thrust into a horrible prison called the Black Hole; and while there so great at times was the raging of his hunger, that his jaws snapped involuntarily when his scanty meal was brought to him. Often the corpse was unchained from his arm in the morning, that another living sufferer might take its place, and fall by the same merciless treatment.

"That he should survive such accumulated misery for twenty-two months, was next to a miracle. At length the monster Hyder Ally was subdued, and the doors of the Black Hole were thrown open, when, emaciated, naked, half-starved, and covered with ulcers, with

thirty-one companions, who alone remained to tell the dismal tale of their sufferings, Captain Wilson obtained deliverance. At a subsequent period, when at Ben-coolen, every European in the ship he commanded died! Yet during all this time his heart continued hardened, and he knew not the hand that preserved him.

"Having been successful in his mercantile pursuits, he resolved to return to England, and sit down content. With this view he embarked in the same ship in which the excellent Mr. Thomas, one of the Baptist Missionaries, was returning to England. Mr. Wilson, being still an infidel in principle, had frequent disputes with Mr. Thomas, who one day remarked to the chief officer of the vessel, that he should have much more hope of converting the Lascars to Christianity than Captain Wilson; so deeply mysterious, at times, are the ways of Providence. But things impossible to man are possible with God; for at length, by a series

of most interesting incidents, he was induced to abandon his infidel principles, and became an eminent and devoted Christian.

"After some years of uninterrupted enjoyment of the comforts around him, a number of the Evangelical Magazine, communicating some embryo views of the mission to the South Seas, fell into his hands, which immediately gave rise to the suggestion, that if his services were either needful or acceptable, he would sacrifice his comforts, and without any prospect of worldly advantage, would embark once more upon the stormy ocean. Thus was this wonderful man raised up, and thus prepared to take command of this novel and important undertaking.

"When we reflect upon the various circumstances which attended the commencement of the mission, we cannot wonder that our fathers had the pleasing impression 'that their undertaking was of God.'"

LAST WORDS.

REFRESH me with the bright blue violet,
And put the pale faint-scented primrose near,
For I am breathing yet;
Shed not one silly tear,
But when mine eyes are set,
Scatter the fresh flowers thick upon my bier,
And let my early grave with morning dew be wet.

I have passed swiftly o'er the pleasant earth,
My life hath been the shadow of a dream;
The joyousness of birth
Did ever with me seem;

My spirit had no dearth,
But dwelt for ever by a full swift stream,
Lapt in a golden trance of never-failing mirth.

Touch me once more, my father, ere my hand
Have not an answer for thee; kiss my cheek,
Ere the blood fix and stand
Where flits the hectic streak;
Give me thy last command
Before I lie all undisturbed and meek,
Wrapt in the snowy folds of funeral swathing-band.
H. A.

NOTES OF TRAVELLERS.

WELLS IN PENNSYLVANIA.—The Alleghany Magazine, published in Pennsylvania, states that a well was dug, some years since, in the great valley between the north and south mountains in Franklin county, Pennsylvania, and another thirty or forty rods distant in Cumberland county, the bottom of which, at the depth of thirty-six feet deep in each, suddenly gave way, and a torrent of water flowed up. A lead with fifty fathoms of line was sunk without finding any obstruction, and the wells remain in the same state at present. The presumption, says the writer, is, that there is a subterranean lake in that quarter, extending under the base of the vast primitive ranges of mountains between the Susquehanna and Pittsburg on the Ohio.

MOROCCO.—The manner in which corn is preserved in Morocco is deserving of mention. A subterranean cellar is dug seven or eight feet in depth, the sides of which are covered with reeds and straw, the bottom part being matted, and straw placed over it. The grain is then deposited, and well protected at top by straw being placed over it: the opening is covered by a large slab, over which the earth is heaped in a mound, to prevent the rain settling and entering. In these kind of granaries, or *matamoors*, as they are called, and which are usually made on sloping ground, to secure them from damp, wheat and barley, I was informed, would keep perfectly good for five years, and other grain to a longer period. The largest *matamoors* are at Rabat, and are capable of containing some hundred bushels.—*Spain, by Arthur de Capell Brooke.*

HANOVER.—There are in Hanover eleven Protestant convents, where young ladies may retire who have sur-

vived the bloom of youth, and have arrived at single blessedness, and may pass down the stream of time, in each other's society, in uninterrupted tranquillity. Each of these institutions is under the direction of an elderly lady, corresponding in some degree with the abbess of Catholic convents. The young ladies receive annually from two to three hundred rix-dollars, with which they are enabled to live genteelly. The restraints of the institutions are not severe. They receive visits from their friends, usually in the presence of their governess, though that is not required, or has been for a short time only. It is not necessary to reside here constantly; a few weeks of each year being sufficient to entitle them to the pension. Some of them accordingly pass most of their time with their friends, and whenever they are thrown out upon the world by the dissolution of their families, they have a refuge to which they can retire, without experiencing those mortifications which are so frequently attendant upon adversity. These asylums are under the direction of government, to which parents, wishing to procure such places for their children, apply. It requires some influence at court to obtain them, as the number of applicants is much greater than that of vacancies. Parents not unfrequently solicit them while children are quite young, and some of them receive the promise of them even from the cradle, although, I believe they do not enjoy the emolument until they approach the shady side of twenty, unless they reside in the convent at least a part of the time.—*Dwight's Travels in Germany.*

SELF EDUCATION.

ARTICLE III.

LET us now mention some of the advantages and defects of self education.

The sort of education we propose, will be in most instances better performed ; the knowledge collected will be more valued ; the difficulties overcome will be gratefully remembered, as motives to future labour ; the habits established will be deeper rooted, and the soul will set altogether a higher value on its attainments, and feel more affluent pleasures as the result ; and this ensures the more faithful transmission of the mental stores to the end of life. An air of mental independence will not be *assumed*, but *grow* up through all the breadth of the mind ; literary authority, and the slavery of opinion, those old friends of error, will be considerably diminished ; and, what is more than all, the mind's individuality will be less crushed and disfigured by the intellectual fashion, which has often strangled genius in the noblest stages of its development. Besides, this education will, on the whole, be more extensive ; and as it is neither confined to place nor time, life itself will be an extended term of learning, and all its events will become part of the educational discipline. For instead of considering education finished at the expiration of youth, the conviction will become established that it is a life-work, which will of itself deliver the mind from a thousand fundamental errors. Look, on the other hand, at the merely *imparted* and the merely *received* thing, which goes by the name of education. It is thought good in proportion to the reputation of the school, or to the degree of its existence. The persons who undertake to set the minds of the rising generation in right action for immortality, are often but the *winded, jaded, or unfortunate* fugitives, who "drag their slow length along" after their own generation ; the maimed members of the intellectual camp, who follow the march of mind merely to live on its bounties, or to shelter behind its protection. Most of the school teachers, it is proverbial, have neither taste nor qualification for their employment, and would never have resorted to it if they had not become widows, or unfortunate in other speculations. But even where this is not the case, how limited are the subjects to which the professional pedagogue confines his pupil ! Language and mathematics are the *principal* things taught at the schools ; and the plot of the intellectual field, which is called *classical*, and which after all, is stuffed with fables, and mythological lumber, and impure narratives, is the only one cultivated to any extent. It is in vain, in most of these schools, that practical science pleads for its share of attention, now, through the minstrelsy of animated nature, and then

through the works of art. The clangor of mills and wheels, the wonders of the water and fire, the mysteries of the lathe and the principles of commerce, the celestial map, traced in lines of eternal fire, and the earth a diamond-mass of natural wealth, the history of mind, and the achievements of social man, call in vain for notice from the horde of fashionable pedagogues. In vain does universal knowledge plead its simplicity, its cheapness, its condescension to children, its ever changing pictures, its ever-multiplying examples, its connexion with happiness, its long neglect, and its Divine origin ; fashion has no ears for truth ; and the *Median* decree is gone forth, that scraps of Greek and Latin, French and Italian, &c., imperfectly acquired, at certain places, in youth, and at a certain expense, shall be considered good education. In vain does nature protest against cramping the genius by the motions of the dolt, or in flogging the dolt to overtake the genius. In vain does it protest against the neglect of juvenile taste, or of working out of the mind all its individuality, by pressing it into the school mould. In vain is the pedagogue shown every day that his imparted knowledge is forgotten before his pupil's beard begins to appear ; and that the recollections of school are kindred to "prison thoughts," and seldom revive in their memory without a shudder or a laugh. The self educationist, on the other hand, knows no bounds to his inquiry, but looks eastward and westward with the same inquisitive interest. He owns no custom in thinking, receives nothing before it is proved, but when demonstrated believes all, however marvellous. He finds his nature in the beginning all disorder ; every pin and screw, every wheel and pivot out of place, and he aims at a general rectification ; and to make all his powers act as nearly as possible according to their original destination. This is, however, a less easy work than that of the Grecian charioteer, who stood up alone in his light car, at the Olympic games, to drive abreast his ten Arabian, and all but wild, stallions, which were yoked with a single band, and glittering in their own foam, and alarmed at the light thunder of their own heels, dashed with dishevelled manes and nostrils of fire through the shouting myriads of assembled Greece, leaping their own height if they saw but the shadow of the whip. Courage and precision of sight were all that was necessary to effect this ; but self education calls upon all the powers, and exercises and produces all the national virtues.

Nor would we omit the occasional and too frequent defects which appear in the self edu-

cated classes. Too many of this class, by the mere education of the mind, excluding the dispositions from the self culture, have become dogmatical, opinative, and even contemptuous. This leads to a hypercritical habit, which is always the badge of mental littleness; and it has inconceivably damaged the repute of self education. I once knew a young man who had disfigured his fine mind, under the notion of educating himself, by the mere study of mathematical science; that is, he had confined himself to one subject and to one set of thoughts, and though they attained to astonishing acuteness, his heart was a waste and his life miserable. For he magnified mathematics above every thing: who knew them was wise, who was ignorant of them was in his esteem a fool. He tried all subjects by that kind of certainty, and therefore confounded the nature of evidence, and lost his claims of talent by a neglect of his character. His intellectual fire, instead of bursting into a crown of glory, scorched the sweet and natural locks of charity, which before fell in simple grace upon his brow, and irritated him with haughty scorn and uncourteous contempt of his superiors. Such is an abortion of the self educated man. Let our young readers then remember that they are not to consider the virtues opponents, but the most valuable auxiliaries in this work.

But we have yet said nothing relative to the education of the senses. The expression will perhaps, among the superficial, raise a smile, but we, who have often profited by a contemptuous laugh, have ceased to be discouraged. It is universally received that the senses are a mediatorial apparatus, to establish and preserve a communication between mind and the external world, as well as between mind and mind; and that without them the external universe would, in relation to man, be virtually annihilated, and every one condemned to an awful isolation of existence. This granted, it is evident that the extent and accuracy of the communication must depend on the perfection of the intervening apparatus of the senses. Hence the loss of sight condemns the imagination, and through it all the mind, to an irreparable poverty; the loss of hearing makes the world silent, and excludes any being from the universal music, as the loss of feeling would fill the heart with constant suspicion and fear. The loss of taste is the removal of the life-guard from the gateway of animal life; and the loss of smell is a virtual destruction of half the animal pleasures. But, perhaps, we cannot better subserve our object than by glancing at the effects of cultivating the senses as they appear in those persons whose professions have made it their interest to educate a particular sense. The science of natural history has arisen almost exclusively from the education of the eye. Where would be the sciences of entomology and botany if the sight were removed?

And is it not by a particular cultivation of the eye that the artist distinguishes himself from his admirers? And who has failed to observe the great benefits that result to the legal pleader from the educational practice of the eye? By a glance he investigates, overpowers, or emboldens his witness; or by a glance he seizes on the leading points of his "brief," which he has only had in his possession a few minutes, though he appears to strangers to have been acquainted with all the *minutiae* of the quarrel. And by an education of the ear *alone* what has the musician done? What a marvellous compensation it becomes to the blind for the loss of sight! Who is ignorant that nearly all the tricks of legerdemain, and all the shuffles of the gambler depend on the exquisiteness to which he has carried the sense of feeling? How frequently the chemist, by a practised taste, will detect the presence of a chemical agent, which it would cost him hours to demonstrate. Now we are convinced that it would be undergirding the work of education with beams of iron, if the senses were as generally educated as the interest of a few has shown to what extent it may be carried. Many a dormant mind would be stimulated into dignified life, while the facts acquired would be incomparably better learned, and would be more numerous. Could our view of the subject be better illustrated than by a simple reference to the poets, the most original of whom, as Chaucer and Shakspeare, evidently laid the foundation of their eminence in a better employment of their senses than their predecessors; while Crabbe, Cowper, and Wordsworth, have, in our own age, by an accurate employment of the senses, on the most commonplace subjects, created a new style of domestic poetry, themselves an evergreen reputation, and have shown clearly that the source of originality has often no other mystery than avoiding the popular error of "having eyes, yet see not, and having ears, yet hear not."

We are quite aware that the use of the senses must depend, (to a great extent,) from natural laws, on the proportionate activity of the mental powers to which they relate; but we also believe, though the faculties within must regulate the exercise of the sensible powers, that the wakefulness of these powers, which may and ought to be artificially secured, would prevent the intellectual doze in which the bulk of mankind pass away their life. The dull child may be substantially quickened by a skilful and constant excitement of the senses; as the inaccurate might be cured by a rigorous attention to the precise qualities which come into contact with the sensible powers. By the same discipline,

* See the late trial of Lord de Roos, whose charge was, that by the improper but skilful cultivation of the power of feeling, he had cheated some of his *peer-gamblers* of large sums of money in accomplishing the *sauter la coupe*.

much of the falsehood of life would be prevented, as a great portion of it arises from the imperfect attention of the senses : and much of the suffering, consequent on fraud, would be spared in the experience of the next generation. Nor would this universe of material beauty, then fare in the next thousand years as it has done in the last. For instead of "the material revelation" lying constantly before the eyes of man, every leaf a picture, limned by the Infinite fingers, here exhibiting the storm blowing up all the pipes of the material organ into untaught anthems, there the buried diamond-nest, flashing like hidden virtues on each other, though unseen, now proving that a beetle's wing, in beauty and colour, is more affluent than the rainbow, and then teaching that the series of the Divine wonders, descending from man, is neither less magnificent nor various than the upper classes of his workmanship ; instead of all this being disregarded, as it has been for the most part, in the previous history of the world, and that by the principal minds that were ever born on earth, the education of all the senses would inlay the imagination with stores of material wealth, out of which the judgment might work its systems, or the heart its consolations.

We beg also to subjoin, briefly, our thoughts on the moral branch of education.

The greatest defect in the popular systems of education is either the entire want of moral instruction, resulting from the feeble opinion that it is impossible to teach morals without falling into some of the forms of sectarianism, or such *jeune* and cold hearted lessons as have disgusted the learner, and appeared to justify the prejudice of the public. We think, however, that in the most sectarian of the public institutions, or in those where there prevails the greatest diversity of moral sentiment among the managers, it is as easy to communicate instruction on fundamental morals, without colouring from the bigot's palette, as it is to teach a child the beauty, parts, and properties, of a plant, without referring to the barbarous jargon and countless divisions of the botanical systems. And, in our judgment, it is as seriously incumbent on public instructors, as its neglect in most instances is perilous to the welfare of youth. By moral instructions we mean such as relate to integrity, pity, courtesy, courage, decision, modesty, prudence, temper, cheerfulness, frugality, gratitude, humility, benevolence, moderation, patience, perseverance, regularity, docility, veracity, temperance, and their opposites.

Who does not see that the happiness of the world is primarily dependent on the state of these mental qualities, which in most of our systems of education are yet abandoned to the influence of chance ? Who does not feel that the most valuable instruction on these subjects

must be alike precious to even opposite sectaries, whose disagreements are not generally about the qualities of fundamental morals, but mainly relate to the best method of propagating doctrines ? And who will not admit to us that it is from ignorance on these subjects that most of our young men miss their road in life ? So that when they are overtaken with its storms, from not having knowledge of the moral armour, they are either driven to frivolous or guilty amusements, sink into dejection, and lose all self-respect, or fly to the miserable solace of infidelity, which, by destroying the difference between good and evil, the connexion of man with the moral universe, and the accountability of his actions, makes "free course" for the passions, and turns human life into an awful masquerade, where superior animals, with angelic forms, play all the diversities of universal selfishness.

We therefore urge our self educating reader to inquire whether he ought not first of all to secure correct *sentiments*, *feelings*, and *practice*, on the above subjects, at least contemporaneously with the education of his intellectual qualities ? and if for no other reason because the right education of the morals will make the development of the other powers more easy and safe, and their attainments more solid and beneficial. If we had permission to enlarge we should prefer no theme to illustrate the importance of this part of our subject to a review of the distinguished men, who in different stations of life have succeeded or failed, according to the state of their moral dispositions.

Lord Bacon is eternally disgraced for want of judicial *integrity*.

Dr. Johnson lost half his influence in life from want of *courtesy*.

James II. lost his throne from want of *courage*.

Cranmer is contemptible from defective *decision*.

Newton's greatness is increased by his marvellous *modesty*.

Dr. Horsley's genius will be always dishonoured by his violent *temper*.

Milton by *cheerfulness* greatly relieved his complicated misfortunes.

Benjamin Franklin, and almost all men who have amassed fortunes, laid the foundation in *frugality*.

Burns was oppressed all through life by the effects of his *imprudence*.

Napoleon might have been saved before he had fallen at all with a little *humility*.

Charles II. The Earl of Southampton partly supported Charles II during his exile ; served him many years in one of his chief offices, and even materially assisted in returning him to the throne, and yet that king refused Lady Russel, the daughter of the earl merely one week's respite of her lord's life : this was monstrous *in-gratitude*.

Sheridan was utterly lost for want of *temperance* and *frugality*.

John Howard has become immortal merely by his *benevolence* and *industry*.

Bishop Burnet, by his *moderation*, has secured the respect and confidence of all parties.

Columbus, by nearly thirty years *perseverance*, through discouragements, brought to light a new world.

Bunyan, by *patience* in prison, overcame his persecutors, and performed a work which will never be forgotten.

Doddridge, by *regularly* rising at *five*, instead of *seven*, and devoting those two hours to one work, wrote his "Family Expositor:" irregularity is the besetting sin of genius.

Walter Scott, by learning many of the local traditions, from the most superstitious of the Scotch peasantry, and by attentively studying their character, acquired the best materials in his imaginative works; such is the effect of *docility*.

Cromwell owed most of his greatness to his *decision*.

The Duke of Marlborough averted many of his calamities by *good temper*.

Andrew Marvel, though a poor representative of Hull, became terrible to the corrupt court of Charles II. by his *integrity*.

Judge Hale was in nothing greater than in generously *forgiving injuries*.

George III. will ever be endeared to the hearts of Englishmen from the *goodness of his domestic disposition* in spite of the defects of his government.

Instead of confining ourselves to the few instances we have just mentioned, illustrative of our remark, that the happiness of the world and the welfare of individuals chiefly depend on the *moral state* of the mind, we might have filled our pages with ten times the number, but we forbear. What might Chatterton, Savage, and Byron, have become if they had attended to this subject? And what did Whitefield, Defoe, and Marvel achieve by its pure influence?

But education in morals is purely the work of the individual himself: as it depends too much on the state of the will and feelings as well as on the knowledge of the heart to be accomplished by a stranger. Knowledge may be *imparted*; but dispositions *grow*, and virtue must be *acquired*; and as the value of the first is regulated by the state of the last things we have mentioned, the most superficial must at once see that his moral education is important, as the labour and responsibility of it will be principally his own. The firm foundation of morals must be revelation, from which all study on this subject will either graduate and measure, or run out into the inane uncertainties of philosophy, whose lights never

yet developed the map of life, much less filled its fields and ways with the luminous joyfulness which "maketh glad the heart of man." There is no alternative but to lay our heart and reason on the rocks of Christianity, or to build on the philosophical waves a float, which the storms may now drift into the regions of fable and enthusiasm, and then into the drearier and colder climes of speculation, where, at best, revelation's sun does but cast a lateral light, which oftener gilds the mountain's tops, than fertilises the plain, or than it cherishes the life of its inhabitants. In morals, there must be a fixed point from which to measure, or there is an end to the itinerations of mind: and if revelation be not allowed to fix that point, there is little hope of its ever being discovered. For the intellectual world has been disputing for the last four thousand years whether "utility," "pleasure," "the nature of things," "necessity," "reason," "experience," "conscience," or "Divine will," is to be the standard; and it is yet as far from being settled by philosophers, as it was when the acute peripatetics were filling the classic groves with disputatious eloquence, which never approached nearer perfection than when it broke out in mixtures of hope and *natural* prayer, that "the gods would vouchsafe them some certainties in moral science!"

In conclusion, self education should rather aim at the establishment of good habits, than a premature collections of opinion; it should confine the attention, at first, chiefly, to fundamental facts, rather than to miscellaneous literature; it should lead to an acquaintance with the best sources of information; it should establish in the mind a conviction that it was a work of self accomplishment; it ought, also, to lead to a very high estimate of the value of minutes and fragments of redeemable time; and it should embrace the sensible and moral, as well as the intellectual, powers of man. It requires solid self knowledge, a sound acquaintance with an attainable standard, a frequent comparison of progress, and no ordinary degree of self control. It will have its peculiar joys, sorrows, and triumphs; but there will be neither loss nor defeat with ordinary care: for missing the road will be one of the methods of learning it thoroughly, and a fall will both illustrate the mental elasticity, and double the vision of foresight. Let no one, therefore, despair of his own success, nor tremble at that of others: for the prevalence of such a self education as we advise, would consolidate the genuine interests of the upper classes, by raising the value of the subordinate characters in life. And why should those classes be excluded from the pleasures of intelligence and taste, since they share the pleasures of appetite and passion with the highest, under the sanction of the same provisions in nature, and from the same law?

PIETY IN THE SEVENTEENTH CENTURY.

[For the following excellent paper we are indebted to the "Literary and Theological Review," of June last; a quarterly work edited by the Rev. L. Woods, jun., and published in New York. We recommend it to the careful perusal of our readers, as containing many valuable suggestions.]

"The truly great
Have all one age, and from one visible space
Shed influence. They, both in power and act,
Are permanent; and time is not with them,
Save as it worketh for them, they *in* it."

COLERIDGE.

No period since the apostolic has been more admirably marked by a happy development of the image of Christ in the hearts and lives of his followers, than the time between the reigns of Elizabeth and George the Third. It was an age prolific in intellectual and moral greatness; it was an age of vast erudition in literature, law, philosophy, and sound practical theology. Great principles sprung up and ripened into maturity; intellects of a giant aspect arose, and brooded over the darkness and confusion of those turbulent and eventful times, and infused into the mass conservative principles, the evolution of which has caused the firm and steady strides of civilisation and refinement to reach from one extremity of the continent to the other, has transformed the dreary wastes of the new world into the abode of peace, the sciences, and the arts, and is now drawing the effeminate millions of Asia within the circle of their almost creative influence.

There are to every period in the history of our race some great characteristic and distinctive habits of thought and feeling, in religion as well as in politics; while, like specimens of statuary, each may possess much in common with the rest.

To trace out some of those traits that gave character and individuality to the period to which allusion has been made, will be our present object.

It was an age of profound psychological research, especially in those departments of the science in which systematic theology has its foundation. How much some may affect to despise the results of these researches is not our concern. But we hazard nothing when we affirm that the leading writers of this period were men trained to severe thought, to keen research, to an iron industry, lucid and masculine reasoning. They delved long in the mine at the unshapen ore; they analysed the laws of their own being, and hence obtained their first principles—the ultimate grounds of their conclusions on great and fundamental subjects. The deep stillness of their closets testified to their avidity for the truth. Introversion of mind became a settled habit. Laden almost to oppression with the

knowledge of the ancient world, they toiled along the dark paths of mental science; and often the diligent and reflecting student will find concealed under "a venerable rust," the pure gold of occult truths, enchased by a sound and healthful reasoning. This knowledge was not a heavy and useless mass; nay, it was pressed into the service of Christ, and made an instrument of promoting his cause in the hearts of his followers, and of suppressing infidelity and apostasy.

The age of which we speak was distinguished for the practical and theological interpretation of Scripture. This, however, was not practised to the exclusion of critical interpretation; on the contrary, there are many well-executed specimens of the latter. To bring out into real life the ideal of the Bible, was the end of their ambition; and how far they succeeded is well known by those who are conversant with the character and writings of the holy Leighton, the godly and ardent Baxter, the great and artless Taylor, the profound and meditative Howe, Flavel, Barrow, and others of a kindred spirit. "If," says Leighton, "some of you be careful of repeating, yet rest not on that; if you be able to speak of it afterwards upon occasion, there is somewhat requisite beside and beyond this, to evidence that you are indeed fed by the word, as the flock of God. As when sheep, you know, or other creatures, are nourished by their pasture, the food they have eaten appears not in the same fashion upon them, not in grass, but in growth of flesh and fleece; thus the word would truly appear to feed you, not by the bare discoursing of the word over again, but by the temper of your spirit and actions, if in them you really grow more spiritual; if humility, self-denial, charity, and holiness are increased in you by it; otherwise, whatsoever literal knowledge you attain it avails nothing. Though you heard many sermons every day, and attained further light by them, and carried a plausible profession of religion, yet, unless by the Gospel you be transformed into the likeness of Christ, and grace indeed growing in you, you are but—as one says of the cypress-tree—fair and tall, but fruitless."

The labours of these men, as interpreters, originated in great love and reverence for the mysterious truths of revelation. This love and reverence for the Bible constitutes another characteristic of the piety of those times.

"They loved the Bible, it was their constant manual; and the only religious philosophy they desired to know was that which could bear the searching, purifying scrutiny of the word of God. Were they metaphysicians, then? Yes; but metaphysicians of an "ethereal mould." They studied to discover, and to present to the minds

of others, the beautiful connexions, the more than earthly harmony of those varied dispensations of the moral government of God which were published successively in Eden, at Mount Sinai, and in the song of the angels to the shepherds of Bethlehem. Did they talk of the soul and its sublime relations? They did; but it was with profound submission to the revelations of Him who made the soul. They rightly judged that all minds must be such as they were declared to be by their Creator. Sometimes, perhaps, they launched out into deep waters beyond their soundings; but even then their ship carried the Master, who could rebuke the surge, and return them in safety to the shore. Reason with them, amidst all its aspirings and flights, which seemed at times scarcely human, was but the servant of revelation. If, in any instances, they followed the *ignis fatuus* of a visionary theory, it was, perhaps, to demonstrate to us the danger of implicit reliance on any other authority than that of the inspired volume, the "entrance of whose words giveth life."

These things, with others, led the way to another characteristic, which gave complexion and distinctiveness to the piety of the seventeenth century. This was an habitual and devout meditation upon the great truths of the holy Scriptures, in all their mysteriousness and remoteness from sense.

The advantages, or rather, I would say, the absolute necessity of this habit is seen, in some measure, from the effects which flow from it.

The want of this habit of profound and pious meditation upon the truths of the Bible, and consequent reflection upon the laws of our interior being, gives the mind a materialising tendency; it places us off from the only just ground of sound philosophical reasoning upon truths, the right apprehension of which demands such reasoning; and it deadens the noblest and purest principles within us. And further, it generates pride and an over-estimate of personal power and worth, a contempt for the opinions of others, and a noisy and disgusting turbulence, if our opinions do not at once revolutionise the sacred customs and institutions of antiquity, and give a new complexion to settled habits of thought and feeling.

But let its presence be felt, and we have the antithesis of these intellectual and moral obliquities. Anchored where storms and winds never beat, a man accustomed to this habit may, without peril, ride where the waves of the highest popular excitement foam and dash about him. The actions of such a man on great and trying occasions are those of moral heroism. He sees not men as trees walking, mountains inverted, and an Utopia in every vanishing cloud; but things in their true aspect. He lays hold on the springs of action, and, from the changelessness of his own principles, labours in the work of

reformation with a firm and even hand, not with intermittent fits and moral paroxysms.

This habit of mind and action was beautifully exemplified by the leading divines of the seventeenth century. By this means, a peculiar gracefulness attaches itself to their writings. Each stood for the defence of truth, firm and self-collected, deeply imbued with the love of it, and a conviction of the certainty of the objects of his faith. The impress of eternity was laid on every moment. In all their religious writings, how much soever of invective they may contain, how dissonant soever their diction, there is an undertone which falls sweetly and softly on the ear, as it were, the soliloquising of a youthful seraph in a heart that inshrines the holy Jesus.

Their imaginative powers, by these employments, were enlarged as they approached the spirit of the higher compositions of Scripture. With a sanctified imagination, restless as the wings of the four beasts the prophet saw in vision, and rich as a golden harvest, wherever they sat down to meditate, there sprang up a well-watered garden, lovely in its own luxuriance, through and around which strayed Arcadian airs. The cross was the centre of their souls. Nursed, like the mountain eagle, amid storms and winds, with a mental nerve rendered consistent by frequent flights around the fastnesses of Calvary, their thoughts wandered through eternity.

Imagination was not the only faculty strengthened by these habits; but the whole inner man was thrust forward towards that high stage of intellectual and moral existence for which we were designed by our Creator. Dwelling in these transalpine regions of thought, unaffected by the low sympathies of the various multitude, their faith gave a tangibility to the most removed truths. Thus viewing the Unseen and Infinite, humility and holy artlessness characterised their whole deportment. With intellects ennobled by such an intimacy with infinite excellence, and with their vast acquisitions of all that was valuable in the men of other times, they rose over their congregations as a full cloud, and held them attentive for hours by thought "instinct with spirit."

Profundity in Divine and human knowledge, without obscurity, meditation without asceticism, spirituality without undue mysticism, pure and simple faith producing love, humility, and a winning artlessness, these all intermingled constitute the ideal of a Christian philosopher and divine. And this ideal we see realised in the outlines of the Christian character before us. A holy harmony and an all-subduing mildness (like evening flute-notes that

"Over delicious surges sink and rise,"

in the dewy air, sthwart the lashed lake that eddies and nestles itself to rest along the strand)

elevate these men to the spiritual life, and embody themselves in them into a presentiment of the angelic and heavenly.

Theirs, then, is an example worthy of imitation; for by the same means every servant of the Lord Jesus Christ may become a scribe well instructed into the spiritual kingdom of God—a rich householder, who may bring forth from his treasure things new and old, giving to every one his portion in due time. Founded on Christ and his apostles, aided and led on by those “whose words are oracles for mankind, whose love embraces all countries, and whose voice sounds through all time,” and inspired by Him “who sendeth forth his seraphim to touch the lips of whom he pleases,”—the modern defender of righteousness may successfully breast the overwhelming tide of philosophy, falsely so

called, and the torrents of misdirected zeal, although he may not remain unscathed by the shafts and vituperations of a baptised infidelity, rank with the stench of the pit, amidst those thunderings, and lightnings, whirlwinds, volcanic eruptions, and earthquakes, in the moral world, that are to precede the battle of the great day of the Lord Almighty.

But their example is not only worthy of imitation, it is imitable. By employing the same means, the despondent saint may cheer his heart with a view of the calm and serene shores of the land of his future destiny, set a rich table in the dreary wilderness, intersperse the desert with cooling oases, and people it, like the dreams of Jacob in the sweet, open air of Padan-Aram, with the guardian hosts of God.

BRITAIN.

CHAPTER X.

By the conquest, religion was brought into a more miserable state in this country; for the English were accustomed to pray daily “from the fury of the Normans, Good Lord, deliver us:” while such was the national insecurity, that the religious offered a prayer every night against robbers. The conqueror, to secure the emoluments for his favourites and the power for himself, invited the papal interference to rectify the disorders of the English church; yet subjected the clerical possessors to military and other service, which was subsequently acknowledged on All Souls Day; forbade either councils, excommunication, or papal interferences without his permission, and separated the civil from the ecclesiastical courts. When William had completed the Domesday book, it was found that out of the 60,215 knights’ fees, of which the kingdom consisted, the clergy possessed 28,115, i. e. nearly half the landed property in the empire. The chief Saxon clergy were deposed on frivolous pretences, and Normans, much inferior to their predecessors, were advanced to the sees of Durham, Norwich, Lincoln, and Winchester. Lanfranc, abbot of Caen, who introduced transubstantiation to the English church, was made archbishop of Canterbury; and Thomas of Bayeux, of York; who were no sooner enthroned, than they began mutual recriminations about precedence, which was not settled until a journey to Rome, two councils in 1072, and many pedantic debates had taken place. Lanfranc, however, as well as learned, was charitable, for he is said to have given away annually, a sum equivalent to about 7,560*l.* of our money. Sooth-saying and fourteen different kinds of divination appear then to have been common. Every prin-

cipal family had its astrologer, whose duty it was to spiritualise the dreams and construct the horoscopes of the family. To preserve themselves from the violence of the age, many females entered the nunnery, while others took up their abode in churchyards, which from having a right of sanctuary were considered inviolable.

Clergymen were often lawyers, and mostly the best mechanics, to encourage which character some of the wealthiest stalls were reserved solely for their use. Thomas of York made numbers of church organs, and set the hymns and translations of the monks to such airs as were then popular, which incurred the displeasure of John of Salisbury, who blamed him for want of gravity of taste. At a council in 1076, the married clergy were merely tolerated, and bishops forbidden to ordain any more of that class. Anselm, *reluctantly*, succeeded Lanfranc, who died in 1089, and offended king William II. by reproving his courtiers for their gay apparel and long hair, of which admonitions the king by no means approved. Anselm soon afterwards left the kingdom on a pilgrimage to Rome, whence he never returned till the year 1100, in the reign of Henry I., with whom he immediately quarrelled about homage. Endless quarrels, concerning right of investiture, were excited between Rome and England, where sons of the priests hereditarily claimed their father’s churches, while the common people worshipped fountains, and sodomy was a crime which the clergy often charged upon their hearers. In a council held 1108, the celibacy of the clergy was again revived by Anselm, who procured the enactment of ten severe canons against the married clergy, soon after which, he happily

died. The married clergy were shortly afterwards revenged on the abettors of celibacy, for which one John de Crema, a papal legate, had been very violent on the day preceding the night in which he was found in bed with a harlot. This was too common an event, many bishops and monks having their concubines and bastards, as well known as themselves. But this accident rather checked than cured the folly, whose tide set in must run its course, which was not completed till many barbarities had been practised on the lawful wives and innocent children of the married priesthood. The papal power had now come to the flood, and nothing was to be undertaken without permission of the Pope, whose modesty declared that nothing of importance in any country ought to be undertaken without his authority! Similar scenes of internal strife and foreign appeal, intrigue and superstition, make up the ecclesiastical history to the end of this period; and by nothing did the papal power more secure its ambitious projects in England than by the establishment of the legatine authority.

Multitudinous are the wonders which the monkish writers attribute to the worthies of this period. Thomas à Becket was said to have cured the lame, the leper, the deaf and the dumb, (if not to have raised the dead,) while it was a sort of pleasantry to him to resuscitate dead birds, butterflies, or even rotten animals. This same Becket would sometimes condescend to reap and make hay at the monastery, and at others regale himself with a meal which cost a sum equivalent to 75*l.* of our money, attended by six hundred or seven hundred knights and squires. While on a journey, he had generally above two thousand attendants, consisting of pages, clerks, squires, and knights, who were mounted, and clothed according to their grade. Two wagons of ale, one containing his chapel trinkets, one his bedroom furniture, one with his kitchen utensils, formed the first part of his procession; and twelve pack-horses carried his money, plate, books, and mass paraphernalia. Under each of his wagons was a mastiff, and on each horse a monkey. (No unfit symbols of their master, or of the religion of which he was one of the prime *Reformers*.) William de Longchamp had above a thousand horsemen in his retinue. In the same period the monks of Canterbury had seventeen, and those of St. Swithin's thirteen dishes every day at dinner; and when the abbot of the last named monastery diminished the number to eleven, they complained in tears and prostrate to the king. Churches were built low, very plain, and with few lights; their architects were the monks who filled the cathedrals and conventual churches with statues, paintings, and other heathen devices.

The church walls and ceilings were painted with such historical or imaginary subjects as were

supposed to explain the biblical history, an art which was sometimes by the monkish *Angelos* a little overshot, when they introduced in the "Route of Sathan," "the Raulmes of Purgatorie," &c., the defeat of the Saracens, or the hounds and rabble of the neighbouring baron, which no doubt greatly contributed to the "solace of the faithful."

Some of the clergy were the richest men in the kingdom; for Roger, bishop of Salisbury, died in 1139, worth a sum equivalent to 41,000*l.*, while the money of Roger, archbishop of York, was incredible.

The crusade was enforced on the attention of the people by plaintive songs, exhibiting the sorrows of Jerusalem, by paintings and images, which rudely represented the indignities which the Arabs offered to the holy sepulchre, and by much eloquent, but misdirected, zeal. There was in this period a metrical translation of the Bible, undertaken by some unknown rhymers, whose art was performed in a language which was then *little more* than a huddle of Saxon and Norman phrases, with some bad latin and a little old British, which, after all, was probably the truest picture of mental Britain that could be supplied. One of the most alarming powers which the church in that age exercised, was that of excommunication. The clergy were, by Eadmer, called "more wolves than shepherds;" a proof of which may be found in the fact, that many of the monasteries had above two thousand slaves. The long hair of the Normans the clergy often cited as a mark of reprobation; and in this crime Anselm excommunicated them, which so terrified Henry I. and his courtiers, that they cut off their flowing locks. But during the action of these ecclesiastical comedies what had become of the religion of the cottage? and where were the priests of Jesus Christ?

LEGAL AFFAIRS.

The conquest increased the number of the virtual slaves in this country; for the Saxon theowl, the burgess, and the inferior thane, who were in many cases deprived of their property, swelled the numbers of the bordars, cottars, and villeins, of which, according to doomsday and other authorities, there appear to have been—

Serfs.

Cotterii, slaves, who practised mechanic arts for the benefit of their masters, and were attached to the estate.

Bordarii, that is, household servants: in gross, that is, the personal property of their masters.

Villeins: regardant, that is, predial servants, who belonged to the lands.

Burgesses, or free citizens.

Of these villeins, in gross, or the personal servants, almost every decent family, either in England or Scotland, had one or more, according to Hoveden. Very occasionally some of the individuals of these classes obtained their freedom,

from some of the numerous reasons which have ever led to the liberation of slaves; and in this respect the clergy were great blessings to the slave population, for they always preached up the virtue of manumission, although many of them were some of the greatest slave masters in the island!

The Normans are mostly the ancestry of the upper ranks in this country, while the Anglo-Saxons were the progenitors of the middle and inferior classes; who, in consequence, must be considered the older residents, and the nobles the new comers, or the descendants of aliens.

The middle classes (alas, how different from

Thrice annually, with their hands between the king's, the great earls swore allegiance, on their knees, for the thirty-two thousand and one hundred knights' fees which the nobles possessed; while William obliged the clergy, who are by some said to have possessed twenty-eight thousand one hundred and fifteen of the same fees, to do homage for their lands. This giving homage was one of the most imposing spectacles in that half barbarous age; for while the king put on every trapping of state, the nobles brought all theirs; as well perhaps to prevent him from asking more, as to justify themselves in giving what they did with the greatest reluctance that was possible. But the homage days were festivals. Ladies then felt all their charms; the minstrels flattered with more assurance; the wassail bowl was often emptied; the jester often raised the laugh; and the mirth of the night almost oblivionised the slavery of the by-gone day, and the thought that they were still slaves. This tenure was a sort of life-loan of the estates, which, in the event of the possessor dying with children who had not attained their majority, reverted to the king with their wardship, which was at once a source of power and emolument. The heirs also paid large bounties to the king, who not only sold them permission to marry but a commutation of field services, and also freedom from other sources of vexation. And what the king demanded from his greater subjects they required from their vassals, the meanest of whom were compelled to till their lands without remuneration, and fight in quarrels in which they had no interest.

The Norman soldiers were either clothed in armour or a quilted cotton jacket and an iron

the moderns!) were formed from the degraded Saxon thanes, the ceorls, who had been neutral in the wars of the conquest, and some of the inferior attendants of the Norman freebooters, and these generally formed the more respectable inhabitants of the cities. The nobility were the personal or relative friends of the conqueror; who had given to them, on the condition of their continuing in his service, a barony, which was worth four hundred marks, and on that account its owner was called "baron."

William secured for himself one thousand four hundred and twenty-two manors, inclusive of numberless farms, forests, &c.

Manors, which were given on condition of military and civil services, personal attendance at the court thrice a year, and, in some instances, provision for the king's household.

The county of Chester.

cap, and carried a bow, a sling, a spear, and a sword. The cavalry wore greaves, a coat of mail, and a helmet. The earl and the baron commanded their vassals in war, who sung as they went to battle, to which they were often stimulated by the clergy. One of the most dangerous instruments of war was the Greek fire, a compound of bitumen, sulphur and naphtha, which was thrown by a machine, and even burnt clearer when it fell into water.

In the year 1086, the conqueror made a congress of the serviceable military force, which amounted to about sixty thousand armed men, each of whom was expected to bring with him two or three auxiliaries, such as archers, &c.

The Saxon courts were superseded by that of the baron, whose authority extended over his barony; by that of the earl, whose earldom was almost absolutely under his sway; and by that of the king, whose court was supreme. The baronial court was held in the hall, or in the castle. The court of the earl often assembled in the chief town; but that of the king depended on his migrations.* The seven principal officers of state were the high treasurer, the chancellor, the great chamberlain, the high steward, the marshal of England, the constable, and the chief justiciary. These judges sat in different rooms, of which one, from a chequered cloth on the table, was called the "exchequer." But when William I. severed the ecclesiastical from the civil courts, an event of malign significance in that age, the clergy set up several courts of their own, known by the name of the archbishop's, or supreme court; the bishop's court, or consistory; and the court of the archdeacon,

* Madox's Excheq.

answering somewhat to the hundredary of the Saxons. The Norman parliament appears to have been for a long time merely a convention of the most powerful persons, whether lay or ecclesiastical, (natives excluded,) who, doing the best for themselves, supposed they were consulting the welfare of the nation. And for a time it was difficult to keep out the populace from entering among the members of the parliament.

It appears to have been at that time very difficult for a person of little property to obtain a legal settlement of a dispute without some exorbitant gift to the king, who would neither appoint to offices, nor protect his subjects without remuneration. Such was William's oppression to his English subjects, who were, however, courted by his successors to carry on their wars, that in a few years after his accession, there was not one who held any important office either in church or state. This introduced the Norman, the only tongue the aggressors knew, from their perfect acquaintance with which, the clergy became the chief legal clerks, whence their present name.

The Saxon signatures, in legal writings, gave place to the Norman seals, which are still used at the foot of charters, and which were introduced on account of the grantors' inability to write. Such was the erudition of these spiritual lawyers, that they were often obliged to resort to the ordeals of fire and water, and especially to the duel, to decide on whose side equity lay! *These clerical lawyers are in very ill savour with the historians for "being covetous and venal above all men," nor did they occasionally refuse to fight when they were either defendants or plaintiffs.*

It is needless to say the loser was considered guilty. The priests, minors, and women, generally procured substitutes for the duel, the regulations of dress, weapons, time, and place, con-

cerning which may be seen in the larger historians. Whoever wishes to see a more enlarged account of the lawless tricks of the powerful clergy, relative to the ordeals in this age, may read Madox, and other historians of the period. Fines, gifts, talliages, tolls, rents, reliefs, and forfeiture, formed the income of the Norman kings, who appear to have realised an annual sum equivalent to about 600,000*l.* of our present money.

The sources of the crown revenue in the Normanic period were

1. Voluntary offerings.
2. One thousand four hundred and twenty-two manors.
3. Rents from forests, parks, chases, houses, farms.
4. Forfeitures and fines.
5. Church vacancies.
6. Customs, tolls, &c.
7. Talliages; that is, extraordinary exactions.
8. Hearth money.
9. Amerciaments, or arbitrary fines, for faults real or imputed.
10. Oppressions of the Jews, guilds, foreigners.
11. Queen gold, that is, all who owed the king were obliged to pay to the queen so much per cent because she was the king's wife.

Crimes were in many cases still atoned by pecuniary mulct; that for a murderer was forty-six marks, though hanging, suspension by the feet, beard, or thumb, suffocation, mutilation, and hunger were more common.

In the time of Stephen, the pandects of Justinian were brought to England, where one Vacarius explained them to the people, though the rulers were violently opposed to them, for evident reasons.

TRUTH.

ARTICLE II.

THE love of Truth, which may next be adverted to, can be scarcely admitted as a concomitant in other minds than those who possess a desire for knowledge, and which must be always in proportion to the habits, education, and intellectual character of the individual professing it; for, like every other feeling grafted upon human nature, the love of truth is chiefly to be fostered by culture, and the opportunities of gratifying it. It is the natural bias of the human mind, that when neither disturbed or beaten down by anxious cares, it should soar upward and aspire to those loftier themes in which intellectual powers delight to indulge themselves, and it is by the noble exercise of these that man becomes, in the language of Bacon, the servant and interpreter of nature.

Now if this principle be applied to the subject under our consideration, we shall find that there must exist within the circle of every man's mind, a law which impels him to love the truth; and can that law be explained by referring it to the pleasure derived from the discovery and contemplation of truth, or to the pleasure we experience in the moderate use of our mental powers? or is it to be regarded as the love of knowledge or the principle of curiosity?

To answer these questions in a manner calculated to arrest the attention of our readers, we must amplify in some degree our remarks on this subject. When we seek to discover a truth, that discovery when made gives us pleasure; and the reception of such pleasure is an inherent portion of that mind from which all conscious

sensations are derived. The capacity of receiving pleasurable and painful impressions has been stated by some philosophical writers to form "the very essence of feeling." Indifference to these can only arise from their frequent repetition, or when either one antagonises the other in the same person and at the same period of time. It never occurs as a primary result. The blind, when first restored to sight, are never indifferent to the radiance and glory of the light which surrounds them. The deaf, when they first hear, receive the most exquisite impressions of pleasure from the sound of the human voice, or the harmonious notes of music. If, therefore, we admit, as we must do, that the first impressions made upon our sensations are those of pleasure, we shall be fully borne out in supposing that any impression, or series of impressions made upon our minds, shall affect them with the same results. It may not be competent, perhaps, to explain that ultimate and simple feeling of pleasure which arises from the perception of truth, but it may be stated, that as truth can only be considered as associated with the understanding, so does the understanding receive pleasure from the objects fitted for it in the same manner as the senses do. The exercise of all our sentient faculties constitutes the existence of consciousness—consciousness is again increased to many points of energetic and multiplying pleasure, by the exercise of reason—reason engages our attention by the discovery of diversified relations, and those relations which we perceive to be really in existence, we believe to be true. If we reconsider this argument, we shall discover that the understanding forms the basement-stone, and truth the topmost pyramidal summit; the one is indissolubly based and founded upon the other—they are equally existent, and united the one to the other. Truth, therefore, must be considered necessarily and universally the sole object of the human understanding. The thing which we judge and think of by the understanding, that we judge to be true. Our love, therefore, of truth may be said to be much the same as our idea of pleasure

of life, for the perception of truth constitutes those feelings which are associated with life. None of our mental powers are absolutely free from error. We may perceive that a proposition is false, but we are even then contemplating a truth, for the one throws light upon the darkness of the other. If, therefore, we give our affections to any subject of mental perception, it must be to truth. It is only another evidence of life, and of life as dependent on variously constituted mental sensibilities.—The pleasure which we experience from the love of truth may also arise from the mere feeling of novelty—nor will this be either given up or destroyed, save when it falls upon the mind by the frequency of its repetition, or awakens by its nature uneasy or unpleasant feelings. If, therefore, the simple feeling of novelty, in conjunction with truth, gives pleasure, how much more must it be heightened and increased, when it is found to spring from many complex sources, and out of error and obscurity to bring us into the shining of a better and more perfect light? How many tired wanderers from the "ways of holiness," and the "paths of peace," have a few simple words of Gospel truth brought back again to the home and the fold of that "good Shepherd," who "careth for his sheep?" and how many have lived to bless the golden dawn of that happy day when they escaped from the trammels of iniquity and the burden of error, and clad themselves in the robes of truth and the garments of salvation? Truth then, as an object of regard and love, may be looked upon as the vivifying energy of new feelings within us, bringing with it its wealth of golden knowledge and advantage.

Thus, then, this inquiry furnishes us with another abundant evidence that our Creator, in placing the love of truth within our reach, has opened to us another bountiful source of good and pleasure. The most attractive inducements are placed before us, in order that we may gain this new love, and gather from it a further understanding of that love which a Heavenly Father bears to all his children on earth. *EPHON.*

MENTAL DEPRESSION.

"How weary, stale, flat, and unprofitable,
Seem to me all the uses of this world!"

THESE are moments, reader, cold, dreary, cheerless moments, which occasionally obtrude, like the visits of a demon, into the history of the wisest and the best. Do you anticipate my meaning? If not, pass on to the next article, for I speak to sympathy. "Why, who does not know that life has its sorrows as well as its joys? there needs no ghost come from the grave to tell us this."—My good reader, pass on, as I re-

quested you, to the next article; I speak to sympathy.

The state of mind which I contemplate acknowledges no relation either to a whining sentimentality on the one hand, or to a convulsion of grief on the other; it is marked by silence, self-possession, and retirement. It does not resemble that common, universal sorrow which has suggested the idea of comparing life to the ocean; it is more like those subterranean depths sacred to darkness and silence, which curiosity

approaches with caution and superstition, with awe. It does not so much resemble the darkness of midnight as it does the twilight of a summer's evening, when even inanimate nature seems deep in thought, and the mind, detached from the interests of earth, wanders to other worlds and systems. It depends not for its continuance on time and place, though it has its preferences, and often ejaculates "O that I had wings like a dove, for then would I flee away and be at rest!" It is not averse to communion, for it will "weep with those that weep," though it cannot "rejoice with those that rejoice." Its course is far away in the past or the future, though it commonly takes its rise in some present object or passing incident. Selfishness does not enter into its composition, for it often looks abroad with interest on the condition and prospects of the species, and even of the universe.

Reader, hast thou friends? are they far away? have they forsaken thee? or are they dead? Then, at such a moment they will appear before thee with their several peculiarities of character; they will come from the regions of the dead as well as of the living, and seem to stand around thee with looks of affectionate concern. Are there spots in the past dear to memory and friendship? places where you first met or last parted with a congenial spirit? where you have often been the subject of deep feeling, or have taken sweet counsel? They will all pass in slow and thoughtful review. Have you been misunderstood, frowned on, and buffeted by the world? you will then say, "My soul hath them still in remembrance, the wormwood and the gall." Is there a point in the path of life to which you fancy you must attain before you can deem yourself safe and happy? it will then seem to recede far into the distance, and to defy your attempts to reach it. Is health a timid and unfrequent companion in your course? you will then catch, in the ear of fancy, the distant sounds of gladness, uttered by those who started

at the same moment as yourself in the career of active life. And while you mark their happy, healthful, easy progress, you will feel the immeasurable distance at which you are left behind to pace along with slow and painful steps. Influenced by such feelings and reflections, the imagination may lead you imperceptibly onwards through scenes of treachery, oppression, suffering and want; for in a world like this it requires but little invention to pourtray such scenes; the materials are all around. The most familiar objects will, at such a moment, assume an appearance almost unearthly, and the strains of music and the voice of mirth will fall on the ear like sounds from another world; and, with Cowper, you may sigh,

"O for a lodge in some vast wilderness,
Some boundless contiguity of shade!"

And where, reader, amidst this gloom and prostration of mind, is a remedy to be found? where but in religion? Reflect, at such a moment, that His eye who never slumbers is fastened on you in compassion; that His hand who supports the universe is stretched out to raise and sustain you. He offers you a staff for your pilgrimage, a balm for your wounds, and a lamp, lighted at the altar of heaven, to illuminate every scene of darkness. And to crown his other acts of love, he points you to his Son as to a friend who never misrepresents, never forgets, never abandons those who give him the confidence which he solicits, and whose peculiar claim to our affection is, that he is touched with the feeling of our infirmity. And when, invigorated by these consolatory reflections, you remember that he has engaged to renovate the moral world, and is actually carrying forward the grand undertaking towards perfection, you will look up and perceive a sphere for your activity, and a subject to employ and exhilarate your mind.

WILLIAM WORDSWORTH.

FOURTH ARTICLE.

It is an object to us of much regret that circumstances as unexpected as they were uncontrollable have conspired together to blot out all thoughts of our author and his works from our minds and memories for many weeks past. The world has been our task-master—its courts and its cities have been the scenes of our suffering and endurance, and its wily and savage slavery has surrounded us with the weight and toil of its more than nightmare suffocation and terror.

At the close of our last article we promised to present our readers with some remarks on the

peculiar theories in which our author has involved the subjects of Poetic Diction, and Poetic Imagination, and this promise it is now our purpose to fulfil. If we take up the subject of our contemplations generally, we shall first inquire what is meant by a poet; secondly, we shall consider from previous inferences the peculiarity of language in which he conveys his sentiments and which has generally received the name of Poetic Diction; and, thirdly, we shall consider the origin and source of that feeling which is the prompting-pulse of his every thought and ac-

tion, and which we shall denominate imagination.

What is a poet?—He is a man, as other men are, to all external appearance: but in his inner mental sensibilities he shows first to himself, and then to the world around him, a loftier and livelier awakening to the influences of all feelings; they impress him with a stronger and sterner power, they are his idols, and he boweth himself down before them in humble worship and adoration, they are his companions through this world, and his viewless and radiant guides to the lofty world of spirits, whose spheres he inhabits as the soul of the sleeper inhabits the sphere of a dream—in mystic and wondering consciousness. These “flights of fancy” invest his mental powers with a high, and in some instances, with a daring degree of enthusiasm, concerning “things above,” which in a vision he has as a mortal only yet dimly seen, whilst concerning “things below,” he is enabled to view the vices and crimes of this mundane existence with a softer and holier degree of reverential tenderness than he had before done. This latter attribute, it may be remarked, is held in esteem by few, and imperfectly understood by many—consequently, that which should inspire regard awakens but uncandid and resentful feelings—and that which should give to his character all the ennobling loftiness of admiration, causes him most frequently to fall under the lash of severe and detrimental sarcasm. Viewing all things through this misty and early dawning of inspiration, it may be well conceived that as he pronounces a mild judgment on the follies and iniquities of mankind, so he views them on a very wide and enlarged sphere of his existence—his soul is permitted to take flight over a more extended expanse of mankind, and its creation; and he looks down upon them through a wider sphere of intellectual vision than the surrounding classes of his fellow-men and mortals. The delightful rejoicing of the life which is in him, which is an ever-present and ever-enlivening cause of enjoyment, is another of the rewards and pleasures of which, in mental taste, he is permitted to partake from the richly gifted ideas of men and things, which are to him the intellectual birthright of an acquired and highly sensitive sphere of existence. If he receives a new and increased freshness of pleasure from the visionary world of thought, which he has created, and in which his powers of volition enjoy a lofty and uninterrupted sway, so does he delight to contemplate “similar volitions and passions as manifested in the goings-on of the universe, and habitually impelled to create them where he does not find them.” This latter power is one of the most radiant and shining in his system; by it he has the wish and the desire to bring all created things under the same dominion and ruling power as himself; he would have all that are “athirst” drink of the fountain

that has been made sweet by the stirring of the angel; he would have the broken-hearted and the mourner to be a partaker of the same intellectual joys as himself; he would have the wide world to be but one vast republic of mental happiness and joy; and wherever he met with “clouds and darkness,” there would he shine a sun or a star. To these qualities it may be remarked, in addition, that the memory of a poet is as elastic as it is strong—it is as powerful as it is lasting; and from the very hardihood of remembrance, (if we may make use of such a term,) he possesses the will to make the absent thought as an ever present thing with him—to give to those events and circumstances that to the common and intellectual eye are hidden in the darkness and obscurity of the past—“a local habitation and a name” amongst the things that are of the present; and robes them in a rich and gorgeous drapery, that to the vulgar eye is totally unbecoming those events which death had long since clad in the white cerements of the grave.

We must here check our remarks by the following beautiful quotation from the prose-poetry of this gifted author, in which, speaking on this topic, he says:—“The object of poetry is truth—truth which is its own testimony, which gives competence and confidence to the tribunal to which it appeals, and receives them from the same tribunal. Poetry is the image of man and nature—it is an acknowledgment of the beauty of the universe;—it is a task light and easy to him who looks at the world in the spirit of love—it is a homage paid to the active and naked dignity of man, to the grand elementary principle of pleasure, by which he knows, and feels, and lives, and moves. The poet considers man and nature as essentially adapted to each other, and the mind of man as naturally the mirror of the fairest and most interesting properties of nature. The poet sings a song, in which all human beings join with him, and rejoices in the presence of truth as his visible friend and hourly companion. Poetry is the breath and finer spirit of all knowledge; it is the impassioned expression which is in the countenance of all science. Emphatically may it be said of the poet, as Shakspeare hath said of man, ‘that he looks before and after.’ He is the rock or defence for human nature; an upholder and preserver, carrying every where with him relationship and love. In spite of difference of soil and climate, of language and manners, of laws and customs; in spite of things violently destroyed; the poet binds together, by passion and knowledge, the vast empire of human society, as it is spread over the whole earth, and over all time. The objects of the poet’s thoughts are every where; though the eyes and senses of man are, it is true, his favourite guides, yet he will follow wheresoever he can find an atmosphere of sensation in which to move his wings. Poetry is the

first and last of all knowledge—it is as immortal as the heart of man.”

This last passage is one of the most beautiful we have ever met with—it is a lump of pure and fine gold, dug from the mine of truth and poetry.

Peruse it, oh, reader, and let it sink into thine heart, till thou art filled with that high esteem and exalted admiration with which the world should ever look upon its intellectually-gifted author—William Wordsworth! ERNOX.

OUR YOUNG QUEEN.

SECOND ARTICLE.

But is it meant also in good faith and regard to the people? Is love to come of it? and joy, of which this joy is an earnest? Then, oh then, the whole business takes another aspect, which is yet “another and the same;” that is to say, including all which is good for the love, good for the power, and pleasant, nay, amusing in the recollection, even in the tale of Cinderella in the story-book; for it is wonderful what kindness does for every thing, small as well as great, and how it fuses the childlike, and the laughing, and the respectful, the playful, and the dignified all in one, and converts a gaudy spectacle into a thing at once grand and good-natured, like the sunshine. As such we, for one, willingly looked at it with eyes of hope, enjoying, in no unpleasant confusion of ideas, our fairy tale, our belief in the good-will, and our own good-will, accordingly our own willing concession in the power, with that understanding. There rode our young queen, like a proper queen of romance, with her radiated diadem; then we at once smiled at, and felt a reverend concern for the good old coachman; and somewhere, we know not where, (but not far off, we trust, in point of time,) was the young prince, or lord, whoever he might be, destined to complete the happiness of the lady, and make her, and all the rest of us, “live happy after.”

Her majesty's appearance in the House must have been very striking, particularly at the period when she remained courteously standing for some time, in return for the rising of the peers, smiling and pleasantly looking about her, with the ribbon of the garter across her bosom, and the diadem on her head. Some speak of having seen a tear in her eye at another time, and of a compression of the lips, manifesting some emotion kept under. The prevailing impression is, that her majesty has great sensibility; and though we ourselves discerned nothing but self-possession in her manner, as she passed us on her return from the house, nor a greater flush of the face than was consistent with it, it is evident, from all that has yet been seen of her since the moment when she melted into that affecting and self-pitying flood of tears at her proclamation, that the general conclusion on this point is correct, and that we have a sovereign who is very sensitive, and liable to feelings which she can

but little conceal—a temperament very charming, if it run on the wise and generous side; and very happy for the possessor, if it succeed in diffusing happiness; but perilous to all parties if emotion is indulged from inability to deny itself its mere will and pleasure.

Hard is the lot of sovereigns, as well as those whom they may injure by such temperaments, when we consider how they *must* be rendered liable to more than ordinary spoiling by the mere fact of their being sovereigns, or of growing up under the probability of becoming such. But our hopes on this subject take refuge in the recollection of the more than ordinary advantages which her majesty—to assist her against these chances—has enjoyed, or is understood to have enjoyed, in the instruction and society of an excellent mother.

Consider a human being so young, and of a sex as well as age the most sensitive, standing in that ascendant manner before a crowd of her worshipping elders, blazing with wealth and gorgeousness, cried after and blessed wherever she appears, never moving without exciting an interest intense, possessing actual power of the rarest and most peculiar description, conferring honours, altering and exalting the colour of people's sensations for their whole lives, and, on occasions like the present, issuing forth like something superhuman in human shape, announced with ecstasies of pealing and crashing bells, and the leaping thunder of cannon. Who could wonder if the wonder itself were almost too much for the brain of human being so raised above its fellows? Or who has a right to quarrel with the object of such worship, if a less sensibility take its merits for granted, to the detriment of those who impute them? At all events, is not the thing itself a wonder in man's history, and reasonably calculated to excite reflections of the deepest nature on the phenomena of circumstance and Providence, whether to purposes of duration or vicissitude. We were among those who felt the gravest and heartiest good wishes for the prosperity of the young being before us, both as woman and queen; desiring, as we do, amidst the great but gradual changes which we certainly do desire, none that should render her existence, in that station, incompatible with all the modifications conceivable for the

greatest good of the dwellers in this world of ornament as well as utility. An innocent female may surely make as good a sovereign, for the noblest order of things, as a man; and we are not among those who take all the superficial aspects of things reasonable for the only ones, or who see nothing desirable in what administers to the natural passion of mankind for looking up to something above themselves.

One great change, good for her and for every-

body, (from all that we ever understood of occasions like the present,) we noticed with delight in the behaviour of the multitudes assembled; and that was the mixture of fervent good-will with the absence of mere slavish noise and gratuitous enthusiasm. The expressions used were deep in the quarter where we stood, and therefore, we conclude, elsewhere. But there was no huzzaing, no loss of the crowd's own self-possession, no violent outbreak of any sort.

REVIEW.

A Commentary on the Epistle to the Romans; by CHARLES HODGE, Professor of Biblical Literature in the Theological Seminary at Princeton, America. London.—The Religious Tract Society. 1837.

SELDOM has it fallen to our lot to introduce to our readers a work that has so many claims on their unqualified approbation as the present, of transatlantic origin; it not only reflects the greatest honour upon the biblical and theological acquirements of its learned author, but confers a flattering distinction upon the seminary over which he presides.

America may well be proud of her colleges, while their chairs are filled by such men as Professor Hodge; and the sacred literature of our country is greatly indebted to the spirited and liberal committee of the Religious Tract Society, for reprinting this Commentary on the Epistle to the Romans for the benefit of our pastors and churches.

The introduction is a well written essay, embracing the following topics: "Paul"—"Origin and condition of the church of Rome"—"Time and place of the composition of the Epistle"—"Its authenticity." Then follows an analysis of the whole. The author of the commentary takes the chapter of the epistle as he finds them in our authorised version, occasionally dividing them. And of each chapter, or selected portion, he gives, first, the contents; secondly, the analysis; thirdly, the commentary; fourthly, the doctrines; and fifthly, the remarks; bringing all to a practical result. As we do not intend to exhibit any thing profoundly critical in the notices of the works that are submitted to our perusal, but rather to aim at interesting our readers, by giving from every production something worth their remembering; we shall, in the present instance, content ourselves with quoting the author's account of St. Paul in the introduction, and his commentary on the passage in the fourth chapter—"Abraham believed God, and it was counted to him for righteousness."

"When Paul and the other apostles were called to enter upon their important duties, the world was in a deplorable, and yet most interesting state. Both Heathenism and Judaism were in the last stage of decay. The polytheism of the Greeks and Romans had been carried to such an extent as to shock the common sense of mankind, and to lead the more intelligent among them openly to reject and ridicule it. This scepticism had already extended itself to the mass of the people, and become almost universal. As the transition from infidelity to superstition is certain, and generally immediate, all classes of the people were disposed to confide in dreams, enchantments, and other miserable substitutes for religion. The two reigning systems of philosophy, the Stoic and Platonie, were alike insufficient to satisfy the agitated minds of men. The former sternly repressed the best natural feelings of the soul, inculcating nothing but a blind resignation to the unalterable course of things, and promising nothing beyond an unconscious existence hereafter. The latter regarded all religions as but different forms of expressing the same general truths, and represented the whole mythological system as an allegory, as incomprehensible

to the common people as the pages of a book to those who cannot read. This system promised more than it could accomplish. It excited feelings which it could not satisfy, and thus contributed to produce that general ferment which existed at this period. Among the Jews, generally, the state of things was hardly much better. They had, indeed, the form of true religion, but were in a great measure destitute of its spirit. The Pharisees were contented with the form; the Sadducees were sceptics; the Essenes were enthusiasts and mystics. Such being the state of the world, men were led to feel the need of some surer guide than either reason or tradition, and some better foundation of confidence than either heathen philosophers or Jewish sects could afford. Hence, when the glorious Gospel was revealed, thousands of hearts, in all parts of the world, were prepared by the grace of God to exclaim, This is all our desire and all our salvation.

"The history of the apostle Paul shows that he was prepared to act in such a state of society. In the first place, he was born, and probably educated in part, at Tarsus, the capital of Cilicia; a city almost on a level with Athens and Alexandria for its literary zeal and advantages. In one respect, it is said by ancient writers to have been superior to either of them. In the other cities mentioned, the majority of students were strangers, but in Tarsus they were the inhabitants themselves.* That Paul passed the early part of his life here is probable, because the trade which he was taught, in accordance with the custom of the Jews, was one peculiarly common in Cilicia. From the hair of the goats, with which that province abounded, a rough cloth was made, which was much used in the manufacture of tents. The knowledge which the apostle manifests of the Greek authors, 1 Cor. xv. 33; Tit. i. 12; would also lead us to suppose that he had received, at least, part of his education in a Grecian city. Many of his characteristics, as a writer, lead to the same conclusion. He pursues far more than any other of the sacred writers of purely Jewish education, the logical method of presenting truth. There is almost always a regular concatenation in his discourses, evincing the spontaneous exercise of a disciplined mind, even when not carrying out a previous plan. His epistles, therefore, are far more logical than ordinary letters, without the formality of regular dissertations. Another characteristic of his manner is, that in discussing any question, he always presents the ultimate principle on which the decision depends. These and similar characteristics of this apostle are commonly, and probably with justice, ascribed partly to his turn of mind and partly to his early education. We learn from the Scriptures themselves, that the Holy Spirit, in employing men as his instruments in conveying truth, did not change their mental habits: he did not make Jews write like Greeks, or force all into the same mould. Each retained his own peculiarities of style and manner, and, therefore, whatever is peculiar in each, is to be referred, not to his inspiration, but to his original character and culture. While the circumstances just referred to render it probable that the apostle's habits of mind were in some measure influenced by his birth and early education in Tarsus, there are others (such as the general character of his style) which show that his residence there could not have been long, and that his education was not thoroughly Grecian. We learn from himself that he was principally educated at Jerusalem, being brought up, as he says, at the feet of Gamaliel, (Acts xxii. 3.) This is the second circumstance in the providential preparation of the apostle for this work, which is worthy of notice. As Luther was educated in a Catholic seminary, and thoroughly instructed in the scholastic theology of which he was to be the great opposer, so the apostle Paul was initiated into all the doctrines and modes of reasoning of the Jews, with whom his principal controversy was to be carried on. The early adversaries of the Gospel were all Jews. Even in the heathen cities they were so numerous, that it was through them and their proselytes that the church in such places was founded. We find, therefore, that in almost all his epistles, the apostle contends with Jewish errorists, the corrupters of the Gospel by means of

* Strabo, lib. 14. ch. 5.

Jewish doctrines. Paul, the most extensively useful of all the apostles, was thus a thoroughly educated man; a man educated with a special view to the work which he was called to perform. We find, therefore, in this, as in most similar cases, that God effects his purposes by those instruments which he has, in the ordinary course of his providence, specially fitted for their accomplishment. In the third place, Paul was converted without the intervention of human instrumentality, and was taught the Gospel by immediate revelation. 'I certify you, brethren,' he says to the Galatians, 'that the Gospel which was preached of me was not after man. For I neither received it of man, neither was I taught it, but by the revelation of Jesus Christ.' These circumstances are important, as he was thus placed completely on a level with the other apostles. He had seen the Lord Jesus, and could, therefore, be one of the witnesses of his resurrection; he was able to claim the authority of an original inspired teacher and messenger of God. It is obvious that he laid great stress upon this point, from the frequency with which he refers to it. He was thus furnished not only with the advantages of his early education, but with the authority and power of an apostle of Jesus Christ.

"His natural character was ardent, energetic, uncompromising, and severe. How his extravagance and violence were subdued by the grace of God is abundantly evident from the moderation, mildness, tenderness, and conciliation manifested in all his epistles. Absorbed in the one object of glorifying Christ, he was ready to submit to anything, and to yield anything necessary for this purpose. He no longer insisted that others should think and act just as he did; so that they obeyed Christ, he was satisfied, and he willingly conformed to their prejudices and tolerated their errors, so far as the cause of truth and righteousness allowed. By his early education, by his miraculous conversion and inspiration, by his natural disposition, and by the abundant grace of God, was this apostle fitted for his work, and sustained under his multiplied and arduous labours."—(pp. iii—vi.)

"The expression 'faith was accounted to him for righteousness' is variously explained. Some understand the word faith as including its object, that is, the righteousness of Christ, so that it is not faith considered as an act that is imputed, but faith considered as including the merit which it apprehends and appropriates. But this interpretation is inconsistent with the connexion in which the passage occurs, both in the Old and New Testament.

"Besides this view of the passage, there are three others founded on the different senses of the word 'righteousness.' It may mean all that the law demands—complete obedience. If this sense of the word be adopted, then the passage means that faith was laid to his account as though it were complete obedience—it was taken for righteousness. This interpretation is perfectly natural, and consistent with the construction of the passage and the usage of the terms; it, however, is inconsistent with the apostle's doctrine. 1. It contradicts all those passages in which the sacred writers teach that men cannot be justified by any of their own works. Faith is as much a work as prayer,

repentance, almsgiving, or any other act of obedience to God; and, therefore, if we are justified on the ground of our faith, or if faith is taken in place of complete obedience to the law, we are justified by works. 2. It contradicts all those passages in which the merit of Christ, in any form, is said to be the ground of our acceptance. 3. It is inconsistent with the office assigned to faith. We are said to be justified by or through faith, but never on account of faith. The expression 'by faith in his blood' admits of no other interpretation than 'by means of faith in the blood of Christ as the ground of acceptance.' It lies in the nature of a sacrifice, that the offering is the ground of acceptance; our confidence in it, or our faith, is the condition of its being accepted on our behalf. Faith, therefore, is the instrumental, but not the meritorious cause of justification. 4. Accordingly, the sacred writers never refer us to our faith, or to any thing in ourselves, as the ground of confidence towards God.

"According to the second view, the word righteousness is taken in a much more limited sense; and the phrase, 'to impute faith for righteousness,' is understood to mean, 'faith was regarded as right, it was approved.' This interpretation, also, is perfectly consistent with usage. Thus, Psalm cvi. 31, it is said of the zeal of Phineas, 'it was counted to him as righteousness.' This, of course, does not mean that it was regarded as complete obedience to the law, and taken in its stead as the ground of justification; it means, simply, that his zeal was approved. It was regarded, says Dr. Owen, 'as a just and rewardable action.' In like manner, Deut. xxiv. 13, it is said of returning a pledge, 'It shall be righteousness unto thee before the Lord thy God.' Agreeably to the analogy of these passages, the meaning of this clause may be, 'his faith was regarded as right, it secured the approbation of God; how it did this must be learned from other passages.

"The third interpretation assumes, that the word translated 'righteousness,' means here, as it does in many other passages, 'justification.' The sense is, 'Faith was imputed to him for justification,' that is, that he might be justified, or, in order to his becoming and being treated as righteous. See Deut. x. 4: 'Christ is the end of the law for righteousness,' that is, in order that every one that believes may be regarded as righteous. Nothing is more familiar than this use of the preposition here used by the apostle; it points out the design with which any thing is done, as 'unto repentance,' that men may repent, Matt. iii. 11; 'unto death,' that we may die, Rom. vi. 3; so, 'unto salvation,' Rom. x. 1; 'unto condemnation,' Luke xxiv. 20; or it indicates the result, Rom. x. 10: 'With the heart man believeth unto righteousness,' that is, so that he is justified, regarded and treated as righteous. This view of the passage expresses accurately the apostle's meaning. It was not as 'one who works,' but as a believer, that Abraham was regarded in his justification. It was not works, but faith, that was imputed to him, in order to his being introduced into the number and blessings of the righteous. Faith, therefore, was not the ground of his justification, but the means of his being justified."—(pp. 96-98.)

NOTES OF TRAVELLERS.

TURKEY.—A Turk, infamous for many barbarous acts, presiding at the town of Tun'ta, in the Delta, went one night to the government granary of that town, and finding two peasants sleeping there, asked them who they were, and what was their business in that place. One of them said that he had brought one hundred and thirty ardeb's of corn from a village of that district; and the other, that he had brought sixty ardeb's from the land belonging to the town. "You rascal!" said the governor to the latter; "this man brings one hundred and thirty ardeb's from the lands of a small village; and you, but sixty from the lands of the town." "This man," answered the peasant of Tun'ta, "brings corn but once a week; and I am now bringing it every day." "Be silent!" said the governor; and, pointing to a neighbouring tree, ordered one of the servants of the granary to hang the peasant to one of its branches. The order was obeyed, and the governor returned to his house. The next morning he went again to the granary, and saw a man bringing in a large quantity of corn. He asked who he was, and what quantity he had brought; and was answered, by the hangman of the preceding night, "This is the man, sir, whom I hanged, by your orders, last night; and he has brought one hundred and sixty ardeb's." "What!" exclaimed the governor, "has he risen from the dead?" He was answered "No, sir: I

hanged him so that his toes touched the ground: and when you were gone, I untied the rope; you did not order me to kill him." The Turk muttered, "Aha! hanging and killing are different things: Arabic is copious: next time I will say kill. Take care of Ab'oo Da'-oo'd." This is his nickname.—*Lane's Manners and Customs of the Modern Egyptians.*

NEW ZEALAND.—What a fertile country is the northern island of New Zealand; and how fast the character of that land, and its inhabitants, is changing. An Englishman may now walk alone and unmolested about any part of the northern island, where, ten years ago, such an attempt would have been a rash braving of the club and the oven. English and American houses are scattered near the Bay of Islands; and settlers are rapidly increasing. All this is chiefly due to the Church Missionary Society. Nothing could be more gratifying than the view of a flourishing agricultural settlement, with good farm-houses, barns, water-mill, mechanics' shops, and large gardens, in the interior of the northern island. I was astonished at what I saw; and when a New Zealander came out of the mill, powdered with flour, and carrying a sack of corn upon his back, I could hardly believe my own eyes.—*Captain Fitzroy's Account of the Surveying Voyage of H. M. S. Beagle.*

THE YELLOW LEAF.

———"Now the leaf
Incessant rustles from the mournful grove;
Oft startling such as studious walk below,
And slowly circles through the waving air.
But should a quicker breeze amid the boughs
Sob; o'er the sky the leafy deluge streams,
Till, choked and matted with the dreary shower,
The forest-walks, at every rising gale,
Roll wide the withered waste, and whistle bleak.
Fled is the blasted verdure of the fields;
And, shrunk into their beds, the flowery race
Their sunny robes resign."

THOMSON'S AUTUMN.

WHETHER it be the fault or the excellence of my nature, which others may be left to determine, the fact is, I am very imaginative. This, perhaps, predominant intellectual quality, is not, however, I trust, unaccompanied by other counter-balancing mental properties as well as by moral restraints. Imagination may be like poison in medicine—destructive when unmixed, but conducive to great good when properly compounded and diffused. He who is all imagination will be often a mere enthusiast, and may be guilty of vain fancies and frivolities; while he who is all judgment will be sure to be dull, and for want of a propelling power, may be uninteresting or silent. A man of mere argument, or good sense, as it is called, can look at the visible universe with little emotion, and pass unobserved and unfelt even its vaster as well as its minuter characteristics of grandeur or beauty, whereas every object will be a theme for the man of glowing passion and observant eye. To the one half the creation is a blank; to the other, every line, word, and letter, is distinctly marked and appreciated on "nature's ample page;" so that not only are our means of mental enjoyment and personal improvement increased by observation, and the play of fancy or thought, but individual amusement is associated with general utility. He who can fetch a thought from a flower, or bring a new and improving association of ideas to a blade of grass, is a real, though not, it may be, so great a benefactor to his species, as he who sows a seed, or plants a tree, where seed was never sown, or tree never grew before.

I must own that a green or a yellow leaf has, like ten thousand other minute, and often disregarded objects in this beautiful creation, a charm—shall I call it, a *moral* charm?—for me. Amidst the expanding verdure of Spring, indeed, I can sympathise with the poet's language—"this is the *bad* of being;" but thoughts not less impressive or beneficial seem to crowd around the steps of Autumn. This may appear a fit subject for poetry, but why should it not breathe in prose?

Perfect uniformity is seldom conducive to the highest effect. We are so constituted as to desire and to be pleased both with change and

variety. The green colour of the opening spring is grateful to the eye; but, abstractedly, the variegated colours of the season of decay probably please as much, or more, both the senses and the taste. It is delightful to contemplate the effect of autumnal changes at a distance, when the foliage begins to exhibit the yellow tinge. The landscape acquires new beauty, though it indicates decay; yet is there sometimes a peculiar loveliness even in death. Perhaps few scenes of nature are more imposing than the variegations of colour in the landscape, and especially on the thick embowering wood, as observed amidst the tranquil atmosphere of October, and when the sun is just casting his departing ray from his throne of gold. It is the painter's and the poet's hour.

The impression I have found to be greatly enhanced by marking the progress of decay, and observing particular objects. If a tree, for instance, covered with its yellow livery stood alone, it might indeed attract attention from its general gracefulness of form, or the brilliancy of its foliage, but when seen in combination, and in contrast with a verdant mass around, in different stages of discolouration and decay, we become at once sensible of increased effect. It both imparts and imbibes beauty.

Nothing is more pleasing than to pursue the path by the forest side, leafy and soft. The gathering foliage presents a kind of pleasing obstacle, which resists, yet yields to the foot. I love to catch the gentle sound of the breeze, to feel the flutterings of his wings, and to follow with the eye, leaf after leaf driven across the path, and whirled about. It is the play-hour of sportive wind; and let not these wanderings amongst the woods be called hours of idleness, but hours of happiness and of profit. They are in truth given, when rightly estimated and employed to health, to meditation and to God!

In an autumnal ramble the eye will be sometimes attracted by a single leaf suspended by its thin fibre at the extremity of a branch or minute ramification. There it hangs as in mid air, twisting and twirling like a culprit in agony, and exhibited in bold and striking relief upon the brightness of a distant sky. It swings hither and thither, turning about in manifest contortions, till jerked from its elevation by a severer blast or a more powerful touch of decay, the fibre snaps, and it falls amongst its kindred millions.

And *what* is fallen? A leaf, say you, an insignificant and withered leaf; brush it out of the path, or let the eddying winds whirl it away. But no—examine it—analyse its parts, take it with you for a closer inspection, employ the exploring microscope—now say what is fallen—what prostrate millions of living beings have

crowded your path, and, O, what a peopled universe is this! Even amidst the decays of nature we have life-sensate, susceptible, and instinctive existence. Mortality is even now, as it were, "swallowed up of life." The fallen leaf is the world to an innumerable host of animalcules, as this rolling atom in the boundless creation is our world—itself less in comparison, both in magnitude and duration than the yellow leaf of the forest to the forest, or the earth itself.

It is well known that the richest soils in an agricultural point of view, are those which are formed by decayed vegetation. In the Western States of America, and particularly on the banks of the Ohio, plants and trees are seen in all their luxuriance and vigour of growth, and everywhere a vegetable mould is prized, as best subservient to all the purposes of cultivation? What then is decay? Is it annihilation? It would seem not, but a change only of constitutional elements, a process of re-modification. The leaf falls, it is true, and returns to dust; but what is that dust? how is it disposed? what transformations may it undergo? The particles of matter of which the leaf is composed do not appear, so far as reason or observation can ascertain, to be utterly destroyed, but to be cast into new forms, and, as we may say, to rise into new being. It is perhaps possible for the mind to conceive of the annihilation as well as the creation of matter; and though we may have no power of imagining the *modus operandi* in either case, yet the admission of the fact or possibility is not difficult. But though matter which was created *may* be annihilated, there is no good evidence that it *will*; because it does not seem necessary, and is contrary to experience. In numberless instances

wherein objects vanish from our sight, and seem to be dissolved, they obviously reappear, though in other and strange varieties and forms. The seed is cast into the ground, and it soon presents itself again; not indeed in a molecule of matter, but in the aspiring blade, which gradually advances to the full corn in the ear. And thus, without bringing other examples from nature, in which decay and reproduction are in endless and mysterious operation, it may be observed, that the withered leaf rots into the earth and contributes its quota to the rich vegetable mould which rapidly accumulates, and then by the force of capillary attraction the separated particles ascend the fibres, and minister life and substance to the stems, branches, and leaves of other trees—again becoming green with young existence—again adorning the forest, and shadowing the walk of meditation—again bowing to the universal law, and shivering on the bough in the yellowness of age, and again in the eternal circle rolling to the dust. Who knows then but we are now contemplating the forests of the creation? Who knows but that we are treading the soil once trodden, though in an altered organisation and arrangement only, that was pressed by the foot of patriarchs, prophets, and kings? Who knows, after ten thousand transformations and transmissions, but yonder tree contains, absorbed from the dust of ages, the elements of the oak of Mamre, or the leaf of the tree of life?—But no—let fancy be repressed, and retire from the images that flit around, with the solemn thought of mortality, as illustrated in the fallen leaf of autumn, blended with the glorious hope, as pictured in the green leaf of spring, of a blooming immortality.

X.

COSMOGONY OF MOSES.

ARTICLE V.

Now, what is the fair and obvious presumption? The world, in which we live, is a round ball of a determined magnitude, and occupies its own place in the firmament. But when we explore the unlimited tracts of that space which is every where around us, we meet with other balls of equal or superior magnitude, and from which our earth would either be invisible, or appear as small as any of those twinkling stars which are seen on the canopy of heaven. Why then suppose that this little spot, little at least in the immensity which surrounds it, should be the exclusive abode of life and of intelligence? What reason to think that those mightier globes which roll in other parts of creation, and which we have discovered to be worlds in magnitude, are not also worlds in use and in dignity? Why should we think that the great Architect of nature, supreme

in wisdom as He is in power, would call these stately mansions into existence and leave them unoccupied? When we cast our eyes over the broad sea, and look at the country on the other side, we see nothing but the blue land stretching obscurely over the distant horizon. We are too far away to perceive the richness of its scenery, or to hear the sound of its population. Why not extend this principle to the still more distant parts of the universe? What though, from this remote point of observation, we can see nothing but the naked roundness of yon planetary orbs? Are we therefore to say, they are so many vast and unpeopled solitudes; that desolation reigns in every part of the universe but ours; that the whole energy of the Divine attributes is expended on one insignificant corner of these mighty works, and that to this earth alone belongs the bloom of

vegetation, or the blessedness of life, or the dignity of rational and immortal existence?

But this is not all. We have something more than the mere magnitude of the planets to allege in favour of the idea that they are inhabited. We know that this earth turns round upon itself; and we observe that all those celestial bodies which are accessible to such an observation have the same movement. We know that the earth performs a yearly revolution round the sun, and we can detect in all the planets which compose our system a revolution of the same kind, and under the same circumstances. They have the same succession of day and night. They have the same agreeable vicissitudes of the seasons. To them light and darkness succeed each other; and the gaiety of summer is followed by the dreariness of winter. To each of them the heavens present as varied and magnificent a spectacle; and this earth, the encompassing of which would require the labour of years from one of its puny inhabitants, is but one of the lesser lights which sparkle in their firmament. To them, as well as to us, has God divided the light from the darkness, and he has called the light day, and the darkness he has called night. He has said, let there be lights in the firmament of their heaven, to divide the day from the night; and let them be for signs, and for seasons, and for days, and for years; and let them be for lights in the firmament of their heaven, to give lights upon their earth; and it was so. And God has also made to them great lights. To all of them he has given the sun to rule the day; and to many of them has he given moons to rule by night. To them he has made the stars also. And God has set them in the firmament of the heaven to give light upon their earth; and to rule over the day, and over the night, and to divide the light from darkness; and God has seen that it was good.

In all these greater arrangements of Divine wisdom, we can see that God has done the same things for the accommodation of the planets, that he has done for the earth which we inhabit. And shall we say that the resemblance stops here, because we are not in a situation to observe it? Shall we say that this scene of magnificence has been called into being merely for the amusement of a few astronomers? Shall we measure the councils of heaven by the narrow impotence of the human faculties? or conceive that silence and solitude reign throughout the mighty empire of nature; that the greater part of creation is an empty parade; and that not a worshipper of the Divinity is to be found through the wide extent of yon vast and immeasurable regions?

It lends a delightful confirmation to the argument, when, from the growing perfection of our instruments, we can discover a new point of resemblance between our earth and the other bodies of the planetary system. It is now

ascertained, not merely that all of them have their day and night, and that all of them have their vicissitudes of seasons, and that some of them have their moons to rule their night, and alleviate the darkness of it. We can see of one, that its surface rises into inequalities, that it swells into mountains and stretches into valleys; of another, that it is surrounded by an atmosphere which may support the respiration of animals; of a third, that clouds are formed and suspended over it, which may minister to it all the bloom and luxuriance of vegetation; and of a fourth, that a white colour spreads over its northern regions as its winter advances, and that on the approach of summer this whiteness is dissipated, giving room to suppose that the element of water abounds in it; that it rises by evaporation into its atmosphere, that it freezes upon the application of cold, that it is precipitated in the form of snow, that it covers the ground with a fleecy mantle, which melts away from the heat of a vertical sun; and that other worlds bear a resemblance to our own in the same yearly round of beneficent and interesting changes.

Who shall assign a limit to the discoveries of future ages? Who can prescribe to science her boundaries, or restrain the active and insatiable curiosity of man within the circle of his present acquirements? We may guess with plausibility what we cannot anticipate with confidence. The day may yet be coming when our instruments of observation shall be inconceivably more powerful. They may ascertain still more decisive points of resemblance. They may resolve the same question by the evidence of sense which is now so abundantly convincing by the evidence of analogy. They may lay open to us the unquestionable vestiges of art, and industry, and intelligence. We may see summer throwing its green mantle over these mighty tracts, and we may see them left naked and colourless after the flush of vegetation has disappeared. In the progress of years or of centuries, we may trace the hand of cultivation spreading a new aspect over some portion of a planetary surface. Perhaps some large city, the metropolis of a mighty empire, may expand into a visible spot, by the powers of some future telescope. Perhaps the glass of some observer, in a distant age, may enable him to construct the map of another world, and to lay down the surface of it in all its minute and topical varieties. But there is no end to conjecture, and to the men of other times we leave the full assurance of what we can assert with the highest probability, that yon planetary orbs are so many worlds, that they teem with life, and that the mighty Being who presides in high authority over this scene of grandeur and astonishment has there planted the worshippers of his glory. But the discoveries of science do not stop here. They widen indeed the empire of creation far beyond the limits which were formerly assigned

to it. They give us to see that yon sun, throned in the centre of his planetary system, gives light, and warmth, and the vicissitudes of seasons, to an extent of surface several hundreds of times greater than that of the earth which we inhabit. They lay open to us a number of worlds rolling in their respective circles around this vast luminary; and prove that the ball which we tread upon, with all its mighty burdens of oceans and continents, instead of being distinguished from the others, is among the least of them; and, from some of the more distant planets, would not occupy a visible point in the concave of their firmament. They let us know, that though this mighty earth with all its myriads of people were to sink into annihilation, there are some worlds where an event so awful to us would be unnoticed and unknown, and others where it would be nothing more than the disappearance of a little star which had ceased from its twinkling. We should feel a sentiment of modesty at this humiliating but just representation. We should learn not to look on our earth as the universe of God, but as one paltry, and insignificant portion of it; that it is only one of the many mansions which the supreme Being has created for the accommodation of his worshippers, and only one of the many worlds rolling in that flood of light which the sun pours around him to the outer limits of the planetary system.

But is there nothing beyond these limits? The planetary system has its boundary, but space has none; and if we wing our fancy there, do we only travel through dark and unoccupied regions? There are only five, or, at most, six, of the planetary orbs visible to the naked eye. What then, is that multitude of other lights which sparkle in our firmament, and fill the whole concave of heaven with innumerable splendours? The planets are all attached to the sun; and, in circling around him, they do homage to that influence which binds them to perpetual attendance on this great luminary. But the other stars do not own his dominion. They do *not* circle around him. To all common observation they remain immoveable; and each, like the independent sovereign of his own territory, appears to occupy the same inflexible position in the regions of immensity. What can we make of them? Shall we take our adventurous flight to explore these dark, untravelled dominions? What mean those innumerable fires lighted up in distant parts of the universe? Are they only made to shed a feeble glimmering over this little spot in the kingdom of nature? or do they serve a purpose worthier of themselves, to light up other worlds, and give animation to other systems?

The first thing which strikes a scientific observer of the fixed stars is, their immeasurable distance! If the whole planetary system were lighted up into a globe of fire, it would exceed, by many millions of times, the magnitude of this

world, and yet only appear a small lucid point from the nearest of them. If a body were projected from the sun, with the velocity of a cannon ball, it would take hundreds of thousands of years before it described that mighty interval which separates the nearest of the fixed stars from our sun, and from our system. If this earth, which moves at more than the inconceivable velocity of a million and a half miles a day, were to be hurried from its orbit, and to take the same rapid flight over this immense tract, it would not have arrived at the termination of its journey, after taking all the time which has elapsed since the creation of the world. These are great numbers and great calculations, and the mind feels its own impotency in attempting to grasp them. We can state them in words. We can exhibit them in figures. We can demonstrate them by the powers of a most rigid and infallible geometry. But no human fancy can summon up a lively or an adequate conception—can roam in its ideal flight over this immeasurable largeness—can take in this mighty space in all its grandeur and in all its immensity—can sweep the outer boundaries of such a creation, or lift itself up to the majesty of that great and invisible arm, on which all is suspended. But what can those stars be, which are seated so far beyond the limits of our planetary system? They must be masses of immense magnitude, or they could not be seen at the distance of place they occupy. The light which they give must proceed from themselves; for the feeble reflection of light from some other quarter, would not carry through such mighty tracts to the eye of the observer. A body may be visible in two ways. It may be visible from its own light, as the flame of a candle, or the brightness of a fire, or the brilliancy of yonder glorious sun, which lightens all below, and is the lamp of the world. Or it may be visible from the light which falls upon it, as the body which receives its light from the taper that falls upon it, or the whole assemblage of objects on the surface of the earth, which appear only when the light of day rests upon them: or the moon, which, in that part of it that is towards the sun, gives out a silvery whiteness to the eye of the observer, while the other part forms a black and invisible space in the firmament: or as the planets, which shine only because the sun shines upon them, and each of which presents the appearance of a dark spot on the side that is turned away from it. Now apply this question to the fixed stars: are they luminous of themselves, or do they derive their light from the sun, like the bodies of our planetary system? Think of their immense distance? and the solution of this question becomes evident. The sun, like any other body, must dwindle into a less apparent magnitude as you retire from it. At the prodigious distance, even the very nearest of the fixed stars, it must have shrunk into a small indivisible point. In short, it must have

become a star itself; and could shed no more light than a single individual of those glimmering myriads, the whole assemblage of which cannot dissipate, and can scarcely alleviate the midnight darkness of our world. These stars are visible to us, not because the sun shines upon them, but because they shine of themselves—because they are so many luminous bodies, scattered over the tracts of immensity;—in a word, because they are so many suns, each throned in the centre of his own domains, and pouring a flood of light over his own portion of these illimitable regions. At such an immense distance for observation, it is not to be supposed that we can collect many points of resemblance between the fixed stars and the solar star, which forms the centre of our planetary system. There is one point of resemblance, however, which has not escaped the penetration of our astronomers. We know that our sun turns round upon himself in a regular period of time. We also know that there are dark spots scattered over his surface which, though invisible to the naked eye, are perfectly noticeable by our instruments. If these spots exist in greater quantity upon one side than upon another, it would have the general effect of making that side darker, and the revolution of the sun must, in such a case, give us a brighter and a fainter side, by regular alternations. Now there are some of the fixed stars which present this appearance. They present us with periodical variations of light. From the splendour of a star of the first or second magnitude, they fade away in some of the inferior magnitudes, and one, by becoming invisible, might give reason to apprehend that we had lost him altogether; but we can still recognise him by the telescope, till at length he appears in his own place, and after a regular lapse of so many days and hours, recovers his original brightness. Now the fair inference from this is, that the fixed stars, as they resemble our sun in being so many luminous masses of immense magnitude, they resemble him in this, also, that each of them turns round upon its own axis; so that if any of them should have an inequality in the brightness of their sides, this revolution is rendered evident by the regular variations in the degree of light which it undergoes.

Shall we say, then, of these vast luminaries, that they were created in vain? Were they called into existence for no other purpose than to throw a tide of useless splendour over the solitudes of immensity? Our sun is only one of these luminaries, and we know that he has worlds in his train. Why should we strip the rest of this princely attendance? Why may not each of them be the centre of his own system, and give light to his own worlds? It is true that we see them not; but could the eye of man take its flight into those distant regions, it should lose sight of our little world before it

reached the outer limits of our system; the greater planets should disappear, in their turn, before it had described a small portion of that abyss which separates us from the fixed stars; the sun should decline into a little spot, and all its splendid retinue of worlds be lost in the obscurity of distance; he should at last sink into a small indivisible atom, and all that could be seen of this magnificent system should be reduced to the glimmering of a little star. Why resist any longer the grand and interesting conclusion? Each of those stars may be the token of a system as vast and as splendid as the one we inhabit. Worlds roll in the distant regions; and these worlds must be the mansions of life and of intelligence. In yon gilded canopy of heaven we see the broad aspect of the universe, where each shining point presents us with a sun, and each sun with a system of worlds, where the Divinity reigns in all the grandeur of his high attributes, where he peoples immensity with his wonders, and travels in the greatness of his strength through the dominions of one vast and unlimited monarchy. The contemplation has no limits. If we ask the number of suns and of systems, the unassisted eye of man can take in a thousand, and the best telescope which the genius of man has constructed can take in eighty millions. But why subject the dominions of the universe to the eye of man or to the powers of his genius? Fancy may take its flight far beyond the ken of eye or of telescope; it may expatiate in the outer regions of all that is visible; and shall we have the boldness to say that there is nothing there? that the wonders of the Almighty are at an end because we can no longer trace his footsteps? that his omnipotence is exhausted because human art can no longer follow him? that the creative energy of God has sunk into repose because the imagination is feeble by the magnitude of its efforts, and can keep no longer on the wing of those mighty tracts, and shoot far beyond what eye hath seen or the heart of man hath conceived, which sweep endlessly along, and merge into an awful and mysterious infinity? Before bringing to a close this rapid and imperfect sketch of our modern astronomers, it may be right to advert to two points of interesting speculation, both of which serve to magnify our conceptions of the universe, and, of course, to give us a more affecting sense of the comparative insignificance of this our world. The first is suggested by the consideration, that if a body be struck in the direction of its centre, it obtains from this course a progressive motion, but without any movement of revolution being at the same time impressed upon it. It simply goes forward, but does not turn round upon itself. But, again, should the stroke not be in the direction of the centre, should the line which joins the point of percussion to the centre make

an angle with that line in which the impulse was communicated, then the body is both made to go forward in its space, and also to wheel upon its axis. In this way each of our planets may have had their compound motion communicated to it by one single impulse; and, on the other hand, if every rotatory motion be communicated by one blow, then the progressive motion must go along with it. In order to have the first motion without the second, there must be a two-fold force applied to the body in opposite directions. It must be set agoing in the same way as a spinning-top, so as to revolve about an axis, and to keep unchanged its situation in space. The planets have both motions, and therefore may have received them by one and the same impulse. The sun, we are certain, has one of these motions: he has a movement of revolution. If spun round his axis with two opposite forces, one on each side of him, he may have this movement, and retain an inflexible position in space; but if this movement was given him by one stroke he must have a progressive motion along with a whirling motion; or, in other words, he is moving forward, he is describing a tract in space, and, in so doing, he carries all his planets and all his secondaries along with him.

But, at this stage of the argument, the matter only remains a conjectural point of speculation. The sun may have had his rotation impressed upon him by a spinning impulse; or, without recurring to secondary causes at all, the movement may be coeval with his being, and he may have derived both one and the other from an immediate fiat of the Creator. But there is an actually observed phenomenon of the heavens which advances the conjecture into a probability. In the course of ages, the stars in one quarter of the celestial sphere are apparently receding from each other; and in the opposite quarter they are apparently drawing nearer to each other. If the sun be approaching the former quarter, and receding from the latter, this phenomenon admits of an easy explanation, and we are furnished with a magnificent step in the scale of the Creator's workmanship. In the same manner as the planets, with their satellites, revolve round the sun, may the sun, with all his tributaries, be moving, in common with other stars, around some distant centre, from which there emanates an influence to bind and to subordinate them all. They may be kept from approaching each other by a centrifugal force, without which the laws of attraction might consolidate, into one stupendous mass, all the distinct globes of which the universe is composed. Our sun may, therefore, be only one member of a higher family, taking his part, along with millions of others, in some loftier system of mechanism by which they are all subjected to one law and to one arrangement, describing the sweep of such an orbit in space, and completing the mighty revolution in such a

period of time, as to reduce our planetary seasons and our planetary movements to a very humble and fractionary rank in the scale of a higher astronomy. There is room for all this immensity, and there is even argument for all this in the records of actual observation; and from the whole of this speculation do we gather a new emphasis to the lesson—how minute is this place! and how secondary is the importance of our world amid the glories of such a surrounding magnificence!

But there is still another very interesting tract of speculation which has been opened up to us by the more recent observations of astronomy. What we allude to is the discovery of the nebulae. We allow that it is a dim and indistinct light which this discovery has thrown upon the structure of the universe; but still it has spread before the eye of the mind a field of very wide and lofty contemplation. Anterior to this discovery, the universe might appear to have been composed of an indefinite number of suns about equidistant from each other, uniformly scattered over space, and each encompassed by such a planetary attendance as takes place in our own system. But we have now reason to think that, instead of lying uniformly and in a state of equidistance from each other, they are arranged into distinct clusters;—that in the same manner as the distance of the nearest fixed stars—so inconceivably superior to that of our planets from each other—marks the separation of the solar system, so the distance of two contiguous clusters may be so inconceivably superior to the reciprocal distance of those fixed stars which belong to the same cluster, as to mark an equally distant separation of the clusters, and to constitute each of them an individual member of some higher or more extended arrangement. This carries us upwards through another ascending step in the scale of magnificence, and there leaves us wondering in the uncertainty whether even here the wonderful progression is ended, and, at all events, fixes the assured conclusion in our minds, that to an eye that could spread itself over the whole, the mansion which accommodates our species might be so very small as to lie wrapped in microscopical concealment; and in reference to the only Being who possesses this universal eye, well might we say, "What is man that thou art mindful of him, or the son of man that thou shouldest deign to visit him?"

And after all, though it be a mighty and difficult conception, yet who can question it? What is seen may be nothing to what is unseen; for what is seen is limited by the range of our instruments; what is unseen has no limit; and though all that the eye of man can take in, or his fancy can grasp at were swept away, there might still remain as ample a field over which the Divinity may expatiate, and which he may have peopled with innumerable worlds. If the

whole visible creation were to disappear it would leave a solitude behind it; but to the infinite Mind, that can take in the whole system of nature, this solitude might be nothing—a small unoccupied point in that immensity which surrounds it, and which he may have filled with the wonders of his omnipotence. Though this earth were to be burned up, though the trumpet of its dissolution were sounded, though yon sky were to pass away as a scroll, and every visible glory which the finger of the Divinity has inscribed on it were to be put out for ever—an event so awful to us and to every world in our vicinity, by which so many suns would be extinguished, and so many varied scenes of life and of population would rush into forgetfulness—what is it in the high scale of the Almighty's workmanship? A

mere shred, which, though scattered into nothing, would leave the universe of God one entire scene of greatness and of majesty. Though this earth and these heavens were to disappear, there are other worlds which roll afar, the light of other suns shines upon them, and the sky which mantles them is garnished with other stars. Is it presumption to say that the moral world extends to these distant and unknown regions? that they are occupied with people? that the charities of home and of neighbourhood flourish there? that the praises of God are there lifted up, and his goodness rejoiced in? that piety has its temples and its offerings, and the richness of the Divine attributes is there felt and admired by intelligent worshippers?*

HAIR-BREADTH ESCAPES. No. VII.

LORD CARNARVON.

IN Lord Carnarvon's remarkable volumes on "Portugal and Galicia," he relates the following occurrence as taking place at Setuval, in the south of Spain, during an insurrectional burst against the constitution, and in favour of Dom Miguel:—

On an open space adjoining the town an enormous concourse of people were assembled. Night had long set in, but we saw by the glare of the lamps the crowd collected most densely around a regimental band, which was playing, with amazing spirit, the ultra-royalist hymn; but even this favourite tune was often drowned by the deafening shouts of, "Miguel the First, the absolute, the most absolute King! and death to the Malleardos,* death to the infamous Constitutionalists!" It was evident that the designs of the Miguelites in promoting this meeting had been crowned with success. The popular enthusiasm was at its height, and characterised by such extreme ferocity, that I could not behold it without awe, or hear the deadly imprecations heaped upon the Constitutionalists without feeling that a terrible hour of vengeance was at hand. I have mingled much in revolutionary scenes, but never before or since have I seen the human face distorted by such a variety of horrible passions,—passions cradled in fanaticism

nursed in silence and in gloom, but now roused to madness, and ready to break down every barrier opposed to their gratification. Every passing occurrence administered to their hate, and furnished matter for hateful illustration. If a rocket went up ill, the people called it a "Constitutionalist,"—a declaration received with yells expressive of the utmost detestation and contempt; if it rose well they cried out that even thus should their knives be sent into the hearts of the accursed Freemasons; and then they expressed fervent wishes that their traitorous heads were burning in the wheel of the rocket. In short, among that assembled multitude all seemed alike transported by one common love for the Infant, by one common hatred to their opponents, and by one pervading sentiment of unlimited and almost frenzied devotion to the church. They were inflamed by music and the spirit-stirring hymn; by wine, which gave an appalling character of desperation to their gestures; and by religious zealots, who whispered, in each pause of the storm, that every blow they struck was struck for God. It is difficult to describe the effect produced at intervals by the sudden glare of the fireworks dispersing the gloom, and lighting up, though but for an instant, their stern and excited countenances. Those momentary gleams showed each man his neighbour's passion, and strengthened his own from a sense of the general sympathy, so that every moment their expressions of vengeance became fiercer, and their shouts more vehement and unintermitted.

At length they raised the cry of "Death to the English!" My host had long before urged me to quit the scene, but the deep interest

* The Constitutionalists were about this time contemptuously called the "Malleardos," or "Spotted Ones," in consequence of an accident that befel Dom Miguel; and the story is illustrative of the quick fancy and readiness of the people who made the application. He was driving an open carriage drawn by two spotted horses, which ran away with him with so much vehemence as to endanger his safety. The people, who were generally attached to Dom Miguel, immediately applied the term "Malleardos" to the Constitutionalists, thereby intending to express their belief that, in one respect at least, they resembled the spotted horses, being equally disposed to run away with the car of the state, and to compromise the safety of their prince.

* This article is chiefly extracted from Dr. Chalmers's celebrated work.

with which I viewed these tumultuary proceedings fixed me spell-bound to the spot. Had my British origin been discovered, my situation might have been very unpleasant; but the same dark face which in Spain convinced the authorities that I was a native outlaw, effectually shielded me at Setuval from the suspicion of being an Englishman; still my foreign accent might have betrayed me had I been compelled to speak, and I felt on many grounds the necessity of retiring, for the people were ripe for violence; and their leaders, seeing that the time for action had arrived, bade the music cease. The crowd, that had been long pent up, chafing like a mighty stream within a narrow channel, now overflowed on all sides, bearing down on Setuval, to carry their revolutionary intentions into effect. In trying to disengage myself from the turmoil, I observed that I was often recognised as a stranger, though not as an Englishman. Many fierce inquiring glances were bent upon me, many persons seemed inclined to stop me, and were only prevented by the hurried movements of the multitude, which pressed on, rank after rank, like the waves of the sea; once, indeed, a savage-looking fellow, rendered still more fierce by intoxication, seized me by the coat, and declaring that I was a freemason, desired me to shout

for the absolute king. My actual position was not agreeable; for my host had warned me, that although I might pass through the crowd unmolested, still if a mere urchin raised the cry of "freemason" against me, the people, in their irritated state, might fall upon me, as a pack obeys a single hound; no well-known Constitutionalist would that night, he assured me, trust himself on that plot of ground for all the treasures of the British exchequer. But the danger, if real, was but momentary, for disordered by wine, and forced onwards by the irresistible pressure of the crowd, my assailant lost his hold before I had time to reply. Extricating myself from the crowd, I took refuge in a knoll of trees behind the chapel, where I saw groups of men careering around with shouts and gesticulations absolutely demoniac, and rather resembling enraged wild beasts than rational beings; and still as I made the best of my way to the inn by a circuitous path, I heard the loud beat of the drum and the infuriated cries of the people, as they rushed to attack the dwellings of the Constitutionals, who were, however, generally speaking, prepared for the tempest, and had fled from their houses some hours before the rising of the gale.

LOVE AND PHILOSOPHY.

[From *MS. Poems on the Affections.* By K. C.]

CHILD of my heart! thine eyes
Seem formed of living light,
Like stars that gem the skies,
And grace the brow of night;
I feel the magic of their beams,
They fill my thoughts, and form my dreams.

With dark and lustrous hue
They dazzle where they dwell;
Where'er they wander, too,
They win with potent spell;
They are laughing, lively, bland, intense,
And sparkling with intelligence.

Thou need'st not long to try
The force of human speech;
There's that within thine eye
That words can never reach:
I read them, hear them—deepest things
Are utter'd by thy glistenings.

To me the thought accords
With heavenly eloquence—
That with the weight of words
They in that world dispense:
Their looks are language—baby, thou
Canst surely speak as angels do.

O, what a glance was there!
'Twas like a tongue of flame,
It flash'd, and filled the air,
As if from heaven it came;
It gleam'd like lightning, blazing, bright,
But scorch'd not—for 'twas lambent light.

Alas! I fear, my child,
My heart is too much raised;
Thy mother wept and smiled
As late on thee I gazed:
She smiled to see me love her boy,
Yet wept lest I should lose my joy.

I cannot help it. Thou
Art all the world to me;
Thy mother is so too:
My child, in loving thee,
I love, with double love, the source
From whence thou sprang'st, my universe.

Thou hast thy mother's eye,
But darker and more bright;
The clear and cloudless sky
Is hers; its hue by night,
Its glow and glory, are with thee—
But both are beautiful to me.

And I may love thee? Yes
I may, I must, I will.
Then give thy sire a kiss.
What! art thou clinging still?
O, language never can express
The luxury of that caress.

"Cease, trifter, cease; away,
Thou lingerest here too long,
My vain and vapid lay
Is but an idler's song."
Thus reason rises to reprove,
And dissipate my dream of love.

LEGEND OF A RUINED TEMPLE AT DUGGA.

Among the ruins, which have a circuit of two leagues, a large temple, with its portico almost perfect, stands conspicuous. At the back the roof had fallen in, within the last ten years, we were told; the gable was yet undecayed. This temple, decorated in the Corinthian style, with great richness and elegance, has the form of a parallelogram; its length, including the portico, is about seventy feet, and its breadth thirty. The pillars, which are all built of one piece, and in admirable harmony, are thirty feet high, and, at the base, have a diameter of four feet and a half. On the field of the gable, on one side, is a colossal eagle in alto-relievo; on the other, the decoration has fallen down: the inscription of the frieze is almost entirely broken off. Shaw has given a copy of this inscription; but, like that given of Spetla, it does not at all agree with the few words that are still legible. It has an almost touching effect to find a stork's nest on the point of the gable, directly over the head of the eagle; it was a pity that the inhabitant was at its summer residence in Europe, where, perhaps, some of my readers may have seen him stalking gravely about, while we were looking at his empty house.

We conclude with a legend of this temple:—This temple was probably dedicated to Jupiter, as the first word of the inscription on the gable field seems to be "Jovis;" the eagle, also, indicates such a destination. It perhaps owes its preservation chiefly to a phenomenon of nature, or to a superstition that Dugga is one of the places where no scorpion can live; and none are really ever found here. The Thaleb of the Shechs related a singular fable concerning this peculiarity, as we reclined under the shade of the pillars on my carpet: we were obliged to spread it here upon heaps of dried dung which covered the floor of the temple, because it was the only shady place; we took, however, the precaution to lay some mats, obtained from the Bedouins, undermost.

"A powerful king and sorcerer," said the Thaleb, "lived here in ancient times, who had a most beautiful daughter. To preserve her from the bite of the scorpions, which then swarmed here, he drew a magic circle in the air around, within which no dangerous animal could live.

When the beautiful princess was of a marriageable age, a neighbouring giant, who was also a powerful magician, demanded her hand, but was refused as an ugly, deformed, and wicked man. He brooded long over schemes of vengeance, without finding a favourable opportunity of wreaking it, because the art of the good king far surpassed his own. On the approaching marriage of the fair princess with a beautiful young prince, whom the fame of her extraordinary charms had brought from a distant country, one of his evil genii instructed him in the following diabolical artifice. He changed himself into a female eagle, built a nest upon a neighbouring rock, and laid two eggs; in which he inclosed a poisonous scorpion. He knew that the princess was passionately fond of eggs, which were brought to her of all kinds, as there was no surer method of earning her favour. It happened she had never tasted an eagle's egg; and rewarded the bringer with the most favourable glance of her starry eyes. The finder of this new delicacy was no other than the bridegroom himself, in whose hands the wicked magician had contrived the fatal eggs should fall. Scarcely had the prince given them to her, on the evening preceding the wedding-day, than the princess, with the eagerness of a spoiled girl whose wishes must all be gratified at the moment, desired to enjoy her feast; but no sooner had her tender fingers touched the shell, than the sting of the poisonous reptile darted forth, and wounded the beautiful princess so severely that her life flowed forth with her rosy blood. The tender-hearted prince died a few days after, in grief and despair. The inconsolable father built this temple, and caused the figure of the eagle to be represented on it, in memory of this melancholy occurrence; soon after, he also sacrificed within its walls the treacherous giant, whom he easily caught by means of the legion of spirits that were at his command. Since that time," concluded the Thaleb, "the custom has prevailed with us, that no bridegroom shall see his bride before the wedding-day; and none of our girls need fear a similar destiny, because no scorpion dares come within a league round Dugga."—*Semilasso in Africa.*

THE CRISIS: WHAT OUGHT CHRISTIAN MINISTERS TO DO?

Among the various intimations that we are approaching some great crisis of national prosperity or decline, of unprecedented virtue or of unexampled degeneracy, I cannot but regard with deep and anxious solicitude the multiplying

institutions which are established for the express purpose of informing the popular mind, and rendering accessible to the humbler classes the treasures of intellectual wealth. Universal education has created a new necessity, and not only

excited the desire of further knowledge in the minds of its subjects, but excited it even to craving; so that mental food is becoming nearly as indispensable to the comfortable existence of the mechanic as the daily sustenance of his body. This necessity has been promptly, generously, and ardently met by the most enlightened and patriotic of our countrymen; and now the novel and interesting spectacle is every where exhibited—children flocking to their Sabbath and other schools, youths repairing to their appropriate institutes, to learn the rudiments of science, and to apply its principles to the particular calling which demands their industry; and all returning to their respective dwellings busy and thoughtful, communicative and inquiring, enriching their families with their new-found stores, and receiving and imparting the highest gratification—the gratification of mind.

In a political and social view, this wonderful change must be big with the most important results. It is a grand and hitherto untried experiment. The world has never yet seen a nation all mind and energy, knowledge and enterprise, capable of investigating all subjects, and determined to push inquiry to its utmost limits; and the politician and philosopher may well ask, with some degree of anxiety, what will be the operation of this stupendous novelty upon ancient establishments, and that state of things which commenced when there was no public mind, when the public consisted only of a few privileged orders, and the populace were in a state of vilenage or total ignorance—a brute mass, unmoved and immoveable, the mere live stock of the soil. May not this prodigious change be accompanied with a fearful reaction? Will not thought, so long dormant, awake to mischief? and will not energy, thus roused from the slumber of ages, avenge itself on the past, and shiver the frame of society which was constructed without any reference to its employment, or presage of its existence? What was it, has been asked by some, that prostrated thrones and altars, and, at last, liberty itself, in revolutionary France? And the reply has been, the too sudden impulse given to mind, the excitement of intellect, without allowing knowledge time to ripen into principle; or, more properly, the corruption of the popular heart through the popular understanding; inoculating a whole people with infidelity and irreligion, under the pretence of exalting their intellectual nature, and emancipating them from the chains of ignorance and delusion.

It is our happiness that the instance adduced is totally inapplicable to us. It is not the modern philosophy, but the arts and sciences, so far as they can be rendered practical and useful, that are taught to our people; and as far as the lectures and institutions are concerned, we have nothing to fear from the doctrines which are inculcated, or the inquiries that are pursued.

Yet is there something in the apprehension, that while the mind of a whole people is passing from ignorance to knowledge, from indolence to activity, their political and ecclesiastical institutions may not remain stationary, and that, in the new zeal to correct abuses which this change will not fail to excite, all that is great and venerable, and true and holy, may be exposed to danger from its indiscriminate exercise.

But under such an apprehension as this, shall we interdict the progress of knowledge? Shall we attempt to lull the awakening energy to sleep? Shall we condemn the children of the poor to their once hereditary ignorance? And shall we compel the mechanic and the artisan to the mere labour of their hands, and bind upon them the original curse without the alleviation—to earn their bread by the sweat of their brow? God forbid! The attempt would be utterly vain, if there were heartless and desperate bigots willing to engage in it. Men will not unlearn; and intellect, conscious of its power, is not again to be manacled. All that is required to convert what so many fear as the most alarming evil, into the greatest blessing that was ever enjoyed in the social state, is, that the hearts of the people should be cultivated with as much assiduity as their understanding; that the ministers of religion should unite their efforts with those of the professors of other sciences; that, with the same spirit of patriotic liberality, they should bring their quota to the popular treasury, and teach, without gratuity or reward, that science which makes wise unto salvation. We may depend upon it, the classes we would especially benefit will appreciate our efforts; and as they are accustomed to apply their faculties to other and rather abstruse subjects, they will not feel the labour of attending to our instructions to be either irksome or exhausting. The mechanics of our metropolis, who are delighted to be taught philosophy, are equally solicitous to be instructed in religion; and if they succeed in acquiring this knowledge, then all is secured that either the wise statesman, the enlightened patriot, and the genuine philanthropist can either hope or desire. The individuals are brought under the immediate influence of the Supreme Ruler, and encircled with the moral glories of his revealed character, which shed a lustre on their natural reason and intellectual acquirements; while the principles by which they are actuated, embodied in the community and diffused through its entire frame and constitution, will effectually work out, though gradually, its complete disenthralment from the evils, whether prescriptive or established, which retard its improvement and impair its felicity. Intellectual energy associated with Christian piety must, in proportion to its diffusion, advance the best interests of a country; but when the one is exiled and the other neglected, when increased mental resources are placed under the direction

and control of moral depravity, or, which is the same thing, when the pride, the vanity, the concupiscence, and the arrogance which are the inherent qualities of our fallen nature, are stimu-

lated and strengthened by the distinctions of science, and the consciousness of mental power, the worst evils that can befall a people may be justly apprehended. J. S.

ANDORRE, THE OLDEST FREE REPUBLIC IN EXISTENCE.

THE republic of Andorre, situated upon the southern side of the Pyrenees, and beyond the natural frontier of France, ought, from its physical position, to belong to Spain. It is, however, considered as a neutral and independent province, although it is, to a certain extent, connected with both countries; to Spain by its religious—to France, by its civil government. The history of this little country presents a phenomenon well worthy the attention and study of the naturalist and the politician. It affords the most solitary instance of a people, few in number, and, in comparison with their powerful neighbours, almost incapable of defence, having preserved, during twelve centuries, their independence and their institutions, uninjured by the many revolutions which have so frequently convulsed the two great kingdoms which surround it. The contented and unambitious minds of its inhabitants, with their seclusion from the world, and indifference to, or ignorance of, the political intrigues and commotions which have overthrown and subverted its many states, have for such a length of time secured to them, as the feudatory republic of France, more real and substantial liberty than was ever enjoyed under the purest of the Italian republics. Andorre is composed of three mountain valleys; of the basin formed by the union of those valleys, and its embouchure, which stretches towards the Spanish Urgel. Its valleys are the wildest and most picturesque in the Pyrenees, and the mountains, with their immense peaks, which enclose it, amongst the highest and most inaccessible. Its length from north to south may be six-and-thirty miles: from east to west, thirty. It is bounded on the north by Arriège; on the south, by the districts of Urgel; on the west, by the valley of Paillas; and on the east, by that of Carol. It contains six communes.

Andorre is altogether independent of Spain; and, as regards France, the annual payment it makes to that country is only in lieu of certain privileges which it enjoys from it; while, there being so little crime in Andorre, the appointment of the French judge has been more with a view to deter criminals of that country from taking refuge in the neutral province, than for the punishment of its natives. Andorre may, therefore, be justly considered as the oldest free republic in existence. The population is from seven to eight thousand; quite great enough for the resources of the country. The Andorrians are all of the Church of Rome, and very religious.

The members of their clergy are in general natives; and they, and the more wealthy of the inhabitants, receive their education at Toulouse or Barcelona. Each curé, in addition to his pastoral duties, has the charge of a school, where the poor are instructed gratuitously; but this does not give him much extra trouble, few of the peasants thinking it at all necessary to send their children to school to acquire what, in their land of shepherds and labourers, they imagine can be of little consequence to them in their future lives: this erroneous impression is the cause why few of the natives have more learning than is sufficient to enable them to read and write; and the great majority are in total ignorance of even these first principles. The Andorrians are simple and severe in their manners, and the vices and corruptions of cities have not hitherto found their way into their valleys,—still, in comparison with the rest of the world, the abode of virtue and content. The inhabitants live as their forefathers lived a thousand years before them; and the little they know concerning the luxuries, the arts, and the civilisation of other countries, inspiring them rather with fear than envy. Their wealth consists in the number of sheep or cattle they possess, or the share they may have in the iron-forges, only a very few of their number being the proprietors of any extent of land beyond the little garden which surrounds their cottage. Each family acknowledges a chief, who succeeds by right of primogeniture. These chiefs, or eldest sons, choose their wives from families of equal consideration with their own, reprobating mean alliances, and looking little to fortune; which is always very small on both sides. The eldest sons have, even during the lives of their parents, a certain status, being considered as the representatives of their ancestors; they never leave the paternal roof until they marry; and if they marry an heiress, they join her name to their own; and, unless married, they are not admitted to a charge of public affairs. When there are only daughters in a family, the eldest, who is an heiress, and succeeds as an eldest son would do, is always married to a cadet of another, who adopts her name, and is domiciliated in her family; and, by this arrangement, the principal Andorrian houses have continued for centuries without any change in their fortunes—*ni plus riche —ni plus pauvre*. They are married by their priests, after having had their banns, as in Scotland, proclaimed in their parish church for three succes-

sive Sundays. The poorest of the inhabitants are, in Andorre, not so badly off as in other countries; their wants are few and easily supplied, the opulent families taking care of those

who are not; and they in gratitude, honour and respect their benefactors.—*Murray's Summer in the Pyrenees.*

USEFULNESS ARISING FROM EARLY PIETY.

THERE is scarcely any thing which has a more powerful influence on the human mind than example; men will be deaf to the voice of instruction, but while they refuse precept, they will often regard the lessons which are conveyed through the medium of example. This accounts for the great good which so frequently results from reading the lives of persons who have been eminent in the service of God; the mind has followed them, step by step, through the various stages of life, the influence of religion under the varied circumstances of adversity and prosperity has been discovered, and thus, by degrees, the principle which was formerly condemned, has been respected, and its real worth acknowledged. (And here I would recommend to the perusal of every young person, the memoirs of distinguished individuals, and especially those who have been removed from the world at an early age: the frequent study of such books you will find highly advantageous.) The cause of God may be much served by young persons, by maintaining a uniform consistency of conduct in the ways of religion. Instead of being disregarded, there is scarcely any one more noticed than a youth who lives under the power of religious principle: there is more to attract attention in him than in those who are more advanced in age. It must be seen that the follies of youth, which are pursued by almost all with the utmost avidity, are discarded by him, and that his attention is arrested by superior pleasures, and happiness of a more exalted character. There is sufficient to contend with, in the time of youth, to distinguish the serious from the profane and thoughtless; the volatile spirit of the one is kept under the salutary restraint of religion, whilst the other is permitted to rise and exercise itself without control. Amongst your companions, the great difference which is discovered between you and themselves may be productive of the most happy consequences; whilst they ridicule the conversation which is serious, they may be brought to love the principle which can produce the change they discover in your conduct and disposition. But not only amongst those of your own standing in life, but amongst your superiors in age, your example may be very useful. A pious youth is the loveliest object in creation, and those who behold it may blush with confusion at their own deformity; and what is more likely than that those who have lived in a course of dissipation and sin should be *shamed* by such a sight? If they have

minds capable of reflection, they must feel that it reflects disgrace upon them, that persons of, perhaps, not half their age, should be diligent in the pursuit of true wisdom, whilst they have been regardless of it through their whole lives. And what if your example should be made the means of bringing others to a sense of their own folly, and of inducing them to attend to the important claims of religion? You will not then have to say you have been of no use in the cause of God. David first dismayed the army of the Philistines, by the slaughter of their champion, and when he began the conquest, the Israelites followed after; the pursuit of the Philistines was not begun till David led the way; and when his example was so beneficial, "he was but a youth." But you may also be useful in the encouragement of those who have already set out on the road to heaven. There are many walking with you in the same path, and many of your own age, and it must be encouraging to every young person, to see that others are disposed as he is, that their attention is directed to that which is the object of his chief concern, and that he is not called alone to bear the burden and the heat of the day. It is pleasant to have companions when we journey, and if we set out on our journey together, we like it so much the better; and how pleasant is it to set out in the way to heaven in the morning of life, and have company all along the road! Then if we meet with troubles we can comfort each other; if one is cast down, the other can render him assistance; if we meet with opposition, by our united strength we may resist our adversary. But we may also encourage those who are far advanced in the journey of life. How cheering must it be to the aged Christian to see others rising to espouse the cause of his Redeemer, to descend into the grave with the satisfaction of seeing others advancing to fill up the station which he is about to resign. And how must the aged Christian parent be encouraged, to see his children rising up in life to call the Redeemer blessed, to take his last farewell of them in the sure and certain hope of meeting them again, after a short interval, to be separated no more for ever; instead of leaving them in love with the world, and at enmity with Christ, he has the heartfelt satisfaction of knowing, that they have given themselves up to be the servants of God. And how must the Christian minister be encouraged, when he beholds the success of his labour amongst the youthful part of his congrega-

tion. With what joy will he, like the tender shepherd, carry in his bosom the lambs of the flock, watchful and careful lest any evil should befall them. His heart will be encouraged by the prospect of your usefulness in the church, even to a distant period; you will be his chief joy here, and the crown of his rejoicing in heaven. Indeed, my young friends, you form a more important part in the church of Christ than you imagine; you are the occasion of much solicitude, and of much joy to those with whom you are connected. But, on the other hand, if you neglect your Creator in the days of your youth, you will be the occasion of distress, instead of encouragement: your friends, your parents, your minister will mourn over you, you will bring down their grey hairs with sorrow to the grave: no pang can be so rending to the heart of a Christian parent, as that which is produced by the recollection that his child is walking in the road to everlasting perdition. Your example will be useful if you become the servants of God, and it will be injurious if you live in the practice of iniquity. You may also do much for the cause of God by your exertions. Though you are "but a youth," you have some strength, and religion is a cause which will accept willingly all the strength which

can be brought into it. By your prayers you may always be serviceable to the interests of religion, for let it not be supposed that the petitions of a youth will be rejected; none of our prayers, for their own merit, can be acceptable with God, and as all are received through the medium of a Saviour's blood, the prayer of the youth shall find acceptance with God, as well as that of the more advanced Christian. And we are not without instances, in which the exertions and prayers of young persons have been the means of bringing their parents and friends to an acquaintance with God as their Saviour. You have the same promises to encourage you to be fervent in prayer, and active in exertion, as others; the promises of God are not confined in their application to persons of particular ages, any more than to particular circumstances; they are equally addressed to the poor and the rich, the young and the aged. You should consider it your duty, in all your prayers, to remember the cause of religion; you should pray that the blessing of God would attend the labours of all his servants, and make his own work to prosper in the world. And by your continued supplications and persevering endeavours, whilst you are "but a youth," you may do much for the cause of God.—*Billings.*

CATS.

ARTICLE I.

How, in the name of all the fates and fairies, came the subject of "Cats" to enter the brains of any contributor to "*Ward's Miscellany*?" we think we hear some fair reader exclaim, as she sets aside, for a time, her tambour-work, or knitting-needle, to refresh the romance which softly stirreth within her by a quiet hour's perusal of our pages. Now such a question as this, and tendered by so fair a voice, that Echo could not even imitate it, we feel that we are bound, by every tie of love and admiration to our fair readers, to answer at once promptly and efficiently. If they will turn back to the pages of our ninth number, they will find that, for their express pleasure and delight, we on a former occasion discoursed most eloquently on the very fertile subject of "Rats." We have reason to know that the concluding promise which we made in that paper of reverting to the subject in some future "more fitting mood," has met with much approbation from that fairer portion of the creation who honour us with their weekly patronage, and has caused many to wait, with longing anxiety, for the due performance of our promise. We have, we confess it in deep humility, been somewhat unmindful of, and have tarried long in reducing our promise to a performance, but let not our readers despair, we entreat them; we have sent couriers

in various directions over the globe for the finest specimens extant of "the beloved brood:" our Muscovy and Canadian wanderers are not yet returned, and until they have reached their final destination—home—all we might write upon the subject of their researches would only terminate in disappointment, mingled with what, in such cases, is generally denominated smoke. Our readers will thus see that, in popular phraseology, "circumstances entirely beyond our control," have concurred to produce the delay—"due notice" shall, however, be given of their "next appearance;" in the meantime, we beg leave to introduce to their perusal the subject of "Cats"—which stands next in order to the above aforesaid one of "Rats."

In the course of an extensive research which we have made into this all-absorbing subject, through numberless frightful folios and grim black-letter quartos, we have often pondered in astonishment at the fact, that neither the Bodleian nor the Museum Libraries contain a single line from which any chronological accuracy can be deduced as to the day and hour in which the first cat was born—whether it were a Tom or a Mary—whether it came singly into the world, or in conjunction with numbers of its own species, as is done in the present day—whether it was born blind—whether it mew—

whether it was born a little kitten, or a full-grown cat—whether its earliest developed antipathies were directed against rats or mice—whether, in short, it presented the same characteristics that cats who are born kittens do in our present day and generation. On all these subjects, and at the very onset of our inquiries, it will thus be perceived that we amalgamate somewhat with the kitten race—for in our earliest steps we wander in the dark. But, supposing our fourteen primitive days of blind vitality to have passed over—suppose us frisking by the side of our tender mother after the accustomed manner and due observance of all young kittens—suppose all this, we say, (and supposition is an easy thing,) and we shall have at once arrived at a fit and wholesome stage of progression to see and judge of the future course which our lucubrations on this all-interesting topic should take.

We have abundant reason for speculating on the probability that rats were born into the world before cats: the existence of the former of these was doubtless antedated by as many years of the latter, as are the articles by weeks in which we have discoursed relatively of them in our *Miscellany*.—Rats were born, in an especial manner, to be the objects of mental amusement and physical enjoyment of cats. This assertion may be somewhat startling, and may not perhaps appear very apposite, but we have many elucidatory remarks on this peculiar topic, as affecting the philosophy of Cathood, which we shall bring

more fully before the notice of our readers in a future article; for the present we content ourselves with drawing attention to the circumstance. But where reality fails us we must have recourse to invention; where history leaves us we must fall back upon the legendary lore which our studies have possessed us with. We can suppose it highly probable that Adam and Eve might have employed their leisure hours in Eden by playing at scratch-cradle, or some such other innocent amusement, amidst the bowers of beauty in which they were placed. The quiet mathematical ingenuity with which in this game the strings are twisted, must surely have been first taught them by the slippery facility with which a cat can loosen itself from any entangled enwovement in which it may have been caught. The supple dexterity of its claws in extricating itself from any accidental "mess" into which it may have been betrayed, might have been aptly imitated by the facile pliability of the fingers in the performance of the above wondrous "*jeu-de-main*." The mischievous innocence which the first entrapped cat displayed when Eve first caught her "playing false" in some sequestered corner of the garden, might doubtless have suggested to the fertile mind of that "first lady of the land" the expediency of contriving some such similar inventive means to extricate herself from any such like "embarrassing situation," should some unlucky misfortune ever drive her to her "wit's-end" for any ante-adamite subterfuge. ERHON.

HEMLOCK, THE POISON AND DEATH OF SOCRATES.

(From the "*Lancet*.")

FIRST ARTICLE.

THIS plant claims considerable attention from the classic celebrity it has acquired, as well as from the narcotic influence it exerts. It is known among the older botanists under the name of *cicuta*; the Italians at this day call it the *cicuta maggiore*; the French, *grand cigue*; the Spaniards, *conio manchado*; the Germans, *schierling*. It is one of that class of plants known by the rural classes under the name of "kicksies;" and the dried fistulous stalks were converted by the shepherds into pipes in the days of Virgil, for we find them mentioned by that poet. The foolish Corydon speaks of it in his lamentation, in the second eclogue, which is much more to be admired for its poetry than for its subject. But it is much more frequently spoken of by the Roman writers as a decided poison than in any other way; and Horace more than once alludes to it. In a very playful ode, addressed to his friend Mæcenas, he very bitterly

inveighs against garlic, speaks of it in the most opprobrious terms, and condemns it as fit for a parricide, and as more destructive than hemlock. Persius speaks of it as a poison to man, but as fattening to sheep. Upon this point Linnaeus observes, that sheep eat the leaves, whilst cows, horses, and goats will not touch them. Curtis has made an observation, that scarcely any insect is found upon them; whilst Ray points out the preference the thrush gives to the seed, even when it can get at the corn.

There has been agitation amongst classical scholars, medical men, and botanists, a question of considerable interest—whether the hemlock be the plant used by the Grecians as their state poison; as it must ever excite considerable emotion in the mind, from the recollection that it was by it that the life of one of the master-spirits of the age in which he lived was, most probably, terminated. The death of Socrates has been,

amongst all those upon whose minds the slightest beam of learning or of philosophy has dawned, a subject of the deepest interest, "it has conferred a notoriety upon hemlock which time will never efface."

Although it was in the Lyceum that he first publicly taught that doctrine which religion has since confirmed,—that the soul of man, immortal, rises from the grave,—yet in the medical schools this knowledge had existed long previous to the Grecian sage, and medical men were the sacred depositaries of this Divine truth; to them had long been revealed the holy balm of comfort in our pilgrimage on earth. In Egypt the science of medicine had attained an extraordinary height; and to the initiated were taught, under the form of mysteries, some of those precepts which, amid "darkness visible," afterwards found their access to the minds of less instructed men. In the medical

school at Alexandria, Ptolemy Soter first collected together that extraordinary library which contained a learning now unknown to the world, mostly the results of the study of the Therapeutæ and Essenes, on whose minds were engraved the conviction of a life to come, virtue as the guide to follow on earth, and all that preceding ages had taught of the power of medicine upon man. The Greek philosophers gathered from these stores, and taught in their cities and in their islands that which they had collected from the schools of medicine and of philosophy which had existed in Egypt; but as the soil of Greece was not yet fitted for the reception of such seed, he who planted and attempted to rear the beauteous offspring, died by the hand of ignorance, and was a martyr to a truth which is now held so sacred and so dear to man, that he who would attempt to overthrow it is despised and execrated.

REVIEW.

Joseph and Benjamin. A Series of Letters on the Controversy between Jews and Christians; comprising the most Important Doctrines of the Christian Religion. By JOSEPH SAMUEL C. F. FREY, author of a Hebrew Grammar, a Hebrew, Latin, and English Dictionary, and editor of Vander Hooght's Hebrew Bible. In Two Volumes. Fifth Edition. New York, U. S.

THE best account we can give of this work, and the best recommendation of its objects, are to be found in the preface addressed to the American reader, and which we therefore introduce into our pages:—

"DEAR READER,

"As you may probably have seen my narrative, or history of my own life, several editions of which have been published both in England and in this country, I shall not say any thing respecting myself, except what may be necessary as a key to the following letters. In the year 1771, I was born in Germany, of Jewish parents, and brought up in the strict observance of all the religious ceremonies of my forefathers. I was early educated for the office of rabbi, which I sustained afterward, together with reader in the synagogue, &c., for seven years. At the age of twenty-five, being convinced that Jesus is the Messiah, I left my father's house and kindred, and publicly professed the Christian religion. In 1799 I devoted myself to the work of a missionary, and commenced the preparatory studies in the missionary seminary at Berlin, Prussia, and pursued it afterwards more fully in England. In 1805 I commenced my missionary labours in London, and continued the same until 1816, when I removed with my family to this country, where I became the pastor of a congregation in the city of New York. In 1823 I resigned my pastoral charge, and engaged as agent for the 'American Society for Meliorating the condition of the Jews,' until 1828. Since that period I have spent much of my time in travelling, and preaching the glorious Gospel of the blessed God through the greater part of the United States. Thus far the Lord has brought me on, and I can truly say, goodness and mercy have followed me all the days of my life; for which I desire to bless his holy name.

"The substance of the following letters constituted my lectures to my Jewish brethren in London, and many of them I have preached in several cities in Great Britain, in the city of New York, and Charleston, S. C., &c.; and to the praise of Him 'from whom cometh every good gift,' I can say, upon good evidence, that they have met with general approbation, and been frequently solicited for publication. For the last twenty years I have revised and enlarged these lectures repeatedly, and carefully compared them with the sacred Scriptures, with the writings of our ancient and modern rabbins, and with the most approved works of Christian divines, and believe them to contain the truth as it is in Jesus Christ, my blessed Lord and Saviour.

"Now I am old and grey-headed, and cannot expect to have

many more days to labour in the vineyard of my Lord, I have endeavoured to prepare them for the press to the best of my poor abilities, and now humbly submit them to the public, that after I shall be dead and gone to rest with my fathers Abraham, Isaac, and Jacob, in the kingdom of heaven, I may yet, by these letters, teach transgressors the way of salvation through the once crucified, and now exalted Redeemer, and confirm believers in the all-important truth that Jesus Christ is the true Messiah, the Son of the living God.

"With respect to the style and composition of this work, I am perfectly aware that the critic will find many imperfections; but hope the candid reader will please to bear in mind that the English is not my native tongue, and ever since I commenced speaking it, I have been actively and constantly engaged in the work of the Lord, which has not left me as much time as I could have wished to attend more strictly to the rules of rhetoric, and therefore humbly request the reader to attend more to the matter than to the style and composition of the following letters.

"One object which I have constantly kept in view is to show that the fundamental doctrines of our holy religion are neither 'cunningly devised fables,' nor 'the inventions of modern priestcraft;' but that they have been revealed in the Old Testament, and believed by the ancient people of God, and have been taught by Christ and his apostles in the New Testament only in a fuller and clearer manner.

"I have addressed these letters to Benjamin, my own brother, merely as a representative of all my Jewish brethren, concerning whom I can adopt the language of the great apostle of the Gentiles, if not as feelingly, yet I trust as sincerely, in declaring, 'I say the truth in Christ, I lie not, my conscience also bearing me witness in the Holy Ghost, that I have great heaviness and continual sorrow in my heart, (for I did wish that myself were accursed from Christ,*) for my brethren, my kinsmen according to the flesh: who are Israelites; to whom pertaineth the adoption, and the glory, and the covenants, and the giving of the law, and the service of God, and the promises; whose are the fathers, and of whom as concerning the flesh Christ came, who is over all, God blessed for ever. Amen.' Rom. ix. 1-5. Neither are these letters written for the Jews only,

* Perhaps few passages have been considered more difficult to be understood than this. But the mind of the apostle may be easily known, 1. If the second and third verses are read without the clause 'for I could wish that myself were accursed from Christ;' 2. Let the original word *εὐχόμενος*, the imperfect middle voice, be translated 'I did' wish, instead of 'I could,' i. e. before my conversion; 3. Let this sentence be read in a parenthesis, as a reason why Paul felt and expressed greater sympathy for his brethren than any other of the apostles did. As if he had said, 'They never hated Christ as I did; for before my conversion I was as bad as my unbelieving brethren are; for, like them, I did wish myself accursed from Christ; that is, I abhorred the idea of believing in him, or as being considered one of his disciples; and therefore, by sad experience, I can sympathise with them more than others.' He who has just been rescued from a dangerous fit of sickness feels more for a sick person than he who never knew what sickness means. Hence, even the Son of God himself needed to be tempted and tried, that he might be able to succour them that are tempted.

but also for Christians of every denomination. The variety of truth contained in them is made so plain, and is in itself so interesting and important, that I hope the work will prove exceedingly useful as a companion in Bible classes, a text book to candidates for the Gospel ministry, and a complete system of divinity for pious families.

"Firmly believing that 'Paul may plant and Apollos water, but God alone can give the increase,' and that 'it is not by might, nor by power, but by the Spirit of the Lord,' I earnestly pray that the Lord, in infinite mercy, may make the truths contained in the following letters 'the wisdom and the power of God unto salvation to every' reader, 'to the Jew first, and also to the Greek.'

"*Brooklyn, New York, March, 1835.*

THE AUTHOR."

The author of "Joseph and Benjamin" is now in England, and is actively, and, we are glad to learn, successfully, employed in obtaining assistance for the gratuitous circulation of this masterly defence of Christianity, in answer especially to the objections of the Jewish nation, both among the Jews in the British empire as well as among those in Germany and other parts of the European continent. In the translation of the work into the German and French languages, we think certain peculiarities of opinion advanced by Mr. Frey might be prudently omitted; and in the event of an English edition succeeding the present, we recommend a careful revision of the whole, and a judicious omission of what is not likely to prove acceptable to the most numerous classes of Christians, however it may flatter Jewish pride and prejudice.

The author has our best wishes and earnest prayers for his success. His credentials from America are most satisfactory; and his reception in England by those who witnessed his exertions in early life, must afford him sincere pleasure.

The Book of the Denominations; or, the Churches and Sects of Christendom in the Nineteenth Century.
Second Edition. Virtue, Ivy-lane.

Why this work was so long permitted to remain out of print, when it was so loudly called for by the public, has not been explained. We are glad to hail its reappearance, and have no doubt of its wide circulation. This is the book for the times. Every churchman ought to possess it, that he may form just views of the character and position of his own church at the present critical juncture; and the Dissenter and the friend of universal religious freedom should read and diffuse its doctrines and sentiments. It is the religious patriot's manual, and we commend to the attention of our general readers the following extract, from the article entitled "The United Church of England and Ireland." The subject is baptism; and the author, after some remarks that the clergy would do well to read, mark, learn, and inwardly digest, goes on to say:—

"Baptism, as managed in this church, is, as we have seen,

the juggle of a priest, the charm with which he works a miracle of grace. But in addition to this, there are three things in the baptismal service, which to the members of all other churches but that of Rome, appear exceedingly strange and repugnant to all their notions of Scripture and common sense.

"The first is the questions put to the babe, and answered by the sponsors. The subject is too grave for farce, and yet the exhibition is ludicrous. Imagine a group composed of a nurse with a baby in her arms, and three or four plain, and for the most part, unlettered and thoughtless persons, who seldom, except on such occasions, are ever seen at church, standing round a white-robed and venerable priest—a man, who, in all respects, appears to be their superior, and who now presents himself before them as their spiritual instructor and guide. The child is brought, and a strange colloquy takes place; the priest addressing the child by proxy, demands of the sureties in its name, 'Dost thou renounce the devil and all his works, the vain pomp and glory of the world, with all covetous desires of the same, and the carnal desires of the flesh, so that thou wilt not follow, nor be led, by them?' On some occasions, when, to save time and trouble, half a dozen children are to be regenerated at once, this question is proposed to some twenty or thirty sponsors, godfathers and godmothers, as they are called; and, as instructed to reply by the clerk, who acts as master of the ceremony, they simultaneously reply, 'I renounce them all.'

"The priest then propounds to the infant the articles of the Apostle's creed, and the sponsors answer as before—'All this I stedfastly believe.' Again the clergyman demands, 'Wilt thou be baptised in this faith?' The response is—'That is my desire.' 'Wilt thou then obediently keep God's holy will and commandments, and walk in the same all the days of thy life?' 'I will,' is the decisive and prompt reply. Thus the babe becomes a Christian, and the sureties, after uttering these solemnities and giving these pledges, salute the little believer—make an occasional present—and will probably hear no more of it till awakened by the terrors of that tremendous judgment which will call all men to account, not only for their profane actions, but their idle words and serious blasphemies.

"The absurdity of all this (to say nothing of its impiety—for impious it does appear to me in the highest degree) may be exposed by presenting something resembling it on another subject.

"Suppose an infant brought by its parents and friends to a public school, to answer certain astronomical interrogations to be put by a professor of astronomy, as in general—'Wilt thou, infant of eight days old, wilt thou be an astronomer? Dost thou renounce all erroneous systems of astronomy; in particular, dost thou admire the true Copernican system? Suppose a proxy required to answer for this infant—All this I, proxy for this child, do stedfastly believe; and suppose from this hour the child became a reputed astronomer.

"The simplicity of scriptural baptism is infringed upon, by the church's officiously rendering the sign of the cross an essential part of the ceremony. No clergyman dare administer baptism without this accompaniment. It is indispensable; for when, to relieve tender consciences, it was proposed by the commissioners, who prepared the bill of comprehension, to make it indifferent, leaving it to be used or not, according to the will of the parents of the child—the proposal was rejected. So that what the Scriptures do not require, and which has no precedent in the practice of the primitive church, the church of England imperiously enjoins upon all her members, from which if they dissent, their offspring are at once, and for ever, abandoned to the uncovenanted mercy of God. But it may be asked, what has the cross to do with baptism? the three Persons in the Trinity are of equal importance in its administration, and if the Son is to be distinguished by a symbol peculiar to his office, why are appropriate rites referring to the Father and the Holy Spirit to be omitted? Invention might easily form some significant device; and so we might convert all the simple and the beautiful in the ordinances of the New Testament into a pageant and a mummery.

"If the church of England invent one rite, why may not the church of Rome invent ten or fifty? 'She may defend the use of chrism, salt, spittle, and the other ceremonies of christening in her ritual, by every argument by which the sign of the cross is defended.' But the sign of the cross is a significant rite; and what absurdity may not be made significant?—(pp. 376—379.)

GEMS.

DISAPPOINTED AMBITION.—The same sun which gilds all nature, and exhilarates the whole creation, does not shine upon disappointed ambition. It is something that rays out of darkness, and inspires nothing but gloom and melancholy. Men in this deplorable state of mind find a comfort in spreading the contagion of their spleen.—*Burke.*

OMNISCIENCE.—There is something in the thought of being surrounded, even upon earth, by the Majesty on high, that gives a peculiar elevation and serenity of soul. To be assured in the loneliest hour of unknown

or neglected sorrow, that every sigh ascends to the eternal throne, and every secret prayer can be heard in heaven; to feel that, in every act of conscious rectitude, the heart can appeal, amidst all the contradictions of sinners, to One who seeth not as man seeth, produces a peace which the world can never give. Feeling itself, like Enoch, walking with God, the heart perceives a spirituality and purity in every joy, a mercy and a balm in every sorrow, and, exalted above the intrusions of an intermeddling world, has its "conversation in heaven."—*Matthew.*

THOUGHTS ON MODERN LITERATURE.

BY THE HON. GEORGE LUNT, NEWBURYPORT, MASSACHUSETTS.

THE different moral tone, which characterises the writings of the present day, compared with those of the fathers of English literature, is such as cannot fail to strike the most casual reader. It is not so much that there is any deficiency of books upon the great subjects connected with human improvement, or that the authors themselves seem at all wanting in just views of the real interests of mankind. On the contrary, all means available to human effort are forced into the service of morality. Society is actually overwhelmed with the praises of whatever is excellent. Science, in her cold, hard way, has undertaken to demonstrate its value. Wisdom uplifts her modest voice; and she has her own hearers: and Folly, throwing over her shoulders the mantle of Philosophy, grows didactic and instructive, until our hearts become sick within us, and we are almost ready to despise those things which deserve our highest veneration and love, and which of themselves are attractive with a thousand beauties. One may now be convinced by mathematical demonstration of the superiority of virtue to vice; but is it not sometimes the case, that the very means which are victorious to convince, fail in power to convert to any good purpose? One may certainly be driven to assent to conclusions, of which he feels neither the force nor the truth; and may store his mind with innumerable maxims, without arriving at any higher eminence in wisdom or virtue. The reason may be overpowered, while the feelings are untouched. The intellect may be enlarged, and the heart remain unimproved. We bow down to an idol which we call Reason, and are too often careless or forgetful, whether this object of our worship be a true or a false divinity. The time has been when men were willing to trust to the ordinary impulses of human nature. They gave themselves up to admiration and pity, and all the more generous affections, without hesitation and without fear. They *felt* that they were right, and they needed no more convincing argument. But now-a-days, the world has grown much wiser; and where we were once satisfied with feeling, we must needs argue and dispute. We forget that all men are not capable of reasoning correctly. We forget that we cannot always be sure of the soundness of our conclusions, even when we have taken the most careful pains. We forget, in fine, that men have been, and may be argued into the most absurd results; and that passion and prejudice will artfully interweave themselves with our nicest speculations. It is true that Reason is herself immutable. But we are to mistake the sacrifice for the altar,—dis-

putation for logic,—reasoning for reason. We confound the mistaken processes of our own weak minds with the invariable principles of Truth, and thus syllogise ourselves into errors which are inextricable, because we are determined to convince ourselves that we are right. The world now deems itself interested only in realities, strangely and falsely so called; for the things which we so regard are indeed the unsubstantial and evanescent; and things distant and indistinct the future will show to be the only and truly real. The daily cares that press upon our thoughts are now made to constitute the daily food and nurture of the mind. And sanguine Hope with her buoyant wings, and Fancy brilliant with the hues of heaven, and Imagination that compasses the illimitable universe, must fold their pinions, and shrink away from a power, who without their ministry must become in a moment but a cold and lifeless abstraction. But is it not true, that all men aim to escape from the present? It is not to-day that we are supremely blest; but yesterday, we say to ourselves, we were happy, and to-morrow shall be like, and much more abundant. The slave of care will struggle to forget himself. He remembers a time when he was not so burdened, and anticipates a period when he shall be free from the perplexities which now oppress him; and the sick man turns upon his restless pillow, and recalls the elastic step of his early youth, or dreams of breezes, full of the sweet south, that shall yet breathe vigour into his frame, and renew the energies of his exhausted heart. And what, may we ask, has reason to do with the thoughts that soothe, and the hopes that cheer their minds? We satisfy ourselves with the suggestions of imagination; we become happy upon the blessings which hope insinuates; and life derives its very spring and buoyancy from things which reason can neither control nor supply. It is under these influences that the tired hand raises itself, and the flagging spirits are encouraged to renewed and more vigorous exertion, and that we press forward, again and again, to the vast pursuits of the world, with the incitements of hope throbbing and thrilling in our bosoms.

It is in vain, therefore, to tell us, that the operations of the imagination are inconsistent with the real requirements of life. It is vain to say that it is not necessary to our very existence. It has the power to lift the burdens which weigh upon the present. It cheers and renovates us by recalling into more splendid being the lost glories which brightened the past. It has the

magic art to clothe the future with more exquisite visions of magnificence and beauty than the present ever knows.

The theory which would confine us down to the mere objects of our senses humbles our nature, and deprives it of some of its most ennobling attributes. It is not surely the cultivation of the fancy, but its neglect and abuse, which is ever injurious to the true interests of society. But it is strange indeed that we should be always studying text-books for the improvement of our other faculties, and should suffer that one to run wild and luxuriate at will, which needs the most constant and attentive direction, and upon which, more than any of them, our daily happiness depends.

It cannot be denied that, after the Scriptures themselves, the books which have exerted the most powerful influence upon human life, have been works of imagination. From childhood to old age, and through every variety of character, they have governed the mind by the same irresistible and intense interest. How many characters indeed have been moulded and fixed by the narrative of that entertaining voyager, upon whose story we have all of us hung delighted in our youth, until his solitary island seemed to us fairy-land, only that we believed its marvels to be truer than any history. How many human beings have caught their more exalted emotions from the pages of that mightiest master of thought and passion, whose wildest conceptions seem less like fiction than the daily occurrences of our own existence! For whoever mused with Hamlet, or acted with Othello, without realising their life and presence like that of his most familiar and ordinary friends? Or, to turn to a graver, but no less imaginative specimen of fictitious composition, how many have wandered with delight over the wondrous story of good and honest John Bunyan! How many "trembling minds and hearts afraid" have gone with valiant Christian upon his pious pilgrimage, and felt their own faith strengthened by his steadfastness, their own courage confirmed by his example! We presume, too, that, considered apart from its sacred character, no more entertaining and instructive reading can be found, than that which is contained in the allegorical portions of Scripture itself. What lofty and beautiful images are breathed by the fervent spirit of the divine Psalmist and his royal son! What terrible sublimity rolls upon the awful strains of the Arabian patriarch! What holy sweetness, what heavenly enthusiasm, what magnificent imagery interweave themselves with the thread of the Old Testament narration, like pearls mingling with gold! Who has ever contrived stories so true to nature, so touching in expression, so beautiful in their application, so interesting in their structure, as the parables of our Saviour himself! the Bible is full of the expression of

the tenderest as well as the loftiest imagination, and disdains not to clothe its instructions, its threatenings, and its consolations, with the flowers that were wreathed in Paradise.

But to confine our attention to compositions of merely human origin, certainly a vast proportion of the literature of the present day is deficient in the higher characteristics, which distinguished the writings of our predecessors. There is plenty of light literature, it is true, and much which is both entertaining and attractive, to a certain degree; but there seems to be an air of superficialness and shallowness about most even of its best productions, which effectually prevents it from entering very deeply into our sympathies, from dwelling and incorporating itself, if we may so speak, with the texture of our minds, and becoming, as it were, a part and portion of ourselves. There are undoubted and illustrious exceptions to so general a charge. It may also be observed, that we seldom regard the writings of our contemporaries and companions with the same impartiality as that with which we look upon the productions of the distant and the dead. For Time, which separates the man of genius from the envy and malice of the world; Time, which covers his failings, and spiritualises and exalts his nature; Time, which transmits to us only the higher and more ethereal attributes of those glorious beings, breaks down also the earthly barriers which limited their renown to their own kindred and country; it sweeps away the prejudices which veiled their fame. They are no longer Spaniards and Italians, Englishmen and Americans: they claim a communion with the human race, and we yield them our veneration and love, as the benefactors of mankind.

But there is something in the older writers intrinsically superior to that which now claims our attention and praise. Take some of the standard classics of the English language, and how rarely will the most judicious critic have occasion for finding fault? But as to the mass of the current literature of the day, all men are competent to criticise the flippant pertness of its expressions, and its ill-considered and unsound speculations. The pen seems to have been taken up as if for the preparation of some unwelcome task, which, as might be anticipated, is executed with slovenly carelessness, and laid aside by both writer and reader without regret. But the eloquent simplicity of the older authors, their sound learning, the elegant variety of their careful diction, their fine thoughts and profound reflections, show that they came with minds prepared for the business which they had undertaken. And thus, "long choosing and beginning late," and writing with that cautious deliberation, they finally produced those noble works, which are worthy the devotion of a life; for ever honourable to themselves, for ever profitable to mankind. The popular works of the present day are many

of them justly so named. They, indeed, gratify the popular fancy, which is but for an instant, and, as that changes, they die, and are forgotten. They are created amidst the bustle and excitement of momentary caprice, to suit a taste as trustless and inconstant as a summer cloud; they contain in themselves no elements of solid continuance; they amuse, it is possible, for a day; they live without renown, and perish without honour; and the places which knew them are filled again and again by others, as trifling and as idle as themselves.

Not so is it with the other class of productions to which we have alluded. They were the fruits of no instantaneous impulse of the fancy: they were written to gratify no popular appetite, and to minister to no depraved taste; and they suit not, it may be, the fashion of the times. But age soon frees them from the passing prejudice of the day, and then they live and flourish for ever! They appeal to the common sympathies and sensibilities of our nature; they enter into the feelings which have characterised our race in every stage of its progress; they strike upon chords which have throbbed in every human bosom. Man is their her, and the world their stage. They think for all time, and their just gerdon is immortality.

We were led into these reflections, by looking over lately some of the minor poems of Milton, and could not help thinking how much more truly valuable was a line of his writing, than whole libraries of many modern compositions. They are true to nature, true to philosophy, true to heaven! There is something more in them than makes up the ordinary attributes of fine writing, something more than fancy, more than imagination, more than learning, more than genius—there is soul! There is a fire which caught its blaze at no earthly altar; there is a grand purpose conceived in the deep solitude of the author's mind. There is not a thought which looks like grasping at present renown. There is, to be sure, the anticipation of glory;—but the glory which Milton coveted was not the acclamation of the crowd around him. There is, indeed, a soul breathing from his pages, conscious of its own objects, serving its own ends, performing its own resolves, unpolluted by the vices of men, but serene, heroic, and unshaken amidst the thronging tumult of an unstable world. There is a conscience, which degrades itself by no base compliances, a heart which holds its hopes under higher control than the world's acclaim, an intellect unallured by interest and far too great for vanity, its only impulse duty, its only law its own approbation. It countenances no false philosophy; it sinks into no morbid despondency; it is full of hope, and courage, and sublime contemplation; it searches into the business of the world with a just appreciation; it mingles in the affairs of life with a generous aim;

it has nourished its meditations amidst the gardens of Sion; the flowers it has gathered have been watered with the dews of

"Silos's fount, that flowed,
Fast by the oracle of God."

We do not mean to be understood that the authors of the present day are to be expected to write like Milton and some of his contemporaries; for with different degrees of power, the same spirit seems to have been working in the minds of all those great men. A genius like Milton's, indeed, must exist alone and unapproachable; it is the wonder of its own era, and the admiration and example of other ages. The great events which agitated their day have been wanting to our own; the influences and the emotions which tended to elevate their minds have operated more feebly upon ours; the stormy waves which beat upon their shores with a dash like thunder, have flowed by us gently and almost imperceptibly, like the receding tide of a summer stream. But there can be no time which does not require encouragements to virtue; no age in which that literature is not really valuable which tends to elevate and dignify the character of man. But the lighter productions of genius, whether good or bad, will always exert a vast influence upon the popular mind; and we cannot count that labour vain which may have some influence in directing the thoughts to those purer fountains of meditation and philosophy. It is sad, indeed, to reflect that literature, which ought to be able to lead and to form the public taste, is too apt to derive its own characteristics from the tendency of the times; and thus acting and reacting upon each other, a day of inferior men and ignoble deeds will encourage corrupt and feeble habits of thought in those whose duty it is to resist such influences, and to stem the torrent of a debasing age. That literature which serves only to entertain an idle hour is not performing any of its higher purposes. It is its duty to devote itself to the encouragement of the better emotions of the heart and mind, and while it pleases, never to forget that its chief aim should be to raise and instruct. But whoever reads much of the fictitious writing now popular, will find himself lulled into a dreamy and enervating voluptuousness, or perhaps new strength imparted to his evil passions; or, it may be, it will unsettle his notions of right and wrong, will encourage a false estimate of the allotments of life, and cherish imaginary but fatal discontents. Let such an one turn, then, to the pages of a writer like Milton, and consider how he regarded the unavoidable misfortunes of existence. What deep and serene contentment breathes in this sonnet upon his blindness!—

"When I consider how my light is spent
Ere half my days, in this dark world and wide,
And that one talent, which is death to hide,
Lodged in me useless, though my soul more bent

2 a 2

To serve therewith my Maker, and present
 My true account, lest he returning chide;
 'Doth God exact day labour, light denied?'
 I fondly ask. But Patience, to prevent
 That murmur, soon replies, 'God doth not need
 Either man's works or his own gifts; who best
 Bear his mild yoke, they serve him best. His state
 Is kingly; thousands at his bidding speed,
 And post o'er land and ocean without rest:
 They also serve who only stand and wait.'

And how nobly does a strong heart and an unbroken mind speak in the thrilling language with which he addresses a friend upon the same subject!—

"Syriac, this three years day these eyes, though clear,
 To outward view, of blemish or of spot,
 Bereft of light, their seeing have forgot,
 Nor to their idle orbs doth sight appear
 Of sun, or moon, or star, throughout the year,
 Or man, or woman. Yet I argue not
 Against Heaven's hand or will, nor bate a jot
 Of heart or hope; but still bear up and steer
 Right onward. What supports me, dost thou ask?
 The conscience, friend, 'I have lost them overplied
 In liberty's defence, my noble task,
 Of which all Europe talks from side to side:
 This thought might lead me through the world's vain
 mask,
 Content though blind, had I no better guide."

It is impossible to read such productions without becoming wiser and better; for they encourage our nobler faculties, they cherish our more exalted purposes, they raise our spirits and warm our hearts, they cheer us on the rough road of duty, and we go forward on the business of life under the promptings of purer and more generous emotions. You read the writings of Milton and some of his compeers, and you feel that you have been in the presence of great men; and if the majesty of their genius awes you, it also comforts you with grander ideas of the capacity of the human intellect, it inspires you to loftier and more strenuous effort for your own cultivation and the improvement of others. On the contrary, many of the trifling productions which are such modern favourites, seem to us to have been written with the direct purpose of debasing our nature. It is not likely that this is generally the case; but so much the more melancholy is the reflection, if they are written to commend themselves to a depraved taste already formed, and open for their reception. At any rate, they are calculated to throw a veil over the brightness of our moral perceptions, and to confound, in our minds, the eternal distinctions of virtue and vice. They rob us of the prouder hopes of life, and chain us down to the sordid and selfish maxims of the world.

The true purpose of imagination is of a higher nature, we believe, than is generally apprehended. It is not simply to amuse an idle hour, still less to minister to a depraved taste, that she spreads her starry wings, and compasses the broad and teeming earth, and the illimitable amplitude of heaven. Her storehouse is a treasury of un-

counted gems—pearl and opal, diamond and gold. As the liberal elements dispense their bounty, so she diffuses her golden gifts. There is no age, or climate, or condition of men, in which she has not given to glory its chiefest honour, and its sweetest magic to beauty. It was by her aid that the early Chaldean looked into the blue depths of upper air, and drew thence the mystic theories of his ancient wisdom; and upon her pinions was wafted the soul of

"That blind old man of Scio's rocky isle."

whose stirring songs yet echo upon the sanguine plain and around the battlements of old Troy. Upon the mountain-tops she hath her dwelling, and in every green field. The deep echoes of primeval forests are filled with her language, and Ocean, as it swells and thunders, answers to her voice. Sometimes she may be found reposing in the calm loveliness of a summer landscape; and sometimes she builds her pavilion upon the tumultuous current of the storm. Other things are partial and limited in their character and operation; but her empire is unbounded as the universe. There is no human being so cold and dull in whose feelings and affections she has not some share. The savage in his desert and the philosopher in his closet, are equally within the sphere of her control. She is powerful to melt, to persuade, and to teach. It is her office to elevate, to refine, and to humanise the mind; and whether she wanders amidst the enchantments of Arabia, or clothes the ragged hills of Scotland with glory and delight, her influence is acknowledged and her dominion allowed.

It is the well-known remark of a great English statesman, that if he might write the popular songs, he cared not who made the laws of the nation. The observation is manifestly founded upon a just appreciation of human character, and is but a commentary upon the conduct of Lycurgus, who introduced the poems of Homer into Greece at the same time that he was reforming the legislation of Sparta. How often has the stirring lay aided the patriot in the achievement of his triumphs! How often has the hero's heart throbbed with higher energies as he listened to the thrilling numbers of the muse's lyre! History is full of the triumphs of song; and a touching incident of this nature is related in Plutarch's life of Nicias, where he tells us that after a battle unfortunate for the Athenians, their Sicilian conquerors freely released their captives, and showered upon them benefits seldom bestowed upon the vanquished, in reward for the recitation of a few verses of Euripides; and which is the same story so beautifully alluded to by a poet of our own times:—

"When Athens' armies fell at Syracuse,
 And fettered thousands bore the yoke of war,
 Redemption rose up in the Attic muse,
 Her voice their only ransom from afar."

See! as they chant the tragic hymn, the car
Of the o'ermastered victor stops, the reins
Fall from his hands, his idle scimeter
Starts from its belt, he rends his captive's chains,
And bids him thank the bard for freedom and his
strains."

If, then, works of imagination exert a more powerful and constant influence upon the popular mind than graver treatises, how necessary it is that they should be founded upon the truest models, and be dedicated to the best purposes! It is in vain to attempt to subdue the outpourings of imagination; nor can it be in any way desirable. Other thoughts may be necessary; but her promptings are a delight. It is her proper business to make goodness attractive, and to scatter flowers over the rugged paths of duty; it is hers to cheer what misfortune depresses, and to gild the clouds of life with a halo of glory. It is surely the interest of society to see to her proper cultivation; and she well knows how to repay its care a thousand fold. When she is neglected she becomes, of necessity, depraved, and society feels the debasement in an infinite variety of ways; when her honour is secured she calls around her the glories which have illuminated her past existence, and thus she gives a fresh charm to virtue, and throws a newer lustre upon happiness.

Above all, let not him who is conscious of a just and noble purpose fear what some have strangely said—that the day of poetry has gone by, and that he will want readers; for this, indeed, can never be while there is any thing in the condition of nature or of life to impress us more deeply than the ordinary current of existence; it can never be while a hue of melancholy shadows any spirit, or a spring of joy gushes in any heart. It would contradict the very constitution of human nature itself. The sailor thrills upon the bounding sea, the student revels in the luxury of solitary thought, the husbandman gladdens in the freshness of spring; and all these are poetical: and the daybreak, scattering the silence

of darkness; the descending splendours of evening; the grey twilight; the array of night; hill and valley, stream and forest, flower and ocean; whatever is noble in the history of mind, whatever is lovely and affecting in the story of life. To say that the day of poetry is gone by, were, indeed, to say what none of us would willingly believe; for it would be to say that the world has grown old and imbecile, that its veins are chilled, and its end is nigh; that the enchantments of youth are vanished; that the glory of manhood is a shadow; that his better hopes are but folly, and the purposes of existence only degrading; it were to say that the freshness has passed from the leaf, and the sunbeam from the canopy of heaven; that life, indeed, is worthless, and creation a blank.

And so, indeed, from day to day, and from year to year, pass on and perish the vanities of the world; so pass its idle fashions and its heartless follies; and sorrowing not for them, we might say without regret,

"Pass on, relentless world!"

But so passeth not whatever is truly valuable and excellent; so can never pass those loftier aspirations which are conceived in the purity of a good heart, and are devoted to the exalted purpose of advancing and ennobling the human character. So can never pass the glory of intellectual achievements, which, like Milton's, have caught their inspiration from a Divine fountain, and whose hopes of endurance are built upon a foundation which is higher than the stars. No generous impulse, no lofty action, no ardent and virtuous aspiration of one who sincerely devotes himself to the advancement and elevation of his kind, shall ever perish; his fervent enthusiasm, his noble enterprises, his magnificent thoughts, his pure life, his charity to man, and his high trust in God, will be recorded for eternity, where the fashions of the world have neither part nor lot.

BRITAIN.

CHAPTER XI.

TRADE.

WHEN the disturbances of the conquest had subsided, it contributed to the spread of trade, by opening communications with France, and other parts of the continent, which found full employment for the small, but always increasing, navy of the conqueror.

Some of the principal places of trade, in this period, were Bristol, London, Exeter, the Cinque ports, Norwich, Lynn, Lincoln, Grimsby, Wainfleet, Boston, Stamford, York, and Pembrokeshire, where the Flemings made coarse woollen cloth.

The exports were wool, leather, yarn, lead, tin, corn, salt, wax, cheese, honey, horses, which often sold for twenty-eight, or thirty marks each, and slaves, often the children of the poor, who were sold in Ireland, as appears from the council of Armagh, at which it was decreed that all the English slaves should be liberated. None of these exports left the kingdom without a tax had been first paid to the king. The merchants, who were chiefly Jews, that had come after the conquest in great numbers, among whom were some Flemings, Italians, Germans, Lombards, and even Anglo-

Saxons, formed a despicable part of the English population at that time. They imported drugs, spices, arms, pictures, books, the precious stones, and metals, oils, woad, silks, wines, furs, and the celebrated tapestries from the city of Arras, whence their subsequent name; and iron and steel from Germany; all whose prices and times of sale were fixed by the king. There were then embroiderers, jewellers, painters, writers, and illuminators, besides the necessary trades mentioned in the former period. But such tradesmen and imports were chiefly for the benefit of the nobles and clergy. The merchants of a trading city were, in this period, formed into guilds, to lessen the hazards, and to increase the gains of commerce, for which they paid a yearly rent to the king. A guild of London paid 16*l*.; one at Winchester 3 marks; one at Lincoln, 2 chassours; one at Oxford 1 gold mark; the weavers at Winchester 3 marks, for the permission to choose their own aldermen; and the fullers of the same city paid 6*l*. for their guild, which, from its fine, might have been considered a more gainful trade than the weavers. One of these merchants was usually kept in the house of a great baron, to superintend all his affairs of trade; and some of the more successful traders rose to the dignity of inferior barons. No usury was allowed to be practised by Christians, which drove the trade of money lending into the hands of the Jews, who often took fifty per cent, and had large dealings with the scholars of Oxford, in compassion of whose proverbial improvidence, Henry III. afterwards limited the interest, or lent money, to forty-three per cent! The Norman shilling was larger than the Saxon, and the silver penny, when required, was cut into smaller divisions, until it was forbidden by Edward I. There were no silver nor gold mines in the island in this period.

Some of the Saxon coins, as the *marcus thrimas*, and the *oras*, fell into disuse soon after the conquest, as well as the copper strea to which we have already referred.

A pound then meant as many silver coins as weighed five thousand four hundred troy grains: the marks were $\frac{3}{4}$ of the pound; a shilling the 1-20: a penny 1-240. Of gold coins it would appear that there were none coined then, though such foreign gold coins as passed among the Saxons were still current, and the proportion of gold to silver appears to have been 1 to 9. If when money was paid into the Exchequer it was a little too light, six silver pennies in the pound were added by the payer: if much too light, the money was paid in by weight, and the number of coins were disregarded: but if impure, a part of it was melted, and the proportion of the rest was thus settled. Hence it became necessary in a bargain to agree upon the *mode* of payment whether by weight, tale, in kind, or by combustion! In 1126 there was a dearth, when wheat sold for 6*s*. a quarter, that is, about 10*l*. of

our money; but in 1244, it was so cheap that it sold for 2*s*. the quarter. With all this disadvantage, the balance of trade was in favour of England, even then, for as there were no mines to increase the coin, which, with all its liabilities to loss, did yet increase, foreign commerce must have sent more money into the English markets than Englishmen sent coin from home; and when we consider the immense sums which were sunk by the clergy, in the papal service, the trade of Britain must have been very great.

It was customary for the great barons to keep in their household a superior inmate, who was called "the merchant," analagous, in part, to the present office of steward, but differing from him in the fact that the merchant often engaged in foreign trade, his lord finding the money and receiving the gains.

A person who had 10*l*. a year, in this period, could have obtained as much as 150*l*. of our present money would procure, which arose, partly from the fact, that their 10*l*. contained much more actual silver than ten of ours; and that a pound, in those times, was worth twelve and a half times more than it is now.

The state of agriculture was greatly neglected in the first part of this period, whose wars were so destructive to the country that it was said, "to till the land was to plough the sea," and though many of the Normans were superior farmers, as Richard de Rulos, who converted some of the fens into good lands, they were for the first century too engaged with their sword to attend to the peaceful plough. In this age the plough had but one stilt, and in Wales the ploughmen walked backwards. A sickle was a double handled blade. Water, and horse mills, were numerous. Marl, Chalk, and Dung, were used for manures. The sower carried the grain in a sheet slung from his neck. But the agricultural art, like all the rest then in Britain, was encumbered with useless laws, which regulated the times of ploughing, and the quantities of tillage, and even, sometimes, declared penalties for suffering the continuance of certain weeds! Nothing, but particularly cattle, could be yet bought without witnesses. All wrecks fell to the king, or the earl, which barbarous custom, a little modified, still exists. Glass painting, binding, and illuminating books, were not uncommon, and some of the most distinguished artists were the clergy. John of Salisbury compares the munificence of the nobles towards musicians to that of Nero; and music then prospered the better because it was directly employed in panegyrising the great, or in praising the fair!

Some of the husbandmen had inferior gardens, which, with vineyards and orchards, were possessed by nearly all the great monasteries, that in the time of Henry I. began to be built in the Norman fashion. William of Malmesbury particularly mentions the gardens and vineyards of

the vale of Gloucester as the best in all England. The houses, in general, were of wood and slime, wattled and covered with rushes. To induce the erection of better churches and monasteries, the builders had a remission of their penances, and were honoured with feasts, provided by the clergy; on one of which occasions, Jeoffred, abbot of Croyland, when about to build a church, provided a dinner to five thousand guests. It was often, however, remarked by the monks, that the Saxons had mean houses, but good living; the Normans fine houses, but poor fare. In this period the churches, abbeys, and castles, had small glass windows: the walls were only white-washed: and the roofs of the richest monasteries were covered with lead. The houses of the ordinary people were still made of wood, and covered with sods, straw, or reeds, and even the respectable burgesses of London lived in places which would be now considered inferior cowsheds. But the higher classes, conscious that England had been taken from its want of places of fortification, built numerous castles, which were defended by the ditch, barbican, moat, and walls, from which modern gaols have been copied. A sight of two or three of the castles which yet remain at Warwick, Alnwick, Bedford and Exeter, would be better than pages of description.

Towards the end of this period brass founding began to be practised by the clergy; armour and images were covered with gilt; jewellery appears to have produced some skilful artists, amongst whom Baldwin is mentioned, who made several vessels, which charmed even Adrian IV., the noted Breakspear. Nor must it be forgotten that artists found their best market in the church. The emigration of the Flemings advanced the arts of weaving and spinning, but they were ordered not to stretch their cloths before the door; they were required to make them of two ells wide, *as good in the middle as at the sides*, and none but black cloth was to be sold in cities and boroughs; to enforce which regulations six or eight "honest men" were appointed, from whose inspection, however, some of the richer merchants easily purchased exemption. Silks were worn by

many of the nobles; and English ladies retained their celebrity for works of embroidery, by which, in patches of biblical or church histories, the wonders of the saints proclaimed the triumphs of the needle; on which account the English ladies were often employed to make the sacerdotal dresses, and, sometimes, even those of the pope. The rooms of great houses were painted with histories, wainscotted and hung with tapestries, while the warrior had his saddle and shield painted. Sculpture could not be disregarded since every church wanted the statue of its patron saint; and most of them were as well stocked with images, as the niches in the external walls of some of our cathedrals are still. Nor did sculpture rest when it had stored churches with many a gilded row of the "twelve patriarchs," and the "twelve apostles," the martyrs, &c., but it created files of angels, with gilt wings, and not seldom dared to represent the Almighty himself. Portrait painting was common, and the church walls were generally the carvass where the great condescended to have their images drawn; and in some of the churches, the grandees not only had their own full-lengths "painted in fresco" (!) on the walls, but accompanied it with drawings of their favourite dogs, hawks, and horses, with some of their principal slaves; doubtless, a very edifying picture for the King of heaven. Do not smile, reader; it was by this art that the clergy moved the compassion of even kings and courts to engage in the crusades; for which purpose Abulfeda tells us, among other things, that two remarkable paintings had a great effect in deciding the oscillating zeal of the nobles; namely, one representing Mahomet flogging Christ, who was tied to a stake! and the other, an Arabian stallion, staling on the holy sepulchre.

LEARNING.

Happily for us there was learning enough in the monasteries to provide us with some historians of that most melancholy period, of which it may be useful to mention the following:—

	A.D.	to	A.D.
Ingulphus, whose history extends from	664	to	1091
Eadmer	1066	...	1122
Simeon of Durham	616	...	1130
Richard of Hexham	1135	...	1189
William of Malmesbury or Somerset	449	...	1148
Henry of Huntingdon, from the beginning.....		...	1154
John of Hexham	1130	...	1156
Benedict of Peterboro'	1170	...	1192
William the little.....	1066	...	1197
Gervase of Canterbury.....	1122	...	1200
Roger de Hoveden (continued Bedes')	731	...	1202
Matthew Paris	1066	...	1259
Matthew Paris, with Rishanger's additions.....		...	1273
Thomas Wykes	1066	...	1304
Giraldus Cambrensis, a history of Ireland.			

Of these, it may be necessary to remark, Ingulphus was secretary to the conqueror, went on the crusades with seven thousand other pilgrims, out of which only twenty ragged and famished fugitives returned. He removed to Croyland, where he wrote his history. William of Malmshbury is by many thought to be the most veracious of the historians. He was only, however, monk and librarian of his abbey. Benedict, of Peterborough, also wrote a life of Becket, of whom John of Salisbury was an enthusiastic admirer. Besides these scholars, there are others whose works are yet distinguished, as Anselm, Lanfranc, Nicholas, Breakpear, Ailred, Peter Blois, of whose works there are yet extant sixty-five sermons, seventeen tracts, and one hundred and thirty-four letters. All the scholars of those times went to Paris, which, added to their frequent political employment, often contributed to make their histories partial and prolix. We learn that at Croyland, in 1091, there was a library of nine hundred volumes, and a beautiful orrery. Original authorship was a dangerous pursuit; for if the writer mentioned the crimes of the great, they crushed him; if of the little, none read; and if of the clergy, they excommunicated him, and burnt his books. Rude poems, without a spark of the great natural fire which all good poetry must possess, appear to have been then a part of the staple literature. From the specimens which are extant they appear to have been indecently amorous, full of tiny conceits about metaphysical morality, or pompous panegyric of the nobles. These Norman poets were called troubadours, and their productions, romances, from the name of the language Roman-French, in which they were written. Of course, love songs, and doggrel hymns, were as common as hawthorn berries; and, occasionally, satire wrote in rhymes; but satire was then in its infancy. The chief schools of learning besides Cambridge and Oxford, where out of six hundred and seventy-five houses above five hundred were in ruins at the conquest, and where there were yet about three thousand scholars and teachers, were the cathedral schools of York, Lincoln, Canterbury, Winchester, Saint Alban's, and London. The monasteries, of which, from the conquest to the death of John, there arose five hundred and fifty-seven new ones, were the chief schools of medicine, no mean part of the maxims of which were drawn from the depths of astrology; and it was gene-

rally thought then that medicines depended more on the quarter and age of the moon than on their own native efficacy.

The real scholars, justly disgusted with the trash to which the Norman jargon had reduced the vigorous Saxon-English, cultivated the Latin tongue, in which all their books, letters, accounts, sermons, and many of their conversations were expressed; and some of the historic writers, whom we have just mentioned, are, by no mean judges, thought to have attained to an elegance in Latinity which, in this country, has certainly never been surpassed. In addition to Latin, the knowledge of Arabic was ascribed to Robert of Reading, and Adelard of Bath, with the exception of whom Latin appears to have been then the utmost classical acquirement, of which even the great officers of the court often did not know a word. The metaphysics and logic of Aristotle appear to have been introduced and much studied, even by the ladies; which may account for that nice discrimination of all the casuistry of feminine moralities, in which the romancers make them such adepts. But what, except such nonsense, could be expected from the scholastics who sat in solemn debate over such themes as what is the substantial form of sound? what is the essence of universals? can angels pass from one point to another without passing through intermediate space? does the body of Christ sit or stand in heaven? in short, the best intellects of the age were employed in the ethereal fooleries of that real metaphysician Aristotle; and though John of Salisbury, with a manly eloquence, and often a two-edged wit, denounced and exposed such follies, the practice was continued, to the infinite detriment of all the sciences, but especially to that of theology. Canon law, which had special attractions for the clergy, came into fashion, and at the discovery of the Justinian code, the Roman law began to be studied. Geometry, medicine, and astronomy, were but little known, and arithmetic less studied; while the astrologer was caressed in every family of consequence, as the most important guest, until in September, 1186, having in an almanac ventured, from their equivocal prognostications, to foretell a dreadful storm, which never happened, they fell into temporary neglect. For the people had prepared for the evil, with a three days fast, which was vexatiously of no consequent use.

CATS.

ARTICLE II.

We can fully participate in the wondrous looks of surprised astonishment which our "first parents" displayed when the solemn silence of the

garden of Eden was first disturbed by the loud and unruly love-chaunt of a Cat. How must "soft fear" have disturbed their "gentle breasts," when

the "peace" of the land was "broken," and no policeman was at hand to quell the boisterous brawlers: how they must have exchanged looks of dire wonder and dismay when listening to the chords of music thus discordantly strung by the first cat-chorus that ever woke the infant world—how dread must have been the din—how frightened they must have been—how spell-bound by the fearful voice of misrule that then reigned—how utterly confounded their senses by this stunning "confusion of tongues," "ere Babel was"—and how provoked Adam must have felt if the "voice of sound" was first heard when he and Eve were in their "first sleep." Knowing, as we do, in the language of Mr. Curtis, "that the ear is an instrument delicately tuned," we wonder it was not put out of tune on the instant, and deafness been the future lot of the "first-born pair." Our surprise is, that both their tympani were not, in newspaper language, "shivered all to atoms" by the reverberating chorus of swelling sounds. How unlike the "dulcet notes" to which they had ever been accustomed from "bird and brook." In truth, it must have been a sad "falling off" in harmony, and whenever we revert, in thought, to these "past times," we pity our "parents."

We have already presumed upon the probability that when cats were born "*a parte post*," rats must have been born "*a parte ante*." The purposes for which their relative births were fixed at different periods of time may (as the case may happen to be) or not have been divulged to them. It would be gratifying to ascertain this fact for a truth, but we are inclined to reckon our ignorance of this matter as our greatest bliss, and profess not, therefore, to question the planets about it. Joy and terror have never, we conceive, been more aptly pourtrayed than when first they met as moral and physical antagonists in the relative persons of Cat and Rat. The features of the Grimalkin largely swelling out under the influence of hitherto unknown sensibilities of force and power and longing enjoyment for a meal of rat's-meat; her whole mind enkindling under the feeling of a foretaste for a yet unrelished delicacy; her mouth watering, and her heart panting for the savoury odour and the rich gravy of an underdone rat-steak, the picking the bones, the digging out the marrow with her claw for a spoon, the tit-bits, the savoury relish, the stew-like warmth, the gravy oozing into the skin for a natural dripping-pan, and the lapping up, and the smacking the lips, when the delicious meal was over, the long remaining after-taste of savoury relish remaining upon the tongue, the fully enlarged feeling of "having had enough" newly developing itself just beneath the ribs, on the right side where the stomach lies—all these "pleasurable delights," aye, and many more than these, must have passed with a hop and skip step through the brain of the first cat on her first introduction to a member of the rat community.

And then the "preparing for battle"—the sharp eye, the set and stiffened whisker, the gradually unfolding claw, the stiff hair, the swelling tail, the set and expanded paw on which to start fairly for the fight; and then the spring, the leap, the bound, and, in an instant, claw, and fang, and tooth, were deeply digging into the "flesh and blood" of rat's-meat. Of the feelings of "the opposite party," it is not our business here to speak; we shall reserve what we have to say on this head for another opportunity, of which we have already spoken. The catastrophe attending the first slaughter only stimulated the "oppressor" to further acts of violence; and from this accidental introduction, as it were, to "a good thing," a desire for a further and closer intimacy was awakened; but when this was repelled, destruction took the place of desire, slaughter terminated where castigation had begun, and a fierce cat-crusade was forthwith established; holy alliances were formed, between Toms and Tabbies, quadrupartite treatises signed, and an exterminating war, "offensive and defensive," was forthwith commenced against the tribes that dwell in wainscot-holes and hay-lofts. The "nooks and corners" of Eden were converted into battle-plains, slaughter was made in seclusion, and carnage and cruelty reigned where peace had formerly been wont to dwell. The long lasting animosity and uproar between the "contending parties" scattered dread and dismay amongst the greater creatures who looked on. Doves and young pigeons were scared out of their very senses; young chickens caught the croop and died; and thus the first "slaughter of the innocents" was caused by a cat.

We may, however, rest tolerably sure of the fact, that if Noah took a male and female of every animal species with him into the ark, that cats were among the number. We know not how these gentle creatures deported themselves in those days, but this we know, that a week's residence at the treadmill villa, at Brixton, would be positive happiness to us, when compared with the forty day's close confinement in a box with a cat. The bare consideration of it brings upon us a fit of shiverings. The golden age of Cat-hood was during the reign of the Pharaohs in Egypt, the sun shone upon the feline tribes then, and verily they made fine hay whilst it lasted. Nice fat and sleek creatures they must have been, backs of richest black and tortoise-shell fur, and fine electric sparks they doubtless gave out when some unlucky Egyptian curry-combed their backs the wrong way in the dark. A fine array of whiskers there must have been then, horizontal, long, white, straight, and pointed; curls they doubtless turned up their noses at, in downright disdain; Egyptian cats might do this, we never knew an English cat attempt so bold a feat with her nose. It must have been a very difficult thing to bring such an array of cats as Thebes or

Memphis must then have shown, into any thing like positive order or subjection; there must have reigned sad confusion at times in cat-land; dreadful disasters and rampant-riots must have frequently been the order of the day; the cat-constabulary must have had hard work of it; there must have been numberless clawings and scratchings on both sides. A cat when she is drunk, and in good fighting condition, is all head and tail, and, by a tremendous feat of harlequinade, they somehow manage to make both ends, that is, head and tail, to meet, and bring them to bear with terrific and overbearing violence upon their enemy. Verily, cats had a fine time of it in those "olden days;" living in temples, and being made much

of, they doubtless gave themselves many airs and graces upon state occasions, and would not have scrupled, we dare to say, to scratch king Pharaoh's eyes out, if they had felt a wish to do so. Poor fellow, he was much to be felt for, and we have often pitied him, when reflecting upon the numberless scratches which his back must have shown, when engaged in some uncongenial combat with his cat subjects, who, like many of their betters, when enraged, would listen neither to colloquy nor parley. "Uneasy lies the head that wears a crown," says the adage in our days—"Uneasy sits the king that keepeth cats," must have been the adage in the days of our friend Pharaoh.

EPHON.

A SKETCH.

BY J. G. PERCIVAL.

[Of the numerous writers of that rich and graceful poetry which distinguishes the modern literature of America, there are none whose genius is more lofty or more emphatically poetic than that of J. G. Percival. Even in the earlier days of school-boy youth the hidden fire struggled within him, and he soon attracted the particular notice of his friends and companions by the wonderful quickness which he displayed in acquiring languages. Throughout his earlier years he was in his temper and character timid, sensitive, and affectionate; mild and softly gentle in all his actions, and shrinking sensibly from that rough and joyous hilarity which pre-eminently distinguishes the gladness and unsuspecting confidence of the youthful heart. As he grew up, he particularly directed his talents to the study of chemistry and botany; whilst his acquirements in every branch of general knowledge and literature, including most of the modern languages, increased. He has published several volumes of poetry, from which we shall occasionally select the best specimens for our Miscellany. The following "Sketch" describes a scene in the time of the yellow fever, and was written in a miserable apartment in the suburbs of New York, whilst Percival was suffering from the pangs of hunger: it was sold, for about thirty shillings, to the Editor of an American newspaper.]

"Night

Was far upon its watches, and the voice
Of nature had no sound. The pure blue sky
Was fair and lovely, and the many stars
Looked down in tranquil beauty on an earth
That smiled in sweetest summer. She looked out
Through the raised window, and the sheeted bay
Lay in a quiet sleep below, and shone
With the pale beam of midnight. All was still,
And the white sail, that o'er the distant stream
Moved with so slow a pace, it seemed to rest,
Fixed in the glassy water, and with care
Shunned the dark den of pestilence, and stole
Fearfully from the tainted gale that breathed
Softly along the crisping wave; that sail
Hung loosely on its yard, and, as it flapped,
Caught moving undulations from the light,
That silently came down, and gave the hills,
And spires, and walls, and roofs, a tint so pale,
Death seemed on all the landscape—but so still,
Who would have thought that any thing but peace
And beauty had a dwelling there! The world
Had gone, and life was not within those walls;
Only a few, who lingered faintly on,
Waiting the moment of departure; or
Sat tending at their pillows, with a love

So strong it mastered fear—and they were few,
And she was one—and in a lonely house,
Far from all sight and sound of living thing,
She watched the couch of him she loved, and drew
Contagion from the lips that were to her
Still beautiful as roses, though so pale
They seemed like a thin snow-curl. All was still,
And even so deeply hushed, the low, faint breath,
That trembling gasped away, came through the night
As a loud sound of awe. She passed her hand
Over those quivering lips that ever grew
Paler and colder, as the only sign
To tell her life still lingered: it went out—
And her heart sunk within her, when the last
Weak sigh of life was over, and the room
Seemed like a vaulted sepulchre, so lone
She dared not look around; and the light wind
That played among the leaves and flowers that grew
Still freshly at her window, and waved back
The curtain with a rustling sound, to her,
In her intense abstraction, seemed the voice
Of a departed spirit. Then she heard—
At least in fancy heard—a whisper breathe
Close at her ear, and tell her all was done,
And her fond loves were ended. She had watched
Until her love grew manly, and she checked
The tears that came to flow, and nerved her heart
To the last solemn duty. With a hand
That trembled not, she closed the fallen lid,
And pressed the lips, and gave them one long kiss—
Then decently spread over all a shroud;
And sitting with a look of lingering love,
Intense in tearless passion, rose at length,
And pressing both her hands upon her brow,
Gave loose to all her gushing grief in showers,
Which, as a fountain sealed till it had swelled
To its last fulness, now gave way and flowed
In a deep stream of sorrow. She grew calm,
And parting back the curtains, looked abroad
Upon the moonlight loveliness, all sank
In one unbroken silence, save the moan
From the lone room of death, or the dull sound
Of the slow moving hearse. The homes of men
Were now all desolate, and darkness there,
And solitude and silence took their seat
In the deserted streets, as if the wing
Of a destroying angel had gone by,
And blasted all existence, and had changed
The gay, the busy, and the crowded mart
To one cold, speechless city of the dead.

ATHENS IN THE DAYS OF PERICLES.

It was during the days of Pericles that those glorious fabrics progressed which seemed, as Plutarch gracefully expresses it, endowed with the bloom of a perennial youth. Still the houses of private citizens remained simple and unadorned; still were the streets narrow and irregular; and even centuries afterwards, a stranger entering Athens would not at first have recognised the claims of the mistress of Grecian art. But to the homeliness of her common thoroughfares and private mansions, the magnificence of her public edifices now made a dazzling contrast. The Acropolis, that towered above the homes and thoroughfares of men, a spot too sacred for human habitation, became—to use a proverbial phrase—"a city of the gods." The citizen was every where to be reminded of the majesty of the state; his patriotism was to be increased by the pride in her beauty; his taste to be elevated by the spectacle of her splendour. Thus flocked to Athens all who, throughout Greece, were eminent in art. Sculptors and architects vied with each other in adorning the young empress of the seas; then rose the masterpieces of Phidias, of Callinates, of Mnesicles, which, even either in their broken remains, or in the feeble copies of imitators less inspired, still command so intense a wonder, and furnish models so immortal. And if, so to speak, their bones and relics excite our awe and envy, as testifying of a lovelier and grander race, which the deluge of time has swept away, what, in that day, must have been their brilliant effect, un mutilated in their fair proportions, fresh in all their lineaments and hues? For their beauty was not limited to the symmetry of arch and column, nor their materials confined to the marbles of Pente-

licus and Paros. Even the exterior of the temples glowed with the richest harmony of colours, and was decorated with the purest gold; an atmosphere peculiarly favourable both to the display and the preservation of art, permitted to external pediments and friezes all the minuteness of ornament, all the brilliancy of colours, such as in the interior of Italian churches may yet be seen, vitiated, in the last, by a gaudy and barbarous taste. Nor did the Athenians spare any cost upon the works that were—like the tombs and tripods of their heroes—to be the monuments of a nation to distant ages, and to transmit the most irrefragable proof "that the power of ancient Greece was not an idle legend." The whole democracy were animated with the passion of Pericles; and when Phidias recommended marble as a cheaper material than ivory for the great statue of Minerva, it was for that reason that ivory was preferred by the unanimous voice of the assembly. Thus, whether it were extravagance or magnificence, the blame in one case, the admiration in another, rests not more with the minister than with the populace. It was, indeed, the great characteristic of those works, that they were entirely the creations of the people; without the people, Pericles could not have built a temple or engaged a sculptor. The miracles of that day resulted from the enthusiasm of a population yet young, full of the first ardour for the beautiful, dedicating to the state, as to a mistress, the trophies honourably won, or the treasures injuriously extorted, and uniting the resources of a nation with the energy of an individual, because the toil, the cost, were borne by those who succeeded to the enjoyment and arrogated the glory.—*Bulwer's Athens.*

HEMLOCK, THE POISON OF SOCRATES.

SECOND ARTICLE.

LINNÆUS and Lamarck believed the hemlock, Haller and others that a composition of different herbs, was the Greek poison; and, more latterly, Foderé has investigated the subject. The details of the death of Socrates, and they are sufficiently minute, have led medical men to believe that they are not acquainted with the means which were employed.

We have had handed down to us a dialogue, which is ascribed to Plato, between two of the friends of Socrates, one of whom was present on the sad occasion, and from whom this remnant of antiquity takes its name—Phædo. This dialogue is a beautiful account of the last moments of the great heathen philosopher; his words, his thoughts, his actions, are touchingly recorded;

and Cicero declares that he never read it without shedding tears. We learn the names of the friends of Socrates, who, by permission of the magistrates, spent the last sad day with their revered preceptor, listening to the beauteous discourse on life and immortality, which he pronounced on this the eve of his departure hence. We are particularly informed of the absence of his scholar Plato, in consequence of indisposition. Early in the morning Phædo and his companions sought the prison in which Socrates had for some time been confined. His fetters were just removed, the magistrates having announced to him that he must that day undergo the punishment which their folly had pronounced. They found him with his wife; and their entrance made her

lamentations again burst out. At the request of Socrates she was removed, together with one of her children that had accompanied her. The sensation of pleasure which followed the removal of the pressure of the fetters, drew forth from the sufferer some philosophic observations, which were followed by a long and beautiful disquisition upon the unlawfulness of suicide, upon the conviction that dwells on the mind of a future state, the reasoning that had led him to such a conclusion, and upon the immortality and indestructibility of the human soul. In the midst of a long train of exquisite argument, to which he is excited by the remarks of his attached and admiring pupils, he was warned by Crito, one of his favourite disciples, that he ought to speak as little as possible, for that the person whose duty it was to make ready the poison, had previously told him, that any discussion or argument would most probably overheat the system, and that those who had not observed caution, had been obliged to repeat two or three times the dose of

poison. Socrates continued his philosophic discourse, merely observing that the executioner had only his duty to perform, whether it was three or more doses that he was called upon to give. He resumed the even tenour of his way, and, upon the brink of eternity, calmly and dispassionately reasoned upon the life of man, convincing his auditors that the great end and aim of the philosopher's life, is to learn to die. He maintained his opinions, though closely questioned by those who surrounded him, and who eagerly listened to every word that dropped from one to whom they so long had been taught to look as "their guide, philosopher, and friend." As the evening drew on he retired to seek the bathing-room, where he prepared himself, by ablutions, in order, as he said, to render the attendance of the females (who usually washed the body after life had departed) unnecessary. Here some of his children were, for the last time, introduced to his presence.

LOVE, FAME, AND HEAVEN.

[The fingers that traced the following beautiful stanzas are cold in the grave, and the imagination that conceived them is now ranging through the glorious paradise of a brighter world; that heaven of which it dreamed is now its home. The fair writer—who has left behind her several manuscript volumes of original composition, chiefly poetical—died at the age of seventeen—so transient are the dearest possessions of earth. We can only exclaim, as they vanish from our sight, "*Adieu, adieu vale!*"]

I DREAMT of love, I dreamt of love, and doted on my dream,
For to my heart of trusting faith a beacon did it seem;
A soul th' Eternal's breath had lit, a pulse of living fire,
Whose throb went through the universe, and never could expire.
Too soon I found, too soon I found, the vision could not last—
'Twas human, 'twas a mockery,—my dream of bliss was past:
The lightning was within my heart, and left but ashes there,
Then came a voice upon my soul—"Where is thy day-dream, where?"

I dreamt of fame, I dreamt of fame,—a dream of glorious pride;
A thousand voices hail'd me "Great!" in one impetuous tide;
A thousand spirits bent to mine, a thousand greetings poured,
To hail me as their idol-one, their spirit's sceptred lord;
But soon my heart was parch'd with light, and thirsted for the stream
Of peace and love, that could not live beneath that fiery beam;
My soul was sick with glare and praise, and panted for the rest
The weary spirit finds alone in some fond human breast:
I turned with loathing from the sound of praise that round me rose,
I would have given it all for that sweet voice affection knows;
I rush'd to solitude to hide my writhing heart's despair,
And through the gloom those accents thrill'd—"Where is thy day-dream, where?"

I dreamt of heaven, I dreamt of heaven,—my agony was stilled,
A voice of comfort and of peace my inmost spirit thrilled—
A murmur like a mother's voice when on her shielding breast
She soothes the wild and passionate cry of infancy to rest.
The whirlwind of my soul was hush'd, my heart's dark tempest flown,
It seem'd as though a pitying hand had claim'd me for its own,
Had hush'd the fever of my brain, had soothed my wild despair,
And murmur'd with its voice of love—"Where are thy sorrows, where?"

CONSTANTIA.

REVIEW.

Observations on the Preservation of Health in Infancy, Youth, Manhood, and Age. By JOHN HARRISON CURTIS. Renshaw.

THE world we inhabit is composed of two large classes of human beings; one of these knows Mr. Curtis, the other does not know him. The first class comprises a large number of her majesty's faithful liege subjects, men, women, and children. If they take their central point in Soho-square, and radiate thence over a space of fifty miles in every direction, they cannot traverse a solitary square inch of ground where Mr. Curtis's footsteps have not been; they dare not, on their consciences, affirm that the soles of their shoes cover a single spot of which they can say it is barren; for from Dan to Beersheba Mr. Curtis maketh all things rich and fruitful. We know not whether he takes a bath in the Nile occasionally or not, but of a truth his mind overflows in books like that river in waves; and we have now before us his latest published volume; to introduce the excellent contents of which to our numerous readers, is the especial purpose which we have in view in writing this article. But before we proceed to this pleasing task, we must have a few words with that second class of human beings to whom we have alluded—those who do not know Mr. Curtis. Some one who understood mankind before we did, has said that they are all fools; and it is of those included in this latter denomination that this class are chiefly composed. It were, indeed, a hard task to penetrate the tough hide of ignorance which covers these persons; but, for the benefit they will for ever hereafter derive when we shall have made known to them the rich treasures of the volume before us, we are willing to write till our fingers turn up stumps.

We do not mean to say that the majority of those who may peruse this article belong to the class of persons whom we are now addressing; but we believe that many of their friends may; for amongst every man's friends there are, and ever must be, some fools. We have one fool whom, in the world's language, we call friend; nor will his first appellation be considered in any way inappropriate by our readers, when we inform them that he looks upon the respected author whose work we are now noticing, as nothing better nor worse than a quack. Since the period when he first broached this theory, we have not scrupled to number him amongst those whose brains are gone in search of an employer. Ignorant people cannot help hearing much of Mr. Curtis; and not having much sense to guide them, they forthwith imagine him to be a sort of nonsuch, whom it is worth living for to behold once in a life-time; they look upon him as a wonder, a genius, a doctor, a modern anthropophagus, and we know not what besides. Now let us, in sober earnest, assure all such simple-minded people, that Mr. Curtis is neither one nor other of these; he aspires not so high, he looks not for a habitation in the heaven of their invention; he is as plain and honest a gentleman as may be met with any day between Soho-square and the Strand; along the intermediate perambulations of which he may be frequently seen. He dresses like other people, for aught we know to the contrary; his coat is made by Stultz, his waistcoat by Buckmaster, and his trowsers by Nuges; Jupp supplies his hats, and James, of Charing-cross, his shirts. His tradesmen are genteel; so, indeed, is he. He understands eyes and ears better, perhaps, than most people. When at home he sits in an acoustic chair, most meritoriously contrived and designed by himself; and when his leisure will permit, he is one of the most

pertinacious perusers of "*Ward's Miscellany*." Having said thus much of our author, we end by cordially and sincerely wishing each and all of our readers to visit him at his own house, where, every morning, he will, with the most gentlemanlike politeness and urbanity, receive both their coin and their company.

But what of the book before us? Why, we have much to say of its merits and its value, both in a literary and medical point of view. The aim which the author has had before him has been to sift and garner from the immense mass of experience which he has had, the best and most profitable lessons for the support, preservation, and long continuance of health under every variety of age, climate, and constitution. Life, through all its varying periods of infancy, childhood, youth, and age, are brought under notice and review; its lights and shadows, of health and disease, are skillfully portrayed with reference to the preservation of the one, and prevention of the other.

In the chapter on Infancy we recognise the various topics of lactation, clothing, cleanliness, temperature, respiration, and sleep. Youth is brought under our notice in a passing review of the subject of indigestion, which has received a more honourable notice, and has been more faithfully chronicled than, perhaps, all the other diseases of the human frame put together. We recognise nothing remarkably new in the manner in which this fertile subject is here treated, yet sufficient notice for every purpose of prevention is bestowed upon it. To the remarks which Mr. Curtis makes on the subject of exercise, at the period of life when all its physical and mental energies are undergoing a daily and progressive development, we give our most sincere and cordial assent; nor should we have felt it a task to peruse the remarks which he has so judiciously made on this subject, had they extended over a larger number of pages.

The chapter on Maturity opens with some valuable remarks respecting diet, both of a liquid and solid kind. We shall extract some of these, removing from them many of their *functional* and *organic* incongruities, which, however learned the general class of readers in the present day may be, are terms which, we can assure our author, are still *caviare* to the million:—

"Although the quantity of food is one of the most important matters connected with it, yet it is, at the same time, undoubtedly true, that substances differ widely in their digestible and nutritious qualities; on account of which, some kinds of food are to be preferred to others, and some to be wholly abstained from, by those whose digestive organs are in any way impaired. As a general rule, the plainer the food the better. Condiments serve only to stimulate and prolong the appetite after the wants of the body have been supplied, and are thus the causes of indigestion and other maladies.

"It is commonly thought, that without an abundant supply of animal food it is impossible to be strong or healthy. Some animal food is, in our northern climate, undoubtedly necessary; but that its importance is too highly rated will be evident, when we consider that the Irish peasants live almost exclusively upon potatoes; the East Indians upon rice; the Italian makes his dinner upon bread, wine, and a few figs; and that the French consume far less butcher's meat than we do. A substantial meal once a day is, in general, enough of animal food. The time of eating, as well as the quantity of food, ought to be regulated by the appetite indicating the wants of the system; for there is, in the constitution of man, a tendency to periodicity, which makes it both easy and advantageous to adopt fixed times for supplying his wants.

"As a general rule, an interval of from five to six hours should elapse between the meals; but this must, of course, vary according to circumstances, and depend upon the appetite. Persons engaged in business frequently do themselves much mischief by disregarding its monitions, amidst the bustle and excitements of trade. After a time, it is true, the appetite subsides; but the necessity for food is not thereby removed. It is no unusual thing for a merchant to breakfast at eight o'clock in the morning, ride several miles to town, and return to dine

in the evening between six and seven o'clock, without having, during all this time, ate any thing. This long fasting is injurious, and the subsequent full meal still more so. In such cases a luncheon ought certainly to be taken, which may consist of a hard biscuit.

"We now come to the subject of liquid food.

"The fluids of the body are continually diminishing, by means of secretion and exhalation; these the health of the frame renders it needful to replace; and this necessity is indicated by the sensation of thirst—a sensation perfectly analogous to that of hunger, (?) and to which, therefore, most of the rules and observations already made in reference to the latter, are applicable. The general practice of civilised men clearly shows that the first meal should be of a liquid kind. The reason for this is the great expenditure of fluids during the night, which is manifested by the sensation of thirst commonly experienced in the morning.

"It is by no means requisite that a large quantity of liquid should be taken at dinner; on the contrary, it is likely to delay the digestion of the meal; and, if habitually indulged in, permanently to weaken the stomach. The best time for taking drink is about three or four hours after a solid meal; and the usual time for drinking tea in this country corroborates this view of the matter.

"Water, the fluid which nature has so abundantly provided, is that best fitted for man to drink; it is suitable for every variety of constitution, and is more effectual than almost any other liquid in allaying thirst; thereby showing that it is the beverage designed to supply the loss of fluid to which we are perpetually subject. There are many simple compounds in which water is an ingredient, such as ginger-beer, lemonade, toast and water, soda-water, tea, coffee, chocolate, cocoa, &c. All these are, for common consumption, far preferable to fermented liquors; and it is gratifying to observe the extent to which they have superseded these intoxicating drinks. The introduction of tea and coffee in particular, into general use, has done much towards effecting this change; and notwithstanding the objections that have from time to time been brought against them, the strongest evidence of their beneficial qualities is furnished by the constantly-increasing quantity of them imported into this country.

"Still it must not be forgotten that they are stimulants; and that if taken too strong, or in too great quantity, they give rise to nervous complaints; and that the latter, especially, although for a time an aid to digestion, does yet, like all other stimulants, if too freely indulged in, weaken the sensibility of the stomach, and derange its functions. And it must be borne in mind, also, that diluents of any kind, in large quantities, relax the coats of that organ, and impair its efficiency.

"As to fermented liquors, it is the almost unanimous opinion of physiologists, that to a person in a state of health, they are decidedly injurious; their effect is directly upon the nervous system, and the circulation, which they stimulate and quicken. Now, in a state of health, the nervous system is duly balanced, neither too active nor depressed; and the circulation is of the kind best adapted for carrying on the processes of waste and nutrition. Whatever then tends, in however slight a degree, to disturb this condition of the system, is a cause of disease, although its effects may be, for a time, imperceptible. But fermented liquors are hurtful, for they inflict terrible injuries, which, if the bad habits be persisted in, become permanent. But substances poisonous in themselves, may often be exceedingly useful as medicines, in preserving health and life; and such is the case with fermented liquors. There are some conditions of the body in which the circulation is sluggish, and the nervous system weak and depressed: here, then, is the occasion when such liquors may be usefully and appropriately prescribed. There are, no doubt, many such cases; and it would be absurd, therefore, to denounce their use absolutely and universally. But as no one takes medicines but by the advice and direction of his medical attendant, so let it be with fermented liquors. But supposing they produced no other than physical ills, the magnitude of these would render any attempt to extirpate them worthy of our sincerest admiration and support. Such an attempt is the institution of Temperance Societies,—an attempt which has already been extensively successful in the land where it was commenced, and which is taking root in our own country. In the lately published work on America, of Mr. J. F. Grund, remarkable for its statistical precision and accuracy, it is stated that in 1833 the American Temperance Society contained two million members. And that in 1831, when the number was far less, one thousand five hundred distilleries had been stopped; four thousand merchants had ceased to traffic in spirits; four thousand five hundred drunkards had been reformed, and one thousand vessels sailed without ardent spirits as a part of their provisions, while the men were better able to undergo the fatigues and hardships of the sea, than those in vessels where the old plan was persevered in. In this country, Temperance Societies have already made some progress, but not so extensively as is to be desired. There can be little doubt, however, that they will increase in number and usefulness as the attention of the public is more forcibly directed towards them, and as the conviction of the destructive effects of spirituous liquors upon the health becomes more general. Mr. Livesey of Preston has informed me that upwards of thirty thousand persons in Lancashire, principally mechanics and artisans, have joined the Temperance Society; and that the good effects of temperance have already manifested themselves in the increased and increasing comforts of themselves and families. Temperance

Societies are not modern institutions. In 1517, Sigismund de Dietrichstein established one under the auspices of St. Christopher; a secular association was formed in 1600 by Maurice, Duke of Hesse, which, however, allowed a knight to drink seven glasses at each meal, but only twice in the day. Another temperate society, under the name of the Golden Ring, was instituted by Frederic V., Count Palatine.

"The good effected by Temperance Societies must not be reckoned merely by the number of their pledged members; this, it is probable, is but a small part of their beneficial results; by powerfully calling the attention of the civilised world to the tremendous evils of intemperance, they have, doubtless, led many thousands of persons who have not enrolled themselves under their banners, to see the real state of the case, and to abandon habits so fatally destructive to physical, moral, and intellectual excellence."—(pp. 56—63.)

Every author who has written upon the preservation of health has felt himself imperatively called upon to notice the sad and baneful effects of dwelling too much within doors; the evil and pernicious results of which cannot be too strongly or severely reprobated. The sun of heaven sheds his beams alike upon all, dispensing warmth, heat, and health, wherever they fall; the fresh winds stir up the very air with gladness; and every breath we respire is redolent with fragrance. Were there no habitable cities in the world, disease would ever remain afar off, doctors would be at a discount, physic would become what it will ever remain—a drug; and even Mr. Curtis would write no more books. The cares and anxieties of mind, the wear and tear of life, both physical and mental, the cancer of suffering, and the ulcer of disappointment, depict their ceaseless and constant presence in the countenances of many thousands whom we meet in the crowded courts and streets of our metropolis. Mr. Curtis, like his medical brethren in general, has not failed to depict the sad evils of such a state in strong and nervous language; our space will not permit of any further quotation, and we must on this topic refer our readers to the work itself.

In the last chapter, which is devoted to the consideration of Old Age, every topic is discussed and noticed which may in any way lengthen that period which leadeth but to the grave. The reflections may be trite and common-place, and the remarks on Longevity we shall perhaps notice in a future number, when we shall bring before our readers a variety of the most remarkable instances of longevity upon record.

Our readers will bear full testimony to the indulgent manner with which we have spoken of this book of books, for such in truth it really is, and, therefore, critically speaking, we might have felt inclined to visit the sin of compilation somewhat heavily upon Mr. Curtis's shoulders; but as "facts are stubborn things," we shall lay before our readers the following works, from whose pages this author has, without any ceremony, begged and borrowed much of what is both valuable and useful.

Combe on the Constitution of Man—Combe's Physiology—Sir. J. Sinclair's Code of Health—The Flora Londinensis and Botanical Magazine—Locke on the Understanding—Hartley's Observations on Man—Mill on Education—Dr. Southwood Smith's Philosophy of Health—Dr. Brigham on the Influence of Mental Cultivation and Excitement upon Health—Julien upon Education—Hufeland's Art of Prolonging Life—Dr. Caldwell on Physical Education—Dr. Holland's Experimental Inquiry into the Laws of Life—Dr. Thomson's Lectures on Medical Jurisprudence—Dr. Cummis's Lectures on Medical Jurisprudence—The North American Review—Salgues' Rules for Preserving the Health of the Aged—Sir. Henry Hallford's Oration.

From the contents of the above eighteen volumes, it would require but little trouble beyond that of compilation, to ensure the production of a work of tolerable pretensions: but in order to supply a richer abundance of materials, and a more dainty feast of physic for his readers, Mr. Curtis lays down number-

less rules and maxims, gathered from the works of the following eminent men : namely,—Blackstone ; Herodotus ; Socrates ; Agesilaus ; Asclepiades ; Berkeley ; ("System of Training ;") Dr. Milne Edwards ; Crabbe ; Dr. James Johnson ; Dr. Thackrah ; Mr. Abernethy ; Dr. Paris ; M. Andral ; Dr. A. Morrison ; Gibbon ; Foster, and Mr. Mayo.

Gentle Reader, what more can we say unto thee—than that if, having followed us to the close of this article, thou dost not forthwith procure Mr. Curtis's book, and read, mark, learn, and inwardly digest it, the future pangs of sickness thou mayest suffer will lie at thine own door, not at our's.

COLERIDGE'S TABLE TALK.

KEENNESS AND SUBTLETY.—Few men of genius are keen, but almost every man of genius is subtle. If you ask me the difference between keenness and subtlety, I answer, that it is the difference between a point and an edge. To split a hair is no proof of subtlety, for subtlety acts in distinguishing differences, in showing that two things that are apparently one, are in fact two ; whereas, to split a hair is to cause division, and not to ascertain difference.

RELIGION.—A religion—that is, a true religion—must consist of ideas and facts, both ; not of ideas alone, without facts, for then it would be mere philosophy ; nor of facts alone, without ideas of which those facts are the symbols, or out of which they arise, or upon which they are grounded, for then it would be mere history.

CHURCH, STATE, DISSENTERS.—Even to a church—the only pure democracy, because in it persons are alone considered, and one person, *a priori*, is equal to another person—even to a church, discipline is an essential condition. But a state regards classes, and classes as they represent classified property ; and to introduce a system of representation which must inevitably render all discipline impossible, what is it but madness—the madness of ignorant vanity and reckless obstinacy ?

INSPIRATION AND DICTATION.—There may be dictation without inspiration, and inspiration without dictation ; they have been and continue to be grievously confounded. Balaam and his ass were the passive organs of dictation ; but no one, I suppose, would call either of these worthies inspired. It is my profound conviction that St. John and St. Paul were divinely inspired ; but I totally disbelieve the dictation of any one word, sentence, or argument throughout their writings. Observe, there was revelation : all religion is revealed. Revealed religion is, in my judgment, a mere pleonasm. Revelations of facts were undoubtedly made to the prophets, revelations of doctrines were as undoubtedly made to John and Paul ; but it is not a mere matter of our very senses that John and Paul each dealt with those revelations, expounded

them, insisted on them, just exactly according to his own natural strength of intellect, habit of reasoning, moral and even physical temperament. We receive the books ascribed to John and Paul as their books on the judgment of men for whom no miraculous judgment is pretended, nay, whom, in their admission and rejection of other books, we believe to have erred. Shall we give less credence to John and Paul themselves ? Surely the heart and soul of every Christian give him sufficient assurance that, in all things that concern him as a man, the words that he reads are spirit and truth, and could only proceed from him who made both heart and soul. Understand the matter so, and all difficulty vanishes ; you read without fear, lest your faith meet with some shock from a passage here and there which you cannot reconcile with immediate dictation by the Holy Spirit of God, without an absurd violence offered to the text. You read the Bible as the best of all books, but still as a book, and make use of all the means and appliances which learning and skill, under the blessing of God, can afford towards rightly apprehending the general sense of it ; not solicitous to find out doctrine in mere epistolary familiarity, or facts in clear *ad hominem et pro tempore* allusions to national traditions.

"*Vox POPULI, Vox DEI.*"—I never said that *vox populi* was, of course, the *vox Dei*. It may be ; but it may be, and with equal probability, *a priori*, *vox diaboli*. That the voice of ten millions of men calling for the same thing is a spirit, I believe ; but whether that be a spirit of heaven or hell, I can only know by trying the thing called for by the prescript of reason and God's will.

SOCIETY.—That is the most excellent state of society in which the patriotism of the citizen ennobles, but does not merge, the individual energy of man.

PHILOSOPHY.—A philosopher's ordinary language, and admissions in general conversation or writings, *ad populum*, are as his watch compared with his astronomical timepiece. He sets the former by the town clock ; not because he believes it right, but because his neighbours and his cook go by it.

NOTES OF TRAVELLERS.

POISONOUS FLY.—Near this place (Babakala, on the Danube) we found a range of caverns, famous for producing the poisonous fly, too well known in Serbia and Hungary under the name of the Golubacser fly. These singular and venomous insects, somewhat resembling mosquitoes, generally make their appearance during the first great heat of summer, in such numbers as to seem like vast volumes of smoke ; their attacks are always directed against every description of quadruped, and so potent is the poison they communicate, that even an ox is unable to withstand its influence, for he always expires in less than two hours. This results, not so much from the virulence of the poison, as that every vulnerable part is simultaneously covered with these most destructive insects ; when the wretched animals, frenzied with pain, rush wild through the fields till death puts a period to their sufferings, or they accelerate dissolution

by plunging headlong into the rivers. The shepherds of these countries, taught by experience the time of their approach, anoint every part of their flocks and herds, unprotected by nature, with a strong decoction of wormwood ; to which, it appears, these flies have a great antipathy. In addition to this, the shepherds keep immense fires constantly blazing ; around which the poor animals, aware of their danger, tremblingly and patiently congregate. Kind nature has, however, mercifully ordained that their existence shall be most ephemeral ; for the slightest variation in the weather is sufficient to destroy the whole swarm ; hence they seldom live beyond a few days. The probable supposition, however, is, that when the Danube rises, which it always does in the early part of summer, the caverns are flooded, and the water remaining in them becomes putrid, and produces, during the heat of summer, this most noxious fly.—*Spencer's Circassia.*

THE JEWS AT LEGHORN.—This wandering and excommunicated race form no inconsiderable part of the resident population in Leghorn, being estimated at twenty-five thousand out of seventy-five thousand inhabitants. Their synagogue is a spacious building, but not otherwise remarkable than for the extraordinary number of lamps in it. Except the latticed galleries for the females, there is little to indicate its purpose, and very little indeed of that respect due to a place of worship is to be seen in the behaviour of those who frequent it. Although a rabbi was reading part of their ritual, instead of paying the slightest attention to him, those around me were conversing together on ordinary topics, just with as much indifference as if they had been in the open street, or in any other place than a house of prayer; nay, some of them were talking over matters of business, so that it was impossible not to be forcibly reminded of the words of our Lord, who had reproached their forefathers for similar profanity, and for converting the sanctuary of their religion into "a den of thieves." What singular inconsistency,

that a people who so pertinaciously adhere to ordinances which subject them to many privations and inconveniences, possess so little of the real devotional spirit of religion!—*Rae Wilson.*

REHME.—The salt-works at Rehme could not be passed unseen. The manner in which the water from the saline spring is made to deposit its treasure is very ingenious. Stacks of thorn boughs, three hundred feet long, sixty feet high, and thirty wide, are constructed with the uniform symmetry and neatness of a brick mansion. The water is forced to the top of this structure, and, being carried in troughs along its whole extent, is made to drip gradually through every part of it. In its passage this water deposits lime, which attaches to every twig, and forms a little forest of petrifications. Below the works are cellars, twelve feet deep, into which the purified water runs, whence it is conveyed to the boiling house, where a most pure and beautiful deposit of salt takes place on the sides of the boilers. This deposit is laded out, and immediately packed in baskets.—*Mrs. Trollope's Belgium.*

GEMS.

THE BLESSING OF BOOKS.—Many who have not the advantage of wealth or high standing in society, are apt to repine at their situation—to regret that they are debarred from much refined and intellectual intercourse; but this deprivation is in a great measure ideal; there is an intercourse far more intelligent than that of any living society whatever—the great commonwealth of letters—which knows no distinction of persons, admits of no adventitious superiority, where every thing is rated at its real value, and reduced to its legitimate standard. Whatever may have been the rank of authors, the wealth or consequence attaching to their living persons, they exact no further homage; they are entertained without expense, dismissed without ceremony; they are at once our preceptors, masters, servants; they come or go at our bidding; they speak or are dumb at our pleasure. We open the book, its eloquence streams upon us; we close the leaves, it is instantly sealed in silence. We have the best thoughts of the best men in the best possible form: we benefit by a close communion with great and shining characters, without being annoyed by those foibles and eccentricities which appear to be more particularly inherent in genius. Had we lived in the same time, and possessed the intimacy of Dr. Johnson, we should have been shocked to find that, with all his intelligence and strength of mind, he was contracted in principle, insolent and overbearing in argument. We should have blushed for the tarnished honour of our common nature, to think that so great a mind as Addison's could have been meanly jealous of contemporary worth. And, as we all know, poor Goldsmith, amidst innumerable follies and foibles, was so great a glutton of praise that he considered the applause bestowed upon a rope-dancer unjustly diverted from himself; and, in the presence of Dr. Johnson, and several others, actually broke his shins in a clumsy attempt to prove he could surpass him. In books are treasured up the matured fruits of the greatest and most cultivated minds; they contain the pure and condensed intelligence of the human mind, without any proportionate alloy of its passions and weaknesses. Thus the noblest conceptions of our nature are preserved in the odours of language, as formerly the bodies of the great and noble were embalmed in perfumes. In reading history, for instance, we participate

in the actions of the illustrious dead, and exchange with pleasure the dull monotony of our own existence for the glorious achievements and enthusiasm of theirs. Under the pen of the historian, the events of time undergo a refining and condensing process: he retains all that is worth preserving, the kernel without the husks or shell. We thus engage in war without the peril of a wound, and accompany the voyager without encountering the dangers of the seas.—*Professor Calvert.*

OLD AGE.—Old age is often querulous. It is one of its defects to be so: but let not this occasional weakness deceive you. You may be assured that naturally it has gratifications of its own, which fully balance those of earlier days, and which, if cultivated, would carry on the stream of happiness to its grave. If life has been rightly employed, it will also have the visioned recollection of its preceding comforts to enhance the pleasures which it is actually enjoying. My own experience in the sixty-seventh year of my age is, that notwithstanding certain ailments and infirmities, and the privations they occasion, it is just as happy as all the preceding seasons were, though in a different way,—so happy as to cause no regret that they have passed, and no desire to exchange what is for what has been. If youth has hopes, and prospects, and wishes that enchant it, age has no inferiority even in this respect.—*Turner.*

MOURNING FOR FRIENDS.—Grief at the loss of friends is natural. To say, therefore, that tears for the deceased are unseasonable, because they are unprofitable, is to speak without regard to the state and condition of human nature. A pious tear is a sign of humanity and generosity; but still, exceeding care must be taken that men do not run into excesses in this kind. To grieve may be laudable: to be loud and querulous is childish; and to carry matters so far as to refuse comfort is inexcusable. It is impious towards God, without whose permission nothing happens in the world: it expresses too great a disregard to other men, as though no one remained worthy of esteem or love; and it is highly prejudicial to ourselves, as it impairs our health, weakens our minds, unfits us for our several offices, and sometimes ends in death itself.—*Bishop Conybeare.*

THE STUDY OF THE PHYSICAL HISTORY OF MANKIND.

To the student who reposes his belief in the truth that

"The proper study of mankind is man,"

the subject of his inquiries naturally resolves itself into two portions. The history of mankind can be contemplated only under two separate views—the moral and the physical. The one embodies the capacities and powers of a supernatural agency over man, the other lays down the principles of his physical development and conformation. Of the former it may be observed, that the field of inquiry which it presents to the mind is, in its very nature, vast and boundless. The contemplations which the moral government of the Eternal Mind over man exhibits, are such as to call into active energy the loftiest and noblest capacities of man's nature and intellect. The imagination must take "the wings of the morning," and travel into "the uttermost parts," where thought may scarcely abide, and where man's mental energy soon sinks bowed down and exhausted. The result of such speculative inquiries is seldom satisfactory; the grasp of mind becomes loosened, and where mortality approaches to the confines of spiritual intelligences, the eagle-wing becomes wavering in its career, and the cheering sunbeam that led upward the adventurous flight, soon blinds the mental eye by the dazzling brilliancy of its lightnings. In the arrangement of the subjects which go to the development of the inquiry into the physical history and condition of man, there are no startling points or periods to encounter; the regions of calm philosophic investigation lie open to the view of the inquirer; and he reaps the greatest profit and advantage whose powers of research and observation enable him to penetrate the deepest into those recesses of abstruse philosophic investigation which are involved in the inquiry.

The history of our species, from the earliest annals of creation down to the present time, presents a very wide field for inquiry and research; yet, in our own country, the subject has scarce occupied the minds of any other than the two kindred spirits of Lawrence and Pritchard.* The "Lectures on the Natural History of Man" by the former, obtained a wide and undeserved popularity, and has, in consequence, gone through several editions; whilst Dr. Pritchard's work—though more extensive in its range of facts and reasonings, and generally superior to it in every respect—is known to very few readers out of the pale of the author's profession.

From the abundant inquiries and extensive research which Dr. Pritchard has made into this

his favourite study, he has laid down his argument over a very wide and extensive field of investigation. Amongst some of these may be enumerated natural history and general philosophy, physiological research, the nature of moral and intellectual diversities, the characteristics of mental and social disposition, and the more abstruse and difficult inquiries relating to the origin, formation, and spread of languages. These are the points which he brings to bear upon the solution of the inquiry of "whether all the races of men scattered over the surface of the earth, distinguished as they are from each other in structure of body, in features, and in colour, and differing in languages and in manners, are the offspring of a single stock, or have descended respectively from several original families." And in order to solve this problem, he traces from the earliest recorded date, the history of the creation of the vegetable and animal worlds; he traces up

"The leafy flower and the golden fruit,"

from their origin and beauty in the immortal bowers of the earthly paradise, and reviews the entire scheme of their dispersion, by the operation of natural or artificial causes over the wide regions of the habitable world. In the same manner he discourses of the first development and eventual dispersion of the lower orders of insects, birds, marine animals, mammifera, reptiles, and the higher classes of quadrupeds. He next speaks of man in his highest and noblest state of physical conformation, giving records of him as he is found in every habitable region of the earth;—of the various external diversities which he assumes in colour and complexion, in form and structure, both of skull and skeleton; and these are analogically compared with those external physical varieties which are found to exist in the higher classes of animals. The reasoning which the author has employed in embodying the apparently contradictory evidence which he has thus accumulated, forms a most valuable recapitulation of the preceding argument laid down.

Thus far in the inquiry does the first volume of Dr. Pritchard's work extend; his ensuing one will terminate it. When that is published we shall lay a full and, we trust, a meritorious analytical review of its contents before our readers.

Of the work itself, it is perfectly competent in us to state, that the author has collected together a large mass of materials, and has presented us with all the information that has been derived on this subject during the last fifty years, from the enterprising voyages of those travellers who have penetrated into the wild and desert regions of Asia, Africa, and America, in

* "Lectures upon Man. By W. Lawrence, F.R.S." "Researches into the Physical History of Mankind. By J. C. Pritchard, M.D."

search of knowledge, physical, political, and geographical. On this he has raised the best foundation for the physical history of man that exists in this country. He has given to its composition a long period of uninterrupted labour

and investigation, and has rendered it fully worthy of that high rank which it will always maintain amongst works devoted to the noble purposes of literature, science, and learning.

EPHON.

SATIRE.

THE projects of reform which have flattered the hopes of successive generations as effectual remedies for human depravity, if summoned at once before the mind, would be a whimsical but melancholy exhibition. On one side we should behold an immense array of lawgivers, turnkeys, and hangmen—the army of public justice, whose trophies are, unfortunately, the record of her defeats. We should see the whole myriad fearlessly encountered by a single philosopher, who rails at prisons and halters, proclaiming the omnipotence of truth, and the perfectibility of mankind. Another swarm of philanthropists have discovered that the calamities of the people originate in defects of the government; they have traced all the varieties of evil in society to one corrupt man, and have expected, by deposing this one and enthroning five or five hundred corrupt men, to restore the golden age. A crowd of elegant persons expatiate on the efficacy of civilisation as a purifier of the morals, and detail the virtues of refinement from the conversation of a Parisian *coterie*, or the columns of the “Morning Post.” A romantic lover of solitude and paradox reclaims them to pure and unsophisticated nature, and enforces the precepts of his eloquence by an exhibition of carousing cannibals. A venerable host of theologians, some in the dress of an Eleusinian hierophant, and some in the humbler habiliments of a Presbyterian academic, or an Oxonian master of arts, harangue on the attractions of virtue and the prospects of a future state; they are sure of the efficacy of their system, for mankind, during the last score or two of centuries, having been tolerably versed in its principles, have lived very good lives, and made very good ends. A very scientific inquirer, however, starts forth from among the denunciators of final retribution, announcing the dethronement of terror from the consciences of men, and assuring his audience that the worst they have to expect is a philosophical purgatory; that every woe they at any time may suffer is for their good; that they only require different degrees of discipline, and shall all be happy at last. One of the most approved nostrums is education: when the poor are taught to read and write they are sure to be virtuous, because it is well known that instructed draymen are much more sober and honest than illiterate shepherds. A classical education, however, is still better; it is especially extolled by a reeling

pedagogue, who chants, “*Ingenuus didicisse*,” displaying the immortal Busby in one hand, and pointing with his rod in the other to a model of the temple of virtue, as a porch to the temple of fame; he recites the fine sentiments of heathen writers, describes the morality of a college, and refers to the manners of the great. The sapient Edinburgh reviewers opine, that we may preach, or we may let it alone. But if any thing will reform the vices of the fashionable world, it is Edgeworth’s “Moral Tales,” which are not adulterated with Christian sentiment. Another hawk of infallible elixirs explains the purifying influences of the arts; he praises Annibal Carracci, and Raffaëlle, and Flammingo, and Kirt, and Morland, and he celebrates the morals of Italy. Another acquaints us that the stage is a school for virtue. His information is unquestionable, for its scholars are practising in the lobby. It would be endless to trace the spirit of reform in all its shapes and influences; at one time we find it in a pair of contemporary queens, one of whom improves her people with bayonets and dragoons; the other, with faggots and bishops. At another time it stimulates a prime minister to promote sports on the Sunday, for the purpose of encouraging piety; and at length it betrays a member of parliament into a panegyric on bull-baiting, as peculiarly suited to improve the industry and order, the humanity and patriotism of his countrymen. According to Molière, it has even possessed fiddlers and dancing-masters, who ascribed the miseries of the world to an ignorance of the principles of harmony, and the frequency of taking false steps. They certainly were not singular; great benefit, we doubt not, is expected from the accomplishment of dancing, as it occupies so much of the probationary time of immortal beings; and, in addition to the same argument in favour of music, we have repeatedly heard that the tones of an organ are a specific for the cure of indevotion; and have also learned, from the lips of an ingenious professor, that the reformation of mankind would be much promoted by a more general acquaintance with Handel’s oratorios.

Such are the recognitions, principles, and labours of the reformer. He acknowledges the guilt of individuals and the corruption of the age, for this is only a censure upon his neighbour; but evades the imputation of depravity to the species, for this would be a censure on himself.

He perceives the necessity of a change; yet will not admit that it must be radical. He is willing that our nature should be reformed; but not that it should be regenerated. He will try every partial remedy and palliative, he will submit to any process or agent—except it be Divine; and the chronicle of time is the catalogue of his disappointments.

Another class there is which belongs to that faculty in the college of Laputa which expects wonders of reformation in this wicked world, from an exposure of the world's wickedness; and expresses its opinion, on comparing projects of reform, in the following well known and most absurd couplet:—

"Satire well writ has most successful proved,
And cures because the remedy is loved."

Thus, the persons in question consider the object of Juvenal to be a very noble one, namely, that of exposing vice in its true colours and natural deformity; the aim of Juvenal in writing so grossly, was to lay open the native unsightliness of vice, to remove that fascinating cloak which hides its horrors, and thereby to render it an object too disgusting to be publicly espoused, and a guest too dangerous to be privately admitted into our bosoms.

These notions find such ready currency in the world, that we hope to be pardoned for assaying them.

Considering satire most favourably, not as the effusion of personal animosity, but as an attempt to expose vice and folly to indignation and contempt, we are of opinion that it is rarely innocent. The exercise of ridicule implies in the satirist, and excites in the reader, a contemptuous feeling, composed of pride and mirth; that of invective implies and excites an indignant feeling, composed of pride and malice; and however faint and harmless these feelings may appear in single instances, and on just occasions, the character which they induce on the mind by frequent recurrence is neither dubious nor amiable. The mob, which has been assisting with stones and mud at an exhibition on the pillory, returns, perhaps, with strong feelings of contempt or indignation against some particular crime; but we cannot applaud such an attack, even on vice, nor recommend such an employment as a salutary discipline for the heart.

If the innocence of satire be doubtful, we are still more inclined to question its efficacy. We will not affirm that it has been wholly useless in combating the follies and delusions of mankind. It may have abated some nuisances in literature, and reformed some offences against taste; it may have rectified some little absurdities in dress or manner, and assisted in demolishing the reverence for monks, the spirit of knight-errantry, and the devotion to a corrupt and despotic priesthood. These absurdities were easy to

overcome; to expose, was to defeat them; they had no hold on the passions and appetites; they maintained their power, injuriously to the public interest, under a temporary cover of ignorance, and were vanquished by a gleam of light; they were not the canker at the heart of a flower, but the caterpillar on its leaf. The follies of men are, however, so volatile and fantastic, they are so ready to vanish spontaneously, and re-appear in new shapes, that the touch of satire is scarcely needed to anticipate their destiny; it is unable to extinguish their essential being, and can only pretend to hasten that metamorphosis which might otherwise have waited a little for the lapse of time. But the vices derive their influence, not from novelty or accident, but from the most powerful and permanent propensities of human nature; they maintain it, not by favour of ignorance, but against convictions of interest and sentiments of obligation. The vice which has resisted them all is invulnerable to the wrath or the ridicule of the satirist; he cannot make it appear more odious than it is known to be, by any poetical association of circumstances or aggravation of phrase; nor propose any motives to virtue which conscience or policy has not often suggested in vain.

Should it, however, be admitted that the vicious are not accustomed to surrender their favourite gratifications at the summons of a speculative satirist, yet personal satire may still be supposed to have its use, to deter the delinquent from repeating, or the tempted from committing, a crime, by the prospect of exposure and public scorn. To condemn the vicious may be effectual, where it is useless to condemn vice. The experiment has been tried; the early comic writers of Athens, as long as they were endured,

*"Si quis erat dignus describi, quod malus, aut fur,
Quod machus foret, aut vicarius, aut aliquis
Famosus, multa cum libertate notabant."*

We do not hear that the ridicule of Aristophanes reformed or banished any culprit, or corrected the licentiousness of the Athenian manners; but we do remember that a venerable and innocent sage was the victim of this hopeful censure. The satire of the middle comedy has been revived in our own times. We do not hear that Samuel Foote could claim the credit of reducing the number of "Mother Coles;" but we doubt not that, in blackening the character of Whitfield, he stimulated the spirit of bigotry and persecution which raged against him amongst vulgar minds, and confirmed multitudes in their derision of religious truth, their habits of vice, and their heedlessness of eternity. We must further observe, that few vices can be imputed to an individual which would not subject him to punishment or injury; and that no orderly government can admit the publication of charges without proof, or tolerate the continual breaches

of the peace which must result from employing the press as a vehicle of personal accusation and scurrility. Some crimes, however, escape the vengeance of public justice by favour of an imperfect and partial system of law. Yet even here it is needless for the satirist to interfere, with any other design, at least, than to recommend a revision of the jurisprudence. Few crimes will come to his knowledge which are not sufficiently public without his intervention. And the seducer, the adulterer, the miser, the duellist, who apprehends no censure from his immediate connexions, or if he did would despise it, must be ridiculously weak, should he concern himself for the good opinion of the satirist, the nation, or posterity. If any efficacy could be ascribed to satire when directed against crimes, we might

anticipate its success when directed against national crimes—against crimes which the nation has power to suppress, and its members in general have no interest to maintain; against the hideous traffic in blood, for instance, which has yielded at length to far other influence than that of humane satirists, double-tongued adversaries, or national repentance. In fine, one question may perhaps be equivalent to fifty arguments: what profligate has it ever reclaimed to virtue? and what crime has it ever banished from society? If one instance could be produced, we must again inquire, before we acknowledge its efficacy as an instrument of reform, has it altered the character, or only changed the vice? has it purged a constitutional taint, or only obliterated a particular symptom?—*Parthen.*

THE SIGNS OF THE ZODIAC.—No. I.

TAURUS, THE BULL.

THE subject of the ancient zodiac has been frequently discussed, but too often with a spirit far from conducive to the establishment of truth, and not unfrequently with a view to unsettle chronology, or to impugn Scripture. It is my intention to enter the same arena of discussion, with less glittering arms, but under a more consecrated banner; to maintain the thesis of "Pagan evidence to the truth of Holy writ;" to throw down the gauntlet in the teeth of infidelity, and begin the contest with the chivalric war-cry of—"God defend the right."

Of the evidence to which I allude, the zodiac appears to me one of the most important. Of the symbols which compose it, Taurus, or the Bull, is the most conspicuous; inasmuch as it is supposed to have once been the leading constellation; but chiefly, inasmuch as the superstitions connected with it have deeply coloured the whole stream of ancient mythology. With Taurus, therefore, I propose to begin my investigation.

Most of the conquests of animals ascribed to heroes belong to Hercules, under other names, as Jason, Theseus, Cadmus, Perseus. They originate, most probably, in Egyptian illustrations of the zodiac; or mystical paintings of the sun passing through the signs, which were misunderstood, or misinterpreted by the Greeks.

In Grecian fable, Hercules was represented as conquering the Elean bull. In Persia, he was pictured as Mythra Victrix, grasping a bull with one hand, and in the other, holding a sacrificial knife. Jason the Argonaut, who killed the bull with brazen hoofs, and thereby obtained the golden fleece; Cadmus, whom a bull conducted to the site of Thebes; and Theseus, who slew the Minotaur, (the Grecian Apis,) are only modifications of the same story, which describes the

Grecian Hercules as triumphing over the Elean bull.

The mysteries of Apis, as this sign was called in Egypt, were the oldest in the world, and entered into the religious dogma of most, if not all, of the primeval nations. The ancient Persians pictured the first man with a bull's head. The Hindoos anciently, and still venerate the same character. One of the Hindoo avatars pictures the bull-man perishing in the flood. A bull-headed human form is frequent among Javanese monuments, and agrees precisely with similar figures on those of Egypt. The monuments preserved by Hyde, leave nothing uncorroborated on the same subject, as far as regards the Mythralic rites. The god Osiris was sometimes portrayed with a bull's head, sometimes with bull's horns. Among the Syrians, Astarte was a human figure with a bull's head; for she was male and female. So, among the Phenicians, their chief god, Moloch, bore the head of an ox annexed to the figure of a man. The Greek Osiris, namely Bacchus Bugenes, or Tauriformis, was represented; as the name imports, by the same form. So was the Cretan Minotaur. The golden fleece and golden apples of the Hesperides were equally guarded by bulls. An apple formed into the shape of a bull was sacred to Hercules. A bull's head hung upon a tree was a symbol appertaining, as appears from Hyde, to Mythra Victrix. The head of Bacchus Tauriformis was hung upon trees, as Spence instances, in order to produce fructification. Even the druids devoted milk-white steeds to the sacred mistletoe. The same traditional veneration exhibits itself repeatedly among Jewish antiquities. The Jews had scarcely left Egypt, when they recurred to the worship of the calf, Apis; and, as it was their

first offence, so it adhered to them till their punishment and dispersion. "Thy calf, O Samaria!" says the denouncing prophet, "has cast thee off." The chimerical bulls of the Hebrews, or cherubim, (as they named them from the root, to "plough,") are evidently of Egyptian origin. The twelve bulls of Solomon's brazen sea, arranged in *threes* towards each cardinal point, have a precise Egyptian counterpart in the twelve bulls arranged also in *threes* round the apex of the Heliopolitan obelisk; and, like the former, quadrate with the cardinal points. The behemoth and leviathan of the rabbins are the Apis, or Osiris, and the river-dragon, or the Typhon of the Egyptians. Joseph was symbolised by an ox, as well as the half-tribes of Manasseh and Ephraim; and it was to him, under this symbol of Behemoth, that the blessing of the "ancient mountains" was promised to the "thousand hills" of Esdras, and the "Elysios Collos" of Hesiod. To the last, according to Esdras, was assigned the ocean, and thence the Scandinavian sea-snake. The leviathan and river-dragon, were both to receive their final wound. According to the rabbins, behemoth, or the ox, is, at the consummation, to be divided among the elect. By this was evidently implied, the partition of Paradise, or of the whole earth in a state of paradise, as by the wine of Adam to be then produced, was meant original prosperity; for grapes and prosperity are synonymous in Hebrew. This rabbinical fable is very singular, inasmuch as Osiris Apis appears to have been similarly separated into various divisions, during the mysteries, which divisions were subsequently rejoined, with one exception; a type not to be mistaken of the expected restoration of mankind, as one family, to pristine innocence. In the mysteries of the Grecian Osiris, or Bacchus, the same remarkable feature was preserved, a bull being torn to pieces by the devotees. Among the hieroglyphics, the thigh of Apis is frequently seen. Belzoni found one in the tomb of Psammis. I take it, as the ox was a symbol of the first race of men, perhaps of antediluvian man, that the thigh was a symbol of the choicest part of the earth or paradise. Hence it was always set apart for the gods, and considered sacred. The thigh was the region sacred to oaths. It contained the sinew forbidden to be eaten by the Jews; and the incorruptible bone, or *luez*, which the rabbins suppose to be the germ of a restored future corporeal life. Paradise is called Meru by the Hindoos, which is the root of the Greek word for a thigh; and the Brahmins seat their tenth world of gardens in the thigh of Brahma. It is worthy here of remark, that pots of flowers, similar to what are called the gardens of Adonis, (see Coptic Manuscript in Denon,) were offered to the ox: neither will it be unimportant to add, that apples and apple-trees were connected with the mysteries of Apis,

What is human reason to infer from all this singular analogy of facts, and images as singular? My inference is short: That the whole is a hieroglyphical portraiture, (of what Moses described in words,) namely, of the fall and expected restoration of man, with some dark shadowing of the means through the death of a second Adam, leader or teacher (ox in Hebrew).

There is nothing in the least illogical in our supposition, that Ham, whose name Egypt bears to this day, and who lived with the antediluvians, should have handed down the creed and traditions of the first men to his children, in the only language they possessed; nor is it wonderful, from the metaphorical nature of that language, that these traditions should become distorted, and vary from the true and simple statement of Moses, himself an Egyptian scribe. Neither the general coherency, nor peculiar variations, of these traditions, ought therefore to excite the least surprise. But it is incumbent on me to proceed to a more elaborate proof of my hypothesis. My first position is, that Apis was a symbol of antediluvian man; when connected with apples, his paradisaical state was implied; when connected with water, scyphi, crescents, &c., his partial destruction by a deluge.

It is scarcely necessary to argue that all the pagan fables of apples are referable to the forbidden fruit, those, for instance, of Atalanta, of Hercules, of Discord and the rival goddesses. Let the reader examine these fables, and judge for himself.

It is calculated that the vernal equinox, at the creation, was in the first degree of Taurus. Two thousand years after, Aries, by the precession of the equinoxes, occupied its place, and Aries is, accordingly, the first sign on the most ancient of the zodiacs. Taurus was, therefore, an apt and legitimate symbol of antediluvian man, and we may presume that the mysteries of Apis related to that state.

The mythological account of the fall differs little from that of Moses. According to Plato and his disciples, man fell when he descended from his intellectual to a sensual state, and multiplied himself; this was apparently Milton's idea. It was the version of a large portion of the early Christians, and thence the celibacy of the monastic orders. Moses, therefore, may have employed a delicate metaphor to express what Plato philosophically inferred, and the double interpretation of fruit and fruition at this day, warrants the inference. The Mohammedans say, that incontinency was the cause of the fall.

Another pagan fable bears a remarkable coincidence to the narrative of Moses. The pagan Eve, Persephonch, (which name signifies "lost fruit,") is condemned to Hades, or death, for eating a portion of the forbidden pomegranate. Numerous pictorial and symbolical representations of the same event, may be referred to. I

apprehend that, according to the laws of hieroglyphical writing, the narrative of Moses could not have been more closely adhered to. I will endeavour to refer to these pictorial descriptions in the order of the Mosaic account.

Montfaucon exhibits several instances of the bull-man, or first parent, crowned with apples.

Osiris was represented as enclosed in the thigh of Aps, an emblem of paradise.

Protonotus and Eon, the first man and woman, were described as sailing through space in an egg-shaped vehicle. There are similar representations among the hieroglyphics.

On one of the Egyptian planispheres, exhibited by Kircher, instead of Astrea, who represented the paradisaical state, there appears a fruit-tree, with two dogs in the branches, looking different ways. Now, two cynocephali were symbols of light and darkness, of good and evil.

On a Mythraic sculpture preserved by Hyde, there are two fruit-trees. The first has a scorpion winding round it, and near it a ladder, which was the mystic symbol of descent or fall. Scorpio, on some Egyptian zodiacs, is a serpent; in others Typhon, depicted as the devil now is, with a serpent's tail and breathing flames.

In Montfaucon there are many representations of the Hesperian tree, with a serpent twined round it, and a male and female on the opposite sides.

So much for illustration of the Mosaic theory of the fall. The Hesperian gardens, in fact, were the pagan paradise; the golden apples, the fruit of the tree of life; and the dragon, or seraph, the angel who guarded the way of it. Sometimes, indeed, a chimera, resembling the Jewish cherubim, was substituted for the seraph or fiery serpent. At others, the golden apples were converted into a golden fleece, and the bulls (the cherubim of the Hebrews) with fiery breath, were the guardians. Griffins (a mixed monster, also resembling the cherub) are, in a different hieroglyphical version of the same story, guarding the "treasures of the everlasting hills," promised to Joseph. Throughout it is the same Mosaic story, only differently coloured by the picturing vehicle.

It can scarcely be doubted that Jacob, in his blessing on the twelve tribes, alluded to the figures of some Chaldean or Egyptian zodiac. Without we admit this, we must infer that the patriarch uttered complete nonsense. If, as is not disputed, the twelve tribes were signalled by the twelve signs of the zodiac on their standards, they must have adopted them from the circumstances of Jacob's prophecy. In blessing the twelve tribes, which were to fill the world, it is not only not wonderful that the old patriarch should refer to the twelve signs, but they clearly furnished the most obvious illustration, and the most lasting memorial. Common sense, therefore, is in favour of an argument which has been exclusively referred to Sir William Drummond, but which belongs to Kircher. The scriptural

allusions to Taurus, are the following: "His glory (Joseph's) is like the firstlings of the *bullock*;" see blessing of Moses. "Ephraim is as a *heifer*;" Hosea. "And unto Enoch (behemoth, or the ox) thou hast given one part to dwell wherein are a thousand hills;" Esdras. Jacob's blessing on Joseph (according to the reading of Hebraists) is as follows: "Joseph is a fruitful *bull*, by a well, whose children run over the neck. The archers have sorely grieved him, and shot at, and hated him: but his bow abode in strength, and the arms of his hands were made strong by the hands of the Mighty One of Jacob; from thence is the Shepherd the Stone of Israel." Now, I maintain, that all this is nothing but a correct translation of the antediluvian prophecy, pictorially represented in the figures which accompany Taurus, as extant on the planisphere and zodiac of Denderah. Let us arrange them in the order in which they presented themselves to the eyes of Jacob, the inspired interpreter of an imagery not improbably invented by his great antediluvian ancestor Seth, the Thoth of Egypt. A bull, and near it an eye in a circle, (an means an eye or well;) a representation of the seven Atlantidæ, or Hesperidæ, on the neck of Taurus; another representation of a bull recumbent, and shot at by an archer; two more characters expressive of the same violence; a bull beheaded; a chimerical figure of the head and thigh of Taurus held chained by Typhon, while another personage transfixes it with an arrow. To this the allusion of the Brethren, or Gemini, the next sign, also applies. "Cursed be their wrath, for it was cruel, for in their anger they slew a man, and in their self-will they houghed an ox." In fact, "violence" characterises the whole of these two starry habitations. Next, we have the Bowman rising from the decapitated Taurus, and destroying the power of evil as Scorpio. The strange metaphor, the "arms of the hands," is doubtless taken from the front limbs of the chimera, representing Sagittarius having human hands. Next to Taurus is the Shepherd, with his pastoral staff, the Shiloh elsewhere noticed, and directly beneath Agathodæmon, or a square stone.

Symbolic mementos of man's predicted restoration, and the means to be employed for effecting it, are equally common as those which record his fall. But as these will more naturally occur during the consideration of other portions of the zodiac, I shall confine myself, at present, to such only as relate to Taurus.

Apis was drowned at particular periods, as a symbol of the flood; as a symbol of the anticipated hope of the ancient world, he was buried in a sarcophagus, and on the fourth day a new Apis was led forth to the people, as a pledge of the resurrection.

It was by a violent death of the chief god (such was the dogma of the earliest priests) that

man was to be restored. A bull was torn to pieces at the Bacchanalian orgies. Apis was cut in pieces, as was Osiris, whom he represented, before he was deposited in his three days' sepulchre. The thigh was set apart as something mystical and sacred. A vast number of evidences of this are to be found in the sculptures of Belzoni's tomb. As for the head, the curse of evil was laid upon it in Egypt, as it is now in India. On the zodiac of Esneh the head and thigh of Apis are on the point of being pierced by a figure with an arrow. At Denderah, a bull is represented shot at by an archer. In the centre of the planisphere of the latter place is the thigh of Apis, and Typhon standing beside it with a sacrificial knife.* The archer at Denderah is a Centaur, and thence, perhaps, the name, which means to pierce a bull. It is, indeed, a remarkable fact that the original Sagittarius is a winged and crowned figure, having a bow, and with the face of a man and lion, (precisely the conquering Messiah of the apocalypse.) This was the golden-haired Chrysaor of the mythologists, and the golden-winged divine love of Aristophanes. The half human figure is represented as rising from the decapitated body of Apis, and, beyond a doubt, was a symbol of the resurrection of Horus,

the second person of the Egyptian trinity, who is called by ancient writers the mediator, who generally grasps a fac simile of the Christian cross, and who is represented sometimes nursed upon the lap of Virgo, and at another piercing Typhon, or the great dragon, with his finally extirpating arrows. It is not, therefore, unlikely that, as the terminating of the mysteries, Horus, or Chrysaor, was represented rising in glory from the sarco-phagus, in which the severed fragments of Apis had been deposited,

Anon a tremulous flash
Detects a sable interposing veil,
Which severs that monotonous grim room;
And brodered images of gods are seen
Fluttering across it, as the light augments
In ever-varying lines, and fleeting hues,
It parts, it rolls away. The illumined flood
Which follows, palsies each inebriate sense.
Before a tabernacle strewed with gems
A sculptured offer lay. Twice rose the cry,
Of Eleu, Elulul and at the last,
The alabaster lid was rolled aside,
Then, from the depths of its mysterious womb
A vision rose amidst the curling smoke,
Of white-wreathed incense and odorous myrrh;
A regal visage, diadem'd with rays,
And shining like the sun, † engendering day
In the dark bosom of rock-canopied night.

CANOVA AND THE YOUNG SOLDIER.

THERE was in Rome a young soldier of the pope's guard, about twenty years of age, who entertained an ardent passion for painting and drawing. The walls of the Monte Cavallo and the Vatican were covered with figures and groups drawn in chalk. These sketches displayed extraordinary talent, and the costumes were singularly correct.

One day Canova happened to pass by while the young soldier was occupied in sketching on one of the walls. Struck with surprise and admiration, the Roman Phidias stopped and questioned him. Canova was fond of encouraging and patronising talent wherever he discovered it. The soldier said he had so strong a taste for drawing and painting, that he could not refrain, at his leisure moments, from amusing himself by chalking on the walls designs which, he modestly observed, he knew to be very faulty.

"How I should like to be taught!" he exclaimed with transport; "but I am too poor to pay any one for giving me lessons."

"Well," said Canova, "come to me, and I will teach you for nothing. I will even settle upon you a pension of fifteen piastres per month, to enable you to quit your regiment. I am Canova the sculptor."

The young man thought he had awakened from a dream. He stood in the presence of the

great man, whose generosity overwhelmed him even more than his brilliant reputation. All he could do was to fall on his knees and return thanks, as an Italian thanks God or his patron saint. Next day the young enthusiast was received among the pupils of Canova. But Canova had looked only at the brilliant side of the adventure. A month had not elapsed before the young soldier became pale and thin. He sighed at the recollection of the time when he could wander alone by moonlight, and trace on the base of the obelisk Di Trinita di Monti the profile of some pretty Roman girl. He was then unfettered by academic rules, and his pencil was never checked by the words, "Rub that out, it is bad." He wished to learn, but *ennui* became more powerful than all the arguments either of himself or his master. One morning he entered Canova's study, kissed his hand, and thanked him fervently for all the kindness he had shown him, but candidly avowed that he could not submit to the restraint to which the other pupils were subjected. He said he was like a plant whose stem was too old to bend, on which the art of the cultivator could produce no improvement, and must be left to its wild and natural growth.

He returned to his regiment, and resumed his untaught sketches amidst the ruins of the eternal city.—*Memoirs of the Duchess of Abrantes.*

* Among the Mythrac sculptures is a head of Taurus, hung on a tree, with a quiver of arrows suspended beside it.

† It is supposed that *Sol infusus* was the final exhibition of the mysteries.

THE PRESENT AND THE PAST.

[We make the following extract from an article published in a recent number of the American "Christian Review."]

BUT these are not the only declaimers, who commit the fault on which we are now animadverting. There are religionists, who fall into the same error, and owe no small part of their success in playing the orator, to the fecundity of this theme, about which the most prosing are frequently quite animated and spirited. Thus it is our lot, in this age, to hear the times of Luther, and Calvin, and Melancthon, lauded to heaven, as the period when the doctrines of the Bible were best understood, and the system of Divine truth most perfect and symmetrical. Similar praise is awarded to the age of Flavel, Howe, Baxter, and Doddridge, not to enumerate others of no less fame in the galaxy of British divines. Were we to take for granted all that we hear on this subject we might suppose, that, contrary to all experience in other cases, the progress of time has produced an inversion of the order of things with regard to the knowledge of the word of God. For, in those other cases, the more discussion there is, the better is a subject understood. Truth is thereby evolved, and its scintillations struck out by the collision of mind with mind. But with reference to Divine truth, the order of nature is, forsooth, reversed; and they who first opened their eyes to it, when it burst forth, like the sun through a cloud, at the Reformation, received more of its rays, and measured its orb more accurately than all their successors put together. But this cannot be true; nor is it possible to believe in such an inverted order of things. Let us not be misunderstood. If they who first contemplated Divine truth, at the dawn of the Reformation, had many facilities, they had also many obstacles to its acquisition. For unless they were more than men, they must have remained wedded to numerous prejudices, those "idols of the cave," as Bacon quaintly calls them, and attached to many absurd notions, that were produced and fostered by the darkness of the preceding ages, during which they had been educated. It was not possible for them to throw off these incumbrances to their minds at once, and divest themselves of such errors as they must have cherished, provided they were not superhuman. On entering upon their investigations, and constructing their theories and systems, many things they took for granted, not suspecting that any could doubt their truth. Some things they examined, but employed an abstruse, scholastic mode of reasoning, which satisfied their own minds, but must fail to satisfy others, who have had proof of the uncertainty of such reasoning. Some things they rested upon as tests, which, it is plain, they had not sufficiently studied to

know the meaning of; while other things they left unnoticed, because no mind is comprehensive enough to embrace all the points of a vast subject.

That the men who figured at the time we are speaking of, had a great deal of truth on their side, no one would be so reckless of his reputation for candour as to deny. They dug very deep, and brought up much gold and many precious gems. They fought against error, with uncommonly well-furnished weapons, and smote with sinewy arms. They deserve highly from the world, as its greatest benefactors, nor can any meed be too honourable for them to receive. But since their time, much has been done to advance Divine truth, and promote a far better understanding of its doctrines, than even those great men possessed. The streams of religious knowledge have been deepened, the fields of investigation widened, and new paths struck out by modern inquiries into the regions of moral truth; former errors have been exploded, and the means of rightly understanding the Bible multiplied, by the formation of a new science,—that of sacred interpretation,—founded upon a deeper acquaintance with the laws of language, greater familiarity with oriental customs and manners, and a better knowledge of the history of the east. To suppose that these causes have not advanced Divine truth, would be at war with fact and common sense. To suppose that the present age is inferior in its theology, compared with past ages, would be to reverse the stream of knowledge, and make it broader at the fountain than it is at its mouth, narrowing its limits and becoming more shallow the further it flows. That many errors have crept into the divinity of this age, is not denied. No age deserves indiscriminate eulogy. But, allowing that some errors are mingled with what is true, we may challenge an honest comparison with our predecessors. Perhaps no fact more convincingly shows the superiority of the present over the past, with regard to religious knowledge, than that, formerly a fiercer sectarian and polemic warfare was waged, than could now possibly be fomented between two different persuasions of Christians. Such ferocity of attack and defence would now be universally frowned upon. There is too much religious enlightenment, for men any longer to mistake the raven for the dove. A century or two ago, what was more common than for Baptists, and Episcopalians, and Presbyterians, to eye each other with suspicion and jealousy? And how often did these bitter looks end in quarrels and railings, and an odious war of sects, in which hostilities were carried on more in accordance with the nature of the lion than of the lamb? Than this, nothing could more certainly indicate the

ignorance, narrowness, and bigotry that existed among all parties. But as a clearer perception of truth was attained, and sounder views of theology prevailed, the consequences were, more liberality, a kindlier feeling, more fraternal affection, a disposition to regard chiefly essentials, hatred of discord, and the love of peace, purchased at any price short of sacrificing truth. Notwithstanding all this, however, how common it is for many religionists to inquire, what is the cause that the former days were better than these?

But the fault which we are now pointing out is not confined to politicians and religionists. The *aged* are another class, who are prone to cry out against the present and extol the past. Perhaps none are more disposed to believe that the times are out of joint, than they. The period of their youth was one in which, forsooth, men were wiser citizens, and purer patriots, and better Christians. Mankind were then less mean and selfish, more honest in their dealings, more punctual in their engagements; the public morals were kept at a higher standard, and the fear of God more generally acknowledged; there was then more honour, and virtue, and principle in the world; but now hardly any of these noble qualities of character are to be found. The idea is presented in many forms. But the whole of it is this, there is a general declension in those things that marked the *good old times*. Even religion herself is not what she used to be, when the venerable class here spoken of solicited her smiles and wooed her embrace. This is the strain which they too often indulge, especially to their young brethren, who sometimes ill suppress the contempt which they feel. Not aware of the deceitful influence of distance, in hiding deformities in any object, and mellowing the roughest features, they judge from deceptive views, and make no allowance for the deceit practised upon their understandings by the long space through which they look; while, on the other hand, they are as little on their guard against the error to which they are exposed by contemplating an object too nearly. Let them know, however, that intellectual and moral objects require to be held at a *certain point*, to be viewed correctly, just as material objects must be, in order to see them in their proper and just proportions. Owing to these causes of misapprehension, the class of men, now alluded to, misjudge in their estimate of the comparative merits of the past and the

present; unduly magnifying the virtues of the one, and the vices of the other. And hence, they do not wisely inquire, what is the cause that the former days were better than these?

It is proper to remark here, that our observations are not designed to rebuke *all* comparison of the past with the present. This would destroy history, and cut off all the advantages to be derived from that useful branch of knowledge. But such inquiries respecting the past, as are found upon the historic page, are, in the highest degree, useful and proper; nor do they conflict, in the least, with what we are maintaining. From this study, political and all other kinds of wisdom are gleaned. In this way, the experience of one age subserves the progress of another succeeding one. From thence, the orator draws kindling motives to arouse a people from their lethargy, and stir them up to noble daring and splendid achievement in the cause of liberty. Thus none of the motives urged by Cicero penetrated the souls of his audience, on a certain public occasion, so deeply, as an appeal to the indignation which their fathers would have felt, had they heard that a Roman citizen had been scourged and crucified by a foreign power. So, also, from appeals to the past, the ministers of our holy religion draw often the most potent persuasives to Christian duty and engagedness. But it is evident, that if this sort of argument is to produce effect, such views of the past must be chosen, as shall appear bright and illustrious. As a necessary consequence, the contrast, for the time being, must be favourable to the past, tending to exalt our conceptions of antiquity, and inspire us with a noble emulation to imitate them in the scenes described.

What we condemn is, a querulous temper respecting the times in which we live; a disposition to see nothing creditable in the present, and nothing reprehensible in the past; a proneness to enlarge the degeneracy of our own age, magnify existing evils, undervalue the blessings which we enjoy, and depreciate the Divine goodness as it descends upon ourselves, our families, our church, our country; while we are ready to believe, that such dark and trying times were scarcely ever suffered before, and that we are peculiarly unfortunate in living at an era so troublous and perplexing. Such we charge with folly, in their inquiry, what is the cause that the former days were better than these?

AUTUMN.

A FRAGMENT.

THE spring is past, the summer is come and gone, and the autumn is again a dweller in the land. We love the delicious outpouring of beauty which is visible over the wide heavens

and the rejoicing earth in the early and lovely days of spring; we delight to bask on the turf meadow-side, or by the drooping bank of some stream whose glittering waves reflect the dazzling sheen of the golden summer-heaven. But, more than these, we rejoice to contemplate the silent and soothing decay of all these glories as, one by one, they fade, and droop, and die, and leave the landscape covered with the cold, bare, and skeleton array of a thousand hedgerows and forest trees. But the early days of autumn are preparatory to all these great and mighty changes in the universe of nature. The heavy, leaden tinted clouds hang low upon the earth; and instead of the gladdening sunshine, the world is lit by a dim and saddening cloud-light. Morning breaks with a chilly and mist-clad splendour; the dew loses its diamond sparkle, and gleams with a white and pearly dimness; the leaves do not wave or flutter in the wind, they shiver, tremble, rustle, and fall. The wide atmosphere is frigid and damp, and the world sleeps in a grey and misty shroud, preparatory to the burial of all that made it glad, and bright, and happy. Yet we love the autumn, we love it for the dear, delightful remembrances of youth which it brings back to us; we love it for all the associated memories and recollections of departed friends who have passed away from amongst us at this season of the year.

An evening in autumn is at best but a sad and gloomy scene. There are fewer sunsets, and they come like angels' visits—bright, brief, and beautiful; radiant with splendour, but soon to decay; burning with brightness, but consumed by the very lightning and illumination of their transitory glory. Eve comes clad in grey and pilgrim weeds; her pathway is over darkness and decay, hastening on to death; she weareth no purple robe around her, nor is she crowned with the immortal diadem of a star. We knew one in our early youth, she was pale, graceful, and beautiful, one who was more fitted for the shrines of heaven than the dwellings of the earth, one whose aspirations were for the bright stars and the golden firmaments of a loftier universe. She was a sad and gentle girl, and dwelt in a visioned world of rich and glittering imaginations.

She had numbered sixteen autumns; she had, in that short yet happy period, seen many pass away around her; she had planted and watered flowers over their graves, and had marked the grass grow sere and the leaves decay; and she longed to be far away in "the spirits' land" with them.

There was a quiet hush in that little household on the hill-side when Mary died. The night was calm and starry, and the young moon's last smile that night fell upon the white coverlid that was over her who was so soon to pass away from amongst them, and be at rest. An old and venerable man knelt by the bedside of the dying girl; the only sound was from the choking sob and the suppressed moan; but these were hushed when that venerable man opened the holy Bible, and began reading that solemn passage—"I am the Resurrection and the Life." Each one knelt in deepest silence, and the stillness of that room was the stillness of death; for with the last echo of that venerable pastor's prayer, the lingering spirit took flight from death unto life—life immortal beyond the grave.

In a few days the lost and the loved was buried. The same returning hour of early night that witnessed her death, witnessed her burial. The venerable church, the burial-ground, and the dark grave surrounded by solemn mourners, were below; the unclouded sky, the stars, and the full-orbed moon, were above; the corpse was in the earth, the spirit was in heaven.

Weep not, weep not, she is dead;
Cold and dreamless now she lieth,
Where the damp, dull clay is spread,
And the death-worm sigheth.

Lay a white rose on her breast,
Pied violets dim, and cypress sore,
That the scent of flowers may rest
In her wintry sepulchre.

Strew, O! strew bright shells around,
Gathered from the white sea-shore,
For in life she loved the sound
Of old ocean's roar.

Deck'd and crown'd with conch and leaf,
Sleep, O! sleep till morn restore
All thy beauty, bright and brief,
To life and love for evermore.

EPHON.

SKETCH OF RANGOON.

BY THE REV. H. MALCOM, A.M.

THE name of Rangoon is so conspicuous in the annals of our mission, and occurs so often in the narrations of travellers on this coast, that I naturally entered it with feelings of peculiar interest. Association of ideas of course keeps up some of that interest; but so wretched a looking town, of its size, I have no where seen. The city is spread upon a part of a vast meadow, but little

above high tides, and at this season resembling a neglected swamp. The approach from the sea reveals nothing but a few wooden houses between the city wall and the shore. The fortifications are of no avail against modern modes of attack. They consist of merely a row of timbers set in the ground, rising to the height of about eighteen feet, with a narrow platform running round in-

side for musketeers, and a few cannon, perhaps half a dozen in all, lying at the gateways, in a useless condition. Some considerable streets are at the back of the town, outside the walls.

The entire population is estimated at fifty thousand, but that is probably too much. There is no other seaport in the empire, but Bassein, which has little trade, and the city stands next in importance to Ava; yet there is literally nothing in it that can interest a traveller. A dozen foreigners, chiefly Monguls, have brick tenements, very shabby. There are also four or five small brick places of worship, for foreigners, and a miserable custom-house. Besides these it is a city of bamboo huts, perfectly comfortable for this people considering their habits and climate; but in general appearance as paltry as possible. Maulmein has already many better buildings. The eaves of the houses generally descend to within six or eight feet of the ground; very few being of more than one story, or having any other covering than thatch. Cellars are unknown, and all the houses are raised two or three feet above the ground for coolness and ventilation. As the floors are of split bamboo, all dirt falls through, and what is not picked up by crows, dogs, fowls, &c., is occasionally swept out, and burned. For nearly half of the year the city presents a most singular appearance, half sad, half silly. By a standing law, on the setting in of the dry season, all the thatch must be removed, except a particular kind, not common, made partly of split bamboo, which will not easily burn. Were it not for the people in the streets, and the clothes of various kinds put up in the houses to keep off the sun, it would seem like a city deserted.

The streets are narrow, and paved with half burnt bricks, which, as wheel carriages are not allowed within the city, are in tolerable repair. There is neither wharf nor quay. In four or five places, are wooden stairs, at which small boats may land passengers, but even these do not extend within twenty feet of low-water mark. Vessels lie in the stream and discharge into boats, from which the packages slung to a bamboo are lugged on men's shoulders to the custom-house.

The commerce of the place is still considerable, though greatly crippled by enormous port-charges, and absolute prohibitions against exporting rice or the precious metals. Specie is exported by adroit smuggling. Could rice be exported freely, a most beneficial trade, both to government and people, might be carried on, the agriculturist receive a better reward for his toil, and the price of land be raised throughout the kingdom. Paddy (that is, rice uncleaned) is now selling at five rupees the hundred baskets;—that is, about two hundred and fifty dollars for a hundred bushels.

The best of cleaned rice is four annas a basket, about twelve cents a bushel. Wheat, as good as I have ever seen, is selling at thirty rupees per

hundred baskets. Such prices would send here half the vessels in Bengal bay. How strange that governments must always be doing damage, by dabbling into matters which, if left to themselves, would prosper!—However, the policy is certainly more wise than that of Great Britain, which lets some of her subjects annually starve, and thousands of others constantly suffer, by keeping bread-stuff away.

Other necessities are equally cheap in Rangoon. Fowls about two rupees per dozen, black tea, brought down the Irrawaddy from China, one rupee per viss; that is, nearly twelve cents a pound. Almost every kind of British manufactures may be had in the bazaar, at rates not higher than they cost in Boston. Medicines are not easily procured, and many kinds are excessively dear.

During the long wars of Europe, in the days of Napoleon, many vessels were built here, chiefly by the English, amounting, on an average, from 1790, to 1802, to three or four thousand tons per annum. At the time of Col. Symes' visit in 1795, there were several ships on the stocks, of from six hundred to one thousand tons burden. This branch of business is now almost annihilated.

Two miles from Rangoon is the celebrated pagoda, called Shoo-da-gon. It stands on a small hill, surrounded by many smaller pagodas, some fine zayats and kyongs, and many noble trees. The hill has been graduated into successive terraces, sustained by brick walls, and the summit, which is completely levelled, contains about two acres.

The two principal approaches from the city, are lined on each side, for a mile, with fine pagodas, some almost vying for size with Shoo-da-gon itself. These are in every state of repair; from beautiful white new ones, to mere grass-grown heaps. In most of them the apertures still remain, through which the English soldiers penetrated, to take the treasure always deposited in them. Even the great pagoda did not escape; but it is so perfectly repaired, as to show no signs of the indignity.

Passing these on your way from the city, you come to a flight of time-worn steps, covered by a curious arcade of little houses of various forms and sizes, one above another, some in partial decay, others truly beautiful. After crossing some terraces, covered in the same manner, you reach the top, and, passing a great gate, enter at once this sad, but imposing, theatre of Gaudama's glory. One's first impressions are, what terrible grandeur—what sickening magnificence—what absurd imagery—what extravagant expenditure—what long successions of devotees to procure this throng of buildings of such various dates—what a poor religion that makes such labours its chief meritoriousness. Before you stands the huge Shoo-da-gon, its top among the clouds, and its

golden sides blazing in the glories of an eastern sun. Around are pompous *zayats*, noble pavements, gothic mausoleums, uncouth colossal lions, curious stone umbrellas, gracefully cylindrical banners of gold-embroidered muslin hanging from lofty pillars, enormous stone jars in rows to receive offerings, tapers burning before the images, exquisite flowers displayed on every side, filling the air with fragrance, and a multitude of carved figures which cannot be portrayed without the pencil.

Always in the morning, men and women are seen in every direction kneeling behind their gift, and with uplifted hands reciting their devotions, often with a string of beads counting over each repetition; aged persons are sweeping out every place, or picking the grass from the crevices;—dogs and crows straggle around the altars, and devour the recent offerings;—the great bells utter their frequent tones;—and the mutter of praying voices, makes a hum like the buzzing of an exchange. The whole scene is so strange, so distressing, that one is relieved to stroll away among the huge trees, and gaze from the parapet on the unlimited scene around. It is one wide flat jungle, without a single hill, but that of *Syriam* in the distance; but it is nature. It is the true temple of the true God—the only representation he has given of his natural perfections, as the Bible is of his moral ones. All the rest is distortion, absurdity, and crime. Of inferior pagodas, (though some surpass in size any I have seen elsewhere,) there are, in Rangoon, more than five hundred, occupying as much space as the city itself, probably more. Most of them stand a little out of the city, interspersed with groves, embowering costly *kyoungs* and commodious *zayats*. The latter are particularly numerous, to accommodate the hosts of worshippers, who resort hither at certain seasons of the year.

In the vicinity of the hill are one hundred and fifty families of "slaves of the pagoda," containing about two hundred men, and, as their chief

told me, "plenty of women." They do not appear to be poor or despised, and their quarter of the city is not distinguished by any particular feature. They become so, not always because of crime, but often by merely incurring the displeasure of a great man, who spares his life and gives him to the pagoda. Most of them are so by birth, for the children of such persons are for ever in the same condition. They are not allowed to marry, except among themselves.

I visited the pagoda frequently, about sunrise, as it is the only direction in which one can ride. There were always twenty-five or thirty worshippers scattered up and down; and on the regular worship days, one or two hundred. They come and go during the cool of the morning, remaining about fifteen minutes, and amounting, I was told, in the whole, to two or three thousand. A few remain all day in the cool *zayats*, often performing their worship, and spending the intervals of the time in friendly chat. Some, as an act of particular merit, stay all night. No priests are in official attendance, nor, indeed, did I ever see any there performing their own worship.

Every one brings a present, often a bunch of flowers, or only a few green twigs, plucked on the way; but generally nice eatables, done up tastefully in fresh leaves, or articles of raiment, &c. The act of worship is called *shee-ko*, though the name is often given to the mere act of prostration which accompanies it. The amount of offerings here is very great. Stone vases, some of which will hold fifty or sixty gallons, stand round the pagoda, into which the devotees carefully lay their leafy plates of rice, plantains, cakes, &c. As these are successively filled, appointed persons from among the pagoda slaves empty them into their vessels, assorting the various kinds. The beautiful flowers remain all night, and are swept out in the morning. No one ever objected however to my gathering them at pleasure. A gift once deposited is no more regarded.

CATS.

ARTICLE III.

Cats! by all that is good and beautiful, we profess no respect for them. Kitten-born they come into the world, blind as though the ophthalmia (which doubtless they inherited from their ancestors in Egypt) were a disease with which they were quite "at home." Nasty little muling puny things, good for nothing in the world but to make a noise and lap milk. Just let our readers picture to themselves the perils with which those persons provide themselves who nourish mother cats, just delivered by parturient pangs of a basket-full of youthful caterwaulers, averaging between fifteen and twenty in number.

Imagine any one of these "little ones" seized with a sudden fit of the gripes or the mulligrubs, what a hideous wowing and wailing the mother-cat would instantly set up, the parish in which her pregnancy was perpetrated would ring with a peal of purrs—the feelings, sensitive and physical, of every Cat in the neighbourhood, for miles around, would be set in motion in some one way or other, the wide clan of Cats would be visibly affected, there would be meetings summoned for condolence, and committees appointed to besiege all the chemists' shops in the vicinity for Dalby's carminative, poppy syrup, and Godfrey's cordial.

There would be no rest in those days for either the wicked or the good. But the mischief would not unfortunately rest here: every family, whose Cat presents them with a kitten budget, feels it to be their imperative duty to divide their feelings on the occasion; "the young ladies" of the family are to retain all the kind and affectionate feelings of their tender natures for the young brood; whilst Sally and Betsy and Mary, in the kitchen and scullery, are to be allowed the privilege of sharing between them the choice of either wringing the necks or drowning the bodies of the "newly arrived young strangers." Forthwith the kitchen is in a scrimmage and a scuffle, and the maids below stairs, forgetting that modesty which should ever accompany maidenhood, forthwith indulge in most unamiable remarks upon the cruel cantankerousness of their master and mistress up stairs, in "putting upon" them so, as to bring them to be obliged to destroy the dear little kittens, who wouldnt harm a mouse, the blessed little dears, if they could help it. Drowning the "little insensibles," too, and master a subscriber to the Royal Humane Society all the time; the bare idea of the kitten-swamping is not to be thought of without the assistance of a pint bottle of spirits of hartshorn, to enable them to go through the critical ceremony; putting the little things into water before they were ever taught to swim; and then wringing their necks, oh! who could do it? their "last dying speech and confession" to terminate in a squeak. Oh! here Mary sinks, and falls in a fainting fit into the dripping pan, from which she is only aroused by the pleasing sensation of a ten-pound red-hot coal, fast turning her right rosy cheek into roast mutton. This cruel catastrophe adds to the dilemma, and exemplifies the truth of that adage, which says—

"What great events from trivial causes spring;"

whilst, in the midst of the bustle, the parlour bell rings, and the breakfast-room bell immediately follows its example; the contents of one room inquire, with much trepidation, whether the kittens have been drowned, according to orders; the inmates of the other inquire whether they have been roasting the kittens, by mistake, as there is a strong smell of burnt meat exuding from the kitchen. An involuntary and unprepared negative is given to each of these queries, and fresh orders from the "seat of government" are forthwith issued, that within ten minutes' time the whole "affair" shall be concluded under pain

of incurring the severe displeasure of master and missus, and receiving "warning" and wages at one and the same time. All Mary's finer feelings now evaporate, Betsy "drabbits" the dripping-pan and the kittens too, whilst Sally declares it makes her heart ache to see how the little dears "take on" when they get half strangled to the bottom of the water-butt, into which by mistake she unconsciously pops them. Order now reigns in the household till the following day, when it suddenly occurs to the united tongues of the whole family that they taste something "very queer" in the water of the tea and coffee. This "very queer" sensation soon becomes a "tickling one," this again degenerates into an irresistible desire to "puke," which after awhile runs into the positive and pleasurable sensation of "heart-sickness." Beds and basins are the only things now thought of, every stomach has a Niagara fit, and every one unconsciously wonders what can be the cause of it. Sleep at last lulls the weary to rest, and, relaxing the tight hold they have all day had upon their respective basons, they sink into profound rest and sleep. Dreams now take the place of painful realities, and night-mares ride, rough shod, over the breasts of all, with a weight and pressure becoming the bulk of a night elephant; dreams bring sad visions of water-butts, strangled kittens, red-hot coals and dripping-pans, till morning comes, with "yellow eyes," and brings "the doctor." He, with the skill natural to his craft, soon detects the cause, and with plausibility, a pill and phial he soon quiets the restless stomachs of the household, never to be disturbed again by Cat or kitten for many many months to come.

We need not, surely, here insist upon the fact, that the above scenes form no "part or parcel" of either a domestic farce or extravaganza; but contain the rudiments of what the oath-administering clerk of the Old Bailey would term "the truth, the whole truth, and nothing but the truth." Our readers must have been themselves the living witnesses to many such; ay, even in the home of many a member of the "Society for the Suppression and Prevention of Cruelty to Animals." We have seen occurrences of "the facts and circumstances" which we have sketched above, many hundred times, and they have in truth affected us with "thoughts too deep for tears," but scarcely too deep for description—which we have endeavoured to give to the best of our power. EPHON.

REVIEW.

Poems. By JOHN MOULTREY.—Pickering, 1837.

WORDSWORTH tells us, "that it is not the mere admirer of verse, as a species of luxurious amusement, that is fitted to pass a judgment on the intrinsic merit of poetical compositions; but he who, having

been enamoured of the art in his youth, has found time in his maturer years to cultivate its study, when it is no longer a passion, as a part of general literature."

The former possessing only an uncultivated taste, or,

what is worse, a taste probably perverted by early and faulty impressions, is like the child or the clown, who would prefer the gorgeous extravagances of a Chinese tea-cheat, or the glittering tinsel of a French fan, to the sublime compositions of an Angelo, or the chastened beauties of a Da Vinci. The latter has obtained the practised eye of a connoisseur; and, though, with the multitude, he may be amused by the daubings of a Japanner, and will not censure them if they are not put forward with higher pretensions, yet the admiration of his judgment is only bestowed on the nobler efforts of purer art.

There are, doubtless, some who seem to be gifted with an intuitive perception of excellence in some one or more branches of art or literature; and there are, too, some productions of genius of such surpassing merit that they have at once seized the admiration of every observer, and have been still enabled, on longer acquaintance, to maintain the territory they have conquered. But these are not the occurrences of every day. The rule we have brought forward will be found to hold good in ordinary instances, and excellence of whatever kind, will always be most accurately appreciated by those whose minds have been disciplined in that department in which the individual excellence occurs. It is true that the expression of this just judgment may often be perverted by the jealousy of rivalry, or by the suggestions of envy; but yet the hidden offering of secret admiration is gradually, though it may be slowly, manifested and developed, and on this foundation alone can an author hope to erect a monument of enduring reputation, for the momentary breath of popular applause quickly dies away, and the transitory flame that it fanned into existence perishes at once on its withdrawal.

Beside bringing with us the qualifications we have adverted to, we must also, before we attempt to criticise the works of any author, endeavour to ascertain with what intention he is writing, and in what character he designs to appear before us. For, to take another illustration from the sister art, it would be manifestly absurd to apply the same rules of criticism to the works of a disciple of Raffælle, to those of a follower of Hogarth, and to those of a laborious Durer; and it would be still more ridiculous to endeavour to value, on the same principles, the labours of the imitator of marble and fancy woods for our doorways and our furniture. We must bear in mind, too, that in different productions of the same hand, different styles may be attempted, and that with varying degrees of success, according to the genius or ability of the author; and that these may be regarded individually as forming distinct grounds for our admiration or our censure, as well as forming a united whole, by which we may learn something of the general talent of the writer. Fair success in various styles assuredly gives the individual a higher claim in the scale of genius, than a rather higher degree of excellence in one manner only, for this single excellence may be attained even by an ordinary mind, by untiring perseverance and application, and by confining its attention solely to that one style, the excellence by degrees becoming an almost mechanical habit—while successful compositions of varied kinds must claim origin from another source. From those, from either source we may receive pleasure. In the one case it is like that received from a view of the ocean, grateful indeed at first, but by its monotony soon degenerating into wearisomeness,—in the other, it is the delight we experience as we scan over the variegated landscape, boasting, perhaps, not things so grand as the sublimities of the gathering of the waters, yet holding a power whose fascination is far more permanent. In the latter case, the degree of pleasure depends on the character of the landscape. It may be, that there are few features of interest, or it may teem with romantic scenery, or its beauties

may all be owing to the short-lived bloom of some perishing flower that has decorated the rocks with its blossoms.

The volume before us is made up of varied productions, which, if not possessing grandeur and elevation, are at least pleasing and interesting. They are not put forward as claiming to rank with the loftier breathings of the more devoted followers of poetry, and, therefore, are not to be condemned, if a want of profundity should be discoverable. It may be that some captious beings may ask "why, then, publish at all?" But, on the same principle, every painter ought to throw down his brushes if he happens not to be a Buonarroti.

Speaking of those who have "won their way to fame," our author modestly writes:—

"With such as these I may not cast my lot,
With such as these I must not seek a name,
Content to please awhile and be forgot;
Winning from daily toil, (which irks me not),
Rare and brief leisure these poor songs to frame."

—p. 64.

Yet with these humble pretensions, we have some portions that would do honour to a more exclusive poet—many that only carelessness has occasioned to hold a lower rank, and some that, it must be confessed, are not at all above mediocrity. They are divided into two sections, the first consisting of poems lately composed, the other, of those written between 1818 and 1828. Judging by our author's own evidence, it would appear that of late years he has fared sumptuously every day, as his more recent poems are certainly of an inferior stamp, taken as a whole, than those of an earlier date.

Here followeth his disposition:—

"I should have been more cautious in my diet,
Eaten less butcher's meat, and drank no wine;
Not suffered heart or head to run such riot;
Loved but one maid instead of eight or nine;
Kept all my pulses steady, cool, and quiet,
And then my poems would have been divine.
Whereas, I've been so wayward and unwise,
As to waste all my better sympathies."

—p. 259.

However, we must grant, if there is less of the fire of the poet, there is more of the feeling of the Christian, in the verses of later date. The death of a cherished son seems to have originated the best of "these flocks of a second spring," to whom he thus beautifully alludes in a piece entitled "My three sons."—

"I have a son, a third sweet son, his age I cannot tell,
For they reckon not by years and months where he is gone
to dwell,
To us for fourteen anxious months, his infant smiles were given,
And then he bade farewell to earth, and went to live in heaven."

I cannot tell what form his is, what looks he wears now,
Nor guess how bright a glory crowns his shining scarp brow.
The thoughts that fill his sinless soul, the bliss which he does feel,
Are numbered with the secret things, which God will not reveal.

But I know (for God hath told me this) that he is now at rest,
Where other blessed infants lie, on their loving Saviour's breast.
I know his spirit feels no more this weary load of flesh.
But his sleep is blessed with endless dreams of joy for ever fresh.

I knew that angels fold him close beneath their glittering wings,
And soothe him with a song that breathes of heaven's divinest things.

I know that we shall meet our babe (his mother sweet and I)
Where God, for aye, shall wipe away all tears from every eye.

Whate'er befalls his brethren twain, his bliss can never cease,
Their lot may, here, be grief and fear, but his is certain peace:
It may be that the tempter's wiles their souls from bliss may sever,
But if our own poor faith fail not, he must be ours for ever.

When we think of what our darling is, and what we still must be;
When we muse on that world's perfect bliss, and this world's misery;

When we groan beneath this load of sin, and feel this grief
and pain,
Oh! we'd rather lose our other two than have him here again."

It is possible that our author borrowed his idea from Wordsworth, but if this really be the case, he has certainly amplified and improved and elevated the child's notion in "We are seven." This poet at least seems to possess a large share of the author's present admiration; and borrowings or imitations from his works, especially in the sonnets, may be detected in several parts of Mr. Moultrie's volume. We, perhaps, ought scarcely to characterise them as such, for though there are many points of close resemblance, yet we cannot, in this instance, attempt to substantiate a charge of plagiarism.

On leaving the spot where their infant is buried, after noticing how painful was the separation to maternal tenderness, and how differently it acted on his own feelings, Mr. M. adds, with regard to local influences,—

"It will doubtless seem

A paradox to many; yet I deem
That we of the wild heart and wandering brain
Are less accessible to joy or pain
From such associations—find the scene
Of joy long past, or sorrow that hath been,
Less pregnant with ideal bliss or woe
Than others do, whose feelings are more slow,
Whose fancies less intense. When we survey
The wrecks and reliques of the olden day,
Old battle field, or camp, or ruin grey
Of abbey, or of fortress, we feel less
Of its past pride than of the loveliness
Which time hath shed around it; others cast
Their mind's eye far more fondly on the past,
And muse so fixedly on days gone by,
That they impart a dread reality,
A present life, to things that were of old,
Peopling with phantoms what they now behold
In ruin and decay. So do not we;
Our light-winged thoughts so easily can flee
From that which is to that which ought to be,
Glance with such swiftness from the scene that's nigh
Into the airiest realms of phantasy,
That if such scene should raise a transient pain
Within the heart, the ever-ready brain,
Almost ere felt, disperses it again,
Filling its place with fancies sweet, and strange,
And rich, and ever on the range.
'Tis this, and more than this, the poet's eye
So keen to seek, so ready to descry
All visible beauty, and the poet's breast,
So eager to enjoy, so glad to rest
In contemplation calm, and deep delight,
Known but to him, on every lovely sight
Of nature or of art; extracting thence
Whatever it yields to gladden outward sense,
Unmixed and undisturbed 'Tis this that takes
The pressure from our hearts; 'tis this that make
The interest, deep and keen, which others feel
In the mere scene of former woe and weal,
Known by themselves or others, less acute
In us than them."

—(p. 33.)

To this creed we cannot fully and unhesitatingly subscribe. We have ever regarded the poet, not as one whose pleasure wholly centres in the present, but as preserving in his pages the records of the past, outlined more boldly, and tinged with more glowing, and yet more delicate, tints than those that belong to the mere historian; penetrating the future with an almost prophetic glance, and anticipating the events of coming years, while, at the same time, he flings over present scenes a halo of brightness and a zone of beauty. We have regarded him, too, as a being who really feels more deeply than others; and his productions we have looked upon as the overflowings of that feeling. Yet there is a seeming truth in the statement of our author; but we believe it is only a seeming one, as we will endeavour to explain.

An emotion of the mind uncommunicated, reveals and luxuriates in undisputed empire, if once it be sufficiently powerful to overcome more immediate impressions; but when it is communicated, the spell is half broken, we look upon it as, in some measure, the

emotion of another, and analyse it as such, till we come to view it in its real bearings and importance, as having ceased to be a thing in which we alone were especially and overwhelmingly interested; and, consequently, have been enabled to examine it without prejudice, at least with a much less degree of prejudice than heretofore.

Now, in the situations supposed in the lines preceding our extract, there will arise, in sensitive minds, feelings which, to most, are "too deep for words;" or if they are not, indeed, so, there is yet a something which renders their communication impossible. There may be no companion present, or that companion may be devoid of feeling, or, at least, of congenial feeling; or there may be so exact a resemblance between the minds of the associates, that each one feels that he has nothing to communicate which his fellow does not already possess. Hence the emotion which had been originated remains undivided, and keeps its dwelling-place; and the longer it possesses it the deeper seems its claim, till some future and indefinite period shall witness its gradual decay, when it does become merged with those very emotions and feelings with which, at first, it seemed not to have the remotest sympathy. But the poet had ever a something which is even more than an equivalent to the companionship of a fellow-being. The mere flowing of his ideas in the channel of poetry, amounts to very nearly the same thing as the communication of them to a friend; and if his pencil or his pen embody his thoughts, they then come to be scrutinised rather as the productions of his intellect, than as the simple suggestion of surrounding things. The inevitable consequence is, that the thoughts diverted from the original emotion to one arising from his work as a metrical performance, are not influenced by the primary impressions to that extent which those of other minds must be under similar circumstances. It is in this manner that the "ever-ready brain" softens the harshness of feeling, though we cannot allow that it renders the heart less accessible to impressions. Such a statement is equivalent to asserting that a cistern furnished with a pipe to carry off its contents when filled to a certain point, is less accessible to water than another cistern under precisely similar circumstances, only without so direct and eligible a mean for removing the rain it may receive. We cannot help regarding the feelings stated in the above quotation to belong to others, as feelings decidedly belonging to, and emanating from, if not making up the greater part of the constitution of a true poet. The imparting present life to things that were of old, and peopling with phantoms of his own creation the scenes around him, is what the poet really does; and this has the effect which we have ascribed to it. Instead of which, Mr. Moultrie gives this creative attribute to the commonality of our fellow-beings, and tells us that it renders impressions on their minds deeper and more vivid. Now, the reverse is the fact. Ordinary minds are oppressed by the monotony of sorrow, just as the body is wearied out by one unvarying exertion. Imaginative minds find relief in ever-changing emotions, as our limbs, when fatigued by one species of labour, are rested by resorting to a different kind. The creative energy of poetical genius raises, ever and anon, new images, which, mingling with recollections of the past or suggestions of the present, still tend to beautify and obscure both, to render their influence most uncertain, and sometimes, by raising the poet to a sphere above them, rendering them entirely inoperative. He is, then, truly dwelling in a fairy land of bright imaginings, where more substantial realities may scarcely venture to intrude; but he has been carried there by the intensity, not by the deficiency, of feeling.

As we must now draw towards a conclusion, we

shall content ourselves with very briefly noticing the second division of the volume. The first piece, "My Brother's Grave," originally published in the *Etonian*, is decidedly the most pleasing of the whole. "Sir Launfal," also an early production, abounds with smartness. Its manner is too evidently borrowed from Byron's "Don Juan;" going on in the style of an improvisatore; seizing the ideas as they arise in the mind, and setting them down either with or without connexion, just as it happens; often putting in a few lines of sheer nonsense to fill up time, whilst the mouse-conceiving brain delays its parturition; and very frequently reminding us of one of a band of village literati, who, in order to appear quite at ease whilst reading aloud, was wont to substitute "apple-dumpling" for each crack-jaw word, to the great delight and edification of his hearers. Nevertheless, it has some beautiful and elegant passages.

Had we space remaining, we would undertake to prove that, in this case, Mr. Moultrie is very frequently a literary plunderer; and moreover, that he is guilty of the sin with which his model is charged, namely, that of bitterly reviling those whom he plundered; for as often as our author pillages from Byron, so often does he add bullying to his robbery. In its very incompleteness this piece resembles its prototype, though we trust some noble motives prevented its completion, leading the reverend author to devote his powers to higher objects, and making him sensible that such trifling as this is scarcely befitting the pen of a clergyman.

The extracts we have made would scarcely do justice to the writer were we to omit a quotation from the conclusion of the first part. This is made up of the pieces lately composed, and, addressing them as

"florets of his fancy's second spring," he proceeds:—

"I know not of what depth the soil may be
By which your growth is nurtured; but I know
That henceforth never shall it yield for me
Such gaudy wild flowers and rank weeds as grow
In the parterres of wanton phantasy;
But all its poor fertility bestow
On holler produce, lays of faith and love,
And His great praise who died and reigns above.

High theme, and worthy to attune the strings
Of seraph-harps to symphonies divine;
Whereat the angels, folding their bright wings
In trance-like silence, should rapt ears incline
To strains which told them of profounder things
Than thought of theirs can fathom. And shall mine
Venture beyond them? Daring flight, I ween,
For grovelling fancy such as mine hath been."

—(p. 173.)

Yet we should hail with delight the appearance of a volume of strains such as these from the pen of Mr. Moultrie. He has proved himself, at least, capable of writing well in some instances, if not always; and if we are to consider the present specimens as "forerunners of autumnal fruit," as we are told they haply may be, we would willingly accord the volume some additional favour. With many beauties, and with some glaring defects, which hereafter we may possibly be generous enough and malignant enough to particularise, these poems will probably meet with a kind reception at the hand of the ladies; and if stern judges should not regard them as worthy of their admiration, our author will have no just ground for complaint, as these will choose the more valuable fruit, after his blossoms are scattered and strewn, and after the zephyr-like breath of lady-patronage scorns to wanton any longer among the decaying florets.

REVIEWER'S TABLE.

MRS. BAKEWELL'S *Mother's Practical Guide*, is a very useful little volume, published by Hamilton and Co., pointing out the manner in which the parent should direct the physical, intellectual, and moral education of her children. It deserves to be carefully studied by the very important class of society to whom it proffers its aid.

Not less valuable are the *Conversation Cards on Intellectual and Moral Subjects*, prepared by the same lady for the junior branches of families. They indicate correct thought, combined with pure taste.

The Saviour's Bright Example; a Model for Sunday-school Teachers, by C. GORBELL, is a work of but mediocre talent, but as it breathes a spirit of piety it may be useful to some of the persons for whom it is designed.

Calvin's Christian Theology, by SAMUEL DUNN, is an able and judicious arrangement of the best portions of the practical writings of the Genevan Reformer, arranged under their respective heads, forming a sort of body of divinity. The idea was happily conceived, and is well executed.

Mrs. Henderson's Cottage Preacher; or Plain Sermons for Plain People, published by Ward and Co., is a little volume admirably adapted for the purpose it

has in view—that of communicating Christian instruction to our country villagers. We ardently desire the vast increase of such female preachers as Mrs. H.

Married Life. A Wedding Gift, is a small and elegant brochure. It is filled with elegant prose and poetry, and will be found useful in every stage of life, from the wedding to the funeral.

The Witnessing Church. This is a masterly and eloquent Missionary Sermon, by the able author of "Mammon." We shall hereafter advert to it at length, for the present we strongly commend it to the perusal of our readers.

Practical Remarks on Infant Education, for the use of Schools and Private Families, by DR. MAYO and MISS MAYO, is a very valuable little volume, published to promote the interests of the Home and Colonial Infant School Society. No parent or teacher can peruse it without advantage.

Counsels to Young Men on Modern Infidelity and the Evidences of Christianity. By JOHN MORRISON, D.D. This neat little volume deserves to be studied by the important class of society to whom it is addressed, and its author is entitled to the thanks of the whole Christian church for the pains he has taken in its production.

GEM.

DISAPPOINTMENT.—Men are very seldom disappointed, except when their desires are immoderate, or when they suffer their passions to overpower their reason, and dwell upon delightful scenes of future honours, power, or riches, till they mistake probabili-

ties for certainties, or wild wishes for rational expectations. If such men, when they awake from these voluntary dreams, find the pleasing phantom vanish away: what can they blame but their own folly?—Dr. Johnson.

THE APPARENT MOTION OF THE HEAVENS.

(From Dr. Dick's "Celestial Scenery," now in the press.)

ALL the phenomena which we have described, when duly considered and compared together, conspire to show that the whole celestial vault performs an apparent revolution round the earth, carrying, as it were, all the stars along with it, in the space of twenty-four hours. This may be plainly demonstrated by means of a celestial globe on which all the visible stars are depicted. When the north pole is elevated fifty-two degrees above the northern horizon, and the globe turned round on its axis, all the variety of phenomena formerly described may be clearly perceived.

Here, then, we have presented to view a scene the most magnificent and sublime: all the bright luminaries of the firmament revolving in silent grandeur around our world, not only the stars visible to the unassisted eye, but all the ten thousands and millions of stars which the telescope has enabled us to descry in every region of the heavens; for they all seem to partake of the same general motion. If we could suppose this motion to be real, it would convey to the mind the most magnificent and impressive idea which could possibly be formed of the incomprehensible energies of Omnipotence; for here we have presented to view, not only ten thousand times ten thousands of immense globes, far superior to the whole earth in magnitude, but the greater part of them carried round in their revolutions with a velocity which baffles the power of the most capacious mind to conceive. In this case there would be millions of those vast luminaries which behaved to move at the rate of several thousands of millions of miles in the space of a second of time; for, in proportion to the distances of any of these bodies, would be the rapidity of their motions. The nearest star would move more than fourteen hundred millions of miles during the time that the pendulum of a clock moves from one side to another. But there are thousands of stars visible through our telescopes at least a hundred times further distant, and whose distance cannot be less than 2,000,000,000,000,000, or two thousand billions of miles. This forms the radius, or half diameter of a circle whose circumference is about 12,500,000,000,000,000, or twelve thousand five hundred billions of miles. Around this circumference, therefore, the star behaved to move every day. In a sidereal day, of twenty-three hours, fifty-six minutes, and four seconds, there are 86,164 seconds. Divide the number of miles in the circumference by the number of seconds in a day, and the quotient will be somewhat more than 145,000,000,000, or one hundred and forty-five thousand millions, which is

[No. 41. OCTOBER 11, 1837.—2d.] VOL. I.

the number of miles that such a star would move in the space of a second, or during the pulsation of an artery, were the celestial vault to be considered as really in motion—a rate of motion more than a hundred thousand millions of times greater than that of a cannon ball, and seven hundred thousand times more rapid than the motion of light itself, which is considered as the swiftest motion in nature.

The idea of such astonishing velocities completely overpowers the human imagination, and is absolutely inconceivable. We perceive no objects nor motions connected with our globe that can assist our imagination in forming any definite conceptions on this subject. The swiftest impulse that was ever given to a cannon ball, or any other projectile, sinks into nothing on the comparison. Were we transported to the planet Saturn, and placed on its equatorial regions, we should behold a stupendous arch, thirty thousand miles in breadth, and more than six hundred thousand miles in circumference, revolving around us every ten hours, at the rate of a thousand miles in a minute, and sixty thousand miles every hour. But even this astonishingly rapid motion would afford us little assistance in forming our conceptions, as it bears no comparison to the motions to which we have now adverted. It becomes those persons, therefore, who refuse to admit the motion of the earth, to consider, and to ponder with attention, the only other alternative which must be admitted, namely, that the whole of the bodies of the firmament move round the earth every day with such amazing velocities as have now been stated. If it appear wonderful that this globe of land and water, with all its mighty cities and vast population, should move round its axis every day at the rate of a thousand miles an hour, how much more wonderful, and passing all comprehension, that myriads of huge globes should move round the earth in the same time with such inconceivable rapidity? If we reject the motion of the earth because it is incomprehensible, and contrary to all our preconceived notions, we must, on the same ground, likewise, reject the motion of the heavens, which is far more difficult to be conceived, and, consequently, fall into downright scepticism, and reject even the evidence of our senses as to what appears in the economy of nature. Such views and considerations, however, teach us that, in whatever point of view we contemplate the works of the Almighty, particularly the scenery of the heavens, the mind is irresistibly inspired with sentiments of admiration and wonder. To the vulgar eye, as well as to the philosophic, "the heavens declare the glory of God." Their har-

mony and order evince his wisdom and intelligence, and the numerous bodies they contain, and the astonishing motions they exhibit, on whatever hypothesis they are contemplated, demonstrate, both to the savage and the sage, the existence of a Power which no created being can control.

“View the amazing canopy!
The wide, the wonderful expanse!
Let each bold infidel agree
That God is there, unknown to chance.”

We cannot however admit, in consistency with the dictates of enlightened reason, that the apparent diurnal movements of the stars are the real motions with which these bodies are impelled. For, in the first place, such motions are altogether unnecessary to produce the effect intended, namely, the alternate succession of day and night with respect to our globe; and we know that the Almighty does nothing in vain, but employs the most simple means to accomplish the most astonishing and important ends. The succession of day and night can be accomplished by a simple rotation of the earth from west to east, every twenty-four hours, which will completely account for the apparent motion of the heavens, in the same time, from east to west. This we find to be the case with Jupiter and Saturn, which are a thousand times larger than the earth, as well as with the other planets, which have a rotation round their axis some in ten hours, some in twenty-three, and some in ten hours and a half; and, consequently, from the surfaces of these bodies the heavens will appear to revolve around them in another direction from what they do to us, and, in certain instances, with a much greater degree of velocity. We must therefore conclude that our motion every day towards the east causes the heavens to appear as if they moved towards the west; just as the trees and houses on the side of a narrow river appear to move to the west when we are sailing down its current in a steam boat towards the east.

2. Because it is impossible to conceive that so many bodies, of different magnitudes, and at different distances from the earth, could all have the same period of diurnal revolution.

The sun is four hundred times further distant from us than the moon, and is sixty millions of times larger. Saturn and Herschel are still further from the earth; the comets are of different sizes, and traverse the heavens in all directions, and at different distances; the fixed stars are evidently placed at different distances from the earth and from each other; yet all these bodies have exactly the same period of revolution, even to a single moment, if the heavens revolve around the earth; and that, too, notwithstanding the other motions, in various directions, which many of them perform. It is therefore much more

natural and reasonable to suppose that the earth revolves around its axis, since this circumstance solves all the phenomena, and removes every difficulty.

3. Because such a rate of motion in the heavenly bodies, if it could be supposed to exist, would soon shatter them to atoms.

Were a ball of wood to be projected from a cannon at the rate of a thousand miles an hour, in a few moments it would be reduced to splinters; and hence the wadding and other soft substances projected from a musket or a piece of ordnance, are instantly torn to pieces. What, then, might be supposed to be the consequence, were a body impelled through the regions of space with a velocity of a hundred and forty thousand millions of miles in a moment of time? It would most assuredly reduce to atoms the most compact bodies in the universe, although they were composed of substances harder than adamant. But as the fixed stars appear to be bodies of a nature somewhat similar to the sun, and as the sun is much less dense than the earth, and only a little denser than water, it is evident that they could not withstand such a rapidity of motion, which would instantly shatter their constitution, and dissipate every portion of their substance through the voids of space.

4. Because there is no instance known in the universe (if that to which we are now adverting be excepted) of a larger body revolving around a smaller.

The planet Jupiter does not revolve around his satellites, which are a thousand times less than that ponderous globe; but they all revolve around him. Nor does the earth, which is fifty times larger than the moon, revolve around that nocturnal luminary; but she regularly revolves about the earth, as the more immediate centre of her motion. The sun does not perform his revolution around Venus or Mercury; but these planets, which are small compared with that mighty orb, continually revolve about him as the centre of their motions. Neither on earth nor in the heavens is there an instance to be found contrary to this law, which appears to pervade the whole system of universal nature. But if the diurnal revolution of the stars is to be considered as their proper motions, then the whole universe, with all the myriads of huge globes it contains, is to be considered as daily revolving around an inconsiderable ball, which, when compared with these luminaries, is only as an atom to the sun, or as the smallest particle of vapour to the vast ocean.

5. The apparent motion of the heavens cannot be admitted as real, because it would confound all our ideas of the intelligence of the Deity; while it tended to exalt our conceptions of his omnipotence to the highest pitch, it would convey to us a most unworthy and distorted idea of his wisdom.

Wisdom is that perfection of an intelligent agent which enables him to proportionate one thing to another, and to devise the most proper means in order to accomplish important ends. We infer that an artist is a wise man from the nature of his workmanship, and the methods he employs to accomplish his purposes. We should reckon that person foolish in the extreme who should construct, at a great expense, a huge and clumsy piece of machinery for carrying round a grate, and the wall of a house to which it is attached, for the purpose of roasting a small fowl placed in the centre of its motion, instead of making the fowl turn round its different sides to the fire. We should consider it as the most preposterous project that ever was devised, were a community to attempt, by machinery, to make a town and its harbour to move forward to meet every boat and small vessel that entered the river on which it was situated, instead of allowing such vehicles to move onward as they do at present. But none of these schemes would be half so preposterous as to suppose that the vast universe moved daily round an inconsiderable ball, when no end is accomplished by such a revolution but what may be effected in the most simple manner. Such a device, therefore, cannot be any part of the arrangements of Infinite Wisdom. It would tend to lessen our ideas of the intelligence of that adorable Being who is "wonderful in counsel, and excellent in working," who "established the world by his wisdom, and stretched out the heavens by his understanding," and whose wisdom as far excels that of man as the "heaven in its height surpasses the earth." This argument alone I consider as demonstrative of the position we are now attempting to support.

The above are a few arguments which, when properly weighed, ought to carry conviction to the mind of every rational inquirer, that the general motion which appears in the starry heavens is not real, but is caused by the rotation of the earth round its axis every day, by which we and all the inhabitants of the globe are carried round in a regular and uniform motion from west to east. When this conclusion is admitted, it removes every difficulty and every disproportion which at first appeared in the motions and arrangements of the celestial orbs, and reduces the system of the universe to a scene of beauty, harmony, and order, worthy of the infinite wisdom of Him who formed the plan of the mighty fabric, and who settled "the ordinances of heaven." Instead, then, of remaining in a state of absolute rest, as we are at first apt to imagine, we are transported every moment towards the east with a motion ten times more rapid than what has ever been effected by steam-carriages or air-balloons. It is true, we do not feel this motion, because it is smooth and uniform, and is never interrupted. The earth is carried forward in its

course, not like a ship in the midst of a tempestuous ocean, but through a smooth ethereal sea, where all is calm and serene, and where no commotions to disturb its action ever arise. Carried along with a velocity which is common to every thing around us, we are in a state somewhat similar to that of a person in a ship which is sailing with rapidity in a smooth current: he feels no motion, except when a large wave or other body happens to dash against the vessel; he fancies himself at rest, while the shore, the buildings, and the hills, appear to him to move; but the smallness of the vessel, compared with the largeness of the objects which seem to move, convinces him that the motion is connected with the ship in which he sails: and, on similar principles, we infer that the apparent motion of the heavens is caused by the real motion of the earth, which carries us along with it as a ship carries its passengers along the sea. With regard to motion, it may be observed that, strictly speaking, we do not perceive any motion either in the earth or in the heavens. When we look at a star with the utmost steadiness, we perceive no motion, although we were to keep our eye fixed upon it for a few minutes; but, if we mark the position of a star with regard to a tree or a chimney top, and, after an hour or two, view the star from the same station, we shall find that it then appears in a different direction. Hence we infer that motion has taken place: but whether the motion be in the star, or in the persons who have been observing it, remains still to be determined. We perceive no motion in the star any more than we feel the motion of the earth. All that we perceive is, that the two objects have changed their relative positions; and therefore the body that is really in motion must be determined by such considerations as we have stated above.

Besides the apparent diurnal revolution of the heavens, there is another apparent motion which requires to be considered. It is well known to every one who has paid the least attention to this subject, that we do not perceive the same clusters of stars at every season of the year. If, for example, we take a view of the starry heavens on the first of October, at ten o'clock in the evening, and again at the same hour, on the first of April, we shall find that the clusters of stars in the southern parts of the heavens are, at the latter period, altogether different from those which appeared in the former; and those which are in the neighbourhood of the pole will appear in a different position in April, from what they did at the same hour, in the month of October. The square of the Great Bear, for example, will appear immediately below the pole-star in October; whereas, in April, it will appear as far above it, and near to the zenith. In the former case, the two stars called the pointers will point upwards to the pole, in the latter case they will point

downwards. These variations in the appearance of the stars lead us to conclude that there is an apparent annual motion in these luminaries. This motion may be observed, if we take notice, for a few days or weeks, of those stars which are situated near the path of the sun. When we see a bright star near the western horizon, a little elevated above the place where the sun went down, if we continue our observation, we shall find that every day it appears less elevated at the same hour, and seems to be gradually approaching to the point of the heavens in which the sun is situated, till, in the course of a week or two, it ceases to be visible, being overpowered by the superior brightness of the sun. In the course of a month or two, the same star which disappeared in the west, will be seen rising some time before the sun in the east, having passed from the eastern side of the sun to a distance considerably westward of him. The stars in the western quarter of the heavens which appeared more elevated, will be found gradually to approximate to the sun, till they likewise disappear; and in this manner all the stars of heaven seem to have a revolution, distinct from their diurnal, from east to west, which is accomplished in the course of a year.

The different positions of the Pleiades, or seven stars, at different seasons of the year, will afford every observer an opportunity of perceiving this motion. About the middle of September, these stars will be seen, about eight o'clock in the evening, a little to the south of the north-east point of the horizon; about the middle of January, at the same hour, they will be seen on the meridian, or due south; on the first of March, they will be seen half-way between the zenith and the western horizon; about the middle of April, they will appear very near the horizon; soon after which they will be overpowered by the solar rays, and will remain visible for nearly two months, after which they will re-appear in the east, early in the morning, before the rising sun.

This annual motion of the stars evidently indicates that the sun has an apparent motion every day from west to east, contrary to his apparent diurnal motion, which is from east to west. This apparent motion is at the rate of nearly a degree every day, a space nearly equal to twice the sun's apparent diameter. In this way, the sun appears to describe a circle around the whole heavens, from west to east, in the course of a year. This apparent motion of the sun is caused by the annual revolution of the earth around the sun as the centre of its motion, which completely accounts for all the apparent movements in the sun and stars to which we have now adverted. If we place a candle upon a table in the midst of a room, and walk round it in a circle, and, as we proceed, mark the different parts of the opposite walls with which the candle appears coincident, when we have completed our circle the

candle will appear to have made a revolution round the room. If the walls be conceived to represent the starry heavens, and the candle the sun, it will convey a rude idea of the apparent motion of the sun, and the different clusters of stars which appear at different seasons of the year in consequence of the annual motion of the earth. But this subject will be more particularly explained in the sequel.

From what we have now stated in relation to the apparent motions of the heavens, we are necessarily led to conceive of the earth as a body, placed, as it were, in the midst of infinite space, and surrounded in every direction, above, below, on the right hand, and on the left, with the luminaries of heaven, which display their radiance from every quarter, at immeasurable distances; and that its annual and diurnal motions account for all the movements which appear in the celestial sphere. Hence it is a necessary conclusion, that we are surrounded at all times with a host of stars, in the day time as well as in the night, although they are then imperceptible. The reason for their being invisible during the day is obviously owing to their fainter light being overpowered by the more vivid splendour of the sun, and the reflective power of the atmosphere. But although they are then imperceptible to the unassisted eye, they can be distinctly perceived, not only in the mornings and evenings, but even at noon-day, while the sun is shining bright, by means of telescopes adapted to an equatorial motion; and in this way almost every star visible to the naked eye at night can be pointed out, even amidst the effulgence of day, when it is within the boundary of our hemisphere. When the stars which appear in our sky at night have, in consequence of the rotation of the earth, passed from our view, in about twelve hours afterwards they will make their appearance nearly in the same manner to those who live on the opposite side of the globe, and when they have cheered the inhabitants of those places with their radiance, they will again return to adorn our nocturnal sky.

On the whole, the starry heavens present, even to the vulgar eye, a scene of grandeur and magnificence. We know not the particular destination of each of those luminous globes which emit their radiance to us from afar, or the specific ends it is intended to subserve in the station which it occupies, though we cannot doubt that all of them answer purposes in the Creator's plan worthy of his perfections and of their magnitude and grandeur; but we are certain that they have, at least, a remote relation to man, as well as to other beings far removed from us, in the decorations they throw around his earthly mansion. They serve as a glorious ceiling to his habitation. Like so many thousand sparkling lustres, they are hung up in the magnificent canopy which covers his abode. He perceives them shining

and glittering on every hand, and the dark azure which surrounds them contributes to augment their splendour. The variety of lustre which appears in every star, from those of the sixth magnitude to those of the first, and the multifarious figures of the different constellations, present a scene as diversified as it is brilliant. What are all the decorations of a Vauxhall Gardens, with their thousands of variegated lamps, compared with ten thousands of suns, diffusing their beams over our habitation from regions of space

immeasurably distant? A mere gewgaw in comparison,—and yet there are thousands who eagerly flock to such gaudy shows who have never spent an hour in contemplating the glories of the firmament, which may be beheld “without money and without price.” That man who has never looked up with serious attention to the motions and arrangements of the heavenly orbs, must be inspired with but a slender degree of reverence for the Almighty Creator, and devoid of taste for enjoying the beautiful and the sublime.

CRANIOLOGY.

UPON Dr. Gall's theory, how many and what obvious advantages result! Nor are they merely confined to the purposes of speculative physiognomy; the uses of his theory, as applied to practice, offer to us hopes scarcely less delightful than those which seemed to dawn upon mankind with the discovery of the gases, and with the commencement of the French revolution, and, in these later days, with the progress of the Bible Society. In courts of justice, for instance, how beautifully would this new science supply any little deficiency of evidence upon trial! If a man were arraigned for murder, and the case were doubtful, but he were found to have a decided organ for the crime, it would be of little matter whether he had committed the specific fact in the indictment or not; for hanging, if not applicable as punishment, would be proper for prevention! Think, also, in state trials, what infinite advantages an attorney-general might derive from the opinion of a regius professor of craniology! Even these are but partial benefits. Our generals, ministers, and diplomatists would then unerringly be chosen by the outside of the head, though a criterion might still be wanted to ascertain when it was too thick and when too thin. But the greatest advantages are those which this new system would afford to education; for by the joint efforts of Dr. Gall and Mr. Edgeworth, we should be able to breed up men according to any pattern which parents or guardians might think proper to bespeak. The doctor would design the mould, and Mr. Edgeworth, by his skill in mechanics, devise, with character-

istic ingenuity, the best means of making and applying it. As soon as the child was born, the professional cap—medical, military, theological, commercial, or legal—would be put on, and thus he would be perfectly prepared for Mr. Edgeworth's admirable system of professional education. I will pursue this subject no further than just to hint, that the materials of the mould may operate sympathetically; and therefore, that for a lawyer in *rus*, the cap should be made of brass; for a divine, of lead; for a politician, of base-metal; for a soldier, of steel; and for a sailor, of heart of English oak.

Dr. Gall would doubtless require the naked head to be submitted to him for judgment. Contrariwise, I opine,—and all the ladies will agree with me in this opinion,—that the head ought neither to be stript, nor even examined in undress, but that it should be taken with all its accompaniments, when the owner has made the best of it, the accompaniments being not unfrequently more indicative than the features themselves. Long ago, the question whether a man is most like himself drest or undrest, was propounded to the British Apollo; and it was answered by the oracle, that a man of God Almighty's making is most like himself when undrest; but a man of a tailor's, periwig-maker's, and sempstress's making, when drest. The oracle answered rightly, for no man can select his own eyes, nose, or mouth; but his wig and his whiskers are of his own choosing.—*The Doctor, vol. I.*

THE GUIDE, AT MOUNT ETNA.

THE following anecdote, was preserved and communicated to me by my brother, J. T. Coleridge:—

As I was descending from Mount Etna with a very lively talkative guide, we passed through a village, I think called Nicolozzi, when the host

happened to be passing through the street. Every one was prostrate; my guide became so; and, not to be singular, I went down also. After resuming our journey, I observed in my guide an unusual seriousness and long silence; which, after many *hums* and *hahs*, was interrupted by a

low bow, and leave requested to ask a question. This was of course granted, and the ensuing dialogue took place.

Guide. "Signor, are you then a Christian?"

Coleridge. "I hope so."

G. "What! are all Englishmen Christians?"

C. "I hope and trust they are?"

G. "What are you not Turks? Are you not damned eternally?"

C. "I trust not, through Christ."

G. "What! you believe in Christ, then?"

C. "Certainly."

This answer produced another long silence. At length my guide again spoke, still doubting the grand point of my Christianity.

G. "I am thinking, signor, what is the difference between you and us, that you are to be certainly damned?"

C. "Nothing very material; nothing that can prevent our both going to heaven, I hope. We believe in the Father, the Son, and the Holy Ghost."

G. (Interrupting me.) "Oh, those ——— priests! what liars they are! But (pausing) we cannot do without them; we cannot go to heaven without them. But tell me, signor, what are the differences?"

C. "Why, for instance, we do not worship the Virgin."

G. "And why not, signor?"

C. "Because, though holy and pure, we think her still a woman, and therefore do not pay her the honour due to God."

G. "But do you not worship Jesus, who sits on the right hand of God?"

C. "We do."

G. "Then why not worship the Virgin, who sits on the left?"

C. "I did not know she did. If you can show it me in the Scriptures I shall readily agree to worship her."

"Oh," said my man, with uncommon triumph, and cracking fingers, "*sicuro, signor! sicuro signor!*"—Coleridge.

BRITAIN.

ADDITION TO CHAPTER VIII., ENDING ON PAGE 538.

[If our readers have never conducted a Periodical, they know nothing of the anxieties, the vexations, and the pains, of such a task. We really thought we had gone on quite right with "BRITAIN," when, after Chapter XI. was in print, arrived the continuation of Chapter VIII. We examined, and, singularly enough, found that the printer had gone on with his copy, and had not, any more than ourselves, detected the error. Could we have a personal interview with the reader, we might prove, to a demonstration, that the fault rests neither with the author, the editors, nor the printer.]

To prevent the sudden destruction of the criminal, the right of sanctuary was given to the king's court, which extended three and a half miles every way from his actual abode; to all churches and their yards; to some of the castles of the thanes; to monasteries; to bishops' residences; to depositories of the holy relics; to graves of the saints; and, in some places, to the plough. When arrived at any of these, the criminal had several days' respite from justice, during which he could arrange for the payment of his fine.

Their design was evidently to compensate injuries, to preserve the power of the upper classes, and not to punish the offender. Every person was valued, the price of which was called his "were;" if he were murdered the murderer paid his were, and if a woman were sought in marriage her price was paid to her guardian, hence the common Saxon phrase, "buy him a wife." This method of punishment was morally lenient; in its

appeals to some natures more acute, and for some crimes more equitable. But it was decidedly destructive to the existence of patriotic virtue, and public morality; for any crime could be committed for its price, always within the power of the rich, which, to illustrate further the injustice of its imposition, was not equal, but graduated; higher according to the ecclesiastical or secular dignity of the person against whom it was committed.

To kill a slave was fined nothing, if done by his master.

But to kill a free man one hundred shillings.

A rape committed on a slave was five shillings.

To steal was fined six shillings.

To steal from the king nine shillings.

To steal the goods of a bishop eleven fold.

Adultery with the king's maid was death.

The laws against stealing became gradually more severe, till the thief was obliged to pay his were, and, at last, forty years after the Conquest, it was judged a capital crime.

The following are some of the crimes to which a pecuniary fine was attached:—

PERSONAL INJURIES.

A broken shoulder was compensated by	20
The loss of the power of hearing	25
A broken bone	10
If an ear were cut off	12
The loss of an eye	50
An injury to the mouth	12

	s.
If the nostrils were slit	6
The loss of any of the fore teeth	6
If the jaw bone were broken	6
If the thumb were cut off	20
The thumb nail	3
The fore finger	8
The ring finger	6
The little finger	11
For each other nail	1
For a broken rib	3
For a wounded vertebra	3
The loss of a foot	50
The loss of a great toe	10

With all these singular rates every judge was required to be familiar.

Ethelred, in 1008, began to show that some crimes are inexpiable, by ordaining that a murder in a church was so, except the king interfered.

A calumniator was fined nineteen shillings, or lost his tongue.

An adulteress lost her nose, lips, and property, and was declared infamous for life.

A coiner of base money lost his right hand.

Nor are the methods less singular by which our Saxon forefathers proceeded to prove guilt, or to acquit the accused. Among which, was compurgation, that is procuring a sufficient number of witnesses to swear their belief in the innocence of the prisoner, and the validity of his oath. On these occasions, the defendant and plaintiff, if powerful persons, would sometimes appear with a thousand on each side ready to make oath in favour of their different friends. A thane required twelve peers to clear him. The compurgators laid their hands one above another, either on the gospels or the relics, and the accused at the top, while he swore by all the hands beneath that he was innocent, which he was thought to be if the compurgators were unanimous. A female prisoner required female compurgators. These compurgators, are by some thought to have been the incipient English jury.

Oaths, which were valued according to the property of the swearer, though numerous, were made as terrible as possible, and they were only administered to persons fasting. This was a difficult task, and to avoid it the criminal preferred an appeal to ordeals, to testify his innocence; which suited the ignorance of the judge, who was only required to be able to read the Dom-boc, where the prices of every crime were written; and the superstition of the clergy. Of these, the appeal to boiling water, in which a hand was to be dipped; to hot iron, which when red, was to be carried with the naked hand several feet; to the holy cross; to bread and cheese, after having prayed that if guilty it might choke him; to cold water, in which he was thrown with his legs tied and a cord round his waist: if he floated, he was guilty, but if he

sunk, innocent. All of which tests of guilt might be compounded for great fines.

The trade and commerce of this period must not be overlooked. The exode of the Romans was as fatal to the commerce of Britain as to its peace. The vast exports, and the numerous inland manufactures, through the piracies of the homeless sea-kings, and the devastation of the Picts, had ceased; nor, with individual exceptions, revived again until the comparative settlement of the Jutes, Angles, and Saxons, in the heptarchy, and the expatriation of the Britons beyond the sky-girt mountains of Wales. The Saxons, who had lived almost on the sea, were no sooner seated among the ruined, but fertile orchards, vineyards, gardens, and fields of Britain, than they abandoned their ships, and the little commerce was then transacted by foreigners, who chiefly used the port of London till the time of Offa. How could trade exist among the endless scuffles of the heptarchy? Then a man could buy nothing in the city of London without the presence of several persons in authority, or the portgrieve, who was the principal magistrate, and elsewhere, he could only buy to the extent of twenty pence, without the same security, and when kings and monasteries had nearly all the money shut up in gold tables, of which Charlemagne is said to have had three hundred, and foolish relics. Nor could exchanges be made under a fine of thirty shillings, unless in the presence of the lord of the manor, the mass priest, sheriff, or some other officer, which insured the payment of the king's part of the price, which was four pence on every article that was sold in some towns in the south. These measures were not all the result of a jealous police, but of a mistaken regard for the tradesmen, who could neither read nor write, and who therefore had no proof of bargains except the presence of these grandees, whose oaths were taken to be indubitable evidence. Edgar made a law that no sale, purchase, exchange, or bargain, could be legally made in large towns, except before some, or all, of the thirty-three "honest men," who were a sort of itinerant evidence, necessary to be called to every shop or stall to witness a purchase. Twelve of such were thought sufficient for a small town. The price of every article, as well living as dead, even to the cat, was legally fixed, and the king's share taken, at the time of sale, by the witnessing "honest men." Among others may be mentioned the following, in Saxon money:—

	£	s.	d.
Acre of land	0	4	0
A hawk	1	0	0
Slave	1	0	0
A hide of land	15	0	0
Horse	0	30	0
Mare	0	20	0
Ass, or mule	0	12	0
Ox	0	6	0

	£	s.	d.
Cow	0	5	4
Swine	0	1	3
Sheep	0	1	0
Goat	0	0	2

The Roman British markets had been continued, but the day of their observance was changed to the Sunday, on which day, for a long period, they were held within the church; but before any one entered, he was obliged to pledge that he would neither steal, cheat, nor lie! When the effects of this system became prodigiously indecent, the market was changed again to Saturday, and held close to the church, whose services which also began on the Saturday, were then better attended when the secular was joined to the spiritual motive for convention, which made large congregations, and good markets. Fairs were also held on saint days and church holidays, within the precincts of the church or monastery, and to whose abbot or bishop every buyer paid a toll, which accounts for the right of several bishops at the reformation to the tolls of the fairs.

Foreign commerce then exported slaves, horses, other cattle, a little corn, and woollen garments, to avoid the tax of which, some of the merchants were detected in the garb of pilgrims, asserting their sales to be the necessities of a foreign journey; and imported from Pisa and Venice, which traded with the east, precious stones, spices, silks, drugs, and wines,—from Germany, cloths, seal and whale skins, of which the ropes and rude rigging for ships were made, and whale oil. But the chief imports were from Rome, and consisted of relics, church-books, vessels, ornaments, and dresses, of which the priests were often the merchants, to many of whom it was an incredible source of wealth, and to none more than to Benedict Biscop, who first brought glass makers to Britain. Of the domestic trades, little genuine knowledge is extant, but we know that physicians were itinerant, and resided with their patients for a part of their fee, which was eighteen pennies for a dangerous wound; and music was sometimes used as medicine; that the lay tradesmen were virtual slaves, obliged to trade in guilds or societies for mutual protection, and to lessen the tolls. Everythane had his tradesmen, who were slaves, and who itinerated in their callings, and whose reward went to the lord. The king had great numbers of these mechanic slaves, who, with the ceorls and others, are the patres antiqui of the present middle classes. But some of the best workmen were the monks and clergy; and it is said of Dunstan, that he was not only the best blacksmith and brazier of his age, but a goldsmith and an engraver, and a very Anglo in sculpture and painting, of which the Bodleian is a proof; that his works rose immensely in price from his death, till, no longer

subjects of commerce, they virtuffed into relics capable of wonders and worthy of the devotion they received. Stigand, bishop of Winchester, gilded shoals of images; other monks manufactured gold and silver pence, founded bells, and dyed wool and cloths with all hues, and especially scarlet and purple. The names of carpenter, bailiff, merchant, fisherman, hunter, hawker, furrier, bleacher, often occur in the chronicles of this period, but the smith was a person of very singular estimation, nor is it precisely known how many arts and mysteries were comprehended in his handicraft. The cattle belonging to a town was then all kept in a common by persons called the kyeward, the swineherd, the swanhard. The ropes were made of twisted willow twigs, and oxen alone were used to work the plough, which then served seven or eight farms, and which the ploughman was required to make. The Anglo-Saxon garden was a wretched place, containing only the ordinary pot-herbs then used, and a little flax, and abandoned to the slave's taste and labour, except at the monastery, where fruit trees were to be found, especially the apple; and all the flowers that had been consecrated to any of the saints, or the herbs, which with the help of a propitious planet, a concurrent moon, and the savour of a stinking relic, were to be the materia medica of the neighbourhood. The hawker was a tradesman only in demand in the winter, when, for the tables of the king and thanes, he caught game. The fisherman was a person of more general request, because the customs of the religious often required fish. Long after the time of Alfred almost every building was wood, covered with straw, which explains why the Danish conflagration was so easy and awful, many whole towns having often been on fire at the same moment, like so many flaming craters. A great house then had a kitchen, a dormitory, a granary, a bakehouse, a chapel, a stable, and a kennel. Castles were built mostly of wood, whose interstices were clay and straw, and even when of stone, not in regular courses, and mortared; they were divided into four stories, which were as often places of penance as of refuge; the lower one, which was subterraneous, was called the keep. In the same time a monastery had a large hall, a strangers' room, a chapel, an hospital, a scriptorium, where the young monks copied books for the library, a bath, a brewhouse, a bakehouse, dormitories, and stables. In these houses were the largest collections of plate, and tapestry, in working which the greatest and devoutest ladies spent most of their time, which they thus dedicated to the churches. These tapestries were often histories, as that of Bayeux, nineteen inches, by sixty-seven yards, of the life of William the Conqueror, from A.D. 1065 nearly to his death.

The church of Ely had a historic tapestry

of Brittnod, of Northumberland, done by his wife. In this work the English ladies excelled. The fine arts, which under the Romans had risen to great perfection, were totally neglected after the conquest of the Saxons, who with as little taste as is possible for the savage to possess it, reduced to ashes all those glorious monuments of painting, sculpture, architecture, and other sciences, which the British genius, great according to the testimony of its enemies, under the instruction of the Romans, was three centuries in working to maturity. All remains of Anglo-Saxon sculpture are wretched productions.

But, at length, several of the British sovereigns began to see that trade, and not war, was intended to be the right hand of the nation, whose merchants were then encouraged, by having the dignity of a thane conferred on them, when they had voyaged thrice beyond the seas each in his own ship. And, in the time of Ethelstan, any town which was engaged in foreign trade might if it pleased, have its own mint; a privilege which, though never allowed in Wales, the following places for a little time possessed: the figures denote how many mints existed there:—

Bridport	1	Lewes	2
Canterbury	7	London	8
Chichester	1	Rochester	3
Exeter	2	Shaftesbury.....	2
Hastings ..	1	Southampton.....	2
Hereford	7	Winchester and York	2

And each of the other burghs had one in the time of Ethelstan.

For the liberty of coining, each mint paid to the king a tax, varying from twenty Saxon shillings to the worth of the privilege, or to the wealth of the place.

The following is a table of the moneys generally current in the Anglo-Saxon period:—

Names of Saxon Money.	Present worth.	Weight in Troy oz.	
Pound	2 16 3	5400	
Mark	1 17 9	3600	
Byzant	9 4½	73	8s. Saxon.
Gold Mancus }	7	56	
Frank Solidus }	7	675	
Silver Mancus	4 8	450	
Ora			
Great Shilling			
Less Frank Solidus			
Less Shilling	11½	90	
Thrimma	8½	67½	
Penny	2½	22½	5 in a Shilling.
Halfing.			
Ferthling.			

Saxon rent of a farm:—

300 loaves; 12 casks of strong ale; 30 casks of weak ale; 10 casks of honey; 1 cask of butter; 2 oxen; 10 wethers; 10 cheeses; 10 geese; 20 hens; 5 salmon; and 100 eels.

But this rent must have varied, for in conse-

quence of the bad system of agriculture, ordinary provisions were often ten times as dear at the end of a summer as at its beginning.

A piece of water was rented at 2000 eels; sheep-shearing was not allowed before midsummer, and the farmer sowed all his wheat in spring.

In the time of Athelstan, a poor person received for his monthly allowance from the authorities:—

An amber of meal; four pennies, or a ram; a gammon of bacon; and some coarse cloth.

Landowners were always obliged to provide the king in his military expeditions with men, of which Oxford sent two; Leicester twelve; Warwick ten; besides a tax to repair bridges and fortifications.

We have yet said nothing of the Anglo-Saxon learning, of which they were at first destitute, destroying all they found, and remaining ignorant till after they had received Christianity, which brought a new order of impulses to the heart, originated a new taste—a thirst for knowledge, and an emulation of the arts. All the celebrated Roman-British scholars, however, including Merlin, Melchior, &c., dispirited with the dark prospects of their country, had died; while their feeble successors, who never rose above the weak and plaintive spirit of the age, left no writings of consequence. But the clergy taught a little ancient geography, medicine, mixed with the wildest scraps of astrology, botany, and relics, a sort of latin, polemic theology, music, manners, customs, natural philosophy, rhetoric, astronomy, logic, mathematical mechanics, and arithmetic; the first four rules of which few of the clergy knew before the introduction of Arabic numerals, brought to England by Grabert, about 971, when their only figures were Greek and Latin letters, and other arbitrary signs. Even Aldhelm said, that nothing was so difficult to him as arithmetic. In an age when Charlemagne could not write, when there were neither books, teachers, knowledge, a press, materials for copying, nor demand for any of them, we are neither surprised to learn that Alfred gave eight hides of land for a poor cosmography; nor that such men as Boniface, Tobias of Rochester, Ceolfrid, and Willibald, were considered profound scholars. Yet, of these the monasteries produced some, as Gildas, Daniel bishop of Bangor, Adrian, the eloquent Dinot, Plegmuned, Nennius, Dunwulph, Elfrie the grammarian, Wulfisig, Clement, and Bede. Nor did the period want men of astonishing acuteness, as Scotus, at once the light and pest of his age, and of whose mind we may judge from the title of his best book, which was "On the Division of the Natures," and Edbert, to whom the world is indebted for the immortal Alarin. All the greater monasteries had a school; one also existed near every bishop's palace; and among those most celebrated, are the schools of Oxford, Glaston-

bury, Dunwich, Lincoln, Canterbury, and York. At the last, Edbert had collected a library, of which Alcuin has given Charlemagne a catalogue in heroic Latin verse.

The great Alcuin called these "treasures of wisdom," and so recommended them to Charlemagne, that we may conclude there were few similar. And with these helps they taught "the harmony of the sky, the labour of the sun and moon, the five zones, the seven wandering planets, the laws and risings and settings of the stars, &c.; the aerial motions of the sea, earthquakes, the nature of man, cattle, birds, and wild beasts, their various species and "figures," which appears to have been the standing school order at York. From similar studies arose Aldhelm, Bede, and Alcuin. The first, who wrote in latin, was besides the literary apostle of France, the Jeremy Taylor for sportive, never-tired, solemn fancy: and the last was the schoolmaster of this and other nations, though both are now forgotten in comparison of Bede. Thus *vicissim* appears to be the rule of fame. Seeing his countrymen deplorably ignorant, the great Aldhelm employed his fine mind in the composition of songs, to which his wonderful voice was yet necessary to arouse their attention; discovering himself at once to be a good philosopher for instructing through amusement, and a good divine, for becoming, in a good sense, "all things to all men."

Music, in that age allied invariably with painting, appears to have been almost the first art to which the Saxons applied. Such power indeed had songs over them, that they would often decide battles, liberate captives, change despair into courage, anger to laughter, and, as the monks say, "cast out devils and chain the winds." Many of them are said to have been ten years in learning music, which was more difficult before Gregory denoted the notes by A, B, C, &c.; indeed it was requisite to qualify for the best society, in which every guest was required both to sing and play the harp; and the instrument was so sacred that it could not be taken for debt. Bede tells us the harp, trumpet, pipe, tabor, psaltery, atola, flute, and organ, were in use in his days, as well as the cymbal, the violin, and the bell. Ailwyn, founder of Ramsay abbey, expended about 900*l.* of our money in building an organ in Ramsay church.

Church music is thought to have been first taught the Anglo-Saxons by John, an arch chanter, from Rome, whence he was sent by Agatha to Britain. In those times church singers were itinerant, and travelled through the continent for improvement, and the best singers went for the most learned men. Of the praises of these instruments, Bede and others are full. Nor were poets wanting, for besides Alfred Cedmon, the Cowper of his time, and Rodvald, of the Orkneys, many other names could be mentioned; but as their

works nearly all perished under the Danes, fame is at its last gasp, therefore we must omit them. The poetic art was not less complicated than critics, those wasps of genius, have made the Grecian; for, besides one hundred and thirty-six different metres in which they wrote, endless were their concerts in rhyme—apposition, and alliteration, the bounds of which, the poetic fire, the Saxon vertigo, or Shakspeare's "fine frenzy rolling" easily burst. Poets were then the teachers of the people, the flatterers of the great, and the historians of the dead: hence the florid and episodical character of our oldest chronicles, which were often compiled from ballads.

A desire to keep the notices of this astonishing man separate, is the reason why little has been yet said of Alfred. In his childhood, he was taken on a pilgrimage to Rome, learned to read after he was considerably grown, when his wise mother offered a valuable book to the first of her children who should be able to read it. After which he was self-educated. He at first refused the crown. He was for a period immoral, and oppressive to his subjects, who are said to have abandoned him; when overpowered by the Danes, he went disguised out of Somersetshire, lived for a time with a herdman, whose wife scolded him for neglecting her cakes, as he sat by the fire. He afterwards sought concealment in a morass, till an opportunity arose to surprise the Danes, whom he had paid to withdraw, which was not long wanting.

When he had somewhat settled the country, he rectified the laws, heard appeals, and important trials, expelled forty-two judges in one year, and obliged others to learn the Dom-boc; brought as many artists and monks to England as he could persuade to settle after the ravages of the Danes; spoke of learning always with approbation, and advanced learned men; compelled his nobles to send their children to school, which was thought a severe law, when many priests could not understand the Latin service; translated several books, among which were *Boetius de Consolatione*, and Gregory's "Pastorals," of which he sent a copy to each of the bishops; opened several schools at Oxford for divinity, grammar, logic, &c., which has been called founding the university, to whose support he gave an eighth of his income, and sent his own children. He made a survey of his kingdom, which was recorded in the book of Winchester, where there is a curious description of woods, towns, villages, cities, farms, and population. He divided the counties, as they have been already described, and, with the help of his daughter, built many castles. He also divided his time, which, for want of a watch, he contrived to do by candles made of the same size, into thirds, of which one was devoted to sleep, &c.; a second to the affairs of his station; and a third to learning, religion, and

good works. Of his activity few will be able to conceive, for, besides building many places which the Danes had destroyed, he personally looked after his servants, rewarding the skilful,—paid his workmen, received and dismissed his visitors, supported the monasteries, relieved the destitute, for all which he consecrated a seventh of his property. Yet he lived in a house little better than our stables, for he was obliged to keep his light in a lantern, from the winds, which, when the tapestry hangings were down, pushed in with the rain and snow, through the crevices. To which may be added, he was always subject to a very acute disease. Nor is it the least of his praise, that, by confining all legal slavery to six years, he effectually prevented its increase when it was not in his power to abolish it. To show the worth of the man, we must remember the age in which he lived: when property consisted in many places only of large herds of swine, in others of church trinkets; when the slaves, and even the clergy, eat horseflesh; when porpoises were thought to be the dainties of the rich, and periwinkles of the poor; and the common people had probably never heard of letters. His works proved that he had as good a knowledge as then existed of botany, astronomy, physics, theology, laws, geography, fables, and poems, which he ardently admired.

The language of the Anglo Saxons was remarkably simple, poetic, and vigorous; and such is the proportion in the present language of Saxon words, that of the sixty-five in the pater-noster, only five are not Saxon. And the most classical nervous words in the English language are decidedly Saxon. The following is a list of some of the names of the most important

English towns, whose names in the Saxon are significant:—

English name.	Saxon name.	Meaning.
Bath	{ Accmancester and Bathancaster }	Sick man's city
Bedford	Bedanford	Bedan's-ford
Beverley	Beverlic	Beaver-like
Bristol	Brigstow	Bridge-place
Buckingham	Buccinghamam	Beech-tree-town
Barton	Byrtune	Bear's-town
Canterbury	Cantwaraburh	Kent-men's-town
Colchester	Colneceaster	Colno-city
Chippenham	Cyppanham	Merchant's-town
Derby	Deoraby	Deer's-place
Durham	Deorham	Deer's-home
Folkstone	Wolcestan	People's-stone
Fulham	Fullenham	Foul-town
Gainsborough	Gegnesburh	Tribe's-town
Peterborough	Gildeneburh	Gilded-town
Lichfield	Licetfeld	Corpe-field
Northampton	Northampton	North-home-town
Stafford	Stæford	Staff-ford
Nottingham	Snotingham	Cave-town
Wilton	Wiltan	Willow-town.

As a further specimen, many of these names, however, are thought to have been imposed at birth; these are common:—

Names of Females.

Adeleve, the noble wife	Eadwolf, the prosperous wolf
Adelfleda, — pregnancy	Ealdwolf, the old wolf
Æthelgiva, — gift	Belfric, the powerful wolf
Æthelhild, — war goddess	Beltarelf, the distinguished wolf
Eadburgh, the happy gift	Æthelwyn, the noble warrior
Beage, the bracelet	Ælfieag, as the elf, tall
Heaburghe, tall as a castle	Ethelstan, the noble rock
Wynfrede, the peace of man	
Æthelwolf, the noble wolf	

And so of the rest, from which may be seen what qualities were in greatest estimation. Few surnames were then used.

BENEFICENCE.

(From *Conder's Choir and Oratory*.)

"Blessing; knowing that ye are thereunto called, that ye should inherit a blessing."—1 Peter iii. 9.

WHY are springs enthroned on high,
Where the mountains kiss the sky?
'Tis that thence their streams may flow,
Fertilizing all below.

Why have clouds such lofty flight,
Basking in the golden light?
'Tis to send down genial showers
On this lower world of ours.

Why does God exalt the great?
'Tis that they may prop the state;
So that toil its sweets may yield,
And the sower reap the field.

Riches, why doth He confer?
That the rich may minister
To the children of distress,
To the poor and fatherless.

Does he light a Newton's mind?
'Tis to shine on all mankind.
Does he give to Virtue birth?
'Tis the salt of this poor earth.

Reader, whosoe'er thou art,
What thy God has given, impart;
Hide it not within the ground;
Send the cup of blessing round.

Hast thou power? The weak defend.
Light? Give light: thy knowledge lend.
Rich? Remember Him who gave.
Free? Be brother to the slave.

Called a blessing to inherit,
Bless, and richer blessings merit.
Give, and more shall yet be given:
Love, and serve, and look for heaven.

HEMLOCK, THE POISON OF SOCRATES.

THIRD ARTICLE.

THE last day was now spent; the hour had arrived, when the servant of the magistrates, bursting into tears, and expressing his regret, announced that the time was come for drinking the fatal draught. Socrates desired that the poison should immediately be brought to him if bruised; if not, that the person upon whom this duty devolved should bruise it. Crito, one of the faithful followers of his venerable master, wishing to delay to the latest possible moment the eventful scene, and to protract the fatal moment, observed that the sun still lingered upon the mountain-top; he said that he had known many who drank from the bitter cup very much later after the announcement had been made to them; that they had even supped and drank abundantly, and had enjoyed the society of those they loved. Socrates declined such a delay; he requested that the cup should be brought to him; and when the executioner appeared with it, he put a question to him as to what he should do when he had swallowed the potion. The reply made to him was, that he had nothing further to do than, when he had drunk it, to walk about until a heaviness came on in his legs, and afterwards to lie down. Socrates asked whether it was right to make a libation to the gods; for it was the custom before drinking to spill upon the earth a small quantity. The answer made was, "We only bruise as much as we think necessary to produce the effect." With calm and philosophic indifference Socrates hastily drank the beverage. His friends, who had with difficulty restrained their emotion, burst into floods of tears, which he gently and calmly reprehended. He paced the floor of his prison till he found the weariness of his limbs come on; he then laid himself down. He who had administered to him the poison examined, at intervals, his feet and his legs; and having forcibly pressed his foot, asked him if he felt it. Socrates answered he did not. After this, the executioner, in the same way, pressed his thighs; and, gradually extending this examination upwards, showed that he was growing stiff and cold. Socrates also touched himself, and observed, that when the poison reached his heart, he should then leave

his friends. His lower belly was almost cold; and now uncovering himself,—for he had previously been covered,—he said, and these were his last words, "Crito, we owe a cock to Æsculapius; discharge this debt for me, and do not neglect it."

"Your wishes shall be attended to," was the reply of Crito; "have you any further injunctions?"

To this no reply was made by Socrates; but just afterwards he moved himself. The executioner then covered him over; Socrates fixed his eye, and then Crito closed his mouth and eyes. Such are the terms in which the last days of the philosopher are detailed; and this description has served as a picture on which all have gazed with respect and admiration.

There are some circumstances detailed in this narrative which are very interesting, first, as regards the symptoms which are spoken of, and then as leading to some conclusions as to the herb which was thus used. The effects are evidently those of a narcotic, taken in so large a dose that the stomach must have been instantaneously overpowered, so as to prevent the ejection of it by vomiting. No visible effects were produced upon the mind; the limbs first betrayed the action; the muscular powers decreased; the recumbent position became necessary. The next marked effect was the loss of sensation and diminution of animal heat, which gradually extended themselves to the great centre of life. The length of time during which this went forward is not detailed to us; but evidently it was very short. Not the slightest suffering is mentioned. We have no reason to suppose that this arose from the magnanimity of the dying man, for we learn from Ælian, that when old persons, weary of the infirmities of the close of life, were determined to quit its pain and sorrow, they invited each other to a banquet, when, crowned with chaplets, they quaffed, from a goblet containing its juice—"Death in this world, life in one hereafter." Valerius Maximus himself saw an old lady of ninety, in the island of Cos, so intimately associated with the name of Hippocrates, terminate in this manner her existence.

TRADE WINDS.

IN illustration of the adaptation of the trade-winds to the purposes of commerce, a more striking instance, perhaps, could not be adduced than the following, which is given in a volume entitled, "Four Years' Residence in the West

Indies," written by a gentleman of the name of Bayley. In the description of the island of St. Vincent, it is stated that a little sloop, the private signal of which was unknown to any of the merchants, sailed into the harbour one morn-

ing, and immediately attracted the notice of the surrounding crowd; and the history of its unexpected appearance is thus given:—

"Every one has heard of the little fishing-smacks employed in cruising along the coast of Scotland, which carry herrings and other fish to Leith, Edinburgh, or Glasgow, worked by three or four hardy sailors, and generally commanded by an individual having no other knowledge of navigation than that which enables him to keep his dead reckoning, and to take the sun with his quadrant at noon day.

"It appears that a man who owned and commanded one of these coasting vessels, had been in the habit of seeing the West India ships load and unload in the several ports of Scotland; and having heard that sugar was a very profitable cargo, he determined, by way of speculation, on making a trip to St. Vincent, and returning to the Scottish market with a few hogsheads of that commodity. The natives were perfectly astonished; they had never heard of such a feat before; and they deemed it quite impossible that a mere fishing smack, worked by only four men, and

commanded by an ignorant master, should plough the boisterous billows of the Atlantic, and reach the West Indies in safety; yet so it was. The hardy Scotchman freighted his vessel, made sail, crossed the Bay of Biscay in a gale, got into the "trades," and scudded along before the wind at the rate of seven knots an hour, trusting to his dead reckoning all the way. He spoke no vessel during the whole voyage, and never once saw land until the morning of the thirty-fifth day, when he descried St. Vincent's right a-head; and setting his gaff-top-sail, he ran down, under a light breeze, along the windward coast of the island, and came to anchor about eleven o'clock, under the circumstances before mentioned."

Such a vessel, and so manned, could hardly have performed the voyage here described, had it not been aided by the current of the trade-winds; and what, then, must be the advantages of such a wind when, instead of aiding the puny enterprise of a single and obscure individual, it forwards the annual fleets of mighty nations?—*Kirby's Bridgewater Treatise.*

THE SEA-STORM.

A FRAGMENT.

—"There I felt thee! on that sea-cliff's verge;
Yes, while I stood and gazed, my temples bare,
And shot my being through earth, sea, and air."

COLERIDGE.

I.

Oh, eyeless darkness! grim despair and death!
The sea-world shook beneath a mighty storm,
Each billow on his brow had bound a wreath
Of white foam-flowers; and every moving form
Of spectral Typhoon and sea-monster rose,
To battle wildly with the deep, wild sea—
Twin spirits dread! they fought as maddened foes
Would fight, in kingly wrath, to gain eternity.
The wind swelled up her mighty trumpet-blast,
And blew her clarion o'er the stormy deep,
The shrieking billows hurried madly past,
The Maelstrom-monster woke aghast from sleep,
And stirred again the waters of his wrath,
Hurling the quivering storm-shafts in his ire,
And scattering blood like foam upon his path,
Till the great deep glowed red, like suns when they expire.

II.

Oh, mercy, mercy! 'twas a fearful time:
The storm-rack'd billow tossed in agony,
The sea's wild wail rose up to heaven sublime,
The heaven's re-answered with a dreadful cry,
As though in thunder-sound an angel spoke.
The tempest paused to listen; but no shout,
Save the dread echo of the deep, awoke—
That still in fearless wrath ran wildly out.
The wanderer cursed the sea-deep on that night;
The lordliest bark that ever rode the wave
Lay tost and stricken by the stormy blight;
And proud, high hearts that spurned the darkling grave
Saw gleaming down beneath the horrid surge
The pale white arms that rock th' accursed to sleep,
And heard in choral strains the fearful dirge
With which the Syren lulls the doomed beneath the deep.

III.

The dark, infernal caverns of the dead
Shook off the dreamy silence of the tomb;
The great Leviathan, that droops his head
On a cloud-pillow of hell's blackest gloom,
Stirred like the sound of thunder on the flood
Of the great fountain-deeps; and forth there came
The "voice of many waters" in their roar,
Mingling like mighty blasts blown from the trump
of fame.
Hell oped her wide and adamant gates
The sea-wrecked dead thronged in by thousands
there;
Satan sat throned in pomp and awful state,
Where millions bowed who only knew despair—
The living-dead! Each wore a burning star—
A breastplate, quivering with unquenching fire—
To guide their footsteps through hell's realms afar,
Whose ashes never quench, whose burnings ne'er
expire.

IV.

The wail, the wail, when storm-winds sink and die!
The weary echo of a wandering blast!
The thrill of life, when life's last agony
Hurries the dying o'er the death-sea fast!
The billow sank aghast upon the shore,
The dark surge slept beneath its shroud of foam,
The hush of death still'd the wild tempests roar,
And mad waves, monster-like, ran madly to their
home.
Uprose the cloud; the blue and lovely morn
Led the young day from out her eastern cave,
The Triton blew aloud his wild sea-horn,
The Naiad sang along the summer-wave,
The great sea spread her beauteous bosom bare,
Where the bright sunbeam like a monarch lay,
The ocean-eagle, from his rocky lair,
Spread his wild flight wide o'er the shining spray,
Day, like a star, kept watch above the sea,
To guard serene as heaven the deep's serenity.

EPHON.

REVIEW.

Sketches from Life, Lyrics from the Pentateuch, and other Poems. By THOMAS RAGG, Author of "The Deity," "The Martyr of Verulam," &c.—London. Longman and Co.

THE true poet needs no adventitious aid to secure the sympathies of his readers; his wand is that of an enchanter; he can "call spirits from the vasty deep," and they will obey his call; the whole material universe is his for the purposes of his art. There is no part of it so mean that his genius cannot clothe it with poetical attributes, and confer on it power to influence human hearts and minds. From objects the most minute and neglected he gathers the material of poetry, as the bee extracts honey from the disregarded weed; And if he were forbidden access to the inexhaustible storehouse of nature, still the creative power which he possesses would fashion imaginary worlds, and people them with airy and beauteous beings, whom his fellows would "not willingly let die." The real poet, therefore, finds access to the heart of his reader by the mere force of his genius. Mr. Ragg is a poet, and as such, needs no extrinsic recommendation to the favour of the public. Yet poets are men; and there are cases in which, while we feel with, and admire the author, we are called on to feel for, and sympathise with, the man; we would not, then, forget the fact, nor would we have our readers forget, that the author of the poems under notice, whose genius has struggled into publicity through the impediments with which the humble condition of a mechanic had environed it, has recently suffered severe domestic calamities, the consequence of which is harassing pecuniary embarrassment. The purchaser of this volume will have a double gratification; he will enrich his shelves by the addition of much delightful poetry, and, at the same time, assist to free its author from his difficulties.

"Night," the first poem of the collection, is deeply imbued with the melancholy which his trials might be expected to engender in the author's mind, but breathes throughout the spirit of resignation and piety. Religious sentiment, indeed, and amiable feeling are the characteristics of the whole, and we have not read throughout the author's productions "one line which, dying, he would wish to blot."

Among the "Sketches from Life" are some extremely touching. We select for quotation, although somewhat long, "Burnt Row," a tragical incident, simply and pathetically narrated in the fine old ballad style.

BURNT ROW.

"Have you ever been to Somercoates,
In rocky Derbyshire?
If so, then haply you've heard my tale,
If not you shall shortly hear.

For in Somercoates some houses stand,
Which people call Burnt Row;
And the elds, they dolesome things relate,
Which happened there long ago.

The sun was up, the morn was fair,
The mists were fleeing away,
And the birds sang sweet in the bushes round,
To welcome the rising day.

A mother said to her eldest girl,
To her eldest girl said she—
'We go to your aunt's to-day, my dear,
So take care of your sisters three.'

'Then give me a kiss, my sweet mother,
For you scolded me yester e'en;
And though I own I was naughty then,
I wish I never had been.

'And give me another, my mother dear,
For I feel, I can't tell why,
As though I should kiss those lips no more.'
And a tear sprang into her eye.

'Oh, foolish child!' said the good woman,
'Tis but a few miles we go;
And we shall return by the full moonlight,
By a path that well we know.

There is no river for us to cross,
No pit lies in our way;
And many along from the wake will come,
So banish your fears I pray.'

The tear went back in the daughter's eye,
And a smile came o'er her cheek;
But, oh! it was not a smile of joy,
For she felt as her heart would break.

She tended her little sisters, fair,
As merrily they played,
And strove to throw off the load of care
That on her young spirits preyed.

But her smiles were like the transient gleam,
That pierces the thick mists through,
When clouds envelope the bright sun-beam,
And the heavens wear a murky hue.

She played with her little sisters, three,
Till the long summer day was spent,
As over the green grass, joyfully,
They danced to their hearts' content.

And to bed they went when the night came on,
Though she trembled over her prayers,
And sleep, ere long, with his soothing charm,
Had lulled her bosom's cares.

How sweet the sleep of the young must be,
When troubles are small and few;
When the heart is light, and the thoughts are free,
And stainless as morning's dew.

For sweet it is even to see them sleep,
And watch the unconscious smile,
That over the rosy face will creep,
Though the lips are closed the while.

But oft 'tis but as a poison cup,
Which charms their cares away;
And greedily as they drink it up,
Destruction grasps his prey.

The moon rose over the mountains high,
The midnight hour was past,
And kindred who met at the wake that morn,
Prepared for their homes at last.

'But what is that light in the heaven, yonder!'
The wife to her good man said;
'It does not come from the moon, I wist,
It seems such a fiery red.'

'Tis the northern light,' said the company,
'Though seldom in summer-tide,
Its beautiful tints thus brilliantly,
Spread over the welkin wide.'

'But it changes not,' said the mother then,
As she thought of her distant home;
And her daughter's words rushed into her mind,
That was tossed like the wild sea's foam.

And many and deep were the mother's sighs,
As homeward they went along;
Though they laughed at her fears, and told her oft
To bridle her foolish tongue.

The flame grew brighter and brighter still,
As on the road they went,
Till nought appeared but a glowing red
Half over the firmament.

The leaves were tinged with a ruddy hue,
And the moon grew deadly pale;
And each, as he looked in the other's face,
Felt all his courage fail.

'There must be a fire in Somercoates,
For see it is drawing near.'
'Yes, there is a fire in Somercoates,
And my children are burning there.'

The mother said, with a bursting heart,
As her tears in torrents flowed;
And nothing they spake would comfort her,
As they hastened along the road.

Away, away to the fatal place
Breathlessly hurried they all,
And just arrived in time to see
The roofs of two houses fall.

'The row is on fire! the row is on fire!
How many will share in the woe?'
But from thought of the many to share her grief,
To her could no comfort flow.

For, O, what a sight for a mother there!
Her children all lifeless lay,
And the lips that sued for a kiss that morn
Were blackened and shrivelled away.

She gave at her children one long, long gaze,
Then laughed like a maniac wild,
And never another word she spake,
Save, 'Kiss thee? O yes! my child.'

Three days she suffered in speechless woe,
'Twas all that her strength could do;
Then the earth that over her children spread
Covered the mother too.

Twelve years passed on. In a distant town
Where wandered the Avon's tide,
A priest was sent for in haste one night,
To pray by a sick man's side.

'What lies on your conscience so black?' said he;
The blood that the Saviour spilt
Is sufficient, and more than sufficient, to cleanse
Every penitent heart from guilt.'

But in vain were his prayers, his preaching vain,
Still writhing in agony,
The sick man said, as he wrung his hands,
'O, there is no hope for me!'

I hated a neighbour in Somercoates,
Twelve long, long years ago,
And to injure him sought, with malice as deep
As a spirit accursed could know.

I set fire to the house where his children lay
In innocent sleep locked fast,
And twelve houses were burnt in that dreadful night,
By the brand these fingers cast.

The mother was laid in her children's grave,
The father looked up no more,
But nobody knew how the fire broke out,
And the wonder at length passed o'er.

My conscience, smitten with keenest pangs,
I fled from that dreadful scene,
Still hoping that time would banish it all,
As though it had never been.

But whithersoever my body went,
No peace could my spirit find;
The awful deed of that sad sad night
Is ever before my mind.

And now I am going, alas! to reap
The seed I have sown before,
For that brand has purchased a place for me
In fire to be quenched no more.'

'Though dark are thy deeds,' said the holy man,
'A penitent still may'st thou die,
For the Saviour came but to seek the lost;
Then now to his bosom fly.'

'I cannot, I cannot,' the sick man cried;
'See! the demons are round me now;
The brand that I threw in the house that night
Is fixed on my burning brow.

'O mercy! O mercy! 'tis all too late,
My doom it is fixed, I see!'
Then he drew up his legs, and died in bed,
Crying, 'There is no hope for me.'

Many of the "Lyrics from the Pentateuch" are sweetly and powerfully written "Caradoc" we like least, not because it is deficient in poetry, but because it is written in that species of octo-syllabic verse which, even in the hands of Scott, owed success chiefly to novelty, and in other hands is to us the reverse of pleasing.

We feel great pleasure in recommending this fourth essay of the poet to the regard of our readers. Nottingham has had the honour to produce among her poorer classes many men of considerable genius, and the author of "Sketches from Life," &c. is a worthy addition to the brotherhood.

NOTES OF TRAVELLERS.

CHINESE HOUSES.—Very few of the houses or temples of Canton have more than one story, the halls of which are usually of the whole height of the fabric, without any concealment of beams or rafters of the roof. Terraces are often built above the roofs; and when surrounded by a breast-work, afford, in the cool of the day, a pleasant and secure retreat, where people can ascend to enjoy a purer air, to secure a wider prospect, or to witness any event that transpires in the neighbourhood. These terraces are not, perhaps, very unlike the *flat roofs* of other orientals. In some other points, also, there is a coincidence between the houses of the Chinese, and those which are noticed in sacred literature.

Referring to these latter, professor Jahn, in his *Biblical Archaeology*, says, "the gates, not only of houses, but of cities, were customarily adorned with an inscription, which was to be extracted from the law of Moses; a practice in which may be found the origin of the *modern Mezuzaw*, or piece of parchment inscribed with sacred texts, and fastened to the door-posts. The gates were always shut, and one of the servants acted the part of a porter. The space immediately inside the gate is called the porch, is square, and on one side of it is erected a seat for the accommodation of those strangers who are not to be admitted into the interior of the house. From the porch we are in-

troduced, through a second door, into a court, which is commonly paved with marble, and surrounded on all sides, sometimes, however, only on one, with a peristyle of covered walk, over which, if the houses have more than one story, there is a gallery of the same dimensions, supported by columns and protected by a balustrade. In this court, large companies are received, at nuptials, &c. On such occasions, a large veil of thick cloth is extended by ropes over the whole court, to exclude the heat of the sun. The back part of the house is allotted to the women, and is called in Arabic, the harem, and in Hebrew, by way of eminence, *the palace*. Behind the harem there is a garden, into which the women enjoy the pleasure of looking from their apartments. In the smaller houses the females occupy the upper story. This is the place assigned them, also, by Homer in the *Iliad* and *Odyssey*."

Now in the buildings of the Chinese, the various inscriptions seen on their door-posts; the porter at the outer gate, and the porch and court within; the peristyle with its columns, and, perhaps, a gallery above, and the palace, *kin-tse*, or "forbidden ground," with its garden, have a striking resemblance to those in the above description. The inner apartments of the emperor are, in like manner, called, by way of eminence, *kung-tem*, or "the palace."

GLANCES AT THE PAST.

Mexico.—When Fernando Cortez conquered Mexico, in 1518—19, the city of Mexico contained a population of upwards of sixty thousand families. It was divided into two distinct parts, in one of which lived the nobility, and in the other the castes. The public edifices and the dwellings of the court and nobility were built of stone. The temples were magnificent; the one dedicated to Vitzputzli, the god of war, and the most worshipped of all their deities, was the most spacious. Besides the dwellings of the priests erected on the inside, and the great number of squares it contained for other inferior deities, to which the people had to pay homage on their entrance, this great edifice would accommodate more than ten thousand persons, who came to dance at their regular festivals. One of the squares was set out with trees, at regular distances, through which iron bars were passed, whereon were suspended the heads of the victims who had been sacrificed to the gods. In another apartment was a large stone terminating in an acute angle, upon which the priests suspended the victim to be sacrificed, cut open his breast, and took out his heart. A splendid chapel contained the grand idol. It was the figure of a man sitting upon a high altar. His head was crowned with a helmet of burnished gold; in the right hand it held a serpent, and in the left a shield of four arrows; the countenance was most horrific. The priests slowly withdrew the curtains when they permitted the people to pay their adoration to this deity of their worship. On the left was another idol of similar display and characteristics, pretending to be his brother, and equally an object of profound adoration.

The city contained eight temples of a similar description. The chapels in these edifices amounted to not far from two thousand, dedicated to different deities. They were constructed in great magnificence, and their appendages and trappings were of inestimable value.

No one would approach the royal presence except being barefoot, with profound awe, and "my great lord" uttered in a suppressed tone. When he dined in public, (which was frequent,) he sat by himself at a superb table, being first helped from his choice of two or three hundred dishes, and then leaving the rest to the nobility. He drank several kinds of liquors from richly ornamented cans. The herd were kept out by a rail; they could look on and see the royal gormandising "in distance." Buffoons displayed themselves to amuse the royal eyes, and all sorts of music saluted the royal ear. And then the people went to the squares, to wrestle, shoot, and run, to please his grace.

The vast mines contributed much to Montezuma's prodigious wealth; besides, he drew by usage about one-third of the whole productive wealth of his subjects. The nobility were compelled to make him vast annual presents in person. The emperor was the law in all things; and the slightest disrespect towards him cost the life of a subject. Every town in the empire had a regular militia; and it is even stated that Montezuma had upwards of thirty vassals, from each of which he could have brought into the field one hundred thousand men.

NAPOLEON'S SACRIFICE OF HUMAN LIFE.—Never was there a conqueror who fired more cannon, fought more battles, or overthrew more thrones, than Napoleon. But we cannot appreciate the degree and quality of his glory without weighing the means he possessed, and the results which he accomplished. Enough for

our present purpose will be gained, if we set before us the mere resources of flesh and blood which he called into play from the rupture of the peace of Amiens, in 1804, down to his eventful exit. At that time he had, as he declared to Lord Whitworth, an army on foot of 480,000 men. (Here follows a detail of the different levies made from 1804 till 1814. Total of men, 2,965,965.) This detail, which is derived from Napoleon's official journal, the *Moniteur*, under the several dates, is deficient in the excess which was raised beyond the levies; but even if we deduct the casualties, as well as the 300,000 men disbanded in 1815, we shall be much under the mark in affirming that he slaughtered two millions and a half of human beings, and these all Frenchmen. But we have yet to add the thousands and tens of thousands of Germans, Swiss, Poles, Italians, Neapolitans, and Illyrians whom he forced under his eagles, and, at a moderate computation, these cannot have fallen short of half a million. It is obviously just to assume that the number who fell on the side of his adversaries was equal to that against which they were brought. Here, then, are our data for asserting that the latter years of his glory were purchased at no less expense than six millions of human lives. This horrible inroad on the fairest portion of the population of Europe, resulted in the abandonment of every conquered territory, the bringing of foreign enemies, twice within four-and-twenty months, under the walls of Paris, and the erasure of his name from the records of dominion.—*Paris Paper*.

QUEEN ELIZABETH'S VANITY.—The following anecdote is a very curious illustration both of the character of this great princess, and of the bad taste of the pulpit eloquence of her age:—"There is almost none that waited in Queen Elizabeth's court, and observed any thing, but can tell it pleased her very much to seeme to be thought, and to be told, that she looked young. The majesty and gravity of a scepter born forty-four yeeres, could not alter that nature of a woman in her. When bishop Rudd was appointed to preach before her, he wishing, in a godly zeale, as well became him, that she should think sometime of mortality, being then sixty-three yeeres of age, he tooke his text, fit for that purpose, out of the Psalms, (xc. 12,) 'O teach us to number our days, that we may incline our hearts unto wisdom;' which text he handled most learnedly. But when he spoke of some sacred and mystical numbers, as three for the Trinity, three times three for the heavenly hierarchy, seven for the Sabbath, and seven times seven for a jubilee, and, lastly, seven times nine for the grand climacterical yeere, (her age,) she, perceiving whereto it tended, began to be troubled with it. The bishop discovering all was not well, (for the pulpit stood opposite to her majesty,) he fell to treat of some more plausible numbers, as of the number 666, making *Latinus*, with which, he said, he could prove the Pope to be the antichrist, &c. He interlarded his sermon with Scripture passages touching the infirmities of age, as that in Ecclesiastes xii.: 'When the grynders shall be few in number, and they wax darke that looke out of the windowes, &c., and the daughters of singing shall be abased;' and more to like purpose. The queen, as the manner was, opened the window; but she was so farre from giving him thanks or good countenance, that she said plainly, 'He should have kept his arithmetic for himselfe; but I see the greatest clerks are not the wisest men;' and so went away discontented."

THE LIFE OF THOMAS PAINE,

AUTHOR OF "THE AGE OF REASON."

CHAPTER I.

[IN dragging forth from the oblivion into which they have been sinking for several years, the name and memory of Thomas Paine, the writer has a specific object, which he conceives will perfectly justify him in the estimation of his readers; it is, through the life of this, its modern champion, to test the character of infidelity; and then to place, in contrast with the life of Paine, the life of the apostle Paul, as a practical comment upon the nature and genius of Christianity. Let the motto to each be, "By their fruits ye shall know them."]

THE conversion of the witty and profligate Earl of Rochester, at the close of his life, from infidelity to a sincere and penitent belief in the Divine authority of the holy Scriptures, is indubitably proved by an interesting narrative of the circumstances of that event written by the celebrated bishop Burnet. This narrative has been published in the form of a tract, and is in very wide and general circulation; it ought, indeed, to occupy a distinguished place in every cottage library. The reader will, no doubt, recollect in this pamphlet a most impressive declaration of the dying Wilmot, exposing and denouncing the atrocious character of infidelity, which had well nigh destroyed his happiness in both worlds. Laying his trembling and emaciated hand on the sacred volume, he exclaimed, with unwonted and solemn energy, "The only objection against this book is a bad life." In this sincere hour the unhappy Rochester disclosed the secret of all his former and restless enmity against the Christian faith; and those most conversant with the subject, who have examined it with the scrutinising eye of philosophy and reason, unanimously concur in opinion that infidelity originates in the heart rather than in the head. Every good man must at least wish religion to be true; and it is the interest of every wicked man to persuade himself that it is false. Christianity is a system of moral restraint, addressing all our hopes and fears, to induce a life at war with appetite, passion, and vice. Infidelity takes off this restraint, and, annihilating every object of hope and fear, produces licentiousness and sin. Its maxim is, "Let us eat and drink, for to-morrow we die."

Accordingly, the Founder and apostles of Christianity exhibit an example of the most self-denying, yet ennobling and sublime virtue; while the authors and abettors of infidelity have been, almost without an exception, the disgrace and the abhorrence of their species. Infidels have generally been so perfectly aware of this, that they have deprecated all reference to personal character in our controversy with them; while they have traduced and vilified the character of prophets and confessors, and even stained the reputation of Christ himself, with the imputation

of deliberate and base imposture; they have prohibited Christians from examining and reprobating their own spirit and conduct. When the Gospel is to be attacked, it is to be attacked through the characters of those on whose moral worth, in point of testimony, its credibility depends; but infidelity is to be refuted on the ground of principles alone. We must not uncharitably scrutinise the promulgators of these principles; the arguments, not the men, are to be the subjects of investigation.

But we think, on this great moral question, very serious attention ought to be paid to both. We have no objection that Christianity should stand or fall upon her own moral character, and the moral character of her apostles and evangelists; and we are resolved to bring infidelity to the same test. Should this prove offensive to the real enemies of religion and the pretended friends of virtue, we cannot help it. We have, however, the sanction of one of their great leaders in our favour; and though it is not oracular with us, it may serve to silence them. "No man," says Cobbett, "has a right to pry into his neighbour's private concerns, and the opinions of every man are his private concerns, while he keeps them so; that is to say, while they are confined to himself, his family, and particular friends. But when he makes those opinions public, when he once attempts to make converts, whether it be in religion, politics, or any thing else; when he once comes forward as a candidate for public admiration, esteem, or compassion, his opinions, his principles, his motives, every action of his life, public or private, becomes the fair subject of public discussion."

Thomas Paine was born at Thetford, in Norfolk, January 29th, 1736, of respectable, but comparatively indigent, parents. His father followed the humble craft of stay-making, the art and mystery of which he imparted to his son, who, at the age of fourteen, having made himself master of the elements of reading, writing, and arithmetic, assisted his father to supply the wants of the family. In due time he acquired a sufficient knowledge of the business to render himself useful; but the moment he felt this to be the case, his froward and restless disposition induced him to abscond from home, and to go forth into the world in quest of adventures. The sobriety of industry, the quiet regularity of the domestic sphere in which Providence had placed him, he viewed as a degradation, because it imposed upon him restraint; and restraint and slavery, in his vocabulary, were, even at that early period, synonymous terms. Of this step,

so indicative of his future character, and so distressing to his parents, he has given the following account:—

"At an early age, raw and adventurous, and heated with the false heroism of a master who had served in a man-of-war, I began my fortune, and entered on board the 'Terrible,' captain Death. From this adventure I was happily prevented by the affectionate and moral remonstrances of a good father, who, from the habits of his life, being of the Quaker profession, looked on me as lost; but the impression, much as it affected me at the time, wore away, and I entered afterwards in the 'King of Prussia' privateer, captain Mender, and went with her to sea."

Finding, however, that subordination was required at sea as well as on land, and that the shocking evil of government existed every where, he soon quitted the privateer for *terra firma*. For a few months he sought subsistence by following his trade in London. From thence he removed to Dover, and there obtained employment with Mr. Grace, a respectable stay-maker. By hypocritically professing attachment to the daughter of his master, he induced him to lend him a sum of money to enable him to commence business for himself at Sandwich. It is almost needless to add, that he neither married the young woman, nor discharged the debt to her father.

He settled at Sandwich, in April, 1759, and on the twenty-seventh of September, in the same year, he married Mary Lambert, an interesting and beautiful girl, the daughter of an exciseman at Sittingbourne, who, on the decease of both her parents, became waiting-woman to Mrs. Solly, of Sandwich. This amiable and unsuspecting young woman had no sooner confided her happiness to the man who had won her affections by the most passionate expressions of regard, than she experienced from him treatment the most cruel and infamous. He first placed her in furnished lodgings; then he procured a house, and, with difficulty, obtained furniture upon credit; but having contracted debts which he was unable to discharge, he found it convenient to take what is called in Scotland a "moonlight flitting;" and in the night between the seventh and eighth of April, 1760, Paine and his wife set out from Sandwich to Margate, carrying with them the furniture purchased on credit, a stove belonging to the house, and the stays of a customer. He sold the furniture by auction at Margate. Such, at that period, were his clear apprehensions of the rights of man, and the nature of moral obligation. We shall see, as we proceed, what he thought of the rights of women.

From Margate, Paine returned to London. His wife set out with him; but her subsequent fate is not well known. Some say that she perished on the road by ill usage and a prema-

ture birth; certain it is that, in 1761, Thomas returned without her to his father's house.

Having been unsuccessful in the business of a stay-maker, he was now anxious to leave it for the excise. In the excise, after fourteen months' study and trial, he was established, on the first of December, 1762, at the age of twenty-five. The kindness of Mr. Cocksedge, recorder of Thetford, procured for him this appointment. He was sent as a supernumerary, first to Grant-ham, and on the eighth of August, 1764, to Alford. Being detected in some misconduct, he was, on the twenty-seventh of August, 1765, dismissed from his office.

In this state of wretchedness and disgrace he repaired to London a third time. Here charity supplied him with clothes, money, and lodgings, till he was, on the eleventh of July, 1766, restored to the excise, although not to immediate employment. For support in the meantime, he engaged himself as an usher to two schools in succession, one in Goodman's Fields, the other at Kensington, to teach English and walk out with the children. About this period he would willingly have taken holy orders; but his efforts to obtain the necessary certificates were unsuccessful.

At length, in March, 1768, he entered upon his duties in the calling of an excise officer, and was sent in that capacity to Lewes, in Sussex. He was now at the age of thirty-one, but without industry or any other qualities which render a man respectable. Most of his time was spent in clubs and taverns. Though ambitious of shining among his companions as a jolly fellow, he was rather endured than welcomed. In his temper he was always sullen, litigious, overbearing, and insolent. He loved contradiction for its own sake. Every opinion, whether true or false, advanced in his presence, he spontaneously controverted; it was a matter of course with him to differ from every body. In arguing, as well as in every thing, he was utterly devoid of principle; and was more than once heard to say, "that the man who could only argue when he had truth on his side, was nobody; but he who could make falsehood appear to be truth, was the man for him."

Soon after his settlement at Lewes, having ingratiated himself with the widow and daughter of Mr. Ollive, with whom he had lodged till his death, he undertook to manage their affairs, and united to the business of an exciseman that of a grocer and tobaccoist. In an evil hour for the unfortunate victim of his cruelty, he persuaded Miss Ollive to become his wife, and thus put himself in possession of an excellent shop of trade and a tobacco mill.

One of his biographers observes, "Elizabeth Ollive was a handsome and worthy woman, eleven years younger than Paine; and had it not been for her unfortunate attachment to him,

might have married to much greater advantage. Upon the occasion of this second marriage, he thought proper to represent himself in the marriage register as a bachelor."

His treatment of this amiable woman, whom he married solely for the sake of her property, impresses upon him a character of monstrous and unparalleled villany. Having pledged their mutual vows before the altar, Mrs. Paine returned to their dwelling in the full confidence that her husband would manifest towards her something of the tenderness and affection due to her sex; and the new and interesting relation upon which she had entered. But from that moment the savage repelled her from his bosom as a stranger. Yes, this boasting advocate of human rights, who shuddered at the barbarity of kings, could deliberately, coldly, and basely violate the first law of his nature, dishonour his parents, and deprive the confiding heart that had sacrificed all for him, of one of the justest rights of humanity, in a case, too, where it was impossible so much as to complain.

To this unhappy creature the endearing name of husband was but a mockery and an insult. She was, indeed, a wife; that is, she had linked her mortal destiny with a man who, in order to secure his victim, pretended to regard her with the fondness of the most ardent attachment. How bitter must have been her disappointment, to find him the reverse of what he seemed!—a heartless monster, who had bound her with the trammels of law, only that he might squander her property, and agonise her feelings with impunity.

If this be infidel virtue, parents shield the daughters that you love from the possibility of forming alliances with the atrocious disciples of such a school. Be not deceived by their affected concern for the well-being of society. Think not that they are tender-hearted because they have nothing but "*douce humanité*" in their mouth. Even this wretch could talk in raptures of the French revolution "restoring parents to their children, and children to their parents, relations to each other, and man to society." "I ever suspect," says William Cobbett, (mark it, reader,) "I ever suspect the sincerity of a man whose discourse abounds in expressions of universal philanthropy. Nothing is easier than for a person of some imagination to raise himself to a swell of sentiment without the aid of one single feeling of the heart. Rousseau, for instance, is everlastingly babbling about his *genre humain*, ('human race,') and his *cœur aimant et tendre*, ('tender and loving heart.')

He writes for the human race; his heart bleeds for the distresses of the human race; and in the midst of all this, he sends his unfortunate children to the poor-house—the receptacle of misery. Virtuous, and tender-hearted, and sympathetic Rousseau!"

Cruel to his wife, Paine was also unjust in

all his dealings. In violation of the solemn oath by which he had obliged himself faithfully to discharge his duties as an exciseman, he engaged without scruple in smuggling practices himself, and connived at the same practices in others, whose assistance he required in the nefarious traffic. Employed by his brother excisemen to draw up their case, in order to obtain for them an increase of salary, he wrote a pamphlet in their behalf, four thousand copies of which were printed at Lewes. A contribution was made by the general body to defray the expenses incurred by this measure, and also to enable them to carry their application to government. Paine undertook their cause, did nothing, pocketed the amount of the printer's bill, (reader, the printer was his particular friend,) and robbed them of an additional sum amounting to more than thirty pounds.

At length his credit failed. By gross habits of intoxication and idleness, he sunk into difficulties and distress, and, in this situation, made over a bill of sale of his whole effects to Mr. Whitfeld, a considerable grocer at Lewes, and his principal creditor. Mr. Whitfeld seeing no prospect of payment, took possession of the premises, and, in April, 1774, disposed of them as his own. The other creditors, thinking themselves outwitted by Whitfeld, and cheated by Paine, had recourse to the rigours of the law. Paine sought concealment for a time in the cock-loft of the White Horse inn. When in after-life he arose to circumstances of comparative affluence, he never chose to remember his pecuniary obligations. He was never known voluntarily to pay a single debt; and in Mr. Rickman's ledger, the father of his bosom friend Clio Rickman, there stands at this moment against the name of Thomas Paine, the sum of twenty-one guineas.

To complete his calamities, he was degraded from his situation in the excise. His forlorn-hope, in his wretchedness, was to induce his wife to purchase emancipation from his tyranny, by paying him thirty-five pounds sterling. How the poor woman procured such a sum we have no means of ascertaining; it was her all, and he kindly fleeced her of every shilling; agreeing, however, to claim no part of whatever property she might hereafter acquire.

He now returned to London; but, in defiance of his solemn engagement not to trouble his wife again, and, perhaps, hoping to wring from her friends a little more money, he once more disturbed her peace. In this mean attempt he did not succeed. They mutually entered into new articles of separation, in which it was declared, on his part, that he "no longer found a wife a convenience;" and on her's, that "she had too long suffered the miseries of such a husband."

Paine now finding that his notoriously bad

character rendered it advisable for him to leave a country where he was known, had the address to procure a recommendation to the late Dr. Franklin, in America, as a person who might, at such a crisis, be useful there. He accordingly sailed for America in September, 1774.

The following letter from his mother to his wife, written about this time, proves that she had the distress of hearing of his crimes and misfortunes, and of feeling for them as a parent naturally feels for a child wicked or unhappy:—

“*Thetford, July 27th, 1774.*”

“DEAR DAUGHTER,

“I must beg leave to trouble you with my inquiries concerning my unhappy son, and your husband. Various are the reports, the which I find came originally from the excise office; such as his ill treatment to you; his secreting upwards of thirty pounds intrusted with him to manage the petition for advance of salary; that since his discharge he have petitioned to be restored, which was rejected with scorn. Since which, I am told, he have left England. To all which, I

beg you will be kind enough to answer me by due course of post. You will not be a little surprised at my so strongly desiring to know what is become of him, after I repeat to you his undutiful behaviour to the tenderest of parents. He never asked of us any thing but what was granted, that were in our poor abilities to do; nay, we even distressed ourselves, whose works are given over by old age, to let him have twenty pounds on bond, and every other tender mark a parent could possibly show a child. His ingratitude, or want of duty, has been such, that he has not wrote to me upwards of two years. If the above account be true, I am heartily sorry that a woman whose character deserves the greatest love and respect, (as I have always on inquiry been informed your's did,) should be tied for life to the worst of husbands.

“I am, dear daughter,

“Your affectionate mother,

“F. PAINE.

“For God's sake, let me have your answer, as I am almost distracted.”

THE CITY STATE SWORD-SHEATH.

“SIR C. MARSHALL submitted, that as the Queen was to come into the City on the 9th of November, it would be necessary to repair the sheath of the City state sword, out of which several pearls had dropped on state days.

“The sword was here produced, and

“The Recorder sharply observed, that it appeared to him that the pearls which had dropped out were the very best that had adorned the sheath.”—*Report in the “Times.”*

ALAS! for the vanity of human wishes and desires. He in whose brain the idea first arose of a City sword—he who first wished for a weapon to defend the corporation—doubtless never dreamt that the day would come when, amid “piping times of peace,” it would require regeneration and repair, that it would reach a stage of corruption and decay, unfitting it to reflect back the light from the lovely eyes of our youthful and gracious Sovereign. Little would it be supposed that, in the race of time, the harness would reach the goal of dissolution and decay before the horse, that the shield of the City would become shorn of its covering, and that the civic gewgaw would become stript of its jewels, and thereby become bereft of its gems, its beauty, and its glory.

Yet such, alas! is the fact, such is the plain, honest, and simple, and naked truth; and it can no longer remain a secret from the world, that some pearls have dropped out of the sheath of the City sword. And having arrived at this all-important, this all-anxious stage of our inquiry, it becomes next our bounden duty to inquire how this unfortunate accident has occurred, how it was brought about, whether by sheer and untoward chance, or by direct connivance and con-

trivance of a brace of cockney citizens; how the stable door came to be stolen, and the steed left; how the lion's skin happened to be abstracted, and the noble animal—the right honourable the lord commissioner of the four-footed foresters—to remain; how the ass's ears came to be cut off, and the ass not taken; how the trowsers were despoiled, and the wearer left in a breechless condition. And in answering these presumptive queries, it will not do to either shirk or shrink from the question; it must be met boldly and bravely, face to face; and, as the vulgar say, (whose words, when speaking of an appropriate subject in an appropriate manner, it is sometimes worth while quoting,) “no mistake about it.”

We must beg leave to repudiate all idea of the pearls having dropped out of the aforesaid sword-sheath by mistake; it is a thing which we never heard of pearls doing, it is a habit which they are not accustomed to; and aware, as they must be, of the important official situation they held among the ranks of the civic jewellery, they would, we are quite sure, have disdained to drop from the lofty eery they occupied, of their own free will and accord. They must have been removed by main force, violence must have been done to their feelings; there must have been a struggle between the pearls and the picker; some “cunningly-devised fable” must have been “got up” to seduce them from their lawful allegiance to the lord mayor and aldermen; there must, we fear, have been something very much like “burling” in the case, when they were ruthlessly re-

moved from the parental shelter of the sword-sheath. The pearls have not been cast before swine, but before one of the anti-swinish multitude—to wit and *videlicet*—a Jew. Is there a Salomon, a Levy, a Hart, a Samuels, an Emanuel, or a Garcia, who knoweth any thing about the pearls of the sword-sheath? If there is, let him or her come boldly forward and confess to “the soft impeachment;” and own that the temptation to prig the pearls was too strong for mortal flesh, unfed and unnourished by pork, to resist. Let them come out of their hiding-places, we say, for the sake of humanity, and on behalf of the suffering state to which the nerves of every civic functionary between Temple-Bar and White-chapel church is reduced on this very lamentable occasion. Our readers would be astonished could they have witnessed the dreadful dilemma into which every one who has the dignity and importance of the City at heart is thrown, at the loss of these pearls. We have many fears for the ultimate consequences. We have been assured, as the newspapers say, “upon competent authority,” that they were “pearls of greatest price;” that they were nonsuches in their way; that they had neither brothers nor sisters at all resembling them; that they stood alone in the world, having neither equal nor superior, and

receiving the due homage and respect of all inferior pearlets.

But, alas! the immutable mutability of all earthly things is come upon them; the power of “passing away” has reference to pearls as well as to persons. They are, for aught we know, now suffering under the various chances and changes of this mortal life. They have left their apartments, vacated their lodgings, changed their quarters, undergone what the French so pathetically call a *changement de domicile*; they are missing; they have strayed or have been stolen; they are found wanting at the bottom of King-street. The sword of civic state groweth rusty; the sheath lacks lustre, it has lost its pearls.

Now what is to be done under these trying circumstances? Why, we think we should——

“Please, sir, I wants your place, to put this here gen’l’m’n’s plate in.”

“What?”

The question was repeated.

“Why——What the plague——Well”——

Reader, we beg you ten thousand pardons; we have been writing this at Williams’s *a-la-mode* beef house, in the Old Bailey. We declare we did not know where we were. We must, surely, have been dreaming.

ERHON.

COSMOGONY OF MOSES.

ARTICLE VI.

AND what is this world in the immensity which teems with them? and what are they who occupy it? The universe at large would suffer as little, in its splendour and variety, by the destruction of our planet, as the verdure and sublime magnificence of a forest would suffer by the fall of a single leaf.

After these illustrations of the minuteness and the magnitude of the creation, a mind enlightened by Divine revelation glows with adoring admiration, and pays its duteous and awful homage at the footstool of the supreme Intelligence who called the glorious and stupendous scene into existence. Supposing the original principle—the being of a God—to be established in our conviction, the more we know of the extent of nature the loftier will be our conception of Him who sits in high authority over the concerns of so wide a universe. Is it not adding to the bright catalogue of Divine attributes another glorious gem, when we say that while magnitude does not overpower him, minuteness cannot escape him, and variety cannot bewilder him; and that at the very time while the mind of the Deity is abroad over the whole vastness of creation, there is not one particle of matter, there is not one individual principle of rational or of animal existence, there is not one single world in that expanse which teems with them, that his

eye does not discern as constantly, and his hand does not guide as unerringly, and his Spirit does not watch and care for as vigilantly, as if it formed the one and exclusive object of his attention?

Having thus seized the grand fundamental principle that the whole universe owes its existence and preservation to one eternal Being, infinite in wisdom and power, how delightful is it to range through his creation, amid the innumerable and wonderful displays of his goodness! Of this goodness, as displayed in the works of creation, the proof rests upon two propositions, each capable of being made out by observations drawn from the appearances of nature. The first is,—that in a vast plurality of instances in which contrivance is perceived, the design of the contrivance is beneficial.

The second,—that the Deity has super-added pleasure to animal sensations beyond what was necessary for any other purpose, or when the purpose, so far as it was necessary, might have been effected by the operation of pain.

With regard to the first, we may observe that no production of nature displays contrivance so manifestly as the parts of animals; and the parts of animals have all of them a real and, with very few exceptions, all of them a known and intelligible subserviency to the use of the animal.

Now, when the multitude of animals is considered, the number of parts in each, their figure and fitness, the faculties depending upon them, the variety of species, the complexity of structure, the success—in so many cases—and felicity of the result, we can never reflect without the profoundest adoration upon the character of that Being from whom all these things have proceeded; we cannot help acknowledging what an exertion of benevolence creation was—of a benevolence how minute in its care! how vast in its comprehension!

When we appeal to the parts and faculties of animals in particular, we state, I conceive, the proper medium of proof for the conclusion which we wish to establish. I will not say that the insensible parts of nature are made solely for the sensitive parts; but this I say, that when we consider the benevolence of the Deity, we can only consider it in relation to sensitive being. Without this reference, or referred to any thing else, the attribute has no object, the term has no meaning. Dead matter is nothing; the parts, therefore, especially the limbs and senses of animals, although they constitute, in mass and quantity, a small portion of the material creation, yet, since they alone are instruments of perception, they compose what may be called the whole of visible nature, estimated with a view to the disposition of its Author. Consequently it is in these that we are to seek his character, it is by these that we are to prove that the world was made with a benevolent design.

Nor is the design abortive. It is a happy world after all; the air, the earth, the water teem with delighted existence. In a spring noon or a summer evening, on whichever side I turn my eyes, myriads of happy beings crowd upon my view: "the insect youth are on the wing;" swarms of new-born flies are trying their pinions in the air; their sportive motions, their wanton mazes, their gratuitous activity, their continual change of place without use or purpose, testify their joy, and the exultation they feel in their lately-discovered faculties. A bee among the flowers in spring is one of the most cheerful objects that can be looked upon; its life appears to be all enjoyment, so busy and so pleased; yet it is only a specimen of insect life, with which, by reason of the animal being half domesticated, we happen to be better acquainted than we are with that of others. The whole winged insect tribe, it is probable, are equally intent upon their proper employments, and, under every variety of constitution, gratified, and perhaps equally gratified, by the offices which the Author of their nature has assigned to them. But the atmosphere is not the only scene of enjoyment for the insect race; plants are covered with aphides, greedily sucking their juices, and constantly, as it would seem, in the act of sucking. It cannot be doubted but this is a state of grati-

fication; what else should fix them so close to the operation, and so long? Other species are running about, with an alacrity in their motions which carries with it every mark of pleasure; large patches of ground are sometimes half covered with these brisk and sprightly natures. If we look to what the waters produce, shoals of the fry of fish frequent the margins of rivers, of lakes, and of the sea itself. These are so happy that they know not what to do with themselves; their attitudes, their vivacity, their leaps out of the water, their frolics in it, (which I have noticed a thousand times with equal attention and amusement,) all conduce to show their excess of spirits, and are simply the effects of that excess. Walking by the seaside in a calm evening, upon a sandy shore, and with an ebbing tide, I have frequently remarked the appearance of a dark cloud, or rather very thick mist, hanging over the edge of the water, to the height, perhaps, of half a yard, and of the breadth of two or three yards, stretching along the coast as far as the eye could reach, and always retiring with the waters. When this cloud came to be examined, it proved to be nothing else than so much space filled with young shrimps, in the act of bounding into the air from the shallow margin of the water, or from the wet sand. If any motion of a mute animal could express delight, it was this; if they had meant to make signs of their happiness, they could not have done it more intelligibly. Suppose, then,—what I have no doubt of—each individual of this number to be in a state of positive enjoyment, what a sum, collectively, of gratification and pleasure have we here before our view!

The young of all animals appear to me to receive pleasure simply from the exercise of their limbs and bodily faculties, without reference to any end to be attained, or any use to be answered by the exertion. A child, without knowing any thing of the use of language, is in a high degree delighted with being able to speak. Its incessant repetition of a few articulate sounds, or perhaps of the single word which it has learned to pronounce, proves this point clearly. Nor is it less pleased with its first successful endeavours to walk, or rather to run, (which precedes walking,) although entirely ignorant of the importance of the attainment to its future life, and even without applying it to any present purpose. A child is delighted with speaking, without having any thing to say; and with walking, without knowing where to go. And, prior to both these, I am disposed to believe that the waking hours of infancy are agreeably taken up with the exercise of vision, or, perhaps, more properly speaking, with learning to see.

But it is not for youth alone that the great Parent of creation hath provided; happiness is found with the purring cat, no less than with the playful kitten; in the armchair of dozing age, as

well as in either the sprightliness of the dance, or the animation of the chace. To novelty, to acuteness of sensation, to hope, to ardour of pursuit, succeeds—what is in no inconsiderable degree an equivalent for them all—"perception of ease;" herein is the exact difference between the young and the old. The young are not happy but when enjoying pleasure; the old are happy when free from pain. And this constitution suits with the degrees of animal power which they respectively possess. The vigour of youth was to be stimulated to action by impatience of rest, whilst, to the Imbecility of age, quietness and repose become positive gratifications. In one important respect the advantage is with the old: a state of ease is, generally speaking, more attainable than a state of pleasure; a constitution, therefore, which can enjoy ease, is preferable to that which can taste only pleasure. This same perception of ease oftentimes renders old age a condition of great comfort, especially when riding at its anchor after a busy or tempestuous life. It is well described by Rousseau, to be the interval of repose and enjoyment between the hurry and the end of life. How far the same cause extends to other animal natures, cannot be judged of with certainty. The appearance of satisfaction with which most animals, as their activity subsides, seek and enjoy rest, affords reason to believe that this source of gratification is appointed to advanced life under all or most of its various forms. In the species with which we are best acquainted, namely, our own, I am far—even as an observer of human life—from thinking that youth is its happiest season, much less the only happy one. As a Christian, I am willing to believe that there is a great deal of truth in the following representation, given by a very pious writer, as well as an excellent man:—"To the intelligent and virtuous, old age presents a scene of tranquil enjoyments, of obedient appetite, of well-regulated affections, of maturity in knowledge, and of calm preparation for immortality. In this serene and dignified state, placed, as it were, in the confines of two worlds, the mind of a good man reviews what is past with the complacency of an approving conscience, and looks forward with humble confidence in the mercy of God, and with devout aspirations towards his eternal and ever-increasing favour."

What is seen in different stages of the same life, is still more exemplified in the lives of different animals. Animal enjoyments are infinitely diversified. The modes of life to which the organisation of different animals respectively determines them, are not only of various, but of opposite kinds. Yet each is happy in its own; for instance, animals of prey live much alone; animals of a milder constitution, in society: yet the herring which live in shoals, and the sheep which live in flocks, are not more happy in a crowd, or more contented amongst their com-

panions, than is the pike or the lion with the deep solitudes of the pool or the forest.

But it will be said that the instances we have here brought forward, whether of vivacity or repose, or of apparent enjoyment derived from either, are picked and favourable instances. We answer, first, that they are instances, nevertheless, which comprise large provinces of sensitive existence; that every case which we have described is the case of millions. At this moment, and every given moment of time, how many myriads of animals are eating their food, gratifying their appetites, ruminating in their holes, accomplishing their wishes, pursuing their pleasures, taking their pastimes! In each individual, how many things must go right for it to be at ease! yet how large a proportion out of every species is so in every assignable instant! Secondly, we contend, in the terms of our original proposition, that throughout the whole of life, as it is diffused in nature, and as far as we are acquainted with it, looking to the average of sensations, the plurality and preponderancy is in favour of happiness by a vast excess. In our own species, in which, perhaps, the assertion may be more questionable than in any other, the preponderancy of good over evil,—of health, for example,—and ease over pain and distress, is evinced by the very notice which calamities excite. What inquiries does the sickness of our friends produce! what conversation their misfortunes! This shows that the common course of things is in favour of happiness; that happiness is the rule, misery the exception. Were the order reversed, our attention would be called to examples of health and competency, instead of disease and want.

One great cause of our insensibility to the goodness of the Creator, is the very extensiveness of his bounty. We prize but little what we share only in common with the rest or with the generality of our species. When we hear of blessings we think forthwith of successes, of prosperous fortunes, of honours, riches, preferences, that is, of those advantages and superiorities over others which we happen either to possess, or to be in pursuit of, or to covet. The common benefits of our nature entirely escape us; yet these are the great things; these constitute what most properly ought to be accounted blessings of Providence, what alone—if we might so speak—are worthy of its care. Nightly rest, and daily bread, the ordinary use of our limbs, and senses, and understandings, are gifts which admit of no comparison with any other; yet, because almost every man we meet with possesses these, we leave them out of our enumeration; they raise no sentiment, they move no gratitude. Now, herein is our judgment perverted by our selfishness. A blessing ought, in truth, to be the more satisfactory; the bounty, at least, of the donor is rendered more conspicuous

by its very diffusion, its commonness, its cheapness, by its falling to the lot and forming the happiness of the great bulk and body of our species as well as of ourselves. Nay, even when we do not possess it, it ought to be matter of thankfulness that others do; but we have a different way of thinking. We court distinction; that is not the worst—we see nothing but what has distinction to recommend it. This necessarily contracts our views of the Creator's beneficence within a narrow compass; and most unjustly. It is in those things which are so common as to be no distinction, that the amplitude of the Divine benignity is perceived.

But pain and privations no doubt exist in numerous instances, and to a degree which, collectively, would be very great if they were compared with any other thing than with the mass of animal fruition. For the application, therefore of our proposition to that mixed state of things which these exceptions induce, two rules are necessary; and both, I think, just and fair rules. one is, that we regard those effects alone which are accompanied with proofs of intention; the other, that when we cannot resolve all appearances into benevolence of design, we make the few give place to the many, the little to the great: that we take our judgment from a large and decided preponderancy, if there be one. When God created the human species, either he wished their happiness, or he wished their misery, or he was indifferent and unconcerned about either.

If he had wished our misery, he might have made sure for his purpose, by forming our senses to be so many sores and pains to us, as they are now instruments of gratification and enjoyment: or by placing us amidst objects so ill suited to our perceptions, as to have continually offended us, instead of ministering to our refreshment and delight. For example, he might have made every thing we tasted bitter; every thing we saw loathsome; every thing we touched a sting; every smell a stench; and every sound a discord.

If he had been indifferent about our happiness or misery, we must impute to our good fortune (as all design by this supposition is excluded) both the capacity of our senses to receive pleasure, and the supply of external objects fitted to produce it. But either of these, and still more both, being too much to be attributed to accident, nothing remains but the first supposition, that God, when he created the human species, wished their happiness, and made for them the provision which he has made with that view, and for that purpose. The same argument may be proposed in different terms, thus: Contrivance proves design; and the predominant tendency of the contrivance indicates the disposition of the designer. The world abounds with contrivances: and all the contrivances which we are acquainted with are directed to beneficial purposes. Evil,

no doubt, exists; but is never, that we can perceive, the object of contrivance. Teeth are contrived to eat, not to ache; their aching now and then is incidental to the contrivance, perhaps inseparable from it; or even, if you will, let it be called a defect in the contrivance, but it is not the object of it. This is a distinction which well deserves to be attended to. In describing implements of husbandry, you would hardly say of the sickle that it is made to cut the reaper's hand; though from the construction of the instrument, and the manner of using it, this mischief often follows. But if you had occasion to describe instruments of torture or execution, this engine, you would say, is to extend the sinews; this to dislocate the joints, this to break the bones; this to scorch the soles of the feet. Here pain and misery are the very objects of the contrivance. Now nothing of this sort is to be found in the works of nature. We never discover a train of contrivance to bring about an evil purpose. No anatomist ever discovered a system of organisation calculated to produce pain and disease; or, in explaining the parts of the human body, ever said, this is to irritate; this to inflame; this duct is to convey the gravel to the kidneys; this gland to secrete the humour which forms the gout: if by chance he come at a part he knows not the use of, the most he can say is, that it is useless; no one ever suspects that it is put there to incommode, to annoy, or to torment.

Our second proposition is, "that the Deity has added pleasure to animal sensation; beyond what was necessary for any other purpose; or when the purpose, so far as it was necessary, might have been effected by the operation of pain." This proposition may be thus explained: The capacities, which according to the established course of nature are necessary to the support or preservation of an animal, however manifestly they may be the result of an organisation contrived for the purpose, can only be deemed an act, or a part of the same will as that which decreed the existence of the animal itself; because, whether the creation proceeded from a benevolent or malevolent being, these capacities must have been given, if the animal existed at all. Animal properties, therefore, which fall under this description, do not strictly prove the goodness of God: they may prove the existence of the Deity; they may prove a high degree of power and intelligence; but they do not prove his goodness; for as much as they must have been found in any creation which was capable of continuance, although it is possible to suppose, that such a creation might have been produced by a being whose views rested upon misery. But there is a class of properties which may be said to be superadded from an intention expressly directed to happiness; an intention to give a happy existence, distinct from

the general intention of providing the means of existence; and that is, of capacities for pleasure, in cases wherein, so far as the conservation of the individual or of the species is concerned, they were not wanted; or wherein the purpose might have been secured by the operation of pain. The provision which is made of a variety of objects not necessary to life, and ministering only to our pleasures, and the properties given to the necessities of life themselves, by which they contribute to pleasure as well as preservation, show a further design than that of giving existence. A single instance will make all this clear. Assuming the necessity of food for the support of animal life, it is requisite that the animal be provided with organs, fitted for the procuring, receiving, and digesting of its food. It may be also necessary that the animal be impelled by its sensations to exert its organs. But the pain of hunger would do all this—why add pleasure to the act of eating? sweetness and relish to food? why a new and appropriate sense for the perception of the pleasure? Why should the juice of a peach, applied to the palate, affect the part so differently from what it does when rubbed upon the palm of the hand? This is a constitution which, so far as appears to me, can be resolved into nothing but the pure benevolence of the Creator. Eating is necessary; but the pleasure attending it is not necessary; and that this pleasure depends, not only upon our being in possession of the sense of taste, which is different from every other, but upon a particular state of the organ in which it resides—a felicitous adaptation of the organ to the object—will be confessed by any one who may happen to have experienced that vitiation of taste which frequently occurs in fevers, when every taste is irregular, and every one bad.

In mentioning the gratifications of the palate, it may be said that we have made choice of a trifling example: I am not of that opinion. They afford a share of enjoyment to man; but to brutes I believe that they are of very great importance. A horse at liberty passes a great part of his waking hours in eating. To the ox, the sheep, the deer, and other ruminating animals, the pleasure is doubled. Their whole time almost is divided between browsing upon their pasture, and chewing their cud. Whatever the pleasure be, it is spread over a large portion of their existence. If there be animals, such as the lupous fish, which swallow their prey whole and at once, without any time, as it should seem, for either drawing out or relishing the taste in the mouth, is it an improbable conjecture that the seat of taste with them is in the stomach; or, at least, that a sense of pleasure, whether it be taste or not, accompanies the dissolution of the food in that receptacle, which dissolution in general is carried on very slowly? If this opinion be right, they are more than repaid for the defect of palate.

The feast lasts as long as the digestion. In seeking for argument, we need not stay to insist upon the comparative importance of our example; for the observation holds equally of all, or of three at least, of the other senses. The necessary purposes of hearing might have been answered without harmony; of smell without fragrance; of vision without beauty. Now, if the Deity, as we before said, were indifferent about our happiness or misery, we must impute to our good fortune (as all design by this supposition is excluded) both the capacity of our senses to receive pleasure, and the supply of external objects fitted to excite it. I allege these as two felicitous, for they are different things, yet both necessary: the sense being formed, the objects which were applied to it might not have suited it; the objects being fixed, the sense might not have agreed with them; a coincidence is here required, which no accident can account for. There are three possible suppositions upon the subject, and no more:—The first, that the sense, by its original constitution, was made to suit the object;—the second, that the object, by its original constitution, was made to suit the sense;—the third, that the sense is so constituted as to be able, either universally or within certain limits, by habit and familiarity, to render every object pleasant. Whichever of these suppositions we adopt, the effect evinces, on the part of the Author of nature, a studious benevolence.

If the pleasures which we derive from any of our senses depend upon an original congruity between the sense and the properties perceived by it, we know by experience, that the adjustment demanded, with respect to the qualities which were conferred upon the objects which surround us, not only choice and selection, out of a boundless variety of possible qualities, with which these objects might have been endued, but a proportioning also of degree, because an excess, or defect of intensity spoils the perception, as much almost as an error in the kind and nature of the quality. Likewise, the degree of dulness or acuteness in the sense itself is no arbitrary thing, but in order to preserve the congruity here spoken of, requires to be in an exact or near correspondency with the strength of the impression. The dulness of the senses forms the complaint of old age. Persons in fevers, and, I believe in most maniacal cases, experience great torment, from their preternatural acuteness. An increased, no less than an impaired sensibility, induces a state of disease and suffering.

The doctrine of a specific congruity between animal senses and their objects, is strongly favoured by what is observed of insects in the election of their food. Some of these will feed upon one kind of plant or animal, and upon no other: some caterpillars upon the cabbage alone; some upon the black currant alone. The species of caterpillar which eats the vine will starve

upon the elder; nor will that which we find upon fennel touch the rose-bush. Some insects confine themselves to two or three kinds of plants or animals. Some, again, show so strong a preference as to afford reason to believe that, though they may be driven by hunger to others, they are led by the pleasure of taste to the few particular plants alone; and all this, as it should seem, independently of habit or imitation. But should we accept the third hypothesis, and even carry it so far as to ascribe every thing which concerns the question to habit, (as in certain species, the human species most particularly, there is reason to attribute something,) we have then before us an animal capacity, not less perhaps to be admired than the native congruities which the other scheme adopts. It cannot be shown to result from any fixed necessity in nature, that what is frequently applied to the senses should of course become agreeable to them. It is, so far as it subsists, a power of accommodation provided in these senses by the Author of their structure, and forms a part of their perfection.

In whichever way we regard the senses, they appear to be specific gifts ministering not only to preservation, but to pleasure. But what we usually call the senses are probably themselves far from being the only vehicles of enjoyment, or the whole of our constitution, which is calculated for the same purpose. We have many internal sensations of the most agreeable kind, hardly referrible to any of the five senses. Some physiologists have held, that all secretion is pleasurable; and that the complacency which in health, without any external assignable object to excite it, we derive from life itself, is the effect of our secretions going on well within us. All this may be true; but if true, what reason can be assigned for it except the will of the Creator? It may reasonably be asked, Why is any thing a pleasure? And I know no answer which can be returned to the question, but that which refers it to appointment. We can give no account of our pleasures in the simple and original perception; and even when physical sensations are assumed, we can seldom account for them in the secondary and complicated shapes in which they take the name of diversions. I never yet met with a sportsman who could tell me in what the sport consisted; who could resolve it into its principles, and state that principle.

The "quantum in rebus inane," whether applied to our amusements or to our graver pursuits, (to which in truth it sometimes equally belongs), is always an unjust complaint. It trifles engage, and if trifles make us happy, the true reflection suggested by the experiment is upon the tendency of nature to gratification and enjoyment; which is, in other words, the goodness of its Author towards his sensitive creation.

Rational natures, also, as such, exhibit qualities which help to confirm the truth of our position. The degree of understanding found in mankind is usually much greater than what is necessary for mere preservation. The pleasure of choosing for themselves, and of prosecuting the object of their choice, should seem to be an original source of enjoyment. The pleasures received from things great, beautiful, or new, from imitation, or from the liberal arts, are in some measure not only superadded, but are mixed gratifications, having no pains to balance them.

I do not know whether our attachment to property be not something more than the mere dictate of reason, or even than the mere effect of association. Property communicates a charm to whatever is the object of it. It is the first of our abstract ideas; it cleaves to us the closest and the longest. It endears to the child its plaything, to the peasant his cottage, to the landholder his estate. It supplies the place of prospect and scenery. Instead of coveting the beauty of distant situations, it teaches every man to find it in his own. It gives boldness and grandeur to plains and fens; tinge and colouring to clays and fallows.

All these considerations come in aid of our second proposition. The reader will now bear in mind what our two propositions were. They were, first, that in a vast plurality of instances, in which contrivance is perceived, the design of the contrivance is beneficial; secondly, that the Deity has added pleasure to animal sensations beyond what was necessary for any other purpose; or when the purpose, so far as it was necessary, might have been effected by the operation of pain. Whilst these propositions can be maintained, we are authorised to ascribe to the Deity the character of benevolence; and what is benevolence at all, must in him be infinite benevolence, by reason of the infinite, that is to say, the incalculably great number of objects upon which it is exercised.

STATISTICS OF CRIME AT PRESTON.

BY THE REV. JOHN CLAY; READ AT THE STATISTICAL SOCIETY, AND PRINTED IN THE ATHENÆUM.

THE second paper read stated, first, the number of persons committed for felony to Preston

gaol in each year, together with the result of their trials, and the nature of their sentences, at

length. One gratifying fact which this exhibits is worthy of notice, namely, that the number of committals has considerably decreased within the last two years, the average of that period being less by 23 per cent. than the average of the four preceding years. The results of the trials also indicate the offences to have been of a much less serious character than during former years. The proportion of offences was then compared with the population of the several towns and districts in which they were committed. In the district of Pendle Forest, containing more than 7000 inhabitants, and in Oswaldtwistle, containing 5897 inhabitants, the number of offences in two years was only one in each. In the other fifteen districts the average fluctuates between one offender in 2853 inhabitants to one in 530. Mr. Clay had examined these proportions in order to discover whether they indicated any excess of crime in either the manufacturing or the agricultural districts; but he found that any reference to the employment of the population would fail to afford an adequate cause for the disparity; thence he concludes, that these variations are not differences in the amount of *real* crime, but only in that which is *detected*—that there exists no great real disparity in the moral state of the inhabitants of the several districts, but that irregular characters are more closely watched, and the police more efficient in some places than in others, and that consequently the laws are not enforced with that uniformity which is essential to their proper efficacy.

Two causes likely to affect any comparisons between the amount of crime existing in different districts are, proximity to a large town, which will occasion an increase in the number of offences, although the population of the district may share in them to a very small extent; and a difference in the practice of disposing of cases by summary conviction instead of committing the parties to the Quarter Sessions.

Another circumstance to be taken into consideration is, the difference between the number of offences committed at a place, and the number of offenders resident there.

From all these circumstances, it is almost impossible, in the present state of criminal statistics in this country, to form any correct estimate of the comparative morality of different districts.

The next point noticed was the ages of the prisoners, divided into periods of five or ten years, and the proportion which the number within each period bears to the total population in the same class.

Thus, of 1046 persons committed in five years,

71 or $7\frac{1}{2}$ per cent. were under 15 years of age.
 289 ... $27\frac{1}{2}$... between 15 and 20.
 361 ... 34 ... 20 and 30.
 167 ... 16 ... 30 and 40.
 84 ... 8 ... 40 and 50.
 67 ... 7 ... above 50.

Taking the average yearly committals for four years, and comparing each of the above classes with the gross publication, as given in the census of 1831, it appears that the proportion of yearly offences to the population, between the ages of 10 and 15, was one to 2076 persons; between 15 and 20 one in 500; between 21 and 30 one in 583; between 31 and 40 one in 1238; between 41 and 50 one in 1406; and above 50 one in 2453.

Thus it is shown that 35 per cent. of the number of offences is committed by persons under 20 years of age, and 34 per cent. by persons between 20 and 30, after which age the proneness to crime seems to diminish rapidly; but it is to be observed, that criminals are not long lived, and many are transported.

It appears, also, that the proportion of crimes committed by persons between 15 and 20 years of age exceeds that committed by persons of any other class; and this latter point must be taken into consideration in any estimate of the prevalence of crime among persons of one age compared with those of another. It must be remembered that the number of persons existing at any one time of a certain age, considerably exceeds the number existing of another age; and hence, although the greatest numerical amount of offence existed among persons between 21 and 30 years of age, yet the greatest proportionate amount was among those between 15 and 20.

Offences committed by children under 15 are equal in number to those committed by persons between 40 and 50, which is doubtless the direct consequence of parental neglect.

These reports contain valuable statements as to the causes which led to violations of the law, exhibited sometimes in connexion with the nature of the offences, sometimes with the ages of the offenders. The information was obtained chiefly by personal inquiry from the prisoners themselves, who are stated generally to manifest a great degree of candour in detailing the circumstances connected with their offences.

The following is an abstract of 723 cases:—

Drunkenness	375
Want	50
Temptation	19
Neglect of parents	6
Weak intellects	6
Combination	11
Idleness and bad company	52
Idleness and ignorance	18
Confirmed bad habits	16
Alleged innocence and various causes	170

723

It hence appears that no less than 375, or 52 per cent., arose from drunkenness directly connected with the crime; either from offences which took place in public houses and beer shops, or when the offender, or party upon whom the

offence was committed, was in a state of intoxication. Mr. Clay expresses his opinion, that if all the particulars connected with a criminal's guilt were made known, or if his general habits could be ascertained, drunkenness, which now appears to account for 52 per cent. of the offences, would manifest itself as being little short of the universal cause of criminality.

A comparison of the causes of crime with the ages of the offenders, shows that the influence of intoxication in causing crime is greatest between the ages of 20 and 30.

In the two principal classes of offences, felonies and assaults, the number of the latter arising from intoxication was 74 per cent. of the whole, while the felonies, from the same cause, did not exceed 58 per cent.

The occupations of the persons indicted for felonies during three years were noticed, showing that of 550 men and boys, 268, or 48½ per cent., were immediately connected with manufactures; 78, or 14 per cent., were labourers; and 26, or 5 per cent., were tramps. The remaining 22½ per cent. comprehended persons engaged in various trades, or occupations of a mixed nature.

Upon the subject of the influence of the factory system in producing crime, the Report remarked, that the rigid discipline, vigilance, and ceaseless activity, in cotton mills, precludes opportunity for concerting the commission of crime.

The following statement was given of the degree of instruction which had been received by each individual:—

Of 340 men, 153, or 43 per cent., were altogether unable to read; 82, or 23 per cent., were barely able to read.

Of the remainder, 76, or 22 per cent., could read easy sentences, while only 41, or 13 per cent., could read well.

Of the 340 men, 25 could write their names; 17 others could write a little; 14 could write tolerably well; and only 10 could write with any facility.

Of 78 women, 33, or 43 per cent., were unable to read; 28, or 36 per cent., could barely read; 12, or 15 per cent., could read easy sentences; and 5, or 7 per cent., only could read well.

Of the 78 women, 4 could write their names; 2 others could write a little; and 2 could write well.

From which it appears that, instruction in reading is less general in this district among females than among males. The proportion of females instructed in writing is also much smaller.

The Report contained some just remarks upon the frequent misapplication of the term education. It was stated, that it is certainly mistaking the means for the end, to suppose that a man is educated, when, by having been taught to use books, he is only put into a capacity for attaining education—that is, for cultivating his understanding, and learning to regulate his principles. It was added, that of the 398 prisoners who could in some degree read and write, there were not more than 14 or 15 to whom the term "educated" was at all applicable.

A great difference was noticed between the state of instruction among the criminals at Preston and those in the gaols of London. It appears from the report of the Chaplain of Cold Bath Fields, that of 966 prisoners, the uneducated portion amounted to 103, and the educated to 863. Thus, while at Preston the number of uneducated criminals is considerably more than double that of the educated, in London the proportion of uneducated is only one-ninth. London, it was said, is the attractive centre and receptacle for the greatest portion of the trained thieves in the kingdom, who subsist by a skill dependent on education, or rather knowledge; while the criminals of a neighbourhood like that around Preston are such as have been born within it, and therefore furnish better data for estimating the moral value of education.

The last point noticed in the Report related to the state of religious instruction among the prisoners. In 1836, there were in 198 persons only 8 persons who possessed any competent knowledge of the Christian religion; and 116 were wholly unable to answer the simplest questions about it. It was remarked as an omission of the greatest importance, that no information was given respecting the number and circumstances of relapsed criminals; and that great misconception prevails with respect to the extent of crime and the number of habitual criminals, it being a fact that the number of criminals bears a small proportion to the number of offences committed, so that the government might readily adopt measures for confining or otherwise ridding the country of its whole criminal population.

BEARDS AND WIGS.

THAT very important and unexpected effects arise from the most trivial causes, is to be discovered in every page of history, as well as in every line of the passing volume of life. Circumstances, to all appearance, the most inconsequential and insignificant, have not only dipped

thousands of pens in the bitter ink of controversy, produced infinite envy, heart-burning, and calumny, but have also turned the ploughshare and the pruning-hook into weapons of bloodshed and destruction.

Turning away, with alarm, from the subject at

large, which would be little less than the history of the world, permit me to call your attention to the virulent animosities which have been created, among a large and powerful part of mankind, in different ages, by the modes of dressing the hair, wearing beards, and weaving periwigs.

It is not with any view to instruct you that I mention the great veneration which in former times has been paid to the hair, but to give somewhat of order and arrangement to the weighty matter under my immediate consideration. That the tresses of pious virgins were thought an acceptable offering to their tutelary goddess, is well known by every classical student; nor is it less an object of common literary knowledge that, among the Greek and Romans, the first fruits of the human temples, as well as of the chin, were claimed, with great ceremony, by the altars of Bacchus, Neptune, and other presiding divinities. In later times, but in the early part of our era, (you perceive I write as a Christian,) an oath was supposed to demand instant conviction, when a man swore by his hair; and the act of salutation was never so graceful or acceptable as when it was accompanied by the plucking an hair from the head, and presenting it to the person who was the object of respectful attention. The offering the hair to be cut was an acknowledgment of sovereignty, and an acceptance of the offer was considered as an assurance of adoption. The serf, or bondsman, was distinguished by the shortness of his hair; and the insolvent debtor, on resigning himself to the future service of his creditor, presented potent scissors, whose instant sharpness was applied to his flowing locks, the marks of that freedom he no longer possessed.

Long hair being at this period the distinguishing proof of a gentleman, and, of course, an object of great care and attention, became a subject for pulpit sarcasm; and religious oratory did not fail to make the churches echo with the crime of toilet assiduity. At length, however, some of the younger clergy, sighing after the appearance of fashionable life, ventured upon the reigning mode, and gave a new *ton* to clerical *cœffure*, which was soon adopted by a long train of their complying brethren. This schism in dress caused the ecclesiastics to turn the tide of invective from the lay world to each other, and produced a division in the church, which drew forth, through no small period, the retaliating menaces of damnation from the long-haired and short-haired clergy.

The respect which has been shown to the beard, in all parts of the civilised, and in some parts of the uncivilised world, is well known to the slightest erudition; nay, a certain prejudice in its favour still exists even in the countries where the razor has long been omnipotent. This impression seems to arise very naturally from the habit of associating with it those ideas of expe-

rience and wisdom of which it is the emblem. It cannot wait upon the follies of youth; its bushy and descending honours are not known to grace the countenance of early life; and though it may be said in some degree to grow with our growth, and strengthen with our strength, it continues to flourish in our decline, and attains its most honourable form and beauty when the knees tremble, the voice grows shrill, and the pate is bare.

When the bold and almost blasphemous pencil of the enthusiastic painter has aimed at representing the Creator of the world upon the canvas, a flowing beard has ever been one of the characteristic and essential marks of the Supreme Divinity. The pagan Jupiter, and the graver inhabitants of Olympus, would not be known without this majestic ornament. Philosophy, till our days, has considered it as the appropriate symbol of its profession. Judaic superstition, Egyptian wisdom, Attic elegance, and Roman virtue, have been its fond protectors. To make it an object of dissension, and alternately to consider it as a sign of orthodoxy or the standard of heresy, was reserved for the fanatical zeal of the antichristian church.

In more modern times, not only provincial and national, but general councils have been convened, synods have been summoned, ecclesiastical congregations and cloistered chapters of every denomination have been assembled, to consider, at different periods, the character of this venerable growth of the human visage; infinite disputes have been, of course, engendered, sometimes with respect to its form, at other times in regard to its existence. Religion interested itself in one age in contending for that pointed form to which nature conducts it; at a succeeding period, anathemas have been denounced against those who refused to give it a rounder shape; and to these, other denunciations have followed, which changed it to the square or the scollop. But while religious caprice—for religionists, sorry am I to say it, seem to be troubled with caprices—quarrelled about form and shape, the disputes were confined within the pale of the western church; but when the beard lessened into whiskers, and the scythe of ecclesiastical discipline threatened to mow down every hair from off the face, the east sounded the alarm, and the churches of Asia and Africa took up the cause, and supported with all the violence of argument and remonstrance those honours of the chin that they still preserve, and to which the existing inhabitants of those climates offer up a perpetual incense.

In the history of the Gallic Church, (for by some unaccountable accident I have sometimes stumbled upon a page of ecclesiastical story,) the scenes of religious comedy still live in description. For example: a bearded bishop appears at the door of a cathedral in all the pomp of

prelacy, and demands installation to the diocese to which he is appointed. He is there met by a troop of beardless canons, and refused admittance unless he will employ the golden scissors they present to him, to cut that flowing ornament from his face, which they would think a disgrace to their own, as well as to the religion they profess. This same history, also, is not barren of examples, where the sturdy prelate has turned indignant from the disgraceful proposal, and sought the enforcing aid of sovereign power, which has not always been able, without much difficulty, to compel the reluctant chapter to acknowledge a bearded diocesan. Others, unwilling to risk or delay the power and wealth of an episcopal throne for the sake of a cumbrous bush of hair, have, by the ready sacrifice of their beards, been installed amid acclamations and hosannas, as disgraceful as they were undeserved. It may appear still more ridiculous, but it is no less true, that some of these bishops have compounded the matter with their refractory clergy, in giving up the greater part of the beard, but retaining the growth of the upper lip in the form of whiskers. The idea of a bishop *en moustaches* must trouble the spirit of a modern Christian; but such there have been, who, in the act of sacrificing to the God of peace, have exhibited the fierce terrific aspect of a German pioneer.

At length the persecuted beard, which has been the object of such faithful veneration, finds in our quarter of the globe (if we except the corner of European Turkey) its only asylum in the Capuchin cloister; unless we add the casual protection which is given to it by the fanatical Jew or mendicant hermit.

The wig, peruke, or periwig, with the clerical tonsure, have been the cause of as much ecclesiastical contention as the Arian and Athanasian schisms. The last century experienced all its fury, which would not have given way to less important events than the Edict of Nantes and the Questions of Jansenius. The former turned bigotry to a more engaging object, and lost common sense in astonishment; while the latter opened a new vent in the combustious volcano of religious discord.

The first wig which is mentioned in history was the hairy skin of a goat, which the daughter of Saul is related to have employed to save the life of her husband. In a succeeding age, Xenophon makes mention of the periwig of Astyages, the grandfather of Cyrus; and describes the astonishment which seized the royal boy on beholding his ancestor so majestically covered. Suidas and Tacitus both bear testimony that Hannibal, of Carthage, wore a peruke, and that his wardrobe was furnished with a very large assortment of wigs, of all kinds, fashions, and colours, not only for the purpose of magnificence, but also from the policy which frequently obliged him to change his appearance.

The Romans, and in particular the fashionable ladies of Rome, had great recourse to false hair; that of a white colour was the *ton* in Ovid's days; and it was imported from Germany, where it was common:—

*"Nunc tibi captivos mittet Germania crines;
Cultus triumphatæ munere gentis eris."*

This courtly gallant poet is very severe upon the custom; Martial has made it the subject of several epigrams; and Juvenal charges Messalina with wearing the adscititious ornament of her head to obtain concealment in the pursuit of her debaucheries. The ladies of the present day may, therefore, shelter themselves behind the greater extravagance of the female Romans. The latter imported their borrowed locks from a foreign country, while the former are contented with the spoils of death in their own, and do not shudder at mingling with their own tresses such as are furnished by the fatal hand of disease in hospitals and infirmaries.

Louis XIII., of France, having lost his hair, was obliged to ask, or, as he was king, I should rather say, command, the comfortable aid of a periwig; and the necessity of the sovereign cut off all the hair of his fashionable subjects. Louis XIV. annexed great dignity to his peruke, which he increased to an enormous size, and made a lion's mane the object of its similitude. That monarch, who daily studied the part of a king, was never seen with his head uncovered but by the barber who shaved him. It was not his practice to exchange his wig for a night-cap till he was enclosed by his curtains, when a page received the former from his hand, and delivered it to him in the morning before he undrew them. The figure of the great Bourbon must at times have been truly ridiculous. But of ridiculous figures—had I lived in the reign of good Queen Anne, my thread-paper form and baby face must have been adorned with a full-bottom periwig, as large as that which bedecks the head and shoulders of Mr. Justice Blackstone, when he scowls at the unhappy culprit who is arraigned before him.

It is, I believe, very generally known, that there is no small number of the clergy who love a little of the *ton* as well as the ungodly laymen: the question, therefore, of wearing wigs, with the form of ecclesiastical tonsure, became a matter of bitter controversy; and the first *petit-maitre* of a clergyman, who was bold enough to appear in a wig, was called *le patriarche des ecclésiastiques emperruqués*. At this time was published the famous book in favour of periwigs, with the admirable title of "Absalom," whose melancholy fate was caused by his hair; and I remember in the humorous exhibition of sign painters, with which I think Bonnel Thornton amused the town some years ago, that he adopted this idea in a representation of the Jewish prince suspended in mid-air, as related in Holy Writ, which

was entitled "A Sign for Peruke makers." Tom Warton, of Oxford, wrote a little Latin *jeu d'esprit* on the subject of wigs, with their applications and effects, of which it concerns me to remember no more than that it possessed his usual latinity and classical humour. Hogarth also employed his pencil to ridicule the full bottoms, especially the aldermanic ones of the last coronation, with his accustomed success. But of the histories that relate to this subject, the most extraordinary, and which will be hardly credited by posterity, is the petition delivered by the peruke makers of London to his present majesty, praying him, for the benefit of their trade, to resume the wig he had been pleased to lay aside: and, what adds to the ridicule, as well as the impudence of the measure, I have been informed, by a spectator of their procession, that a considerable number of them actually wore their hair, though they openly avowed the sacrilegious wish to pluck that ornament from the pate of sovereignty.

In the Augustan age of the Roman empire, the wit and the satirist have employed their different weapons against the prevailing attentions to the decorations of the hair; and Seneca, in

one of his epistles, writes with solemn indignation against the Roman toilets, which he describes in the precise form and process of our own. Some of the fathers were equally severe against the female coquettes of their time, as their denunciations seem to be more particularly levelled at the fairer part of the creation. One of them, in particular, declares, that they who employ their hours in arranging their hair, instead of performing the duty of Christians, sacrifice to the fabled deities of impurity.

But, to conclude my unsuspected learning on this subject, I must add the curious reproach of Tertullian against the high head-dresses, as well as the practice of dying the hair, so prevalent in his day. He concludes his earnest address on this subject to the ladies, by impressing on their attention the sacred text, that we cannot make an hair white or black, or cause the least addition to our stature; and reproaches them on employing the above-mentioned arts of the toilet to effect both these purposes, and thereby giving an express lie to the Divine declaration of the Gospel.—*Lord Lyttleton's Letters.*

REVIEW.

The Progress of Creation considered with reference to the present Condition of the Earth. By MARY ROBERTS. London: Smith, Elder and Co. 1837.

THIS is really a very elegant volume, full of valuable matter, illustrated by fourteen steel and wood engravings, and printed and bound in a manner which must please the most fastidious. We have but little acquaintance with its fair author, (for how is it possible in these busy days to know a tithe of those who press forward to literary fame?) but we are sure that the mind which could produce a volume like that on our table, is destined to extensive usefulness. The crowded state of our pages will not allow us to go into the subject of this book as we would otherwise do, but we will quote a paragraph or two from the preface, illustrative of the sound principles on which the work is constructed, and will then extract a single passage from the book itself, to show the interesting manner in which the author has executed her task.

"My meditations on this subject have led me to pass on to the present condition of the earth, and to consider its animal and vegetable productions with an especial reference to the benefits which they confer on man. I have further observed their adaptation to different portions of the globe, and how wonderfully the most inhospitable regions are rendered habitable by the location of some peculiar species. Remarkable phenomena on the surface of the earth have been also pointed out; and, in so doing, I must confess my obligations to the learned author of the 'Comparative Estimate of the Mineral and Mosaic Geologies,' and to 'Cuvier's Essay on the Theory of the Earth'."

"Throughout this volume, I have ever kept in view, that the heavens and earth were finished, and all the host of them, in six days; and that no theory, however plausible, can be admitted in opposition to the Divine record."

We select the following passage on the means by which the beds of the great rivers were first formed:—

"If a flood of waters was to descend for the first time from a mountainous source, and spread itself along a level country, and increase by means of the waters that continually followed with

equal violence and rapidity, what would be the natural consequence? If the first rushing waters found no bed ready to receive them, no channel through which to flow, they would spread themselves in all directions, and roll on in a state of wild and uncontrolled inundation, or rush tumultuously down some steep declivity, to overflow the lower ground. Most assuredly they could not form for themselves a narrow and confined channel, below the level of the plain, and between upright banks. Let any one, for instance, survey the course of the Rhine, and see that majestic river flowing for upwards of thirty miles, from the Seven Mountains to Cologne, through a vast and level plain, and in a bed, whose uniform breadth appears in the distance, like an azure ribbon drawn along that plain, and he will be sensible that the gradual diffusion of even a considerable stream could not have formed for that river the deep channel through which it flows. For let us consider what the bed of a river really is. It is a vast and extensive trench, and we know that in the forming of a trench, considerable labour is required; the soil must be thrown out with care, and the stones removed. But this could not be done by the action of the waters. The Danube, for example, could never have won its way to the Black Sea, a distance of seven hundred leagues, and often through a level country; where the land, on either side the banks, slopes considerably; yet over these the waters are prevented from falling, by the restraint of their banks, when without them, the surrounding country would be liable to perpetual inundations. In tracing the original formation of these river-beds, and of the valleys through which they occasionally pass, we must again refer to the era of the deluge. When the waters which had overwhelmed the earth began to roll towards the place that was assigned them, they must have produced on the soft and yielding earth, effects proportioned to their rapidity and weight. Currents of such mighty power, when driven forward by the wind that was made to pass over them, were fully adequate to furrow the soil, and to excavate the valleys. The winds, therefore, and the currents, produced those undulations on the surface of the earth, which are either gently sloping hollows, or deep valleys, or those deeper channels that form the beds of rivers, which are so turned in many places from the nearest seas, and conducted through extensive inland regions, that it is impossible to contemplate them, without being forcibly struck with the excellency of their arrangement. This is especially discoverable in the Danube, and the Ganges, the Nile, and the Amazon. The direction of all these rivers is determined by the valleys in which they begin to flow. The first formation of those valleys must therefore be ascribed to Him who sendeth the springs to flow among them, and who by their means gives drink to every beast of the field. Were it not for this admirable method of irrigating the earth, the whole system of vegetation must necessarily perish.

"The varied arrangement of those depressions, which are called valleys, and their connexion, both with mountains and with rivers, can therefore only be referred to the one 'Great Cause from which all things proceed.' And it is a blessed thing to refer them to that one 'Great Cause.' Every thing shall live whither the river cometh,* and why? Because a channel is cut for each, and all are collectively directed, where they are most wanted. But if the streams had overflowed, when the waters gushed out, without confinement or direction, many portions of the earth would have perished, either because the rivers could not have extended to them; or because the unconfined waters would have stagnated, or have pursued the nearest declivities that tended to the sea. Instead of this, God cut out the rivers among the rocks, and sent the springs into the valleys.† He cleft the earth with rivers,‡ and thus watered its separate portions.

'The sea, the sea, the deep proud sea!'

"What a glorious prospect is afforded by its vast expanse! How admirably are all things adjusted for the convenience of this world! What boundaries are set to the wild impetuosity of the billows! At one time high mural rocks forbid their encroachments; at another, smooth sand is placed for the bound of the sea, by a perpetual decree that it cannot pass it, and though the waves thereof toss themselves, yet they cannot prevail; though they roar, yet they cannot pass over it." Jer. v. 22. pp. 260—262.

We cannot resist the temptation we feel to place before our readers the following beautiful passage with which the volume closes; assured that such a book must commend itself to the judgment of every enlightened mind:—

* Ezekiel xlviii. 9. † Psalm civ. 10. ‡ Habak. iii. 9.

"One thousand millions of human beings are conjectured to exist upon this revolving planet. But who can number the quadrupeds and birds, the fishes that pass along the great waters, and the insect population that inhabit every leaf and opening flower. Examine a map of the world. There are the Alps and the Rhipæan hills, and Caucasus, and the magnificent sweep of the Andes. There are the Cordilleras, and the high hills of Tartary and China. Yonder are the snow-clad mountains of the frozen regions, and beneath them rolls the Arctic sea. Lower down is Iceland, the cultivated fields of Britain, civilised Europe, and burning Africa, the vast continent of America, stretching from north to south, the smiling plains of Mexico, Peru, and Chili, turbaned India, and all the glory and luxuriance of the east. Look again, but with the mental eye, for the visual organ can no longer follow it; dissimilar races of men are conspicuous in various portions of the globe. One part is crowded with fair men, in another are seen clear olive faces, in another, black. Some are swarthy, others of pale complexions. Their languages are various, and their modes of thinking widely different. Each continent, and every large island, has also its own peculiar kind of quadrupeds, and birds, and insects. The lordly lion, the bear, the antelope, the wild bison, the tusked elephant, the reindeer, the wolf, the bear, and arctic fox, have all their boundaries assigned them. The air is filled with a winged population. The lakes and ponds, every sea and river, is stocked with fish and animated beings, of strange forms and aspects. Myriads of insects, and creeping things innumerable, are seen walking in the green savannah to their forests of interminable length, and among the branched moss that clothes the roots and branches of high trees. And more than even these, every leaf that quivers in the sun-beam, and every flower that drinks the dew of heaven, is in itself a world of animated life.

"Over the mighty whole watches One who never slumbers, and whose ear is ever open to the prayers of his children. He is our Father; his eye is perpetually upon us; the darkness of the night cannot hide from him, he sleeth out all our ways. He will not overlook us in the thronged city; nor need we fear to be forgotten in the most solitary place."

NOTES OF TRAVELLERS.

LEPROSY.—There is, near the walls of Morocco, about the north-west point, a village, called the Village of Lepers. I had a curiosity to visit it; I mounted my horse, and took two horse-guards with me, and my own servant. We rode through the lepers' town; the inhabitants collected at the doors of their habitations, but did not approach us; they, for the most part, showed no external disfigurement, but were generally sallow. Some of the young women were very handsome; they have, however, a paucity of eye-brow, which, it must be allowed, is somewhat incompatible with beauty; some few had no eyebrows at all, which completely destroyed the effect of their dark animated eyes. They are obliged to wear a large straw hat, with a brim about nine inches wide; this is their *badge of separation*, a token of division between the clean and the unclean, which, when seen from the country, or on the road, prevents any one from having personal contact with them. They are allowed to beg, and accordingly are seen by the sides of the roads, with their straw hat badge, and a wooden bowl before them to receive the charity of passengers, exclaiming, "Bestow on me the charity of God!" "All belongs to God!" reminding the passenger that he is a steward, and accountable for the appropriation of his property; that he derives his property from the bounty and favour of God. When any one gives them money, they pronounce a blessing on him, as "May God increase your good," &c.—*Jackson's Morocco*.

AMERICAN MOSQUITOES.—The mosquitoes seldom annoyed us at mid-day; but when we wished to enjoy the refreshing coolness of a morning or evening's walk, they fastened on us with their horrid stings, against which we had no defence except leather. By smoking, we might indeed keep them at a civil distance from our noses and the parts thereunto adjacent; but this was a preventive which, if constantly practised, would have

in a short time reduced our tobacco to a small quantity. The annoyance during our meals was worse. We were obliged to have an iron pot at each end of the table, filled with saw-dust or rotten wood; which substance, when ignited, produced a quantity of thick smoke without flame. It effectually drove them away; but it was a desperate remedy; for during the process of mastication we were nearly suffocated from the dense clouds of vapour by which we were enveloped. In the meantime our tormentors hovered about the doors and windows, watching the gradual dispersion of the smoke; and the moment the atmosphere became sufficiently clear, they charged in from all directions on our heads, necks, ears, faces, and hands, from whence it was impossible to dislodge them, until a fresh supply of saw-dust, thrown over the dying embers, put them once more to flight. The horses also suffered severely from these insects and the horse flies. We caused several fires of rotten wood to be made in the prairie in which they were grazing, and round which they instinctively congregated to avail themselves of the protection afforded by the smoke. Those which had short tails and cropped manes suffered more than the others; for with these weapons of nature (of which in America, at all events, it is cruel to deprive them) they could whisk off great numbers of the enemy; while the cropped horses, having no such defence, often had their hoofs and legs severely burned by standing in the fires to avoid the stings of their assailants. I have often observed the poor animals, when the smoke began to evaporate, gallop up to the fort, and neigh in the most significant manner for a fresh supply of damp fuel; and on perceiving the men appointed for that purpose proceed to the different fires, they followed them, and waited with the most sagacious patience until the smoke began to descend and disperse their tormentors.—*Cox's Columbia River*.

THE BOATMAN'S FOUNDLING.

It is a truth so generally believed as to have become almost an axiom, that benevolence always meets with its reward. Indeed, if no other reward were met with, the feelings it produces were sufficient; for it is, as Scripture plainly declares, "more blessed to give than to receive."

It was midnight; the busy hum of nature was hushed, and the gentle breezes of summer, as they kissed the soft waters of the canal, upsent a feeble murmur that seemed the lullaby of care. The boat of Robert Edwards was sinking in one of the locks about ten miles from the town of B——, where he resided, when suddenly he heard at a distance a splashing and a feeble cry. Impelled by humanity as well as curiosity, he hurried to the spot, and saw, by the light of the moon, something white floating in the middle of the stream. Fearless of that which was now, as it were, his native element, without waiting to undress himself, he rushed in, and lifted up in his arms an infant child. Not knowing what route the miscreant who had perpetrated the dark deed had taken, to attempt a pursuit would have been useless; so, as his wife was not blessed with any children, he resolved to adopt the little unprotected creature as his own. Hastening, therefore, back to the boat, he took off its wet clothes, wrapped it up in a blanket, and laid it to rest near his cabin fire.

Robert was not the best nurse in the world; but he managed to keep his little charge pretty quiet by feeding it with bread and milk, till his arrival at home; he then presented it to his wife for her protection. It is somewhat remarkable, that many women who have no children are most partial to them; and such was the case with Sally Edwards. She received the little creature as a precious boon, and found herself sufficiently repaid for her maternal cares by watching its infantile antics,

"And those quick bursts of joy, those glances bright,
Those gentle gleams of the half-risen sun
Upon the young horizon of its brow,
Those smiles that seemed reflections of her own,
So fond, so tender, which she sometimes met,
When waking from its rosy, peaceful sleep,
It upward fondly turned its azure eyes,
Like planets toward their suns, to catch the light
That flowed from hers."

Henry, for that was the name they gave the young foundling, soon grew a fine boy, and was as much distinguished for his dutiful attention to his foster-parents as many children are for their want of it to those who have still farther claims on their regard. At an early age he was put to a Sabbath-school in the neighbourhood, where he gained the respect of his teachers for his good behaviour and attention; and before he was ten years old, (as near as they were able to calcu-

late,) he occasionally accompanied his foster-father with the boat.

It was during one of these voyages that the mind of the lad seemed one evening unusually lost in thought; and the pained eye of his protector perceived, or thought he could perceive, a great depression of spirits. In vain he pointed out to him the beauties of the scenery; in vain he directed his attention to the gambols of the fishes, as they leaped up exulting in the air. Unusual gloom overspread his fair countenance, and the waters of his eye looked dim.

"Father," he at length exclaimed, "do you think we shall go to heaven?"

"I hope so, my lad," replied Edwards, "but what made you ask that question?"

"Because," he returned, "teacher told me last Sunday, that those *what* want to go to heaven should walk in the way there; and, above all things, pray to God."

"And so they should, my lad," answered Robert, with somewhat of an involuntary tremor.

"And why not you pray, father," said the boy; "and pray for me too?"

These words, spoken in the sweetest simplicity, touched the very soul of the boatman. The kind attentions of Henry, and his constant fulfilment of his commands, brought home to his thoughts his own neglect of that Father who had constantly supplied him with all that he needed. The sun, at that moment sinking behind the western hills, reminded him that the sunset of his existence was at hand. He burst into tears; and while the arms of the child were twined fondly round his neck, sunk upon his knees in fervent prayer.

The distant landscape was immersed next morning in the brilliance of the rising sun, and looked, to the rapt eye of the saint, like the new Jerusalem descending in its glory from on high. The eye of young Henry was lit with its usual vivacity on his waking from the dreams of night. Robert requested him to read a chapter in the Bible which had been given him by his teachers, and knelt down with him to prayer—a practice which, though begun in a moment of peculiar excitement, he carried on, whenever he was able, till the day of his departure from this world. The confidence of the apostle was not vain. He who beginneth a good work in the heart of man, carries it forward to the day of the Lord Jesus. The few words which the child had spoken so simply in his ear had sunk deep in the heart of the boatman; and both were eventually led to Him whose arms are ever open to receive the returning sinner.

Time rolled on, and brought its changes: the foster-father fell ill, and Henry, then about fifteen years of age, was obliged to attend (for a few

times he hoped) the boat in his stead. But the death-warrant of the old man was sealed by the Eternal, and the angels were commissioned to bear his happy spirit to a place of rest.

The heart-broken youth had already gone three voyages by himself, when, on returning from the last of them, he found the saviour and protector of his life sinking beneath the strokes of mortality, and she who had rocked the cradle of his infancy weeping beside him.

"Thank God!" exclaimed the dying man as he entered, "I behold thee then once more, my child, my darling child. O, blessed be those lips that first taught me the way of salvation! and blessed be the God and Father of our Lord Jesus Christ who gave to me such an inestimable treasure! I leave thy mother with thee. He who has sealed thee as a jewel of his own will teach thee thy duty towards her."

"My father! my more than father!" exclaimed Henry—he could say no more. He grasped the hand that was held out to him, and sinking on his knees, bathed it with tears.

Sally wept aloud. Robert Edwards alone, in the prospect of approaching dissolution, was unmoved, and calmly rebuked them for their sorrow. "Mourn not," he cried, "as those who have no hope. Have ye not heard that there is a resurrection from the grave? Have ye not

heard that they who are alive and remain at the coming of the Lord, shall not prevent those which are asleep, who first shall rise to meet him in the air. The days of my pilgrimage are almost over; but I know that my Redeemer liveth, and that though worms after my flesh devour this body, he shall raise it again to reign with him for ever.

'The world recedes, it disappears,
Heaven opens on my eyes, my ears
With sounds seraphic ring.
Lend, lend your wings, I mount, I fly,
O grave, where is thy victory!
O death, where is thy sting!'

'Thanks be to God that giveth us the victory through our Lord Jesus Christ!'

"My father! O my father!" exclaimed Henry, may the God of all grace and mercy"—tears again choked his utterance; he sobbed violently, and Sally, sinking on her knees beside him, seemed swallowed up in grief.

The old man himself was moved; he shed tears; but that momentary burst of feeling was too much for his weakened frame: the pangs of death gat hold upon him; he cast an affectionate look at his wife, another at his child, and fervently exclaiming, "Father, into thy hands I commend my spirit," expired without a groan.

J. R.

THE LIFE OF THOMAS PAINE,

AUTHOR OF THE "AGE OF REASON."

CHAPTER II.

It was in America, in the most critical period of the struggle between Great Britain and her colonies, that the intellectual powers of Paine were developed, and that he wrote the most popular and least noxious of his works.

As this memoir is not designed to exhibit the political opinions of its subject, or to follow him in the stormy career of anarchy and revolution, his writings and his conduct during this period will be only so far noticed as they discover the state of his mind and heart in reference to the genius and spirit of Christianity, and as they prepared him to become the author of a work so detestable and dangerous as the "Age of Reason." To deny the writer of "Common Sense," the "Crisis," and the "Rights of Man," talents of a very superior order, would be an act of the silliest injustice. These productions are unquestionably written with great power of intellect, and great dexterity of management. They are exactly suited to an agitated state of public feeling, and are admirably calculated to rivet the attention and to control the judgment of the multitude, as they just awake to a sense of political wrongs.

Their tendency is not to reform, but to eradicate, to alter the very substance of existing governments, to get rid of all their essential good, as well as of all the accidental evil annexed to them. They aim not to improve, but to destroy. They magnify and exaggerate the acknowledged evils of ancient establishments. They even transfer the faults of human nature from the mass of mankind to these establishments. They call for a total revolution in every country where there is a monarch and an aristocracy, and propose, with an air of confidence,—as if political constitutions were as easily formed out of the elements of anarchy as they are drawn and exhibited on paper,—that the people should first will their disenthralment, and then immediately proceed to harmonise the chaos, and legislate for themselves. The politician who values himself on the following dogma, as a new discovery in political science, ought surely to be regarded in no other light than as a visionary, dropped down from the regions of Utopia, or rather as a demon of evil, sent up on an embassy of mischief from the bottomless pit:—

"Some writers have so confounded society

with government, as to make little or no distinction between them, whereas, they are not only different, but have different origins. Society is produced by our wants, government by our wickedness; society, in every state, is a blessing, but government, even in its best state, is but a necessary evil."

This is the keystone of Paine's mighty arch of political principles, it is the germ of his "Rights of Man;" it is the original sin which taints and perverts all the children of his prolific brain; and as it is a fundamental error, it is fatal to his whole system. A man who understood the subject would have said, society is the union of all for the safety of every one; happiness is the end of this union, and government is the means for the attainment of this end. Government and society being thus parts of one whole, and being thus directed to the same end, have the same origin, and cannot, without each other, exist. Government defines and embodies all the principles of moral rectitude, and brings them to act, with all its sanctions, upon society; and so far from contemplating the best government as a necessary evil, we may recognise in it all the glories with which the venerable Hooker has invested the abstract principle of law: "Of law, there can be no less acknowledged than that her seat is the bosom of God; her voice the harmony of the world; all things in heaven and earth do her homage, the very least as feeling her care, and the greatest as not exempted from her power; both angels, and men, and creatures, of what condition soever, though each in different sort and manner, yet all with uniform consent, admiring her as the mother of their peace and joy."

Having accomplished, as he vainly supposed, a great design in America, he sailed, in April, 1787, from the United States, for France, to mingle with and to increase the pent-up elements of revolution, which were then just ready to burst forth with volcanic fury upon that ill-fated country. From France he passed over to England, in September, 1787, where he continued writing and publishing upon every topic likely to harass government, and to inflame the public mind, till the year 1792. He was hailed by the discontented and turbulent as their apostle. I do not know that he designated himself the advocate of the human race; it was certain, however, that he professed to be the friend of every man, and the willing and unrewarded servant of all. His admirers have dwelt with ludicrous complacency on what they term the manly and generous disinterestedness which he evinced in the disposal of his literary property. Indeed, it was his frequent boast, that he was resolved not to derive the profit of a shilling from his numerous works, which he wrote solely for the good of oppressed mankind. This is his published declaration to the world; let us see what

were his secret views and expectations, and how facts disprove the one and corroborate the other. In a confidential letter which he wrote to his friend Mr. King, and which Cobbett, by some means, procured and printed, this is his truly patriotic and disinterested language:—

"DEAR KING,

"I DON'T know any thing these many years that surprised and hurt me more than the sentiments you published in the 'Courtly Herald,' the twelfth of December, signed 'John King, Egham-Lodge.' You have gone back from all you ever said, You used to complain of abuses as well as me, and wrote your opinions on them in free terms. What, then, means this sudden attachment to kings? this fondness of the English government, and hatred of the French? If you mean to curry favour by aiding your government, you are mistaken; they never recompense those who serve it; they buy off those who can annoy it, and let the good that is rendered it be its own reward. Believe me, King, more is to be obtained by cherishing the rising spirit of the people than by subduing it. Follow my fortunes, and I will be answerable that you shall make your own.

"THOMAS PAINE.

"Paris, Jan. 3, 1793."

Here the mask completely drops off; and what is the evidence of facts?

"I did not," says the hypocrite in the second part of what he calls the "Rights of Man,"—"I did not, at my first setting out in public life, turn my thoughts on subjects of government from motives of self-interest; and my conduct, from that moment to this, proves the fact."

Long before the publication of this last-quoted performance, he had been appointed secretary to the committee of foreign affairs in America, expressly as a reward for the service which he was supposed to have rendered to the colonies, by the writing of "Common Sense," and the "Crisis;" and though his conduct in this office made it imperious on his employers to dismiss him for ever from their confidence, in the year 1785, he procured from congress, "by much importunity," says Mr. Cheetham, three thousand dollars; from Pennsylvania, five hundred pounds; and from the opulent and more liberal state of New-York, the confiscated estate of Mr. Davoe, valued at not less than four hundred pounds per annum. And not contented with this remuneration, many years afterwards he set up a visionary claim to a large sum of money from congress, as a compensation for expenses incurred by a visit to France, which he undertook without any appointment from the government of America, and without achieving any thing for the good of his adopted country. Congress frowned with indignation upon the mercenary wretch who could thus ungratefully

forget their former kindness, and coldly resisted his application, notwithstanding the dreadful threat with which he endeavoured to intimidate them. The following paragraphs from his letters to the speaker of the house of representatives, will exhibit his disinterestedness in a very amiable point of view.

The generous services to which he alludes were publishing "Common Sense," the various numbers of the "Crisis," and a few other pamphlets, all of which might have been written in a few months, and when bound together, form but a slender octavo volume. He had already received for these performances the sums and the estate before mentioned. Thus, then, he writes to his liberal benefactors:—

"It will be convenient to me to know what congress will decide on, because it will determine me whether, after so many years of generous services, and that in the most perilous times, and after seventy years of age, I shall continue in this country, or offer my services to some other country. It will not be to England, unless there should be a revolution.

"The explanation I sent to the committee respecting a resolve of the old congress while they sat at New York, should be known to congress; but it seems to me that the committee keep every thing to themselves, and do nothing. If any memorial was referred to the committee of claims for the purpose of losing it, it is unmanly policy. After so many years of service, my heart grows cold towards America."

Paine was the subject of many base appetites, but his ruling passions were vanity, ingratitude, and revenge. When writing on American affairs, every thing good and great either originated with him, or was carried forward by his wisdom and zeal. Though no more than a private secretary, he styled himself, in the title-pages of his subsequent publications, "Secretary for Foreign Affairs to Congress during the American war."*

In September, 1792, after he had resided long enough in England to provoke, by his seditious writings, a prosecution from the attorney general, he was opportunely chosen a member of the national convention of France. This inflated his vanity to the highest degree, and he conceived himself nothing less than a demi-god among men. Delighted with this honour, he took his seat in the assembly of revolutionists and infidels, till proscribed and imprisoned by Robespierre.

In his confinement he was attacked by disease, the effect of a long-continued habit of inebriation; and would have perished in captivity, but for the humane and judicious atten-

tion of Mr. Bond, an Englishman, who was incarcerated for the foul crime of confiding in French hospitality. The medical skill of Mr. Bond renovated the health of his companion, who, being sufficiently restored to resume his studies, employed the first hours of his convalescence in preparing for the press the first part of his "Age of Reason." The sudden downfall of Robespierre reinstated Paine in his former dignity as member of the convention. Thus elevated to power, and owing, as he did, his very life to the assiduity and skill of Mr. Bond, it will scarcely be believed, but it is nevertheless true, that he left his benefactor in the dungeon, and though importuned, neglected to make a single effort to obtain his liberation. Of his vanity we have spoken; here was an instance of his base ingratitude; and what I have next to record exhibits in him a disgraceful union of ingratitude and revenge. To general Washington he was under greater obligations than to any man on earth. To his kind interposition he was indebted for the bounty of congress; and at his table he was supported when he was homeless and friendless; yet because the general declined to attempt what he could not consistently undertake in his behalf, impelled by furious revenge, and unmindful of all the favours he had received, he thus assails his generous friend and patron: "As to you, sir, treacherous in private friendship, and a hypocrite in public life, the world will be puzzled to decide whether you are an apostate or an impostor; whether you have abandoned good principles, or whether you ever had any." At the same period he wrote the following epigram:—

"Take from the mine the hardest, roughest stone,
It needs no fashion, it is Washington;
But if you chisel, let your strokes be rude,
And on his breast engrave 'Ingratitude.'"

About this time the French convention proceeded to try and execute their king. Paine protested against a sanguinary sentence, and recommended perpetual banishment. Yet, though his proposal was rejected with scorn, he continued to sit with regicides and murderers. He even made a speech commending a paper constitution submitted to this enlightened and humane assembly, in which he virulently abused the principles and plan of the American government, which he had in former instances, and in all his publications, applauded, as the only perfect model of a constitution upon earth. It was about this period his friend King addressed to him the following remonstrance:—

"'If the French kill their king, it will be a signal for my departure, for I will not abide amongst such sanguinary men.' These, Mr. Paine, were your words at our last meeting; yet after this you are not only with them, but the chief modeller of their new constitution, formed

* American independence, it seems, was exclusively his work. This is his modest account of himself in the "Age of Reason": "I wrote 'Common Sense' the latter end of 1775, and published it the first of January, 1776; independence was declared the fourth of July following."

on principles so heterogeneous and inconsistent, so hypothetical and contradictory, as shows me, that provided your theories obtain fame, you are indifferent how the people may be disappointed in the practice of them."

We have now conducted the hero of our tale to an important era in his literary and moral history. The politician now becomes a theologian. He relieved the tedium of imprisonment by putting together his thoughts on religion. He apprehended himself to be every moment at the point of death; his life was in jeopardy, and every time he heard the creaking of the door of his dungeon, he expected to be led forth to the guillotine. He had not a Bible in his possession; but he had received a Christian education; he had passed the greater part of his life with Christians, and was no stranger to the facts and doctrines of the holy book. He reflects on its well-remembered pages; it has been his guide and polar star amidst the darkness and storms of his feverish being, and now its cheering light is thrown upon a scene of beauty and glory in which he is shortly to recreate his wearied spirit.

The angel of mercy is identified in his imagination with the messenger of death, and the terrors of the scaffold vanish before the benignant splendors of the crown with which the ministering spirits of the Christian patriot and martyr long to invest his honoured brow. O that this were more than a bright illusion! Alas! the wretched captive, darting his keen, malignant eye through the gloom of this antichamber to the grave, is neither Christian, patriot, nor martyr. Having spent his life in labouring to dethrone the monarchs of earth, and to shiver the frame of civil society to atoms, he now regards, with convulsive rage and vengeance, the thrones, the prince-doms, the orders, and the royalties of heaven. The agents of darkness eagerly hover round him, and a black inspiration pours its unhallowed and pestiferous *afflatus* on a head and heart the fittest instruments of satanic delusion and malice that were ever conjoined in one being since the days of Judas Iscariot, and which seem to constitute that being the connecting link in the moral chain which unites the human with an infernal nature.

THE POET'S HYMN OF PRAISE.

ETERNAL God! thy presence we behold
In all thy works—in river, land, or sea,
Where bounding waves since Time's first birth have
rolled,

Charming the soul with deep sublimity:
I hear thee in the summer's sighing gale,
And view thee in the peaceful, slumbering vale.
I praise thee, O my God!

Thou art where Andes rear their giant forms,
Capped with an everlasting snow-wreathed crown;
Home of the clouds, and cradle of the storms,

That o'er the land with sullen darkness frown:
In the deep mountain-stream's impetuous fall,
Rocks call to floods, and floods to mountains call,
To praise thee, O my God!

Thou form'dst the world, and madest man to dwell
A humble denizen on earth below,
Yet lord o'er all, as holy records tell,
Fraught with deep inspiration's sacred glow:
For mines of wealth, a rich unbounded store,
Gifts from that land where angel-bands adore,
I praise thee, O my God!

Swift at thy word the blazing star of day
Springs from the gloomy shadows of the night;
Chases the mountain mists and clouds away,
And yields to earth his glad refulgent light:
That thou hast given to man his quickening rays,
My soul shall speak her mighty Maker's praise:
I praise thee, O my God!

That thou hast given the fanning, balmy gale,
And made the lucid streamlet softly glide;
Hast formed the peaceful haunt—the silent vale,
The leafy grove, the mountain's grassy side;
And bid the verdant scenes of earth arise,
A glorious Eden 'neath the azure skies:
I praise thee, O my God!

Thou to the flower hast given its beauteous form,
Its scented fragrance—its alluring hue;
Rul'st the whirlwind, ridest on the storm,
Speak'st in the thunder; in the heaven's blue

Thou, Lord! art seen; o'er all thy foot hath trod;
"Earth with her thousand voices praises God!"
I praise thee, O my God!

That thou hast made my soul rejoice, and feel
The raptures of devotion's holy flame;
That thou hast taught me with delight to kneel,
And offer homage to thy sacred name;
That I have felt the peace thy Spirit brings,
Unbought by richest gems of eastern kings,
I praise thee, O my God!

That thou didst look from heaven with pitying eye
When earth was sunk in wretchedness and sin:
That Jesus' spirit groaned on Calvary,
Redeeming grace for guilty man to win;
That thou, within the realms of light above,
Wilt crown us with thy everlasting love,
I praise thee, O my God!

Long as life beats within this mortal frame,
To thee, O God, my grateful song I'll raise;
Welcome reproaches, and all earth calls shame,
If to thy glory shall redound the praise:
If thou art mine, and heaven my future rest,
No sorrow shall disturb my peaceful breast:
I praise thee, O my God!

Earth's fleeting joys are formed of hopes and fears,
Gliding ephemeras of a hasty hour,
Cradled in sin, and washed in guilt's big tears,
That, torrent-like, their watery deluge pour:
O! may I seek enduring joys on high,
Where streams of bliss shall roll eternally,
And praise thee, O my God!

And when relieved of all this sin and shame
I feel below, and to the heavens above
I've winged my flight, thy ever glorious name
I'll praise, and chaunt a Saviour's dying love;
And in sublimer strains of melody,
Hymn to the golden harp his grace so free,
And praise thee, O my God!
T. W. A.

A LEAF FROM THE HISTORY OF THE FORTRESS OF EHRENBREITSTEIN.

ON the banks of the fair Rhine, opposite the town of Coblenz, and close to the confluence of the Moselle and Rhine, stands a lofty rock, crowned by the shattered ruins of Ehrenbreitstein. This once impregnable fortress, with its varied fortunes and magnificent locality, has become so familiar to us by means of "Tours," "Views," &c., as to need no description. Its image, frowning over the waves of that exulting and abounding river, which nobly foams and flows at the base, and its shattered wall, "black with the miner's blast," is present to every one. The remembrances induced by the sight of the dismantled fortress are of a character peculiarly affecting and tragic; and the scenes of suffering included in the brief notices of the blockade of Ehrenbreitstein have few parallels in the annals of war. In the course of the campaigns immediately following the French revolution, this castle experienced, on several occasions, the vicissitudes of war, and more than once exchanged its possessors by force, stratagem, or capitulation. In 1797 it endured a close siege for eighteen months, terminated only by the peace of Leoben, which transferred it from the elector of Mayence to French mastery. On this occasion, colonel Faber was its brave and resolute commandant; and determined, with his veteran garrison, to abide the event of the siege, for which he was well prepared as to means of defence. The excavated galleries and bomb-proof walls of Ehrenbreitstein bade defiance to the enemy; but a sorer foe lurked within her walls than force or fraud, and not many days had passed before the governor appointed a more economical distribution of provision, in order to avert, as long as possible, the dreaded evil of famine. Among the fated inmates of the castle were Count D'Aubigny, his lovely wife, and their child, the blooming Eugene. They had sought safety in emigration during the reign of terror in Paris, and had quitted their residence in that city, and the quiet scenes of their native land, until more peaceful times. Now too hastily attempting a return to their loved home, they had been intercepted by the officers of the German government, and their passports proving unsatisfactory to the authorities of Coblenz, the noble prisoners were transferred to Ehrenbreitstein, and there detained as valuable hostages. Count D'Aubigny felt the peculiar severity of his lot in thus being captured at the very threshold of his own country; detained for an indefinite time, and shut within these guarded walls by his own friends, who were, without unfriendly intentions, to prove the means of the severest suffering to him and his unfortunate family.

• But he dreaded most the threatened evils of the siege for his gentle Eveline and darling child.

He pleaded for permission to send them under a flag of truce to Coblenz, while he remained and shared the lot of the garrison; he asked not for liberty even for them, but only a change in their place of imprisonment, that they might not incur the risk of the most horrible of deaths.

The sturdy Faber denied the suit. "The lady's tongue," said he, "is not to be trusted; she will betray our present destitute condition. She and her son must share our fare and our famine; and when the provisions fail, as fail they will ere I yield the fortress, perhaps the knowledge of a lady's sufferings may dispose your gallant countrymen to come more readily to terms."

D'Aubigny returned to the apartment of his countess, who already guessed the terrible truth. Her mind was as firm, her character as elevated, and her love as faithful, as her disposition was feminine and gentle, and she strove to soothe and comfort her agonised husband, whispering words of hope which she hardly felt. The cup of woe from which the tender mother and heroic wife shrunk not on her own account, was, however, to be drained to its last most bitter dreg, and every day brought an increase of suffering, beneath which the firmest soldier quailed. The frail and delicate boy, ill prepared by his careful and luxurious training to bear such trials, was the first to sink; and his agonised parents saw his cheek fade, his laughing eye become dim, and his step bound less playfully over the courtyard, and they gazed mournfully on each other, and on their drooping blossom.

The count took Eveline's hand and said, "Could I, my loved wife, could I have believed when I sought your heart in scenes of festal gaiety and wealth, that I should only win it to share in the horrors of such a destiny, or could I have dreamed, when I first looked on my child's face, that I should live to wish him unborn rather than see him perish thus slowly and horribly,"—

"Hush! D'Aubigny," said his gentle wife, "repine not; we are still the objects of the love and care of a merciful God, and he will soon give us freedom and happiness, if not on earth, in the world of enjoyment above. But, see! our boy sleeps; let us cherish his repose; it will win him a few minutes from hunger."

"No, mamma, I cannot sleep," said the languid voice of the little Eugene.

The count took up the emaciated child in his arms, and forced his way to colonel Faber, exclaiming, in a voice broken by sobs, "Look on my boy; he is my only child. If you have the heart of a man, pity him before it is too late; send him away from Ehrenbreitstein."

"I cannot," replied Faber resolutely, though

his eye glistened with a tear of sympathy as he spoke; "I am responsible to my country for the fulfilment of the trust which she has given me. Your child shall have my share of provision; but my duty sternly forbids your request, I cannot, sir, I cannot grant it."

"Do not weep, dear papa," murmured the child; "I never saw you weep before. I shall soon be better. I will eat what we can still procure. O, do not weep, dear papa."

With an effort mighty at his age, did the little Eugene force himself to share the loathsome morsels scantily doled out to the starving garrison. The flesh of dogs and horses had long been exhausted, and were now vainly sought as the highest luxuries. Many of the troops had already perished; and the fair young mother and her boy showed, by their failing strength and tremulous voices, that they were soon about to follow. Again the wretched father and husband attempted to move the governor, who continued inexorable; and becoming almost frantic by repeated denials of his request, was ordered to solitary confinement. "A merciful punishment," said Faber, "since the unfortunate man will now be spared the misery of looking on sufferings which he cannot alleviate."

Deprived of the society of her husband, the last resource of her wretchedness, the only solace in her deep anguish, the countess and her little son remained in a lonely chamber in the loftiest tower of the fortress, and with longing eyes and yearning hearts looked out on the free waters of the Rhine that sparkled brightly as they flowed, eight hundred feet below the walls of their prison. The glad sunshine streamed through the narrow slits which afforded them light and air, and from which they could see the white city of Coblenz glittering among the trees on the opposite side of the river. It was a beautiful sight to look upon; but the mental anguish the mother endured as she gazed upon her boy, and thought shudderingly of the husband who had been torn from her side, and who was wont to soothe her in her sorrows, prevented her from deriving the pleasure she was accustomed to experience when

beholding the glories of nature and the productions of art.

Hour after hour slowly waned away, the stillness of their apartment broken only by the hoarse mingled sounds of the besieging army, or the step of the sentinel before the tower in which they were confined. Within the fortress all was dismay: the succours which they had asked from the city of Rastadt had been refused; and men looked on each other's pale and withered features, each seeking to read the opinion of his brother-in-arms, as to the probability of the iron-hearted Faber surrendering the trust reposed in him, now that all external aid was helpless, or whether, still keeping the gates closed, he would perish within the walls.

But the sufferings of the beautiful wife of D'Aubigny were fast ending. On the morning of the day on which the governor capitulated, the mother spoke faintly to her child, who laid with his face on her bosom, "Eugene," said she, if you survive this peril, let the deliverance be a pledge to you of the never-failing mercy of God, and let it teach you sympathy with the wants of others. Never let the poor and the hungry plead with you in vain."

"Mamma," feebly articulated the child, "let me hold your hand."

She clasped it; it was cold. She looked upon her boy; his eye was closing; he gave her one glance of affection, and his spirit fled.

An hour afterwards the fortress surrendered. The brother of Eveline was in the army of the conquerors; he knew his sister and her husband and child were in Ehrenbreitstein; and hastily commanding one of the fainting garrison to lead him to their apartment, rushed eagerly into the room. No living one was there save himself; and at the sight that met his view, he stood transfixed with horror. Eugene was lying on the bed, his limbs composed in death, and the wasted form of his once-beautiful mother lay beside him. She had perished while performing the last sad offices of affection for her child.

The count lived but to receive the embrace of his brother, and died in his arms.

MEMORY.

BY LORD NORTHAMPTON.

[Extracted from "The Tribute," a volume edited by the noble lord above named, for the benefit of the family of the late Rev. E. Smedley, M. A.]

O, memory, thou ever restless power,
Recalling all that's vanish'd from our sight;
Thy pencil dipp'd now in the rainbow's light,
New in the gloomy tints of midnight's hour;
From youth's gay garden, manhood's blighted bower,
Culling thy varied chaplet, dark and bright—

The rose, the rue, the baleful aconite;
Alternating the cypress and the flower:

Casting, with lightning speed, thy wizard glance
Through th' long retrospect of by-gone years,
Whence, at thine behest, in dim array, advance
Shadows of idle hope and idle fears?
Half cheerful is thy saddest countenance,
Thy sweetest smile, alas! is moist with tears.

THE INVENTION OF PAPER.

(From Hallam's History of European Literature.)

THE date of the invention of our present paper, manufactured from linen rags, or of its introduction into Europe, has long been the subject of controversy. That paper made from cotton was in use sooner, is admitted on all sides. Some charters written upon that kind not later than the tenth century were seen by Montfaucon; and it is even said to be found in papal bulls of the ninth. The Greeks, however, from whom the west of Europe is conceived to have borrowed this sort of paper, did not much employ it in manuscript books, according to Montfaucon, till the twelfth century, from which time it came into frequent use among them. Muratori had seen no writing upon this material older than 1100, though in deference to Montfaucon, he admits its employment earlier. It certainly was not greatly used in Italy before the thirteenth century. Among the Saracens of Spain, on the other hand, as well as those of the east, it was of much greater antiquity. The Greeks called it *Charta Damascena*, having been manufactured or sold in the city of Damascus. And Casiri, in his catalogue of the Arabic Manuscripts in the Escorial, desires us to understand that they are written on paper of cotton or linen, but generally the latter, unless the contrary be expressed. Many in this catalogue were written before the thirteenth, or even the twelfth century.

This will lead us to the more disputed question as to the antiquity of linen paper. The earliest distinct instance I have found, and which I believe has hitherto been overlooked, is an Arabic version of the Aphorisms of Hippocrates, the manuscript bearing the date of 1100. This Casiri observes to be on linen paper, not as in itself remarkable, but as accounting for its injury by wet. It does not appear whether it were written in Spain, or, like many in that catalogue, brought from Egypt or the east.

The authority of Casiri must confirm beyond doubt a passage in Peter, Abbot of Clugni, which has perplexed those who place the invention of linen paper very low. In a treatise against the Jews, he speaks of books, *ex pellibus arietum, hircorum vel vitulorum, sive ex biblis vel juncis Orientalium paludum, aut ex rasuris veterum pannorum, seu ex aliâ quâlibet forte viliore materia compactos*. A late English writer contends that nothing can be meant by the last words, "unless that all sorts of inferior substances capable of being so applied, among them, perhaps, hemp and the remains of cordage, were used at this period in the manufacture of paper." It certainly at least seems reasonable to interpret the words *ex rasuris veterum pannorum*, of linen rags; and when I add, that Peter Cluniacensis passed a consider-

able time in Spain, in 1141, there can remain, it seems, no rational doubt, that the Saracens of the Peninsula were acquainted with that species of paper, though perhaps it was as yet unknown in every other country.

Andrés asserts, on the authority of the Memoirs of the Academy of Barcelona, that a treaty between the kings of Arragon and Castile, bearing the date 1178, and written upon linen paper, is extant in the archives of that city. He alleges several other instances in the next page; when Mabillon, who denies that paper of linen was then used in charters, which indeed no one is likely to maintain, mentions, as the earliest specimen he had seen in France, a letter of Jonville to St. Louis, which must be older than 1270, Andrés refers the invention to the Saracens of Spain, using the fine flax of Valencia and Murcia; and conjectures that it was brought into use among the Spaniards themselves by Alfonso of Castile.

In the opinion of the English writer to whom we have above referred, paper, from a very early period, was manufactured of mixed materials, which have sometimes been erroneously taken for pure cotton. We have in the Tower of London a letter addressed to Henry III. by Raymond, son of Raymond VI., Count of Toulouse, and consequently between 1216 and 1222, when the latter died, upon very strong paper, and consequently made, in Mr. Otley's judgment, of mixed materials; while in several of the time of Edward I., written upon genuine cotton paper of no great thickness, the fibres of cotton present themselves every where at the backs of the letters so distinctly that they seem as if they might even now be spun into thread.

Notwithstanding this last statement, which I must confirm by my own observation, and of which no one can doubt who has looked at the letters themselves, several writers of high authority, such as Tiraboschi and Savigny, persist not only in fixing the invention of linen paper very low, even after the middle of the fourteenth century, but in maintaining that it is undistinguishable from that made of cotton, except by the eye of a manufacturer. Were this indeed true, it would be sufficient for the purpose we have here in view, which is not to trace the origin of a particular discovery, but the employment of a useful vehicle of writing. If it be true that cotton paper was fabricated in Italy of so good a texture that it cannot be discerned from linen, it must be considered as of equal utility. It is not the case with the letters on cotton paper in our English repositories, most, if not all, of which were written in France or Spain.

Sir Henry Ellis has said, that "few, very few instances indeed occur before the fifteenth century, of letters written upon paper. The use of cotton paper was by no means general, or even, I believe, frequent, except in Spain and Italy,

perhaps also in the South of France. Nor was it much employed even in Italy for books. Savigny tells us that there are few manuscripts of law books among the multitude that exist, which are not written on parchment."

A SKETCH OF THE LIFE AND CHARACTER OF NOBODY.

THE "pensive public" has of late years been overwhelmed with "Lives," "Memoirs," "Reminiscences," "Autobiographies," and "Biographical Sketches," "Diaries," "Note Books," "Conversations," and after-dinner chit-chat have issued, as a torrent, from the press. In truth, we have been so nauseated with the "Life, death, last dying speech and confession" of anybody, and every body, that, by way of variety, we have determined to present our readers with a biographical sketch of Nobody.

Nobody is so exalted above other men, that no human being can be brought, however remotely, into comparison with him. Nobody is older than Methuselah was when he died. Indeed, when nature was emerging from chaos, and the Spirit of the Almighty breathed upon the shapeless mass, Nobody was by. Nobody plucked the olive leaf with which Noah's dove returned to the ark; and, when the waters had subsided, and Noah left his floating habitation and placed his foot again on the slimy earth, Nobody was there to receive him. Nobody communicated to Joseph the purport of the dreams which he interpreted to Pharaoh's butler and baker, while in prison.

When Pharaoh attempted to pass through the Red Sea, in pursuit of the Israelites, to the destruction of himself and his host, Nobody escaped. Nobody recollects the building of the Pyramids; Nobody had the honour to trim the beard of Nebuchadnezzar during the entire period of his banishment; Nobody saw the she-wolf affectionately suckling the brothers, Romulus and Remus; and, when "the eternal city" was in flames, Nobody danced to the fiddling of Nero. During Napoleon's campaign in Russia, Nobody anticipated the early frost and the burning of Moscow. Nobody saw the devil fling an ink-stand at Luther, in his study, and Nobody interfered to prevent its taking effect. Nobody was present when Eugene Aram committed the murder for which he suffered.

Nobody has traversed every part of the globe, and encountered perils of every description. When the *Royal George* went down with Kempenfeldt and his eight hundred men, Nobody was saved. Nobody enjoyed the squeeze and suffocation in the black-hole at Calcutta.

Nobody has a perfect knowledge of all the laws to which the several phenomena of nature may be referred. Nobody is acquainted with the

kind of matter of which the earth's centre is composed. The nature and various phenomena of light, heat, electricity, Galvanism, &c., are as familiar as the first three letters of the alphabet to Nobody. The principles of aerostation are fully understood by Nobody; and when poor Cocking fell a victim to his temerity, in descending in a parachute of his own construction, Nobody was astonished. The Newspapers, the other day, favoured us with a long and very circumstantial account of a balloon, which was seen descending in the neighbourhood of St. Martin's-lane, from which narrative it appears, that when the gaping and breathless multitude, who had been watching its progress, reached the car, they found Nobody in it. Nobody can steer a balloon in a direction exactly opposed to the current of the wind; it is, accordingly, Nobody's amusement, atmospherically, to circumnavigate the globe in order to acquire an appetite for dinner.

Nobody is credulous on all subjects and occasions, believing, for instance, the statements contained in the travels of Gulliver and Munchausen, American newspapers, hustings declarations of parliamentary candidates, epitaphs, and love-letters. When Mr. Waterton published a book, and prefixed to it a frontispiece representing himself astride a large crocodile, which appeared to be trotting him obediently to the next village—the reptile's fore-legs serving for a bridle—and stated that the event actually occurred, Nobody believed him.

Nobody is universally generous. Burns experienced *his* bounty, for he says,

"I have a penny to spend,
There—thanks to Nobody;
I have nothing to lend,
I'll borrow from Nobody."

When Otway, the gifted, the neglected Otway, was so reduced by misfortune that a penny tart was to him an almost unattainable luxury, Nobody relieved him! In fact, most of the sons of genius have risen to eminence in spite of the sleek dunces who fattened on their brains; and if some have escaped obscurity, misfortune, and indigence, they have been indebted for their comparative good fortune to Nobody.

Nobody has read every work that has proceeded from the press, of whatever country. Accordingly, the literary knowledge of Nobody is universal. Nobody knows who was the author of the series of letters published with the signa-

ture "Junius." Every body has read some of the works of the Laureate—Nobody has read them all. Many people made desperate attempts at his "Vision of Judgment," but Nobody liked—Nobody comprehended it; most people quizzed—Nobody failed to laugh at it. We are bound, in candour, to acknowledge that, as an author, Nobody surpasses Mrs. Trollope in falsehood, vulgarity, ignorance, and conceit: yet Nobody can, when he pleases, by the force of his eloquence, make a man believe himself to be another person. Nobody can, by dint of mere rhetorical flourish, convert a ditch into "a river," a swamp into "a lake," a dung heap into "a gentle declivity," an old tumble-down house into "an ancient mansion," better than George Robins. Nobody thinks Lord Londonderry wrote the "History of the Peninsular War," which bears his name, for Nobody doubts that Mr. Gleig wrote it for him. When the clever author of the Pickwick papers attempted to delineate what he had evidently never seen—a type of that class of ignorant hypocrites who hover on the skirts of all sects of Christians, as suttlers and fortune-tellers do on the track of an army, yet have as little in common with the former, as such vagabonds have with the latter, Nobody recognised the portrait, and no wonder—it represents Nobody.

The knowledge of Nobody is without limit. Every body has his or her opinion as to the justness and propriety of entailing on us the national debt, but Nobody knows when or how it is to be liquidated. Nobody knows the meaning, purport, and use of the "Unknown Tongues:" Nobody has witnessed the performance of an Irvingite miracle. Nobody knows how the vast sums of money appropriated to the repair and alteration of Buckingham-palace can have been absorbed by that sponge-like piece of deformity. Nobody can tell what will be the result of any known suit in any existing court of law; for our legislators appear to have taken great pains so to frame the laws which they have made, as to render them intelligible to Nobody. There is an ecclesiastical law, too, which appears to have been enacted

for the especial benefit of Nobody—Nobody may marry his grandmother!

Nobody is of so sympathetic a nature, that he mourns for all who die. An instance of Nobody's extreme sensibility is narrated in an old epitaph, which we quote from memory:—

"Beneath lies John Tomkins. When he died
Nobody sorrowed, and Nobody cried;
And where he is gone to, and how he fares,
Nobody knows, and Nobody cares."

This John Tomkins must have been a very particular friend of Nobody.

Nobody is wise at all times, yet Nobody likes to be considered a fool. Nobody is insensible to pain, therefore Nobody likes to have his corns trodden on. Nobody likes to be a principal in a duel with a good shot for his antagonist. Nobody perfectly understands wherein consists the justice and honour of shooting a man whom you have offended, or suffering him to shoot you; and, when two men quarrel, fire at each other, and, as is usually the case, both miss, yet immediately become reconciled, Nobody comprehends on what rational principle the reconciliation is effected. Nobody prefers cold boiled mutton to hot. Nobody is responsible for the neglect and omissions of the whole human race, for "what is every body's business is Nobody's." Nobody is exempt from liability to disease of any kind; yet Nobody, when in possession of his senses, takes Morison's Pills.

We could furnish the reader with many more interesting anecdotes of Nobody, so as to make our narrative as long as the biography of Anybody. But we have no particular desire to be esteemed by Nobody, and if we extend our article we are sure Nobody will be pleased; suffice it then, that as Nobody has existed from the moment of creation, so Nobody will continue to exist till matter shall be no more; and when the elements shall be resolving into their original nothingness, the mighty flames which still embrace a universe in their destructive grasp will possess power to effect the annihilation of Nobody.

N. (not Nobody.)

FICTION.

THIRD ARTICLE.

In our last paper on this subject (which has preceded this by a much longer period than we could have wished) we alluded in a general manner to the well-known fact, that "the golden ages" of Greece and Rome possessing, as they did, a very rich and abundant supply of materials for the construction of novels and romances, did yet hesitate to avail themselves of them, and did not bring to bear upon the literature of their country the scenes and sketches either of cha-

racter or society which were so aptly fitted for display in the hands of a *litterateur* either in the pages of a novel or a romance.

We believe that the reasons why the moderns have, and the ancients had not, this form of composition, may be found in the fact, that although the materials for it were good, and the situations in, and characters of life, the very ones best suited and adapted to the purpose—that the persons (or those who go under the generally significant

title of "the public," in our day and generation) to whom they would have been addressed, would have turned a deaf ear to the soft words and the winning entreaties, and would not, therefore, have brought either to the pockets of printer, editor, author, or publisher, that rich reward which is gained daily and weekly by every one of the parties connected with *Ward's Miscellany*. In those early days of literature, the only species of literary composition which "went down" with the public was the drama, which was among the earliest forms of fiction extant. On this subject an able writer thus appropriately expresses himself: "The old Greeks as a people could not read, nor if they could, was it possible to supply them as a people with books. The elements of their narrative and lyric poetry, therefore, were gradually blended together in a form of composition, which in addition to the original accompaniments of music and dance, admitted those of action and spectacle, and with this elaborated into perfection by consummate art and genius, the lively, the essentially southern imagination of a people, whose talent was prodigiously superior to their knowledge, was abundantly satisfied. The Romans borrowed not only the form but the substance of their drama from the Greeks; and to little purpose, for the character of the people was essentially military, and the display of martial skill, the pomp of warlike processions, and, above all, the horrible interest of actual combats between man and beasts, and man and man seem to have left little room in the popular affections for the milder and more elegant excitements of dramatic art. Even had the political circumstances of the country been as favourable as in the olden times, when poetical art flourished in any shape, they were otherwise to the theatrical display of the heroic characters and events of the national history on the one hand, or the free *coram populo* exposure of actual national manners on the other."

In the earlier times of modern literature we find that songs and ballads occupied the foremost rank—the minstrel was the *litterateur* of the day—his life was spent in musical wanderings from castle to castle, and from abbey to abbey; his precarious livelihood was derived from the largess of the lord or the charity of the monk. The poetic romance soon degenerated into the prose narrative; the troubadour became the *trouveur*, and from this anomalous and ambiguous birthright sprang the romance and novel of those days which, though changed somewhat in name and character, are still the same, which in our own day alternately enchant and enliven, captivate or subdue the weak and willing spirits who bend to their perusal. Cervantes, the Spanish author, was the first who amalgamated and enwoven together the materials which an every day life afforded him for the "perpetration" of a novel,

and he may be considered as the father of novelists. We shall pass over here (as unsuitable altogether to the object which we have in view in these papers) all mention of the origin, rise, and progress of that department of literary fiction to which the drama more particularly appertains, simply observing, in the words of a well-known author, that "it demands brevity of expression, and concentration of parts, as among its first requisites; it trusts much to the aid and assistance of apparatus; and much more to the ready imaginations of persons excited during a brief space by external stimulants; and although it has been fortunate enough to be the vehicle of the very highest genius, and also of the very highest art that the annals of poetry have to display, it seems impossible not to admit that it hopes in vain to advance in power and popularity along with the growing intelligence of the people at large." This passage was written many years since, and suns have risen and set over the sentiments which it conveys, and have not altered its power or falsified its justice; its latter portion has become, in our day and generation, a true and prophetic one, and every hour and every day only hastens the advent of its fulfilment.

But ere we close this article we have some few concluding observations to make upon that class of candidates for approval in the world of fiction—we mean vicious novels.

It will be surely conceded by the most inveterate novel reader, that not one novel out of twenty conveys either a good or even a satisfactory moral principle to the minds of its readers, or that it even pretends to any thing of the kind. This observation is as applicable to what is termed the religious novel as to one whose author is utterly guiltless of all knowledge of the holiest and most sacred of all principles. We had occasion, a short time since, to revert to a very bad example of this kind in reviewing the "Monk of Cimés," and we refer our readers to the remarks we then made on that subject.

Novels are again to be deprecated on account of the fallacious views which they take on most topics which they presume it to be their province to discuss. The writers of this class of fiction paint virtue in such bright and dazzling colours as are sufficient to blind the eyes of all who contemplate her masquerade attire; and vice is too hideously deformed in the hands of the novelist to admit of any transforming power or influence affecting it in the slightest degree. Every action and sentiment, although the property of characters who profess to be mortal, is utterly at variance with the truth of such a supposition. Their "sayings and doings" are more appropriate to those who obtain chance "glimpses of the moon," than to mere inheritors of mortal flesh and blood. The personages, more especially the hero and heroine, are invariably either preter-

naturally good or superlatively evil; their "lives and conversations" are either seraphic or satanic, and their difficulties, trials, and hair-breadth escapes, out of all sorts of impending death and dangers, are such as to put competition out of the question, and at utter defiance. But these points are some of the lightest to which the evil of this class of writings is attached. The impression which they make upon all grades of intellectual and moral power is such as tends to their utter degeneracy, degradation, and downfall. To the young, whose unformed and hitherto uncontaminated minds gladly resort to the perusal and contemplation of the fictitious lives and exploits which this false class of fictions display, the effect of such canker-poison is destructive in the highest degree. The young give an easy credence to the gorgeous scenery of a pantomime, and a ready belief to the purity of character with which one or more of the personages of a novel are sure to be graced; and

in proportion to the truth with which they invest all they read, is the disappointment they experience when treading from the threshold of the golden doors of fiction they step out among the busy throngs of the every-day world of reality around them. The bright vision then fades—the sunny landscapes, with which in their imagination they had invested life, then dissolve away, and,

"Like the baseless fabric of a vision
Leave not a wreck behind."

The truth of the change does violence to the false feelings which fiction had engendered. The mind becomes unsettled, disquietude and discontent soon step in, and a mock fatigue and weariness of the world in which their lot has been placed assumes the sway and power, where the happiness and contentment which a gracious Benefactor has vouchsafed to them should be the cause of great and sincere thankfulness of heart.

EPHON.

COSMOGONY OF MOSES.

ARTICLE VII.

THE ABSURDITY OF THE MERE INVENTION OF MAN AS THE ORIGIN OF THE WORLD.

Thus have the discoveries of science lent their useful aid to those of revelation; and it is pleasing to reflect that the Cosmogony of Moses is the only account of the creation which remains unimpeached, and even strengthened by the results of philosophical inquiry. Yet it is important to observe, that science alone could never conduct the human mind to God, as the first cause of all things; and a very humiliating reflection it forces upon us when we take a review of the inventions and schemes of the wisest philosophers, who, without the guidance of the holy Scriptures, have attempted to account for the phenomena of nature, or to describe the origin of the universe. Our next reflection therefore regards,

Secondly, The ignorance and folly of man; the utter insufficiency of his reason to attain a knowledge of the Deity, through the medium of his brightest works; and the arrogance of his presumption in assigning to those works either eternity of existence or a commencement by the operation of causes that are altogether inadequate and absurd.

It was the Jewish legislator who first laid down the hypothesis, which is the foundation of his whole system, that every thing which exists owes its existence to a first Being: to Him who is the fountain of being; to him who calls himself "I am," by excellence. This is the title of his sovereignty over the creatures; this is that which renders him worthy of the honours of adoration; for if we do not owe him all that we

are, if any be before him, if he does not exist by himself, we cannot pay him the supreme homage of our minds and of our hearts; which supposes a sovereign perfection in him that receives it: as it does an absolute dependance in him that renders it. The hypothesis of the newness and beginning of the world, which naturally implies the being of a God, puts everlasting bars to idolatry, that admits of several gods, as it does to irreligion, which allows of none. It was absolutely indispensable that Moses should make this supposition of the newness of the world the corner-stone, (as one may call it,) upon which he was to build the whole system of religion which he was about to impart to the church. How necessary was this lesson, especially in those ages in which the legislator lived, as well as for some of the ages that immediately followed! One is amazed to read the different opinions of the heathen philosophers about the beginning of the world. It is not to be conceived how men who were formerly the admiration of their own times, and whose fame has descended from age to age, even to this time, were capable of such strange notions upon this subject. Let a man consult the famous work of Cicero, entitled *De Natura Deorum*, and which ought rather to be looked upon as a list of extravagant fancies, which he had formed about the Divinity, than as a treatise upon his nature, and he will find this remark most abundantly confirmed.

What a wretched account was that of the Egyptians, (from whom the Epicureans borrowed

their hypothesis,) that the world was made by chance, and mankind grew out of the earth by a kind of vegetative process! What strange stories does the Grecian theology tell us of Jupiter and Saturn! and what sad work do their ancient writers make, when they come to form men and women out of projected stones! How unaccountably does the Phenician historian make a dark and windy air the principle of the universe; all intelligent creatures to be formed alike in the shape of an egg, and both male and female awakened into life by a loud clap of thunder! The Chinese are accounted a wise people; and yet the articles of their creed are such as these:—That one Tayn, who lived in heaven, and was famous for his wisdom, disposed the parts of the world into the order in which we find them; that he created out of nothing the first man Panson, and his wife Pansone; that this Panson by a power from Tayn, created a man called Tanhom, who was a great naturalist, and thirteen *laen* more, by whom the world was peopled, till after a while the sky fell upon the earth, and destroyed them all; but that the wise Tayn afterwards created another man, called Lotziram, who had two horns, and an odoriferous body, from whom proceeded several men and women, who stocked the world with the present inhabitants. The moderns, who have either perverted Divine revelation, or daringly rejected it, have promulgated absurdities quite as gross and incredible as their less culpable predecessors. The prophet of Arabia has outdone all that went before him in extravagance, when yet he had undoubted access to the holy Scriptures; and the proudest genius of our own times, but who was too great and too wise to believe in the being of a God, has vied with Mohammed in absurdity, while he has infinitely surpassed him in the imposing splendour of his impious speculation. Mohammed was simply an impostor, who invented the most extravagant falsehoods, in order to insure the devotion of his weak and credulous followers. Buffon was a philosopher, who hated creeds and faiths, and who could not be persuaded that there was a Being in the universe greater than himself. The Mohammedan account of the formation of the world is the following:—It tells us that the first things which were created were, the throne of God, Adam, Paradise, and a great pen, wherewith God wrote his decrees; that this throne was carried about upon the necks of angels, whose heads were so stupendously large, that birds could not fly in a thousand years from one ear to another; that the heavens were propped up by the mountain Koff; that the stars were firebrands, thrown against the devils when they invaded heaven, and that the earth stands upon the top of a great cow's horn; that this cow stands upon a white stone, this stone upon a mountain, and this mountain—but here they are lost. The formation of Adam is thus described. That

after God, by long continued rains, had prepared the slime of the earth out of which he was to form it, he sent the angel Gabriel, and commanded him, of seven layers of earth, to take out of each a handful; that upon Gabriel coming to the earth, he told her, that God had determined to extract that out of her bowels whereof he proposed to make man, who was to be sovereign over all and his viceregent; that surprised at this news, the earth desired Gabriel to represent her fears to God; that this creature, whom he was going to make in this manner would one day rebel against him, and draw down his curse upon her; that Gabriel returned and made a report to God of the earth's remonstrances; but God, resolving to execute his design, despatched Michael, and afterwards Asraphel, with the same commission; that these two angels returned, in like manner, to report the earth's excuses, and absolute refusal to contribute to this work; whereupon he deputed Azrael; who, without saying any thing to the earth, took a handful out of each of the seven different layers or beds, and carried it to a place in Arabia, between Mecca and Talef; that after the angels had mixed and kneaded the earth which Azrael brought, God with his own hand formed out of it a human statue, and having left it in the same place for some time to dry, not long after, communicating his Spirit or enlivening breath, infused life and understanding into it; and clothing it in a wonderful dress, suitable to his dignity, commanded the angels to fall prostrate before it; which Eblis (by whom they mean Lucifer) refusing to do, was immediately driven out of Paradise. Thus puerile was the mind of that daring impostor, who has set up a rival throne to that of the Messiah. Such is the wisdom of man when he presumes to reject the counsel of God.

The philosophers of Europe were for a season dazzled with the sublime invention of Buffon, but, like a meteor, it gleamed, and passed away. It was invested with only momentary splendour, and, like every system of nature from which a Deity is excluded, fell by its own dead weight. Let us place it in contrast with the Mosaic Cosmogony, and we shall soon perceive that the most wonderful human intellect, in its bold attempt to supersede the inspired narrative, is driven to admit absurdities, which even credulity rejects, and superstition laughs to scorn. When vain man would be wise in opposition to his God, it is at his peril. He descends from his high eminence as an intelligent creature, to become the sport of the wildest fancies, and the most irrational chimeras.

The system of Buffon, (and we give it as the *ne plus ultra* of the human mind, in the most enlightened age of the world,—an age, when it was assumed that in another generation philosophy would probably triumph over revelation,)

depends principally upon two facts, which, though generally true, were totally insufficient to sustain his extravagant hypothesis.

It had been long observed, that such flinty, or silicious bodies as form a part of the composition of glass, are among the most abundant materials which compose the earth, and that many of them nearly resemble glass in colour, transparency, lustre, hardness, and specific gravity. As glass is produced by fusion in a strong heat, it was inferred by Buffon, that the flinty bodies found in the earth, derived their origin from a similar fusion; and as no heat, sufficient to produce so great an effect, could be found on our globe, the author has recourse to the sun as its source. He supposes the planets, and the earth among the number, to have originally formed a part of the body of the sun. In this situation, a comet falling in on that great body, might have given it such a shock, and so shaken its whole frame, that some of its particles might have been driven off, like streaming sparkles from red-hot iron; and each of these streams of fire, though very small in comparison of the sun, might have been large enough to form a planet much greater than our earth, or any other of the planetary system. In this manner the planets, together with the globe which we inhabit, might have been driven off from the body of the sun by impulsion; and in this way they would have continued to recede from it for ever, had they not been arrested by the superior power of attraction exerted on them by the sun; and thus, by the combination of the centrifugal and centripetal forces, they were whirled round in the orbits which they now describe.

After giving a number of reasons for the credibility, or at least possibility, of the foregoing supposition, the author concludes that it is evident that the earth assumed its present figure when in a melted state. "It is natural to think," says he, "that the earth when it issued from the sun, had no other form but that of a torrent of melted and inflamed matter; that this torrent, by the mutual attraction of its parts, took on a globular figure, which its diurnal motion changed into a spheroid; that when the earth cooled, the vapours, which were expanded like the tail of a comet, gradually condensed, and fell down in the form of water upon the surface, depositing at the same time a slimy substance mixed with sulphur and salts, part of which was carried by the motion of the waters into the perpendicular fissures of the strata, and produced metals, and the rest remained on the surface, and gave rise to the vegetable mould which abounds in different places, with more or less of animal or vegetable particles, the organisation of which is not obvious to the senses."

Thus the interior parts of the globe were originally composed of vitrified matter, and probably they are so at present. Above this were placed

those bodies which had been reduced by the heat to the smallest particles, as sand, which are only portions of glass, and above these pumice stones, and the scoræ of melted matter, from which were afterwards produced the several kinds of clay. The whole mass was covered with water, to the depth of five or six hundred feet, arising from the condensation of the vapours when the earth began to cool. This water deposited a stratum of mud, mixed with all those substances which were capable of being sublimed or exhaled by fire, and the air was formed of the most subtle vapours; which, from their small specific gravity, floated above the water.

Such was the condition of the earth when the tides, the winds, and the heat of the sun, began to introduce changes on its surface. The diurnal motion of the earth, and that of the tides, elevated the waters in the equatorial regions, and necessarily transported thither great quantities of slime, clay, and sand; and by thus elevating those parts of the earth, they perhaps sunk those under the poles about two leagues, or a two hundred and thirtieth part of the whole; for the waters would easily reduce into powder pumice stones, and other spongy parts of the vitrified matter upon the surface; and by this means excavate some places and elevate others, which, in time, would produce islands and continents, and all those inequalities on the surface, which are more considerable towards the equator than towards the poles. The highest mountains lie between the tropics and the middle of the temperate zones, and the lowest from the polar circles towards the poles. Indeed, both the land and sea have most inequalities between the tropics, as is evident from the incredible number of islands peculiar to these regions.

The other circumstance which forms a principal part of the basis of this theory, is derived from the composition of sea-shells. It is well known that these shells consist chiefly of an earth like that which constitutes the principal part of limestone or marble; and it was hence inferred, that, after a series of ages, these shells being broken down into minute particles, produced those immense masses of calcareous substances which are now found either in vast mountains; or in stratified plains, in almost every part of the earth.

Buffon conceives, very naturally, that the surface of the earth must, at the beginning, have been much less solid than it is at present, and consequently the same causes which at this day produce but slight changes, must then, on so yielding a body, have been attended with very considerable effects. There is, he thinks, every reason to suppose that the earth was at that time covered with the waters of the sea; and that these waters were above the tops of our highest mountains, since, even in such elevated situations, we find shells and other marine productions in

very great abundance. It appears also that the sea continued for a considerable time upon the face of the earth; for as these layers of shells are found so frequently at such great depths, and in such prodigious quantities, it seems impossible for such numbers to have been supported all alive at one time; so that they must have been brought there by successive depositions. These shells also are found in the bodies of the hardest rocks, where they could not have been all deposited at once, at the time of the deluge, or at any such instant revolution; since that would be to suppose that all the rocks in which they are found were at that instant in a state of dissolution, which would be absurd to assert. The sea, therefore, deposited them wherever they are now to be found, and that by slow and successive degrees.

It will appear, also, that the sea covered the whole earth, from the appearance of its layers, which, lying regularly one above the other, seem all to resemble the sediment formed at different times by the ocean. Hence, by the irregular force of its waves and its currents, driving the bottom into sand-banks, mountains must have been gradually formed within this universal covering of waters; and these, successively raising their heads above its surface, must, in time, have formed the highest ridges of mountains upon land, together with continents, islands, and low grounds, all in their turns. This opinion will receive additional weight by considering that, in those parts of the earth where the power of the ocean is the greatest, the inequalities on the surface of the earth are highest; the ocean's power is greatest at the equator, where its winds and tides are most constant; and, in fact, the mountains at the equator are found to be higher than in any other parts of the world. The sea, therefore, has produced the principal changes in our

earth; rivers, volcanoes, earthquakes, storms, and rain, having made but slight alterations, and only such as have affected the globe to very inconsiderable depths.

"In the formation of this theory," says Mr. Kirwan, "genius (I mean genius in its primitive sense, the sublime talent of fascinating invention, and not the energetic power of patient, profound, and sagacious investigation) unhappily presided. Yet dazzled by the splendid but delusive scenery,—pourtrayed by an ardent imagination soaring to the source of light, and rending from its flaming orb the planetary masses that surround it, then marking with daring and overweening confidence, fancied successive epochs of the consolidated fabric of the terraqueous globe,—the public attention was long arrested by the magical representation, and the understanding nearly betrayed into a partial, if not a total, assent to it.

"This proud gigantic theory was, however, like another Goliath, soon demolished by a common flint or pebble—the very substance it sprung from. Common glass essentially contains an alkaline salt, to which alone it owes its fusibility; silicious substances contain none, and are absolutely infusible when unassociated with any. Macquer found them infusible but in the still incomparably superior heat of inflamed oxygen. Hence the hypothesis, grounded on the assumed identity of these substances and common glass, vanished like the unembodied visions of the night. With respect to limestone, the other pillar on which this theory rests, Cronstedt, Ferberborn, Arduini, and Bergman, demonstrated the existence of numerous and immense mountains, in which not only no vestiges of shells could be traced, but whose internal structure of position was incompatible with the supposition of an origination thence derived."

VICTORY.

WARR not to me the blast of fame,
That swells the trump of victory;
For to my ear it gives the name
Of slaughter and of misery.

Boast not so much of honour's sword,
Wave not so high the victor's plume;
They point me to the bosom gored,
They point me to the blood-stained tomb.

The boastful shout, the revel loud,
That strive to drown the voice of pain,
What are they but the fickle crowd
Rejoicing o'er their brethren slain?

And ah, through glory's fading blaze,
I see the cottage taper, pale,
Which sheds its faint and feeble rays
Where unprotected orphans wail.

Where the sad widow weeping stands,
As if her day of hope was done;
Where the wild-mother clasps her hands
And asks the victor for her son:

Where the lone maid in secret sighs
O'er the lost solace of her heart,
As prostrate in despair she lies,
And feels her tortured life depart:

Where, midst the desolated land,
The sire lamenting o'er his son,
Extends his pale and powerless hand,
And finds its only prop is gone.

See, how the bands of war and woe
Have rifled sweet domestic bliss;
And tell me if your laurels grow
And flourish in a soil like this?

Mrs. L. H. SIGOURNEY.

REVIEW.

A Tabular Chronological Epitome of the History of Architecture in England. By GEORGE GODWIN, Jun., Architect. J. Weale; C. Tilt.

THIS is one of the most valuable Architectural Epitomes we have ever witnessed; it is, in the words of Mr. Godwin—"an attempt to show at one view an approximation to the date, duration, and characteristics of the principal styles which have prevailed; some examples; and names of eminent architects." The most prevalent style of architecture observed amongst our principal cathedrals, churches, and castles, is the Gothic, under the different divisions of Early Pointed, Pointed, Florid Pointed, and Elizabethan; and the information connected with these is well given by Mr. Godwin: for instance, the Florid Pointed style was most prevalent from the commencement of the reign of Richard II., in 1377, to that of Henry VII. and Henry VIII., in 1509, including the reigns of 10 kings, and occupying a period of about 140 years. The leading features of this style are thus enumerated by our author—"Windows very large; occasionally with horizontal embattled transoms; General lines of mullions, &c., perpendicular; Horizontal transoms over doorways with ornamented spandrels; Lofty turrets and cupolas; Elaborate panneling; Rich fan-like tracery to vaultings; Heraldic ornaments; Pointed arches obtuse; Details overwrought. In private residences security less studied than during preceding periods, and convenience more." The best examples of this style may be easily seen by our readers—they are to be met with at Westminster Hall, St. George's Chapel, Windsor, and Henry the VIIIth's. Chapel, Westminster. The most eminent architects of this style were Bishop Waynesflete, Bishop Beauchamp, Bishop Alcock, Sir Reginald Bray, John Hylmer, and Prior Bolton.

We should recommend to Mr. Godwin, whose love of his art, and perseverance in its pursuit, are very great, to construct an architectural chart, on a plan somewhat similar, but more extensive of course, than this epitome. A more ample series of details might there be given of every point connected with the history of architecture, and diagrams and sketches slightly shadowed might be introduced, which we can conceive would tend to enhance its value in a ten-fold degree, both to the architectural student and professor, and be, we should conceive, of far higher service than the most elaborate literary finish which we know Mr. Godwin gives to all his works.

The Waldenses, or Protestant Valleys of Piedmont Dauphiny. By WILLIAM BEATTIE, M.D. Illustrated in a series of views, taken on the spot expressly for the work, by Messrs. Bartlett and Brockedon. First quarterly part. George Virtue, Ivy-lane.

WE have waited a considerable time for the subsequent parts of this splendid specimen of a work, which if it equals its promise, will, no doubt, meet with the most liberal patronage. Besides a beautiful vignette, exhibiting the Villar, Val Pelice, this part is enriched with eighteen illustrations of the valleys, by the artists employed in this truly noble undertaking.

The Bridge of the Po is a scene of quiet beauty, gradually rising in the distance to a degree of sublime magnificence. All possess merit, and as works of art, portraying nature in every diversified form of grandeur and loveliness, they are highly gratifying to the eye of taste; but some of them awaken a powerful moral interest. Every mountain and every glen, every dark recess and deep ravine, have witnessed heroic deeds and sufferings, which induce us to gaze upon them with breathless awe and intense sympathy, while they call up to our recollection the events, the deeds, and woes of other times. We conclude our brief notice of this portion of the work with a paragraph from the introduction, which is in exact accordance with our views and feelings:—

"With respect to the scenery of these valleys, the engravings speak for themselves, they embrace a rich and striking variety of subjects, such as may be expected on the confines of two countries so different in physical character, and range between the awful solitudes of Fressinière, or Dormelleuse, and the summer valleys of the Luzern and the Po. But had nature been less auspicious to the painter—had the scenery been less sublime, or picturesque, or beautiful than it is—the actions alone, of which, for so many centuries, it has been the theatre, would stamp its bleakest rocks with an interest which no mere landscape, however beautiful, could inspire. The scenery indeed is well calculated to fascinate the eye and enchant the imagination. But it is only when surrounded by associations that it has power to reach the heart, addressing us like an intelligent spirit, through the allurements of a beautiful exterior. The connexion between natural scenes and historical records is here so peculiarly striking, that it would be difficult to fix on any point of Waldensian landscape, which in the almost incredible series of thirty-three wars, has not been the 'vantage ground of religious freedom, or the sepulchre of its champions.—*Monsieur mesio quo pacto, locis ipsis quibus eorum quos diligimus aut admiraturus adsumt vestigia.*—Cicero De Legibus."

As the work advances we shall avail ourselves of some of its heart-stirring tales for the gratification of our readers.

GLANCES AT THE PAST.

SIMPLICITY.—When the Americans first perceived the intercourse the Spaniards kept up with each other at immense distances, by means of little bits of white paper, they imagined some spirit to be concealed within them, who communicated what was ever going on. An Indian boy being sent with a present of figs to a Spanish captain, ate part of them by the way. Upon the captain reading the letter which accompanied them, he discovered the deficiency, to the astonishment of the poor boy, who, the next time he was sent on a similar errand, determined to outwit the spirit, and prevent his telling tales; he therefore cunningly placed the letter under a stone, while he indulged his appetite with the coveted luxury.

INGENUITY OF NECESSITY.—Although the ancient Peruvians were civilised in comparison with the other nations of America, they were to be considered, with

respect to Europe, as in a state of great barbarity. Of singular ingenuity, however, their history affords many traits. The great road of the Incas, which extended from north to south upwards of one thousand five hundred miles, was intersected, in its course, by all the torrents which roll from the Andes toward the Western Ocean. The Peruvians could not construct bridges either of stone or timber; but necessity, the parent of invention, suggested a device which supplied that defect. They formed cables of great strength, by twisting together some of the pliable osiers with which their country abounds. Six of these cables they stretched across the stream parallel to one another, and made them fast on each side; these they firmly bound together, by interweaving smaller ropes, which being covered with branches of trees and earth, they passed along with complete security.

PASSAGES FROM THE LIFE OF A CONDEMNED MAN.

FROM THE FRENCH.

PART I.

CONDEMNED to death!—For five weeks has this thought dwelt alone with me; I have been always frozen by its presence, always crushed down beneath its weight. Formerly—for it seems to me these are rather years than weeks—I was a man as others are. Each day, each hour, each minute had its idea; my spirit, young and lofty, was full of phantasies. It amused me to unravel them, the one after the other, without order and without end, embroidering, from inexhaustible arabesques, this rough and slender staff of life. There were visions of young maidens, splendid mitres, battles won, theatres filled with light and sound, and again young maidens and solemn walks at night beneath huge branches of chestnut-trees. There was always a festivity in my imagination. I could think on what I would; I was free.

Now I am a captive; my body is in irons in a dungeon; my spirit imprisoned in one idea, one horrible, bloody, implacable idea. I have but one thought, one conviction, one certainty—I am condemned to death.

Whatever I do it is always there—that infernal thought!—like a leaden sceptre at my side, alone, jealous, chasing all distraction, face to face with me, miserable, and shaking me with its two icy hands, when I would turn away my head or close my eyes. It creeps into all forms where my spirit would flee from it, and it mingles, like the horrible burden of a song, with all the words that are addressed to me; it glues itself with me to the hideous gratings of my dungeon, possesses me when awake, watches my convulsive sleep, and reappears in my dreams as a knife.

I have just started in my sleep from its pursuit. Ah! it is but a dream. Well, even before my eyes have had time to open sufficiently to see, this fatal thought, written in the horrible reality which surrounds me, on the damp and sweltering flag-stone of my cell, in the pale rays of my night-lamp, in the coarse woof of the cloth of my garments, in the gloomy figure of the guard-soldier, whose cartouch-box shines through the grating of my dungeon; it seems that a voice has already murmured in my ear, "Thou art condemned to death!"

It was a beautiful morning in August. For three days my trial had been entered upon, for three days had my name and my crime drawn together each morning a cloud of spectators, who came crowding down on the benches of the hall of audience like ravens around a carcass; for three days had all the phantasmagoria of judges, witnesses, advocates, and king's attorneys passed and repassed before me, sometimes grotesque, sometimes bloody, but always gloomy

and fatal. The two first nights of uneasiness and terror I had not slept, the third night I slept from lassitude and fatigue. At midnight I had left the jury deliberating; I had been brought back to the straw of my dungeon, and I had fallen immediately into a deep sleep, into a slumber of oblivion. They had been to me the first hours of repose for many days.

I was in the depth of this profound sleep, when they came to awake me. This time, neither the heavy step, nor the iron shoes of the jailer, nor the clashing of his knot of keys, nor the harsh gnashing of the bolts, were sufficient; it required his rude hand on my arm, and his rough voice in my ear, to arouse me from my lethargy.

"Awake!" said he.

I opened my eyes, and rose up scared upon my seat. At that moment, through the high and narrow window of my dungeon, I saw, on the ceiling of the neighbouring gallery, the only sky I could have a glimpse of, that yellow reflection in which eyes accustomed to the darkness of a prison know so well how to recognise the sun. I love the sun.

"It is a fine day," I said to the jailer.

He remained a moment without answering me, as though not knowing whether it were worth the trouble of a word; but after some effort he answered bluntly, "It is possible."

I remained immovable, my spirit half lulled asleep, my mouth in a smile, my eyes fixed on that soft golden reverberation that diaped the ceiling. "Here is a fine day," I repeated.

"Yes," answered the man. "They wait for you."

These few words, like the thread that breaks the insect's flight, threw me back violently into reality. I saw again, suddenly, as in a flash of lightning, the gloomy hall of the assizes, the horse-shoe range before the judges covered with bloody hues, the three ranks of the stupid-faced witnesses, the two *gend'armes* at each end of my bench, the dark robes rustling, and the heads of the crowd swarming in the depth of the shadow, and the fixed looks of the twelve jurymen—who had watched while I slept—resting upon me.

I arose; my teeth chattered, my hands trembled, and I knew not where to find my clothes. My legs were weak; at the first step I made I stumbled like a street-porter overcharged; nevertheless, I followed the jailer.

The two *gend'armes* waited for me at the threshold of my cell. They replaced the handcuffs. They had a small complicated lock on them, which they closed carefully. I let them do it: it was a machine on a machine.

We traversed an interior court. The light

air of the morning revived me. I lifted up my head. The sky was clear; and the warm rays of the sun, divided by the long chimneys, described large angles of light on the summit of the high and gloomy walls of the prison. It was indeed a fine day.

We mounted a circular staircase; we passed along one corridor, then another, then a third, then a low door opened; a hot air mingled with sounds struck my face—it was the breath of the crowd in the hall of the assizes. I entered. At my apparition there was a rumour of arms and voices; the raised benches were displaced with a noise, the partitions cracked; and whilst I traversed the long room, between two masses of people walled in with soldiers, I seemed like a centre to which were attached the threads which moved all those inclined and gaping faces.

At that minute I perceived that I was without irons; nor could I remember either when or where they had been removed from me.

There was then a great silence. I had reached my place: at the moment the tumult ceased among the crowd, it ceased also in my ideas. I suddenly and clearly understood that which, until then, I had only seen in confused glimpses—that the decisive moment was come, and that I was there to hear my sentence.

Let him explain it who can; but from the manner in which this idea came to me, I can state that it caused me no terror. The windows were opened; the air and the noise of the city came freely from without; the hall was bright as for a bridal. The gay beams of the sun traced here and there the luminous figure of the casements, sometimes lengthened on the floor, sometimes developed on the tables, sometimes broken at the angle of the walls; and from these shining lozenges of the windows each ray cut out in the air a large prism of golden dust. The judges at the end of the hall looked contented, probably from the delight of their task being soon finished. The face of the president, softly lit up by the reflection of a window, had something of calmness and goodness spread over it; and a young barrister was talking, almost gaily, and grasping the hand of a pretty woman in a rose-coloured hat, placed, by favour, behind him. The jurors alone appeared wan and dejected; but it was apparently from the fatigue of having watched all the night. Some of them yawned; nothing in their countenances indicated men who had just borne sentence of death; and in the figures of these good citizens I could divine nothing beyond a great wish for sleep.

EPHON.

THE SIGNS OF THE ZODIAC.—No. II.

GEMINI, THE TWINS.

In discussing the subject of the sign *Taurus*, I produced a variety of pagan evidence to the truth of holy writ: to bring together all the proof would overwhelm me beneath the load of my arms. That which ought to shield, (gorgeous and impenetrable as it might be,) would crush me beneath its weight, like Tarpeia beneath the Sabine shields. Let it suffice, that the substance of a beautiful and universal creed has come down to us in a variety of ancient fables, beautifully, but variously and capriciously told. Sometimes it was Persephone, "the lost fruit," which human nature (Isis, Isheh, "the woman") sought in vain, and found in death. Anon it was the secret of primitive perfection, which Theseus and Pirithous strove to ravish from the initiatory rites, but perished in the attempt. It was the loss of light which Isis wept over Horus; it was the decree of death which Venus wept over Adonis. It was the promise of his revival which shook with triumph the valley of Egypt, and echoed in gratulation from the hills of Libanus. Sometimes this creed depicted Orpheus descending into hell in search of his lost love, stung to death by a *serpent*, and *bitten in the heel*. At other times it represented Psyche, ("the fallen soul,") deserted by heavenly love, descending into the realms of night, and opening the repository of

evil. Again, it portrayed the first woman, urged by curiosity to open the forbidden chest, and introducing the plagues of sin and death into the world, while *nothing but hope* (hope of the future seed) remained. Lastly, it portrayed the promised seed, (so the pagans thought,) the *magnum Jovis incrementum*, the self immolated Hercules, dragging up the grave (Cerberus, the "cry of the grave") in triumph; wounding *Haris*, or hell, (Pluto,) trampling on the dragon's head, (see the modern sphere,) and grasping the immortal fruit. I revert to the order of the signs, and my proposed investigation.

The Gemini of the ancient Zodiac were sometimes represented as a male and female. On the Farnese globe, Venus and Apollo occupy this sign, and so it is on some of the ancient planispheres of Egypt, preserved by Kircher. They were the Dioscuri of the Greeks, Castor and Pollux, the story of whom springing from an egg, and their half year's division of light and darkness, sufficiently attests Egyptian original. They were emblems of the upper and lower spheres, of the light and darkness, and of the mingled good and evil which were produced from the egg of chaos. In the language of the Rabbins, they were the *two arms* of the Deity, and are frequently represented as such among the hieroglyphics, the

right hand holding an emblem of resurrection, (the *Tau*.) and the left a besom of destruction. Philosophically considered, their embrace (the attitude in which they are usually represented) was a type of the harmony produced by the contest of attraction and repulsion, or *love and war*, as Aristophanes argued; and thence it was, perhaps, that on one of the Roman spheres, the Twins are represented as Venus and Mars. But these were later inventions. The Dioscuri and Cabiri were the oldest deities of the world, and, indeed, were the same deities; they were the visible potencies of the most ancient trinity; for though the Dioscuri and Cabiri were originally three, Pausanias expressly says, that "two only of these gods were visible, while the third and and greatest was invisible. It was unlawful," he adds, "to pronounce their name; but they were afterwards called Dioscuri." Bochart says, that "the Cabiri were Proserpine, Ceres, and Pluto."

In the mystical metaphors of the sacred dialect, they occupied the same place as the twin Cherubim of the ark, and the witnesses referred to by Zechariah iv. 12, 14, and the Apocalypse, xi. 4, "These are the two olive trees, and the two candlesticks standing before the God of the earth." "And when they shall have finished their testimony, the beast that ascendeth out of the bottomless pit (that is, *Typhon*, for so he is precisely depicted, as a dragon with seven heads) shall kill them; and their dead bodies shall lie in the street of the great city, which spiritually is called Sodom and Egypt: and after three days and a half the Spirit of life shall enter into them, and they shall stand upon their feet."

As to the Egyptian Dioscuri there cannot be a doubt that the "brothers" were Osiris and Typhon; the one representing light and the other darkness, and both springing from the mundane egg.

On the Zodiac of Esneh, they are represented under the double form of a harpy, as an amphibæna; as two dragons, flying different ways; and as two seraphs, uniting their wings over an ark. On one of the planispheres in Kircher, they are represented by two serpents; in another by the caduceus of Mercury; the knot of which united the warring principles of good and evil, was called "Hercules and Harmonia." This wand, consisting of the globe, wings, and two serpents, was a talisman, connected with the deepest mysteries of magic. The figure of a man, in the same sign, grasping a serpent in either hand, was, doubtless, connected with the same mysterious philosophy of good and evil.

On the planisphere of Dendera, the sign is represented by a double shaped monster, on one side a baboon, on the other a wolf. Little argument is necessary to prove that the *royal prophet* (so Horus Apollo explains the first hieroglyphic) was Osiris; and the impious man, (so he interprets the latter,) his brother Typhon. The

wolf, as a symbol of evil, has found its way even to the Edda, and plays an important part in the last battle between the great serpent and the gods. It is still considered as the great enemy of the sun and moon (Osiris and Isis) by the remotest nations, negroes and Chinese. On one of the planispheres of Kircher, he is depicted as in the act of being transfixed by Orus, a representation which has, indeed, descended to the modern celestial globe, whereon there still is to be seen the wolf transfixed by the Centaur.

The Cabiri are called "the sons of King Sadek, by Sanchoniatho." Bishop Cumberland supposes Sadek, which means "a just man," was Shem. But is he not more likely to have been Noah, who is called "a just man" by Moses? Indeed, nothing is more probable than that his three sons were the first objects of hero worship. But there are fearful characteristics, relating to the rites of the Cabiri, which are not reconcileable with the history of those three patriarchs, which would seem to point to some antediluvian enormity of the accursed line of Cain, and which possibly was the immediate cause of the deluge. Perhaps the crime may be that mysterious one confessed by Lamech to Adah and Zillah, his wives. "Hear my words, ye wives of Lamech, and hearken unto my speech, for I have slain a man to my wounding, and a young man to my hurt. If Cain shall be avenged seven-fold, surely Lamech seventy and seven-fold." To warrant such a scale of comparison the enormity must be great indeed.

It is curious that the cause of the deluge, as assigned by Ovid, is the offering up a human victim to Jupiter by Lycaon (the wolf.)

But however this be, the rites of the Cabiri were of the gloomiest possible character. They had a temple near Memphis, which none but the priests could enter. All things black were offered to them; and here it may not be unworthy of remark, as a singular corroboration, that the Copts, who call the three larger pyramids by the names of the three sons of Noah, are in the habit of offering a *black cock* at that which they call the pyramid of Shem. The Cabiritic rites were certainly bloody. Bochart says that a man was supposed to have been sacrificed in their mysteries, from a perverted notion of the predicted seed, and the necessary atonement. Hence perhaps the fable of Busiris and his human victims, the name of Busiris merely signifying the "house" or "tomb" of Osiris. Men, it appears, were originally sacrificed to Osiris, under the form of a vulture: but Alnasis ordered images of wax to be offered in their stead. As a proof that a mediatorial atonement was implied by the Egyptian sacrifices, it was customary to place a seal on the oxen selected as victims, which seal had upon it the figure of a man kneeling, with his hands bound to a stake and a sword to his throat. There is one of these representations

among the hieroglyphics in Denon. As to the human sacrifices at the tomb of Osiris, and elsewhere, the Greeks fabled that the Egyptian priests were going to offer up Hercules to his father Jupiter, but that he delivered himself by slaying the sacrificants. Every one knows that he afterwards became a voluntary victim.

Many wild and dark traditions seem to point to an atrocious antediluvian crime, committed under a blasphemous interpretation of the expected atonement. Thus Chronus, in Sanchoniatho, is described as offering his own son, Ilus, in sacrifice, in order to realise a prophecy. Atlas, the king of the Atlantis, which was submerged by the deluge, was murdered and thrown into a pit, by Hermes and Chronus, his brothers. So Lynceus was slain by the Dioscuri, Castor and Pollux. Now all this is corroborated by what Julius Firmianus intimates, that the Cabiri were three brothers, one of whom was slain by the other two, and then deified; and he describes "his worshippers as holding up their bloody hands to the once bleeding."

Were the Cabiri then the Mercury, (Jabal,) the Vulcan, (Tubal Cain,) and the Apollo, (Jabal,) of holy writ? Was the latter murdered by his brethren? and was this the "young man," whose murder is rated at so enormous a proportion of criminality, by Lamech, the repentant father?

Certain it is that similar stories of murder and mangling of a body, with its subsequent deification, are related of other personages besides Osiris. Thus Orpheus, the primitive bard, was torn to pieces. Apollo was, by some accounts, slain by Python, and partook of a three days' death; Adonis was torn by a boar; Bacchus was cut in pieces by the Titans, and Jupiter by the giants; the Manicheans had their Manes, and the Freemasons their Hiram. In all, the same family feature of violence and funereal mourning is strikingly apparent.

The following allusion to the sign *Gemini*, or the "brothers," Jacob's blessing to the tribes wonderfully corroborates, and strikingly illuminates the whole of the above inferences:—

"Simeon and Levi are the 'brothers;' instruments of cruelty are in their habitations. Oh, my soul, come not thou into their secret, (mysteries,) and unto their assembly be not thou united, (be not initiated,) my honour. For in their anger they slew a man, and in their self-will they digged a well, (this agrees with the fable of Atlas,) or houghed an ox, (this agrees with the Tentyrian planisphere.)"

Nothing can agree more completely with this reproving exclamation, nor with the history to which it seems to allude, than the ancient sign *Gemini*, and the symbols and figures which surround it. On all sides of it the planisphere of Dendera presents "instruments" and memorials of "cruelty." Typhon, a compound figure of a hog and crocodile, leans on a sacrificial knife,

with which he appears to have just destroyed the sacred bull. The scriptural term of "houghing an ox," seems borrowed from the twin symbols of the ox's thigh and the knife. Close at hand appears a figure, intended perhaps to represent the Gorgon head, with its single eye, severed by the Egyptian Perseus, and from the blood of which the giants are said to have been born. The symbol is an eye and a circle, which agrees precisely with the word *Cyclops*, implying also an eye and a circle. Now the race of giants were called "*Cyclopean*," and it is to the enormities of that race of giants that Moses attributes the flood. Beneath this is a gigantic figure, (the Orion and Nimrod of the modern sphere,) who grasps an animal by the neck, and has just lopped off the head of an ox, or cow, perhaps, for it has human feet, and in that manner Isis is sometimes represented. The Chaldean Ormorca was fabled to be beheaded, with reference to a similar tradition. So was Oannes, who predicted the flood. Belus also, like Osiris, was beheaded, and the head of the latter is seen carried above his coffin on the zodiac of Tentyra, while amidst the diluvian signs of the same zodiac appears a beheaded man.

The Egyptian "brethren," therefore, were Typhon and Osiris, who were twins, *Gemini*, and to these Jacob doubtless alluded. The "secret assembly" and conspiracy of Typhon need not be insisted on, nor the resurrection of Osiris in the form of Horus. The Greek fables of *Cœlus*, Saturn, and Jupiter, their mutual cruelties, and "wrath," and contentions, are no doubt derived from this source. No painting nor narrative could explain more forcibly the words of Jacob than the hieroglyphics of the planispheres and zodiacs in question, and the fables I have shown to be connected with them.

Beyond a doubt, the words of Jacob point to a greater sufferer than Osiris, and so did what I conceive to be the antediluvian picture-writing of the prophecy. But could any symbolic representative of the great atonement more apposite be found than the *great teacher* Osiris, the priest and king, slain by his brethren, and doomed to a three days' sepulture and resurrection? or his *thousand years'* reign of gold, as Horus, (the word implying "gold and light?") Could any symbol more apposite be found for the desolation of the future church than the widowhood of his wife, or her persecution and flight, than its persecutions and flight? The Apocalypse evidently sanctions the inference that these symbols were prophetic. "And to the woman (or the church, *Isheh*, *Isis*) were given two wings of a great eagle, that she might fly into the wilderness from the face of the serpent." (Typhon.) Now *Isis* was supplied with quail's wings to fly with her son from the successful treason of Typhon. The same wanderings and flight are recorded of *Latona* and her son, (the Greek *Horus*, or *Apollo*.)

and the same persecution imputed to Python, the "great serpent." Can any one for a moment doubt that these things are the *disjecta membra*

of one most ancient, most sublime, traditional, homogeneous religious system?

E. C.

SCRIPTURE TALES.

SIDDIM.—GENESIS, CHAPTER XIV.

THE waters of the deluge had wholly disappeared from the bosom of the earth, and with them had vanished all thoughts of the judgment from the hearts of her apostate sons. God was again forgotten amid their strivings for empire; especially by the race of Ham. The miraculous dispersion from Babylonia appeared also to be utterly lost upon their idolatrous minds. Expelled from the region they unjustly usurped, the Rebrodian Cuthites sought refuge in various portions of the world. Some penetrated beyond the Indus and the Ganges; others possessed themselves of part of the inheritance of Mizraim; some patiently sought the allotment given to their father, in the more southerly districts of Afric; and others took possession of the land of promise between Jordan and the sea of Tarshish, from Hobnah to the vale of Siddim.

But the dispersion of the rebel tribes was not the only consequence of the check they received at Babel. Thence also arose the first protracted struggle that stained the face of the newly regenerated earth with blood. In the mythological reveries of the Ethnic writers we read of a decennial war between the Titans and the gods. That war, and the fabled conquests of the Assyrians, who are said to have achieved such victories over many nations in days when those nations could scarcely be established, we have intimated to us, in language free at once from ambiguity and hyperbole, in the word of the living God.

A few of the Hamonians, notwithstanding the fate of Nebrod and their own discomfiture, yet lingered in Shinar and Babylonia; and a much greater number, as previously remarked, still resisting the command for their dispersion, settled on the coasts of Tarshish, and the region round about; while Canaan took possession of that country which the Lord had reserved for another, and claimed as his own peculiar portion. These people, powerful as they had been, and trained to ambition and warfare under their fallen leader, whom they now worshipped as a god, excited the jealousy of the children of Shem, who entered into a family confederacy against them. Aramphal, king of Shinar, (which had been recovered by the Shemetic tribes,) Arioch, king of Ashur or El-Asur, Chedorlaomer, king of Elam, and Tidal, king of the nations of the children of Aram, were the principals in this confederacy, by which not only the scattered Chaldees of Shinar, but all the Hamonians even

to the cities of the plain were brought into subjection. Twelve years they served Chedorlaomer, and in the thirteenth they rebelled; and in the fourteenth year came Chedorlaomer and those that were with him, bringing on their armies to battle, resolved to reduce them to obedience, or expel them from the land.

The martial trumpet sounded through Sodom, and assembled her bold sons at the command of Bera, to give battle to the foe. Imposing was the appearance of the warriors as they marched through the streets of the city arrayed in the habiliments of destruction, and rending the air with loud shouts of "freedom to our children," and "vengeance on the foe." But beneath those breast-plates of steel beat many a heart whose palpitations confessed a sway other than Bera's, many a heart that could not leave behind the tender ties which bound it to home and kindred, from which the din of martial clamour could not erase the impress of near and dear ones whom they had left perhaps for ever.

Go, look into the homes of Sodom! why are their wives so sad? and why are her children weeping? will not the spirit-stirring sound of martial music quell their fears? will not the sight of their mail-clad husbands and fathers inspire them with ardour? Oh, what are these but mockeries to the bosom that has clung to the warrior's last embrace? One truth only is present before them—they have parted perhaps for ever.

The temples of the city were filled with devotees, who implored their deaf idols to assist their heroes in the strife. But alas! they turned not from their iniquities, nor acknowledged the hand that in righteousness had smitten them. There every kind of vice was rampant, and few heeded, none obeyed, the mandates of that law which had been transmitted by their father Noah. One heart only in Sodom, the heart of a Shemite who was sojourning among the people, was lifted to the one true God, and owned the justice of the rod that afflicted them.

"Why art thou so sad?" exclaimed Shelah to her consort, "they call thee not forth to battle."

Lot wandered to and fro in the court of his house, and heeded not her words. He had before felt his spirit wounded to see the iniquity of the land. But now that battle and destruction drew nigh, he experienced more keenly the bitterness of dwelling among the wicked.

"Wretch that I am," he exclaimed mentally, "why was I not satisfied to abide with my own kindred, and marry among them? Now the judgments of the Lord are upon me, and I too must suffer with the idolaters, among whom I dwell. Oh God of Enoch and of Noah! I have hidden thy name in my heart, and have not declared thy almightiness among my neighbours, more anxious about my own safety than theirs; while I have gathered up wealth among them, I have let their dark deeds go unreprieved. Now justly dost thou mix me with them in condemnation, and the sword is coming upon me."

"What ails thee, Lot?" cried Shelah in a louder voice. "On what are thy thoughts thus wandering?"

"I was thinking," he answered, "of peace and the plains of Bethel, where the son of Terah feeds his flocks."

"And what has peace or war to do with thee?" said she, "thy hands are not required to raise the sword; and soon will the brave citizens of Sodom free their people from the bonds of Chedorlaomer."

Lot shook his head in token of dissent, but answered not. He knew that the eye of the Eternal kept watch upon the earth, and he felt the guilt of the people had brought this judgment down upon them; making the tribe of the apostate usurper, so soon after the prophecy had been uttered, "a servant of servants." He looked at his playful daughters, then like young flowrets in their bloom, destined perhaps to fall by the rough hands of the exasperated foe. The pangs of his heart brought tears into his eyes. He wished himself again beside the tent of his uncle, the favoured of the Lord; and cursed the time when the quarrels of their herdsmen had urged him from his presence.

That day was an anxious one for Sodom. Many were they who looked with glad surmising towards the plain; but no army came back with shouts of victory, and palm branches in their hands. Towards evening many scattered ones hurried through the vale. But they stayed not in the cities. They fled to the mountains for shelter.

What means that voice of wailing, "the king is fallen?" Wail, Sodom, 'tis the season of thy widowhood, and the spoiler is upon thee. Her king, with that of Gomorrah, is overthrown in the battle; and the army of the victors are poured into her gates. There all is confusion. The houses are sacked by the invaders; the temples are pillaged; and the shrieks of mothers and daughters carried off by the foe heighten the din of anarchy.

Lot seized his children in his arms, hugged them to his breast, and burst into tears. But

tears were of no avail to stay the hands of the ruffian soldiery. Father, mother, and daughters were forced along with them. Their house was cleared of its contents, and their flocks were driven before them for the use of the marauders.

"Oh God!" exclaimed the Hebrew, "to thee I make my appeal, forsake not thy servant in this distressing hour."

"God is with us!" replied one of the soldiers, "he hath aided us in the day of battle."

"God winks not at oppression and injustice," responded Lot, "ye are striving for a land which does not belong to you, and have ravaged the country to the borders of Mizraim. He may punish by your hands the iniquities of others; but he will not on that account be less mindful of yours. When the true owner asserts his claim to the region of Jordan, then will he drive out the nations before him; but that region is not yours."

"Cease your preaching, old dotard," cried several of them at once, "we have no time to listen to your dreams;" and they hurried him along with the spoils of the vale of Siddim, whose fair daughters were subjected to the rough insults of their conquering foes.

Day and night they hastened them along, scarcely stopping for needful rest or refreshment, till they had travelled as far as Hobnah on the north. Then they heard in their rear the shouts and footsteps of pursuers, the heart of Lot bounded within him, for he knew the voice of Abraham.

"He is come," he exclaimed, "he to whom authority is given. Thanks be to God for this seasonable succour."

Soon was the air rent with the clashing of weapons, and the loud alarms of contending hosts. War roared, and the darkness of midnight made its roarings more awful, while amid the hoarse thunderings of battle flashed beneath the pale moon-beams the lightning of conflicting steel.

But not long the contest continued. The Hebrew and his followers, with those of his brave allies, Mamre, Eschol, and Aner, soon made dreadful slaughter in the ranks of the enemy, and the captives, catching the spirit of valour from the shouts of the recusants, struggled again for freedom. The eyes of Lot were uplifted to heaven, as he prayed for the success of his kinsman. Absorbed in God he knew not that the contest was over, till snatched with his wife and daughters from the grasp of the oppressor, he looked round for a moment with inexpressible delight, then fainted in the arms that had cherished him in childhood, the arms of the Son of Terah.

T. R.

MEDICINE OF NATURE.

It becomes us, before we decree the honours of a cure to a favourite medicine, carefully and candidly to ascertain the exact circumstances under which it is exhibited, or we shall rapidly accumulate examples of the fallacies to which our art is exposed. What has been more common than to attribute to the efficacy of a mineral water those fortunate changes of constitution that have entirely, or in great measure, arisen from salubrity of situation, hilarity of mind, exercise of body, and regularity of habits, which have incidentally accompanied its potation? Thus the celebrated John Wesley, while he commemorates the triumph of "sulphur and supplication" over his bodily infirmity, forgets to appreciate the resuscitating influence of four months' repose from his apostolic labours; and such is the disposition of the human mind to place confidence in the operation of mysterious agents, that we find him more disposed to attribute his cure to a brown paper plaister of egg and brimstone, than to Dr. Fothergill's salutary prescription of country air, rest, asses' milk, and horse-exercise. The ancient physicians duly appreciated the influence of such agents; their temples, like our watering-places, were the resort of those whom medicine could not cure; and we are expressly told by Plutarch that these temples, especially that of Esculapius, were erected on elevated spots, with the most congenial aspects; a circumstance which, when aided by the invigorating effects of hope, by the diversions which the patient experienced in his journey, and perhaps by the exercise to which he had been unaccustomed, certainly performed many cures. It follows, then, that in the recommendation of a watering-place, something more than the composition of a mineral spring is to direct our choice. The chemist will tell us that the springs of Hampstead and Islington rival those of Tunbridge and Malvern; that the waters of Bagnigge Wells, as a chalybeate purgative, might supersede those of Cheltenham and Scarborough; and that an invalid would frequent the spring in the vicinity of the Dog and Duck, in St. George's Fields, with as much advantage as the celebrated spa at Leamington: but the physician is well aware that, by the adoption of such advice, he would deprive his patient of those most powerful auxiliaries to which I have alluded, and, above all, lose the advantage of the *medicina mentis*. On the other hand, the recommendation of change of air and habits will rarely inspire confidence, unless it be associated with some medicinal treatment—a truth which it is more easy and satisfactory to elucidate and enforce by examples than by precept. Let the following story by Voltaire serve as an illustration:—

"Ogul, a voluptuary, who could be managed

but with difficulty by his physician, on finding himself extremely ill from indolence and intemperance, requested advice.

" 'Eat a basilisk stewed in rose-water,' replied the physician.

"In vain did the slaves search for a basilisk, until they met with Zadig, who, approaching Ogul, exclaimed, 'Behold that which thou desirest! But, my lord,' continued he, 'it is not to be eaten; all its virtues must enter through thy pores; I have therefore enclosed it in a little ball, blown up, and covered with a fine skin. Thou must strike this ball with all thy might, and I must strike it back again, for a considerable time; and by observing this regimen, and taking no other drink than rose-water for a few days, thou wilt see and acknowledge the effect of my art.'

"The first day, Ogul was out of breath, and thought he should have died from fatigue; the second he was less fatigued, and slept better; in eight days he recovered all his strength. Zadig then said to him, 'There is no such thing in nature as a basilisk; but thou hast taken exercise and been temperate, and hast therefore recovered thy health.'

But the medical practitioner may, perhaps, receive more satisfaction from a modern illustration; if so, the following anecdote, related by Sydenham, may not be unacceptable:—

"This great physician, having long attended a gentleman of fortune, with little or no advantage, frankly avowed his inability to render him any further service, adding, at the same time, that there was a physician of the name of Robinson, at Inverness, who had distinguished himself by the performance of many remarkable cures of the same complaint as that under which his patient laboured, and expressing a conviction, that if he applied to him he would come back cured. This was too encouraging a proposal to be rejected. The gentleman received from Sydenham a statement of his case, with the necessary letter of introduction, and proceeded without delay to the place in question. On arriving at Inverness, and anxiously inquiring for the residence of Dr. Robinson, he found, to his utter dismay and disappointment, that there was no physician of that name, nor ever had been, in the memory of any person there. The gentleman returned, vowing eternal hostility to the peace of Sydenham; and on his arrival at home, instantly expressed his indignation at having been sent on a journey of so many hundred miles for no purpose.

" 'Well,' replies Sydenham, 'are you better in health?'

" 'Yes, I am now quite well; but no thanks to you.'

"No," says Sydenham; 'but you may thank Dr. Robinson for curing you. I wished to send you a journey with some object of interest in view; I knew it would be of service to you. In

going, you had Dr. Robinson and his wonderful cures in contemplation; and in returning, you were equally engaged in thinking of scolding me.'"—*Paris's Pharmacologia*.

A SEAMAN'S FUNERAL.

VERY shortly after poor Jack dies he is prepared for his deep-sea grave by his messmates, who, with the assistance of the sail-maker, and in the presence of the master-at-arms, sew him up in his hammock; and having placed a couple of cannon shot at his feet, they rest the body (which now not a little resembles an Egyptian mummy) on a spare grating. Some portion of the bedding and clothes are always made up in the package, apparently to prevent the form being too much seen. It is then carried off, and being placed across the after-hatchway, the union Jack is thrown over all. Sometimes it is placed between two of the guns, under the half-deck, but generally, I think, he is laid where I have mentioned—just abaft the mainmast. I should have mentioned before, that as soon as the surgeon's ineffectual professional offices are at an end, he walks to the quarter-deck, and reports to the officer of the watch that one of his patients has just expired. At whatever hour of the day or night this occurs, the captain is immediately made acquainted with the circumstance.

Next day, generally about eleven o'clock, the bell on which the half hours are struck is tolled for the funeral; and all who choose to be present assemble on the gangways, booms, and round the mainmast, while the forepart of the quarter-deck is occupied by the officers. In some ships (and perhaps it ought to be so in all) it is made imperative on the officers and crew to attend the ceremony. If such attendance be a proper mark of respect to a professional brother, as it surely is, it ought to be enforced, and not left to caprice. There may be, indeed, times of great fatigue, when it would harass men and officers needlessly, to oblige them to come on deck for every funeral; and upon such occasions, the watch on deck may be sufficient. Or when some dire disease gets into the ship, and is cutting down her crew by some daily and nightly, or, it may be, hourly ravages, and when two or three times on watch the ceremony must be repeated, those only whose turn it is to be on deck need be assembled. In such fearful times the funeral is generally made to follow close upon the death.

While the people are repairing to the quarter-deck, in obedience to the summons of the bell, the grating on which the body is placed, being lifted from the main-deck by the messmates of the man who has died, is made to rest across the lee-gangway. The stanchions for the man-

ropes of the side are unshipped, and an opening made at the after-end of the hammock-netting sufficiently large to allow a free passage. The body is still covered by the flag already mentioned, with the feet projecting a little over the gunwale, while the messmates of the deceased range themselves on each side. A rope, which is kept out of sight in these arrangements, is then made fast to the grating, for a purpose which will be seen presently. When all is ready, the chaplain, if there be one on board, or, if not, the captain, or any of the officers he may direct to officiate, appears on the quarter-deck, and commences the beautiful service which, though but too familiar to most ears, I have observed never fails to rivet the attention even of the rudest and least reflecting. Of course, the bell has ceased to toll, and every one stands in silence and uncovered as the prayers are read. Sailors, with all their looseness of habits, are well disposed to be sincerely religious; and when they have fair play given them, they will always, I believe, be found to stand on as good 'vantage ground, in this respect, as their fellow-countrymen on shore. Be this as it may, there can be no more attentive or apparently reverent auditory than assembles on the deck of a ship of war on the occasion of a shipmate's burial.

The land service for the burial of the dead contains the following words:—"Forasmuch as it has pleased Almighty God, of his great mercy, to take unto himself the soul of our dear brother here departed, we therefore commit his body to the ground; earth to earth, ashes to ashes, dust to dust; in sure and certain hope," &c. Every one, I am sure, who has attended the funeral of a friend, (and whom will not this include?) must recollect the solemnity of this stage of the ceremony, where, as the above words are pronounced, there are cast into the grave three successive portions of earth, which, falling on the coffin, send up a hollow, mournful sound, resembling no other that I know. In the burial service at sea, the part quoted above is varied in the following very striking and impressive manner:—"Forasmuch," &c., "we therefore commit his body to the deep, to be turned into corruption, looking for the resurrection of the body, when the sea shall give up her dead, and the life of the world to come," &c. At the commencement of this part of the service, one of the seamen stoops down and disengages the flag from the remains of his late shipmate, while the others, at the

words, "we commit his body to the deep," project the grating right into the sea. The body being loaded with shot at one end, glances off the grating, plunges at once into the ocean, and

"In a moment, like a drop of rain,
He sinks into its depths with bubbling groan,
Without a grave, unknelt, uncoffined, and unknown."

This part of the ceremony is rather less solemn than the correspondent part on land; but still there is something impressive, as well as startling, in the sudden splash, followed by the sound of the grating, as it is towed along under the main-chains.—*Captain Basil Hall's Sketches.*

THE LIFE OF THOMAS PAINE,

AUTHOR OF "THE AGE OF REASON."

CHAPTER III.

THE "Age of Reason," the first and second parts, is a virulent, and blasphemous attack on Divine revelation: it is full of coarse and vulgar sentiments and allusions. Ribaldry is substituted for argument, and the most unfair advantage is taken of the ignorance of common readers. It is well adapted to unsettle superficial believers in the Divine authority of the Scriptures, and to strengthen, with a show of reason, the prejudices with which vice always arms its votaries against sanctity. In short, the book is a fair, or I should rather say, a foul and frightful picture of the man. His "Age of Reason," is the dictate of a black and bloodless heart, charred with the flames of its own raging and restless passions. It has nothing of the fire of youth, nothing of the sober maturity of enlightened age. It is just such a work as a demon would write, and which no man but Paine could have conceived and dictated. If he had possessed a remnant of a virtue he would have paused before he had denounced the Gospel of Jesus Christ, before he had trampled on a system of ethics so perfect in all its parts, so pure in all its principles.

There is that in a sublime morality, when embodied in the doctrines and precepts of true religion, which only minds of virtuous tendencies are able to understand or appreciate. Jesus Christ insisted upon this, as a pre-requisite in those who wished to examine into the truth of his mission. "If any man will do his will, he shall know of the doctrine whether it be of God, or whether I speak of myself." Surely no higher presumptive evidence can possibly be offered in favour of any system of religion than that it requires moral goodness as the indispensable character of those who would investigate and adjust its claims; as it would certainly be a powerful argument against a pretended revelation from heaven, that it was congenial with the principles and sought the alliance of the vicious and the base. We sometimes talk of "the anticipated Christianity of Socrates," and we may, with the same propriety, speak of the anticipated infidelity of Epicurus. If the life of the one prepared him for a cordial reception of the Christian doctrine, had it been presented to his mind, the principles

and conduct of the other would have, as certainly, induced him to reject it. And we might as soon have expected that Satan would love God, as that Thomas Paine would love the Bible. Such contrarieties can never harmonise; either the Bible must repeal all its laws, and abolish their sanctions, or Paine must deprecate and abhor it as his accuser and judge. The same class of feelings which induce culprits to hate the Old Bailey and the new drop, influenced Paine to reprobate the sacred Scriptures. It would be a happy world for thieves and infidels if the majesty of the people could but destroy prisons, gibbets, and Bibles.

"The Age of Reason" Paine considered as his last gratuitous labour for the public good. His generous spirit meditated nothing less than the complete emancipation of the human mind: the thralldom of civil government, and the vassalage imposed by religion, must yield to "The Rights of Man," and "The Age of Reason."

Whether he always entertained this noble purpose in all its extent, may well be doubted. Even philanthropy does not spring up at once to maturity! it grows with our growth, and enlarges its sphere of action with our opportunities and our means.

In some of his works we meet with plain recognitions of the divinity of the Scriptures, and the truth of Christianity.

In a rhapsody about the new American constitution which he proposed to establish, he tauntingly remarks, "But where, say some, is the king of America? I will tell you, friend: he reigns above, and does not make havoc of mankind. Yet, that we may not appear to be defective, even in earthly honours, let a day be solemnly set apart for proclaiming the charter; let it be brought forth, placed on the Divine Law—the word of God; let a crown be placed thereon, by which the world may know that so far we approve of monarchy; that, in America, the law is king."

In another page of the same work, we meet with a direct recognition of Christianity, as a religion from heaven. "For myself, I fully and conscientiously believe, that it is the will of the

Almighty there should be diversity of opinions among us; it affords a larger field for our Christian kindness: were we all of one way of thinking, our religious dispositions would want matter for probation; and on this liberal principle, I look upon the various denominations among us to be like children of the same family, differing only in what is called their Christian names."

Either Paine, when he wrote these sentences, had not conceived the lofty idea of dethroning religion from the consciences of mankind, or he was an arrant and profligate hypocrite. There are two reasons which, in my mind, strengthen the latter position; his flagrantly vicious conduct when he professed to write as a Christian, and a remark he once made to a friend, with his own account of his inducement to favour the world with his thoughts on religion.

"In deism," observes Mr. Cheetham, "Paine was, in all probability, a hypocrite. Generally he expressed detestation of atheism; and yet he has uttered opinions favourable to it. He believes, he repeats, in his 'Age of Reason,' in one God; but it is probable that he believed in nothing superior to matter. In conversation with Mrs. Palmer, widow of the deistical haranguer, he let out his materialism. Stewart, 'the traveller,' an insane man, had published a pamphlet, which he called *Opus Maximum*, denying the existence of every thing but matter. Referring to it, Mrs. Palmer remarked, 'Stewart's doctrine, Mr. Paine, may be correct.' 'It is well enough,' replied Paine, 'to say nothing about it; the time is not yet come!'"

In the second part of the "Age of Reason," the preface contains the following passage: "I have already mentioned, in the former part of the 'Age of Reason,' that it had long been my intention to publish my thoughts upon religion, but that I had originally reserved it to a late period of life, intending it to be the last work I should undertake."* Compare these extracts with the opinions and sentiments quoted from his "Common Sense," and what can you think of the man? Are we not forced to conclude that a time-serving and mean policy alone influenced him to hide the atheist behind the Christian mask?

It is now time that we follow Paine from France to America, where he exhibited the efficacy of his principles in life and death. He continued in France from the year 1797 to the year 1802, "associating during that time," says Mr. Cheetham, "with the lowest company, and indulging, to still greater excess, his thirst for

liquor. He became so filthy in his person, so mean in his dress, and so notorious a sot, that all men of decency, in Paris, avoided him. On the third of October, 1802, he arrived at Baltimore, under the protection of President Jefferson.

Soon after, followed him, abandoning her husband, (Paine's particular friend,) Margaret Brazier Bonneville, and her three sons Lewis, Benjamin, and Thomas. "Thomas," says Cheetham, "has the features, countenance, and temper of Paine."

At New York, in 1802, Mr. Cheetham waited on him, having received a note from him, announcing his arrival. He was accompanied in his visit by Mr. George Clinton, jun. His account of the interview is characteristic and amusing: "We rapped at the door; a small figure opened it within, meanly dressed, having on an old top coat, without an under one, a dirty silk handkerchief, loosely thrown round his neck; a long beard of more than a week's growth; a face well carbuncled, fiery as the setting sun, and the whole figure staggering under a load of inebriation. I was on the point of inquiring for Mr. Paine, when I saw in his countenance something of the portraits I had seen of him. We were desired to be seated. He had before him a small round table, on which were a beefsteak, some beer, a pint of brandy, a pitcher of water, and a glass. He sat eating, drinking, and talking, with as much composure as if he had lived with us all his life. I soon perceived that he had a very retentive memory, and was full of anecdote. The Bishop of Llandaff was almost the first word he uttered, and it was followed by informing us that he had in his trunk a manuscript reply to the bishop's apology. He then, calmly mumbling his steak, and ever and anon drinking his brandy and beer, repeated the introduction to his reply, which occupied him nearly half an hour. This was done with deliberation, the utmost clearness, and a perfect apprehension, intoxicated as he was, of all that he repeated. Scarcely a word would he allow us to speak. He always, I afterwards found, in all companies, drunk or sober, would be listened to. Having repeated the introduction to his manuscript reply, he gave us the substance of the reply itself. He then recited from memory, in a voice very plaintive, some Asiatic lines, as specimens of morality, equalling at least the sublime doctrines of the New Testament. He had read but little in the course of his life; much less than may be supposed; but that little he had sorted, laid up in his intellectual storehouse with care, and could deal it out with a facility and discrimination, which, however hated and despised, or on whatever account, was truly admirable."

In the receipt of four hundred pounds per annum, and with a good house, had he chosen to occupy it, this sage, this illuminator of the old and the new world, was constantly removing from our

* Since writing the above, I have found in the "Age of Reason" the following declaration, which proves his hypocrisy, when writing "Common Sense," beyond a question. "I could see injustice in the doctrine of redemption when only seven years of age; and I believe in the same manner to this day."

pot house to another. Sometimes, when he could induce persons to lodge him in more private dwellings, he would become their inmate, till in their own defence they were forced to dismiss him. Madame Bonneville and her children he treated with the greatest cruelty. More than once he endeavoured to abandon her. One of the boys, disgusted with his treatment, and feeling towards him the most sovereign contempt, indignantly quitted him and his mother for ever, and worked his passage back to France. This youth frequently declared with a sigh, that Paine had destroyed the peace of their family, and that bad as his character was in America, it was considered to be far more infamous in France. He would pay no demands made upon him till absolutely compelled; and would sacrifice the dearest friend on earth, if he asked him for a shilling. He was so scandalously unjust, and despicably mean, as to force a poor servant who had waited upon him with the utmost assiduity and tenderness, to sue for her wages. And his mistress must have starved, if she had not gained a precarious subsistence by undertaking to teach the French language. He was habitually drunk; and, in a state of intoxication, once or twice endangered his life. A detail of the facts which disgraced the latter period of his mortal existence, would excite no other feelings than those of disgust and abhorrence. Avarice sat brooding in his heart; malignity gave its dark and deadly character to his fierce and fiery eye; he was deserted by the good; and the meanest dependants, impelled by their necessities, could scarcely be induced to approach him. The following extracts from a letter written to him by an individual who was a disciple in his school, and who treated him with more than a brother's kindness, but who at length abandoned him, because he disputed with him a just debt, will prove that the statement I have given falls far short of the truth.

"It is a well known fact, that you drank one quart of brandy per day at my expense. I am not paid, and found you room and firing besides.

"I will ask you what consolation you derive to your mind in departing from truth, and endeavouring to evade paying a just and lawful debt?

"You complain that I left your room the night you pretend you were seized with the apoplexy; but I had often seen you in those fits before, and particularly after drinking a large portion of ardent spirits, those fits have frequently subjected you to falling. You remember you had one of them at Lovett's hotel, and fell from the top of the stairs to the bottom. You likewise know I have frequently had to lift you from the floor to the bed. You must also remember, that you and myself went to spend the evening at a certain gentleman's house, whose peculiar situation in life forbids me to make mention of his name; but I had to apologise for

your conduct; you had two of these falling fits in Broadway, before I could get you home.

"I believe you have broken up the domestic tranquillity of several families with whom you have resided; and I can speak by experience as to my own.

"An old acquaintance of yours and mine called on me a few days ago. I asked him if he had been to see you? his answer was, he had not, neither did he want to see you. He said, he believed that you had a good head but a very bad heart. Have you lost all principles of gratitude, as well as those of justice and honesty? or did you never possess one virtue?

"A respectable gentleman from New Rochelle called to see me a few days past, and said, that every body was tired of you there, and no one would undertake to board and lodge you. I thought this was the case, as I found you at a tavern, in a most miserable situation. You appeared as if you had not been shaved for a fortnight, and as to a shirt, it could not be said that you had one on; it was only the remains of one, and this, likewise, appeared not to have been off your back for a fortnight. Do you not recollect the pains I took to clean you? that I got a tub of warm water, and soap, and washed you from head to foot, and this I had to do three times before I could get you clean. I likewise shaved you and cut your nails, that were like birds' claws. Have you forgotten the pains I took with you when you lay sick, wallowing in your own filth?" I really can transcribe no more.

The wretched being who has been the subject of so much attention, is now drawing near the close of his ill-spent life. He went to reside with a Mr. Jarvis, who managed him better than might have been expected. He continued to drink excessively; but once Mr. Jarvis knew him to abstain from liquor two weeks. He would sit up at night tipping till he fell from his chair. Disposed to listen to his conversation, Mr. Jarvis sat up with him one night from twelve till three, doing all he politely could to keep him sober. At three he left him at his bottle. At four he returned to the room, and found him drunk on the floor. Mr. Jarvis wished to raise him up; but Paine desired to lie still. "I have the vertigo, the vertigo," said he. "Yes," said Mr. Jarvis, taking up the bottle, and looking at its diminished contents, "you have it deep-deep!" In this posture and plight he talked about the immortality of the soul. "My corporeal functions have ceased," he said, "and yet my mind is strong. My body is inert, but my intellect is vigorous. Is not this a proof of the immortality of the soul?" "I am glad," said Mr. Jarvis, "that you believe in the immortality of the soul, and in a future state." "That," said Paine, "is a wrong term. We have strong testimony; I have strong hope of a future state; but I know

nothing about it." "As the soul (said Mr. Jarvis) will live hereafter, will it be conscious that it has lived now?" "To live hereafter," said Paine, "and not be conscious that I have lived now, would not be identity; it would amount to nothing."

One day, sitting with a volume of his works on a table before him, containing his "Age of Reason," the servant girl took it up to read. Mr. Jarvis said she should not open it for the world, and took it from her. "Why?" said Paine, rising up angrily. "Because she is a good girl now; she has the fear of God, and will do nothing wrong. She cannot reason as you can, and if she reads your 'Age of Reason,' and divests herself of those restraints which now govern her conduct, she may cheat me, she may rob me, she may be undone." "Pshaw, pshaw!" said Paine, walking testily across the room, with his hands behind him: "why should any body believe in Jesus Christ?" "Come here," said Mr. Jarvis, "to the window; look there; (pointing to a congregation of people of colour coming out of their church;) do you see that black man? Three years ago he was a great reprobate; he was guilty of all sorts of offences; he had not been brought up as my servant has; he was egregiously immoral; he had no religious awe; and was not disposed to make use of the little reason he possessed. He has since been converted. He is now a regular attendant on his church. You see that he is dressed well, and has a goodly appearance. All in his neighbourhood now shake hands with him, and are his friends; formerly he was avoided by them all as a pestilence." Paine had no answer to make, but "Pish" and "Pshaw," and "I had not thought that you were such a man."

He remained with Mr. Jarvis five months, and then removed, in succession, to several other places. The last residence which he selected was a small alehouse, where a sixpenny show was daily exhibited. About this period he wrote the "Memorial to Congress," for a compensation for his services already noticed.

In January, 1809, his friends having removed him by force from his paltry lodging, placed him in the house and under the care of a Mr. Ryder, a respectable man; he began to be so feeble and infirm as to be incapable of doing any thing for himself. Often Mr. Ryder found him in tears. He was very anxious to die; but still more anxious about his body after death. He wished to be interred in the cemetery of the Quakers. This, however, was refused. Symptoms of his dissolution increased so rapidly, and he was so sensible of this himself, that on the 4th of May he was removed from Mr. Ryder's to a small house in the neighbourhood. The house was rented by Madame Bonneville for Paine, who occupied the whole of it. A nurse was provided for him, a pious elderly matron, named

Hedden. Aware of Paine's bad temper, she determined to take all the care of him she could, but not to bear ill-treatment. During the first three or four days, his conduct was tolerable, although he always quarrelled with Madame Bonneville when she went into his room. About the fifth day, his language was offensive to Mrs. Hedden, who told him she would instantly leave the house. Sensible of her value as a nurse, and that in all probability no other person would attend him, he made her satisfactory concessions, and was afterwards civil. He suffered severe pain, and would long and frequently cry out, "O Lord, help me!" "O Lord, help me!" "O Christ, help me!" "O Christ, help me!" Dr. Manley, his physician, once observed to him, that if he would throw himself on the mercy of Jesus Christ, he would find relief. To this he made no reply. He professed to be above the fear of death. Yet, one night, when he apprehended immediate dissolution, he exclaimed, "I think I can say what *they* make Jesus Christ to say—my God, my God, why hast thou forsaken me!" After this he would not be left alone night nor day; he not only required to have some person with him, but he must see that he or she was there, and would not allow his curtain to be closed at any time; and if, as it would sometimes unavoidably happen, he was left alone, he would scream and halloo until some person came to him.

A young lady who resided in the family of a gentleman, a near neighbour of Paine in his last illness, sometimes visited him, taking from the table of the family, refreshments more adapted to his comfort than those he usually enjoyed. In making these visits, she found him frequently writing; and believed, from what she saw and heard, that when his pains permitted, he was almost always so engaged, or in prayer, in the attitude of which she more than once saw him, when he thought himself alone. One day he inquired of her, whether she had ever read his "Age of Reason;" and being answered in the affirmative, desired to know her opinion of that book. She replied, that she was but a child, when she read it; and he, probably, would not like to hear what she thought of it; on which, he said, if old enough to read, she was capable of forming some opinion; and that from her he expected a candid statement of what her opinion had been. She then acknowledged, that she thought it the most dangerous, insinuating book she had ever seen; that the more she read, the more she wished to read, and the more she found her mind estranged from all that is good; and that from a conviction of its evil tendency, she had burnt it, without knowing to whom it belonged. To this Paine replied, that he wished all who had read it had been as wise as she; adding, "If ever the devil had an agent on earth, I have been one." At another time, when she

was in his chamber, and the master of the family was sitting by his bed-side, one of Paine's former companions came in; but, on seeing him with him, hastily retired, drawing the door after him with violence, and saying, "Mr. Paine, you have lived like a man; I hope you will die like one." Upon which Paine, turning to his principal visitor, said, "You see, sir, what miserable comforters I have!"

"I took occasion," says Dr. Manley, "during the night of the 5th and 6th of June, to test the strength of his opinions respecting revelation. I addressed him in the following manner, the nurse being present:—

'Mr. Paine, your opinions, by a large portion of the community, have been treated with deference: you have never been in the habit of mixing, in your conversation, words of course: you have never indulged in the practice of profane swearing: you must be sensible that we are acquainted with your religious opinions, as they are given to the world. What must we think of your present conduct? Why do you call upon Jesus Christ to help you? Do you believe that he can help you? Do you believe in the divinity of Jesus Christ? Come now, answer me honestly;—I want an answer as from the lips of a dying man: for I verily believe that you will not live twenty-four hours.' I waited some time at the end of every question; he did not answer, but ceased to exclaim after the above manner. Again I addressed him: 'Mr. Paine, you have not answered my questions: will you

answer them? Allow me to ask again—Do you believe?—or let me qualify the question—Do you wish to believe that Jesus Christ is the Son of God?' After a pause of some minutes he answered,—'I have no wish to believe on that subject.'"

From the anxiety he expressed to obtain something like Christian burial, and from the testimonies of the state of his mind in the alarming prospect of dissolution, I think it is evident that Paine, like most of the same school, had not even the cold comfort afforded, by "the full assurance of infidelity." In life, who would wish to imitate him? In death, who can envy him? He departed on the 8th of June, 1809. Thus this venerable apostle of infidelity, whose precious relicts are transported to the country which gave him birth, to be distributed among the faithless who cherish his memory (as we are told) with enthusiasm, died at the age of seventy-two, a martyr, not to his principles, but to drunkenness—his vitals were consumed, not with fire, but with his darling *Eau de vie*—in plain English—with Brandy. The unpitied eye of heaven never looked on so forlorn, so wretched, so despicable a being. Humanity never felt itself so insulted and degraded as in his loathsome person. By his own confession he was forsaken of God, and by man he was denied the last hope of the miserable, the common privilege of sepulture. He lies with no kindred dust. The misanthrope perished alone!

A LEAF FROM THE HISTORY OF THE WALDENSES.

HISTORICAL associations impart a higher character to natural scenery than it can possess when only regarded as an assemblage of material images. While the eye gazes, memory recalls the deeds of olden time; and mountains, valleys, rocks, and rivers, that have been the scenes of spirit-stirring events, when beheld, awaken emotions of a peculiar kind; and the events themselves seem to be clothed with the freshness of yesterday's exploits. When Imagination waves her magic wand, the barriers of time disappear, the gathered mists of ages vanish, the battle-plain is once more thronged with the bold and the brave, the helmet and the plume are again seen, the banners are floating on the breeze, the trumpets are heard sounding to the charge, foe meets foe, sword glitters near sword, now rises the victor's shout, and now the dying wail of the conquered breaks fearfully on the air.

"The earth is covered thick with other clay
Which her own clay shall cover, heap'd and pent,
Rider and horse, friend and foe, in one red burial blent."

To legend and romance is owed much of the interest attached to scenes, as well as to the authentic annals of the chronicler. The wizard of the north has immortalised many spots in his

own beautiful and romantic country, and the dwellers in other lands are not unfrequently found wending their way to some of the places which he has made celebrated by his works. Still there is in scenes where real events have happened a more indescribable charm, and the feelings produced by their contemplation will be modified by the character of the deeds with which they are associated in the pages of history.

"Oh who could, even in bondage, tread the plains
Of glorious Greece, nor feel his spirit rise
Kindling within him? who, with heart and eyes
Could walk where liberty had been, nor see
The shining footprints of her Deity?
Nor feel those god-like breathings in the air,
Which mutely told her spirit had been there."

Who could traverse the wide steppes of Poland,* uninspiring as is the aspect of that country, and not feel his soul thrill within him, while he remembered how often the soil had been

* "The name of Poland is derived from a Slavonic word, signifying a 'plain,' the country being almost one uninterrupted level. A balloon might pass at the height of twenty toises over almost the whole extent of Poland, without fear of coming in contact with any mountains or other obstructions."—*L'Observateur en Pologne, par H. Vantrín.*

stained by the blood of her patriotic children, and the watch-word of liberty had sounded over those hapless plains. Who, beneath the sunny sky of Spain, could forget the spirit-stirring deeds of chivalry and romance, wrought by her sons and their valiant invaders? or fail to recognise in the rapid alternation of garden and desert, which characterises her scenery, the mementos of Gothic barbarism and Moorish luxury? But recollections of a higher and holier order pertain to localities, consecrated by having been the asylum of religion, the home of the persecuted, the scene of their calamities, and the theatre of their heroic achievements.

Scotland and Piedmont appeal, on these grounds, more forcibly than perhaps any other countries, at least in reference to events noticeable by modern history. In the latter country, every object seems to tell of the self-devotion and heroism of the Waldenses.

"The very gale their names seem sighing,
The waters murmur of their name,
The woods are peopled with their fame;
The ivied pillar, lone and grey,
Claims kindred with their silent clay;
Their spirits wrap the dusky mountain,
Their memory sparkles o'er the fountain;
The meanest rill, the mightiest river,
Rolls mingling with their fame for ever;
Despite of every yoke she bears,
The land is glory's still, and theirs!"

Among these scenes the little commune of Rora addresses itself peculiarly to the reader of Waldensian history, as having been a strong-hold of pure and undefiled religion; and as giving birth to an individual whose blameless life and daring intrepidity, have earned him undying laurels, amidst that band of truest heroes—the victims of persecution.

Shut out from the fertile districts of the Po and the Pelice, and environed by Alps, whose everlasting ramparts seem to deny all ingress, Rora is scarcely known; and Janavel, the leader of its little band of patriots, in 1655, has not his name enrolled among warriors and generals.

The adjacent valleys had suffered deeply from fire and sword, while the inhabitants of this peaceful district were permitted to lead lives of patriarchal simplicity and quiet; but at length it was sentenced to a bloody doom, and Count Christovel was charged with the execution of the cruel mandate. Janavel gained information of the impending calamity, and seconded by only eight co-patriots, threw himself into a rocky defile, which guarded the village capital of their beloved valley. From this post of defence the aggressors received a deadly welcome, and Christovel returned, with the scanty remains of his troops, to tell of disgrace and defeat.

To retrieve this failure, a fresh attempt was made to force the mountain pass with a larger number of soldiers, but Janavel, encouraged by the past, and with his numbers augmented to

seventeen, again repulsed the enemy with equal success.

Again and again was the sword of persecution raised for the destruction of Rora, and as often was it struck down by the determined courage of men who fought for the sanctity of their altars and hearths. At length the brilliant career of these champions of religion and liberty was to close; and the arm that had been so undauntedly interposed between Rora and its enemy was to become powerless. A numerous force surrounded the valley, and by distracting the attention of its defenders, succeeded in forcing the natural barriers.

This effected, the infuriated soldiery, goaded by revenge for past defeats, rushed headlong to the work of pillage and massacre. Marquerita, the sister of Janavel, was among the first victims of their rage. She possessed a spirit which might almost ennoble guilt, but which invests the martyr's name with a holy lustre. She was actively engaged in assisting in the defence of Rora, when she received a shot in her bosom, which she only noticed by exclaiming to her husband, "Heed it not! do not be shaken by this event, hold out to the end, endure the cross that you may win the crown!"

The fall of this heroic female was followed by the most revolting atrocities; and the victors, deaf to the voice of nature, and dead to every feeling that could elevate the conqueror above the beast of prey, answered every supplication for mercy with the sabre, till the devoted hamlet presented the spectacle of a vast scaffold strewed with victims and streaming with blood. When the morning sun arose on the hapless village, not a voice was heard breaking the deadly stillness that reigned around; not a dwelling was left standing; and only a heap of smouldering ashes, through which appeared at intervals the ghastly features of the slain, remained to tell of the happy homes and sacred altars, which had adorned the smiling valley only the day before. But the smoking ruins and blood-stained hearths of Rora carried their loud appeal to the gates of heaven!

At this disastrous epoch, Janavel, having witnessed the violation of his home, the destruction of his kindred, and the enemy in full possession of every approach, and there being nothing now to defend in the solitudes of Rora, transferred his unbroken energies to another field of action, and being reinforced by a few undaunted spirits, maintained a kind of guerilla warfare, amidst the natural fastnesses of Augrogne. Here he kept the enemy in constant check, and by driving in their outposts, seizing their convoys, and cutting off their detachments, became in every sense the avenger of his murdered kindred.

Pianessa, who succeeded Count Christovel in the command of the army appointed to exterminate

nate the Waldenses, proved himself a worthy agent of the cruel and tyrannical author of this persecution.

On one occasion he offered to Janavel the alternative of apostacy, or the Inquisition. Such an offer, to one possessed of that Christian fortitude which can blunt the fiercest pangs of corporeal suffering, and transform even the terrors of the scaffold into a triumph, was likely to be repulsed with the scorn it deserved; and Janavel returned an answer worthy of himself: "What was once said to Pilate I now say to Pianessa—'Thou couldst have no power at all against me, except it were given thee from above.' Shall I abjure those principles I have so long defended with my blood?—principles unchangeable as the word of God! Shall I desert His cause for the hopes of a renegade, who, abjuring obedience to

his lawful master, looks for protection and friendship from those he had formerly opposed, and who would be the first to taunt him with his infidelity? No! in that cause, which I have thus freely espoused, I am ready to perish. The terrors of the Inquisition, fearful though in themselves they be, are mild compared with the upbraidings of conscience. I will never incur the one by shrinking from the other."

He kept his word, and died in the defence of the cause to which he had consecrated his heart's blood. To the last, amid peril and danger, despite alike of promises and threats, unrestrained by fear, undazzled by offers of reward, he maintained firmly his consistent character, as the uncompromising champion of religious freedom.

INVENTION,

AS APPLIED TO THE FINE ARTS.

THE highest range to which that faculty of the mind termed "Invention" can be carried in the pursuit of the fine arts, is in the important branch of historical painting, properly so called, in the delineation of those subjects whose composition exercises an active and extensive exertion of thought and feeling; and it is to such high developments of the mind as these require, that the study and attention of the artist can with the greatest advantage to himself and to the art which he follows be directed. It will enable him to exercise a higher judgment over all other minor classes of composition.

This peculiar exercise of the mental powers may be truly said to be as applicable to the cultivation of the sciences of the philosopher, the chemist, and the mechanic, as to the appreciation and promotion of the fine arts of the painter; but whilst we allow the truth of this statement we would add, that this power of invention may be considered as having a closer and more specific attachment, a firmer and a nearer bond of union, with the cultivation of the fine arts than with any other. An artist can neither commence, continue, nor finish a painting without having recourse to this aid. "It directs his lines, it commixes his colours, it controls his arrangements of them, and having provided him with the means of proceeding, it continues, to be his guide throughout the whole of his labour and his main support." But invention must not be confounded with creation—the latter consists in the arrangement and composition of forms and things not yet seen—the former in the union and disposition of such as have been already impressed

upon the fancy, or the imagination—the greatest inventor, therefore, will be he who can retain with the closest recollection those forms and images which he has seen, and newly classify and arrange them in the combination and composition of any work or works of art.

The range of invention and imagination in poetry is wide and boundless; in art its circle is narrower in limit, and admits not of such high and lofty flights of fancy; its colourings and conceptions have a specific boundary assigned to them, and are confined to such thoughts, dreams, and objects, as will bear positive, definite, and material display.

The objects and scenes on which the artist may rely for extending the faculty of invention, are all such as combine together in unison, ideas of beauty, grace, tenderness, sublimity, power, or terror. Every scene, incident, and circumstance of life should unravel and develop to his mind some novel association or idea, and the different colourings or picturesque combinations, in which such diversified scenes can be well displayed, will afford constant subjects for his study and research. The knowledge of the attitude and expression of the varied feelings and passions of the human mind should be familiar to him, "as household things," that his stores of memory may serve effectually in guiding his pencil. The object of invention, in reference to the fine arts, is to render the idea or subject depicted clear and intelligible to the person viewing it, and to raise in his mind a high impression of the character or characters depicted.

EPHON.

REVIEW.

The Condensed Commentary and Family Exposition of the Holy Bible: containing the most valuable Criticisms of the best Biblical Writers, with Practical Reflections and Marginal References, Chronology, Indexes, &c. By the Rev. INGRAM COBBIN, M.A. London: Ward & Co., Paternoster-row.

THE title of this work, comprehensive as it is, is fully borne out by its contents; but it must be studied daily, as an instructor and a guide, before it can be justly appreciated. At its first appearance we sat down to its perusal as a task imposed upon us in virtue of our critical office; we have ever since made it the companion of the study and the closet; and the industry and judgment of Mr. Cobbin have inspired us with growing admiration and gratitude. The present notice is a spontaneous expression of these sentiments; and if the "Condensed Commentary" required another recommendation after the unusually favourable testimonies of individuals of eminence, and several of our popular journals, we should most cheerfully tender ours.

Is the editor, the printer, or the corrector of the press responsible for the statement which heads the First Epistle of Peter? Is it an error, or did Peter "write his Second Epistle not long after his martyrdom at Rome?"

Memoir of the Rev. William Newman, D.D., &c., &c. By GEORGE PRITCHARD. Ward and Co., Paternoster-row.

DR. NEWMAN was well known and most highly respected by all parties as a minister of the Baptist denomination, and for several years the theological tutor of one of their principal seminaries. His friend Mr. Pritchard has put upon record, not only the incidents of his life, which exhibited little variety, and are calculated to excite as little interest, but he has done more, he has furnished extracts from the diary of his subject extending through more than forty years, literally constructed upon the plan *nulla dies sine linea*; thus we are introduced into the sanctuary of his mind, and are able to form a tolerably just estimate of his character. The work will be highly acceptable to Dr. Newman's personal friends, and the members of his church and congregation; his brethren will also hail it as a memento of one with whom they often took sweet counsel, and with whom they were pleasantly associated in many a work of faith and labour of love; while, as another addition to our stock of Christian biography, it will obtain a place in our vestry and private libraries.

GEMS.

DIVINE GOODNESS.—As the powers and goodness of Heaven are infinite in their extent, and infinite in their minuteness, to the mind cultivated as nature meant it to be, there is not only delight in contemplating the sublimity of the endless sea, or everlasting mountains, or the beauty of wide-extended landscapes, but there is a pleasure in looking at every little flower, and every little shell that God has made. Nature has scattered around us on every side, and for every sense, an inexhaustible profusion of beauty and sweetness, if we will but perceive it. The pleasures we derive from flowers, from musical sounds, from forms, are surely not given us in vain, and if we are constantly alive to these, we can never be in want of subjects of agreeable contemplation, and must be habitually cheerful.—*Captain Basil Hall.*

BIBLICAL THEOLOGY.—As to your present studies, for such portions of your time as you can prudently appropriate to reading, without wrong to the claims of health and social relaxation, there is one department of knowledge, which, like an ample palace, contains within itself mansions for every other knowledge; which deepens and extends the interest of every other, gives it new charms, and additional purpose; the study of which, rightly and *liberally* pursued, is beyond any other *entertaining*, beyond all others tends at once to tranquillise and enliven, to keep the mind elevated and steadfast, the heart humble and tender: it is *biblical theology*—the philosophy of religion, the religion of philosophy. I would that I could refer you to any *book* in which such a plan of reading had been sketched out in detail, or even but generally.—*Coleridge.*

FALSE HAPPINESS.—False happiness is like false

money; it passes for a time as well as the true, and serves some ordinary occasions; but when it is brought to the touch, we feel the lightness and alloy, and feel the loss.—*Pope.*

ARGUMENT.—Let the end of the argument be rather to discover a doubtful truth, than a commanding wit; in the one thou shalt gain substance, in the other froth; that flint strikes the steel in vain that propagates no sparkles; covet to be truth's champion, at least to hold her colours: he that pleads against the truth, takes pains to be overthrown; or, if a conqueror, gains but vain-glory by the conquest.—*Quarles.*

NATURE.—Surely there is nothing in the world, short of the most undivided reciprocal attachment, that has such power over the workings of the human heart, as the mild sweetness of nature. The most ruffled temper, when emerging from the town, will subside into a calm at the sight of an extended landscape reposing in the twilight of a fine evening. It is then that the spirit of peace settles upon the heart, unfetters the thoughts, and elevates the soul to the Creator. It is then that we behold the Parent of the universe in his works; we see his grandeur in earth, sea, sky; we feel his affection in the emotions which they raise; and half-mortal, half-etherialised, forget where we are, in the anticipation of what that world must be, of which this lovely earth is merely the shadow.—*Miss Porter.*

FRIENDSHIP.—It is not the least advantage of friendship, that by communicating our thoughts to another, we render them distinct to themselves, and reduce the subjects of our sorrows and anxiety to their just magnitude for our own contemplation.—*Coleridge.*

ON THE MAGNITUDE AND GRANDEUR OF THE SUN.

BY THE REV. THOMAS DICK, LL.D.

Among all the objects of the visible creation there is none whose beauty is so much admired, and whose benign influence is so generally appreciated, as the sun. Every day this glorious orb visits us with his cheering beams, dispels the shades of night, and diffuses joy and animation among all the tribes of sensitive existence; without whose powerful energy, our world would soon become a dark and shapeless chaos, without life, order, or enjoyment. But the splendour of this luminary, and the benefits it confers, are so common, and so regularly continued, that we are apt to view them with indifference; and we seldom contemplate, with the eye of an enlightened understanding, the wonderful nature of that vast globe on which surrounding worlds depend for all the comforts and beneficial agencies they enjoy. To the vulgar eye, the solar orb appears only like a flat luminous circle of a few inches diameter; and there are thousands of mankind who consider it in no other light than as a brilliant lamp, of no great size, hung up in the firmament to give us light by day, and to enable us to prosecute our daily labours. Even minds of a more elevated and reflecting cast have seldom entered into all the sublime ideas connected with the nature and properties of this august luminary: and it is questionable whether the greatest astronomer now existing is capable of forming a conception of the magnitude and sublimity of the solar orb, corresponding to its vast extent and its real grandeur. To enable the reader to form some faint idea of the immense magnitude of the sun, we extract the following passage from a work now in the press, entitled, "Celestial Scenery."

"The magnitude of this vast luminary is an object which overpowers the imagination: its diameter is calculated at 880,000 miles, its circumference is 2,764,600 miles, its surface contains 2,432,800,000,000 square miles, which is twelve thousand three hundred and fifty times the area of the terraqueous globe, and nearly fifty thousand times the extent of all the habitable parts of the earth; its solid contents comprehend 356,818,739,200,000,000, or more than three hundred and fifty-six thousand billions of cubical miles. Were its centre placed over the earth, it would fill the whole orbit of the moon, and reach two hundred thousand miles beyond it on every side. Were a person to travel along the surface of the sun, so as to pass along every square mile on its surface at the rate of thirty miles every day, it would require more than two hundred and twenty millions of years before the survey of this vast globe could be completed. It would contain within its circumference more than thirteen hundred thousand globes as large as the earth, and a thousand globes of the size

of Jupiter, which is the largest planet in the system. It is more than five hundred times larger than all the planets, satellites, and comets belonging to our system, vast and extensive as some of them are. Although its density is little more than that of water, it would weigh 3360 planets such as Saturn, 1067 planets such as Jupiter, 329,000 globes such as the Earth, and more than two millions of globes such as Mercury, although its density is nearly equal to that of lead. Were we to conceive of its surface being peopled with inhabitants, at the rate of 280 to every square mile, (which is the rate of population in England,) it would contain 681,184,000,000,000, or more than six hundred and eighty billions, which would be equal to the inhabitants of eight hundred and fifty thousand worlds such as ours.

"Of a globe so vast in its dimensions, the human mind, with all its efforts, can form no adequate conception. If it is impossible for the mind to take in the whole range of the terraqueous globe, and to form a comprehensive idea of its amplitude and its innumerable objects; how can we ever form a conception, approaching to the reality, of a body one million three hundred thousand times greater? We may express its dimensions in figures or in words; but in the present state of our limited powers, we can form no mental image or representation of an object so stupendous and sublime. Chained down to our terrestrial mansion, we are deprived of a sufficient range of prospect so as to form a substratum to our thoughts when we attempt to form conceptions of such amazing magnitude. The imagination is overpowered and bewildered in its boldest efforts, and drops its wing before it has realised the ten thousandth part of the idea it attempted to grasp. It is not improbable that the largest ideas we have yet acquired, or can represent to our minds, of the immensity of the universe, are inferior to a full and comprehensive idea of the vast globe of the sun in all its connexions and dimensions. And therefore, not only must the powers of the human mind be invigorated and expanded, but also the limits of our intellectual and corporeal vision must be indefinitely extended, before we can grasp the objects of overpowering grandeur which exist within the range of creation, and take an enlightened and comprehensive view of the great Creator's empire. And as such endowments cannot be attained in the present state, this very circumstance forms a presumptive argument that man is destined to an immortal existence, where his faculties will be enlarged, and the boundaries of his vision extended, so as to enable him to take a large and comprehensive view of the wonders of the universe, and the range of the Divine

government. In the meantime, however, it may be useful to allow our thoughts to expatiate on such objects, and to endeavour to form as comprehensive an idea as possible of such a stupendous luminary as the sun, in order to assist us in forming conceptions of objects still more grand and magnificent. For the sun which enlightens our day is but one out of countless millions of similar globes dispersed throughout creation, some of which may far excel it in magnitude and glory."

As the sun is a body of inconceivable magnitude, it appears that extensive and amazing processes and operations are going forward on its surface, or in its immediate vicinity: "this appears from the immense size both of the dark and the luminous spots, and the sudden and extensive changes to which they are frequently subjected. Spots have been observed on the solar disk so large as the one-twentieth part of the sun's diameter, and, of course, 44,000 miles in lineal extent, comprising an area of one thousand five hundred and twenty millions of square miles. Now, it is known from observation, that such spots seldom or never last longer than forty-four days; and, consequently, their borders must approach at the rate of at least a thousand miles a day, but in most cases with a much more rapid motion. What, then, shall we think of the motions and operations by which a large spot has been made to disappear in the course of twenty-two hours? as I have sometimes observed; yea, which have disappeared in the course of a single hour? And what shall we think of the process by which a spot as large as the earth was broken into two during the moment of observation, and made to recede from each other, as was observed both by Dr. Long and Dr. Wollaston? How powerful the forces! how rapid the motions! and how extensive the changes which must have been produced in such cases! Whether we consider such changes to be produced in the solid globe of the sun, or merely in the luminous atmosphere with which it is environed, the scale on which such movements and operations must be conducted is immense, and altogether overpowering to the imagination. What should we think were we to behold the whole of the clouds which float in the earth's atmosphere, dissipated in a moment? the continent of America detached from its basis, and transported across the Atlantic? or the vast Pacific Ocean, in the course of a few days, overwhelming with its billows the whole of Asia, Africa, and Europe? Amazing as such changes and revolutions would appear, there are, in all probability, operations and changes, though of a very different description, taking place on the solar surface or atmosphere, upon a scale of much larger extent. It is found by calculation, that the smallest space containing a visible area which can be distinctly perceived on the sun with good telescopes, is about 460 miles; and a

circle of that diameter contains above 166,000 square miles. Now, those ridges or corrugations formerly termed *faculae*, which are seen near the sun's margin, are more than twenty times larger than such a space; they evidently appear to be elevations and depressions on the solar surface, and are almost as distinctly perceptible as the wavings and inequalities on the surface of the moon. How immensely large and elevated, then, must such objects in reality be, when we perceive their inequalities so distinctly at the distance of ninety-five millions of miles! The elevated parts of such objects cannot be less than several hundreds of miles above the level of the valleys or depressions, and extending in length several thousands of miles; yet sometimes in a few days, or at most in a few weeks, these extensive objects are either dissipated, or dark spots appear in their room, evidently indicating the existence of stupendous powers, which are in constant operation in connexion with this august luminary."

The following is a comparison of the expansive view from Mount Etna with the amplitude of the sun: "When we ascend to the top of Mount Etna or Mount Blanc, and survey the vast group of surrounding objects which appear around and beneath us, when the morning sun illuminates the landscape, we behold one of the largest and most expansive objects that can meet our eye in this sublunary scene, and we can compare it with objects that are smaller, and with those that are somewhat larger. But the amplitude of such a scene extends only to about one hundred and fifty miles in every direction, which is less than the least visible spot or point which we can perceive on the sun with the most powerful telescopes.

"Let us compare more particularly the view from Mount Etna with the amplitude of the sun. 'There is no point on the surface of the globe,' says Mr. Brydone, 'that unites so many awful and sublime objects as the top of Etna, and no imagination has dared to form an idea of so glorious and magnificent a scene. The body of the sun is seen rising from the ocean, immense tracts both of sea and land intervening; the islands of Pinari, Alicudi, Lipari, Stromboli, and Volcano, with their smoking summits, appear under your feet, and you look down on the whole of Sicily as on a map, and can trace every river through all its windings, from its source to its mouth. The view is absolutely boundless on every side, so that the sight is every where lost in the immensity.' Yet this glorious and expansive prospect is comprised within a circle about 240 miles in diameter, and 754 in circumference, containing 45,240 square miles, which is only the $\frac{1}{13,775,000}$ part of the surface of the sun; so that fifty-three millions seven hundred and seventy-six thousand landscapes, such as beheld from Mount Etna, beheld to pass before us ere

we could contemplate a surface as expansive as that of the sun. And if every such landscape were to occupy two hours in the contemplation, and twelve hours every day allotted for the survey, it would require twenty-four thousand five hundred and fifty-four years before the whole surface of this immense globe could be in this manner surveyed; and, after all, we should have but a very imperfect view of the vast system of the sun.

"It is owing to the existence and agency of the sun that our globe is a habitable world, and productive of enjoyment. Almost all the benign agencies which are going forward in the atmosphere, the waters, and the earth, derive their origin from its powerful and perpetual influence. Its light diffuses itself over every region, and produces all that diversity of colouring which enlivens and adorns the landscape of the world, without which we should be unable to distinguish one object from another. By its vivifying action vegetables are elaborated from inorganic matter, the sap ascends through their myriads of vessels, the flowers glow with the richest hues, the fruits of autumn are matured and become, in their turn, the support of animals and of man. By its heat the waters of the rivers and the ocean are attenuated and carried to the higher regions of the atmosphere, where they circulate in the form of vapour, till they again descend in showers to supply the sources of the rivers, and fertilize the soil. By the same agency, all winds are produced, which purify the atmosphere, by keeping it in perpetual motion; which propel our ships across the ocean, dispel noxious vapours, prevent pestilential effluvia, and rid our habitations of a thousand nuisances. By its attractive energy the tides of the ocean are modified and regulated, the earth conducted in its annual course, and the moon sustained and directed in her motions. Its influence extends even to the mineral kingdom, and is felt in the chemical compositions and decompositions of the elements of nature. The disturbance in the electrical equilibrium of the atmosphere, which produces the phenomena of thunder, lightning, and rain, and the varieties of terrestrial magnetism; the slow degradation of the solid constituents of the globe, and their diffusion among the waters of the ocean, may all be traced, either directly or indirectly, to the agency of the sun. It illuminates and cheers all the inhabitants of the earth, from the polar regions to the torrid zone. When its rays gild the eastern horizon, after the darkness of the night, something like a new creation appears; the landscape is adorned with a thousand shades and colours, millions of insects awake and bask in its rays, the birds start from their slumbers and fill the earth with their melody, the flocks and herds express their joy in hoarser acclamations, man goeth forth to his work and to his labour, all nature smiles, and the

'hills rejoice on every side.' Without the influence of this august luminary, an universal gloom would ensue, and surrounding worlds, with all their trains of satellites, would be shrouded in perpetual darkness; this earth would become a lifeless mass, a dreary waste, a rude lump of inactive matter, without beauty or order; no longer should we behold the meadows clothed with verdure, the flowers shedding their perfumes, nor the valleys covered with corn; the feathered songsters would no longer chant their melodious notes, all human activity would cease, universal silence would reign undisturbed, and this huge globe of land and water would return to its original chaos."

What a glorious idea, then, does such an object as the sun present to us of the grandeur of the Deity, and the energies of Omnipotence! There is no single object within the range of our knowledge that affords a more striking and august emblem of the great Creator. In its lustre, in its magnitude, in its energy, in its boundless influence, and in its beneficial effects on this earth and on surrounding worlds, there is a more bright display of Divine perfection than in any other material being with which we are acquainted. Could such a magnificent orb have been produced by a fortuitous concourse of atoms, and placed in its proper position to distribute light and attractive influence to the worlds which roll around it? Could chance have directed the distance at which it should be placed from the respective planets, or the size to which it should be expanded, in order to diffuse its energies to the remotest part of the system? Could chance have impressed upon it the laws requisite for sustaining in their courses all the bodies dependent upon it, or have endowed it with a source of illumination which has been preserved in action from age to age? To affirm such positions would be to undermine and annihilate the principles of all our reasonings. The existence of the sun proves the existence of an eternal and supreme Divinity, and, at the same time, demonstrates his omnipotent power, his uncontrollable agency, the depths of his wisdom, and the riches of his beneficence. If such a luminary be so glorious and incomprehensible, what must its Creator be? If its splendour be so dazzling to our eyes, and its magnitude so overpowering to our imagination, what must He be who lighted up that magnificent orb, and bade a retinue of worlds revolve around it, who dwells in light inaccessible, to which no mortal eye can approach? If the sun is only one out of many millions of similar globes dispersed throughout the illimitable tracts of creation, how great, how glorious, how far surpassing human comprehension must be the plans and the attributes of the infinite and eternal Creator! "His greatness is unsearchable, and his ways past finding out." Could we thoroughly comprehend the depth of

his perfections, or the grandeur of his empire, he would cease to be God, or we should cease to be limited and dependant beings. But in presenting to our view such magnificent objects, it is evidently his intention that we should rise in our contemplations from the effect to the Cause,

from the creature to the Creator, from the visible splendours and magnificences of creation to the invisible glories of Him who sits on the throne of the universe, "whose kingdom ruleth over all, and before whom all nations are counted as less than nothing and vanity."

RISE OF MUSEUMS.

THE term "museum" is derived from the Greek name of the muses, one of whose attributes was to preside over the polite and useful arts; it signifies, in the present day, a building in which are deposited specimens of every object, natural and artificial, that is in any degree curious, or which can tend to illustrate physical science and to improve art. A complete museum should be an epitome of nature; it should contain collections of preserved beasts, birds, fishes, reptiles, and, in fact, a specimen of every creature that moves on our globe; herbariums containing dried specimens of the vegetable kingdom, as also specimens of minerals; it should be "a representative assembly of all the classes and families of the world; it should also contain collections of ancient records, medals, and coins, which attest and explain laws and customs; also paintings and statues, that, by imitating nature, seem to extend the limits of creation;" as also every thing that can exhibit the manners and customs of men in distant ages and nations. In ancient times the word museum had no such extended signification, it simply implied a building in which scientific men assembled to discuss matters of science and literature. Such appears to have been the museum of Alexandria—a splendid building, ornamented with porticoes, galleries, and large and spacious apartments: but it does not appear to have contained any thing like the collections of our museums. It is rather to the temples of the ancients that we must look as the first repositories of rare and curious things, as any rare production, or natural object extraordinary for size or beauty, was consecrated to the gods. When Hanno returned from his distant voyages, he brought with him to Carthage two skins of the hairy women whom he found on the Gorgades Islands, and deposited them, as a memorial, in the temple of Juno, where they continued till the destruction of the city. The monstrous horns of the wild bulls which had occasioned so much devastation in Macedonia, were, by order of king Philip, hung up in the temple of Hercules. The crocodile found in attempting to discover the source of the Nile, was preserved in the temple of Isis, at Cesarea. A large piece of the root of the cinnamon-tree was kept in a golden vessel in one of the temples of Rome, where it was examined by Pliny. The skin of that monster which the Roman army

attacked and destroyed, and which probably was a crocodile, was, by Regulus, sent to Rome, and hung up in one of the temples, where it remained till the time of the Numantine war. In the temple of Juno, in the island of Melita, there were a pair of elephant's teeth of extraordinary size. The head of the basilisk was exhibited in one of the temples of Diana. And the bones of that sea monster—probably a whale—to which Andromeda was exposed, were preserved at Joppa, and afterwards brought to Rome. Many other instances of this custom are given by Beckmann, from whom we have gathered the foregoing, and many of the following particulars. In the course of time, these natural curiosities became so numerous as to form large collections; and though it is certain that all these articles were not properly kept there for the purpose to which our collections of natural history were applied, yet, at the same time, it must be allowed that they might be of important use to naturalists.

The ancients appear to have had no private collections, though, perhaps, we must except that formed by Aristotle, at the command of Alexander; as also a collection of natural curiosities formed by the emperor Augustus. The principal cause of their being unable to form collections must have arisen partly from their ignorance of the proper means of preserving such bodies as soon spoil or corrupt. They employed for that purpose either salt, wax, or honey.

There is no account of any collections during the middle ages, except in the treasures of princes, where, besides articles of great value, curiosities of art, antiquities, and relics, there were occasionally found scarce and singular foreign animals, which were dried and preserved. Such objects were to be seen in the old treasury at Vienna; and in that of St. Denis were exhibited the claw of a griffin, sent by the king of Persia to Charlemagne, the teeth of the hippopotamus, and other things of the like kind. In later times, we find that menageries were established to add to the magnificence of courts, and stuffed skins of rare animals were hung up as memorials of their having existed. Public libraries, also, were made receptacles for such natural curiosities as were from time to time presented to them. At a later period, collections of this kind began to be formed by private persons. The

object of them was rather to gratify the sight than to improve the understanding ; and they contained more rarities of art, valuable pieces of workmanship, and antiquities, than productions of nature. Private collections, however, appear for the first time in the sixteenth century ; and there is no doubt that they were formed by every learned man who, at that period, applied to the study of natural history. About the same period, collections began to be formed in England ; but not till the seventeenth century did the public derive any benefit from them, when Elias Ashmole left his valuable collection of rarities, which he had in part inherited from the Tradescants, to the University of Oxford, upon condition that they erected a building to receive it, which they consented to, and commenced it in the year 1679, and it was completed in 1683. It is known as the Ashmolean Museum. From that time to the present it has been continually receiving additions. The collection of Martin Lister was added to it, as also the manuscripts of Aubrey, Dugdale, and Wood, the collections of natural history of Dr. Plott, Edward Lloyd, and Borlase, the historian of Cromwell. From a list of the curiosities contained in this museum we select the following:—

The skull of Oliver Cromwell, or a fragment of mortality supposed to be such ; a jewel of gold once belonging to king Alfred, found in 1639, in Newton Park, a short distance northward of the Isle of Athelney, in Somersetshire, where king Alfred found shelter when the Danes had overrun the country. The jewel is enamelled like an amulet, and in Saxon characters is circumscribed, "Alfred ordered me to be made." A figure sitting, crowned, appears on one side, probably Alfred himself, holding two lilies; on the other is a rudely-engraved flower. This relic was given to the university by Thomas Palmer, Esq., of Fairfield, Somersetshire, in 1718. A head of the bird called a "dodo," the species of which is extinct. Dr. Shaw, the celebrated naturalist, discovered it in the museum, before which he considered the accounts of this extraordinary bird to be fabulous. Besides a good collection of objects of natural history, there are also many Egyptian antiquities, and a few good pictures.

This is, perhaps, the earliest museum formed in England, and probably coeval with most of those on the continent ; but they have left us far behind in the establishment of institutions for the advancement and fostering of the arts and sciences. Private individuals have generally undertaken what could, perhaps, be only fully accomplished by the state. Our principal collections of natural history have been chiefly formed by the exertions, and at the expense, of private individuals ; and, until within a very short period, our national collection was little better than a national disgrace. No country in the world has such opportunities of rendering her collections in natural history the most perfect of any. The power of England extends to the two hemispheres ; her colonies are to be found in every part of the habitable globe ; yet, with the greatest means, her museums are found to be the most defective, to such a degree, that our writers on natural history are necessitated to go to Paris for that information which they ought to be enabled to find at home.

A taste for natural history has become more prevalent among all classes of society, as may be collected from the support given to the Zoological Society and other institutions of a similar nature. Our national museum has already felt the impulse given by the advancing knowledge of the people. Let us hope that, in a few years, it may rival those of the continent, and then we shall doubtless adorn our scientific annals with names as great as Buffon, Daubenton, Cuvier, and Lamarck.

The British Museum, which will soon be one of the most splendid institutions of our metropolis, contains under its roof our national library, which is peculiarly rich in mss. ; a collection of Greek and Roman sculptures ; Egyptian antiquities and sculptures ; Terra Cottas and Roman antiquities ; a splendid collection of coins and medals ; a very fine collection of prints and drawings ; as also the collections of natural history, which are at present very incomplete. This museum has now for a long time been accessible to the public on three days of every week ; and we are much gratified to learn that great numbers have of late availed themselves of this privilege.

CHANGE.

It is pleasant in spring-tide to look from the door
Upon fields that are barren and dreary no more ;
On the opening leaves, and the myriads of flowers,
That start into life beneath sunbeams and showers.

It is pleasant of summer to note the rich glow,
The blue sky that tinges the water below,
The breeze that springs up at the close of the day,
And wafts to the sense the sweet odour of hay.

It is pleasant in autumn to mark, o'er the plain,
Asleep 'mid the poppies, the heavy brown grain ;

The trees with lithe branches that tend to the ground,
Weigh'd down by the bursting fruit tinted and round.

It is pleasant in winter to witness on high
The sun beaming bright in a clear frosty sky ;
White smoke staining ether, else stainless and free ;
And hoary frost spread over meadow and lea.

There is beauty in change. Indestructible change !
Thou alone art eternal in matter's wide range !
Thou art part of all things, present, past, and to be—
Worlds and atoms alike are made subject to thee.

N.

NAPOLEON AND AN OLD SOLDIER.

"If he is anxious for popularity," said the Duke de Frioul, "he has reason to be satisfied. Our stroll this morning was through the Faubourg Saint Antoine. I did not myself think that he was so much in favour as he is. You cannot form an idea, Junot, of the enthusiasm of the people. He stopped before some houses that are being built in the Rue Charonne. His hat was slouched over his forehead, as usual, but in spite of that, it is so easy to recognise him, that I am always apprehensive of something unpleasant occurring in these expeditions, in which I play the Giafar. This morning we were surrounded by two hundred workmen, who were all labouring with their pickaxes and shovels. The emperor was as calm as if he had been surrounded by his old guard. While he was observing the men at work, he fixed his eyes particularly on one, who moved his arm with difficulty, and appeared to be less active than his comrades."

"It is singular," said the emperor, "but I think I know that man's face."

The workman observing that the *little man* looked at him so stedfastly, looked very hard at him in his turn. The scrutiny was not long, and the workman, who was an old soldier, recognised his general. His pickaxe fell from his hand, and his limbs seemed to tremble under him.

"General!" exclaimed the man, in a voice faltering with emotion.

"Well, well, my brave fellow!" said the emperor, "so you know me, do you? *Pardieu!* and I recollect you. I said to Duroc, as soon as I saw you, That is a face I know. Now I recollect you perfectly; you were a corporal in the thirty-second, and you were wounded at the bridge of Arcola: *pardieu!*"

To every word uttered by the emperor, the man replied by bowing his head, and saying, "Yes, general."

"But why have you betaken yourself to this work?" inquired the emperor, "if you can lift a spade, you can shoulder a musket."

"No," replied the man, with an oath expressive of his vexation; "no, I cannot carry a musket." And he showed us the difficulty he had in raising his arm.

"But you were in the guards at Austerlitz," continued the emperor. "Your name is Bernard, is it I mistake not?"

"It is, general."

"And why are you not in the Invalids?"

"I am entitled to be there, general, but—"

"Oh, yes; I remember now what you allude to;" and a cloud gathered on his brow. "Marshal Serrurier did not give me a good report of you. How happens this? If you entertain opinions unfavourable to the government, you may leave France, and go and build houses in America."

"But, general, in that case, I must not only

leave my country, but you, whom I love even more than my country."

"Me?" said the emperor, laughing. "*Pardieu*, this is strange enough. How do you reconcile your attachment to me with your hatred of the empire?"

"Because, general, it is to you personally,—to you alone."

"I am certain," pursued the Duke de Frioul, "that the man had no idea of the force of meaning conveyed in these simple words, 'to you alone,' though they evidently came sincerely from his heart. The emperor felt them, and understood at once the noble mind of the man who uttered them. Even the title of 'general,' with which he constantly addressed the emperor, had its bright side in this little story; for it was not dictated by any feeling of insolence, but was merely the effect of habit in the old soldier. The emperor looked at him with some little expression of dissatisfaction; but more of kindness. The old soldier stood there before him, hat in hand, and with as respectful an air as if he had been under arms on a parade day at the Tuileries."

"Ah, *ça!*" exclaimed the emperor; "have you not the cross?"

Bernard half opened his jacket, and showed the cross on his bosom. "You see, general, it is in its right place. You gave it me at the battle of Wagram, for a ball which the Austrians fired at me. You were passing at the moment when they were raising me up, and seeing me wounded, like a brave man, you gave me the cross; it has been a healing plaster to my wound. I never take it from my breast; I sleep with it, and when I come to work I put it within my jacket."

"Why so?" said the emperor. "Do you think that your work would disgrace the cross? Your labour is honourable, and you should not blush to perform it. What would your comrades think of you? Those comrades to whom you preach republicanism. They must laugh at you, my poor Bernard; for surely this is nothing but pride."

Bernard knew not what reply to make. He recollected that some of his comrades had laughed at him, and others had been offended with him. He cast down his eyes.

"Have you not the pension attached to your cross?" resumed the emperor after a short pause. "I am sorry that the marshal did not ask me what was to be done before he turned you out of the old soldier's retreat. Was there not some other reason besides that which I have just alluded to? Come, tell the truth."

"To be candid, general, there was another reason. The truth is, I was a little unsteady on the *décadés*: that is to say, I mean, the Sundays, I was punished several times, and then

came that affair.* You know what I allude to, general. Well, thought I, since they have turned me out, I must try and get my bread elsewhere, and so I tried my hand at the spade and pickaxe. But still I am sorry at being out of the Invalids; and if you can, general, I wish you would get me sent back again."

He raised his head to look at the emperor, and his expressive countenance was at that moment irresistibly persuasive; for the big tears which overflowed his eyes ran down a furrow, formed by a deep scar in his left cheek. The emperor made no reply, but stood looking at him for some moments; then, turning to me, he asked me for my purse, and taking out three napoleons, he presented them to Bernard.

"There is something for you and your comrades to drink my health. Now go to breakfast; but do not get tipsy, for then I shall be obliged

to pay your master for the loss of your day's work. Adieu!"

The workmen all threw down their spades, shouted "*Vive l'Empereur!*" and thronged round Napoleon to kiss his hands. Bernard alone was silent, and he kept back from the rest; but there was more real affection expressed in his silence than in the shouts of his companions, which were raised for a gift of money. The emperor, stepping up to him, said:—

"Bernard, you must call on General Sougis, or Marshal Bessières; or, if you prefer it, come to the castle and ask for this young man;" (striking me on the shoulder, said Duroc;) "he will have a message for you from me."

So saying, he took off his hat, and bade adieu to the workmen, who continued crying "*Vive l'Empereur!*" long after he was out of sight.—*Memoirs of the Duchess d'Abrantes.*

PASSAGES FROM THE LIFE OF A CONDEMNED MAN.

PART II.

BEFORE me was a window widely opened. I heard on the quay the laugh of the flower-women, and on the edge of the casement a little yellow flower, interpenetrated by a ray of the sun, played with the wind in a cleft of the stone. How could any sinister idea have its birth among so many kind sensations? Overflowing with the air and the sun, it was impossible to think of aught else but liberty; hope shone within me as the day around me; and in confidence I awaited my sentence, as one awaits deliverance and life. However my advocate arrived. He had been waited for. He had just made a hearty breakfast, and with a good appetite. Having reached his place he leant once towards me with a smile—"I hope," said he.

"Is it not so?" I answered, light and smiling, also.

"Yes," returned he, "I know nothing of their declaration, but they have doubtless discarded all premeditation, and then it will be but hard labour for life."

"What say you, sir?" I replied indignantly. "Rather death a hundred times! yes, death!"

"And besides," responded within me an unknown internal voice, "what risk I by saying it?"

"Never has sentence of death been pronounced otherwise than at midnight, in a dark and gloomy hall, and in a cold night of wintry rain. But in the month of August, at eight o'clock in the morning, and these good jurymen; it is impossible!" And my eyes again returned to fix themselves on the pretty yellow flower in the sunshine. Suddenly the president, who waited but for the attorney, invited me to rise. The

* The affair, as he termed it, was, that he got tipsy one day, and called out "*Vive la République!*"

troops carried arms, and as by an electric movement, the whole assembly stood up at the same instant. A dull and insignificant figure, seated at a table beneath the tribunal, it was I believe the recorder, now spoke, and read the verdict, which the jurors had pronounced in my absence. A cold sweat started over all my limbs—I leant against a wall to prevent myself from falling.

"Advocate, have you aught to say on the application of the punishment?" demanded the president.

I myself should have had all to say, but nothing came to me. My tongue clave to the roof of my mouth.

"Condemned to death!" echoed the crowd; and whilst I was led away, they rushed upon my footsteps, with the havoc of a destroying edifice. I myself walked intoxicated and stupefied. A revolution had occurred within me. Until the sentence of death, I had felt myself breathe, palpitate, live in the same medium as other men; now I distinguished clearly a separation between the world and myself. Nothing appeared to me under the same aspect as before. The large luminous windows, the beautiful sun, the pure sky, the pretty flower, they were all pale and white as a sheet. Those men, women, and children who thronged upon my path, I found them but as phantom shapes.

At the base of the staircase a black, dirty, grated vehicle was in waiting for me. At the moment of my entering it, I hastily looked into the square. "A man condemned to death!" exclaimed the passers by, as they ran towards the vehicle. Through the cloud which seemed interposed between all things and myself, I distinguished two young girls, who followed me

with anxious eyes. "Good," said the youngest, as she clapped her hands, "it will take place in six weeks!"

Condemned to death!—Well, and why not? I remember having once read in a book that contained nothing else of good, "Men are all condemned to death with indeterminable reprieves." What is there then so changed in my situation?

Since the hour when my sentence was pronounced to me, how many are dead who set themselves in order for a long life! How many have gone before me, who, young, free, and healthy, counted the chances of seeing my head some day fall in the *Place de Grève*! How many perhaps between here and there who walk and respire the wide air, and enter and go out at their will, who will go before me still!

And besides, what then has life to be regretted for by me? In truth the gloomy day, and the black bread of the dungeon, the portion of thin boillon drawn from the troughs of the galley-slaves, form a rough and harsh life to me, who am refined by education, to be roughly used by jailers and the guards of galley crews; to see no human being who considers me worthy of a word, or to whom I can render one; to be constantly thrilling with fear at what I have done, and what may be done to me, these are very nearly the only benefits which the executioner may remove from me.

Well,

"I care not—though horrible enough it be!"

The black vehicle has transported me here, in this hideous bicetre.

Seen from a distance this edifice has something majestic about it. It spreads itself out on the horizon in front of a hill, and, at a distance, bears somewhat of its ancient splendour, the air of a royal castle. But in proportion as you approach, the palace becomes a ruin. The unrepai red gables shock the eye. I know not what of ignominy and impoverishment defiles these royal façades; it seems as though the walls were smitten with leprosy. No panes, no glass to the windows, but massive bars of iron inter-crossed, to which cling here and there the ghastly figure of some maniac or galley-slave.

"It is life seen with a closer eye!"

Scarcely had I arrived when iron bands

secured me. The precautions were multiplied; neither knife nor fork for my repast; the *camisole de force*, a species of sack or sail cloth, imprisoned my arms; they were answerable for my life. I was taken care of for death. This onerous office might be required of them for six or seven weeks, and it was important to guard me safe and sound to the *Place de Grève*.

During the first days I was treated with a mildness that was horrible to me. The looks of a turnkey smell of the scaffold. Happily in a few days custom assumed the superiority, they confounded me with other prisoners, in one common brutality, and bore towards me none of those unaccustomed distinctions of politeness which placed the executioner constantly before my eyes. Nor was this the only amelioration. My youth, my docility, the cares of the chaplain of the prison, and more than all, some Latin words which I addressed to the keeper, who did not understand them, opened for me, once every week, the usual walking place with the other prisoners, and loosened the paralysis of my sail-cloth dress. After many hesitations I have also had the use of pens, ink, and paper, and a night lamp granted to me.

Every Sunday, after church, at the hour of recreation, I am allowed to walk loose upon the green. There I talk with the prisoners. They are good fellows—these miserable men. They tell me of their tricks, which are horrible; but I know that they boast. They teach me to talk slang; it is a language engrafted on common, every-day language, like a species of hideous excrescence or wart. It will sometimes betray a singular energy or a frightful picturesque of expression. Sometimes a light and joyous spirit animates their language, in the midst of which, every now and then, words odd, mysterious, ugly, and filthy, creep out no one knows whence. The executioner and the place of execution have each their separate signification in this toad and spider language. When you hear it spoken it has the effect of something dirty and dusty kicked up from a bundle of rags before you.

These men, however, pity me, and are the only ones who do. The jailers, the turnkeys, the key-bearers, (I do not want them,) laugh and talk of me, and before me, as of "a thing."

EPHON.

TO TEA-DRINKERS.

VESSELS intended to contain a liquid at a higher temperature than the surrounding medium, and to keep that liquid as long as possible at the higher temperature, should be constructed of materials which are the worst radiators of heat. Thus, tea-urns and tea-pots are best adapted for their purpose when constructed of polished metal, and worst when constructed of

black porcelain. A black porcelain tea-pot is the worst conceivable material for that vessel, for both its material and colour are good radiators of heat, and the liquid contained in it cools with the greatest possible rapidity. On the other hand, a bright metal tea-pot is best adapted for the purpose, because it is the worst radiator of heat, and therefore cools as slowly as possible.

A polished silver or brass tea-urn is better adapted to retain the heat of the water than one of a dull brown colour, such as is most commonly used.

A tin kettle retains the heat of water boiled in it more effectually if it be kept clean and

polished, than if it be allowed to collect the smoke and soot to which it is exposed from the action of the fire. When coated with this, its surface becomes rough and black, and is a powerful radiator of heat.—*Dr. Lardner's Treatise on Heat.*

NATURAL AND REVEALED TRUTH.

[We extract the following remarks from an able sermon, preached at the Triennial Visitation of the Lord Bishop of Lincoln in July last, by the Rev. W. G. Moore, M.A., Rector of West Barkwith, and Vicar of Stixwold, and since published by Messrs. Smith and Elder. We should greatly rejoice to see Visitation Sermons displaying the talent and breathing the spirit of the one before us.]

THE word Truth is not merely expressive of a bare notion, an abstract idea, but of a comprehensive system, embracing doctrines peculiar to it, and these again based upon principles of universal and eternal obligation. It is the development of a scheme, which, by its influence upon the mind and will of man, his thoughts, words, and actions, proves the purity of its source, and which by its adaptation to his especial wants, situation, and circumstances, must conduce to his temporal and eternal welfare. The necessity for some such scheme is apparent from the restless though futile endeavours of every age and people, to mark out some unerring rules of right, to define the duties of mankind to God, and their fellow-creatures; so that by repressing the waywardness and the folly of individual passions, and bringing the conduct of all to one common standard, the comfort and well-being of society might be most effectually promoted.

Now, those rules thus elicited from the experience of the wise and good, and consented to by the reason and consciences of men, have been termed collectively, moral philosophy, or natural religion. And undoubtedly society could never be upheld under any form of government, unless some such rules were allowed to operate with their fullest effect, and met with universal acceptance. The natural reason of man is sufficient to prove to him that, if there be a God, some worship must be paid, some tokens of obedience and subordination rendered to Him: that if the necessities or the inclinations of mankind lead them to congregate into societies, some control must be exercised over individual freedom of action, that the restlessness and miseries of an irresponsible state of being may be avoided. The object, therefore, which, viewed as a corrective of selfish feelings and interests, the truths of natural religion seek to further, is by no means a contracted, or unimportant one, for it is this,—from a view of the order, the harmony, the beauty of the operations of nature, to lift the eye of adoration and love to Him who spreads out before us the every-day proofs of His all-wise care, and providential goodness, and infinite wisdom;

and it is likewise to bind man to man, by the union of common interest, and in every sphere of life in which he may be called to move, to instil those maxims of practical wisdom and virtue, which, in their exercise, have necessarily a vast and grateful influence upon society.

But a moment's consideration will show the utter inadequacy of such a system to all the demands of the Deity, or all the wants of mankind. What is defective in principle, must prove inefficient in practice. Principles are the germs or seeds of action; if the former be therefore false, built upon mistaken notions, or erroneous views, the latter can never be in accordance with Him, one of whose glorious attributes is truth; never adequate to the wants of society, because they will be subjected to momentary caprice, and the eddying winds of human passions. Now, that natural religion does not comprehend the truth, the inspired truth of the apostle, though granted to be in accordance with the duties of reason and conscience, and elicited from the necessities and experience of mankind, is evident from this fact,—that, under his present circumstances it is powerless to enable man to discharge his obligations to God and his fellow-creatures. I say, under his present circumstances, for in this lies the broad line of demarcation between natural and revealed truth. Man is not the being he was created, and consequently the religion of his nature, when holy, and innocent, and happy, is not the religion of his nature, when unholy, and guilty, and unhappy, with his faculties and inclinations perverted by the ingress of sin into the heart, and with evil principles predominant over good. From the very constitution of our being, it is clear, that every system which is not based upon the present circumstances and condition of the human race, which does not rest its capabilities and derive its force from principles foreign to their natural tastes, and subversive of their natural pride, immutable and eternal as the God of their adoration, and the requirements of His law, (which are the same now as in Paradise as a rule of life,) must be denominated false, superficial, and worthless. Unhappily, however, true to the bias which sin has given, we still dream of ability to discern the path of duty, and to perform our moral and religious obligations, though destitute of the first principles of right action, and averse to seek them in that way by which alone they can be recovered. Heedless

of the change which has come over our destiny, and which renders imperative a renewal of the heart once more after the Divine image; "a death unto sin, and a new birth unto righteousness," we laboriously strive to do in our own strength what our estrangement from God renders impossible. We seek to guide our own path, and to direct that of others, by a light which has burned down to the socket; we are, in short, ambitious of effecting by the aid of morality, or natural religion, a design, whose grandeur defies human art, invention, or discovery. The inefficiency of the means to the end, of natural religion, that is, to bring about any deep or abiding change in the habits, the affections, and the desires of a fallen creature, to remould him after his Divine original, to make him love what he naturally dislikes, to hate what naturally wins his affections, is proof sufficient that it cannot be adapted to the wants of human nature. However sufficient, if carried into full operation, to fit a person for the discharge of some of his most prominent duties to God and his neighbour, it depends for its existence, and its sanction, upon human expedience; it is superficial in its design, limited in its extent, and what is of the greatest importance, it has not necessarily any influence upon the heart. It teaches the necessity, and implies the expectation, that man should cheerfully and unreservedly obey a God, whose commands are opposed to almost every desire of his heart, and while boasting of freedom in the utmost latitude of thought and action as his birthright, should still be passive under the hand of a master, and surrender that liberty in some measure to the powers that be;—but it does not embrace, it cannot communicate any principle equal to this necessity or this expectation. It is a plan of human device formed by the impulse of conscious duty, for the purpose of self-regulation, but destitute of any inherent power sufficient to the end proposed, and which, therefore, however pertinaciously adhered to by the pride of man, will only issue, as age after age has testified that it has hitherto done, in the utter discomfiture of his hopes. In well regulated minds, indeed, the demands of God upon his dependant creatures, and of man upon his fellow, may be in some degree met and acted up to; reason and common sense will come in to their aid, and supply them with the assistance necessary to the performance of their moral duties. But it is beyond their sphere, and beyond their ability, to render devotion to the Almighty the homage of the heart; or the love of our neighbour equal to the love of self. The great bulk of mankind are, however, influenced by sudden impulse, or unhallowed prejudice, not by cool, dispassionate reason, and even were their principle of action ever so rigidly worked out, yet being in its very nature defective, because it originates in necessity, not in a true

knowledge of God and human nature, its results must be defective likewise. Human passions will ever prove themselves too strong for human motives; and though society, from the progress of civilisation, extended education, and a more general acquaintance with the common interests, may move so smoothly that an unpractised eye may be able to discern no defects in its moral organisation, there is a natural inherent discordancy of materials which must necessarily affect its durable or equable motion, and which no power, save that which is Divine, can counteract. Man is an immortal being; he is not, he never can be, directed wisely, constantly, by principles which are evanescent as his own earthly frames and wishes, which rest upon the mere fitness of things, upon convictions and resolutions which are the formation of the moment, which look to his temporal interests *primarily*, and *secondarily* to the demands of God and the soul.

A system, then, by whatever term dignified, visionary and antichristian as that which we have just considered, in its nature and operation, must bear the mark of reprobation, which has attached itself to every scheme of human device, ever since the fall, and can never certainly embrace that truth which it behoves us, my brethren, to inculcate. It possesses a fair, a promising exterior, but it is like the Jewish temple, when the symbol of the Divine presence had departed; the light it sheds is that of nature, not of revelation, and is consequently undeserving our notice or adoption. Its foundation is laid upon a false estimate of human powers, an erroneous view of human nature, and upon sentiments respecting the Deity inconsistent with his character, his attributes, and his glory.

Let us now inquire into the design and operation of revealed truth. Truth, in the abstract, is a vital spark from God, and revealed truth is that clear and undiverging light, which, falling upon the darkened path of man, directs his toilsome steps through the wilderness of the world, to God, his sole happiness, and heaven, his proper home. The precepts of morality may be found every where, and in every age, more or less pure. Heathen philosophy, and the rules of savage life, supply us with instances of the truth of this observation. The precepts of Christian morality are of a higher order; they are better adapted for the government of mankind, for the regulation of their intercourse with their Creator, and to restore those broken links of a once happy union, which made the requirement of the moral law an easy and natural deduction from the simple and comprehensive law of love, the sole element of control to men while innocent. Still, even these precepts, if maintained and inculcated independently of the grand truths of revelation, will but render the character beautiful as the statue in all its proportions, but wanting that inspiration which gives life to its form, and a motive for its

actions. Revealed truth discloses the real character of the Divine Being; His great and beneficent object in the creation of man; the vastness of His design in counteracting the malignant efforts of Satan; the immensity of His love in finding a ransom for the apostate and the rebel; the wonders of His grace and condescension in the gift of that spiritual light, perception, and power, by which the heir of wrath may be made an heir of glory. And it points out likewise, as consequent upon the revelation of such godlike object, the proper being, end, and aim of man, the true nature of happiness, the just extent of duty. It shows the relation in which he stands to the Author of his existence, the source of every blessing, temporal and eternal; how imperative is a consistent and diligent performance of the duties incident upon such a relationship, and how invariably, uniformly, and of necessity, when engrafted upon the heart by the Spirit of God, it leads to *repentance* and *faith*, to purity of motive and holiness of practice, to the life of God in the soul of man, to the exemplification of the Christian pattern as defined and exhibited by his divine Master.

The expression, "revealed truth," sufficiently denotes the nature of the doctrines comprehended by it. They are, in fact, such as we never could have attained the knowledge of but by Divine teaching. Such as, unless they bore upon them the constant impression of their unearthly origin, would long since have been obliterated from the tablet of human remembrances, and have been numbered among the doubts, the difficulties, and the falsehoods of tradition. To the "law and to the testimony," we have been most properly instructed to refer every principle and every doctrine, and assuredly, unless the Word of God, the book of Revelation, be a sufficient guide for the steps of man from earth to heaven, from the path of duty to that of happiness, eternal truth has been left a prey to mortal chances and human caprice. The lamp of revealed truth discovers man to himself; it shows the deformity of sin, the beauty of holiness. It enables us to see every thing in its proper colours, to try every thing by an unerring standard, to form a just estimate of all sublunary good; and it gives a substance and reality to pleasures, which,

like the thin vapours, seek the higher regions of the atmosphere, and are only made sensible to the refined enjoyments of the Christian, when they fall as dew from heaven, and freshen the path of his pilgrimage. It defines our course when we have entered the valley of the shadow of death, and are left in the solitude of the tomb; it shines beyond that world of spirits where the soul awaits her sentence; it casts its mild rays upon the threshold of eternity, and, although it may not enable us fully to conceive of the glories of heaven or the terrors of hell, it will direct every true member of Christ and child of God to the sure means of obtaining the one and avoiding the other. The mode in which revealed truth operates in producing such effects is, by displacing man from the lofty pedestal upon which his pride and over-weening confidence have exalted him, and, by bringing him down to his proper level, enabling him to see himself in his just proportions. And when it has really reached and lit up the deep recesses of the heart, when it has cherished there, as a nucleus of immortal light, the germ of a truly divine philosophy, it induces men to contemplate, with unaffected humility, the weakness of their constituent elements, their decayed powers, their lost energies, their benighted views, their mistaken affections, their feeble conceptions, their shorn glories,—and by force of the convictions of reason, the experience of the past, and the restless reproaches of conscience, it compels them to look for some deeper cause for their lapse from God, and their numberless deficiencies, than (as is the general supposition) that they are owing to want of instruction on the subject of moral duties and responsibilities, or of any assistance which a fellow-sinner has it in his power to dispense. The ability to think, as well as to do, must come from above; and as a Paul may plant, or an Apollos water in vain, unless the Divine blessing attend those operations, it is our duty, with all fidelity and diligence, to use the means with which we are so highly favoured for the dissemination of the revealed Word of God, waiting and asking for that blessing upon our labours, by which He assuredly will honour his own word, and us the unworthy instruments of its communication.

MORAL AND RELIGIOUS INFLUENCE OF THE CLASSICS.

[In an age in which the higher branches of literature are made the subject of popular study, and in which they have, consequently, much increased the sphere of their influence, we think it advisable to bring before general notice some suggestions as to their moral tendency from the pen of John Foster, "The Essayist." They appeared a few years ago in a periodical publication of very limited circulation, and now extinct.]

MYTHOLOGY.

I FEAR it is incontrovertible, that what is denominated polite literature, the grand school in

which taste acquires its laws and refined perceptions, and in which are formed, much more than under any higher, austere discipline, the moral sentiments, is, for the far greater part, hostile to the religion of Christ; partly by introducing insensibly a certain order of opinions unconsonant, or at least not identical, with the principles of that religion; and still more by training the feelings to a habit alien from its spirit. And in this

assertion I do not refer to writers palpably irreligious, who have laboured and intended to seduce the passions into vice, or the judgment into the rejection of Divine truth ; but to the general community of those elegant and ingenious authors who are read and admired by the Christian world, held essential to a liberal education, and to the progressive accomplishment of the mind in subsequent life, and studied often without an apprehension, or even a thought, of their injuring the views and temper of spirits advancing, with the New Testament for their chief instructor and guide, into another world.

It is *modern* literature that I have more particularly in view ; at the same time it is obvious that the writings of heathen antiquity have continued to operate till now, in the very presence and sight of Christianity, with their own proper influence, a correctly heathenish influence, on the minds of many who have never thought of denying or doubting the truth of that religion. This is just as if an eloquent pagan priest had been allowed constantly to accompany our Lord in his ministry, and had divided with him the attention and interest of his disciples, counter-acting, of course, as far as his efforts were successful, the doctrine and spirit of the Teacher from heaven.

It is, however, no part of my object to remark on the influence, in modern times, of the fabulous religion that infested the ancient works of genius. That influence is, at the present time, I should think, extremely small, from the fables being so stale ; all readers are sufficiently tired of Jupiter, Apollo, Minerva, and the rest. As long, however, as they could be of the smallest service, they were piously retained by the Christian poets of this and other countries, who are now under the necessity of seeking out for some other mythology, the northern or the eastern, to support the languishing spirit of poetry. Even the ugly pieces of wood worshipped in the South Sea Islands, will probably at last receive names that may more commodiously hitch into verse, and be invoked to adorn and sanctify the *belles lettres* of the next century. The Mexican abominations and informalities have already received from us their epic tribute. The poet has no reason to fear that the supply of gods may fail ; it is at the same time a pity, one thinks, that a creature so immense should have been placed in a world so small as this, where all nature, all history, all morals, all true religion, and the whole resources of innocent fiction, are too little to furnish materials enough for the wants and labours of his genius.

The few observations which the subject may require to be made on ancient literature, will be directed to the part of it most immediately descriptive of what may be called human reality, representing character, sentiment, and action. For it will be allowed that the purely speculative

part of that literature has, in a great measure, ceased to interfere with the intellectual discipline of modern times. It obtains too little attention, and too little deference, to contribute materially to the formation of the mental habits which are adverse to the Christian doctrines and spirit. Divers learned and fanatical devotees to antiquity and paganism have, indeed, made some effort to recall the long departed veneration for the dreams and subtleties of ancient philosophy. But they might, with as good a prospect of success, recommend the building of temples or a pantheon, and the revival of the institutions of idolatrous worship. The greater number of intelligent, and even learned men, would feel but little regret in consigning the largest proportion of that philosophy to oblivion ; unless they may be supposed to like it as heathenism more than they admire it as wisdom ; or unless their pride would wish to retain a reminiscence of it for contrast to their own more rational philosophising.

The ancient speculations of the religious order include, indeed, some splendid ideas relating to a Supreme Being ; but these ideas impart no attraction to that immensity of inane and fantastic follies, from the chaos of which they stand out, as of nobler essence and origin. For the most part, they probably were traditionary remains of Divine communications to man in the earliest ages. A few of them were, possibly, the utmost efforts of human intellect, at some happy moments excelling itself. But, in whatever proportions they be referred to the one origin or the other, they stand so distinguished from the accumulated, multifarious vanities of pagan speculation on the subject of Deity, that they throw contempt on those speculations. They throw contempt on the greatest part of the theological dogmas and fancies of even the very philosophers who would cite and applaud them. They rather direct our contemplation and affection toward a religion divinely revealed, than obtain any degree of favour for those notions of the Divinity which sprung and indefinitely multiplied from a melancholy combination of ignorance and depraved imagination. As to the apparent analogy between certain particulars in the pagan religions, and some of the most specific articles of Christianity, those notions are presented in such fantastic, and varying, and often monstrous shapes, that they can be of no prejudice to the Christian faith, either by pre-occupying in our minds the place of the Christian doctrines, or by indisposing us to admit them, or by perverting our conception of them.

As to the ancient metaphysical speculation, whatever may be the tendency of metaphysical study in general, or of the particular systems of modern philosophers, as affecting the cordial and simple admission of Christian doctrines, the ancient metaphysics may certainly be pronounced inoperative and harmless.

The part of ancient literature which has had incomparably the greatest influence on the character of cultivated minds, is that which has turned, if I may so express it, moral sentiments into real beings and interesting companions, by displaying the life and actions of eminent individuals. A few of the personages of fiction are also to be included. The captivating spirit of Greece and Rome dwells in the works of the biographers; in so much of the history as might properly be called biography, from its fixing the whole attention and interest on a few signal names; and in the works of the principal poets.

No one, I suppose, will deny that both the characters and the sentiments, which are the favourites of the poet and the historian, become the favourites also of the admiring reader; for this would be a virtual denial of the excellence of the performance, in point of eloquence or poetic spirit. It is the high test and proof of genius that a writer can render his subject interesting to his readers, not merely in a general way, but in the very same manner in which it interests himself. If the great works of antiquity had not this power, they would long since have ceased to charm. We could not long tolerate what caused a revolting of our moral feelings, while it was designed to please them. But if their characters and sentiments really do thus fascinate the heart, how far will this influence be coincident with the spirit, and with the design of Christianity?

Among the poets, I shall notice only the two or three pre-eminent ones of the epic class. Homer, you know, is the favourite of the whole civilised world; and it is many centuries since there needed one additional word of homage to the prodigious genius displayed in the *Iliad*. The object of inquiry is, what kind of predisposition will be formed toward Christianity in a young and animated spirit, that learns to glow with enthusiasm at the scenes created by the poet, and to indulge an ardent wish, which that enthusiasm will probably awaken, for the possibility of emulating some of the principal characters? Let this susceptible youth, after having mingled and burned in imagination among heroes, whose valour and anger flame like Vesuvius, who wade in blood, trample on dying foes, and hurl defiance against earth and heaven; let him be led into the company of Jesus Christ and his disciples, as displayed by the evangelists, with whose narrative I will suppose he is but slightly acquainted before. What must he, what can he, do with his feelings in this transition? He will find himself flung as far as "from the centre to the utmost pole;" and one of these two opposite exhibitions of character will inevitably excite his aversion. Which of them is that likely to be, if he is become thoroughly possessed with the Homeric passions?

Or if, reversing the order, you will suppose a

person to have first become profoundly interested by the New Testament, and to have acquired the spirit of the Saviour of the world, while studying the evangelical history; with what sentiments will he come forth from conversing with heavenly mildness, weeping benevolence, sacred purity, and the eloquence of Divine wisdom, to enter into a scene of such actions and characters, and to hear such maxims of merit and glory, as those of Homer? He would be still more confounded by the transition, had it been possible for him to have entirely escaped that deep depravation of feeling which can think of crimes and miseries with little emotion, and which we have all acquired from viewing the prominent portion of the world's history as composed of scarcely any thing else. He would find the mightiest strain of poetry employed to represent ferocious courage as the greatest of virtues, and those who do not possess it, as worthy of their fate, to be trodden in the dust. He will be taught, at least it will not be the fault of the poet if he be not taught, to forgive a heroic spirit for finding the sweetest luxury in insulting dying pangs, and imagining the tears and despair of distant relations. He will be incessantly called upon to worship revenge, the real divinity of the *Iliad*, in comparison of which the Thunderer of Olympus is but a subaltern pretender to power. He will be taught that the most glorious and enviable life is that to which the greatest number of other lives are made a sacrifice; and that it is noble in a hero to prefer even a short life attended by this felicity, to a long one which should permit a longer life also to others.

The terrible Achilles, a being whom, if he had really existed, it had been worth a temporary league of the tribes then called nations to reduce to the quietness of a dungeon or a tomb, is rendered interesting, even amidst the horrors of revenge and destruction, by the intensity of his affection for his friend, by the melancholy with which he appears in the funeral scene of that friend, by one momentary instance of compassion, and by his solemn references to his own impending and inevitable doom. A reader who has even passed beyond the juvenile ardour of life, feels himself interested, in a manner that excites at intervals his own surprise, in the fate of this fell exterminator; and he wonders, and he wishes to doubt, whether the moral that he is learning be, after all, exactly no other than that the grandest employment of a great spirit is the destruction of human creatures, so long as revenge, ambition, or even caprice may choose to regard them under an artificial distinction, and call them enemies. But this is the real and effective moral of the *Iliad*, after all that critics have so gravely written about lessons of union, or any other subordinate moral instructions which they discover or imagine in the work. Who but critics ever thought or cared about any such

drowsy lessons? Whatever is the chief and grand impression made by the whole work on the ardent minds which are most susceptible of the influence of poetry, *that* shows the real moral; and Alexander and Charles XII., through the medium of "Macedonia's madman," correctly received the genuine inspiration.

If it be said that such works stand on the same ground—except as to the reality or accuracy of the facts—with an eloquent history which simply exhibits the actions and characters, I deny the assertion. The actions and characters are presented in a manner which prevents their just impression, and empowers them to make an opposite one. A transforming magic of genius displays a number of atrocious savages, in a hideous slaughter-house of men, as demi-gods in a temple of glory. No doubt an eloquent history might be so written as to give the same aspect to such men and such operations; but that history would deserve to be committed to the flames. A history that should give a faithful representation of miseries and slaughter, would set no one who had not attained the last depravation on fire to imitate the principal actors. It would excite, in a degree, the same emotion as the sight of a field of dead and dying men after a battle is over—a sight at which the soul would shudder and revolt, and earnestly wish that this might be the last time the sun should behold such a spectacle; but the tendency of the Homeric poetry, and of a great part of epic poetry in general, is to insinuate the glory of repeating such a tragedy. I therefore ask again, how it would be possible for a man whose mind was first completely assimilated to the spirit of Jesus Christ, to read such a work without a most vivid antipathy to what he perceived to be the moral spirit of the poet? And if it were not too strange a supposition, that the most characteristic parts of the *Iliad* had been read in the presence and hearing of our Lord, and by a person animated by a fervid sympathy with the work—do you not instantly imagine him expressing the most emphatic condemnation? Would not the reader have been made to know, that in the spirit of that book he could never become a disciple and a friend of the Messiah? But then, if he believed this declaration, and were serious enough to care about being the disciple and friend of the Messiah, would he not have deemed himself extremely unfortunate to have been seduced, through the pleasures of taste and imagination, into habits of feeling which rendered it impossible, till their predominance should be destroyed, for him to receive the only true religion, and the only Redeemer of the world? To show how impossible it would be, I wish I may be pardoned for making another strange and, indeed, a most monstrous supposition, namely, that Achilles, Diomedes, Ulysses, and Ajax had been real persons, living in the time of our Lord, and

had become his disciples, and yet (excepting the mere exchange of the notions of mythology for Christian opinions) had retained entire the state of mind with which their poet has exhibited them. It is instantly perceived that Satan, Beelzebub, and Moloch might as consistently have been retained in heaven. But here the question comes to a point: if these great examples of glorious character pretending to coalesce with the transcendent Sovereign of virtues would have been probably the most enormous incongruity existing, or that ever had existed, in the creation, what harmony can there be between a man who has acquired a considerable degree of congeniality with the spirit of these heroes, and that paramount Teacher and Pattern of excellence? And who will assure me that the enthusiast for heroic poetry does not acquire a degree of this congeniality? But unless I can be so assured, I necessarily persist in asserting the noxiousness of such poetry.

Yet the work of Homer is, notwithstanding, the book which Christian poets have translated, which Christian divines have edited and commented on with pride, at which Christian ladies have been delighted to see their sons kindle into rapture, and which forms an essential part of the course of a liberal education over all those countries on which the Gospel shines. And who can tell how much that passion for war which, from the universality of its prevalence, might seem inseparable from the nature of man, may have been, in the civilised world, reinforced by the enthusiastic admiration with which young men have read Homer and similar poets, whose genius transforms what is and ought always to appear purely horrid, to an aspect of grandeur?

If, then, such works do really impart their own spirit to the mind of an admiring reader, and if this spirit be totally hostile to that of Christianity, and if Christianity ought really and in good faith to be the supreme regent of all moral feeling, then it is evident that the *Iliad*, and all books which combine the same tendency with great poetical excellence, are among the most mischievous things on earth. There is but little satisfaction, certainly, in illustrating the operation of evils without proposing any adequate method of contending with them; but, in the present case, I really do not see what a serious observer of the character of mankind can offer. To wish that the works of Homer and some other great authors of antiquity should cease to be read, is just as vain as to wish they had never been written. As to the far greater number of readers, it were equally in vain to wish that pure Christian sentiments might be sufficiently recollected and loved, to accompany the study, and constantly prevent the injurious impression of the works of pagan genius. The few maxims of Christianity to which the student may have assented without thought, and for which he

has but little veneration, will but feebly oppose the influence; the spirit of Homer will vanquish as irresistibly as his Achilles vanquished. It is also most perfectly true, that as long as pride, ambition, and vindictiveness hold so mighty a prevalence in the character and in the nature of our species, they would still amply display themselves, though the stimulus of heroic poetry were withdrawn, by the annihilation of all those works which have invested the worst passions and the worst actions with a glare of grandeur. With or without the infections of heroic poetry, men and nations will continue to commit offences against one another, and to avenge them, to assume an arrogant precedence, and account it and laud it as noble spirit, to celebrate their deeds of destruction and call them glory, to idolise the men who possess and can infuse the greatest share of an infernal fire, to set at naught all principles of virtue and religion in favour of some thoughtless, vicious mortal who consigns himself, in the same achievement, to fame and perdition; to vaunt—in triumphal entries, or funeral pomps, or bombastic odes, or strings of sculps—how far human skill and valour can surpass the powers of famine and pestilence: men and nations will continue thus to act, till a mightier intervention from heaven shall establish the dominion of Christianity. In that better season, perhaps, the great works of ancient genius will be read in such a disposition of mind as can receive the intellectual improvement derivable from them, and, at the same time, as little coincide or be infected with their moral spirit as, in the present age, we venerate their mythological vanities.

In the meantime, one cannot believe that any man who seriously reflects how absolutely the religion of Christ claims a conformity of his whole nature, will, without regret, feel himself animated with a class of sentiments, of which the habitual prevalence would be the total preclusion of Christianity.

And it seems to show how little this religion is really understood, or even considered, in any of the countries denominated Christian, that so many who profess to adopt it never once thought of guarding their own minds, and those of their children, against the eloquent seductions of so opposite a spirit. Probably they would be more intelligent and vigilant if any other interest than that of their professed religion were endangered. But a thing which injures them only in that

concern is sure to meet with all possible indulgence.

With respect to religious parents and preceptors, whose children and pupils are to receive that liberal education which must inevitably include the study of these great works, it will be for them to accompany the youthful readers throughout, with an effort to show them, in the most pointed manner, the inconsistency of many of the sentiments, both with moral rectitude in general, and with the special dictates of Christianity. And in order to give the requisite force to these dictates, it will be an important duty to illustrate to them the amiable tendency, and to prove the awful authority, of this dispensation of religion. This careful effort will often but partially prevent the mischief; but it seems to be all that can be done.

Virgil's work is a kind of lunar reflection of the ardent refulgence of Homer, surrounded—if I may extend the figure—with a beautiful halo of elegance and tenderness. So much more refined an order of sentiments might have rendered the heroic character far more attractive to a mind that can soften as well as glow, if there had actually been a hero in the poem. But none of the personages intended for heroes take hold enough of the reader's feelings to assimilate them in moral temper. No fiction or history of human characters and actions will ever powerfully transfuse its spirit, without some one, or some very few individuals of signal peculiarity or greatness, to concentrate and embody the whole energy of the work. There would be no danger, therefore, of any one's becoming an idolater of the god of war through the inspiration of the *Æneid*, even if a larger proportion of it had resounded with martial enterprise. Perhaps the chief counteraction to Christian sentiments which I should apprehend to an opening, susceptible mind, would be a depravation of its ideas concerning the other world, from the picturesque scenery which Virgil has opened to his hero in the regions of the dead, and the imposing images with which he has shaded the avenue to them. Perhaps, also, the affecting sentiments which precede the death of Dido might tend to lessen, especially in a pensive mind, the horror of that impiety which would throw back with violence the possession of life, as in reproach to its great Author, for having suffered that there should be unhappiness in a world where there is sin.

PRAYER FOR THE QUEEN.

THOU by whose fiat, Lord of all!
Empires and monarchs rise or fall,
Our supplications hear!
To thee, O God! our prayer we raise,
That she who Britain's sceptre aways
May govern in thy fear!

Regard her sex—regard her youth—
Pour on her mind the light of truth,
Be that her guide alone;
From flattery's wiles—from envy's darts
Shield her, and make a nation's hearts
The bulwark of her throne!

Her path-way may the placid star
Of peace illumine; nor raging war
His blood-red standard rear;
May Christian joy and love be spread
Among us, and their influence shed
Wherever seas can bear!

And when, in plenitude of years,
She, 'mid a nation's gloom and tears,
Shall to the tomb go down;—
When earth's cold fleeting pageant's fled,
Then, Saviour, on her sainted head
Place an immortal crown!

NOTES OF TRAVELLERS.

THE GRAVE OF WYOMING.—Many years since, the peaceful inhabitants of the sweet valley of Wyoming, then a settlement of Pennsylvania, far removed from other settlements, were suddenly set upon by a numerous body of French and Indians, and almost entirely exterminated. The survivors fled and alarmed the country. An armed force suddenly collected and proceeded to the bloody field, where they performed the duty of interring the dead in one grave. The blood-drenched fields of this lovely valley were long deserted; the very spot where the grave was had become unknown, and could not be found by some of the descendants of those who fell on that destructive day. The fate of the lovely vale of Wyoming and its spicy groves, perishing under the rude scathe of war, had been sung in trans-Atlantic poetry. Campbell's "Gertrude of Wyoming" has conferred a poetic immortality upon the sufferings of that little band of settlers.

Accident, however, has lately discovered the resting-place of those who have slept the sleep of death for more than half a century. The grave has been found on the delightful plain on which the village of New Troy now stands, on the western bank of the Susquehanna, and but a short distance above Wilkesbarre. Eighty skulls have been uncovered; on each one the marks of the scalping-knife; in many are found the balls that caused death, while other skulls are cleft with the tomahawk, or broken by the war-club.

This disinterment has brought all the scenes of that bloody day again into fresh remembrance. A monument will be erected over the grave where the forefathers of Wyoming sleep.

STATISTICS.—The proportion of the insane to the sane population throughout Europe is 1 to 1000; in Wales, 1 to 800; in Scotland, 1 to 574; in the United States, 1 to 262; which facts support the opinion that madness advances with the excitements of civilisation—commercial speculation, cheap spirits, and other social circumstances being expressly assigned by Brigham as the causes of American madness. Study, by itself, does not seem to be so injurious as is commonly supposed. Out of 472 cases, Esquirol refers only 13 to the excess of study, whilst 100 result from "excess of the propensities, and 90 from an uneducated and ill-regulated state of the sentiments." Georget's lists afford similar evidence: out of about 1000 cases, he enumerates 25 victims of mental labour, 20 of an ill-conducted education, 106 drunkards, and 470 affected from other moral causes. On a wide examination of statistical tables of insanity, one half of the cases are resolvable into crimes, follies, and ignorance. It may comfort the sentimental to mention, that statistics do not support Conolly's assertion that geometricians, physicians, naturalists, and painters are rarely insane, whilst mad poets, painters, priests, and musicians are rife. There are not sufficient facts to decide whether rich madmen proportionately exceed poor; nor, if more complete, would they be of much use, unless the respective numbers of the sane in each class were also ascertained. States of high political excitement, such as revolutions, add greatly, it is well known, to the number of the insane; so do commer-

cial convulsions. No age is secure from madness; infants and octogenarians become insane; but the prime of life—as might be supposed from its exertions and excitements—is the period most liable to attack. Out of tables whose aggregate gives nearly 4500 patients, more than one-fifth became deranged between the ages of thirty and forty. As regards the sexes, mad women are, upon the whole, more numerous than mad men; though there is a national exception in the case of Norway, and the proportions fluctuate in other countries. Let our bachelor readers note, that the single are more obnoxious to madness than the married. At Charenton, out of 1557 patients, only 695 were yoked, whilst 859 were unmarried or widowed; and Dr. Duncan gives only 578 married out of 2357; the proportion of the whole being more than three to one in favour of the conjugal state.—*Spectator*.

WASHINGTON.—Further on, where the brook fell into a deeper basin, we saw some women washing linen by stamping on it with their feet,—the universal method of washing here, where nearly every thing is done in a manner precisely the reverse of ours. For example, the Arabs mount their horses on the right side; write from right to left; wear the crooked sabre with the concave side in front; let the beard grow, and shave the head; sit on their own legs instead of a chair; eat their bread hot, and their meat cold; take their soup at the end of the meal, instead of the beginning; bare their feet instead of their heads on entering a room; and many other things in like manner. If our ladies chose to adopt the Arabian fashion, they would have a double advantage: they could wash and knit at the same time. You see I profit by my travels. We afterwards saw a man pass on horseback who had put meat under his saddle, in the manner of the Tartars, to make it tender; by which means it really becomes more tender and better flavoured than it does by all the beating the cutlets get with us, to soften their dispositions.—*Semilasso in Africa*.

THE FRENCH REIGN OF TERROR.—The sun of liberty was in eclipse, while the crested hydra of the coalition glared round the horizon; the atmosphere was dark and sultry; there was a dead pause, a stillness in the air, except as the silence was broken by a shout like distant thunder, or the wild chant of patriotic songs; there was a fear as in the time of a plague, a fierceness as before and after a deadly strife. It was a civil war raging in the heart of a great city as in a field of battle, and turning it into a charnel house. The eye was sleepless; the brain heated. Signs of horror grew familiar to the mind, which had no other choice than that of being either the victim or the executioner. What at first was stern necessity, or public duty, became a habit and a sport; and the arm, inured to slaughter, struck at random, and spared neither friend nor foe. The soul, harrowed up by the most appalling spectacles, could not do without them, and "nursed the dreadful appetite of death." The habit of going to the place of execution resembled that of visiting the theatre. Legal murder was the order of the day, a holiday sight, till France became one scene of wild disorder, and the revolution a stage of blood.—*Haslitt's Life of Bonaparte*.

A LETTER TO THE PUBLISHERS.

A PROPOSAL to Publish the Prose and Poetical Productions of Peregrine Prosy, Esq., in 365 portable volumes, prettily adorned with Pictorial Illustrations. To be produced on a plan peculiarly calculated to be profitable to the Proprietors, and particularly pleasing to Purchasers.

Twaddle-Hall,
Oct. 1st, 1837.

GENTLEMEN,

I SHALL not apologise for making this communication, believing, as I do, that it is a matter of national importance, and that to you, as publishers, it will discover a flowery pathway to certain and incalculable wealth. To have obtained an introduction to you, would have been to have availed myself of an expedient as common-place as assuredly, in my case, it is unnecessary. Fame has, doubtless, long since made your ears familiar with my patronymic; and the character which common report assigns to you, both professionally and personally, renders me desirous that you should become partakers of my immortality. Yes, gentlemen, I am willing, nay, anxious, that, as the names of Tonson, Lintot, Constable, Murray, and Longman, are associated with those of Dryden, Swift, Pope, Scott, Byron, and Moore, so the names of Ward and Co. shall be syllabled by all literary posterity, in connexion with the productions of Peregrine Prosy.

The fact is, I am less young than when I first devoted my powers of mind to the cause of human advancement; and the wasting toil of the midnight study, aided, perchance, by the sixty-five winters which have shed their snows upon my scanty locks, has rendered me less capable of severe and continuous exertion than formerly. I therefore consider it my duty to collect my multifarious productions, and issue them to the public in a form which shall render them acceptable, and insure their transmission to posterity, whose intellectual character will, for the most part, be moulded and fashioned by them. If, gentlemen, you should be disposed to aid me in the undertaking, you will, besides becoming the Rothschilds of the Row, acquire the reputation of philanthropists, and justly so; for think not it is a light thing, in an age of book-making like the present, when facts and whimsies are indiscriminately hashed up and seasoned like French dishes, according as the vanity of the *artiste* may dictate; think not, I say, that it is a trifling matter to afford the reading public a supply of wholesome, nutritious mental aliment, which will

require the application of a life-time wholly to imbibe.

The form of publication which I have decided on, if it should receive your approbation, is that adopted in the cases of my clever, but somewhat trifling and superficial contemporaries, Scott and Byron. By issuing a small volume monthly, at the price of five shillings, you will, I think, secure the purchasers of the works of the two authors mentioned; and we shall be certain, in addition, of the patronage of all sensible people, but few of whom, probably, sanctioned the waste of talent which is exhibited in the useless novels of the one, and the jingling absurdities of the other. I calculate I have matter enough, published and in manuscript, to fill three hundred and sixty-five volumes. A very pretty set of books they will be when completed! I think we may anticipate the sale of, at least, fifty thousand volumes per month. Be particular to employ a printer and a binder who possess means adequate to the production of these punctually; for fifty thousand copies are not an ordinary impression.

You will, of course, provide a steel-plate frontispiece, and an engraved title, including a vignette, for each volume. The frontispiece to the first will appropriately consist of a full-length portrait of the author. I intend that, like my works, it shall be very much out of the common way; in fact, that it shall indicate the contents of the series, and the universality of the genius of him who produced them. I purpose being represented as standing near the window of my study, with a variety of articles about me, tastefully arranged, and bearing reference to my attainments and pursuits. My right hand will be placed on a terrestrial globe, implying that my labours have been prosecuted for the benefit of mankind at large. My right eye will be raised to the starry heavens, emblematical of the loftiness of my aspirations, and the exalted nature of my studies. In order to convey an impression of my extreme versatility, of the readiness with which I can change "from grave to gay, from lively to severe," my left eye will be fixed on the gambols of a kitten, whose vivacious fancy my left arm—furnished with a piece of string attached to a cork—will be employed in stimulating. This, if well done, will doubtless assist much to sell the first volume; the intense interest to be excited by the contents of which, consisting, as they will, of a narrative of my life to the end of the second year, will create an unprecedented demand for the other three hundred and sixty-four volumes.

Before I enter farther into negotiation with you in this matter, I request that you will read the enclosed specimen of my compositions, when

you will be better able to decide on the terms and conditions you may see fit to offer and impose.

I am, gentlemen,

Your very obedient servant,

PEREGRINE PROST.

Messrs. Ward & Co., Paternoster-row.

POSTSCRIPT.

I THINK it right to add a list of my several works, with the number of volumes which, according to my estimate, each will extend to. The specimen I herewith send is a chapter from my autobiography. In a few days I shall have time to copy, as further specimens, one of my "Esquimaux Melodies," and a part of the "Life and Opinions of an Oyster," being his love-letters.

LIST OF THE WORKS OF PEREGRINE PROST, ESQ.

	Vols.
Autobiography.....	24
Life and Opinions of an Oyster, including his Correspondence	14
Esquimaux Melodies	7
Ill Effects of wearing Tight Shoes; with a Digression on the Corn-Laws	12
Facts relating to the Cod Fishery in Newfoundland; with a Dissertation on the Phenomena of Sounds... ..	6
Billingsgate Pastorals	8
Lawkamassymee: an Epic Poem in 402 Cantos.....	32
Lives of Eminent Contemporaries, who have been more or less connected with the Author.....	10
The Derivation and Uses of the word Pudding.....	13
Biographical Sketch of John Jones, Esq., many years Surgeon and Accoucheur in the Village of Swampum-on-the-Ditch, Gloucestershire	8
The Phenomena of the Gout, Practically yet Philosophically Considered	12
A New System of Astronomy; Proving Newton and all others who have written on the Science to have been totally Wrong; and Accounting, on New and Uncontrovertible Principles, for all Celestial Phenomena, Observed and Unknown	25
An Argument to Prove that the Red Sea is not so Called on Account of the Colour of its Water.....	27
Lives of Eminent Graziers and Slaughtermen. Originally compiled for Lardner's Cyclopædia, but omitted to be published in that series, the style being pronounced too exalted for the many.....	15

218

Vols.
213

Suggestions for the Preservation of Mirrors and Looking-Glasses, by means of a Permanent Covering of India-Rubber	7
Papers on Various Subjects, furnished to the Gentlemen's Magazine at Intervals during the last Half-Century	44
An Inquiry into the Causes of Vibration in the Tails of Dogs	13
Essays on every known Subject not Treated of in the Foregoing List	37
Minor Poems	14
Correspondence	30
Miscellaneous.....	7

365

Oct. 1st, 1837.

PEREGRINE PROST.

EXTRACT FROM MY AUTOBIOGRAPHY.

CHAPTER XIII.

SHOWETH THAT I WAS BORN, AND UNDER WHAT CIRCUMSTANCES.—NARRATETH MY BEHAVIOUR ON THAT IMPORTANT OCCASION.—INTRODUCETH THE READER, PARENTHETICALLY, TO MRS. PIPKIN AND JOHN JONES, ESQ.—ENLARGETH ON THE ATTENTIONS SHOWN ME.—PRESENTETH THE READER WITH VARIOUS RECIPES FOR THE PRODUCTION OF A PRE-EMINENTLY-COMFORTABLE BEVERAGE.—DESCRIBETH, CIRCUMSTANTIALLY, A PUBLIC CEREMONIAL, SPECIALLY GOT UP ON ACCOUNT OF THE AUTHOR;—AND CONCLUDETH WITH A STORY OF APPALLING INTEREST, RELATING TO BROWN THE CONSTABLE AND PEGGY PADDLE.

I was born at twenty-five minutes and four seconds after eleven of the clock, ante-meridian, on the fifteenth day of November, in the year of our Lord one thousand seven hundred and seventy-two, at the village of Swampum-on-the-ditch, in Gloucestershire. South-west winds had prevailed for some days; and the one so important to myself, and, I may add without vanity, to my species, had been ushered into equivocal existence amid a dark, dreary, mizzling mist, which lasted till five-and-forty minutes after eight A.M., when a change took place in the weather—from bad to worse, the only kind of change to be looked for in an English November. The multitudinous small particles of moisture which floated hither and thither till they found a resting-place, and congregated with myriads of their fellows on the coat, hat, or whiskers of the unfortunate pedestrian, were succeeded by a regular and, apparently, interminable fall of rain. At nine my mother, who appears to have been endowed with a prophetic spirit, desired that the horse should be harnessed to the chaise, and that John should drive to the adjoining village

of Clamperclodhopper, to bring therefrom Mrs. Pipkin, the nurse. My mother, as was her wont when she expected a stranger to visit her, made up a little party to receive me. The party on this occasion consisted of the aforesaid nurse Pipkin, John Jones, Esq., surgeon and accoucheur, and my mother's mother, Mrs. Brown, daughter of Mr. Joseph Fudge, who, in his day and generation, was a common-councilman of the city of London. Mr. Jones and Mrs. Pipkin had been invited some time previously. I may observe here, that it was not to save time that my mother sent the chaise for the last-named excellent and actively-benevolent woman, but from a regard for the old lady's health—a trait in my mother's character which induces me to think that, from her, I inherit the philanthropic disposition which has, I trust, distinguished me through life. It was about half-past ten when Mr. Jones arrived; and a most interesting conversation immediately ensued, sustained by him, Mrs. Pipkin, my mother, and grandmother, chiefly relating to myself. Although eight of the volumes which will follow this are devoted to the biography of that great man, I think it necessary to state some particulars respecting him, in order that the reader may know something of the society into which I was first introduced. Mr. Jones's father had a small farm in the county of Essex. If I was correctly informed, the farm consisted chiefly of grass land, and was used to fatten calves for the London market. The genius of young Jones soon began to develop itself. It is a remarkable fact that he disliked veal, even when quite an infant; and his boyhood loathed the feeding of calves. He was evidently intended to figure in science; and that his mind, at a very early age, was directed to anatomy, was evinced by the pleasure he took in amputating the legs of flies, separating the anterior and posterior halves of wasps, and causing cockchafers to spin round on a pin, in order, doubtless, the better to observe them from all points of view. When ordinary boys do these things they richly deserve the application of a horse-whip, to acquaint them, slightly, with the nature of pain, which they inflict so abundantly and recklessly on creatures alike incapable of resistance and complaint; but young Jones probably thought only of benefiting science, an opinion in which I am strengthened by the fact, that full-grown experimentalists practise similar barbarities with an equal result.

When John was fourteen he sighed with all his might for the lancet; "he had heard of battles," and, like that great man Norval, sighed to be among them, or, at least, in their neighbourhood; not to cleave skulls and perforate limbs, nor to submit to such operations in his own person, but to repair such mischief when inflicted and sustained by others. An army surgeon he aspired to be; and after much preparatory study, and considerable outlay on the part of the old

grazier, an army-surgeon he became. His adventures in that capacity I shall not narrate here, as they will be found in his biography; suffice it, that after a few years he grew tired of a roving life, married, settled at the village of Swampum-on-the-Ditch, and devoted himself chiefly to introducing young strangers to the community, and attending them after their arrival. His wife was a Miss Shank, daughter of Mr. Peter Shank, who was, for many years, somewhat eminent as a boot and shoe maker, in the neighbouring village of Clamperclodhopper. Miss Shank's baptismal name was Lucy. As I have, of course, in the Life of her husband, made particular mention of this union, and given copious notices of the more remarkable of Mrs. Shank's relatives and other connexions, I shall not dwell on these topics here; suffice it, that Mr. Jones's marriage with Miss Shank laid the foundation of a practice which, at the important period when I made my *debut* in mundane affairs, extended through three villages. To the same circumstance must be attributed the remarkable coincidence of his being the first to give me the hand of welcome on the occasion above alluded to. Old Mr. Shank used to make shoes for my father, and they were parish-officers together, for the village of Clampclod (as it was familiarly called) was included in our parish. It was therefore natural that intercourse should subsist between my parents and their friend's son-in-law.

Mrs. Jones had acquired great celebrity by her attentions to the sick. She was the widow of the best cricketer in the parish, and, of course, was much respected. Her husband having been more skilled to "urge the flying ball" than to manage his business, left his relict unprovided for. Jones had been in the "general line;" the stock consequently consisted of cheese, salt-butter, bacon, eggs, sand, matches, brimstone, whiting, blacking, treacle, candles, oil, pickles, brushes, red-herrings, string, sugar, vinegar, tea, tobacco, toys, ginger-bread, lollypops, table-beer, catchup, crockeryware, bread, grits, flour, coals, coke, charcoal, picture-books, nutmeg, ginger, plums, currants, oatmeal, snuff, glue, tape, pins, needles, pens, writing-paper, fire-wood, bees-wax, thread, honey, starch, blue, curd-soap, mottled-soap, yellow-soap, soft-soap, mops, birch-brooms, coffee, rods, capers, slate-pencils, whip-cord, bricks, hearth-stone, lamp-oil, lard, salt, hooks-and-eyes, nails, sugar-candy, sieves, liquorice, sugar-plums, cinnamon, fish-sauce, shirt-buttons, sealing-wax, hardbake, lamp-cottons, split-peas, fish-hooks, and many other articles which, for the reader's sake, I wish I could recollect; but if he will take the trouble to enter one of those numerous warehouses vulgarly called chandler's shops, he will see with his own eyes what a treacherous memory prevents me from laying fully before him. It was found after the funeral that Jones's debts exceeded the value of his

stock. The widow's friends, therefore, thought, as old Mrs. Byby—who for twenty years had earned a respectable livelihood by assisting those ladies who were engaged in providing subjects for the future sovereigns of England—had lately died, that she might become a worthy successor. This post she had filled six years at the period under consideration. It occurs to me that I ought to devote a few pages here to the personal description of Mr. Jones and Mrs. Pipkin, but as I omit to do so in order the more speedily to return to matters relating to myself, I am certain my readers will pardon me.

I was introduced to the company, assembled to receive me, in an upper room of our cottage, with a southerly aspect. This my mother chose for the occasion, because it was the quietest in the house. My mother's taste appears to have resembled my own in this respect; I was always fond of retirement, even of seclusion.

For the particulars hereafter related I can adduce the authority of Mrs. Pipkin; to make inquiries of whom, for the purposes of this narrative, I not long since took a journey of a hundred and forty miles. I am happy to say that I found her, although very old and weak, in full possession of her intellectual faculties. It appears that, as soon as I was born, I took great pains to ascertain the quality and condition of my lungs. This was in itself sensible, as might be expected from me, for the lungs are of extreme importance in the animal economy; but I am sorry to say the manner in which I pursued the investigation was discreditable to my taste. In short, reader, I cried. Let extreme juvenility palliate, if it cannot excuse, the act. Mrs. Pipkin of course sought to console and reconcile me to the society I had so recently entered. It did not escape her scrutinising eye that I was entirely without clothing; and thinking, probably, that this unbecoming condition had occasioned my dissatisfaction, she clothed me from head to feet, and, although of the male sex, placed a cap upon my head. The fact appears to have been that I was at that time nearly bald. She says, I looked very engaging in my new dress; though, from her description, I am inclined to think my outer garment was longer than my stature required.

I know not whether it was apprehended that consumption might lurk in my system, or what other reason my parents, Mrs. Pipkin, and Mr. Jones, had for their proceeding, but the fact is certain, that by common consent they placed me for a considerable time on milk diet; which, however, evidently agreed with me. The most plausible solution of the difficulty is the following. Strange as the statement may appear, I have Mrs. Pipkin's positive testimony to its correctness:—

I was born without teeth. Those organs so necessary to the process of digestion, because of

mastication, began to make their appearance, one or two at a time, several months later. When the awful effects of indigestion are considered, we shall not find it difficult to justify their choice of regimen for me.

My philosophical and contemplative tendencies appear even thus early to have betrayed themselves, for I regarded objects, however near to me, with an indifference and abstraction almost amounting to absence of mind; my own reflections absorbing, apparently, every faculty. I slept much at this period; enjoying a *siesta* often in the course of the day. A few weeks after, for my greater convenience in this respect, an article was procured, made of wicker-work like a basket. Its length exceeded its breadth, and it was larger at the feet than at the head. The latter was surmounted by a canopy, composed of the same material as the other parts. The whole was placed on a couple of semi-circular pieces of wood, called "rockers," so that by a very slight touch this ingenious couch, which I believe was called a "cradle," was made to incline to the one side and to the other alternately, producing an undulating motion, which my friends very correctly imagined would be soothing and pleasing to me.

I have heard of ill effects, even death, occurring from excess of joy. To this cause I suppose I must attribute an indisposition which confined my poor mother to her bed and room for several weeks.

The importance of the event appears to have been duly felt in the neighbourhood; for most of my mother's acquaintance came to see me, and such was their joy when I was introduced to them, and such their satisfaction at Mrs. Pipkin's attentions to me, that but few of them retired without making her a present; while she, anxious that the occasion should be duly honoured on all hands, concocted for the entertainment of our visitors, a beverage, almost unknown, I fear, among the degenerate-beings of the present generation: it was called "caudle." It may be made according to the following recipe. Make a fine smooth gruel of half-grits; strain it when boiled well; stir it at all times till cold. When to be used, add sugar, wine, and lemon-peel, with nutmeg: some like a spoonful of brandy besides the wine; others like lemon-juice. If the latter be used, the beverage will probably have a stronger flavour of acid than in the other case. If preferred, the caudle may be made as follows:—Boil up half a pint of fine gruel, with a bit of butter the size of a large nutmeg, a large spoonful of brandy, the same of white wine, one of capillaire, a bit of lemon-peel and nutmeg. If additional strength is required, the most approved method is to increase the quantity either of the brandy or wine. The following is a third recipe:—Into a pint of fine gruel, not thick, put while it is boiling-hot, the yolk of an egg, beaten

with sugar, and mixed with a large spoonful of cold water, a glass of wine, and nutmeg; mix, by degrees. Some like gruel, with a glass of table-beer, sugar, &c., with or without a tea-spoonful of brandy. If it is intended that the caudle should be taken cold the following method will succeed best. Boil a quart of spring-water; when cold, add the yolk of an egg, the juice of a small lemon, six spoonfuls of sweet wine, sugar to your taste, and syrup of lemons one ounce.

N.B. It must not be expected that the spring-water will be found cold the moment the boiling ceases. This process takes time. There may be many methods of carrying it on, but I believe the most popular is to leave the water exposed for a time to the action of the atmosphere. It may be well to add, that in whatever way the caudle may be prepared, the same rule should be observed in drinking it. It should be poured from a cup or some other vessel, at a moderate speed, between the lips of the imbibor.

My father has been dead many years; indeed he died at so early a period of my existence that I have no recollection of his personal appearance, he must, however, have borne a great resemblance to myself, for every visitor declared that she discovered in me a most striking likeness to my papa. I presume my mother's complaint was one requiring quiet and repose, for some of the visitors most earnestly conversed with her, by the hour together, upon the impropriety of talking much, and made her promise over and again to be obedient to their injunctions.

A sensation almost supernatural appeared to have been produced throughout the whole neighbourhood. My arrival was publicly noticed at the parish church, in the course of morning prayers on the Sunday following. At home the proceedings were of a most revolutionary character; to use a phrase as forcible as it is classically elegant, "the house was turned out at window." The room which I have alluded to was the best bed-room in the house, and that in which my parents ordinarily slept. This was accordingly fixed on for my apartment; and as the observance of state befitting the occasion required the constant attendance of Mrs. Pipkin, my father, with much courtesy and hospitality, adjourned to the sofa-bed in the back parlour.

Thus matters proceeded until the third day after my arrival. This was a most momentous day to me, in fact the first of my appearance as a public character; I was received by the clergyman in his robes of office, and so cordially that he clasped me in his arms. Many of the parishioners were present. A ceremonial entirely relating to myself was conducted by the clergyman, and a subordinate ecclesiastical parish functionary. Its object was not to confer on me the honour of knighthood, for the power to do so was possessed only by his majesty George III.,

whose acquaintance it was not my happiness to enjoy; yet I received from the hands of the reverend old man an honour which I have enjoyed as a distinction among my fellow-men ever since. He conferred on me the name of Peregrine. This name it appears was chosen by my parents. Why, I cannot tell. Sometimes I think it may have been an old family name; yet, surely, if such were the case, I should not be ignorant of the fact. Once I indulged the thought that I was named after the celebrated Peregrine Pickle, but this cannot have been, for he was certainly not of the Prosy family. A piece of plate was presented to me on the occasion; or rather three pieces of plate—a knife, fork, and spoon. They were contained in a red-morocco case, each compartment, for there were three, being lined with crimson velvet. The case divided into two parts, when opened; consisting of an upper and a lower. These were united at the back at all times, by a couple of ingeniously constructed pieces of metal, called hinges; and in the front, when closed, by two small pieces of brass somewhat shapen like sickles; these being fixed in the lower half of the case by the handle end, the blade passed through little rings affixed to the upper section, and thus the two halves of the cases were held together during the pleasure of the owner.

A yet more handsome present was a gorgeous robe, the tribute of Mrs. Brown, no relation of my grandmother, who lived in the little thatched cottage, with the honey-suckle and clematis climbing about it. She was a widow. Her husband had been a distinguished man in his day. He owed his celebrity chiefly to an act of heroism, which will certainly hand his name, festooned with laurel leaves, to the latest posterity. He was parish constable that year. One night Peggy Paddle knocked at his door, and told him that she observed, as she passed Mrs. Wheezum's house, in which it was well known only Mrs. W. and her two daughters slept, that the door was ajar, which she conceived indicated that a robber was within. Mr. Brown, who presented himself at the window in his night-gear with a horse pistol held forth at arm's length, very judiciously suggested that, the night being warm, the door might have been left open to admit the cool night air; and added, which proves him to have been as distinguished for delicacy of feeling as he was for courage, that if he proceeded to the spot he could not choose but alarm the females, and who could foretell the result? Would it, he added, be becoming in him, a peace-officer, to disturb the peace of three unprotected females? Peggy was not satisfied. She insinuated that Brown was not exactly calculated for the office he filled, and in spite of the most eloquent appeals to her womanly sympathies, she went so far as to use the word "coward." This Brown could not endure. What man of honour and

courage could? So, having looked pistols, blunderbusses, and forty-eight pounders, at the hapless Peggy, he withdrew his head and shoulders from the external atmosphere, laid aside his pistol, and began to don his daily habiliments. Never had Brown been so long in completing his task. The night must have been less warm than his over-anxiety for the welfare of Mrs. Wheezum and the Misses Wheezum led him to imagine, for through an awful shivering fit which seized him, his fingers refused to perform their wonted office. Every limb shook; his teeth chattered; and his garments remonstrated, as much as inanimate things could do, against resuming their ordinary office at such an unseasonable hour. It is clear that the wind must suddenly have changed from south to east, or the dews which fall so plentifully in warm weather had chilled the atmosphere, and by consequence the blood and sinews of the gallant constable. At length he was equipped, and proceeded towards Mrs. Wheezum's, slowly, very slowly, in order that he might not dissipate any portion of his strength, all of which was likely shortly to be needed. On his arrival, he found the door ajar, as Peggy had described it to be when she passed; and apparently it had not been fastened, for the door-key was hanging within, on the hook which it customarily occupied. Of this, Brown most judiciously and courageously possessed himself, and took his station on the outside, quite in the shadow of the cottage, that he might not be observed, conceiving it was his duty, as peace-officer, to take care that no one entered the premises. All was still for some time, and Brown began to think that the door, which had evidently been latched only, had been blown open; when, suddenly, screams issued from Mrs. Wheezum's sleeping apartment, and a small rattle was whirled round, and round, and round, with more than feminine energy. Brown instinctively cast his eyes along the passage, and beheld a male human figure descending the stairs. With that rapidity of decision which characterises military genius, the constable closed the door, and securely locked it, having previously inserted the key on the outside. This was most skilful generalship, for the housebreaker and murderer was effectually secured; the back of the premises being bounded by the lofty brick walls of farmer Gosling's barn and stables, and the windows, after the cottage fashion, being barred and narrow. Another excellent purpose was answered; Mrs. Wheezum and her daughters were necessarily restrained from sallying forth, and thus encountering unknown dangers. As fast as a pair of thick calves, or rather all-calf, legs would bear him, Brown ran to the house of butcher Wilkins, who, with his men, John Scragg and William Sweetbread, returned with him to the spot. The military genius of Brown was now admirably dis-

played in the arrangement of his forces. He gave Wilkins the key, with directions to open the door and seize the offender, while Scragg and Sweetbread supported him in the rear. Brown, being armed, thought it better to station himself on the opposite side of the road, in order that if the robber escaped the three butchers, he might be brought down by the contents of the pistol. The door being opened, little Tommy Shovel, the chimney-sweeper's apprentice, threw himself on his knees before Wilkins, and exclaimed in piteous accents, while the big tears chased each other down the white channels which their predecessors had made in his sooty cheeks, "Do forgive me this time—I'll never do so no more." It appeared Tommy had been sent for to a distant chimney, in which some soot had ignited, and on his return, observing Mrs. Wheezum's door ajar, it not having been securely latched, and the locking part of the business having been forgotten by Jenny Wheezum, who had an affair of the heart on the tapis, Tommy thought he would walk up to the store-room and taste a few apples, of a very choice sort, for which Mrs. Wheezum's orchard was celebrated. Tommy had often relished their flavour while on the trees, and he wished to ascertain whether they were better or worse for keeping. He did not very readily find the heap he was in search of; and, in his over-anxiety, he trod on a small hillock of Ripstone pippins, which rolled from beneath him, laying him prostrate and making not a little noise, as some of the pippins bounded against the wooden partition. This aroused and alarmed the inmates of the house, and occasioned the subsequent incidents which we have already narrated. Thus did the husband of Mrs. Brown immortalise himself. Although the danger was not so great as was apprehended, the courage and sagacity of Brown are not the less to be admired. None but a man of genius could, by one spontaneous act, have made the three Wheezums secure, and also have secured their supposed intended murderer, by locking them all up together.

I ought in this place to insert my description of the splendid robe presented to me by Mrs. Brown, on occasion of my first appearance in public; but as it will occupy twelve or thirteen printed pages, I will not introduce it at the end of a chapter, but take an opportunity of doing so a few chapters on, when I shall again have occasion to make mention of the generous donor. In the meanwhile I beg the reader will not partially peruse the intervening matter, from a feeling of impatience to arrive at a description so animating and interesting, as I can assure him that that matter will involve incidents of vast importance, which occurred between the third and the fifteenth day of my existence. N.

PASSAGES FROM THE LIFE OF A CONDEMNED MAN.

PART III.

I SAID to myself :—Since I have the means of writing, why should I not do it? but what to write? Enclosed within four walls of cold and naked stone, without liberty for my steps, or horizon for my eyes, the only distraction to be mechanically occupied all the day in following the slow march of that whitish square that the Judas at my door cuts out upon the dark wall opposite to me; in lonely companionship, with one idea—an idea of crime, of punishment, of murder, and of death! Can I have any thing to say; I who have nothing else to do in this world? And what shall I find in this empty and withered brain worth the trouble of being written?

Why not? If all around me is monotonous or discoloured, is there not within me a storm, a wrestle, a tragedy? This fixed idea, which possesses me, does it not present itself to me every hour, every instant, under some new form, always more hideous and bloody in proportion as the time of its consummation approaches? Why should I not try to speak to myself all that I feel of secret and violent in the abandoned situation in which I am? Certainly the material is rich; and how short soever my life may be, there will be yet in the agonies, in the terrors, in the tortures which will fill it from this hour to the last in which this pen may be used and this ink dry up. Besides, the only way to lessen the suffering of these agonies is to contemplate them, and the depiction of them will divert me from them.

Besides, what I shall write may not be, perhaps, useless. This journal of my sufferings, hour by hour, minute by minute, torment by torment, if I have the power to carry it up to the moment when it will be *physically* impossible to continue it—this history, necessarily unfinished, but as complete as possible, of my feelings, will it not carry with it a deep and profound precept? Will there not be in this verbal process of agonised thought, in this continually increased progression of pains, in this species of intellectual autopsy of a condemned man, more than one lesson for those who condemn? Perhaps this lesson may render the hand less light when it becomes a question to throw a head which thinks—a man's head, into what they call the scales of justice! Perhaps these unfortunates have never

reflected on this slow succession of tortures that is contained in the expedite formulary of a sentence of death. Have they only never been struck with the poignant idea, that in the man whom they cut off there is an understanding, and an intelligence, which had calculated upon life; a soul, which has not prepared itself for death? No. They see in all that but the vertical fall of a triangular axe, and doubtless think that for the condemned there is neither past nor future.

These pages will undeceive them. They may be published some day, and will arrest for a few minutes their thoughts on the sufferings of the spirit, for those are they which they do not suspect. They rejoice in being able to kill without scarcely causing the body to suffer. And that is the point in question. What is physical pain compared to moral suffering? Honour and pity—laws made this! A day will come, and perhaps these memories—the last confessions of a miserable man may have contributed to them.

* * * * *

Unless after my death the wind should not play on the green with these morsels of paper, soiled with mud, or that they should not rot in the rain, clinging in stars to the broken window of a turnkey.

That the words which I write here may be one day useful to others, that it may stop the judge in his judgment, that it may save the unfortunates, whether innocent or guilty, from the agony to which I am condemned—Why? To what good? What does it signify? When my head has been cut off, what will it be to me if they cut them off from others? Is it truly that I can have thought of these follies? Throw down the scaffold after I have mounted it! I ask you what will return to me? What! the sun, the spring, the fields filled with flowers, the birds, who awaken the morning, the clouds, the trees; nature, liberty, life, all that is no longer mine! Ah! it is I who must be saved! Is it quite true that such cannot be, that one must die tomorrow, to-day, perhaps, that this should be thus? The horrible idea of breaking one's head against the wall of one's dungeon!

EPHON.

A SHARK HUNT.

THE lunarian, busy taking distances, crams his sextant hastily into the case; its computer,

working out his longitude, shoves his books on one side; the marine officer abandons his

eternal flute; the doctor starts from his nap; the purser resigns the complete book; and every man and boy, however engaged, rushes on deck to see the villain die. Even the monkey, if there be one on board, takes a vehement interest in the whole progress of this wild scene. I remember once observing Jacko running backwards and forwards along the after-part of the poop hammock-netting, grinning, screaming, and chattering at a rate, that, as it was nearly calm, he was heard all over the decks. "What's the matter with you, Master Mona?" said the quarter-master, for the animal came from Teneriffe, and preserved his Spanish cognomen. Jacko replied not, but merely stretching his head over the railing, stared with his eyes almost bursting from his head, and, by the intensity of his grin, bared his teeth and gums nearly from ear to ear. "Messenger! run to the cook for a piece of pork," cries the captain, taking command with as much glee as if it had been an enemy's cruiser he was about to engage. "Where's your hook, quarter-master?" "Here, sir, here!" cries the fellow, feeling the point, and declaring it as sharp as any lady's needle, and in the next instant piercing with it a huge junk of rusty pork, weighing four or five pounds; for nothing, scarcely, is too large or too high in flavour for the stomach of a shark. The hook, which is as thick as one's little finger, has a curvature about as large as that of a man's hand when half closed, and is from six to eight inches in length, with a formidable barb. This fierce-looking grappling iron is furnished with three or four feet of chain, a precaution which is absolutely necessary; for a voracious shark will sometimes gobble the bait so deep into his stomach, that, but for the chain, he would snap through the rope by which the hook is held as easily as if he were nipping the head off an asparagus.

A shark, like a midshipman, is generally very hungry; but in the rare cases, when he is not in very good appetite, he sails slowly up to the bait, smells it, and gives it a poke with his shovel-nose, turning it over and over. He then edges off to the right or left, as if he apprehended mischief, but soon returns again, to enjoy the delicious *haut goût*, as the sailors term the flavour of the damaged pork, of which a piece is always selected, if it can be found. While this coquetry, or shyness, is exhibited by John Shark, the whole afterpart of the ship is so clustered with heads that not an inch of spare room is to be had for love or money. The rigging, the mizen top, and even the gaff, out to the very peak—the hammock-nettings and the quarters, almost down to the counter, are stuck over with breathless spectators, speaking in whispers, if they venture to speak at all, or can find leisure for any thing but fixing their gaze on the monster, who as yet is free to roam the ocean, but who, they trust, will soon be in their power. I have seen this go

on an hour together; after which the shark has made up his mind to have nothing to say to us, and either swerved away to windward, if there be any breeze at all, or dived so deep that his place could be detected only by a faint touch or flash of white many fathoms down. The loss of a Spanish galleon, in chase, I am persuaded, could hardly cause more bitter regret, or call forth more intemperate expressions of anger and impatience. On the other hand, I suppose, the first symptom of an enemy's flag coming down in the fight was never hailed with greater joy than is felt by a ship's crew on the shark turning round to seize the bait. A greedy whisper of delight passes from mouth to mouth; every eye is lighted up, and such as have not bronzed their cheeks by too long exposure to sun and wind, may be seen to alter their hue from pale to red, and back to pale again, like the tints of the dying dolphin.

When a bait is towed astern of a ship that has any motion through the water at all, it is necessarily brought to the surface, or nearly so. This, of course, obliges the shark to bite at it from below; and as his mouth is placed under his chin, not over it, like that of a Christian, he must turn nearly on his back before he can seize the floating piece of meat in which the hook is concealed. Even if he does not turn completely round, he is forced to slue himself, as it is called, so far as to show some portion of his white belly. The instant the white skin flashes on the sight of the expectant crew, a sudden cry or murmur of satisfaction is heard amongst the crowd; but no one speaks, for fear of alarming the shark.

Sometimes, at the very instant the bait is cast over the stern, the shark flies at it with such eagerness that he actually springs partially out of the water. This, however, is rare. On these occasions he gorges the bait, the hook, and a foot or two of the chain, without any mastication or delay, and darts off with his treacherous prize with such prodigious velocity and force that it makes the rope crack again as soon as the whole coil is drawn out. In general, however, he goes more leisurely to work, and seems rather to suck in the bait than to bite at it. Much dexterity is required in the hand which holds the line at this moment; for a bungler is apt to be too precipitate, and to jerk away the hook before it has got far enough down the shark's maw. Our greedy friend, indeed, is never disposed to relinquish what may once have passed his formidable batteries of teeth; but the hook, by a premature tug of the line, may fix itself in a part of the jaw so weak that it gives way in the violent struggle which always follows. The secret of the sport is to let the voracious monster gulp down the huge mass of pork, and then to give the rope a violent pull, by which the barbed point, quitting the edge of the bait, buries itself in the coats of the victim's throat or stomach. As the shark is

not a personage to submit patiently to such treatment, it will not be well for any one whose foot happens to be accidentally on the coil of the rope, for, when the hook is first fixed, it spins out like the log line of a ship going twelve knots.

The suddenness of the jerk with which the poor wretch is brought up, when he has reached the length of his tether, often turns him quite over on the surface of the water. Then commence the loud cheers, taunts, and other sounds of rage and triumph, so long suppressed. A steady pull is insufficient to carry away the line; but it sometimes happens that the violent struggle of the shark, when too speedily drawn up, snaps either the rope or the hook, and so gets off, to digest the remainder as he best can. It is, accordingly, held the best practice to play him a little, with his mouth at the surface, till he becomes somewhat exhausted. During this operation one could almost fancy the enraged animal is conscious of the abuse which is flung down upon him; for, as he turns, and twists, and flings himself about, his eye glares upwards with a ferocity of purpose which makes the blood tingle in a swimmer's veins, as he thinks of the hour when it may be his turn to writhe under the tender mercies of his sworn foe! No sailor, therefore, ought ever to think of hauling a shark on board merely by the rope fastened to the hook; for, however impotent his struggles may generally be in the water, they are rarely unattended with risk when the rogue is drawn half way up. To prevent the line breaking, or the hook snapping, or the jaw being torn away, the device of a running bow-line knot is always adopted. This noose, being slipped down the rope, and passed over the monster's head, is made to jam at the point of junction of the tail with the body. When this is once fixed, the first act of the piece is held to be complete, and the vanquished enemy is afterwards easily drawn over the taffrail and flung on the deck, to the unspeakable delight of all hands. But although the shark is out of his element, he has by no means lost his power of doing mischief; and I would advise no one to come within range of his tail, or trust his toes too near the animal's mouth. The blow of a tolerably large-sized shark's tail might break a man's leg; and I have seen a three inch hide tiller-rope bitten more than half through, full ten minutes after the wretch had been dragged about the quarter-deck, and had made all his victors keep at the most respectable distance. I remember hearing the late Dr. Wollaston, with his wonted ingenuity, suggest a method for measuring the strength of a shark's bite. If a smooth plate of lead, he

thought, were thrust into the fish's mouth, the depth which his teeth should pierce the lead would furnish a sort of scale of the force exerted.

I need scarcely mention, that when a shark is floundering about, the quarter-deck becomes a scene of pretty considerable confusion; and if there be blood on the occasion, as there generally is, from all this rough usage, the stains are not to be got rid of without a week's scrubbing, and many a growl from the captain of the after-guard. For the time, however, all such considerations are superseded—that is to say, if the commander himself takes an interest in the sport, and he must be a rather spoony skipper that does not. If he be indifferent about the fate of the shark, it is speedily dragged forward to the fore-castle, amidst the kicks, thumps, and execrations of the conquerors, who very soon terminate his miserable career, by stabbing him with their knives, boarding-spikes, and tomahawks, like so many wild Indians.

The first operation is always to deprive him of his tail, which is seldom an easy matter, it not being at all safe to come too near; but some dexterous hand, familiar with the use of the broad axe, watches for a quiet moment, and at a single blow severs it from the body. He is then closed with by another, who leaps across the prostrate foe, and with an adroit cut rips him open from snout to tail, and the tragedy is over, so far as the struggles and sufferings of the principal actor are concerned. There always follows, however, the most lively curiosity as to his inside; but they are often disappointed, for the stomach is generally empty. I remember one famous exception, indeed, when a very large fellow was caught on board the *Alceste*, in Anjeer Roads, at Java, when we were proceeding to China with the embassy under Lord Amherst. A number of ducks and hens, which had died in the way, were, as usual, thrown overboard in the morning, besides several baskets, and many other minor things, such as bundles of shavings and bits of cordage; all which things were found in this huge sea-monster's inside. But what excited most surprise and admiration was the hide of a buffalo, killed on board that day for the ship's company's dinner. The old sailor who had cut open the shark, stood with a foot on each side, and drew out the articles one by one from the huge cavern into which they had been indiscriminately drawn. When the operator came at last to the buffalo's skin, he held it up before him, like a curtain, and exclaimed, "There my lads; d'ye see that! He has swallowed a buffalo, but he could not digest the hide!"—*Captain Hall*.

A FARM SCENE IN SPAIN.

FROM STORIES OF SPANISH LIFE.

ANTONIO's paternal house was one of the first on entering the village. It exhibited towards the street a principal building, or habitation, of about thirty feet in breadth, of two stories, with an azotea or terraced roof, and one single broad window, with a balcony on the second floor, whilst the first floor had only a small aperture. To this part of the house was attached a long and low building, covered with tiles, which extended about sixty feet, till it reached the next house. This building had no windows at all; but only here and there irregular apertures, and a great gateway, having a small door in one of its wings. Such an exterior as this could not truly present any great architectural beauties; but it was snow-white, and kept in the cleanest condition.

Antonio stepped with his sister through the open door. It led immediately into a great hall, or more properly, a covered court, which occupied the whole of the above-mentioned low building, and measured about sixty paces in length and thirty in breadth. The roof was supported by a row of coarsely-worked wooden pillars, the bases of which rested on blocks of stone, and which went round the whole space. Against these were hung all kinds of implements of husbandry, harness for horses and mules, and also some arms.

Some waggons and carts stood in the back ground of this space, and on both sides there were about twenty mules, and a few horses separated from them by a partition, and tied up to racks. On the left side, one stepped from this space into a small court, from which there was no separation, and which we only call a court to distinguish it from the other space, because the roof which covered the former, ceased here. This court was about thirty feet in length, that is to say, the same as the breadth of the above-mentioned covered space, and was about fifteen yards wide from the last pillars of the roof up to the wall of the proper dwelling-house. On two sides of the court were covered passages, supported by somewhat prettier columns than those of the first space, but without any kind of architectural ornament. On the third side of the court, there was a kind of a well, inasmuch as an immense earthen jar full six feet in diameter was sunk deep into the earth. In this draw-well, or rather jug, the water is kept fresh, even during the greatest heat. Near the well a date palm rose high above the house. Along the same side of the wall an immense vine stretched itself out, which covered also a great part of the house, and had formed a green wall over one part of the corridor itself, interwoven with purple red grapes in almost incredible number and size. Lastly, in one corner of the court stood some

pomegranate and orange trees, the first nearly bent to the earth by the weight of their curiously-formed reddish capsules, and the latter shining with an abundance of golden fruit and fragrant blossoms, covering the ground on all sides.

All round the corridor there were several doors, one of which led by a stair to the upper floor of the house, and the others to the apartments on the ground floor, to which they also served as windows. The upper story of the house had some windows towards the court, but they were without glass. The whole was cleanly, it is true, but it is evident that this cleanliness was more the effect of a fine climate than of any particular pains on the part of the inhabitants; for half-crushed oranges were lying all about in the court, and the rank grass grew up from between the paving stones.

When Antonio entered, some servants were employed in the semi-obscurity of the court, taking care of, and feeding the mules and horses. Nearest to the court, and turning his back to them, was a young man in his shirt sleeves employed in mending a bridle. Under the corridor, on a small wooden stool, sat a young woman of about five and twenty, in negligent domestic attire, with her head bare, and some roses in her black hair. She was occupied in cleaning vegetables, a great heap of which lay before her. Opposite to her, seated upon an old arm chair, made of twisted willow, was an old Carmelite monk, with a long white beard and fiery eyes, but of mild expression.

Two boys, of nine or ten years old, were playing about in the court, without any other clothing than a shirt and short brown trowsers. * * On perceiving Dolores, they both ran to her with loud cries of "Aunt Dolores! aunt Dolores! what have you brought us?" At this, the young man got up, (it was Antonio's eldest brother, Juan,) and held out his hand to Antonio (for without recollecting him, he guessed it could be no one else) with a hearty "Welcome Antonio." Dolores was embraced by her sister-in-law, whilst the two boys would not willingly let go of her; but at length she extricated herself from them, and ran up to the ecclesiastic, whose hand she kissed with great respect, making many eager inquiries after his health, whilst he, stroking her cheeks with visible emotion, said, "The holy Virgin bless you a thousand times!"

Antonio recognised him immediately as the old Father Hilario, whose favourite he had been as a boy, and to whom he had, in many respects, reason to be thankful; he hastened up to him, and seizing his proffered hand, kissed it in speechless emotion.

The old man appeared surprised for a moment, and then said, with tears in his eyes, "God bless you, Antonio! you are always, then, my good son."

Dolores had looked on with folded hands, and Juan said, with a softer voice than was usually his custom, "That is our brother Antonio, wife."

This last made an embarrassed courtesy, and wished to kiss the hand of her reverend brother-in-law, but he would not suffer it, and, shaking her cordially by the hand, reminded her of their early acquaintance. Juan seized the two boys, who had crept shyly behind their aunt, and they were now obliged to kiss their uncle's hand, as in duty bound, but ran away immediately, and could only be allured back when they saw Dolores displaying her little presents. The servants also had come up at the noise of the welcoming, and greeted their young mistress (who had something friendly to say to everybody) with cordial joy, and welcomed also Antonio in a reverential manner, yet not without visible pride at the honour which accrued to their master's family by having a son in the church. They then hastened away to unload the mules, who had come up with their burdens, and announced their presence impatiently by clattering the bells upon their heads.

"Father and mother are on the farm," said Juan at last, when the party had become somewhat more calm, "but they will be home directly;" and accordingly, almost immediately afterwards, they made their appearance.

The mother, an old woman, who must have been once very handsome, with a countenance such as is given to St. Anne, in Murillo's pictures, wore a Basquina of coarse black velvet, and on her head a Mantilla of the same material without any trimming. She sat sideways on a handsome ass, which carried her without requiring any guidance, and beside her stepped the father, a hale man, who did not show the seventy years full of labour and dangers of all kinds, through which he had lived. He wore a short jacket of black plush, ornamented with some silk braids and with embroidery, and short white pantaloons of the same stuff, a fine and very broad jabot, and a silk handkerchief round his throat, a red sash round his body, and lastly,

shoes and gaiters of light brown leather, reaching close up under his knees, yet so that one could see the white linen clothing which he wore beneath. He carried a long Biscayan firelock on his shoulder, and beside him ran two handsome greyhounds. A maid followed her master, driving an ass before her laden with vegetables and fruits—such as melons, cucumbers, and glowing red pimientos; figs, oranges and grapes; together with a small bundle of juicy sugar-cane, which last the children immediately pounced upon, and began to suck it, and to beat each other with it.

Antonio hastened to meet his mother, who recognised him immediately, and fell speechless and sobbing upon his neck. She only relaxed her embrace in order to consider him with the careful look of motherly love, and again to press him in her arms, till Dolores, who had greeted her father with a timid kiss of the hand, at last claimed her share also of motherly affection, and Antonio could turn to his father, who shook him cordially by the hand without any particular emotion, but with a hearty "Welcome Antonio, welcome home." After the first storm of joy and emotion of questioning and answering was past, the father reminded them that it was time for the evening meal. A plank was now laid upon two low blocks, which formed together a long low table in the middle of the court, and this was covered with a coarse but clean cloth. A few common earthenware dishes full of gazpacho* were then brought, and all the inhabitants of the house seated themselves on low stools round the table; the servants and the maid at the lower end, at the upper end Father Hilario, who was always a welcome guest; next to him, old Lara and his wife, and beside the latter Antonio, to whom Dolores had been obliged to yield her place. The wooden spoons which drew from all sides upon the dishes soon emptied them, and olives, together with snow-white bread, concluded the frugal repast. Some glass jugs of wine, however, were not wanting, from which the men poured the wine down their throats, holding them with a skilful hand high above their heads.

* Gazpacho is a sort of macedoine, consisting of cucumbers, crumbs of bread, garlic, pimiento, vinegar, oil, and water, and is a very cooling dish.

ON SEEING A BUTTERFLY AT NIGHT.

WHY, O thou wanderer lone,
Hast thou come forth when purple evening dies?
To gaze at Hesper on her radiant throne,
And watch the pale moon in the deep blue skies?
Say, has thy fluttering wing,
Wet with the silvery dews, so mildly bright,
Borne thee to where the elves, in fairy ring,
Dance to their joyous music through the night?
Leav'st thou the wood's deep shade,
Where the blue violet her odour breathes?
Or where the moonbeams glance along the glade?
Or where the ivy round the oak entwreathes?

Hast thou thy pathway lost,
Borne on thy snow-white wings along the air?
And, on the pinions of the night-wind tossed,
Sought, yet in vain, to reach thy mossy lair?
Or in some purple bell,
Or tulip's painted cup, hast thou been sleeping,
Till the meek twilight's lengthening shadows fell,
And darkened clouds o'er all the east were sleeping?
Haste, haste thee to thy home,
Darkness has throned herself upon the sky,
'Tis not the fitting hour for thee to roam,
When nightly wild winds breathe their sullen sigh.

CATS.

ARTICLE IV.

CATS—view them in any light you may, or under whatever circumstances you choose—are, to say the least of them, most uncommon queer creatures indeed. With respect to throwing them out of a window, it is no punishment whatever to them, provided it be from a height somewhat less than the top limb of the cross of St. Paul's. Take, for instance, the top of the Monument, or the Column in Waterloo-place, they would think nothing of it, and treat it as a mere joke. And this is easily accounted for when we remember the great propensity they possess for putting their best feet forward even when falling; it seems a part of the contract they entered into with nature ere they exuded from the stage of kittenhood, that they should touch the ground with nothing else than their feet. We have given the height of St. Paul's as the loftiest from which they have come down "on foot;" but we forget that the late lamented and desperate Mr. Cocking was in the habit of experimenting upon the dangerous passion for parachutes, by which he eventually lost his life, by means of the very creatures of whose propensities we are now discoursing. He sent up numberless cats on aerial peregrinations in parachutes, to taste the fresh air above the "smoke and din of this lower world;" and we doubt not (though we may lack the positive assurance of the fact) but that they kept their "footing" among the clouds as became their firmness of character in the high and exalted situations which, by the pious provision of the parachute and the voluntary will of Mr. Cocking, they were called upon to fill. Such scientific speculations being generally hazarded at evening-time, the cats in question being picked favourites, doubtless realised the adage of "catching larks for supper;" which they no doubt relished with a keener appetite than they would of such mundane animals as rats and mice; small blame to them for doing so, being, at the same time, duly allowed.

Though it is allowed—and we are very ready to believe it—that cats are the cleanliest animals in Christendom, yet this fact can only be metaphysically arrived at by comparing the relative superficial extent of clean and dirty skin which they carry on their backs. We believe the latter state to have the predominance in them as in most others, and that cleanliness should be written against their names as a requisite. They have, as is well known, a very strong antipathy to water; and one of the most effectual methods of keeping them in the kitchen, is to have a bucket of water staring them in the face at the door of every room in the house. One of the most effectual methods of washing them, is to

place them in a washing-tub floating down a river, on a pouring wet day. The shock of the natural shower-bath is not more than their strength can bear. They cannot and dare not leap from the barque in which they are borne; and of a dark night, their bright eyes floating onwards over the water, they not unaptly resemble a river-sprite, or an old shoe with two cigars stuck in it, or what—by a great stretch of the imagination—may be supposed to be the Indian Cupid floating down the Ganges.

A passionate love and admiration for cats has ever been considered as a true and decided symptom of insanity; many instances might be adduced in support of this statement, although, *per contra*, much amusing and entertaining argument might be urged against it. We believe that, from the earliest days of Eve down to our own, no woman has ever lived who has not, at some one unfortunate period of her life or other, showed many most decided marks of preference and affection for some one or more members of the feline race. Our readers may doubtless remember the case of a certain noble lady of rank, who domiciled some short time since, somewhere in the immediate vicinity of Portland-place; her wits frequently left her for a long period of time, for change of air; and during one of these witless periods, a solemn inquisition *de lunatico inquirendo* caught her in its trammels, and soon detected the poor lady's melancholy weakness. One of the strongest proofs adduced against her was that of her keeping a very large and extensive establishment of cats, numbering, we believe, from twenty to thirty. One of the witnesses, we remember, dwelt with a strong and emphatic emphasis on the numberless and diversified peculiarities of these "gentle grimalkins," enumerating all their professed points of attraction and repulsion, enlarging broadly upon every distinguishing characteristic which they severally displayed, and altogether bestowing upon the court, in the course of her evidence, such an immense mass of information upon the subject, that we have regretted much that we did not at the moment take fuller notes of her highly-interesting evidence, and that we, at the same time, neglected availing ourselves of the honour of a personal introduction to her. The good old lady, we remember, had a regular service of china on which the cats had their meals served up; the finest and best joints were cooked up for their use; and the quantity they devoured was, as a consequence, any thing but inconsiderable. Their appetites, doubtless, grew with what they fed upon; and we dare to say, that whoever remained unsatisfied when his quantum was devoured, fell instantly on his next neighbour's "mess

of pottage," and assisted him in the devourment. There arose, in consequence, many "border-frays" around the plates, and the splutter and carnage must have formed the "*entremets*" on these festive occasions. Many a tooth and whisker that had revelled in beef and mutton, turned round in horrid cannibalism to the dismemberment of its own species. Knives and

forks there were in abundance, but they refused the use of such vulgar weapons, and turned, with tooth and nail, and paw and claw, to the dreadful and savage scrimmage. All this, and much more than this, was revealed on the above occasion; but our memory has grown grey since that period, and our heads are nearly as white as a whiskered cat. EPHON.

ART.

WHEN from the sacred garden driven,
Man fled before his Maker's wrath,
An angel left her place in heaven,
And crossed the wanderer's sunless path.
'Twas Art! sweet Art! New radiance broke
Where her light foot flew o'er the ground;
And thus with seraph voice she spoke,
"The curse a blessing shall be found."

She led him through the trackless wild,
Where noontide sunbeam never blazed:—
The thistle shrunk—the harvest smiled,
And Nature gladdened as she gazed.
Earth's thousand tribes of living things,
At Art's command to him are given;
The village grows, the city springs,
And point their spires of faith to heaven.

He rends the oak—and bids it ride,
To guard the shores its beauty graced;
He smites the rock—upheaved in pride,
See towers of strength, and domes of taste.

Earth's teeming caves their wealth reveal,
Fire bears his banner on the wave;
He bids the mortal poison heal,
And the destroying knife to save.

He plucks the pearls that stud the deep,
Admiring Beauty's lap to fill;
He breaks the stubborn marble's sleep,
Rocks disappear before his skill:
With thoughts that swell his glowing soul,
He bids the ore illumine the page,
And proudly scorning time's control,
Commerces with an unborn age.

In fields of air he writes his name,
And treads the chambers of the sky;
He reads the stars, and grasps the flame
That quivers in the realms on high.
In war renowned, in peace sublime,
He moves in greatness and in grace;
His power subduing space and time,
Links realm to realm, and race to race.

SPRAGUE.

REVIEW.

Religion in America; a Narrative of the Deputation from the Baptist Union in England to the United States and Canada. By the Rev. F. A. Cox, D.D., LL.D.; and the Rev. J. Hoby, D.D.—Ward and Co. 1837.

IN some of our former numbers, when introducing to the notice of our readers the principal points of Mr. Livingstone's Code of Penal law, we stated that America might with much justice be denominated "The land of progress." The most careless and incautious observer of the state of the western world cannot indeed fail to be struck with the rapid and unchecked progress which is being made in America in the various branches of art, of literature, and of science: already, indeed, on many of these subjects she has outstripped the fostering nurture which the genius of her earliest children received from their "Fatherland," and recognising neither limit nor boundary to his progress, nor foreseeing check or danger in his career, who shall boldly tell the enterprising American when to stop, or say unto him "Thus far shalt thou go and no farther?"

But the progressive tide of civilisation and improvement which has spread over the vast regions of the western states, has fertilised her soil with a richer and a purer growth—has called forth the intellectual energies of her great men to strive for the gaining of a crown of glory, which can neither be sought for nor won in the fields of literature, art, or science. The best and the greatest men of America, from the early days of Penn and Franklin even down to our own, have been distinguished for the purity and simplicity of their lives and conduct, as well as for their readiness to follow,

whithersoever it might lead them, the rules and doctrines of that faith which was in them. The comforting assurances of religion gave to their hearts the quiet sanctity of that peace which passeth all understanding, and to their children and their children's children have they bequeathed the legacy of a fervent faith in the promises of the holy Scriptures, whose assurances and consolations of salvation have given unto them a livelier energy, and kept alive among them that pure and exalted faith which we rejoice to say animates the hearts of our friends and brethren on the wide and western shores of the Atlantic.

We have been led to make these remarks, as expressing in some faint degree the pleasure we have derived from the perusal of the work before us. It has now reached a third edition, and as it has received a new title, and contains much new and important matter, it approaches more appropriately to a "corrected" and "improved" edition than many "professing" third editions do. Accounting for its change of title, its authors state that, "on several accounts, it has been expedient to alter our original title; so that, instead of 'The Baptists in America,' we have adopted 'Religion in America.' Our chief reason is, that as the *book* is not sectarian, the *title* ought to be more general." We quote the following introductory remarks for the admirable and liberal spirit in which they are conceived and written:—

"The principle upon which the present work is constructed, being that of avoiding indiscriminate censure, which would be unjust, and undistinguishing panegyric, which would be injudicious, it is fair to observe at the outset upon the questioning habits of the western world, that as curiosity is one of the elements of our mental constitution, and a great instrument of acquiring knowledge, if Americans possess more of this spirit than ourselves, which the very objection seems to imply, it

does but afford an evidence of their intellectual vigour, and may suggest the caution that we do not allow ourselves to be beguiled by self-confidence and sluggishness into the loss of the race and the rivalry of knowledge. But if the reproach be intended solely to represent their sensitiveness with regard to the conclusions to which their friends from the 'Fatherland' may come respecting themselves or their institutions, then it may be viewed as, at least, complimentary. It presupposes that our judgment is thought to be of some importance; and that as an older and more advanced country, we are competent to form some estimate of their intellectual and moral condition. Why should we seem to spurn as a meanness, or contempt as a folly, even an excessive eagerness to obtain the approving smile of Britain upon their efforts, which a generous rivalry will not withhold, and which will promote a friendship between us that must be reciprocally beneficial? United by a common origin, a common language, a common Christianity, we are capable, if ready to act in fraternal combination, of impressing a character upon the future destinies of the world.

"In some points of view, indeed, the question proposed, whether for the purpose of eliciting praise or challenging criticism, scarcely admits of a very direct or very definite answer. Vague and general terms may easily be used in reply, which, when analysed, have hardly a meaning, and which are often the substitutes rather than the expressions of intelligent ideas. It is true that there is a far greater identity among the confederated republics of America than among the separate kingdoms of Europe; but time must be allowed for them to be moulded into homogeneous uniformity. If the inquiry regarded particular states or sectional divisions, a general outline, even of the ever-fluctuating transatlantic world, approximating national character in each, might be given; but we must be content at present with few generalisations, and allow the hand of time to mix and prepare the colours for the ultimate exhibition of a finished portraiture of the whole.

"If, however, it would be difficult to draw a general feature, it is not so to describe a general feeling. The progress of political events has combined with the increase of commercial and social intercourse, to awaken in the minds of the great majority on the other side of the Atlantic, a sentiment which we believe is extensively reciprocated on this, that the endeavour to promote dislike of each other among either people by partial and prejudiced representations, must be discountenanced by both, and that nothing can be more desirable than a sincere and permanent union. It is not exclusively or primarily to statesmen or legislators we must look; but to men who can coalesce upon another and a nobler principle than the politics of this world supply. It must be based on *Christianity*, the prevalence of which in both countries is already giving indications that the time is hastening when this consummation of all pious wishes and prayers will be accomplished."

The above extract will serve to acquaint our readers with something of the general spirit and tone in which the work before us is written—the scope and design which the deputation had in view was high and praiseworthy; and the extracts which we shall present as we proceed in our notice of the work, will prove that the mission and the reception were equally worthy of the high and holy cause which it was intended to accomplish.

Upon the arrival of the deputation at New York, they were received with much warmth of hospitality and kindness by their Christian friends and brethren, with whom, however, the urgent demands upon their time and attention only allowed of their making a short stay. From New York they proceeded to Philadelphia, where after noticing the theological and literary seminary at Haddington, under the patronage of the Philadelphia Baptist Association; the Water Works, at Fair Mount; the Penitentiary; the Gervard College for Orphans, and the Navy Yard, we are presented with the following summary of the past and present state of the baptist denomination in that city:—

"The baptist denomination is of comparatively recent origin in Philadelphia. In 1802, the first church, situated in Second-street, was the only one, and consisted of sixteen members, under the pastoral care of Thomas Ustick, who had been preceded by Morgan Edwards and William Rogers. At present there are eight baptist churches, besides two African churches, comprehending about three thousand members. Some of these are in a prosperous state, with large places of worship; particularly that of Dr. Brantly, in whose church more than one revival has occurred, and that of Mr. Kennard. The church, of which the latter is pastor, was only constituted in September, 1817; nevertheless, it now consists of between five and six hundred members. Spruce-street, though at present without a pastor, is acquiring stability and magnitude. The congregation in Sansom-street is beginning, after a season of depression, to return to its pristine importance; and it is anticipated that the capacious edifice, which is estimated to contain nearly three thousand people, will be again filled."

The deputation proceeded to Baltimore, where the record given of "the origin and singular trials of the second church" is of great interest. At Washington they were introduced to the President, General Jackson:—

"We found him in company with Mr. Van Buren, the vice-president, who is a candidate for the supreme office, at the period of regular vacancy. It was a gratifying opportunity of familiar and animated conversation over a cup of coffee, on topics connected with some of the most important interests of our respective countries. Recent intelligence from Europe was touched upon, and particularly news relative to Ireland, which led to a somewhat extended discussion of the compulsory support of religion as contrasted with that which is spontaneous and voluntary. It was gratifying to ascertain that the mind of the chief magistrate of this mighty nation was as free from all the sophistries arising out of the unhallowed blending of things sacred with things secular, by the alliance of the church with the state, as his person and count were disencumbered of the pomps of royal etiquette. He uttered, with great emphasis, these memorable words, 'Human legislation in matters of religion may make hypocrites, but it cannot make Christians.' On the tithing system, particularly as it is working in Ireland, which led to the conversation, the President spoke with still kindling energy, and in terms which harmonised with what may now be considered public opinion in every part of the British empire, till all the soldier was apparent as the general exclaimed, 'I had rather die a thousand deaths than see my wife and children starve while I was robbed of one-tenth of my labour to support a religion I disapproved.'"

One of the most important meetings which the deputation attended was the Triennial Convention: it will afford to our readers one of the best accounts of the state of religious feeling in America, and give a very good example of the volume before us.

"The Convention, which was the eighth triennial assembly of the denomination, commenced its sittings at ten o'clock on Wednesday morning, April twenty-ninth, in the first baptist church. Although this important body now embraces, in its deliberations, the general interests of the baptist denomination in the United States, it was originally constituted for missionary purposes. In May, 1814, a meeting was held in Philadelphia, composed of delegates from missionary societies in Massachusetts, Rhode Island, New York, New Jersey, Pennsylvania, Delaware, Maryland, Columbia, Virginia, North Carolina, South Carolina, and Georgia. The object was to unite to send the Gospel to the heathen; and they accordingly formed 'The General Missionary Convention of America, for Foreign Missions.' A committee was chosen to conduct the affairs of the body, denominated 'The Baptist Board of Foreign Missions for the United States,' and it was decided that a general convention should be held triennially. Although other great denominational associations have gathered around this missionary society for convenience, and have been animated by the vitality with which the primary institution was instigated, it is nevertheless still regarded as the triennial missionary meeting. The session at Richmond was more numerously attended than former conventions, and it was thought to be a more complete representation of the denomination. There were delegates from nineteen states besides the district of Columbia; but Delaware, Indiana, Missouri, Arkansas, Mississippi, and Alabama, were not represented by persons who, according to the constitution, were entitled to seats and to a vote.

"Among the pastors and ministers assembled, the age of some was indicated by the 'hoary head found in the way of righteousness;' but we observed, in general, that while many were in middle or advanced life, as a body they were remarkably youthful, and seemed fresh with the dew of an intellectual morning.

"The preliminary arrangements were promptly made, evincing great tact in the management of their affairs. We were struck with the business-like character of the whole assembly; while the sacredness of piety, and the cheerfulness of benevolence, redeemed the whole from an air of secularity. A merely mercantile man would have felt, instinctively, that he was breathing an uncongenial element; and yet commercial and even political assemblies might have learned some lessons on regularity and despatch. This was the more observable as, with very few exceptions, the pastors and ministers were the chief actors. It was not the practice, either on this or other occasions, to proceed as if the concerns of the kingdom of Christ were incapable of being conducted by the ministers of the Gospel because they are not educated as mercantile or commercial men. Our American friends seem rather to conceive that, in general, they are the suitable persons, and that lay assistance is most advantageous when associated in religious enterprises and in religious meetings, under ministerial superintendence. It may admit of a question whether, in concerns strictly and properly ecclesiastical, the same reasons which constitute the pastor the president of the church should not operate to place one of the body in the chair at the grave and solemn anniversaries of religion. If in the one case there may be a tendency, in such an arrangement, to produce a spirit of ecclesiastical domination is there not at least an equal tendency in the other to foster a spirit of secular power in the church? And is it not worth con-

sidering whether the primitive constitution did not assign spiritual affairs to episcopal, that is, pastoral guidance?

"As soon as the assembly became seated on this occasion, a hymn was sung, which was followed by prayer. The credentials of delegates were then examined, the names enrolled, and the officers for the present convention chosen. The Rev. S. H. Cone was elected president, Rev. H. Malcom, secretary, Rev. G. F. Davis, assistant-secretary. The first business of the meeting was to receive our credentials. After preliminary remarks by the president, we presented various communications with which we had been intrusted, particularly the document from the Union. The reading of this fraternal epistle was preceded by a few prefatory remarks, apprising the assembly of the nature of the Baptist Union of England and Wales, and distinguishing it from the London Board of Ministers. Each of us then delivered an address of some length in further explanation of the views and feelings of their British brethren towards the transatlantic churches. These addresses were listened to with the deepest interest. Many a manly countenance was bedewed with a tear of sacred sensibility. It was forthwith resolved, 'That the president welcome the delegation, and give them the right hand of fellowship on the part of the convention; and well did he sustain the dignity of his office, while, with equal affection and eloquence, he received us as brethren beloved for our works' sake, and emphatically as Englishmen, as Christians, and as ministers. 'We welcome you,' said he, 'to our country, our churches, our houses, and our hearts.' When the tumult of emotion had subsided, after a few moments of solemn stillness which succeeded the president's address, he rose and gave out a stanza of the hymn which commences,

'Blest be the tie which binds
Our hearts in Christian love.'

"The communications which had been made were then referred to a committee, to report upon them during the present session. The visit of the delegates from the churches of the Fatherland naturally increased the general interest of the convention; and the reception which they experienced was such as not only to banish those feelings of restraint which, as strangers, they might have cherished, but to make them delightfully sensible that they were in the bosom of Christian brethren. Ordinary forms of speech are too cold and common-place to express the impression, never to be erased from the heart, of the kind greetings and affectionate intercourse of every day. They were brought into fellowship and unreserved intercourse with multitudes of Christian ministers and friends whom they had never seen before; many of whom were unknown to them even by name, and all of them fellow-workers of God, and fellow-heirs of eternal life. It seemed like the point of confluence of a thousand streams of sacred feeling and pious operation; and proved to themselves, and they believe to all present during these 'days of heaven upon earth,' the assured prelibation of those 'pleasures which are at God's right hand for evermore.' There was soon kindled in every bosom, and beaming from every eye, a glow of fervent sympathy and love, indicating, what every tongue would have been ready to declare, 'it is good to be here.' If a doubt had arisen in any minds as to the course the deputation from England intended to pursue in public intercourse with their brethren, with respect to subjects of vital importance indeed, but inadmissible in a body constituted of such various elements as theirs, it was only like a cloud of the summer morning, which was speedily dispersed in the brightening sunshine. To associate what was now realised with the early history of the denomination, only two centuries ago, and to feel that by themselves as instruments, the English churches were thus seeking a more intimate alliance and union with so much larger a body in America than themselves, was to the delegates an overpowering idea. If they were enabled, in a manner at all satisfactory to their beloved brethren in the United States, to respond to their glowing sentiments of Christian love, and to express the fraternal feeling of those by whom they were commissioned to visit them, they would devoutly acknowledge the grace of Him who makes his strength perfect in weakness, which at these seasons of deep responsibility, though of high enjoyment, they felt had been successfully, as they knew it had been earnestly, implored on their behalf, by the churches at home.

"The appointment of committees to report upon the operations of different societies, is an excellent expedient, by which the despatch of business is greatly facilitated. No fewer than nineteen of these sub-committees were appointed, consisting, for the most part, of different individuals nominated by the president, but finally chosen by the assembly. They arranged their own time of meeting, to consider the various points confided to their deliberations; and were generally prepared with their reports when the business confided to them was called on for general discussion and final decision. Thus, for instance, sub-committees were chosen to arrange religious exercises during the session; on Indian missions; to nominate persons out of whom the trustees for the Columbian college might be elected; on the African mission, &c., &c. It was not difficult to select men whose piety, habits of business, and competent knowledge of the matters referred to their consideration, materially assisted the final determinations of the convention.

"The Rev. A. Sutton, a missionary from Orissa, in connexion with the body of general baptists, was present. Mr. Sutton is well known in England, but still better in America, where he had been for many months. The chief object of his visit was

to rouse the members of his own religious community—the general baptists—to a sense of duty relative to Christian missions. He found an ample field among 500 or 600 congregations, containing between 20,000 and 30,000 members. His labours also were acceptable and useful in promoting the general interests of the Gospel. He was received in a similar manner with ourselves, with the equal greeting of hand and heart. Finally, 'all ministers of the Gospel present who are in regular standing with any evangelical denomination,' were invited to a seat in the convention. For this expression of liberality and Christian courtesy, the delegates were scarcely prepared, notwithstanding their settled conviction that as much genuine Christian feeling prevails among their own denomination as in any section whatever of the Christian church. Nearly thirty brethren accepted of the invitation.

"In the afternoon of this first day of assembly, the sermon before the convention was preached by the Rev. S. H. Cone, who enforced the duty of personal service in the kingdom of Christ on all his people. There were generally two sermons preached every day in different places.

"The missionary meeting, at which Mr. Jeter had proposed a humble confession of the criminal indifference with which Christians had been accustomed to look upon a perishing world, had adjourned its meeting, which was resumed on the evening of the twenty-ninth. Accustomed to their own English habits, this had appeared to the deputation a measure of questionable expediency, doubting, as they did, if that holy fervour, in the degree in which it had appeared to glow in every heart, could be rekindled, and fearing that the resumed discussion might prove flat and uninteresting. The result was far otherwise; nor did it appear as if the flame would have expired, had the meetings been still further protracted. The Rev. W. S. Plumer, a presbyterian minister of Richmond, who had taken his seat in the convention, lent his valuable aid on this occasion.

"On Thursday, April 30th, the convention reassembled at nine o'clock, and it was resolved, that during its session, the hours of meeting should be from nine till two in the morning, and from four till six in the evening. This was the day for attending to the report of the board of missions. The reading of this interesting and important document was once suspended to sing the hymn beginning,

'O'er the gloomy hills of darkness.'

"Again, on announcing the decease of Miss Cummings, one of the society's missionaries, a young woman of great promise, the Rev. W. B. Johnson was requested to lead the devotions of the assembly; and immediately, in a strain of humble and holy fervour, he offered prayer that the events which had removed four of the society's missionaries, during the three years past, might be 'for our profit;' gave thanks that so many had been preserved, while the American board, a sister association, with whom the deepest sympathy was felt, had been called, in one year, to lament the decease of fourteen of their missionaries; and further entreated the Divine protection for the surviving labourers of both societies, that their efforts might be rendered successful in filling the world with his glory.

"The reading of the report was once more suspended on the arrival of one of the Cherokees, a red Indian, whose fathers had originally roamed in undisputed liberty and sovereign authority over these regions. It was impossible to avoid associating the event, in a way of contrast, with the times when his tribe were lords of the soil, with whom only the wild animals disputed the possession of illimitable hunting grounds; and whose course was free and impetuous as that of the rivers on whose banks they wandered from the mountains to the sea. Then, indeed, those woods often resounded with their frantic delight, and with the echoes of the savage war whoop; but now we beheld a meek and lowly disciple of the Master, who was 'a man of sorrows, and acquainted with grief.' O-go-na-ye, pronounced Oganlah, is a Cherokee, from the valley towns in the western part of North Carolina, and formerly a member of the Cherokee council of state. He was converted by the instrumentality of the Rev. Evan Jones, who has been much blessed as a missionary to his tribe. Mr. Jones and the Indian arrived at the convention with the revered treasurer of the body, the Hon. Heman Lincoln, of Boston, who had been on a visit to Carolina.

"The report was again resumed, and finally adopted, certain portions of it being referred to sub-committees. It would be out of place to introduce a lengthened account of the facts it details; but the delegates feel that their own statement would be inexcusably imperfect, without some reference to the missionary operations of their American brethren. After alluding to the venerable fathers of their mission who have entered into their rest, the report mentioned the circumstance of meeting in the capital of the oldest commonwealth in the confederacy, 'Old Virginia,' and expressed a cherished hope that their nation is destined to be a mighty instrument of good; but asserted, that the fulfilment of its glorious ministry must depend on the permanence of its union. The board hailed with delight whatever might tend to cement those national bonds. In the summary view of missionary proceedings, the first mentioned are 'Missions in America.' These, in the true spirit of the early command to the disciples, to 'begin at Jerusalem,' are directed to the various tribes of Indians, both east and west of the Mississippi.

"East of the mighty Father of rivers, are the valley towns in North Carolina; Thomas, and Sauk de St. Marie in Michigan;

the former on Grand River, the latter on Lake Superior; and Tonawanda in the state of New York. At these stations, a few converts have professed their faith in Christ, by being baptised in his name during the year; and the missionaries are encouraged to persevere by favourable appearances amidst numerous difficulties, particularly among the Cherokees.

"West of the Mississippi, the board has confined its attention to what is called, 'the Indian territory.' This portion of country lies contiguous to the states of Arkansas, and Missouri. It may be described as a tract of land, speaking in round numbers, six hundred miles long from north to south, and two hundred miles broad, though there are no specified limits to the west. A foreigner would be ready to inquire whether the design were to hunt the scattered aborigines from all their present settlements into this one territory, as their fathers formerly met to contract, by concerted movements, their wide circle by degrees, till the prey was fairly hemmed in, even within reach of the hunter's weapons; but a more correct and comprehensive view of existing facts might lead to a concurrence in opinion with many benevolent and enlightened men, that the security and happiness of the Indian tribes, perhaps their very preservation, will depend upon their being formed into one state, and finally allowed its star in the American constellation. The late Mr. Wirt appears to have cherished the idea of forming a sovereign and independent, but confederated republic of these tribes. A similar disposition of the descendants of Africans, a black as well as a red republic, might be a far happier, and more practicable expedient than any hitherto adopted; but as if to evince the object degradation of Africa's children, here the black man, in many a forlorn instance, is literally the slave of the Indian! Many of these idolaters, who must still be regarded as savages, have learnt thus much, at least, of the civilisation they witness around them—they purchase negro slaves!

"Without entering into the political merits of the question, it was on every account desirable that Christian missionaries should be employed; and, accordingly, the baptists, as well as the methodists and presbyterians, have missionaries in that territory. The posts they occupy, are among the Shawanoe, the Delawares, the Otoes and Omahas, the Ottawas, the Creeks, the Cherokees, and the Choctaws. The Putawatomes have their lands assigned, but are not yet arrived. As there was a station among them in Michigan, called Carey Missionary Station, so on their removal it will be resumed. By schools, as well as by preaching, attempts are made to evangelise these native tribes; pleasing instances of success are recorded, but in some places, an excessive fondness for ardent spirits, which is unhappily supplied by white men, interferes with the good work. In other instances, the contempt which the Indian expresses for the white man's religion, is singularly associated with a determination to prevent the diffusion of it among their slaves.

The report presented by the committee appointed on the Indian stations, like each of the others prepared by their re-

spective committees, has its own characteristic excellences. It is a plain, faithful, manly representation of facts, relative to the Indians. If it may be thought to lean towards an approval of the government measure of locating the aboriginal tribes in the Indian territory, it does so in the most unexceptionable manner, as it asserts that public opinion among the Indians is turning in favour of the project. In the brief and condensed view of their affairs, it states that east of the Mississippi there are 81,904 of the tribes, and west of that line, 201,758. This does not include those already in the territory, of whom 21,820 were "indigenous," and 28,000 have emigrated thither already. By this it appears that 283,654 are still dispersed through various parts of the states. It must be a mighty attraction to draw so large a body, though divided and scattered as they are, to the 46,820 now resident in the territory. Nevertheless the report says, "Removed from the pernicious influence of the lower order of the whites, exposed to fewer temptations to vice, and united in such large numbers into a kindred community, they feel that they have reached a new era in their history. They are stimulated to put forth fresh exertions; they express the desire to be united into one political brotherhood under a civil government; and as the incentives to war have now disappeared from among them, moral and saving influences can be brought to bear upon them with greater effect, and with the prospect of more permanent results." The report concludes with an affectionate reference to the recent arrival of the Cherokee missionary, the Rev. Evan Jones, and the convert O-go-na-ye, one of the sons of the forest converted from the superstition of savage life by the power of God."

With these extracts from this work we close our notice of it; did our space permit, we could quote many other passages, detailing facts and circumstances of high and exalting interest. The cause of religion and Christianity is in progress in America—it is conquering and triumphing wherever the sound of the trumpet or the voice of the Gospel is heard. Over the mountain-lands and the valleys, in the glens and the dells, by the sounding cataract and the rushing river, by the echoing shore and on the everlasting sea, the joyful tidings of salvation, and the voices of "peace and good-will towards men" are heard. Our readers will find ample and rejoicing evidence of these delightful facts in the volume before us; let them read it with care and attention, for it will more than repay them for giving up a few hours to its perusal.

NOTES OF TRAVELLERS.

AFRICAN SALUTATIONS.—We know of no people who evince more cordiality and ardent feeling on meeting old friends or acquaintances, than the natives of Africa. Their mode of salutation, though strikingly different from that in use among civilised people, is certainly not less affecting, and by far more expressive. When two old acquaintances meet, as soon as they perceive each other, they reciprocally address each other by name, and apply the left hand to the breast, and quicken their pace, until they come in contact. The chin of the one is then laid over the shoulder of the other, reiterating a dozen times, while in this position, their term of salutation. This done, they mutually recede, eyeing one another as closely as though each was apprehensive he had been mistaken. They again address each other by name, as rapidly approach as before, and go through the former ceremony. We once witnessed the meeting of two venerable hoary headed sires, in the Sherbro country, which we shall never forget. After approaching each other, as described above, they receded to a distance of ten or fifteen feet, seated themselves, and, during an interval of eight or ten minutes, eyed each other with a significance that is altogether indescribable. They then, mutually addressed, approached, embraced, and gave vent to their joy in a half stifled tone, as though feelings had paralysed the power of utterance. Let those who deny to the man of colour the possession of acute sensibility, witness such a scene, and say if ever they have been conscious of emotions so deep.

MOONLIGHT AT SEA.—One night I shall never forget: I had left the dinner-table to secure some retirement on deck. I sat down near the helmsman, who was silently directing our course. The breeze dwelt freely on the sails, and gave to the vessel her noblest appearance. The sea was animated, but unbroken; and we were moving rapidly, but quietly, and with a pleasant, undulating motion. A bright sun had just sunk down in the waves, and left his vermilion hues on the margin of the dark clouds which skirted the eastern horizon. Here and there a bright star appeared dancing among the shrouds. Presently the dark but calm clouds sleeping on the waters gave indications of a lustre not their own. Soon they were attenuated, and diversified, and illuminated by a presence which was still unseen; and then the lighter and gauzy portions drew back like a curtain, and forth came, as from her pavilion, and in all her majesty, the queen of night. Her lustre shot across the dark waters, and turned them into a flood of quicksilver. The clouds quickly disappeared as she ascended in her career; and the stars, one by one, were extinguished by her brightness. The lines of the horizon, too, had vanished, so that the blue sky and blue sea seemed united and infinite. Over all this infinitude of space there were only two objects to be seen—the moon sailing silently through the ocean above, and ourselves sailing silently through the ocean below.—*Reed and Matheson's Visit.*

SCOTTISH FUNERALS.

CHAPTER I.

In the sublime but simple ritual of the kirk of Scotland, there is no such thing as a burial service, or any labour or fee to the clergyman when the lifeless body of a human being is consigned to the grave, there to mingle with its kindred dust, and to remain subject to all the contingencies of mere matter, until the trumpet shall sound, the dead be raised, that which is sown a natural body be raised a spiritual body,—when “the corruptible shall put on incorruption, and the mortal shall put on immortality.” We offer no opinion on the rites of churches, for whatever are the ceremonies,—and they are all merely human contrivances and institutions,—the true believers, who make their faith known by their works, are equally acceptable to that redeeming, justifying, and sanctifying God who feels for human infirmities, and sympathises with human frailties; we merely state the fact, that among the rites and ordinances of the kirk of Scotland, there is no service for the dead: neither is there any consecration of particular spots of ground devoted to the purpose of inhumation; it being the belief of these simple people, that all “the earth is the Lord’s, and the fulness thereof,” and that every spot of it or in it is equally sacred in his sight.

But though there is no appointed rite when the mortal remains are consigned to the dust, and no fee to any one person demandable at the sad ceremony, it must not thence be supposed that the members of the Scottish kirk have less regard for the bones of their ancestors and relations than the members of those churches which perform the most pompous services at the grave. Taking it altogether, the service of the kirk of Scotland is much more a service of the heart than of the lips; and perhaps it may be an advantage that, in the more solemn and mournful parts of it, there is no captivation of the eye or the ear to come between the soul and that inward meditation and communing with itself, by means of which alone it can draw near to its God upon such occasions.

However this may be,—and we have no desire to make it matter of controversy, or to elevate any one form of Christian worship at the expense of another,—it is certain that the want of a service for the dead does not lessen the solemnity of a Scottish funeral, or make the people there leave the remains of their friends a prey to dumb forgetfulness more than they are in other countries, where the observances at the grave are of the most pompous and imposing character. It is not considered decorous for females, under any circumstances, to attend a funeral; and the young keep reverently at a distance, as if the scene

were all too solemn for their tender years. But the number of men that attend the funeral is expressive of the estimation in which the deceased was held while alive, and the respect in which his memory is cherished.

In the Highland districts, indeed, clanship used to have a good deal to do with the numbers attending a funeral; and wherever there are vestiges of it remaining, it must still have some influence. The effects of this were often unseemly, as the effects of clanship generally are upon all occasions where they can show themselves; and the committing of the remains of a man—especially if he had been a man of distinction—to the dust, was but too often followed by riot and debauchery, serious breaches of the peace, and not unfrequently maiming, and even loss of life. In the lowland parts of the country, where the baneful influence of clanship in setting man against man, from mere difference of name, and often on account of quarrels the original parties to which had been mouldering in their graves for several generations, did not extend, the funerals were, and we believe still are, of much more sober and becoming character, especially in the rural districts. Indeed, it is in the rural districts only that we can obtain correct information respecting the original and native character and habits of the people of any country. The inhabitants of towns and cities, especially commercial ones, are cosmopolites; and excepting difference of language, and some local peculiarities which are found in every place, a trader soon finds himself at home in trading society, all the world over.

In the rural districts, the differences are much greater; and if the people have been resident for a series of generations, they take a character from their country so marked and decided, that they are easily distinguished wherever they may go. This is remarkably the case with Scotchmen, whether highland or lowland, though, in consequence perhaps of the longer abolition of clanship in that part of the country, the lowland character in the rural districts is, or at least was, not long ago, the more complete and permanent of the two. As it was in the lowlands that the Scottish people held fast by the purity and simplicity of their faith, and ratified and sealed the “Covenant” of their God by the blood of martyrdom, so this portion of their character, tested as it has been in the furnace of the deepest affliction, is much more enduring than any other. All the religious observances of which we have previously taken notice may be adduced in proof of this; and as the burial of the dead, though unaccompanied by any outward ceremony of a

religious nature requiring the official service of a minister of religion, is always calculated to draw the thoughts of those who attend it to their own latter end, there is a sad solemnity about the silent mourners who attend at a Scottish funeral, which comes home to the feelings with probably as much both of present force and of lasting effect, as though an audible service were performed.

When a man, conspicuous for his influence or his virtues, and especially where a favourite minister who has been long endeared to his flock by the weekly service, the yearly sacrament, and the frequent prayer, admonition, and instruction, is borne to his long home, the attendance is very numerous; and if the distance is not great, the body is borne by the company, two or three at the end of each of the bars, or "spokes," which support the bier, while the chief mourner supports the pall, or "mortcloth," at the head, the second at the feet, and four others at the shoulders and knees. These official mourners, and any others who may follow in the train of the chief mourner, bear no part of the burden; the guests do that, and each is anxious to show his respect for the deceased, by taking part in this last and solemn duty to one who has quitted for ever the abodes and the society of men upon earth.

Upon a devout and feeling heart, a procession of this kind, as it moves slowly and silently along, makes a very deep impression, for it speaks "in demonstration of the spirit;" and such is the respect shown to such a procession, that the bystanders uncover when it passes, and the traveller who meets it in the other direction, turns back with it for a little way. The moral effect produced by this procession and the inhumation of the body, which constitutes its closing and most solemn scene, is by no means of a momentary nature. It is spontaneous of the people themselves—a plant in its own native soil, as it were; and therefore, though it may be more homely in character than the exotic which proceeds from an eloquent tongue, it partakes far more of the amaranth of immortality. By this means, when the good man is borne to his long home, his example, graven on the mind by the funeral and its procession, continues to influence the district while his body is mouldering in the dust; and the moral effects are probably much greater than any or than all which rite, and monument, and epitaph, and eulogy could produce. Of the rite we shall say nothing farther than that, like the influence of the sun and the rain of heaven, it falls equally upon the evil and the good; but the monument, the epitaph, and the eulogy, being merely human matters as this procession is, can be compared with it upon fairer grounds, and with more propriety. The rite being equally and similarly performed to all, excepting in so far as difference of rank and wealth may make it more gorgeous in some

cases, and less so in others; and thus it is doubtful whether it may not, in so far, tend to stifle that store of instruction which ought to come from the closing grave. The monument, the epitaph, and the eulogy, have all been vitiated by indiscriminate application to bad men as well as to good; and as all who choose and can afford to raise a monument to the dead, can also afford to buy credit for such virtues as the collection of the stonecutter furnishes, the monumental inscription is no index whatever to the character of him whom it is intended to perpetuate; and therefore there is much of truth, as there also is of coarseness, in the epithet "sepulchral lies," which the satiric moralist applies to those unfounded eulogies upon the undeserving which but too frequently pollute the walls of our churches, and turn the consecrated grounds into high places of lying praise, to such of the very worst of mankind as may, through their surviving relatives or representatives, be able to pay for recording it there. Some of these posthumous flatteries are so palpably unjust, as to cause great doubts whether monuments ought to be admitted within the walls of churches; and we believe that, by the early Christians, and down to a pretty late period of the middle ages, they were excluded from those parts of the building in which the public offices of religion were performed; and even as admitted into the vestibules, they were confined to "brasses" in the flat pavement of the floor, or to recumbent figures in niches, with simple inscriptions of the name and age of the party, with a salutary exhortation, and occasionally a text of Scripture. The inscriptions, and also the sculptures, of many of these monuments, are often of a character approaching to that of blasphemous. Angels may be seen lifting to heaven the image of a man who, during the whole of his sojourn upon earth, was a most zealous servant of the prince of the other extremity of the system. Though one cannot admire either the spirit or the expression of the couplet which a well-known wit wrote upon the sculptured tomb of a man whose vices had been equally well known through life, the occasion was worse than the reproof; and the moral of the latter is as forcible as the language is coarse. The personage to whom the monument was erected had never come directly under the laws of his country in a court of justice; but he had owed this far more to his craftiness and wealth than to any thing approaching to virtue. The device of the monument was that of a human body bursting the tomb, and coming forth at the resurrection to appear before the tribunal of the final and unerring Judge; and it was marked out with all the effect which the art of the sculptor could give it. The couplet with which the wit inscribed it was as follows:—

"Lie still, if you're wise,
You'll be d—d if you rise."

We have mentioned these circumstances merely for the contrast which they afford to the simple inhumation which is practised among the rural population of Scotland; and we feel quite sure that any one who reflects but for a moment on the matter, must admit that there is far more both of propriety and of instruction in the latter. For in addition to the memento of our own mortality, which the sight of a funeral never fails to produce in the serious mind, the character of the party laid in the dust is the principal source of instruction in the ceremony, in what manner soever that ceremony may be performed. Hence the less of pomp and circumstance that there is to come between those who attend and that character, the scene must be the more instructive. Nor is the lesson by any means a merely barren or speculative one; and that they who knew him in life may say a good word over his grave, is far from the weakest of those excitements to a good life, of which no man can have too many.

In the total disconnection between a Scottish funeral and any official duty of the ministers of the Scottish kirk, there is something which accords well with the condition of the dead body as contrasted with it before the immortal spirit takes its departure. While the connexion between the soul and the body lasts, the compound creature, man, is in a state for being a member of the church of Christ upon earth; but when the soul has left the body, and taken up its abode as a separate spirit, neither soul nor body can be a member of the visible church; and therefore, though a funeral service may be much more edifying than prayers for the dead, yet, as a religious ceremony, it belongs to the same class; and probably this may be the reason why it is not admitted into the ritual of the kirk of Scotland. That, however, is a point which does not necessarily come within our province, which is the simple statement of facts, rather than any thing like an inquiry into their causes.

But though the ministers of the kirk have no funeral service to perform, they generally avail themselves of the occasion of the demise of any person of eminence, by preaching a funeral sermon as soon after the interment as possible. Such sermons are, in some instances, little else than mere displays of adulation, occasionally fol-

some, and somewhat out of place; but there are other occasions upon which they are highly instructive and very appropriate, and upon these they afford some of the best displays of pulpit eloquence.

Of the first of these we may mention one instance, as peculiarly characteristic of the adulatory school of Scottish ministers:—A grave doctor of divinity, equally remarkable for the sober uniformity of his life and his sermons, resolved to favour the world with the cream of many years of his pulpit labours, in the shape of a volume of sermons. His living was in the gift and close by the demesne of a Scottish earl, whose ancestors had been conspicuous in the time of the reformation and the struggles of the kirk against episcopacy; and the earl and his family held fast by the faith of their fathers, and were not only regular attendants at the kirk on Sundays, but had the doctor at the mansion to say grace upon such occasions as suited his gratification and their own. Under such circumstances, the doctor could do no less than dedicate to the countess that volume which had come into the world after so many mental throes. Accordingly, he began his dedication some time about the autumnal equinox, when the extraordinary tides, both of the air and the sea, are understood to jog the concocting faculties of man with more than usual force and effect. During October, November, and part of December, the doctor toiled at his dedication; but toward the winter solstice, the countess paid the debt of nature, and passed that bourn beyond which the voice of the most laudatory dedicator is not heard. Just about the winter solstice the doctor changed the style of his preliminary composition from a dedication to a funeral sermon, or elogy; and by the time of the vernal equinox it was sent to the printer, like Janus, facing the living countess in the one half, and the departed countess in the other; and thus it stands rubric to the sermons to this day, if a copy of them has escaped the realms of oblivion.

Funeral sermons, where there was sterling merit in the deceased, and the preacher is a man of sterling talent, are very different from this, as we trust we shall be able to show; but the showing is too long for this paper.

NAPOLEON AND THE YOUNG PUPIL OF GRENOBLE.

THEY were on the road from Laxure to Vizille. The emperor had advanced before his companions, and was slowly descending the side of Laffrey; he was in deep meditation. All at once he was struck by the appearance of a groupe of young children, who were advancing towards him. He stopped his horse, and smiling on their young countenances, which for the most

part expressed the liveliest emotion, he said, "Who are you, my children; and what would you have with me?"

The children looked at one another, then one of them, chosen by his companions, advanced to the emperor; the expression of his countenance was mild and full of intelligence. Napoleon extended his hand towards the boy, who seized it,

and kissed it with a sentiment of respect and delight; he wished to speak, but could only utter unconnected words: "General! Citizen! Sire!"

This was Barginet himself, then a pupil at the Imperial school at Grenoble. He is a highly estimable young man, and possesses a heart truly French. I beg to repeat to him the assurance of my esteem. He relates this anecdote with a feeling which will be shared by all his countrymen.

"You have something to say to me, my child," said the emperor; "speak without fear. Do I frighten you, then?"

"Oh, no, sire, we are not afraid of those whom we love."

"Where do you come from, and what would you have?"

"We come from Grenoble, sire; we were pupils of the Imperial school, and hearing of your return, my companions and myself wished to see you one day sooner, and to assure you, sire, that we are ready to die for you."

Napoleon was highly affected at a devotedness so entire and so enthusiastic.

"In devoting yourselves to me," said he, "you devote yourselves to France. But you are young, my children, to become soldiers. Do your parents know of your resolution?"

The children looked at one another; M. Barginet answered, a little embarrassed, "Sire, we set out without informing any one."

"That is not right: our first duty in society is to obey our parents—never forget that; at least," he added, smiling, "you will never again fail in this duty on a similar occasion. But, come, fear nothing; tell me what they say of me in Grenoble."

This unexpected question produced on the young student, as he has since informed me, the effect of an electric shock. He answered, that Grenoble and its neighbourhood looked for him with the utmost anxiety and love; but that the people also expected from him liberal institutions, peace, and the total repeal of the *droits réunis*—taxes; which were held in utter detestation by the French. Louis XVIII., promised to abolish them, and his neglect of this promise was highly injurious to him.

Napoleon turned away, and did not immediately reply; at length he said, "The people are right to reckon upon me. I love them, and wish them to be happy; their rights have been outraged for the last year; I will repair this evil. France has been the most splendid empire of the world—it shall be the freest."

At this moment, a pile of buildings came in view, and Napoleon inquired what they were.

"It is the castle of Vizille, sire, where, in 1788, the estates-general of Dauphiné proclaimed liberty."

The emperor then inquired particularly into the history of Dauphiné. This was a characteristic trait in Napoleon; he always conversed with those whom he met, on subjects on which they were best informed. And as this young student might have been expected to be better acquainted with the history of his own province than with any other subject, the emperor led him to speak on it. He expressed some surprise on learning that on this side of Laffrey ran the road that Hannibal had passed over two thousand years before. Hannibal was his hero, as is well known.

"I will stop at Vizille, and pass the night there," said the emperor, after a moment's consideration.

"No, sire!" said the youth.

"Why so?" said Napoleon, astonished at his decided tone.

"Grenoble is but three leagues distant, sire; you have enemies there, and should arrive to-night."

"Who are my enemies at Grenoble?" said the emperor, looking kindly on him.

"I cannot name them, sire; I can only put you on your guard."

"How old are you? and where have you been educated?"

"I am sixteen, sire, and my education is one of the benefits that I have received from you. I am a public pupil of the school of Grenoble."

"Do you understand mathematics?"

"No, sire."

"What then do you know?"

"I have studied literature and history."

"Pooh! literature will not make a general officer, you must follow me to Paris, and you shall enter at St. Cyr, or Fontainebleau."

"My parents are too poor to defray my expenses there."

"I will take care of that: I am your father also; so that is settled. Adieu; when we reach Paris you must remind the minister of war of the promise that I have just made you."

This promise was fulfilled: a decree of the 10th of April, 1815, named him as a public pupil at St. Cyr, or Fontainebleau; and a decision, dated a few days after, freed him from the payment of the fees required by the regulations.—*Memoirs of the Duchess d'Abrantes.*

LONGEVITY.

NOTWITHSTANDING all that has been written on this subject, it may fairly be affirmed, that nothing has yet been done towards making the slightest approach to a real *rationale* of the

causes which are productive of length of years. Shallow empirics, in evil abundance, have laid down their infallible rules for the preservation of health and for the prolongation of life to an extreme old age; and, having sold their nostrums or their books, and pocketed the money of their dupes, have afforded the best evidence of their utter ignorance upon the subject, by failing, in their own especial persons, to reach even the average number of years of the human existence.

What most strongly and strikingly shows the folly of laying down systematic rules for the prolongation of life to an old age is this, that among the persons who are recorded to have attained to the greatest term of years, have been people of all the varieties of rank, employment, and circumstances. If we insist upon invariable temperance as an indispensable requisite towards the attainment of fulness of years, we are at once met by the fact that Thomas Parr, who lived above a century and a half, had been in early life any thing but an abstemious or even temperate man; and that Lewis Cornaro, who died at a hundred years of age, had reached the half of those years before he ceased to be guilty of such gross gluttony and irregularity, that his physicians anticipated his almost instant decease. But this objection we shall show to be rather specious than solid. If we insist upon comfort, regularity, and nourishing though plain diet, truth plucks us by the sleeve, and reminds us that Parr, and Jenkins, whose age was one hundred and seventy years save one, depended for their support upon the charity which they had to encounter all weathers to solicit, and which was not always accorded to their solicitation. Has climate any specific and infallible influence in the matter? In extreme cases it undoubtedly has; Sierra Leone has no nonogenarians even to speak of, and the coast of Devonshire and the sweet vales of Montpelier, are undoubtedly possessed of both the air and the soil which are more congenial to the human frame than the marshes of Missolonghi, or the simoom-swept deserts of the East. But if any one feel inclined to go beyond this, and to say that in this or in that place the specific climate is to be found in which man will infallibly inhale the principle of long life, let him only just cast his eye over the subjoined table; let him observe the diversity of climates in which the long livers there named have existed.

Name.	Age.	Place.
Albuma Marc.....	150	Ethiopia.
Titus Fullonius	150	Benonia.
Abraham Paiba	142	South Carolina.
Dumitur Raduly	140	Transylvania.
Countess Desmond ...	140	Ireland.
James Sand	140	Staffordshire.
Wife of ditto	120	Ditto.
Henry Jenkins.....	169	Yorkshire.
Thomas Parr	152	Shropshire.

Name.	Age.	Place.
Francis Bons	121	France.
A. Goldsmith	142	Ditto.
Margaret Patten	138	Scotland.
William Ellis	130	Liverpool.
Christian Drakenberg ..	146	Norway.
Richard Lloyd	133	Wales.
James Hayley	112	Cheshire.
John Wilson	116	Suffolk.
Lewis Cornaro.....	100	Venice.
Jane Reeve	103	Essex.
Marquis of Winchester	106	Hampshire.
Agnes Milburn *	116	London.

A 'mere glance at this table—and we could have greatly extended it—will show more clearly than any argument, that climate has no specific or infallible influence upon the duration of life, excepting in extreme cases; for, excepting the extremes, there is included in the tables of places almost every variety of soil and climate. Venice built literally in the water, the mild warmth of France, the fierce and biting blasts of Norway, have alike permitted longevity. Jane Reeve lived to one hundred and three in the marshy county of Essex, and Hippocrates, the great physician, lived but to one hundred and four in the delicious island of Cos; Albuma Marc reached one hundred and fifty in sultry Ethiopia, and Christian Drakenberg reached to within four years of that age in sterile and chilly Norway.

Such contrasts seem to bid defiance to all efforts at philosophising upon the subject. But thus much may be assumed for certain, that every temporary shock which health receives does somewhat to impair the durability of the human frame; and that, consequently, as it is obvious that every act of intemperance causes a temporary derangement of health, we ought not to be tempted to intemperance because some intemperate men have attained to length of days; but to remember that—even were not our morality concerned, as it evidently and importantly is, in our observance of the virtue of temperance—they lived long not on account of their intemperance, but notwithstanding it, and that they might, and most probably would, have lived much longer had they not been guilty of the excesses they committed.

The issues of life and death, it must be remembered, are primarily in the hands of God; but he has given us a free-will to choose between secondary causes; and there is no doubt that whatever circumstances or climate we may be placed in, *temperance in all things* is, as to health, longevity, and virtue, a very indispensable requisite.

Perhaps we cannot more agreeably conclude this brief notice of the subject than by quoting

* This woman had borne many children, and spent many of her years in St. Luke's Workhouse.—*Lynch on Health*, Chap. iii.

from a clever contemporary the reply of an Italian, who, being asked in his one hundred and sixteenth year the means by which he had attained to so advanced an age, replied with the ready versification for which the Italians are so remarkable:—

*"Con mangiar broccoli,
Portar a i pedi soccoli;
In letto capello
Pochi pensieri in cervello."*

Signifying, if our free translation may be pardoned:—

*"When hungry, of the best I eat,
And dry and warm I keep my feet;
I screen my head from sun and rain,
And let few cares perplex my brain."*

Nor is the latter part of this improvisatised epice either so unimportant or so difficult as but too many persons may be inclined to think it. For scarcely any thing conduces more to health of body than calmness and serenity of mind; and of all the storms which devastate the human mind, alas! how large a majority are the consequences of human wickedness and human perversity! how few inevitable or unameliorable!

ALLEGORY.

NIGHT held her sullen reign: thick gathering clouds Obscured the horizon's face, and darkness spread Her sable wings o'er all the arch of heaven. My way was through a rugged wilderness, With pits, and snares, and piercing flints, and thorns, Thickly bestrewn. Awhile I wandered wild And wearily, for not one glimmering star Sent forth its feeble rays. The wan pale moon Was lost; and all her glittering host were gone: Though ever and anon the treacherous glare Of *ignis fatuus*, from surrounding fens, Allured me from my path, then rose aloft, And vanished into air. 'Twas a sad way, A fearful way, and my poor trembling soul Was heart-sick of her journey. I did pause, And ponder oft; for savage beasts howled loud, And ravens croaked, and swift destruction seemed To encompass me around; nor knew I thence Which way to turn. At length a meteor rose, Bright gleaming in the east. 'Twas *Science* called; And swift through heaven it bent its fiery course, Illuminating the thick embodied clouds, And gathering all around a train of light, Allured me to pursue. I followed on The way it took; and brighter it appeared The nearer I approached, until my feet Were wearied; and my dazzled eyes grew dim, And all was darkness. Then again I stayed, And paused, and pondered, and did ruminate On all the way it led me; for I wished To retrace my steps, but vainly strove to find The path by which I came. At length arose Another meteor, paler than the first, And lovelier far; for purer was its light, And smoother seemed its course. 'Twas silvery white. By mortals it was called *Philosophy*;

And to my eyes far more alluring seemed Than *Science*—glaring star. Again my feet In swift pursuit careered. Its chosen track Seemed fair and gentle through the firmament, And easy 'twas to trace, till all at once It vanished in the clouds, and darkness reigned. Deep horrors seized my soul; for now I found On either hand a mighty swelling surge Beat high against my path, and heaven's black arch Muttered harsh threatenings of a boisterous storm. I stood and trembled; pregnant with despair, Earth shook; air groaned, and darkness blacker grew; Whilst the big waves beat o'er my feet as though Intent to swallow me. My ancles smote Against each other. On my knees I sunk And breathed a fervent prayer. Still higher rose The gathering waves; still louder roared the storm. Deep broke the thunder in tremendous peals, And forked corruscations shed their glare, To show my danger more. I ran and prayed, And shrieked, and groaned, and did uplift my hands In supplication to a throne of grace, But seemed to lift in vain; for still the more I prayed, the more my furious foes pursued To drag me to destruction; till, from heaven, Jehovah's mighty voice exclaimed, "Fear not, Poor trembler, thou art mine!" I stood amazed; For winds were hushed, and surges beat no more; And thunders ceased, and lightnings lost their glare; And o'er the heavens a blazing crucifix Spread wide from sphere to sphere. O'erpowered with love I sunk upon my knees, and wept and prayed, And praised my Great Redeemer; whilst each string In my fond bosom thrilled with rapturous joy.

J. R.

LIFE OF ST. PAUL.

ARTICLE I.

I know not that there is enrolled in the annals of human nature a more honoured name than that of the apostle Paul. With intellectual powers of the very highest order; with unswerving integrity of mind; and with opportunities the most favourable, he was devoted from earliest infancy to the study of theology. His character alone would invest any cause which he espoused and sanctioned, with respectability. Yet Paine,

with his usual ill-bred insolence, disparages both the man and his writings; associating him with the impostors who got up the fabulous history of Jesus Christ, and palmed it upon the world as an inspired record, with the sole view of establishing their own authority and power. He styles the apostle, "that manufacturer of quibbles, St Paul;" and asserts, that "the religion he taught was interlarded with quibble, subterfuge, and pun, the

tendency of which was, to instruct its professors in the practice of the same arts."

That Paine should feel towards this distinguished writer of the New Testament, deep-rooted and malicious antipathy, is perfectly natural. The prince of darkness cannot endure the light:—"Sun, I hate thy beams!" and the "foul missionary of foul sin" must equally detest the moral glories of the missionary of the cross. The infidel Paine, and the apostle Paul, must stand in perfect and eternal contrast. The Age of Reason asserts, and it deals almost exclusively in assertions, "that the Jews never credited the story of Jesus Christ. It was welcomed by the Gentile mythologists, and by them alone." This is intended to throw contempt on Christianity, as if it originated in pagan superstition; and to call in question its facts, by insinuating that those who had the best opportunity of being acquainted with them, altogether rejected them.

But the facts of the evangelical history were believed and acted upon by a great multitude of the Jewish people, who lived at the time of their occurrence. They were disregarded, indeed, by the chief priests and rulers; but this, so far from disparaging their authenticity, left them to stand on their own unassisted evidence. If the governors, the sanhedrim, and the nation had espoused the Gospel, and unitedly exhibited it to the world, as of divine origin, a fair objection might have been derived from this universal concurrence, that it was an ambitious project of the Jews, to rid themselves of their burthensome ceremonies, and by means of a faith, to be propagated through all nations, to gain a complete ascendancy over the different kingdoms of the world. Of such an objection Paine would have been eager to avail himself.

The unbelief of the Jews, and their consequent dispersion, as they were the subject of prophecy both in the Old Testament and in the New, corroborate the truth of Christianity, by an evidence which comes home to every man's senses; and the preservation of this people, in all their distinctness of character, through so many ages, and in all countries, is a perpetual miracle, a solitary anomaly, in the history of our species, which can only be accounted for, as the interference of Providence with the general order and economy of human nature, for the purpose of meeting infidelity on its own ground, by furnishing it with "the ocular and manual demonstration" which it is so forward to demand, and yet so reluctant to admit.

Yet, though Christ was rejected by the Jewish nation at large, he was venerated, adored, and loved, by competent witnesses, taken from this people, sufficient in number to satisfy every inquirer that he existed; that Judea was the scene of his preaching, miracles, and sufferings; and that his mission was divine. I have often thought, that if, instead of distracting our at-

tion by a variety and multitude of evidences, facts, and circumstances, we concentrated all our powers of acute investigation on some one, of acknowledged and fundamental importance, we should best determine our own minds, and establish the faith of others.

I am persuaded, for instance, if infidels could once assail with success the character of the apostle Paul—if, in reference to the assumed miraculous events in his history, they could justly allege against him either imposture or enthusiasm, they would inflict a deadly wound on the vitals of Christianity. And if, on the contrary, it can be shown, that the character of this apostle is unimpeachable; that he was a man of sound understanding and strict integrity; that he could not be imposed upon, and would not deceive—the Christian religion is irrefragably proved. If we can maintain this stronghold, the citadel must be secure.

It is true, the history of this apostle is found only in the New Testament, except what relates to his martyrdom in the persecution of Nero; but we may observe, once for all, that the narratives and biography of the evangelical records, stand precisely on the same foundation with the Commentaries of Cæsar, and other works of acknowledged authenticity: that they invite the same scrutiny, and are to be tried by the same rules. An impartial inquirer may, with very little labour, satisfy his mind as to the genuineness and truth of the history and epistles of St. Paul. If he will only read them attentively, he will soon perceive that the history relates nothing but facts; and that these facts are corroborated by the epistles; that the undesigned coincidences between them are such as no impostor could have imagined, and no fiction has ever displayed. The narrative is written, for the most part, by the evangelist Luke; the letters by St. Paul himself, at distant intervals, under different circumstances, and to a variety of churches and individuals. The former is simple and artless. It is not a connected story, but a relation of important events, occurring in the life of a man of peculiar energy, devoted to a public cause; and in defence of that cause making unparalleled exertions, and enduring unexampled sufferings. It is an interrupted journal, rather than a well arranged series of circumstances. And with regard to the epistles, Dr. Paley has judiciously observed, that "whether they be genuine or spurious, every thing about them indicates that they come from the same hand. The diction, which it is extremely difficult to imitate, preserves its resemblance and peculiarity throughout all the epistles. Numerous expressions and singularities of style, found in no other part of the New Testament, are repeated in different epistles; and occur in their respective places, without the smallest appearance of force or art. An involved argumentation, frequent obscurities, especially in the

order and transition of thought, piety, vehemence, affection, bursts of rapture and of unparalleled sublimity, are properties, all or most of them, discernible in every letter of the collection." The beautiful argument invented by Dr. Paley, drawn from a minute, circuitous, and laborious collation of the narratives and epistles, proving from the undesigned coincidences between them, the genuineness of the writings, and the reality of the transactions, is so perfect and conclusive, that infidelity has wisely suffered it to stand unmolested. It defies refutation; and it may, indeed, be considered "as another thread added to that complication of probabilities by which the Christian history is attested."* If there be a deist in the world who unites acuteness with candour, and quickness of perception with patience of investigation, I entreat him to study this argument, and either to detect its fallacy, or yield to its force. If Dr. Paley had written no more than the single volume in which this argument is stated and conducted, he would have merited the admiration and the gratitude of the whole Christian church.

In this article, I shall, as briefly as the nature of the subject will admit, first state those circumstances in the life of St. Paul, previous to his conversion, which illustrate his character, and establish his claim to be a competent and acceptable witness to the truth of that religion which he so long and strenuously resisted; and, secondly, I shall view his conversion, subsequent history and death, as themselves furnishing stupendous and irresistible proofs of the divinity of that religion.

Saul, or as he was afterwards denominated, Paul, a descendant of the patriarch Abraham, and of the tribe of Benjamin, was a native of Tarsus, then the chief city of Cilicia. He was also by birth a citizen of Rome. His father was a Pharisee, a sect of peculiar strictness among the Jews; and he was himself of the same persuasion. His family was eminent for its piety. Many of his relatives embraced the faith of Christ, and some of them adopted this profession before the conversion of their illustrious kinsman. It is certain that the apostle in early life was taught Grecian literature; and it is highly probable that he attained this distinction in his native city. Dr. Bently is of opinion, that "he was a great master in all the learning of the Greeks." He studied the law, and the traditions peculiar to his own nation, under Gamaliel, a celebrated Jewish rabbi, at Jerusalem. In this study also he was no mean proficient. He seems to have been a person of great natural abilities, of quick apprehension, strong passions, and firm resolution; and, therefore, qualified for signal ser-

vice, as a teacher of whatever principles he should be induced to embrace. As an exemplar of Judaism in all its divine and traditional obligations, he was distinguished by a severe and conscientious devotedness. A Hebrew of the Hebrews, he was anxious not to disgrace his origin; of "the strictest sect of his religion," he was resolved to stand first on the list of its supporters and advocates. Imbibing its exclusive spirit, considering its opposers as equally the enemies of God, and imagining himself armed with its tremendous sanctions, his zeal was bigotry, his bigotry persecution, and persecution hurried him to commit those atrocities, a remembrance of which infused peculiar bitterness into his after repentance. In extinguishing heresies, he began with the extermination of heretics. He emblazoned cruelty with divine glory, and sanctified murder for conscience' sake as the first virtue of religion. In this he was no hypocrite. He was governed by no private views. He had no revenge to gratify, no mere party to serve. He was neither a Paine, nor a Robespierre; but the victim of a perverted and mistaken sincerity. When he persecuted, he did it ignorantly, through unbelief; he verily thought that he rendered service to God by immolating his creatures; by torturing and murdering his unoffending offspring, he imagined that he recommended himself to the favour of the Universal Father, who having made all things, hated nothing that he had made. This is a crime we neither justify nor extenuate. Judaism did not sanction it; and for it, Christianity cannot be responsible. There have been persecutors of every religion, and of no religion. Deists are as intolerant as besotted pagans and mistaken Christians. Bigotry is the sin of our common nature, and nothing can eradicate it but the pure philanthropy of the Gospel.

St. Paul was a young man when Stephen suffered martyrdom, which took place, according to the most accurate chronologists, about the year thirty-six of the Christian era; and it seems probable that he had, not long prior to this event, made his appearance in what is called the world. Possibly he did not come from Tarsus to Judea, till after the period of our Lord's ministry. It may be likewise supposed, that he had not a personal acquaintance with any of Christ's apostles, nor had seen any miracles performed by them before he became a persecutor. How long he had been in Judea, and under the tuition of Gamaliel, cannot be certainly determined. As a student, his time and attention would be principally occupied in sedentary inquiries and pursuits; he could therefore know but little of the affairs of Judea during his novitiate. But coming from the schools, animated with an earnest zeal for the law of Moses and all its peculiarities, and for the traditions of the elders; and finding a number of men, called followers of Jesus of Nazareth, whom they spake of as

* "Hære Paulina," or the truth of the Scripture History of St. Paul, evinced by a comparison of the epistles which bear his name, with the Acts of the Apostles, and with one another, by W. Paley, D.D., Archdeacon of Carlisle.

the Messiah, and raised from the dead, and greater than Moses; he was filled with indignation, and thought he was obliged to oppose them to the utmost. It is not unlikely that he conceived of them as the deluded followers of an impostor, similar to others who had frequently appeared in Judea, and therefore deserving of no regard from the learned and the wise. He was, no doubt, provoked at their arrogance and blasphemy, and resolved to make them suffer the sad consequences of his injurious zeal. He lent his countenance and support to the infuriated multitude, when in an irregular and tumultuous manner they stoned Stephen. Unmindful of his rank and station in society, he haled both men and women to prison; and so exceedingly mad was he against the odious sect, that he persecuted them even to strange cities. Though young, he had arrived at the age of maturity, and was deemed by the council and chief priests, sufficiently discreet, and capable to lead forth and to direct a band of persecutors, commissioned by them to undertake a sanguinary expedition against the Christians at Damascus. Such was Saul, up to the period of his conversion to Christianity.

We shall now consider his character in relation to that wonderful event, in order to prove that no deception could have been practised upon him, and that his testimony in favour of the new religion deserves unhesitating credit. The causes which operated in his mind against the reception of the Gospel were such as human nature has never been known to resist, without the counteracting energy of superhuman power. Nor can we account for their sudden vanquishment in the present instance, on any principles that exist among men. In his conversion, the apostle was either controlled by a divine interposition, or he was seized with insanity. Rational and mighty causes must have wrought the instantaneous change which he experienced; or he must have lost himself by an amazing hallucination, depriving him in a moment of all he ever knew, felt, or thought.

In the breast of the apostle, all the influences that form the character and control the destiny of man combined to strengthen and mature his enmity against Jesus of Nazareth.—Let us briefly enumerate them.

Educated as St. Paul was, deeply versed in profane and sacred literature, we may well imagine what importance he attached to a distinction which placed him on an equality with Grecian philosophers and Jewish rabbis. The circle in which he lived was far removed from the vulgar. A friend and companion of the literati and the most acute controversialists of his age, it is probable that intellectual acquirements were the object of his fond pursuit and high ambition. Indeed, he intimates that these were among the things which before he became a

Christian, were "gain" to him, or which he deemed advantageous; and in these he had "whereof he might glory." But at what a distance did this very circumstance place him from the genius and spirit of Christianity! Jesus himself was the uneducated carpenter of Nazareth; his adherents were the most illiterate of the people, simple men, fishermen, the sons of fishermen. How could the disciple of Plato, and the pupil of Gamaliel, endure to associate himself with an unlettered sect, every where spoken against, and held in the most sovereign contempt?

To this we may add another invincible barrier, which prevented his approaching the Gospel in any other spirit than that of unqualified and determined hostility. He was inflamed with ardent zeal for a religion which he believed to be divine, and the subversion of which he conceived to be the necessary consequence of a general admission of Christianity.

The religion which he professed, and of which he was the devoted champion, stood unrivalled among all the systems which had obtained in the world for the miraculous grandeur of its introduction, the stupendous wonders of its progress, its sublime doctrines, and its imposing ritual. It enshrined in its institutions all that was venerable in antiquity. Unveiling heaven, it presented to the eyes of devout and prostrate worshippers an enthroned Deity. It was a religion which addressed the understanding, captivated the senses, and excited the passions. The whole intellectual and moral being was governed by its agency. It was the religion of St. Paul by the accident of birth, by the deliberation of choice, by the force of habit. It was identified with his first thoughts, associated with his deepest feelings, interwoven with his fondest recollections. It was taught him by Moses and the prophets. Its lessons were impressed by the awful majesty of its temple, and the dazzling glories which invested its priesthood and its ordinances. It kindled in the genius of the apostle, was illustrated by his learning, and exhibited in his life. A religion of such a character, so taught, and so embraced, could not but be venerated and loved. Besides, it claimed an exclusive authority; it professed to be the only faith sanctioned by heaven; it allowed not of rivalry or competition; every other system must be rejected. It disdained to share its honours, and spurned with contempt a divided throne. With what feelings then must the most ardent friend of this religion regard not a rival, not a mere competitor, but an avowed opponent, which nothing less than its complete abrogation could satisfy? Such was the aspect with which Christianity seemed to frown on Judaism. The mistaken votaries of the ancient faith saw in the new opinions nothing but unrelenting and determined hostility. Either Moses or Christ, they imagined, must be exterminated. And who was

Christ? He had wrought miracles, but the infatuated Jews ascribed them to Satanic agency. He had taught a pure morality; but he had, they alleged, only attempted to refine upon their accredited code, and arrogantly to place himself in the chair of their own lawgiver. He had advanced the loftiest pretensions under a meanness of exterior that only provoked ridicule and contempt; and whatever glory might invest his claims it was extinguished by his untimely and ignominious death. The single fact of his crucifixion, to the mind of Saul of Tarsus, was altogether conclusive against the divinity of his mission. It was in vain then, to him, that apostles pleaded, and that martyrs died. He mocked their babbling; he consented to their death. Probably he would have treated them with silent neglect, had they not impiously opposed all that he deemed sacred. They assailed the economy of Moses, and this he regarded as the most unpardonable blasphemy. Moses was his oracle; Jehovah was his God. Yet he understood not the one, nor did he rightly adore the other. He equally mistook the nature and object of Christianity, and was therefore a prejudiced Jew, and a most vindictive antichristian.

Another cause which contributed to increase his opposition to the rising doctrines was, his conscientious virtue and unyielding integrity.

He felt that he was governed by no sinister views. He could appeal to the Searcher of hearts for the purity of his motives; he cherished an honest zeal; he valued himself on a virtue founded on the principles and ritual observances of the true religion. His strict and exemplary deportment was the theme of the aged, the attraction of the young, and the admiration of all. He had, therefore, no craving after a more operative faith, and least of all could he be induced to embrace doctrines which were so favourable to publicans and sinners; which seemed, in his mistaken views, to level all moral distinctions, and to extend its benefits to the most undeserving of mankind. The pride of his virtue, which was the canker-worm at its root, armed him against the restorative system of the Gospel. His very righteousness was a guarantee to the world that he would never condescend to adopt the faith of Christ.

The patriotism of St. Paul may be considered as another powerful influence to shield him from all impressions favourable to Christianity. In his view, the prosperity of his country depended in a great degree upon its exclusive religious advantages, upon its temple, its priesthood, and its sacrifices. Christianity gloried in removing all these characteristic distinctions; it aimed to break down the wall of partition between Jews and Gentiles. Christ taught that though salvation was of the Jews, his religion would introduce a new era, in which his faithful disciples would no longer plead for the sanctity of places, the sacred-

ness of vestments, or the holiness of one nation in preference to another. And though his apostles did not, at first, imbibe this spirit of universality, which is the very essence of the Gospel; yet the pious and zealous Israelite perceived in the system a subtle and powerful enemy to his national glory. Saul of Tarsus, from the natural ardour of his character, his youth, and the peculiar energy of his religious feelings, was an unsophisticated and devoted patriot. Of this we cannot doubt, when we consider that many years after his conversion to Christianity, when his views were liberal, and his philanthropy embraced the whole human race, the love of kindred and of country became literally the agony of his noble spirit, and he almost wished himself accursed that his brethren might be saved. He was willing to be immolated, if the sacrifice might appease the wrath of Heaven which was about to be poured forth on his unhappy nation. Yet Christianity denounced Judaism as a religion, that in its rites and circumstances must yield to a more spiritual worship, which was no longer to be confined within the peculiarities of one people, but to extend its blessings to the whole human family. In the progress and ultimate success of the Gospel, the apostle beheld all that was destructive of his most fondly cherished hopes. He saw the star of his country setting in everlasting darkness. With what indignation, therefore, must he have regarded the sad omen of national ruin! We do not wonder that his fury against the rising cause was ungovernable. We are not surprised that he persecuted the Christians even to strange cities, that he haled both men and women to prison, and was exceedingly mad against them.

Thus we are brought to consider another mighty obstacle to the apostle's embracing Christianity, namely, a high and growing reputation, as a zealous opposer of the new opinions. He was not merely a Jew and a Pharisee: he was a distinguished and most zealous partizan of his sect. The chief priests honoured him with their approbation and patronage. His fame was spread through all the region of Judea; it had even reached Damascus. Christians heard his name with terror and dismay. He was the prop and the champion of the old religion; the avowed and notorious exterminator of the new. In this sanguinary undertaking he left his compeers at a hopeless distance behind him. He breathed threatening and slaughter, and made havoc of the churches with all the malignant rage of a demon. And this was the path to honour and to wealth. His country's gratitude awaited his approach, and its rulers hailed him with the most flattering commendations. Thus he had passed the rubicon in his opposition to the Gospel. His character was pledged to perseverance in the career which he had begun. Even to relax in his zeal, he well knew would cover him

with disgrace; but to change sides, and to defend the faith he had laboured to destroy, would appear the extravagance of madness; and could not fail to draw upon him universal execration.

These considerations alone must convince every impartial mind, that nothing less than supernatural power could effect that change in St. Paul which we denominate his conversion; unless, indeed, outward circumstances of resistless energy, and which have been known to operate the most astonishing moral revolutions, conspired to new-model his character, and altogether to reverse the object of his pursuit. Controlled by pleasure, wealth, or fame, instances have occurred in which men have abandoned their religion, their kindred, and their country; in which, in fact, they have consented, if I may so speak, to become exiles from themselves. Was St. Paul allured and determined by one or all of these? Were his principles undermined, and the austerity of his manners subdued in bowers of wanton ease, in the voluptuous paradise of sensual and intoxicating joy? Did Christianity open to his view her harems of delight, and dazzle and bewilder his senses with the blandishments of beauty, and the inspiring pomp of earthly splendour? Did she present the Circean cup to her half-yielding convert, and complete a victory over his reason and religion, by gratifying his appetites, and inflaming his passions. She allured by no such rewards, she held forth no such promises. To the votaries of pleasure her aspect was grave, dignified, and severe. If she awakened the susceptible part of human nature, it was to pain and apprehension. To the rigid morality of Judaism she added precepts of her own, and took from it the solace of its pride; she demanded truth in the inward parts, and called her disciple to incessant warfare with himself. She brought the sincerity and the strength of his professed attachment to her cause to the test of suffering. Crucifixion was her goal, and persecution the handmaid that led to it. Instead of harems, and bowers, and the charms of beauty, she presented racks and dungeons, and the grim visage of the executioner. The rich man, who at that period professed to be her follower, was instantly deprived of his wealth by the rapacity of his cruel enemies, or he voluntarily shared it with his brethren in tribulation. Property was disregarded by those who had all things in common, and who were in daily expectation of martyrdom. And honour, such as attracts the world's ambition, and for which aspiring mortals toil, and agonise, and die, Christianity not only refused to confer, but she regarded it with indifference, almost bordering on contempt. She taught her votaries to renounce it with cheerfulness, and to glory only in the Cross. The moment a man became a Christian, he lost his rank and station in society. Every path to preferment was shut

against him; his name was synonymous with infamy. And this was the case, not in Judea alone, but throughout the civilised world. Jews and pagans, who agreed in nothing else, forgot all their differences, when Christians were to be hunted, vilified, and murdered. The philosophers, the priests, and the people, were alike virulent and hostile. The history of the Christian church, in the early ages, abundantly confirms these assertions. The life of Paul is an evidence in point, and establishes their truth. What inducement, then, had he to become a Christian? He was armed against Christianity by a combination of mighty causes which could not but inflame his enmity; and with this enmity those circumstances which have the greatest power over the minds of men were altogether in alliance.

But it may be said the apostle was desirous of placing himself at the head of the Christian sect, imagining that his superior learning, talents, and influence would render it formidable, and perhaps ultimately triumphant. To this we reply, the supposition is incredible. It proceeds on the principle that St. Paul knew that Christ was an impostor, and his religion a cunningly devised fable. For if he really believed in Christ, and embraced the Gospel as divine, he could not have entertained the views imputed to him. And can it for a moment be conceived that for the sake of propping up a falling imposture and becoming notorious as the first disciple in the school of one who was himself crucified, and whose followers were daily experiencing the same doom, with every probability that he could achieve nothing but his own ruin, that a man of St. Paul's talents and acquirements, station and character, would have thus tempted his fate? He must have relinquished the most substantial advantages, and on a sudden commenced villain from the sheer love of duplicity, with no other prospect before him than that of a violent and disgraceful death.

But it may still be asked, if not a deceiver himself, might not St. Paul have been the dupe of imposture? I answer, that this position is quite as untenable as the last.

That in his conversion, the apostle was not imposed upon by the arts and machinations of men, I think is evident, from the nature and circumstances of that event, from its immediate consequences, from the subsequent undiminished acuteness of his mind, and from the natural candour and magnanimity of his disposition.*

* In order that the reader may have in his view the full and particular narrative of the event under discussion, I entreat him to read with great care the 26th chapter of the Acts of the Apostles; the 22d chapter of the Acts, from the 10th to the end of the 16th verse; the 12th and 18th verses of the 9th chapter of the same book, together with part of the first chapter of the Epistle to the Galatians, beginning at the 11th verse, and ending with the 16th; the 3d chapter of the Epistle to the Philippians from the 4th to the end of the 8th verse; 1 Tim. i. 12, 13; 2 Cor. i.; 1 Col. i. 1; 1 Tim. i. 1; 1 Cor. xv. 8.

CATS.

ARTICLE V.

If ever there is one hour in the whole twenty-four in which cats combine in themselves all the "horribly disagreeable" that attaches to nuisance and abomination, it is most assuredly in that hour

"When weary mortals seek repose,"

and all "the brute creation" is as "dead asleep" as door-nails, cats alone excepted. Their meetings, their conferences, their disputes, their arguments, their love-feasts and their quarrels, are all arranged in that "witching hour" when the wide dark world is, as Wordsworth has it,

"Quiet as a nun—breathless with adoration."

The following descriptive account of one of these unholy night-watches is given by a correspondent, who was "on the spot." He was a witness to the whole transaction, and can therefore "vouch for its truth."

A BATTLE OF CATS.

"How sweet the moonlight sleeps upon the slates!"

Miss Tabitha having made an assignation with Tom Tortoiseshell, the feline phenomenon, they two sit curmurring, forgetful of mice and milk, of all but love! How meekly mews the demure, relapsing into that sweet under-song—the purr! and how curls Tom's whiskers, like those of a Pashaw! The point of his tail, and the point only, is alive; insidiously turning itself, with serpent-like seduction, towards that of Tabitha, pensive as a nun. His eyes are rubies, hers emeralds, as they should be; his lightning, hers lustre: for in her sight he is the lord, and in his she is the lady of creation.

"O happy love! when love like this is found!
O heartfelt raptures! bliss beyond compare!
I've paced much this weary mortal round,
And sage experience bids me this declare:—
If earth a draught of heavenly pleasure share,
One cordial in this melancholy vale,
'Tis when a youthful, loving, modest pair,
In other's arms breathe out the tender tale."

Woman or cat, she who hesitates, is lost. But Diana, shining in heaven, the goddess of the silver bow, sees the peril of poor Pussy, and interposes her celestial aid to serve the vestal. An enormous grimalkin, almost a wild cat, comes rattling along the roof, down from the chimney-top, and Tom Tortoiseshell, leaping from love to war, tackles to the red rover in single combat—sniff, snuff, splatter, squeak, squall, caterwaul, and throttle!

"From the soft music of the spinning purr,
When no stiff hair disturbs the glossy fur,
The whining wail, so piteous and so faint,
When through the house paws move with long complaint,

To that unearthly, throttling caterwaul,
When feline legions storm the midnight wall,
And chaunt, with short snuff and alternate hiss,
The dismal song of hymeneal bliss."

Over the eaves sweeps the airy hurricane. Two cats in one, like a prodigious monster with eight legs, and a brace of heads and tails; and through among the lines on which clothes are hanging in the back green, and which break the fall, the dual number plays squelch on the miry herbage.

The four-story fall has given them fresh fury and more fiery life. What tails! Each as thick as my arm, and rustling with electricity, like the northern streamers. The red rover is generally uppermost, but not always, for Tom has him by the jugular, like a very bull-dog, and his small, sharp, tiger-teeth, entangled in the fur, pierce deeper and deeper into the flesh, while Tommy keeps tearing away at his rival, as if he would eat his way into his windpipe. Heavier than Tom Tortoiseshell is the red rover by a good many pounds; but what is weight to elasticity—what is body to soul? In the long tussle, the hero ever vanquishes the ruffian.

Cats' heads are seen peering over the tops of walls, and then their lengthening bodies, running crouchingly along the coping-stones, with pricked-up ears and glaring eyes, all attracted towards one common centre—the back-green of the inextinguishable battle. Some dropping, and some leaping down, from all altitudes; lo! a general *melée*! For Tabitha, having through a skylight forced her way down stairs, and out of the kitchen window into the back area, is sitting pensively on the steps;

"And, like another Helen, fires another Troy!"

Detachments come wheeling into the field of battle from all imaginable and unimaginable quarters; and you now see before you all the cats in Edinburgh, Stockbridge, and the suburbs. Up fly a thousand windows from ground-flat to attic, and what an exhibition of nightcaps! Here elderly gentlemen, apparently in their shirts, with head night-gear from Kilmarnock, worthy of Tappitomy's self; behind them their wives, grandmothers, at the least, poking their white faces, like those of sheeted corpses, over the shoulders of the fathers of their numerous progeny; there chariest maids, prodigal enough to unveil their beauties to the moon, yet, in their alarm, folding the frills of their chemises across their bosoms; and, lo! yonder the captain of the Six Feet Club, with his gigantic shadow, frightening that pretty damsel back to her couch, and till morning haunting her troubled dreams! "Fire! fire!" "Murder! murder!" is the cry;

and there is wrath and wonderment at the absence of the police-officers and engines. A most multitudinous murder is in process of perpetration there, but as yet fire there is none; when lo! and hark! the flash and peal of musketry; and then the music of the singing slugs, slaughtering the catti, while bouncing up into the air, with Tommy Tortoise clinging to his carcass, the red rover yowls wolfishly to the moon, and then descending like lead into the stone area, gives up his nine ghosts, never to chew cheese more, and dead as a herring. In mid-air the phenomenon had let go his hold, and seeing it in vain to oppose the yeomanry, pursues Tabitha, the innocent cause of all this woe, into the coal-cellar, and there, like Paris and Helen,

"When first entranced, in Canoe's iale they lay,
Lip pressed to lip, and breathed their souls away."

The fearless pair begin to purr and play in that

subterranean paradise, forgetful of the pile of cat-corpuses that in that catastrophe was heaped half-way up the currant-bushes on the walks, so indiscriminate had been the strages. All undreamed of by them, the beauty of the rounded moon, now hanging over the city, once more steeped in stillness and in sleep!*

No battle was ever more admirably described, no field-marshal's dispatch ever described the onslaught and victory over an enemy with more punctilious precision; the rapid interchange between thought and action is most vividly portrayed; Cesar's *veni, vidi, vici*, is a fool to it, begging the Roman general's pardon; and the anti-cruelty-to-animal climax of the slug-slaughtered cat chief, gives a most sanguinary finish to the whole "affair," and puts the sign and seal of "inimitable" to the whole. EPHON.

* Blackwood's Magazine—"Noctes Ambrosianæ."

THE EVENING OF A VILLAGE FESTIVAL.

WHILE our shrub walks darken,
And the stars yet bright aloft,
Sit we still and hearken
To the music low and soft;
By the old oak yonder,
Where we watch the setting sun,
Listening to the far-off thunder
Of the multitude as one.

Sit, my best beloved,
In the waving light;
Yield thy spirit to the teaching
Of each sound and sight;
While those sounds are flowing
To their silent rest,
While the parting wake of sunlight
Broods along the west.

Sweeter 'tis to hearken
Than to bear a part,
Better to look on happiness
Than carry a light heart;
Sweeter to walk on cloudy hills,
With a sunny plain below,
Than to weary of the brightness
Where the floods of sunshine flow.

Souls that love each other
Join both joys in one,
Blest by others' happiness,
And nourished by their own.
So with quick reflection,
Each its opposite
Still gives back, and multiplies
To infinite delight.

H. A.

THE SHEPHERD.

A FACT.

NIGHT had come and gone away again; meanwhile, a copious fall of dew having washed dame Nature's face, she seemed more than usually fresh, vigorous, and healthy. Aurora chequered the heavens in richest hues, and swept the earth by a gentle breeze, as if to awake each flower and herb to feel the magic of the scene. Broad rose the sun behind the distant mountains; and never did even lovely morning appear more lovely, for every thing below and above spoke only of peace, beauty, and joy.

As the day, however, advanced, these softer enchantments were replaced by others more affluent but oppressive: the heat and the glare grew intense, the atmosphere became motionless as death, and all felt enervated or subdued by excess of physical glory. This was especially the case in one of the southern counties of Wales, where the following circumstance occurred, and gave rise to the appended reflections.

On the western extremity of the hundred of Dewsland, the traveller may see a farm-house situated on the brow of a hill whose base is washed by the little river Ilew. Here it was once intended to erect a church to the memory of the famed Saint David; but tradition tells us, that repeated attempts proved the scheme to be impracticable, for, fast as the materials were collected in the day, some invisible power scattered them all during the night. At length application was made to Yeuan Ddoeth, who lived in an artificial cave near the summit of Trelwyd Carn, where he was known to hold hourly converse with the mysterious and supernatural. The reply of the bard was, "The stars can be conquered only by obedience; and Heaven's favourite can be honoured only by following Heaven's plans. Find out, then, the proper site; and future ages, as they rise, shall rise to bless you and your works."

By further instructions of the seer, one of

those gigantic stones called in the principality "Sampson's Quoits,"—specimens of which are seen at Stonehenge,—was placed on a new-made car of solid oak, drawn by two hundred red heifers. The procession moved on in solemn pomp, from place to place, for several weeks, till on the first of March it reached the upper end of the valley, where the stone suddenly leaped off from the car, and settled itself in the ground in the best architectural position. Here, therefore, soon arose the gorgeous cathedral of Menevia, formerly an archiepiscopal see, and metropolis of the British church; but now, though still retaining the name of a city, reduced in shattered magnificence to a mere village left "alone in its glory."

But to return to my story. About two o'clock, p.m., an old man was seen wending his way towards the farm-house already mentioned. His crook and his dog announced him to be a shepherd, while the benevolence and tenderness that marked his countenance beamed as pledges that he would "gather the lambs with his arm, and carry them in his bosom, and gently lead those that are with young." Just as he entered the courtyard, he was met by the farmer, when the following dialogue commenced:—

Farmer.—"Well, James, and what has brought you here this time o' day?"

Shepherd.—"Headach, master, headach; I can't stand this burning sun; so I am hunting for a little shade till the twilight."

F.—"Meantime, what have you done with the sheep?"

S.—"O, sir, they are down in the Craigfelt, looking comfortable enough. Poor innocents! I wouldn't neglect them for the world; for ever since my father died, now fifty years, I have loved them all as my own lambs."

F.—"Yes, yes, James, I know all that, I know you love them, and dare say they love you too. But you look ill; so you'd better go to bed at once, and then, at break of day, you will be able to bid the lambs a 'good morning.'"

The old man obeyed, and went to rest, only first giving Hector, his faithful dog, an early supper. And now, whilst he is supposed to sleep, we may take occasion to describe the Craigfelt, where he had left the flock.

To form an accurate conception of this, the reader is to imagine two ranges of hills covered with trees, interspersed by stupendous masses of rock, meeting each other about half a mile below the present site of the city, so as to form an acute angle, leaving only a narrow outlet for the river. Nothing can surpass the richness and beauty of this scenery in fine weather; and, on the other hand, during the floods, few places can equal it in grandeur and sublimity; for at such times the waters cover the whole valley, and rush out at the lower end with a force that sweeps every thing before them.

Now, however, all was exquisitely calm, and steeped in sweetest amenities and romance; the birds poured forth their liveliest melodies, as if in concert with the tinkling bells, to soothe the sheep; and the lambs, in wooped gambols, chased each other round some willow trees that fenced a gurgling well. Lambs! beautiful creatures! they always look happy; but this day, as if the butcher's knife (*horresco referens*) had been annihilated for ever, they held a special jubilee of frolicking.

Soon after this, perhaps about four o'clock, a small dark speck presented itself on the horizon, followed by an enormous cumulus of most ominous appearance. Then came a full battalion of clouds, skirted by a fleecy little emigrant which the weather-wise call "storm-cup." The cattle became restless in the field; the ducks and geese screamed and rioted in the pond; and the fowls of the yard shook and flapped their wings, stretched their legs, and gradually went to roost; the leaves of the trees mysteriously trembled beneath some noiseless and viewless agency; while the whole heavens kept accumulating their auguries of dread. By this time, the most inexperienced could have prophesied the approach of a thunder-storm, when a cold puff of wind, a vivid flash, and loud report, told that it was actually come. Large, heavy drops now fell in thick succession, until at length, to use a common phrase, the rain poured down in torrents.

The farmer then bethought himself of the poor sheep, and saw that unless they were immediately removed, they would infallibly be drowned. Unwilling, however, to disturb the old shepherd, he sent half a dozen boys, with their complement of dogs, to fetch them home. But this was no easy task, for the plains were already inundated to a depth of three or four inches.

To make the matter plainer, I must premise that from the Craigfelt there was only one way of egress, which lay close to the shepherd's hut. Here there was a narrow passage over a bank, leading to more elevated ground. The sheep had climbed it a thousand times, without any difficulty; but, strange to say, nothing could induce them to attempt it now. The men kept beating and pushing, and the dogs acted their part in barking and biting; but all was of no use. They even dragged up several by main force; but instead of the rest following them, they immediately jumped back to the flock. There was, however, no time for consultation or retreat, for the waters were rising higher and higher every moment, and the sheep becoming proportionally more timid and obstinate.

Meanwhile the uproar awoke the old man, who, coming out into his garden to ascertain the cause, exclaimed, "Holloa, here! what's all this row?"

The sheep saw him not, but they heard his

voice; they argued that as he was near, all must be meant for the best; and impelled by an universal spirit of obedience and gratitude, they shouted "Ba, ba, ba!" and struggled for the first to pass. Thus is persuasion better than force: had they continued diffident only for ten minutes longer, they must all have been lost; but they placed confidence in their benefactor,

and by virtue of that confidence all their lives were saved.

This needs no comment: "And a stranger they will not follow, but will flee from him, for they know not the voice of strangers. But when the good Shepherd putteth forth his own sheep, he goeth before them; and the sheep follow him, for they know his voice." F. F.

REVIEW.

The Christmas Library. Vol. I. Birds and Flowers, and other Country Things. By MARY HOWITT. London: Darton and Clark.

THIS is a beautiful little book, whether we regard its literature or its embellishments. The former department has been confided to one whose name is not unknown in the walks of poetry, and who has proved herself admirably fitted for the task assigned her by the spirited publishers. The sentiments, the illustrations, the diction, are alike excellent, and do honour to the head and the heart of the fair authoress. We may venture fearlessly to predict great success to the series of publications of which we are informed in the preface this volume is the first, if this may be regarded as a faithful specimen. The plates are exceedingly well executed, and are among the best of wood-engravings we have ever seen. To the class of readers for whom, ostensibly, the work has been published,—the young,—it cannot fail to be attractive; but persons of a larger growth will find, in this beautiful volume, much to interest and to instruct. All who love to drink of the pure and unadulterated streams of poetry, will here be able to gratify their taste. We had marked three or four pieces for quotation, that our readers might judge for themselves as to the merits of the work, but can only find room for two. We present them for their perusal, with a cordial recommendation to our young friends to obtain the volume whence they are extracted.

THE PHEASANT.

"The stock-dove builds in the old oak wood,
The rook in the elm-tree rears his brood,
The owl in a ruin doth hoot and stare,
The mavis and merle build every where;
But not for these will we go to-day,
'Tis the pheasant that lures us hence away,
The beautiful pheasant that loves to be
Where the young green birches are waving free.

Away to the woods with the silvery rind,
And the emerald tresses aloft on the wind;
For 'tis joy to go to those sylvan bowers
When summer is rich with leaves and flowers,
And to see, 'mid the growth of all lovely things,
The joyous pheasant unfold his wings,
And then cower down, as if to screen
His gorgeous purple, gold, and green.

The streams run on in music low;
'Twill be joy by their flowery banks to go;
'Twill be joy to come to the calamus beds,
Where a broken root such odour sheds,
And to see how the water-sedge uplifts
Its spires and crowns—the summer's gifts;
To see the loosestrife's purple spear,
And the wind through the waving reeds to hear.

Then on through hazelly lanes away,
To the light-green fields all clear of hay,
Where, along the thick hedge-side, we greet
Tall purple vetch and meadow-sweet;
Past old farm-house and water-mill,
Where the great coltsfoot grows wild as will;
Where the water-rat swims calm and cool,
And pite back in the deep mill-pool.

So on and away to the mossy moor,
Stretching on for many a mile before,
A fine-keen wild, where all around
Some rare and beautiful thing is found—

Green mosses many, and sundew red,
And the cotton-rush with its plummy head,
The spicy sweet-gale leved so well,
And golden wastes of the asphodel.

Yet on and on, o'er the springy moss,
We have yet the bog-rush bed to cross;
And then a-sigh, all shunning green
To the sunny breeze, are the birch-woods seen;
Than the green birch-wood, a lovelier spot
In the realms of fairy-land was not;—
And the pheasant is there, all life, all grace,
The lord of this verdurous dwelling-place.

O, beautiful bird! in thy stately pride,
Thou wast made in a waste of flowers to hide,
And to fling to the sun the glorious hues
Of thy rainbow-gold, thy greens and blues.
Yea, beautiful pheasant, the birch-wood bowers,
Rich many-formed leaves, bright-throated flowers,
Broad masses of shade, and the sunshine free,
In thy gorgeous beauty, are meet for thee."

The following lines are full of sweetness—"Summer music is their flowing:"

LITTLE STREAMS.

"Little streams, in light and shadow,
Flowing through the pasture-meadow;
Flowing by the green way-side;
Through the forest dim and wide;
Through the hamlet still and small;
By the cottage; by the hall;
By the ruined abbey still;
Turning, here and there, a mill;
Bearing tribute to the river,
Little streams, I love you ever!

Summer music is their flowing;
Flowering plants in them are growing;
Happy life is in them all,
Creatures innocent and small;
Little birds come down to drink
Fearless on their leafy brink;
Noble trees beside them grow,
Glooming them with branches low;
And between the sunshine glancing,
In their little waves is dancing.

Little streams have flowers a many;
Beautiful and fair as any;
Typha strong, and green bur-reed;
Willow-herb with cotton-seed;
Arrow-head with eye of jet,
And the water-violet;
There the flowering rush you meet,
And the plummy meadow-sweet;
And in places deep and stillly,
Marble-like—the water-lily.

Little streams, their voices cheery,
Sound forth welcomes to the weary,
Flowing on from day to day
Without stint and without stay.
In the old times, pilgrims drank;
Here, upon their flowering bank,
Here have seen, as now, pass by
Kingfisher and dragon-fly;
Those bright things that have their dwelling
Where the little streams are welling.

Down in valleys green and lowly,
Murmuring not and gliding slowly;
Up in mountain hollows wild,
Fretting like a peevish child;
Through the hamlet, where all day
In their waves the children play,—
Running west, or running east,
Doing good to man and beast,
Always giving, weary never,
Little streams, I love you ever!"

NOTES OF TRAVELLERS.

A CITY OF THE PLAGUE.—The following account, given by Fuller, of a city labouring under the horrors of plague, cannot be perused without exciting a painful interest on the present occasion:—"We were," says he in his "Turkish Tour," "closely confined within the walls of the consulate, and all persons from without were as rigidly excluded. The gate which opened from the court into the street was strictly closed, and the only communication was through a hatch door cut in it. The key of this was not intrusted even to the servants. Each of the company took charge of it in his turn for a day; and it was his business to see that every thing supposed capable of communicating the contagion was duly purified before it was allowed to pass into the house. These precautions were, at any rate, useful, as giving a feeling of security; but I have no doubt that the distinction between such objects as are called 'susceptible,' (to use the technical phrase,) and such as are not, is frequently arbitrary, and that the *index expurgatorius* in this, as in other instances, is tinged by prejudice and caprice. Happily some of the articles of most frequent use, such as bread, iron, and wood, for example, were allowed to pass without suspicion; but meat and all animal substances, and money of every kind, were thrown, with iron tongs or shovels, into a large tub, and compelled to pass through the watery ordeal. Letters, books, and papers, on the other hand, are purified by fire, or, at least, by smoke, being placed on a sort of chafing-dish, and fumigated with a compound of drugs which is any thing but aromatic; and if it should be necessary to affix a signature to any document, a plate of glass is introduced between the paper and the hand of the writer. The cats, who in their nocturnal rambles are supposed to carry with them the seeds of contagion, are condemned to indiscriminate slaughter whenever they are seen creeping along the walls or on the housetops; and when terror is at its height, even the flies are objects of alarm, and the sports of Domitian are revived."

ANECDOTE OF NAPOLEON.—In the "Table-Talk of Cambaceres," published in Paris, there is an anecdote of Napoleon, which we shall extract; it is related by Cambaceres, and is an account of his interview with that extraordinary man. At the end of 1794, Aubry, then the president of the war committee, was jealous of General Bonaparte, and, on some occasion, reproached him with being young. "People soon get old in the battle field," replied Napoleon; "and I am just come from it." Aubry soon after preferred a charge of insubordination against the too youthful general; and Cambaceres, as a matter of course, signed his dismissal. We relate the sequel in Cambaceres' own words: "A few days after, a person knocked at my door at eight o'clock in the morning. On entering, I beheld a short, slim, sallow-faced young man, not over-nice in his toilet. His hair was smoothed down, and hanging in dog's ears, which was then the fashion. His dress was after his own fashion: his boots too short, his coat too long, his cravat ruffled, and his hat gave evidence of long service. But amid this strangeness of appearance and attire, I could not but notice a small white hand exquisitely formed; a mouth beautiful, especially when animated by a smile of benevolence or irony; and then his eyes! they were those of the lion and the eagle—two perpetual flashes of lightning—mild, terrible, interrogative, confiding, and expressing the sublime feelings of genius and magnanimity. He had the appearance of a king under the disguise of a poor suitor; or, more correctly speaking, of Jupiter ready to visit Philemon and Baucis. His voice was full, sonorous, and vibrating; it agitated the heart. His gestures were easy, simple, and noble, but always commanding. Intellectual power was manifest; in short, the fascination of this young man was magical and irresistible. The moment he appeared no one could contest his being entitled to the first place; and this was my own feeling. 'Citizen,' said he, 'I am General Bonaparte, whom you have unjustly dismissed.'"

NATIONAL CUSTOMS.

EGYPT.—During the plague season the Coptic priests recite the prayers of the dead over their congregations in the churches; and if any of them die between that day and their next meeting, their bodies are interred without the prayer being repeated.

Saturday is considered among modern Egyptians as so unfortunate a day, that it is considered wrong to commence a journey, or even to shave or cut the nails on it.

Among the singular superstitions of the Egyptians is one which renders yawning particularly obnoxious, they believing that the devil is apt to leap into a gaping mouth.

CHINA.—On dinner being announced, we were conducted to a circular table, and each provided with a pair of ivory chop-sticks, mounted with silver, a silver ladle, a small cup of soy, a saucer for the bowls out of which we were to eat, and an elegant richly-gilt silver cup, with two handles, on a stand of similar materials. This cup was used for drinking sucsung, the wine of the country, and did not contain more than the old-fashioned Chinese tea-cups. After drinking the health of one of the party, it was usual to turn the inside of the cup towards him, to show that it was empty. The wine was presented boiling-hot, and the cups replenished at every remove. In addition, each European was supplied with a knife and fork and some meat. The table was laid out with eight small dishes containing articles to whet the appetite, such as cold dried pork, called *chin-chew*, grated so fine that it resem-

bled red-coloured wool, some chips of dried salt-fish and ham, roast chicken cut into small pieces, shaped like dice, pig's tongue, salt fish and eggs mixed up with tar-oil. These delicacies were cold, remaining on the table throughout the entertainment, and were paid uncommon attention to by the Chinese, at every opportunity afforded them by the removal of the bowls. The dinner commenced with a large bowl of bird's-nest soup, from which each person helped himself; it was very insipid until flavoured with soy—the necessary condiments of salt and pepper appearing to be wholly neglected in Chinese cookery. The second dish was shark's-fin soup with balls of crab, followed by divers others, amongst which was a vegetable soup made from prepared sea-weed from the coast of Japan. This weed, which is called "*taychoy*," resembled, in its dried state, the pith found in the hollow of a quill, but in the soup the taste is similar to that of celery. There were also in the soup slices of young bamboo, and roots of the white water-lily, each having a peculiar and agreeable flavour. After the soups came stewed mutton, but as fine and tender as vermicelli; the gravy delicious. This was followed by roasted pigeons' eggs, in a very rich gravy. We found it no easy matter, however, to transfer these eggs from the bowl to our cups by means of chopsticks. The Chinese do not clean or change their chopsticks during dinner; but each thrusts his own into every dish, and helps himself throughout the repast.—*Alexander's East India Magazine.*

LIFE OF ST. PAUL.

ARTICLE II.

WHEN this event happened, the subject of it was in the height of his popularity, and in the midst of his career, as a persecutor of the Christians; he was not alone; but in the company of men of similar habits and professions; he was the inquisitor-general, and they the subalterns under his command. What took place was at noon, and in the highway. It was not the result of human contrivance or ingenuity; it was a light in the heavens, far brighter than the sun, and so powerful that it struck St. Paul and his companions to the earth. At the same moment, there was, to the apprehension of his fellow-travellers, loud thundering; but the apostle heard a voice addressing him by name. Jesus of Nazareth spake to him from the unparalleled and miraculous glory; revealed himself to him; converted him to the faith; and opened to him his future employment and destiny.

On rising from the ground, St. Paul felt that he was blind; and he was led by his friends to Damascus, where Ananias, a Christian, had been prepared, by a communication from heaven, to receive him, and to restore his sight. Such were the circumstances of this event. They were known to several witnesses; to the persecuting associates of the apostle; to Christians and others at Damascus. This thing, as St. Paul wisely said, on another occasion, was not done in a corner. Now, what I infer from all this, is, that if it had not been substantially true, and if its falsehood in any essential circumstance could have been established, it is incredible that the rulers and chief priests of the Jews, who afterwards pursued the apostle with virulence and malice, did not contradict and disprove the tale, when it was so often repeated by him in the defences which he made of his conduct before Felix, Festus, Agrippa, and Nero. But, instead of calling witnesses, instead of meeting him on the broad ground of facts, they allowed him, in every trial, to gain his cause; and contented themselves with exciting against him popular tumult and fury. The case was thoroughly sifted by friends and enemies; for the Christians were at first afraid to receive their new ally; and the story was so marvellous, and its effects so amazing on the character of the individual who related it, that it became a matter of great notoriety, and was so often discussed, that St. Paul appeals to King Agrippa, as possessing a perfect acquaintance with the fact and its principal circumstances. Indeed, he declared, in open court, and dared his enemies to contradict him:—"These things know all the Jews."

The immediate consequence of this event was, the retirement of the apostle into Arabia, for a

few weeks; during which time, it is evident, he was instructed by special revelation, in all the mystery of the doctrine of Christ; for, immediately on his return to Damascus, we are informed, "He straightway preached Christ in the synagogues, that he was the Son of God." Now, this is almost as great a miracle as his conversion. That, without the instructions of men, he should be thoroughly acquainted with all the facts in the history of Jesus; the whole compass of the sublime and pure doctrines which were taught by the other apostles, in their mutual connexion, and as they illustrate and confirm the economy of Moses; that he should possess all this knowledge, and be able readily to communicate it, not only to men already Christians, but to confound the opposition of unbelieving and prejudiced Jews, is altogether wonderful; and the conclusion is inevitable, that he was called and qualified to be an apostle by the miraculous interposition of the Almighty.

We may also reasonably conclude, as well from the history, as from the acuteness of the apostle's mind, that if he had been foully practised upon by deception and fraud, that he must in the course of years have detected the imposture. It is not conceivable, that human agency could have created such scenes as took place on the road to Damascus, and in the city itself. But if, by bare possibility it could be imagined, such circumstances might have been combined, and made to operate so as to produce a result so mighty and complete, it is not within the wide range of the possible to believe, that the agents of the plan could have effectually concealed themselves from the prying curiosity of the world; least of all, that they could have been long hidden from St. Paul himself; for, as he was to act so conspicuous a part in the great drama of delusion, his initiation into the whole arcana became a matter of necessity. But with what indignation would the apostle have repelled both the men and their artifices! How readily would he have returned to the religion he had forsaken! How eagerly would the chief priests and rulers have received him again into their confidence! With what honours would they have rewarded him! And what an agent would he have been to expose the vile imposture which had deluded and destroyed so many victims!

From the natural candour and magnanimity of his disposition, we may be convinced that he would have acted in this manner. In his conversion, he afforded an illustrious example, how entirely he could yield to his convictions. He was so candid, and so ready to admit evidence, when it fairly came before him, and so

great was his love of integrity, that he thought none could be destitute of it, but that all men must be willing to listen to truth, and to obey her dictates. This we perceive from what he says, Acts xxii. 17-21: "When I was come again to Jerusalem, I was in a trance, and saw him saying unto me, Make haste and get thee quickly out of Jerusalem; for they will not receive thy testimony concerning me. And I said, Lord, they know, that I imprisoned and beat in every synagogue those that believed on thee. And he said unto me, Depart; for I will send thee far hence unto the Gentiles." He imagined, that an account of his conversion, who once was so opposite, and the reasons of it, if fairly laid before them, must persuade them. His mind, then, was too acute to be long deceived; and his disposition too just not to resent the indignity, the moment he discovered it. The conclusion, therefore, must be, that the facts took place precisely as they are related in the New Testament. But infidelity is not easily to be repulsed. It has another poisoned arrow in its quiver, with which to assail the character and testimony of St. Paul. It seems, he was a man of sanguine temperament, and became suddenly an enthusiastic devotee. In other words, he was seized with religious insanity. But how is this charge supported? It does not appear in any part of his conduct, nor can it be proved from his numerous epistles.

Believing Christianity to be divine, he conferred not with flesh and blood, but instantly obeyed its commands. He yielded implicitly to its spirit. It was of little consequence to him with what contempt the world regarded him. "What things were gain to him, those he counted loss for Christ." If this was enthusiasm, it was the enthusiasm of animated truth, the fire of a highly intellectual spirit warmed into rapture by an intense contemplation of the first fair, and the first good.

Had St. Paul's change been the effect of mental disease, it would have carried to excess his thoughts and feelings in the direction towards which they usually pointed. If the vision which he saw in the road to Damascus had been the illusion of a disordered brain, in all probability it would have sanctioned the undertaking in which he was engaged. Mysterious and heavenly voices would have foretold the extermination of Christianity, and in the pride of his heart, he would have viewed himself as the accredited scourge of God upon the devoted Christians. His companions would have witnessed his ravings, and lamented the wreck of so fine a spirit. But that his enthusiasm should enlist him on the side of the persecuted and dishonoured sect he was commissioned to destroy, is an hallucination not to be found among the almost infinitely varied extravagancies of human insanity.

Nor was the apostle inflated with visions and revelations. He never alludes to any thing supernatural in his history but with evident reluctance, and with the deepest humility. He never rushed into danger, but always avoided it when it was in his power, and resisted it by every lawful means. We discover in him nothing of fanatical and imposing insolence. He studied the human heart, and softened rather than aggravated the prejudices he was anxious to subdue. Once he saved his life by a dexterous use of his understanding. "There was at Athens (says Lord Lyttleton) a law, which made it capital to introduce or teach any new gods in their state. Therefore, when Paul was preaching Jesus and the resurrection to the Athenians, some of them carried him before the court of Areopagus, the ordinary judges of criminal matters, and in a particular manner entrusted with the care of religion, as having broken this law and being a setter forth of strange gods." Now, in this case, an impostor would have retracted his doctrine to save his life, and an enthusiast would have lost his life, without trying to save it by innocent means. St. Paul did neither the one nor the other; he availed himself of an altar which he found in the city, inscribed "To the unknown God," and pleaded that he did not propose to them the worship of any new God, but only explained to them one whom their government had already received:—"Whom therefore ye ignorantly worship, him declare I unto you." By this he avoided the law, and escaped being condemned by the Areopagus, without departing in the least from the truth of the Gospel or violating the honour of God. An admirable proof, in my opinion, of the good sense with which he acted, and one that shows there was no mixture of fanaticism in his religion." Many similar proofs to the same effect might be adduced.

His letters furnish evidence equally convincing of "the soundness and sobriety of his judgment." "His caution in distinguishing between the occasional suggestions of inspiration, and the ordinary exercise of his natural understanding, is without example in the history of human enthusiasm. His morality is every where calm, pure, and rational; adapted to the condition, the activity, and the business of social life, and of its various relations; free from the over-scrupulousness and austerities of superstition; and from what was more particularly to be apprehended, the abstractions of quietism, and the soarings and extravagancies of fanaticism. His judgment concerning a hesitating conscience; his opinion of the moral indifferency of many actions, yet of the prudence and even the duty of compliance, where non-compliance would produce evil effects upon the minds of the persons who observed it, is as correct and just as the most liberal and enlightened moralist could form at this day."

What Lord Lyttleton has remarked of the

preference ascribed by St. Paul to inward rectitude of principle above every other religious accomplishment, is very material to our present purpose. In his first epistle to the Corinthians, xiii. 1—3, St. Paul has these words: "though I speak with the tongue of men and of angels and have not charity, I am become as sounding brass, or a tinkling cymbal. And though I have the gift of prophecy, and understand all mysteries and all knowledge, and though I have all faith, so that I could remove mountains, and have not charity, I am nothing; and though I bestow all my goods to feed the poor, and though I give my body to be burned, and have not charity, it profiteth me nothing." Is this the language of enthusiasm? Did ever enthusiast prefer that universal benevolence which comprehendeth all moral virtues, and which, as appeareth by the following verses, is meant by charity here. Did ever enthusiast, I say, prefer that benevolence, to faith and to miracles, to those religious opinions which he had embraced, and to those supernatural graces and gifts, which he imagined he had acquired? Nay, even to the merit of martyrdom! Is it not the genius of enthusiasm, to set moral virtues infinitely below the merit of faith; and of all moral virtues, to value that least, which is most particularly enforced by St. Paul; a spirit of candour, moderation, and peace? Certainly, neither the temper, nor the opinions of a man, subject to fanatic delusions, are to be found in this passage. "I see no reason, therefore," subjoins Dr. Paley, "to question the integrity of his understanding. To call him a visionary, because he appealed to visions; or an enthusiast, because he pretended to inspiration, is to take the whole question for granted. It is to take for granted, that no such visions or inspirations existed. At least, it is to assume, contrary to his own assertions, that he had no other proofs than these to offer of his mission, or of the truth of his relations." On this branch of the subject, much more might be advanced. I refer the reader, who wishes to pursue it in all its extent, to Lord Lyttleton's valuable treatise, "On the Conversion and Apostleship of St. Paul."

In drawing to a close, it will be only necessary for me to state, that from the first hour of his conversion, to the day of his death, comprehending a period of, perhaps, forty years, St. Paul never wavered in his attachment to the cause he then began to espouse. He encountered all the reproach, and endured all the sufferings which he might have anticipated at his setting out; and at last sealed his testimony with his blood. His own account of his difficulties and sorrows is simple and unadorned, and must make its way to every bosom:—

"Whereof I Paul am made a minister, who now rejoice in my sufferings for you, and fill up that which is behind of the afflictions of Christ in my flesh, for his body's sake which is the church."

"If in this life only we have hope in Christ, we are of all men the most miserable."

"Why stand we in jeopardy every hour? I protest by your rejoicing, which I have in Christ Jesus, I die daily. If, after the manner of men, I have fought with beasts at Ephesus, what advantage hath it me, if the dead rise not?"

"God forbid that I should glory, save in the cross of our Lord Jesus Christ, by whom the world is crucified to me, and I unto the world."

"Are they ministers of Christ? (I speak as a fool,) I am more: in labours more abundant, in stripes above measure, in prison more frequent, in deaths oft. Of the Jews, five times received I forty stripes save one; thrice was I beaten with rods; once was I stoned; thrice I suffered shipwreck; a night and a day have I been in the deep; in journeyings often, in perils of waters, in perils of robbers, in perils by mine own countrymen, in perils by the heathen, in perils in the city, in perils in the wilderness, in perils in the sea, in perils among false brethren: in weariness, and painfulness, in watchings often, in hunger and thirst, in fastings often, in cold and nakedness."

"I think that God hath set forth us the apostles last, as it were appointed to death; for we are made a spectacle unto the world, and to angels, and to men. Even unto this present hour, we both hunger and thirst, and are naked and are buffeted, and have no certain dwelling place; and labour, working with our own hands; being reviled, we bless: being persecuted, we suffer it: being defamed, we intreat: we are made as the filth of the earth, and are the off-scouring of all things unto this day."

Be it remembered, all this suffering arose out of a voluntary devotedness to the religion of Christ. Pleasure, wealth, and fame, would have been purchased by renunciation and apostasy.

But thus the apostle laboured, journeyed, and endured, till he obtained something like a permanent residence at Rome. He witnessed the burning of the city, and suffered martyrdom by the order of Nero, with many other Christians, who were shamefully implicated by the detestable tyrant in the guilt of having produced the conflagration.

During his imprisonment, in the constant expectation of a dreadful doom, he calmly wrote to his youthful friend and beloved convert Timothy. How much of heavenly confidence is breathed in this epistle! Who can read it without emotion? Who does not venerate and love the honoured and holy sufferer? How unlike Paine, the infidel, who quarrelled with mankind because they were insensible to his merits, and degraded himself to be revenged on his species. While the one is all vindictive fury, denouncing equally friends and foes, we behold in the other, the meekness, the philanthropy, the gentleness of Christ. Like his Divine Master,

"He loved the world that hated him,
Assail'd by scandal, and the tongue of strife,
His only answer was a blameless life;
And he that forged, and he that threw the dart,
Had each a brother's interest in his heart."

The following is part of his exquisite valedictory address to Timothy :—

"But watch thou in all things; endure afflictions; do the work of an evangelist; make full proof of thy ministry. For I am now ready to be offered, and the time of my departure is at hand. I have fought a good fight; I have finished my course; I have kept the faith. Henceforth, there is laid up for me a crown of righteousness, which the Lord, the righteous Judge, shall give me at that day: and not to me only, but unto them also, that love his appearing."

Again: "Nevertheless, I am not ashamed, for I know whom I have believed; and I am persuaded that he is able to keep that which I have committed unto him against that day."

This is a spirit which nothing but Christianity can impart; which is truly worthy of it; a spirit which rises with the difficulties it is destined to encounter; which derives from another world support under the trials of this; which is intrepid, without being harsh; kind, amidst insulting provocations; full of hope, when threatened with alarming dangers; and most solicitous for the happiness of others, when its own is exposed to the greatest peril. Let any man read this epistle and say, whether its writer can be an impostor or a fanatic. Every one must rise from the perusal inspired with exalted ideas of the truth and excellency of the Gospel; convinced that it loses nothing of its power, nothing of its attractive influence, in the hearts of its votaries, by the persecutions and afflictions which they suffer for its sake; but that, on the contrary, it becomes, on this very account, more endeared to them. This is one reason why Christianity has been invincible. Its enemies have been constrained to acknowledge, with mortification and shame, that Divine love in the hearts of Christians has been mightier than all their enmity; that, in spite of their united efforts to suppress, conquer, and destroy it, it is insuppressible, victorious, and immortal.

I would not attach unreasonable importance to the evidence of the apostle's sincerity, as it arises from this second epistle to Timothy; yet it is due to him that it should have its full weight, because it not only proves this point, but brings into view several other considerations of the highest moment. If he was a deceiver, it impeaches not only his integrity, but his humanity; and this last effort of his mind exhibits him in undiminished intellectual vigour. He was at this moment as well qualified to think, to compare, to judge, and determine, as at any former period of his life. What this epistle contains, was not

gathered from his lips during intervals from pain, and when oppressed with extreme weakness; he wrote it with his own hand. Every sentence is the result of calm deliberation. When he said, "I know whom I have believed; I am not ashamed; I am ready to be offered;" he was not hurried, or compelled thus to express himself by the ardour of his passions, the spirit of party, or the workings of fanaticism. Under the influence of these, the infidel makes his vain boast of infidelity; the zealot of the exclusive claims of his church; and the fanatic of his peculiar opinions. In that countenance, so full of mild benignity, where the eye of fire is softened by kindness, and the fine expression of energy is sobered by age, and over which piety has shed her holy lustre, we have an assurance, that what is solemnly uttered has been deliberately weighed, and that sentiments so recommended must deserve attention.

The apostle seems, in this epistle, to have summed up the results of all the most serious inquiries of his life. Having paused, considered, and taken a retrospect of all that he had known, heard, experienced, and felt of the truth of the Gospel, and the worth of his Saviour, he exclaims, "I know whom I have believed." Let this impressive and deliberate affirmation of one who had spent a long life in the service of Christianity, be set against the flippant witticisms and hasty conclusions of its adversaries, and we have nothing to fear from the contrast. The circumstances in which he was placed at this moment, and the person whom he addressed, give additional force to the declaration. He had been for some time under close confinement at Rome, at the mercy of a cruel and capricious tyrant; he had seen himself deserted by his friends in his greatest extremity; and had nothing before him but the certain prospect of being called to suffer death in the same cause to which he had devoted his life. In this situation how does he behave? Does he seem to look back with concern on his past conduct, or to regret the sacrifice he had made of all his worldly interests? Can we discover any thing that betrays a secret consciousness of guilt, or even a suspicion of the weakness of his cause? Nay, does he drop a single expression that can be interpreted as a mark of fear or discomposure of mind, in the apprehension of those gloomy scenes that lay before him? Surely if he had been an impostor, or had entertained the least doubt of the doctrines he taught, something of this kind must have escaped him when writing to so intimate a friend, with whom he could intrust all the secrets of his heart. On the contrary, upon the most calm and deliberate survey, he expresses an entire satisfaction in reflecting on the part he had acted; and earnestly recommends it to his beloved pupil to follow his example in maintaining the glorious cause even at the hazard of his life. He appears, throughout

the epistle, to have felt a strong inward conviction of the truth of those principles he had embraced, and glories in the sufferings he endured to support them, triumphing in the full assurance of being approved by his great Master, and of receiving at his hands a crown of distinguished lustre.

A behaviour like this, in one who had so considerable a share in establishing the Christian religion, and expected, in a short time, to seal his testimony to it with his blood, must be allowed a strong confirmation of the truth of those facts on which our faith depends. A consciousness of being a deceiver, in such circumstances could not have been so entirely concealed; nor can we conceive of any motive which could induce a man to persist in writing in such a strain, at the very time he must have been persuaded that the Gospel was a fable. He was losing every thing by his Christian profession, even life itself; and he could not have the most distant hope of even posthumous renown.

"Here, then," says Dr. Paley, "we have a man of liberal attainments, and in other points of sound judgment, who had addicted his life to the service of the Gospel. We see him in the prosecution of his purpose, travelling from country to country; enduring every species of hardship; encountering every extremity of danger; assaulted by the populace; punished by the magistrates, scourged, beat, stoned, left for dead; expecting, wherever he came, a renewal of the same treatment, and the same dangers; yet, when driven from one city, preaching in the next; spending his whole time in the employment; sacrificing to it his pleasures, his ease, his safety; persisting in this course to old age; unaltered by the experience of perverseness, ingratitude, prejudice, desertion; unsubdued by anxiety, want, labour, persecutions; unwearied by long confinement; undismayed by the prospect of death—such was St. Paul."

Nor can I dismiss the subject without inferring the amazing importance and infinite value of Christianity. St. Paul was a man of an enlarged mind. He could comprehend the magnitude of the claims which the Gospel advanced; and he no sooner became acquainted with its nature, than he sacrificed all on its account. To promote its success, he began with poverty and ended with martyrdom. Yet, amidst all that he endured, and in the very terrors of death, he was happy, perfectly happy; not a wish ungratified, and every hope nearly realised. Even while nature agonised and life expired, St. Paul honoured his principles by exhibiting, in the moment of trial, their superiority to the last enemy.

Every man but the Christian must view, with apprehensive dread, "the transit that shows the very soul revealed as it departs." Let the infidel, who glories in his fancied strength of mind, because he is not governed by vulgar prejudices

and superstitious fears, approach that sincere hour when things begin to appear in their true light; when the world which had deceived him is vanishing from his sight; when he feels himself drawing near that eternal existence which now assumes the air of an awful reality; and the terrors of Divine justice impose a dreadful necessity to be honest—Ah! at this moment can he rest upon his principles? Vain principles! They are swept away like light and withered leaves before the rising storm. Instead of that tranquil and affected incredulity with which he formerly dismissed the duties of piety, or sneered at its remonstrances, he is agitated by cruel and excessive fears. His heart trembles and faints within him at the prospect of a judgment to come. Does he any longer cavil at the evidences or hesitate at the incredible doctrines of religion? Does he demand new proofs of it before he will believe? No: he believes and trembles. It is not its evidences, but its comforts which he requires. It is not now the question with him, if there be a God, if there be a future state of retribution. These truths rush with fearful evidence upon his soul; and with the trembling jailer, he exclaims, "What shall I do to be saved?" He approaches the verge of an eternal existence. The past presents nothing but subjects of gloomy and self-condemning reflection—the future offers nothing but a fearful overwhelming despair. Ah! 'tis an honest hour, that tries to the bottom the foundation of infidelity. How few, then, can stand the severe scrutiny of conscience or bear the test of their own reason, when disentangled from those objects which used to deceive it! Not one, perhaps, of all that witting tribe who insult or cavil at a religion which they have never examined. When the props upon which his impiety had rested are torn from beneath the sinner, by the unrelenting hand of death, the wretched fabric falls upon his guilty head, and crushes him beneath the ruins. Is this representation drawn too high? Penitent Rochester, I appeal to the tears and confessions of thy last moments! Was not this the language of thy despair, ferocious Blount, whom thy miseries compelled to be thine own executioner? And Shaftsbury, gay and mirthful Shaftsbury! so apprehensive wert thou of the impotence of thy philosophy to support thee in this great conflict, that thou forewarnedst thy friends not to receive as genuine any sentiments on religion which thou mightest utter in the weakness of nature during her last struggles. By anticipation thou didst abjure a confession which thou wast afraid the horrors of death might extort from thee! Are not these facts in the place of volumes? Do they not speak to every heart, and plead the cause of him of whom St. Paul said, "I know whom I have believed, and I am persuaded that he is able to keep that which I have committed to him against that day?" Who does not shrink

from the bed of death on which the infidel discloses all the miseries of his condition? Who does not exclaim, "Let me die the death of the righteous, and let my last end be like his?"

In conclusion, may I not observe that Christianity, supported by such evidence, recommended by such virtue, and imparting such felicity, must finally triumph over all the opposition of the world! The victory which it obtained in the person of St. Paul, is a pledge of its future conquests till its empire shall be as universal as the necessities and the wretchedness of man. We are not to be perplexed, deceived, or confounded by circumstances. Let us fix our attention on principles and character. These are omnipotent over circumstances, let them wear ever so fearful, ever so formidable an aspect.

I have often pictured to myself the amazing contrast between the power of circumstances and the weakness of Christianity, as it must have appeared to a steady observer at the time when the apostle was imprisoned in a Roman dungeon, when all this power was summoned to crush this weakness. I have beheld the cruel and flagitious Nero on the throne of the world, and Christianity in the person of one of its most intrepid and fearless champions, bound in chains and lying at the mercy of the tyrant. And I have wondered to observe "weak things confounding the things which are mighty, and base things, and things which are despised, and things which are not, bringing to nought things that are;" the tyrant conquered when he believed that he was glutting his vengeance, and Christianity obtaining a triumph when its adversaries were exulting over its defeat. But my wonder has abated, when I have considered a contrast of another kind, not so imposing in its appearance, but infinitely powerful and altogether in favour of Christianity. The contrast I mean is a contrast of character, as distinct from circumstances. Character exalted and sublime, attracts voluntary homage and admiration, while power without character secures only the enforced and reluctant obedience of slaves. Between the throne of Nero and the dungeon of

St. Paul, there appears almost an infinite distance. On account of their outward circumstances, one, perhaps, is envied, and the other pitied. But remove these circumstances, and contrast the men. Each is a fair representative of the cause which he has undertaken to support. Christianity triumphs in the character of its apostle, and the world sinks into nothing with its degraded and despicable master. Power shall not always support the authority of ignorance, effeminacy, and vice; knowledge, manliness, and virtue shall not for ever be associated with weakness. It was from the first an unequal war which the world laboured to maintain against the Gospel. Its principles, which are from beneath, could never prevail against those of celestial origin. What was all its might in opposition to those who were full of the consciousness and the power of immortality—who were persuaded that Omnipotence was with them—who could repel the assaults of hell and earth with a sublime confidence, declaring their readiness to be offered, knowing in whom they believed, and intrusting every interest to His hands, who holds the sceptre of universal government? Such a spirit as this is great and must prevail. It is too subtle to be wounded by the sword of persecution, or to be devoured by its flames. It possesses an astonishing power of propagation. If thousands who imbibe it are for this cause hurried to the stake of martyrdom, it instantly takes possession of thousands more. In the spirit and the principles of the world, though power is engaged to defend them, there are the seeds of decay. By indulgence and operation they destroy themselves; they carry with them their own antidote in the miseries which they inflict; but the spirit and the principles of the Gospel have their birthright in futurity. Wherever they are known and felt, they gather strength and increase. All who embrace recommend them, and their progress is marked with the dignity of reason, the purity of virtue, and the enjoyments of a solid and immortal felicity.

THE OLD MAN.

THERE is an ancient man who dwells
Without our parish bounds,
Beyond the poplar avenue,
Across two meadow grounds.
And whenso'er our two small bells
To church call merrily,
Leaning upon our churchyard gate
The old man ye may see.

He is a man of many thoughts,
That long have found their rest,
Each in its proper dwelling-place,
Settled within his breast.
A form erect, a stately brow,
A set and measured mien,
The satisfied unmoving look
Of one who much hath seen.

And once when young, in care of souls,
I watched a sick man's bed,
And willing half, and half ashamed,
Lingered, and nothing said:
That ancient man, in accents mild,
Removed my shame away;
"Listen," he said, "the minister
Prepares to kneel and pray."

These lines of humble thankfulness
Will never meet his eye;
Unknown that old man means to live,
And unremembered die.
The forms of life have severed us,
But when that life shall end,
Fain would I hail that reverend man
A father and a friend.

H. A.

VESSELS OF THE ANCIENTS.

MAGNIFICENT and large as are some of our modern steam vessels, they are inferior—if we may judge from description—both in size and splendour, to vessels constructed by the kings of Egypt and Syracuse, on a scale of grandeur corresponding to the immense proportions of their sculpture and architecture. Ptolemy Philopater, king of Egypt, built a vessel four hundred and twenty feet long, fifty-six feet broad, seventy-two feet high from the keel to the top of the prow, but eighty to the top of the poop. She had four helms of sixty feet; her largest oars were fifty-six feet long, with leaden handles, so as to work more easily by the rowers; she had two prows, two sterns, seven rostra or beaks, successively rising and swelling out one over the other, the topmost one most prominent and stately; on the poop and prow she had figures of animals, not less than eighteen feet high; all the interior of the vessel was beautified with a delicate sort of painting, of a waxen colour. She had four thousand rowers; four hundred cabin-boys, or servants; marines, or sailors to do duty on the decks, two thousand eight hundred and twenty; with an immense store of arms and provisions.

The same prince built another ship, called the "*Thalamagus*," or bed-chamber ship, which was only used as a pleasure yacht for sailing up and down the Nile. She was not so long or large as the preceding, but more splendid in the chambers and their furnishings.

Hiero, king of Syracuse, built an enormous vessel which he intended for a corn-trader. Her length is not given. She was built at Syracuse, by a Corinthian ship-builder, and was launched by an apparatus devised by Archimedes. All her bolts and nails were of brass; she had twenty rows of oars; her apartments were all paved with neat square variegated tiles, on which was painted all the story of Homer's *Iliad*. She had a gymnasium with shady walks, on her upper decks; garden-pots stocked with various plants, and nourished with limpid water that flowed circulating round them in a canal of lead. She had, here and there on deck, arbours mantled with ivy and vine-branches, which flourished in full greenness, being supplied with the principle of growth from

the leaden canal. She had one chamber particularly splendid, whose pavement was of agates and other precious stones, and whose panels, doors, and roofs were of ivory and wood of the *thya* tree. She had a scholasterium, or library, with five couches, its roof arched into a *polus* or vault, with the stars embossed. She had a bath with its accompaniments, all most magnificent. She had on each side of her deck ten stalls for horses, with fodder and furnishings for the grooms and riders; a fishpond of lead, full of fish, whose waters could be let out or admitted at pleasure. She had two towers on the poop, two on the prow, and four in the middle, full of armed men, that managed the machines invented by Archimedes, for throwing stones of three hundred pounds weight, and arrows eighteen feet long, to the distance of a furlong. She had three masts and two antennæ, or yards, that swung with hooks and masses of lead attached. She had round the whole circuit of her deck a rampart of iron, with iron crows, which took hold of ships and dragged them nearer, for the purpose of destroying them. The tunnels or bowls on her masts were of brass, with men in each. She had twelve anchors. It was with difficulty they could find a tree large and strong enough for her highest mast. Great Britain—an ominous circumstance for the superiority of British oak—had the glory of bestowing upon her a sufficient tree for that purpose; it was discovered amid the recesses of Albion's forests by a swineherd. What is remarkable in the construction of this gigantic vessel is, that her sentina, or sunk, though large and deep, was emptied by one man, by means of a pump invented by Archimedes. Hiero, on finding that the *Syracusan* was too unwieldy to be admitted with safety into the harbours of Sicily, made a present of her to Ptolemy, who changed her name to the *Alexandrian*.

We may add, as a *panergon* to this long tale of a ship, that Archimedes, the Greek epigrammatist, wrote a little poem on the large vessel, which was rewarded by Hiero with one thousand measures of corn—a premium proportioned, if not to the poem, at least to the magnitude of the theme celebrated.—*Tennant*.

AN INTRODUCTION TO THE STUDY OF MORAL PHILOSOPHY.

ARTICLE I.

BY PROFESSOR WILSON.

MORAL philosophy has for its object to ascertain, as far as human reason is able to do so, the law which must regulate the conduct of man as a moral being. Inasmuch as he does not derive

this law from any authority, but endeavours to deduce it from principles founded on the nature of things, it takes the name of a *science*. Therefore, considering the object of moral philosophy,

(which is to ascertain the rule of our living,) and considering the method which it pursues, namely, by the investigation of principles—it may be said that the subject of our studies may be comprised in very few words—being denominated properly, *the science of human duty*. The first object, therefore, of the moral inquirer will be, to find those principles in the nature and constitution of things on which this law of duty of which he is in search must be grounded. For that purpose he will have to consider two subjects; *first*, the nature of the human being which is the subject of such a law; and, *secondly*, the relations in which he is placed; both his nature and his relations concurring to determine the character of moral obligation.

He has first to inquire, then, in pursuing his own studies, whether here or elsewhere, into the nature and constitution of the human being—into his physical, into his intellectual, and into his spiritual being. For this purpose he must know man, not ideally, but as he is. He must contemplate him in his highest, and also in his lowest powers. He must behold him as that powerful being which he is in the midst of creation, fearfully and wonderfully made in every part of his nature, fearfully and wonderfully made in the composition of the whole. He must endeavour to separate the various parts of that constitution, that he may make each of them the subject of distinct contemplation; but, in separating them, he must never for a moment forget that they are the indivisible parts of that complex aggregate of being and of power, which are so mysteriously united in the living man. For, in the *first* place, I have said he has a *physical* nature; and it is the most perfect of any of the kinds of living creatures of which he is one, infinitely as he is exalted above all the rest; *secondly*, I have said that he has an *intelligence* by which he is connected with the higher orders of being; *thirdly*, he has a *moral* nature, by which he can communicate with the Almighty; *fourthly*, he has a *spiritual* essence, by which he is immortal among all celestial beings. I say, then, are not all these natures and powers to be investigated by the moral inquirer?

The highest created substance, (spirit,) and matter, (the lowest,) are joined and even blended together in perfect and most beautiful union. Thus, were you to consider man merely as a part of physical nature, as united, by that animal being which he shares with all other living kinds, to the material, you might think him for a moment merely as the highest of the animal kind, for he has the finest animal life; he has senses the most perfect, and the most perfectly combining their action; he has the most exquisite animal sensibility. You might look at him, then, for a moment in this separate condition; but, in the very next moment, you would feel that all you had thus regarded as so extremely beautiful

in itself, did but constitute the frame that was to be ennobled by a celestial intelligence; for all these senses, so perfect in their structure, were so constructed that they might be fit inlets of knowledge to that intelligence; or the sensibility that fills that frame, delighting and trembling as it does with pleasure and with pain, could not otherwise have answered the purpose for which it was given; because, in that sensibility our moral nature is at first unfolded. It is just the same were you to look at his adaptation for moral action and motion. You find his structure formed for the most varied powers of nature, for the most delicate operations of all the muscular action. But the very observation carries you to that interior nature which is to use this frame; this beautiful machinery carries you to that intelligence which guides you to those works on which it may behold itself and all its powers reflected, and by which it is strengthened and raised. Thus you are led to look at the hand which performs as the peculiar and specific instrument of intelligence. If, again, you look to that most exquisite action by which the organs of his frame are made capable of forming speech, the physical action is, indeed, there most wonderful—so various, so delicate, and so expressive. But what is the sound alone, which is thus called into being? In that breath in which these organs are formed into sound, the tongue utters, and the ear receives the communication of spirit from spirit; you hear the thoughts of intelligence, the emotions of a loving or of an aching heart. In it you hear the voice of conscience itself; speaking, perhaps, with a still small voice from the inmost soul. So that even the light which breaks over the countenance, and the proud motions of the person, are all but emanations of the spirit, and are all pregnant with its hidden powers. Such, then, I say, is that physical nature which thus speaks every part of that higher nature which it enshrines.

Suppose that you are to make *intelligence* the subject of your consideration; just as well can you divide it from all the rest; for it turns you back at once to the physical nature which we are supposing you have left behind. In the very first season of life our intelligence is wrapt in sense as its first parent, impelling the infant action of the new-born limbs; and if we had not beheld and known it in its later effects, we never could have discerned it there. But not *within* the being alone does intelligence thus live by sense, for through sense it finds its union with all material nature; and from matter (which first claims its wonderful world of thought) we look on these intellectual powers in their perfection, if man might use such an expression when speaking of himself. And how high, how powerful do they appear!—how aspiring and how comprehensive! They encompass the world, and they number all the stars of heaven; yet, in the

height of their most capacious knowledge, you see them united with a nature which they cannot fathom. For *within* the human being himself is the most important subject that ever he can be called upon to know, and that is *his moral nature*. In the midst of *it* all these faculties have dwelt; from it they have drawn the materials of their noblest nature and of boundless thought. So that you cannot consider the intellect of man, in its important light, without being carried at once into the very heart of his moral nature. Go a step further, and consider what this intelligence is in the endowment of the spirit. And thus, in that spiritual consideration which the moral inquirer must attempt, (and which he is, to a certain degree, able to carry into effect,) of the acts, processes, and faculties of intelligence, he is never able to divide them from the whole human being; but finds them ministering, and ministered to, and incorporated with every part of his complex being.

Suppose, next, that you were to inquire into his *moral nature*. Having first inquired into his physical and intellectual nature, and having thus found them all blended together, you will then endeavour to inquire separately into his *moral nature*. Why, (you would have to ask,) what are its principles? we shall have to ask, and shall endeavour to explain. You would have to put its various phenomena into order, that you might make them the subject of distinct examination. But how could you separate them from all those different elements of the constitution of man with which nature has inexplicably bound them up? The moral soul, just like the intelligence, first awakens in sense. Through sense all our affections draw in their living pleasure, which is like their living blood. From sense do certainly spring all those overpowering feelings with which the whole nature of man is so often seen to struggle in vain. Pain, in which he must live and breathe, first bathes his spirit from the sense. Fear, that shocks and overmasters the soul of the strongest man, is made more terrible because it makes the heart sicken, and the very breath to choke. Or look at him through his organs of physical sense, looking on all the forms of this material world, yearning over them with the whole love of his spirit, drinking in, with profoundest emotions, to his inmost soul, images which it will bear with it in its holiest recesses, and shall pour on them the fulness of its undying regard. See him, I would say, by his eye and by his ear, manifesting (as all men do) the solemn love which he bears to the land of his birth; see him mingling with the voice of the torrent's roar, and the mountain's breath; see him gazing on the extended lines of legions stretched out in their most proud array; see how the passion for glory shall seize on his soul till he feels his brow burn with patriotic and unextinguishable fire; see him raised to the height of

all his moral greatness when he is now the idol of an earthly state; and observe how well he makes that sovereignty visible to adoring eyes, in glittering diadems, in starry gems, and on golden thrones; or see him in the power of all his faculties, suddenly prostrated in his spirit under the enchantment of one living countenance. So deeply is this his moral blended with this his physical frame, nor less deeply with his intellectual faculties; for with these he executes all its dictates, and the whole strength is then put into action to perform the service of these moral powers. But they are yet far more blended than that; for, though they be incorporated in the very essence of the moral soul, strong affections, and ardent passions, all arise out of the discernment of the intellectual mind. Reverence and awe can be felt only by the spirit; conscience itself could not pronounce if she did not judge; the soul itself without reason could not adore. Thus, then, were you to consider generally the physical, the intellectual, or the moral being of your kind, you see how they are all necessarily and inextricably united.

Were you then to leave all these observations, and attempt to fix your contemplation alone on his *immortal* spirit, how could you divide it? Would it not carry you back upon all that you had left? This spirit it is that quickened this living frame; this spirit is the intelligence; and this spirit is the moral soul. It may be separated, indeed, from that frame which at departing it leaves to dissolution; but all the thoughts which it has ever conceived, all the affections it has ever cherished, the conscience it has soiled or has kept pure—all these it bears with it, indissolubly united, when it is going to its own everlasting origin, and with the records of its mortal life, shall stand in the presence and receive the doom of its Eternal Maker. Well, thinking of such a being as man, might the great master of human nature exclaim, "What a piece of work is man! How noble in reason! How infinite in faculties! In form and motion how express and admirable! In action how like an angel! In apprehension how like a God! The beauty of the world, the paragon of the universe!"

But the moral inquirer must not stop here. It is not thus alone, which may be said to be ideal, it is not thus alone that he must contemplate his species. He must look at them as they are, as observation finds them, or as they have kept their own records in history. Let us look, then, on this being, into whose nature it shall be our object to inquire; let us look upon him in another form.

The primary physical wants of the human being are food, clothing, shelter, and defence. To supply these, man has cleared and cultivated the earth, he has invented all his various arts, he has built houses and cities. At first you see the being whose nature I have thus described, like

the other animals, labouring under the wants which their common nature produces, under sufferings to which they are alike exposed; actuated by passions which boil in their blood, by hunger, by thirst, by the inclemencies of the skies, the fears of self-preservation in the midst of powerful and implacable enemies. Hunger and thirst cultivate the earth; fear builds castles and founds cities. The *animal* is clothed by nature against the cold, and he shelters himself in his den; *man* builds his habitation, and weaves his clothing. With strong and deadly weapons, with which nature has furnished them, the animal kinds wage their wars; *he* forges swords and spears, and constructs weapons of destruction, and engines that will send them as far as his eye can mark his foe. To the animal that goes in quest of his food nature has given feet, or wings, or fins: but man—he bids the horse, the camel, or the elephant bear him; and he yokes them to his chariot. If the strong animal would cross a river, he swims: man spans it with a bridge. The most powerful of *them* stand on the beach and gaze on the ocean: man constructs a ship, and directs it whither he will. Other creatures remain content with the means nature has provided for them: but man *chooses* his element, and man makes *his* means. Can the fish traverse the waters? So can he. Can the bird fly through the air? So can he. Can the camel speed over the desert? Then shall it bear man as his burden.

But to see what man owes to his own inventive art, you must compare him, not with the inferior creatures, but with *himself*. Looking over the face of human society, you find him living, in one place, almost sharing the very life of brutes, or removed from them by innumerable differences and incalculable degrees. In one place you see him harbouring in caves, naked, living (we might almost say) upon prey, seeking from chance his almost wretched sustenance, food which he eats just as he pleases. This extreme degradation is indeed rare; perhaps no where are *all* these circumstances of destitution found together; but still they *are* found, most fearfully admonishing us of our nature. For man has there, as yet, done nothing for himself; his own hands have yet done nothing or little for him, and he is still living like a beggar on the spare alms of nature. But turn to another land, and there you see the face of nature covered with the works of his hands—there you see his habitations increased into wide-spread and stately cities—his clothing culled and fashioned from the three kingdoms of nature; for his food the face of the earth bears him tribute, and the seasons and changes of heaven concur with his own art in ministering to his wants. This is the difference man has made in his own condition by the use of his intellectual powers, awakened and guided by the necessities of his physical constitution.

"REMEMBER ME."

CREATOR of the worlds of light!
 Thou sovereign, high, and holy One!
 'Mid cherubim and seraphs bright,
 Thou sittest on thy sapphire throne.
 Low from the dust my voice I raise,
 And lift my trembling heart to thee;
 Thou searcher of man's silent ways!
 Thou Lord of life! "Remember me."

Remember me, when sorrows roll
 With tumult through my troubled breast,
 When darkening cares o'erwhelm the soul,
 And earth can give nor peace nor rest;
 And when the storm is in the sky,
 Thy bow of promise let me see;
 Then hear in heaven the suppliant cry,
 My Father, still "Remember me."

When false allurements meet my eye,
 And hidden snares my steps surround,
 O, be thy presence ever nigh!
 At my right hand be ever found.
 Guide me secure from every foe,
 Help me from every sin to flee;
 In conflict, sorrow, weal, or woe,
 Through life's short hour, "Remember me."

When death shall come, with noiseless tread,
 And bid my spirit wing her flight,
 Sustain my heart, thy comforts shed,
 And make thy promises more bright.
 And when thy kingdom comes with power
 And skies before thy presence flee,
 In nature's dread dissolving hour,
 Then, O my God, "Remember me."

CATS.

ARTICLE VI.

In our earlier days (we are now nearing the experience of threescore years of life) we were hard readers of the immortal works of Buffon and Cuvier; we have pored and pondered for many a long day over their pages, and made many marginal memoranda of numerous quadru-

pedal particularities which, at the period we speak of, arrested our attention. We noticed more especially one circumstance which, in those days, we believe was unknown; the fact, indeed, has only been accurately verified within these few years back; we allude more particularly to the

great dislike which those "delicate creatures" of whom we are now discoursing, have to water. They are in a constant hydrophobic dread of aquatic fluids, and would as soon think of flying to the moon as of touching water. Worlds would not induce them to put their paws into a puddle; and we have ascertained, by sad experiment, that a cat at sea turns up a regular four-footed Jonah, and is "at sea" in verity and truth. It was our lot some short time since to take a short sea trip with a friend, whose favourite partiality to a friendly cat was one of the most shining qualities inherent in a naturally good and generous disposition. In order to secure the favourite, and screen him (for he was a regular town Tom) from general observation, he was impaled and exported in a green baize bag, sufficiently capacious for him to turn about in at his own pleasure, with ample room, withal, to swing in, if he should feel at all so disposed. The creature had not been on board the steamship many hours before the wind began to howl, and the waves to rise in fury at their domain being trespassed on by such a vagrant intruder as a cat. The storm soon increased to a perfect tempest, and all on board were either steady at their posts or sick in their berths; confusion became worse confounded, whilst the cause of all this "pretty particular mess" lay all the time safely ensconced in the baize bag. The wind continued, meanwhile, to caterwaul most dolorously; and, to add to the dismay of the ladies in whose cabin the bagged cat was deposited, (though many were happily ignorant of the fact,) the creature began to entertain a most violent disrelish at being thus cabined, cribbed, and confined, and afforded to the melancholy maid-servant, to whose pious keeping the rude brute was confided, most evident symptoms of being anxious for a change of place; to accomplish and expedite which, the interesting creature began to kick and plunge "like mad," threatening every moment to burst the "frail tenement" of baize which confined its caperings to so small a span. Every thing that the "best skill" and the "first advice" could do was done on the occasion, to subdue the frantic state of fever in which puss appeared to be—stroking, rubbing, patting, and hushings were all resorted to in turn, but in vain. The bag was sewn up more tightly, with a view to more rigid confinement; but this did but little for us. The poor servant was then advised to sit upon the bag, an advice which she immediately followed, anxious to put a stop to the anxiety of all who were in the same secret with herself; but this failed—the vessel suddenly lurched on the larboard side, the maid was instantly thrown on her starboard beam-ends, and the cat and bag were pitched helter-skelter across the cabin, half-smothering two sea-sick children in the way, and dashing itself with a tremendous thump against the opposite bulk-

head of the vessel, and crushing a variety of basons in its way. It lay for a moment powerless and paralysed, and we were in hopes that sleep would fall upon its bewildered eyes, and bring contentment and quietude to its restless and perturbed spirit. Fortunately it did so, night came, and cat, man, and women, were all buried in deepest slumber; and by the following morn we arrived at our destination, and the cause of all our woes was let out of its prison-house. We saw Peter—that is the cat's name—a few days since; health and happiness had attended it; a rich glossy fur sits upon its back; whiskers that a bushranging Jew can show no parallel to; a tail vivid, quick, sharp, alive, and full of frolicsome vitality, make up the *tout ensemble* of a cat whose points of attraction are, in newspaper parlance, "too numerous to be more minutely particularised" in this paper.

We reside, gentle reader, in the outskirts of London, in an octagon comprising fifty-six houses surrounding a garden; and it is with us a familiar thing to hear and see numberless varieties of Chelsea cats, under every change of brood, kind, and family. It is noon; and in an alley through which there is no quadrupedal thoroughfare save for cats, there is seen a man whose cry denotes his honourable calling. "Cat's meat!" resounds through the air; children become quiet, women cease to scold, and men to swear; and in an instant every door-way is crowded with a grotesque array of grimalkins, opening their eyes, sharpening their tails, licking their whiskers, and filling the air with mighty mewings. Some more venturesome than others approach to the edge of the barrow-den, to sniff the odour of the delicious viands; but of the numbers that throng, alas! how few are satisfied! Of the many who wish, many have to wait; those who have longing lips soon give them another occupation, for the cat's-meat man—the feline Ude—has left the court, and far away up the next street is heard the welcome cry of "Cat's meat!" by expectant thousands.

Cats!—they are, without exception, the most comical animals in Christendom. They turn night into day without any compunctious visitings of conscience; their behaviour as brawlers and breeders, at the "witching time of night," is absolutely beyond all bounds; they set police and patrol alike at defiance; they will walk the streets in Piccadilly or Putney, without showing the least reserve; they will disturb the silence of a cellar, or invade the peaceful slumber of a garret; they will bounce into a boudoir or dance into a drawing-room; they will slide over the slates, roll over a roof, and pounce from pantile to parapet without the slightest let or hinderance; over the earth, above the earth, and under the earth, they roam alike, in the most unconstrained freedom; neither bars nor bolts may arrest them, neither traps nor trickery stay their speed; there is no method of

progression which they do not practise, and with the greatest success; and at night all their powers of mind and body are in full development. Passionless!—not a whit of it; love and passion ardent, warm, strong, fiery, and red-hot, animate their hearts and bosoms, from the point of the whisker to the tip of the tail; every emotion and feeling within them is “alive and kicking;” every throb of their little hearts is the precursor of a claw or a scratch; every motion of their tails exemplifies that though ever agitated, they will

be yet ever constant to their chosen fair one. “Murder will out,” so will a cat’s feelings. “Love laughs at locksmiths,” so does a cat’s warmest affections. We can imagine the overbearing potency, the never-to-be-overcome ardour of a grimalkin’s “first love;” but, alas! we cannot describe it, at least not in this chapter. We must defer the further consideration of this, as well as of other caricature curiosities concerning cats, to another chapter.

EPHON.

A DIALOGUE.

“CHILD, whither goest thou
Over the snowy hill?
The frost air nips so keen,
That the very clouds are still;
From the golden folding curtains
The sun hath not looked forth,
And brown the snow-mist hangs
Round the mountains to the north.”

“Kind stranger, dost thou see
Yonder church-tower rise,
Thrusting its crown of pinnacles
Into the looming skies?
Thither go I. Keen the morning
Bites, and deep the snow;
But in spite of them
Up the frosted hill I go.”

“Child, and what dost thou
When thou shalt be there?
The chancel-door is shut,
There is no bell for prayer;
Yester-morn and yester-even
Met we there and prayed;
But now none is there
Save the dead lowly laid.”

“Stranger, underneath that tower,
On the western side,
A happy, happy company
In holy peace abide:
My father and my mother,
And my sisters four,
Their beds are made in swelling turf
Fronting the western door.”

“Child, if thou speak to them
They will not answer thee;
They are deep down in the earth,
Thy face they cannot see.
Then wherefore art thou going
Over the snowy hill?
Why seek thy low-laid family,
Where they lie cold and still?”

“Stranger, when the summer heats
Would dry their turfy bed,
Duly, from this loving hand,
With water it is fed;
They must be cleared this morning
From the thick-laid snow:
So now along the frosted field,
Stranger, let me go.”

H. A.

FINDING OF MOSES.

“Alas! to see how the cold dew kept wetting
His childish coats, and dabbled all his hair,
Like gossamers across his forehead fair.
His pretty pouting mouth, witless of speech,
Lay half-way open, like a rose-lipp’d shell;
And his young cheek was softer than a peach,
Whereon the tears, for roundness, could not dwell,
But quickly rolled themselves to pearls and fell,
Some on the grass, and some against his hand,
Or haply wanderest to the dimpled well
Which love beside his mouth has sweetly plann’d.
Yet not for tears, but mirth and smilings bland.”

THE sanguinary edict had gone forth—“Every son that is born shall ye cast into the river;” and the agonised parents saw their helpless offspring destroyed by thousands. At this melancholy period, Moses was born. His parents looked on him, admired the beauty of his countenance, and determined to preserve his life at the hazard of their own. Three months elapsed, and his birth remained a secret; but they found it impossible

to conceal him longer. Still, however, parental affection devised another expedient. They laid him in an ark, or floating cradle, of bulrushes—the flags, or papyrus, of the Nile—and placed him on the sedgy brink of the river. His sister stood at a distance to watch the event; and while trembling at the approach of every footstep, and dreading the effect of every breeze that ruffled the stream, the daughter of Pharaoh, attended by her maids, came down to the river.

She saw the ark among the flags, and sent her maid to fetch it. And when she had opened it, she saw it, she saw the child: *and, behold, the babe wept.* What a stroke of simplicity and pathos! It not only records a minute incident, which the historian might easily have overlooked: it not only states a circumstance, natural and touching, and worthy a place in the tenderest poetry; but it seems to intimate the very manner in which the

little foundling wept. It creates no image of infantine fretfulness or passion. It tells one of tears, so gently shed, as to bespeak the meekness of the future man;—of tears which might have

fallen from that holy Babe which was laid in a manger. *And, behold, the babe wept.* It preserves the tears of the weeping babe in crystal.

REVIEW.

Ernest Maltravers. In Three Vols. Saunders and Otley.

FIRST NOTICE.

IN taking upon ourselves the duty of critics and reviewers of modern literature, we were well aware of the fearful and responsible nature of the task we were undertaking and entering upon. We were cognisant, both by thought and reflection, of the lofty situation we were to fulfil; we knew that duty—

“Stern daughter of the voice of God”—

would impel us to be careful in the vocation to which we were called, in holding up to the admiring gaze and approbation of those who looked up to us, all that was great, and good, and virtuous, and upright, in the principles which modern literature would inculcate: as well as to exhibit to the contemptuous scorn and virtuous indignation of all honest and moral men, the flattering vice, the black immorality, and the pestilential contagion of sin and uncleanness which we, alas! too surely prophesied it would be ours to meet with.

If we only cast our eyes carelessly over the lists of modern works in the “publisher’s circular,” we shall find that the ranks of every-day literature include numberless volumes of every variety both of pretension and merit. We find among their pages every phase and alternation of mental trial and intellectual thought, every mind striving to fill the little orb of readers he expects to attract around him with light, and each mind endeavouring to outdo the other in some one particular style of composition. The purposes which these authors have in view are as various as their individual capacities; they may be doubtless very good, but the means which they employ for arriving at the ends they have devised, may not be altogether so scrupulously correct. Indeed, we consider this defect to occupy a very conspicuous place in the records of modern literature; it stands out in bold prominence and relief amid many surrounding beauties and errors; it attracts the notice of the most careless reader, and is, at the same time, generally attended by so many well-pointed attributes of virtue, as to hide the natural and vicious deformity inherent in it. The heroes and heroines of modern fiction are generally persons of very questionable character and circumstance; if they are not guilty, in *propria persona*, of any great moral dereliction, they generally show a remarkable and—we had almost said—constitutional affinity for such a species of turpitude; if they are not the principal offenders, they do not scruple to aid and abet others in their progress in offensive immorality; if they have to choose between good and evil, or between virtue and vice, they will most commonly show a preference for the latter of these; they choose that side of the picture which they are themselves most capable of embellishing; and in laying on their colours, they constantly vilify the truths of nature, and antagonise the highest axioms of art. The subordinate creatures around them partake, likewise, of the full fruition of baseness and turpitude which belong to the leading character of the book; and when they ply their unholy traffic in concert, it will readily be

surmised that the atmosphere they breathe, and the earth they inhabit, become redolent both with the immoral and polluted taint of a pestilential immorality.

We could amplify these remarks to a greater extent did our time and space permit; but we shall have, we fear, many occasions to repeat them to the same purport and office as the one which has given rise to them: we allude to the work whose title is at the head of this notice.

On a former occasion, in a recent number of the *Miscellany*, the opportunity was afforded us of introducing Mr. Bulwer to the notice of our readers in the character of the historian of Athens. It was then our duty to point out those errors, both in the style and composition of the work, considered as appertaining to history, which the impression made on our minds by its perusal warranted. We have now to bring forward the merits of the same author in his humbler character of a disciple of fiction, or, in fact, a novelist—a scope of mental exercise and thought for which, we believe, his talents more eminently fit him, than for the prouder one of a modern Grecian historian, which he has so lately assumed.

We cannot convey to our readers a better idea of this work—Mr. Bulwer’s latest effort—than by giving an analysis of its contents, and offering some critical remarks upon them as we proceed, and making such quotations as we believe may best place the genius and talents of its author in their fairest light before our readers.

The story opens with the return of Ernest Maltravers, the young hero, from the University of Göttingen to England; he is benighted on a dark and savage moor, on the borders of which is a hovel, where he accepts a night’s lodging, to escape from the storm. The dwellers in this hut are a ruffian, Luke Dorvill, and Alice his daughter. The slumbering murder of this man’s character is aroused by the sight of the hero’s gold watch, and the heart of the girl Alice is struck by the looks of her father. She warns Maltravers of his danger, and he escapes, expressing his gratitude to his beautiful deliverer, by begging her to come and meet him in the neighbouring town on the following day. This she does, and flees from her father to Ernest’s arms. The pseudo-attachment that springs up between them wears a somewhat equivocal character; and the mock contrast (which, by the bye, is very badly made out) between the artful depth and hypocrisy of Maltravers on the one hand, and the uneducated intelligence and simplicity of Alice on the other, approaches more nearly to the ridiculous than the sublime. Maltravers finding her simplicity too great for him, resolves to educate her himself. This, however, he soon tires of, and hires a writing and a reading master to finish her education. This is done so well, that she soon becomes a second Juliet—faints away, and performs her part so much “to the life,” that the usual consequences result. After which, their dream of love is fortunately broken in upon by the newspaper intelligence of the alarming illness of the hero’s father. This affords a very excellent pretext for leaving Alice, which he immediately does. Mal-

travers' father dies; and during his absence the cottage is broken open for plunder, and Alice being discovered by her father, who is one of the house-breakers, is carried off by him. All trace of the retreat of Alice is fruitless.

Ernest Maltravers re-appears in Italy in one of those noble palazzo-halls of Naples where music and moonlight make a very carnival of beauty. Valerie de St. Ventadour is here the heroine. She soon obtains an intimate footing with Ernest; and though married, she scruples not to accept of a declaration of love from her young friend; and after giving him twenty-four hours to reflect on the consequences of his midnight folly, she addresses him in mock heroics, coolly requesting him to consider her as his *friend* for life. After a while our hero returns to England, and, by the advice of his guardian, Cleveland, he mingles in many of the gay and busy scenes of what, in fashionable language, is called a London life, and of which we meet with so many in the novels of Mr. Bulwer. Of this, however, our hero soon tires:

"At length—just when London begins to grow most pleasant, when flirtations become tender, and water-parties numerous—when birds sing in the groves of Richmond, and whitebait refresh the statesman by the shores of Greenwich—Maltravers abruptly fled from the gay metropolis, and arrived, one lovely evening in July, at his own ivy-grown porch of Burielgh.

"What a soft, fresh, delicious evening it was! He had quitted his carriage at the lodge, and followed it across the small but picturesque park alone, and on foot. He had not seen the place since childhood—he had quite forgotten its aspect. He now wondered how he could have lived any where else. The trees did not stand in stately avenues, nor did the antlers of the deer wave above the sombre fern; it was not the domain of a grand seigneur, but of an old, long-descended English squire. Antiquity spoke in the moss-grown palings, in the shadowy groves, in the sharp gable-ends and heavy mullions of the house, as it now came in view, at the base of a hill covered with wood, and partially veiled by the shrubs of the neglected pleasure-ground, separated from the park by the invisible ha, ha. There, gleamed in the twilight the watery face of the oblong fish-pond, with its old fashioned willows at each corner; there, grey and quaint, was the monastic dial, and there was the long terrace-walk, with discoloured and broken vases, now filled with the orange or the aloë; which in honour of his master's arrival, the gardener had extracted from the dilapidated green-house. This very evidence of neglect around, the very weeds and grass on the half-obliterated road, touched Maltravers with a sort of pitying and remorseful affection for his calm and sequestered residence. And it was not with his usual proud step and erect crest, that he passed from the porch to the solitary library, through a line of his servants—the two or three old retainers belonging to the place were utterly unfamiliar to him, and they had no smile for their stranger lord."

It has been stated, in reference to this work, among circles who, as the newspapers say, are "likely to be well-informed," that in the delineation of the character of Ernest Maltravers, Mr. Bulwer has endeavoured to shadow forth his own—a species of bravery which he evidently fails to accomplish, and of which we shall have more to say on a future occasion. In accordance, however, with this design he makes his hero an author, and the following quotation refers to this perilous task.

"Let no man tempt gods and columns without weighing well the consequences of such an experiment. He who publishes a book, attended with a moderate success, passes a mighty barrier. He will often look back with a sigh of regret at the land he has left for ever. The beautiful and decent obscurity of hearth and home is gone. He can no longer feel the just indignation of manly pride when he finds himself ridiculed or reviled. He has parted with the shadow of his life. His motives may be misrepresented, his character belied, his manners, his person, his dress, the 'very trick of his walk,' are all fair food for the cavil and the caricature. He can never go back, he cannot even pause, he has chosen his path, and all the natural feelings that make the nerve and muscle of the active being, urge him to proceed: to stop short is to fail. He has told the world that he will make a name, and he must be set down as a pretender, or told on till the boast be fulfilled. Yet Maltravers thought nothing of all this when, intoxicated with his own dreams and aspirations, he desired to make a world his confidant: when from the living nature, and the love of books, and the mingled result of inward study and external observation, he sought to draw forth something that might interweave his name with the pleasurable associations of his kind. His easy fortune and

lonely state gave him up to his own thoughts and contemplations; they suffused his mind, till it ran over upon the page which makes the channel that connects the solitary fountain with the vast ocean of human knowledge. The temperament of Maltravers was neither irritable nor fearful: he formed himself, as a sculptor forms—with a model before his eyes, and an ideal in his heart. He endeavoured with labour and patience to approach nearer and nearer with every effort to the standard of such excellence as he thought might ultimately be attained by a reasonable ambition; and when at last his judgment was satisfied, he surrendered the product with a tranquil confidence to a more impartial tribunal.

"His first work was successful; perhaps from this reason, that it bore the stamp of the honest and the real. He did not sit down to report of what he had never seen, to dilate on what he had never felt. A quiet and thoughtful observer of life, his descriptions were the more vivid, because his own first impressions were not yet worn away. His experience had sunk deep, not on the arid surface of mature age, but in the fresh soil of youthful emotions. Another reason, perhaps, that obtained success for his essay was, that he had more varied and more elaborate knowledge than young authors think it necessary to possess. Whether his style was eloquent or homely, it was still in him a faithful transcript of considered and digested thought. A third reason why Maltravers obtained a prompt and favourable reception from the public was, that he had not hackneyed his peculiarities of diction and thought in that vast of all schools for the literary novice—the columns of a magazine. Periodicals form an excellent mode of communication between the public and an author already established, who has lost the charm of novelty, but gained the weight of acknowledged reputation; and who, either upon politics or criticism, seeks for frequent and continuous occasions to enforce his peculiarities and doctrines. But upon the young writer, this mode of communication, if too long continued, operates most injuriously both as to his future prospects and his own present taste and style. With respect to the first, it familiarises the public to his mannerisms, (and all writers worth reading have mannerisms,) in a form to which the said public are not inclined to attach much weight. He foretastes in a few months what ought to be the effect of years, namely, the wearing a world soon saturated with the *longueurs perdus*. With respect to the last, it induces a man to write for momentary efforts, to study a false smartness of style and reasoning, to bound his ambition of durability to the last day of the month, to expect immediate returns for his labour, to recoil at the 'hope deferred' of serious works, in which judgment is slowly formed. The man of talent who begins young at periodicals, and goes on long, has generally something stunted and crude about both his compositions and his celebrity. He grows the oracle of small coteries, and we can rarely get out of the impression that he is cockneyed and conventional."

We conclude this article by quoting some of these beautiful passages which, whether they bespeak poetry or philosophy, whether as aphorism or sentiment, are truly pearls of great beauty; and thus, "at random strung," we present some of them to our readers:—

"There is a sentiment in all women, and sentiment gives delicacy to thought, and tact to manner. But sentiment in men is generally acquired, an offspring of the intellectual quality; not, as with the other sex, of the moral.

"The refinement of a graceful mind and a happy manner a very contagious.

"There was a time when all information was given orally, and probably the Athenians learnt more from hearing Aristotle than we do from reading him. It was a delicious revival of Academe, in the walks, or beneath the rustic porticoes of that little cottage, the romantic philosopher, and the beautiful disciple! And his talk was much like that of a sage of the earth world, with some wistful and earnest savage for a listener, in the stars and their courses, of beasts, and birds, and fishes, and plants and flowers; the wide family of nature: of the beneficence and power of God; of the mystic and spiritual history of man.

"We are apt to connect the voice of conscience with the stillness of midnight. But I think we wrong that innocent hour. It is that terrible 'next morning,' when reason is wide awake, upon which remorse fastens its fangs. Has a man gambled away his all, or shot his friend in a duel, has he committed a crime, or incurred a laugh, it is the next morning, when the irretrievable past rises before him like a spectre, that doth the churchyard of memory yield up its grisly dead: then is the witching hour when the foul fiend within we can least resist, perhaps, but most torment. At night we have one thing to hope for, one refuge to fly to—oblivion and sleep! But in the morning, sleep is over, and we are called upon coldly to review, and re-act, and live again the waking bitterness of self-reproach.

"Her whole soul was with him; she gave him back in love the spirit she had caught from him in knowledge. And the love that had led to the wrong, should, by fidelity and devotion, take from it the character of sin.

"The conscience is the most elastic material in the world. To-day you cannot stretch it over a mole-hill, to-morrow it takes a mountain.

"Eros and Psyche are ever united, and love opens all its

petals of the soul.—The code of heaven is gentler than that of earth, and does not declare that ignorance excuseth not the crime.

"Middle life is never with to-day, its home is in to-morrow, anxious, and scheming, and desiring, and wishing this plot ripened, and that hope fulfilled, while every wave of the forgotten time brings it nearer and nearer to the end of all things. Half our life is consumed in longing to be nearer death.

"It is a wild and weird scene, a noble English park at midnight, with its rough forest-ground broken into dell and valley, its never-innovated and mossy grass, overrun with fern, and its immemorial trees, that have looked upon the birth, and look yet upon the graves, of a hundred generations. Such spots are the last proud and melancholy trace of Norman knighthood and old romance, left to the laughing landscapes of cultivated England. They always throw something of shadow and solemn gloom upon minds that feel their associations, like that which belongs to some ancient and holy edifice. They are the cathedral aisles of Nature, with their darkened vistas and columned trunks, and arches of mighty foliage. But in ordinary times the gloom is pleasing, and more delightful than all the cheerful lawns and sunny slopes of the modern taste.

"Of the future there is no other prospect but hope!

"Nine times out of ten it is over the Bridge of Sighs that we pass the narrow gulf from youth to manhood. That interval is usually occupied by an ill-placed or disappointed affection. We recover, and we find ourselves a new being. The intellect has become hardened by the fire through which it has passed. The mind profits by the wrecks of every passion, and we may measure our road to wisdom by the sorrows we have undergone.

"People always gain when they make a new acquaintance.

"We should begin life with books, they multiply the sources of employment; so does capital; but capital is of no use unless we live on the interest; books are waste-paper unless we spend in action the wisdom we get from thought.

"It seldom happens that we are very strongly influenced by those much older than ourselves. It is the senior of from two to ten years that most seduces and enchants us. He has the same pursuits, views, objects, pleasures; but more art and experience in them all. He goes with us in the path we ordained to tread, but from which the elder generation desires to warn us off.

"There is very little influence where there is not great sympathy.

"However we may darken and puzzle ourselves with fancies and visions and the ingenuities of fanatical mysticism, no man can mathematically or syllogistically contend that the world which a God made, and a Saviour visited, was designed to be damned.

"Nothing disappoints a stranger more than to see, for the first time, the woman to whom the world has given the golden apple. Yet he usually, at last, falls into the popular idolatry, and passes with inconceivable rapidity from indignant scepticism into superstitious veneration. In fact, a thousand things besides mere symmetry of feature, go to make up the Cytherea of the hour—tact in society, the charm of manner, a nameless and piquant brilliancy. Where the world find the Graces they proclaim the Venus. Few persons attain pre-eminent celebrity for any thing, without some adventitious and extraneous circumstances which have nothing to do with the thing celebrated. Some qualities or some circumstances throw a mysterious or personal charm about them.

"All silent people can seem conventionally elegant.

"Conversation is the touchstone of the true delicacy and subtle grace which make the ideal of the moral mannerism of a court.

"Our life is a lounge from the cradle to the grave.

"The worst fatigue is that which comes without exercise.

"Some people seem born with the temperament and the tastes of genius, without its creative power; they have its nervous system, but something is wanting in the intellectual; they feel acutely, yet express tamely.

"When we have known real adventures we grow less morbidly sentimental. Life is a sleep in which we dream most at the commencement and the close; the middle part absorbs us too much for dreams.

"Maltravers was an admirable scholar. The stores of the immortal dead were as familiar to him as his own language. The poetry, the philosophy, the manner of thought, and habits of life, of the graceful Greek and the luxurious Roman, were a part of knowledge that constituted a common and household portion of his own associations and peculiarities of thought. He had saturated his intellect with the Pædæus of old; and the grains of gold came down from the classic Timolus with every tide. This knowledge of the dead, often so useless, has an inexpressible charm when it is applied to the places where the dead lived. At Balm, Pompeii, by the Virgilian Hades, the ancients are society with which we thirst to be familiar.

"What a new step in the philosophy of life does a young man of genius make, when he first compares his theories and experience with the intellect of a clever woman of the world! Perhaps it does not elevate him, but how it enlightens and refines! What numberless minute yet important mysteries in human character and practical wisdom does he drink, unconsciously,

from the sparkling *persiflage* of such a companion! Our education is scarcely complete without it.

"In the last days of the Roman republic, a *coup d'œil* of their social state might convey to us a general notion of our own. Their system, like ours, a vast aristocracy, rather than a monarchy; an aristocracy heaved and agitated, but kept ambitious and intellectual by the great democratical ocean which roared below and around it; an immense distinction between rich and poor; a nobility, sumptuous, wealthy, cultivated, yet scarcely elegant or refined; a people with mighty aspirations for more perfect liberty, but always liable, in a crisis, to be influenced and subdued by a deep-rooted and antique veneration for the very aristocracy against which they struggled; a ready opening through all the walls of custom and privilege for every description of talent and ambition; but so deep and universal a respect for wealth, that the finest spirit grew avaricious, gripping, and corrupt, almost unconsciously, and the man who rose from the people did not scruple to enrich himself out of the abuses he affected to lament; and the man who would have died for his country, could not help thrusting his hands into her pockets. Cassius, the stubborn and thoughtful patriot, with his heart of iron, had, you remember, 'an itching palm'; yet what a blow to all the hopes and dreams of a world, was the overthrow of the free party after the death of Cæsar! What generations of freemen fell at Philippi! In England, perhaps, we may have ultimately the same struggle. In France, too, we already perceive the same war of elements which shook Rome to her centre; which finally replaced the generous Julius with the hypocritical Augustus; which destroyed the colossal patricians, to make way for the glittering dwarfs of a court, and cheated a people out of the substance with the shadow of liberty. How it may end in the modern world, who shall say? But while a nation has already a fair degree of constitutional freedom, I believe no struggle so perilous and awful as that between the aristocratic and democratic principle. A people against a despot, that contest requires no prophet; but the change from an aristocratic to a democratic commonwealth is, indeed, the 'wide, unbounded prospect' upon which rest 'shadows, clouds, and darkness.' If it fail, for centuries is the dial-hand of time put back; if it succeed, why then man will have colonised Utopia.

"The press is not only the safety-valve of the passions of every party, but the great note-book of the experiments of every hour, the homely, the invaluable ledger of losses and gains. The people who keep that tablet well never can be bankrupt.

"There was one thing that will ever keep the ancient world dissimilar from the modern. The ancients knew not that delicacy in the affections which characterises the descendants of the Goths; they gave up to the monopoly of the senses what ought to have had an equal share in the reason and the imagination. Their love was a beautiful and wanton butterfly; but not the butterfly which is the emblem of the soul.

"Perhaps we pass our lives happier without love than with it. And in our modern social system, I think we have pampered love to too great a preponderance over the other excitements of life. As children, we are taught to dream of it; in youth, our books, our conversation, our plays, are filled with it. We are trained to consider it the essential of life; and yet the moment we come to actual experience, the moment we indulge this inculcated and stimulated craving, nine times out of ten we find ourselves wretched and undone. This is not a world in which we should preach up, too far, the philosophy of love.

"It is a bad thing for a clever and ardent man not to have some paramount object in life.

"The policy of fear keeps many of us virtuous. Sin might not be odious if we did not tremble at the consequences even of appearances.

"Gaming is a moral drunkenness that is worse than the physical.

"Error is sometimes sweet; but there is no anguish like an error of which we feel ashamed.

"There is no unhappier wretch than a man who is ambitious, but disappointed; who has the desire for fame, but has lost the power to achieve it; who longs for the goal, but will not and cannot put away his slippers to walk to it.

"What so fatal to a bold and proud temper as to be at war with society at the first entrance into life? What so withering to many aims and purposes as the giving into the keeping of a woman, who has interest in your love, but not in your fame, the control of your future destinies?

"If we do not fulfil what nature intended for our fate, we become either morbid misanthropes or indolent voluptuaries, wretched and listless in manhood, repining and joyless in old age.

"There is in the affections themselves so much to purify and exalt, that even the error of an unlawful love, conceived without a cold design, and wrestled against with a noble spirit, leaves the heart more tolerant and tender, and the mind more settled and enlarged. The philosophy limited to the reason puts into motion the automata of the closet; but to those who have the world for a stage, and who find their hearts are the great actors, experience and wisdom must be wrought from the philosophy of the passions."

PEREGRINE PROSY'S SECOND LETTER TO THE PUBLISHERS.

Twaddle-Hall,
Nov. 1st, 1837.

GENTLEMEN,

I CAN readily conceive the intense anxiety with which you must have awaited my second communication. Matters of vast moment to the human race at large have alone delayed it until now. The promise conveyed in my first epistle, I regret to say, I am unable fully to realise. On looking over the MSS. necessary to the compilation of that portion of my unfinished works, entitled "The Life and Opinions of an Oyster," I find that many of Mr. Native's letters, especially those immediately preceding his marriage, have, through the intervention of sea-weed and other marine matter, so adhered to each other that they cannot possibly be separated without rendering them for the most part illegible. I regret this the more, because, although my memory will furnish me with all the important facts, the numerous great, and good qualities of my subject would be best developed in his correspondence. As I believe no biography of Mr. Native has hitherto appeared, it may not be amiss to furnish you here with a very brief sketch of his character.

Mr. Native's demeanour was ever quiet and inoffensive. As a husband and father his conduct was most exemplary. Fortunately for him, he found in Miss Lillywhite an oyster of congenial temperament and disposition; so that parents and progeny appear to have avoided disension, pursuing the same course of life, and guided by exactly similar tastes. At a very early age Mr. Native exhibited a strong predilection for the sea; but he never undertook a voyage, however short. He was contemplative rather than active. Some have thought that he was not sensitive, but the fact is that he was of a peculiarly soft and penetrable nature. He was never known to take advantage of anybody. He was perfectly without guile, and, as good dinners have the effect of making human beings communicative, so he was most *open* at feeding time.

Mr. Native's most laborious work was "Observations on the Ebb and Flow of the Tide." The powers of his mind were inconceivable. A poet he undoubtedly was, and how could he be otherwise, placed in the midst of one of the most sublime objects in creation? It will be believed that he was highly imaginative, however mystical, when I state that it was acknowledged by all capable of judging that he was *Shelly all over*. Many authors have had favourite modes of study; Sheridan wrote at night, by the light of a multitude of wax-candles: others have preferred walking, riding, or lying; the latter was Native's plan—he always remained on his *bed*. In figure he was squat and corpulent—"more fat than

bard beseems." In fact, he was nearly as broad as long—the effect doubtless of his sedentary habits. He was of a fair complexion, but had a somewhat dark beard. His nearest connexions never saw him decidedly in a passion, yet, it is said, if any thing offensive to him entered his residence he was apt to be rather snappish; closing his doors so suddenly that the intruder was sometimes crushed between them. He lived a few miles from Colchester. His residence exteriorly was by no means attractive, but, within, it was smooth and white as polished ivory. He had the happiness at all times to be closely surrounded by his kindred and connexions. I am sorry to say, to his amiable qualities there was one sad exception. At a very early age he took to *drinking*; but it must be acknowledged he was placed in circumstances of peculiar temptation.

The decease of Mr. Native speedily followed a journey which he took to the metropolis, accompanied by many of his relatives. It is reported that he was openly stabbed in one of the shops of London, and carried away in a *shell*. His death, however, may be accounted for, without resorting to a supposition so discreditable to the police. When it is recollected that he never before travelled, and had long been confined to his *bed*, it is not difficult to conceive that a journey from Colchester to London might be fatal to his delicate constitution.

I proceed to give a few fragments of his correspondence, at a very important period of his existence. Why they are fragments has already been explained. The following extract appears to be part of the first letter which he addressed to his intended bride—the commencement is unfortunately illegible.

"* * * A feeling which has latterly convulsed my whole frame; and almost occasioned me to doubt my own identity. Formerly I was philosophical—contemplative; now I am—I know not what! I was sleek, and somewhat stout; now there is little of me left, excepting my beard, and the gristly portions of me thereunto adjoining. I am a 'living skeleton.' In my case is realised the wish of Hamlet, when he exclaimed 'O that this too, too solid flesh would melt.' Mine *has* melted; if not 'into thin air,' into thin water. The serenity of my mind, too, is grievously disturbed; and I am so nervous that the most trivial incident causes me to shake like seaweed in the wind. Know, thou dearest and loveliest of she-oysters! thou art the cause of all this. Thy charms have proved to me that a philosophy almost stoical is not invincible. Tell me, then, if there is one ray of hope for me—if, in short, I may call thee mine. I have food in abundance, and, in addition to all which my

3 D

necessities demand, I possess accumulated property in the shape of a very handsome pearl. Say then, may I prosecute this matter farther? Let me hear at your very earliest convenience. And, O! refuse me not hastily, for I am so excited, that in that case I fear I shall be tempted to —

* * * *

The remainder of this sublime and very important letter I am unable to decipher, from the cause already stated. Miss Lillywhite's reply is, fortunately, entire.

*Greenstone Creek,
Feb. 14th, 1830.*

DEAR MR. NATIVE,

Yours of yesterday astonished me not a little. I have consulted mamma on the subject, and she quite agrees with me that I am much too young to undertake the duties of a wife, and those other duties which may possibly be consequent thereon. I beg, therefore, you will think no farther of the matter. I cannot, however, conclude without assuring you that I am much flattered by your good opinion; and that if I could consent thus early to exchange the protection of my mamma for that of any other, there is no one to whom I would sooner commit my future destiny than to yourself.

Yours, respectfully,
LILLYWHITE.

Mr. Native, Next-layer.

*Next-layer,
Feb. 14th, 1830.*

MY DEAR LILLYWHITE,

Anxiously, most anxiously, did I peruse the earlier portion of your kind, and—ten thousand thanks to you—prompt reply to my letter. I read there, as it were, my death-warrant; but the latter sentences cast into my mind the beams of hope—I fancied I saw in them a reprieve. Confirm me in this hope, dearest Lillywhite, for I do not see in your objections aught that should keep us asunder. That you are young, is true; but it is also true that you will be less young each day that you live. So far from your exchanging the protection of your mamma for mine, by union with me, you will insure the society and protection of both; for our shells are so immediately in each other's neighbourhood, that I trust we should ever maintain the affectionate intercourses of near relationship with your mamma; to solace whose declining years will always be one of the chief pleasures of your devoted Beardy.

Reconsider the subject, then, I entreat you, dearest: and if, upon reconsideration, you can arrive at a result more favourable to me, endeavour to win over to our interest your excellent mamma, for whose matronly and unblemished virtues, no oyster in existence has greater reverence than, beloved Lillywhite,

Yours, till eaten,
BEARDY NATIVE.

Of Miss Lillywhite's reply I have endeavoured, with great pains, duly estimating the importance of the subject, to decipher the whole, but have only succeeded as far as the earlier portion of her envelope letter is concerned.

*Greenstone Creek,
Feb. 15th, 1830.*

MY DEAR BEARDY,

I cannot disguise from you that the perseverance you have displayed in the matter on which you communicated with me a few days since, has inspired me with a reciprocal attachment. This I have confessed to mamma; and, with her approbation, I beg to inform you that your addresses will hereafter be favourably received by me. I must, however, entreat you to postpone the period for changing my condition as long as possible. Mamma will be glad of an interview with you when convenient.

Yours, very truly,
LILLYWHITE.

MY DARLING BEARDY,

The enclosed was dictated by mamma, and having discharged my duty by obeying her dictation thus far, I shall now gratify my inclination by adding a few sentences of my own. Know then, darling Beardy, I love you, and have long loved you, but feared, until I received yours of the 13th inst., that I had no chance of gaining your affections. Believe me, I will be true to you till death. O hasten the time when we shall be one, till the fatal Dredger "us do part." I was dreaming of you last night, dear Beardy. I thought we had been conveyed a long, long way. The journey was a most uncomfortable one; and, among other inconveniences which I endured, a part of my upper shell was chipped off. Arrived at our destination, we were crowded, with many others, in a small round wooden vessel, filled with salt water, indeed, but as inferior to our native element as all other oysters are to you, dear Beardy; all was stagnant and tideless. I trembled excessively; but it was for you I feared.

Presently, having left my shells sufficiently apart to see between them, I beheld a stupid looking being, of the man species, with my darling Beardy in one claw, and an ugly, sharp-pointed instrument in the other. With the latter I thought he forced open my dear one's shells, and, tearing him from them, handed him to a creature whom I heard called a Dando. He had small, keen eyes; a chubby face; a large mouth, lined with a double row of formidable grinders. As he raised you towards the awful chasm, I became so agitated that I awoke. Instantly

* * *

The loss of the remainder of this letter cannot be too much deplored. Enough is spared, however, to show that Mr. Native made choice of a congenial helpmate. Confraternal evidence of

his domestic happiness will fortunately be found to exist abundantly in my narrative.

With a specimen of my "Esquimaux Melodies," I will close these extracts. Bear in mind, however, that either of the works named in the list already sent to you will be submitted for your inspection if required.

ESQUIMAUX MELODIES.

MELODY LXXIV.

1.

ALL is dark and drear, for the lasy sun
Is absent, and has been a month or more;
And his holiday is but just begun,
He will skulk months yet, as he did of yore.
Never mind that!
Here's liver, and entrails, and lights to munch,
So gobble we! gobble we! crunch! crunch! crunch!

2.

The wind glides over the ice and snow,
Keen as the edge of a sharpened spear!
Heed not! we have rein-deer and fish, oh! oh!
Here are twenty-five pounds for each, or near!
Work away, boys!

Here's liver, &c.

3.

The gaunt wolves howl, the white bears growl,
They'd very much like with us to dine;
They may lick their jaws, and another way howl,
There'll be plenty for all—when the weather
grows fine.

Shovel it down!

Here's liver, &c.

4.

Who is so blest as the brave Esquimaux!
All his garments of skin, with the fur within;
His but half-buried in frozen snow;
And with seal's-flesh crammed quite up to the chin.
Oh, dainty fare!

Here's liver, &c.

5.

They tell us of southern climes, far away!
Where, because all is brilliant, green, and warm,
The effeminate sun struts every day,
As if our cold breezes would do him harm.
There let him stay!

Here's liver, &c.

6.

What know they of eating and happiness there,
As over their fire-dried mutton they gloat?
While we chew the reeking paunch of a bear,
Or the fish that flaps his tail in our throat.
At it again!

Here's liver, &c.

7.

Hurra! hurra! The north-lights play!
Our squaws for us are engaged in toil;
While we have nothing to do all day,
But gobble down flesh, and guzzle down oil.
Never cry stop!

Here's liver, and entrails, and lights to munch;
So gobble we! gobble we! crunch! crunch! crunch!

And now, gentlemen, I await your reply.
What that reply will be I can no more doubt
than that the sun will rise to-morrow. Pray put
me in correspondence with your printer im-
mediately; and let me know on what day you in-
tend that the first volume shall appear; and, by
the way, will you have the kindness to remit me
fifteen hundred pounds, on account of my share
of the profits, and thereby oblige,

Gentlemen,

Your very obedient servant,

PEREGRINE PROSY.

Messrs. Ward and Co., Paternoster-row.

N.

YOUTHFUL HOURS.

Oh! I HAVE oft been out at even-tide,
When the soft music of the night-winds sighed
Over the musky flowers;
When in her skiey halls the crescent moon,
With all her beauteous stars, kept festal noon,
Through midnight's voiceless hours.

Then my young heart, as yet from sorrow free,
Throbb'd with the rapture and the guileless glee
Youth's hour alone may know;
That golden time when all around is bright,
And the rapt spirit, lull'd in rich delight,
Dreams not of coming woe.

Of! I have thought, as on the sky I gazed,
With its huge arch of blue so high upraised,
How sweet to wander there!
From star to star to take my joyous way,
Drink from the streams of youth, and while I stray,
The spheres' soft music hear;

To commune with the spirits that abide
Near to the crystal river's verdant side,
Where flowrets breathe their sighs;
To gaze on scenes so bright, so passing fair,
While suns pour forth perpetual radiance there,
And pleasure never dies.

Oh! I have longed for wings, to soar above
The path in which the circling planets move
In swift aerial dance;
To gaze on worlds man never yet hath seen,
To tread where yet no mortal foot hath been,
And onward still advance.

"Vain, vain delusive hope," my spirit cried;
And then methought a gentle voice replied,
"Cling not too fondly here,
And glad from earth to yonder beauteous skies
When time is o'er, thy spirit shall arise—
Heaven's holier, happier sphere.

"Learn in the morning hour of youth to know
Thy God, from whom thy richest blessings flow—
To Him thy homage pay;
Give him thy heart—thy first affections give,—
And in the world of light thy soul shall live
When earth has passed away."

Thus spake a voice unseen—I stood alone—
Yet still I heard that sweet, that gentle tone
Whose music soothed the soul;
Of! now I hear it softly murmuring nigh,
When mute I gaze on starry worlds that high
In glittering glory roll. T. W. A.

THE COMPASSION OF JESUS,

TO THE WIDOW OF NAIN.

THIS compassion is distinguished by peculiar characteristics. With many, compassion is little more than a blind impulse, a mere selfish emotion, which ceases with the painful scenes or objects by which it is immediately excited. It acts in them simply as a call—a demand of nature to relieve the miserable, and they obey it as a mere propensity or appetite. Even in this state it is a merciful provision of the Creator to secure, to a certain extent, the well-being of his creatures, by constituting them the guardians of each other's happiness. It is, however, capable of great improvement: from an impulse, it may rise to the dignity of a principle; from an uneasy and fitful sensation, it may become a delightful and a perpetual energy; from a mere dictate of selfishness, it may emerge into an expansive and generous philanthropy.

This was its character as it shone forth in the beneficent words and actions of Jesus of Nazareth. It flowed from an enlightened benevolence, intimately acquainted with all the miseries that afflict mankind, and seeking its constant gratification in alleviating and removing them.

If we would indulge the finest sensibilities of our nature, if we would imbibe the spirit of god-like compassion, and share in its exquisite enjoyments, we must follow the Son of God, we must become the attendants of Him who went about doing good. In his footsteps we may trace the human existence in every stage of its progress; we may trace its pains, its sorrows, its disappointments, its decay and dissolution, not by fixing our eyes on those calamities themselves, but on the remedies which are opposed to them. We may trace them, as we trace the windings of some mighty river, by the lofty embankments which are thrown up to check its fury and repress its ravages. Perhaps in the whole land of Judea, a sufferer so heart-broken was not to be found as this poor, desolate, and afflicted woman. We feel, naturally feel for the delicacy of her sex, and the exquisite tenderness which find their home in a virtuous female bosom. When the supreme Majesty of the universe, the Father of mercies, would disclose to his people all the affection of his character, he borrows an image from maternal fondness—"As one whom his mother comforteth, so will I comfort you." How strong, how persevering is the attachment of mothers to their offspring! How costly the sacrifices which they cheerfully make to affection and duty! Their history, both among the barbarous and civilised, where they have been uncontrolled by the iron despotism of superstition, would, I am persuaded, furnish such an affecting and sublime exhibition of amiable

and great qualities, as would eclipse all the glory which irradiates the memory of the sons of men. But in proportion to the sensibility and tenderness of the maternal character must be the anguish of separation. What, then, were the feelings of this mother, doubly bereaved, and left utterly without consolation—a widow and childless? Her husband was no more, and she is approaching with trembling steps his opened grave, there to deposit the remains of her only son—the single pledge of virtuous affection, the last, the solitary comfort of her life, equally dear to memory and to hope. While she retained him her bereaved heart had one prop, one antidote against despair; all was not lost. In him she traced the image of his father; and the resemblance, real or fancied, brought with it a thousand soothing anticipations:

"Bright as his manly sire the son shall be,
In form and soul; but, ah! more blest than he."

But now this only light of her existence is extinguished. The fatal, deprecated hour is come; her last leaf is shaken down; her last coal in Israel is quenched. In the *acme* of such distress, whose heart does not yearn to afford relief? Who does not grieve that sympathy can do so little, that man is so powerless, that when his fellow-creatures most require his aid he can then do nothing but weep?

The people of the city that were with her were deeply affected; they knew her character, her circumstances, and the extent of her loss. But who is this stranger whom his attendants and followers appear to regard with so much reverence, but whose mean attire and melancholy aspect bespeak him alike familiar with poverty and sorrow? In his countenance are visible the lineaments of a Divine compassion; He is oppressed with grief; yet the calamities which weigh him down are not his own. He has taken up the burden of humanity, with all its nameless woes; he shares the bitterness that is infused into every human lot; nor is there a pang which nature feels that does not awaken a corresponding anguish in his affectionate bosom.

And hence the susceptibility of his compassion. When he saw her, in a moment he understood the whole case. The electric touch of sympathy ran from his eye to his heart. He does not wait to be solicited, nor does he feel it necessary to inquire; he wants neither explanation nor detail; it is enough—the tears of the mourner, the solemnities of death, the anxiety of the spectators, the deep gloom which mortality throws over the moving multitude, all make their silent and instantaneous appeal to him.

The noblest natures are always the most susceptible; a stoic apathy forms no part of the character of greatness, and it is utterly incompatible with goodness. To be at once alive to the miseries of others by a kind of intuition; to know what they would, but dare not ask; to understand the appeal not only of a look, but of an averted and a downcast eye; to prevent the supplication that struggles for utterance, and, in an instant, to convert the unexpressed petition into the equally overpowering sentiment of gratitude, displays benevolence of the highest order. There is an amazing difference between a sensitive and an obtuse, a vigilant and a sluggish compassion; between compassion as an extraordinary excitement and a perpetual habit; between the compassion which shuts itself up and that is approached with difficulty in its retirement, and that which walks abroad in search of misery, and deems every day lost that is not spent in the house of mourning. Such was the compassion of the Son of God.

On the present occasion it is likewise distinguished by its exquisite tenderness. "When the Lord saw her he had compassion on her, and said unto her, Weep not." How much the manner of bestowing may be made to enhance the value of the boon! A harsh exterior may sometimes conceal a humane disposition; but goodness ought always to be invested with her own robe of tenderness. This was the grace which adorned the Saviour's compassion. Here he bids the mourner dry her tears—"Weep not." The benignant look, the soothing accent with which this was urged, must have reached at once the heart of the sufferer. Blessed Redeemer! the law of kindness was ever on thy lips; the tenderness which reigned in thy bosom always beamed in thy countenance; and now, in the moment of conflict and triumph, when the dead is to come forth at thy bidding, and the grave is to be disappointed of its victim, thou forgettest not the kindest office of sympathising humanity. But while all is wonder and expectation; while some are ready to condemn, as an intrusion upon the sacredness of maternal sorrow, advice so easy to give, and so impossible to receive, and others, partially acquainted with the character of Jesus, fix on him eyes of inquisitive earnestness; the human compassion which diffused its touching expression over his features gradually assumes an air of supernatural majesty; the tremulous voice that, in the softness of pity, almost whispered, "Weep not," becomes powerful and sustained, as the authoritative mandate of the great Arbiter of life and death. The carpenter's son, of Nazareth, no longer veils from the gaze of the astonished spectators the Divine nature of the Son of God; the visible and the invisible worlds both confess his presence. "He came and touched the bier, and they that bare him stood still. And he said, Young man, I say unto thee,

arise." No wonder that a fear came on all when they heard from a human tongue sounds so strange to mortal ears. "I say unto thee, arise:" it is the voice of God, and not of man. The multitude felt it, for they exclaimed, "God hath visited his people." The disciples felt it, for they have left their testimony upon record—"We beheld his glory, the glory as of the only-begotten of the Father, full of grace and truth."

The power which accompanied these majestic words fully justified their utterance—and "he that was dead sat up and began to speak." Here was displayed the omnipotence of mercy, a power self-derived and all-sufficient, controlling the king of terrors, and inverting the order of nature by a sovereign act, which proved the entire subseriency of both to his almighty will. And when we reflect upon the occasion on which this Divine prerogative was exerted, we are struck with the propriety of a remark which has been often made—that the miracles of our Saviour were not merely demonstrations of power, but acts of the purest and most disinterested benevolence; that they have a kind of ethical excellence, a close and striking conformity to the peculiar temper, as well as the distinguishing and important mission of Him by whom they were performed.

But we notice the delicacy which peculiarly marked this exercise of Divine compassion. "He delivered him to his mother." In how many ways might he have been employed in promoting the cause and advancing the glory of Him by whom he was thus recalled from the invisible state! In youthful prime and renewed vigour, he had a long life to devote to his service. Under the awful impressions of an eternity which he had personally felt, how would he be able to attest its reality, to allure by its glories, or to alarm by its terrors! What an efficient instrument in promulgating the doctrine of the resurrection, in refuting all the cavils of Jews and heathens against the Divine mission of Him whose power had raised him from the dead! Our Lord could not be insensible to the advantages which such a disciple, raised to the dignity of an apostle, might confer upon his religion, struggling as it was with superstitious prejudice on the one hand, and with Sadducean infidelity on the other. But he wisely, delicately renounced them all. It was the weeping mother that had excited his compassion, and he would not diminish the joy of reunion by a premature separation. He wrought the miracle to wipe away her tears. She is destitute; he possesses the resources of the universe: she has but one son; he has twelve disciples, and legions of angels delight to wait upon him. All the pleasure he enjoys as the Man of sorrows is derived from making others happy; and he cannot forego the exquisite luxury of this moment: "He delivered him to his mother."

This compassion, we would now take occasion

to remark, was prospective; it did not terminate on its immediate objects; through them it has operated to confirm the faith of every future age, as well as to supply the richest consolation to every bereaved sufferer who is able to accredit its testimony. Faith respects the truth of the Saviour's mission, and his power and willingness to help those who trust in him in their time of need. On our belief of both depends our present and future happiness. Whatever he has done to establish this twofold conviction in our minds, is an evidence of his compassion, of his affectionate solicitude to deliver us from the worst evils that can afflict our nature, and to promote, in the highest degree, our well-being as accountable and immortal creatures. Now, if we consider the restoration of the widow's son as a miracle, and as a miracle of compassion, both these ends are accomplished. We must believe in the mission of Jesus; and his character, as it arises out of this striking manifestation of his power, cannot fail to inspire us with that confidence which we ought to repose in him as the Saviour of the world.

On the evidence arising from his miracles our Lord himself laid the greatest stress: "The works," said he, "that I do in my Father's name, they bear witness of me." When the disciples of John were sent to him to receive from his own lips the most satisfactory proofs of his Divine mission, he referred them to his miracles. "Go," said he, "and show to John again those things which ye hear and see—the blind receive their sight, the lame walk, the lepers are cleansed, the deaf hear, and the dead are raised up." This appeal to miracles was founded on the following just and obvious grounds,—that they are visible proofs of Divine approbation as well as of Divine power; that they were of such a nature as would bear the strictest examination; that they were such as an impostor would not attempt, and an enthusiast could not achieve. The miracle recorded in the narrative before us possesses all these characters of credibility; and if the record be true, the conclusion is inevitable, that Jesus is the Son of God. But though our belief of this great fact is indispensable to our becoming Christians and participating in the blessings of the Christian religion, a faith of a more particular and characteristic nature is essential to our experimental and practical acquaintance with this Divine system of mercy. As Christ himself is the fountain of all its knowledge, the source of all its purity, and the sum of all its consolation, it is absolutely necessary that we should understand his character, and place an unlimited confidence in his power and compassion. Now, certainly the subject under review is admirably suited to inspire this confidence. We cannot read this interesting and wonderful story without a deep conviction of the ability of our Redeemer to save to the uttermost, and without a blessed assurance

of his condescension and grace; that he is as willing as he is able to do for us exceedingly abundantly above all that we can ask or think; without feeling that his power can extend to every thing that concerns our happiness, and that he is as merciful as he is mighty; that we may look up to him in every domestic trouble and calamity; joyfully commit our personal and everlasting interests into his hands; descend into the grave with an assured hope that he will be to us as he was to the widow's son of Naim, but under circumstances far more glorious and happy—"the resurrection and the life."

O, then, let the afflicted, the bereaved, and the sorrowful remember that they are not left without resource! Let them learn where to fly in the day of trouble. Jesus ever lives; he has compassion still;

"His heart is made of tenderness,
His bowels melt with love."

No widow suffers without his sympathy; no parent is called to follow his child to the grave without awakening the deepest interest in His bosom who said to the mourning mother of Naim, "Weep not." But O how difficult is it to carry home this conviction to the wounded hearts of bereaved relatives! and especially to the heart of a mother! "Rachel mourneth for her children, and refuseth to be comforted because they are not." In the rebellious state of her feelings, the consolation offered by referring to this miraculous display of the Saviour's compassion, instead of soothing, only aggravates her grief. "Ah!" she exclaims, "my tears must continue to flow; my child is dead, but no Jesus says to me, 'Weep not.' If he look on me at this desolate moment, I am unconscious of his sympathy, I am an outcast from his compassion. It is in vain that I make my appeal, the passionate appeal of unparalleled sorrow, to Him who has taken away, but will not restore, my child." And is this gratitude? this thy submission? What! while his hand is passing over thy brow to wipe away thy tears, wilt thou turn a deaf ear to his compassion? Even now, amidst thy murmuring, I hear him saying unto thee, "Refrain thy voice from weeping, and thine eyes from tears, for thy work shall be rewarded, and they shall come again from the land of the enemy: and there is hope in thine end, saith the Lord, that thy children shall come again to their own border." But this assurance, consolatory as it is, does not reach your case: "He will not raise my child," is still your desponding complaint; "He will not command the grave to yield up its prey for me." O, thou of little faith! wherefore dost thou doubt? He who said to the young man "Arise!" is "the Resurrection and the Life." Thy son, thy daughter, shall rise again, and be delivered unto thee decked in immortal loveliness, and no fear of separation shall damp the joy of union for ever. Will not

this suffice? Does your feverish heart reject this as a cold consolation? Are you saying with Martha, under all the hopelessness of present grief, "I know that he shall rise again at the last day?" O! believe me, it will be better at the last day than now.—*Dr. Styles.*

AN INTRODUCTION TO THE STUDY OF MORAL PHILOSOPHY.

BY PROFESSOR WILSON.

ARTICLE II.

THE early history of the great primary arts of life, their origin, and the first steps of their progress, lie buried in the darkness of antiquity; but thus much we may understand—that man finds himself in the midst of a world teeming with natural productions, and full of the operations of natural powers, all offering him benefit, or menacing him with destruction. The various knowledge and endlessly-multiplied arts by which he fills his life with the supplies of its great necessities, or with all its great resources of security and power, or with which he adorns it, are all merely the regulated application of certain powers of nature, acting at his discretion upon her own substances and her own productions.

But, then, the various knowledge and endlessly-multiplied observations of experience and reasoning of man added to man, and generation following generation, which are required to bring men even to a very moderate state of advancement in the great primary requisites of life, we are now utterly unable to conceive; because we are not born with the knowledge which was collected at first by the labours of many generations. How slowly, with what continual accessions of knowledge were those arts reared up which still remain to us! How many arts which have been laboriously brought to perfection have been displaced by superior inventions! Therefore, fenced in as we are by the works of our predecessors, we see but a very small part of the power of man contending with the difficulties of his lot. But what a most wonderful scene would be opened up before our eyes, with what interest should we look on, if we could indeed behold man armed only with his own implanted powers, and going forth to conquer the creation; beginning by amending evils and supplying wants; going on to turn those evils and wants into means of enjoyment; and, at length, in the wantonness of his pride and of his power, filling his own existence with luxuries! If we could see him in his first step in the wilderness, advancing to subdue, to tame, and to multiply the herds, bending the trees of the forest, blasting the rock, directing the element of fire, fetching substances from the bowels of the earth, fashioning wood, and stone, and metal, to the will of his thought, searching the nature of plants to spin their fibres for his clothing, or with their virtues to heal his diseases; if we could see him launching his first ship, causing the winds and the waters to do his

work; if we could see him changing the face of the earth, joining seas, or stretching the continent itself into the dominion of sea; if we could do all this in our imagination, we should understand something of what man's intellect has done for his physical life, and what the necessities of that physical life have done in forcing into action all the powers of his wonderful knowledge.

But far higher considerations than these arise from the influence of man's physical necessities, thus adverted to, on the destiny of his species; because that full unfolding of his moral powers to which he was called, was only possible in those states of society which are thus brought into being by this conflict of all its faculties against the stubborn power of the material universe. Out of the same conquest wealth is created; and by means thus brought into action, the orders and classes of society are all divided. The division of property itself (the allotment of the earth) takes place simply because it is the bosom of the earth that yields us food. The great foundation of the stability of nations is thus connected with the same necessity, and out of the same cause arises the same great end by which society is held together. Thus that most wonderful development of the moral nature of man, which it shall be our business to inquire into, in all the forms which fill up the history of its race, is blended with the labour to which he had been urged by those first great necessities of his physical nature. Attend for a moment to this point, and see how deep is the operation of such causes in the human character!

Of the real power of the bodily appetites, and the sway they may maintain over the moral nature of the human mind, we who are prevented by our place among the arrangements of civil society from greatly suffering under it, can form but a very indistinct conception. Let me not now speak of those enormities which, in the midst of a dreadful famine, are recorded to have been perpetrated by civilised men, when the whole moral soul, with all its strongest affections and its most instinctive abhorrences, have sunk prostrate under the power of the physical necessities. The power of which I am now speaking subsists habitually, and at all times, among whole tribes and nations. It is that power, which it acquires in the mind of the savage who is frequently exposed to its severity, and who hunts for himself the food with which he is to appease

it. Compare the mind of the human being as you are accustomed to behold it, having the return of this sensation only as a grateful incitement to take the nourishment spread for his repast—compare it with that of his fellow-man bearing through the lonely woods the gnawing pang that goads him to his prey. Hunger lies in the strength of his arm, hunger wakes in his eye, hunger listens in his ear. As he couches down in his covert, waiting the approach of his expected spoil, this is the sole thought that fills his aching mind—"How, wretch that I am, shall I satisfy my hunger?" When his deadly aim has brought his victim within his reach, this is the thought that springs up—"I have got food for my empty soul." What, I ask, must be the usurpation of the animal nature here over the moral, when it is not the power of simple pain and sorrow, but his own helplessness in his wants and in his desires that thus excites him? Here I am speaking not of a suffering and a sinking wretch; the man I suppose is a strong hunter, one who puts forth his whole strength under the agony of this pain. All his might in the chase, all his pride of speed and boast of skill, all thoughts of long and hard endurance, all images of perils past and remembrance of suffering, all are gathered on that one strong and keen desire, all are bound down to the sense of that one bitter animal want. These feelings recurring day by day in the tale of his life, bring on his soul a vehemence and a power of desiring that object, of which, as I said, we can have no conception, till it becomes subjected to this mighty animal passion—a passion such as rages in those fierce animal kinds which it drives with such ferocity on its prey; so that, without exaggeration, I may say, he knows hunger just as the wolf knows it; that he goes forth with a burning heart, just like the very tiger who laps up blood.

But turn to another condition to which man has brought himself by the very agency of that same physical, aided by his moral and intellectual, being; and how infinitely is he removed from all contentions such as these! The very work in which he now labours the whole day, on which his eyes are fixed, and on which his hands toil, is something altogether connected with the distant wants and purposes of a thousand men, in which he has no participation; and as far as it is a work of skill, he has to fix his mind on objects and purposes so removed from himself, that they all tend to sever his thought from his own necessities. Thus it is that civilisation raises his moral character, by protecting almost every human being from that subjection to its passions by which whole tribes are bowed down in the great wilderness of nature.

But still, I ask you, if it be not one of the most melancholy parts of all the speculation that is suggested to the moral inquirer by the condition of man, to observe what a wild and dense

gloom is cast over their souls by this severe necessity, which is, nevertheless, the great and constant source of the improvement of their condition? It is not suffering alone, that they may be inured to bear; but it is the darkness of the understanding, and it is the callousness of the heart, which comes on under the operation of the toil to which this human being—whose nature it is our business to explain—must be subjected; it is all that which is most miserable for us to behold. For if men born with the same spirit as ourselves, seem yet denied the common privileges of that spirit, they seem to bring certain faculties into the world that cannot be unfolded—certain powers of affection and desire which, we might be inclined to say, the lot of their birth will pervert and degrade. There is a humiliation thus laid on human nature in the doom which seems thus to rest on a great portion of the species, which, while it requires our most considerate compassion for those who are thus depressed, compels us to humble ourselves under a sense of our own participation in the mysterious nature from which it all flows. Therefore, in estimating the worth or the virtue of our fellow-men, (which it will be our business to do,) whom Providence has placed in a lot which yields to them the means, and little more than the means, of supporting life in themselves, and those born of them, what moral inquirer would ever, for a moment, forget how intimate is the necessary union between the wants of the body and the thoughts of the soul? Let us remember, that over the great proportion of our humanity, the soul is in a struggle for its independence with the necessities of that nature in which we know it to be enveloped. It has to support itself against irritating or maddening thoughts inspired by weariness, lassitude, and want, or the fear of want. It is chained down to the earth by the influence of one great and constant occupation—that of providing the means of its mortal existence. When it shows itself shocked or agitated, overcome in the struggle, what ought to be the thoughts and feelings in the consideration of the wisdom of poor humanity?

When, on the other hand, you see nature preserving itself more boldly amidst the perpetual threatenings or unceasing assaults of those evils from which it never can make its escape, and though pressed by its own many wants, forgetting them all in that love which ministers to the wants of others; when you see the brow wrinkled and drenched by incessant toil, the body bowed down to the dust, and the whole frame in which the immortal spirit abides marred (but surely not dishonoured) by its slavery; and then, when in the midst of all that depression and oppression, you see man still seeking and still finding joy, delight, and happiness, in all the finer affections and desires of his spiritual being, giving to the lips of those he loves that scanty morsel

earned by his own hungry and thirsty toil ; purchasing by sweat, sickness, and fever, the useful education and religious instruction of the young creatures who delight the heart of him who is striving for their sakes ; resting with gratitude on that day which is like a fountain in the midst of the thirsty wilderness to his exhausted and wearied frame ; and preserving a high sense of his own immortality, amongst all the toils and struggles that would fain chain him to the dust ; when, I say, you see all this, and think of all this, you will discover how rich may be the very poorest of the poor, and you will learn to respect the moral being of man in these its tri-

umphs over the power of his physical nature. But you do not learn from this to doubt or to deny the wisdom of the Creator ; you do not learn from all these struggles, and all these defeats, and all these most glorious victories, and all these triumphs, that God sent his creatures into this state of existence to starve, for that the air, the earth, and the waters have not where-withal to fill the mouths that gape for food. Nor will you ever learn that want is a crime, or that poverty is a sin, or that they who would toil but cannot, or they who would toil but have not work, are intruders at Nature's table, and must be driven to famine, starvation, and death.

JOAN PERRY AND HER SONS.

AMID the progress which, during the last half century, Europe has made in natural philosophy, science in general, and the mechanical arts in particular, moral philosophy appears to have remained almost, or wholly stationary. What is, or what is not insanity, appears to be as much a problem as ever. The following occurrence, substantiated by the best possible testimony, the particulars being contained in Hargrave's State Trials, is one of the most remarkable phenomena of mind within our recollection.

On the 16th of August, 1660, the steward of Lady Campden, of Campden, in Gloucestershire, an old man, named William Harrison, walked from Campden to Charringworth, a village two miles distant, to receive rent due to her ladyship. Not returning at the hour expected, his wife, between eight and nine o'clock, sent their servant, John Perry, to meet his master. Neither Harrison nor his servant returned that night. Early on the following morning, Harrison's son, Edward, proceeded towards Charringworth in search of his father. On his way he met Perry, who said that he could hear nothing of Mr. Harrison at Charringworth. Both then went to the village of Ebrington ; where a man, named Daniel, told them that Harrison called at his house the evening before, returning from Charringworth, but did not stay. They then went a mile farther, to Paxford, and making no discovery returned towards Campden. On the way, they heard that a hat, band, and comb, had been found by a woman in the public road from Ebrington to Campden. On finding the woman, the hat, comb, and band were produced. The former were cut and mutilated, the latter was bloody. Supposing Harrison to have been murdered, they searched the neighbourhood for his body, but in vain.

Perry having been sent to meet his master, and not returning till the following day, suspicion arose that he had murdered Harrison, and taken from him the money he had received. On ex-

amination before a justice of the peace, he stated that, when his mistress sent him in search of his master, he went a short way towards Charringworth, when he met William Reed, with whom, being afraid to proceed in the dark, he returned ; that he afterwards went forward a short way with a man named Pierce, but returned with him to his master's gate : that he then entered the hen-roost, where he remained an hour, and then proceeded towards Charringworth, but losing his way, in consequence of a dense mist which arose, he lay under a hedge the remainder of the night. At day-break he reached Charringworth, and heard from Edward Plaisterer that he had paid his master twenty-three pounds the evening before. William Curtis also told Perry that Harrison had called at his house during his absence. Having learned these facts, he took his way homewards, and met his young master, as before stated.

Reed, Pierce, Plaisterer, and Curtis, on their examination, confirmed this testimony.

The justice asked Perry to explain why, being afraid to proceed to Charringworth at nine o'clock, he ventured to do so at midnight. Perry answered, that at the former hour it was dark, at the latter moonlight.

Perry was farther asked, why, having twice returned to his master's premises, he did not go in to the house to ascertain if his master had returned meanwhile. He answered, that he saw a light in the bed-room window, which was only the case in his master's absence.

The circumstances were so suspicious, that Perry was detained six days, and underwent a second examination, without deviating from his former statement. No clue was discovered to lead to the elucidation of the mystery.

During his confinement, Perry told one person, that a tinker had killed his master ; another, that a gentleman's servant had robbed and murdered him ; a third, that his body was hid in a certain bean-rick, where he was searched for, but not found. He then said, that if he were again

taken before the justice, he would confess the whole matter. On the twenty-fourth of August, therefore, he was again examined. He deposed that Harrison was murdered; but denied that he was the murderer. The justice told him, if he knew the fact of the murder, he must also know by whom it was committed. He then said his mother and brother were the murderers. The justice cautioned him, stating his suspicion that he was the murderer, and reminding him that what he now asserted, if persisted in, might lead to the execution of his mother and brother. Persisting, he was desired to state the details.

His statement was, that his mother and brother had often solicited him for money, suggesting that, if he would acquaint them when his master was going to receive any rents for Lady Campden, they might relieve their poverty, by waylaying and robbing him. On the Thursday morning, when Harrison was last seen in Campden, he met his brother in the street, to whom he communicated where, and for what his master was going. In the evening he again met his brother, as he was going, by his mistress's desire, to meet Mr. Harrison. They proceeded together to the churchyard, where they took different roads, but met again. When they came to a particular spot, his brother entered a part of Lady Campden's grounds, and, after awhile, John followed him, when he found his brother on his prostrate master; his mother standing by. On being asked if Harrison was then dead, he answered "No, for he exclaimed, 'Ah, regues, will you kill me?'"

John then interceded for his master; but his brother said, "Peace, peace, you are a fool!" He then strangled him, and took a bag of money from Harrison's pocket, which he threw into his mother's lap. The brother then conveyed the body into the garden. A consultation took place how to dispose of the body; when it was agreed to throw it into the great sink by Wallington's mill. Being asked if it was now there, he said he did not know. That his mother and brother desired him to go and watch if any one was a-foot, and he did not return to them. It was then he met John Pierce, with whom he went a little way towards Charringworth, and then went into the hen-roost, as before stated. That having, when he left the murderers, carried away the hat, band, and comb, of the murdered man, he hacked them with a knife, and threw them into the highway. His reason for this, he said, was to induce people to believe his master was murdered and robbed there by some stranger. Having done this, he proceeded to Charringworth, on a pretended search after his master.

Joan and Richard Perry were now apprehended. The sink alluded to, and all the fishponds and such other places in the neighbourhood of Campden, were searched for the body, but in vain.

On the twenty-fifth of August, Joan and Richard were examined, and denied solemnly any knowledge of the crime attributed to them by John, who, on his part, persisted in his statement.

A remarkable circumstance occurred while the prisoners were being re-conveyed from the justice's house to prison. Richard, who was considerably behind his brother and accuser, John, pulled something from his pocket, when a ball of ink dropped, and was picked up by one of those in whose custody he was. Richard requested to have it back, saying, it was his wife's hair-lace. The finder opened it, and found a slip-knot at the end. It was then shown to John, who was asked if he knew it. He shook his head, and said he did too well, for it was the string with which his brother strangled Mr. Harrison.

The year before this occurrence, Mr. Harrison's house had been robbed, while the family were at church, and one hundred and forty pounds stolen therefrom; and a few weeks before Mr. Harrison's disappearance, John Perry, one evening, ran home, hallooing, and seeming to be much frightened. He told those who were attracted by his cries, that two men in white, with drawn swords, had attacked him, and that he defended himself with a sheep-pick, which he had in his hand. In proof he showed the handle, cut in several places, and took a key, also out, from his pocket.

On being questioned respecting the robbery, John said that his brother committed it: that he, John, was at church at the time, but had previously given his brother information where to find the money; that it was buried in a certain garden. The garden was searched and no money found. The attack upon him, he said, was pretended, in order to produce an impression that desperate characters were near, and thus account for the past and any future robbery.

In September following, John, Joan, and Richard Perry had two indictments found against them, one for robbing Mr. Harrison's house in 1659, the other for the murder. For the latter they were not then tried, the body not having been found. To the indictment for robbery they pleaded not guilty, but on being spoken to, pleaded guilty, and begged the benefit of the act of oblivion, which was granted them. Subsequently, when about to die, they denied all knowledge of the robbery. John still persisted in his tale about the murder, and added that his mother and brother had attempted to poison him in gaol. In the following spring the three were tried for the murder, and pleaded not guilty. When John's confession was urged against him he said that he was then mad. The jury returned a verdict of guilty against the three. A few days after, they were brought to Broadway-hill to be executed. The mother suffered first. Richard then declared his entire innocence, and besought

his brother to state the truth respecting him. John treated his brother's prayers with surly indifference, yet, when about to suffer in his turn, told the people that he knew nothing of his master from the time he left home, but that they would probably hear of him hereafter. Some years after Harrison was heard of, and Sir Thomas Overbury, of Burton, justice of the peace, having written to him, received the following reply.

HONOURED SIR,

In obedience to your commands, I give you this true account of my being carried away beyond the seas, my continuance there, and my return home. On a Thursday, in the afternoon, in the time of harvest, I went to Charringworth, to demand rents due to my Lady Campden, at which time the tenants were busy in the fields, and late before they came home, which occasioned my stay there till the close of the evening. I expected a considerable sum, but received only three-and-twenty pounds. In my return home, in the narrow passage among Ebrington furzes, there met me one horseman and said, "Art thou there?" and I, fearing that he would have rid over me, struck his horse over the nose; whereupon he struck at me with his sword several blows, and run it into my side, while I, with my little cane, made my defence as well as I could; at last another came behind me, run me into the thigh, laid hold on the collar of my doublet, and drew me to a hedge, near to the place; then came in another; they did not take my money, but mounted me behind one of them, threw my arms about his middle, and fastened my wrists with something that had a spring-lock, as I conceived by hearing it give a snap as they put it on; then they threw a great cloak over me, and carried me away. In the night they alighted at a hay-rick, which stood near to a stone-pit, by a wall-side, where they took away my money; about two hours before the day, as I heard one of them tell the other he thought it to be then, they turned me into the stone-pit; they stayed, as I thought, about an hour at the hay-rick, when they took horse again; one of them bade me come out of the pit; I answered they had my money already, and asked what they would do to me; whereupon he struck me again, drew me out, and put a great quantity of money into my pockets, and mounted me again after the same manner; and on the Friday, about sun-setting, they brought me to a lone house upon a heath, by a thicket of bushes, where they took me down almost dead, being sorely bruised with the carriage of the money. When the woman of the house saw that I could neither stand nor speak, she asked them whether or no they had brought a dead man? They answered no, but a friend that was hurt, and they were carrying him to a surgeon; she answered, if they did not make haste, their friend would be dead before they could

bring him one. There they laid me on cushions, and suffered none to come into the room but a little girl; there we stayed all night, they giving me some broth and strong waters; in the morning, very early, they mounted me as before, and on Saturday night they brought me to a place where were two or three houses, in one of which I lay all night, on cushions by their bed-side. On Sunday morning they carried me from thence, and, about three or four o'clock, they brought me to a place by the seaside, called Deal, where they laid me down on the ground; and, one of them staying with me, the other two walked a little off, to meet a man, with whom they talked; and, in their discourse I heard them mention seven pounds; after which they went away together, and about half an hour after returned. The man, whose name I afterwards heard was Wrenshaw, said, he feared I would die before he could get me on board; then presently they put me into a boat, and carried me on ship-board, where my wounds were dressed. I remained in the ship, as near as I could reckon, about six weeks, in which time I was indifferently recovered of my wounds and weakness. Then the master of the ship came and told me, and the rest who were in the same condition, that he discovered three Turkish ships: we all offered to fight in defence of the ship and ourselves; but he commanded us to keep close, and said he would deal with them well enough. A little while after he called us up, and, when we came on deck, we saw two Turkish ships by us; into one of them we were put, and placed in a dark hole, where how long we continued before we landed I do not know. When we were landed, they led us two days' journey, and put us into a great house, or prison, where we remained four days and a half; then came eight men to view us, who seemed to be officers; they called us, examined us as to trades and callings, which every one answered; one said he was a surgeon, another that he was a broad-cloth weaver, and I, after two or three demands, said, that I had some skill in physic. We three were set by, and taken by three of those eight men who came to view us. It was my chance to be chosen by a grave physician, eighty-seven years of age, who lived near Smyrna, and who had formerly been in England, and knew Crowland, in Lincolnshire, which he preferred to all other places in England; he employed me to keep his still-house, and gave me a silver bowl, double gilt, to drink in. My business was most in that place; but once he set me to gather cotton-wool, which I net doing to his mind, he struck me down to the ground, and afterwards drew his stiletto to stab me; but I, holding up my hands to him, he gave a stamp and turned from me, for which I render thanks to my Lord and Saviour Jesus Christ, who stayed his hand and preserved me. I was there about a year and three quarters, and then my master fell sick, on

a Thursday, and sent for me; and calling me, as he used, by the name of Boll, told me he should die, and bade me shift for myself. He died on the Saturday following, and I presently hastened with my bowl to a port, about a day's journey

distant. I inquired for a ship for England. I procured one, which landed me at Dover.

Yours,

WILLIAM HARRISON.

For Sir T. Overbury, Knt.

BRITISH BRAVERY.

MR. RICHARD HORNBY, of Stokesley, deserves to be honourably mentioned for an instance of heroism almost without a parallel. He was master of a merchant-ship, the *Isabella*, of Sunderland, in which he sailed from the coast of Norfolk for the Hague, June 1st, 1744, in company with three smaller vessels recommended to his care. Next day they made Gravesant steeple in the Hague; but while they were steering for their port, a French privateer, that lay concealed among the Dutch fishing-boats, suddenly came against them, singling out the *Isabella* as the object of attack, while the rest dispersed and escaped. The contest was very unequal; for the *Isabella* mounted only four carriage guns and two swivels, and her crew consisted of only five men and three boys, besides the captain; while the privateer, the *Marquis de Brancas*, commanded by captain André, had ten carriage guns and eight swivels, with seventy-five men and three hundred small arms. Yet Captain Hornby, after consulting his mate, and gaining the consent of his crew, whom he animated by an appropriate address, hoisted the British colours, and with his two swivel guns returned the fire of the enemy's chase guns.

The Frenchmen, in abusive terms, commanded him to strike, to which he returned an answer of defiance. Upon this the privateer advanced, and poured in such showers of bullets into the *Isabella*, that Captain Hornby found it prudent to order his brave fellows into close quarters. While he lay thus sheltered, the enemy twice attempted to board him on the larboard quarter; but by a dexterous turn of the helm, he frustrated both attempts, though the Frenchmen kept firing upon him both with guns and small arms, which fire Captain Hornby returned with his two larboard guns.

At two o'clock, when the action had lasted an hour, the privateer, running furiously in upon the larboard of the *Isabella*, entangled her bowsprit among the main shrouds, and was lashed fast to her; upon which Captain André bawled, in a menacing tone, "You English dog, strike!" but the undaunted Hornby challenged him to come on board and strike his colours, if he dared.

The enraged Frenchman took him at his word, and threw in twenty men upon him, who began to hack and hew into his close quarters; but a discharge of blunderbusses made the invaders retreat as fast as their wounds would permit them.

The privateer being then disengaged from the *Isabella*, turned about, and made another attempt on the starboard side; when Captain Hornby and his valiant mate shot each his man as they were again lashing the ships together.

The Frenchman once more commanded him to strike, and the brave Briton returning another refusal, twenty fresh men entered, and made a fierce attack on the close quarters with hatchets and pole-axes, with which they had nearly cut their way through in three places, when the constant fire kept up by Captain Hornby and his brave crew obliged them to retreat, carrying their wounded with them, and hauling their dead after them with boat-hooks.

The *Isabella* continuing lashed to the enemy, the latter, with small arms, fired repeated and terrible volleys into the close quarters, partly from his fore-castle and partly from his main deck, bringing forward fresh men to supply the place of the dead and wounded; but the fire was returned with such spirit and effect, that the Frenchmen repeatedly gave way. At length Captain Hornby, seeing them crowding behind their main mast for shelter, aimed a blunderbuss at them, which being by mistake doubly loaded, containing twice twelve balls, burst in the firing, and threw him down, to the great consternation of his little crew, who supposed him dead; yet he soon started up again, though greatly bruised, while the enemy, among whom the blunderbuss had made dreadful havock, disengaged themselves from the *Isabella*, to which they had been lashed an hour and a quarter, and sheered off with precipitation, leaving their grapplings, pole-axes, pistols, and cutlasses behind them. The gallant Hornby fired his two starboard guns into the enemy's stern; and the indignant Frenchman soon returning, the conflict was renewed, and carried on yard-arm and yard-arm, with great fury, for two hours together.

The *Isabella* was shot through her hull several times, her sails and rigging were torn to pieces, her ensign was dismounted, and every mast and yard wounded; yet she bravely maintained the combat; and at last, by a fortunate shot which struck the *Brancas* between wind and water, obliged her to sheer off and career.

While the enemy were retiring, Hornby and his brave little crew sallied out from their fastness, and erecting their fallen ensign, gave three cheers.

By this time both vessels had driven so near the shore, that immense crowds, on foot and in coaches, had assembled to be spectators of the action.

The Frenchman, having stopped his leak, returned to the combat, and poured a dreadful volley into the stern of the *Isabella*, when Captain Hornby was wounded in the temples by a musket-shot, and bled profusely. This somewhat disconcerted his companions in valour; but he called to them briskly to take courage and stand to their arms, for his wound was not dangerous; upon which their spirits revived, and again taking post in their close quarters, sustained the shock of another assault; and after receiving three tremendous broadsides, repulsed the foe by another well-aimed shot, which sent the *Branças* again to careen. The huzzas of the *Isabella's* crew were renewed, and they again set up their shattered ensign, which was shot through and through into honourable rags.

André, who was not deficient in bravery, soon renewed the fight; and having disabled the *Isabella* by five terrible broadsides, once more summoned Hornby, with dreadful menaces, to strike his colours.

Captain Hornby animated his gallant comrades—"Behold," said he, pointing to the shore, "the witnesses of your valour this day!" then

finding them determined to stand by him to the last, he hurled his final defiance upon the enemy. The latter immediately ran upon his starboard and lashed close alongside; but his crew murmured, and refused to renew the dangerous task of boarding; and, cutting off the lashings, again retreated. Captain Hornby resolved to salute the privateer with one parting gun, and this last shot, fired into the stern of the *Branças*, reached the magazine, which blew up with a tremendous explosion, and the vessel instantly foundered. Out of seventy-five men, thirty-six were killed or wounded in the action, and all the rest, together with the wounded, perished in the deep, except three, who were picked up by the Dutch fishing-boats. The horrible catastrophe excited the commiseration of Captain Hornby and his brave men, who could render no assistance to their unfortunate enemies, the *Isabella* having become unmanageable, and her boat being shattered to pieces. The engagement lasted seven hours.

For this singular instance of successful bravery, Mr. Hornby received from the king a large gold medal commemorating his heroism. He survived the action seven years, and dying at sea of a lingering illness, was buried at Liverpool, being then fifty-two years of age.—*Young's History of Whitby.*

MEMORY.

It is not easy to invest any subject relating to the philosophy of the mind with an interest sufficiently powerful to secure the protracted attention of a reader. Indeed, a writer, as well as a reader, must often be conscious of the strong propensity of his mind to wander—to fly off, and to settle on any appearance in the whole range of real or imaginary existence, rather than on itself. At the first proposal of a mental subject, the mind, perhaps, suspecting a little difficulty, springs towards it with all its native elasticity, but soon discovers that it has drawn its sword on a leviathan, and the ardour of its enthusiasm gradually chills into impatience and chagrin. In this state of feeling, unable to meet its demands, and unwilling to act the part of an amanuensis, the mind heats and agitates itself by its own action. Unable to fasten on facts and realities, it "bodies forth the forms of things unknown," and applying its wand to each as it passes, endeavours to give it a complexion illustrative of the subject under consideration. But, at length, wearied by its undisciplined efforts, it relinquishes the subject, endeavours to lose the thoughts which have occurred on it, to withdraw from their unwelcome influence, and to recover its wonted temperament, in the hope that the subject, when resumed, will present itself in a more eligible light.

Much of this mental distress may often be attributed to a weak, or immethodical memory. On such an occasion, probably, a far greater demand is made on the memory and the associating principle, than on the imagination. Thoughts and opinions make their re-appearance, which, till now, perhaps, we knew not were in our possession. They may not wear the freshness of novelty, and may remind us of some indistinct resemblances which have already floated across our minds; but frequently, in the feeling which attends the present appropriation of them, we think not of their anterior existence, but are apt to regard them as the creations of the present moment. If, however, a person can command the assistance of a feeble and untutored memory only, he may call on it for aid with the same success as Glendower could "command spirits from the vasty deep." Or, like the ghosts on the banks of the Styx, his ideas, unaccustomed to control and arrangement, will rush promiscuously forward, and his every production will exhibit the picture of a mind habitually submissive to objects and events, without any power to classify and appropriate them.

Memory may be classed among those faculties of the mind, which, on our retiring to rest, seem to descend from their station of authority and observation, to repose in silence with their ma-

terial partner. And this partial loss of the memory during sleep may account for much of the inconsistency of dreams. We often find ourselves realising again the scenes of the past day with a thousand strange additions; but suddenly the scene is changed, and we are introduced to new appearances, without any recollection whatever of the past. Thus we sometimes revisit the familiar scenes of childhood with a friend whom, perhaps, we long since saw lowered into the grave, without remembrance of the solemn event, or our deep emotion at witnessing it. The mind, in sleep, seems quite incapable of retrospection, and is wholly confined to the present scene. Hence, if we ever suspect ourselves to be dreaming, should the subject of our dream change, the former dream, and the suspicion, are entirely obliterated, and we are quite absorbed in the scenes of the new drama.

It is reasonable to suppose, since the memory must always regard some object, and the senses are the great medium of access to the mind, that the active existence of memory is subsequent to that of perception. From the recollection of external objects and events, the mind gradually advances to the more refined exercise of remembering past thoughts. This important advance in its history depends, however, principally on education. An uncultivated mind has few intellectual reminiscences. It has no hallowed thoughts of the past, no shadowy abstractions to commune with in silence, as with the spirit of a departed friend. Still like a chrysalis, it knows not that fancy may be winged, and visit other worlds. Like the Jews, under the present economy, it continues surrounded with types and shadows, when it should be looking back on them as on the pleasing instructors of its nonage.

In early childhood, when the mind can just turn its eye from the present to look a short distance "before and after," its efforts of memory and anticipation are nearly balanced. From the recollection of a yesterday, it begins to think of a to-morrow. And this proportion in its intimacy with the past and future continues, until the sphere of its vision has so far increased that the future can venture to assert its independence of the past. Henceforth, during the greater part of life, anticipation is commonly found to lord it over the memory. The mind feels its impotence when it refers to past scenes—they seem to have fled beyond the limits of its influence. But the future is ever pregnant with interest. All the important events of life are yet to come. Over these the mind intends to exert its highest authority, and to surprise the world into an unpremeditated acknowledgment of its powers. Perhaps almost every past day has presented blanks only from the great lottery of life; but this, so far from damping the ardour of the mind, induces it the more to luxuriate in fancy on the prizes which yet remain. Thus the memory is

commonly doomed to hold an office of secondary importance, until the history of life becomes well stored with incidents, and, from the diminished interest of the present the mind begins to feel itself occasionally thrown back on the past. The balance of power is now gradually restored; and, at length, perhaps, the preponderance appears on the side of memory. Besides, having proved the uncertainty of the future, and enjoying a pleasure in revolving and detailing the past, nothing can now be seen or heard, but the mind instantly recurs to something parallel in the record of days gone by.

The pleasures and advantages of memory will be found to compete with the most exalted we enjoy. It is the museum of the mind, where are deposited the rare, the costly, and the beautiful, to be exhibited as occasion may require. It is the mysterious power which calls up our former joys and sorrows, and bids them live again. It invests every man, more or less, with the character of a prophet, enabling him to foretell the nature and approach of many events with accuracy. In short, an idea of the influence which it exercises on our happiness is given to us by the fact that the poets of all ages have personified and apostrophised it with religious enthusiasm; nor should it sink in our estimation from the circumstance, that the instinctive tribes have given repeated indications that they possess it as well as ourselves, though in a much inferior degree. Indeed, in some of them, there are traces of other powers besides the memory. But if we reflect that these phenomena are quite incidental, seldom satisfactory, and always confined to the Bacons and Newtons of their species, we feel ourselves reinstated in our accustomed elevation, and exult in the assurance that, whatever may be the nature of our mental economy, "there is a spirit in man, and the inspiration of the Almighty hath given him understanding."

There is something extremely revolting in the contemplation of the state induced by the total absence of memory. We review with so much interest scenes that are past, as constituting parts of our former selves, that with all our anxiety to pry into futurity, we should not probably be disposed to exchange memory for prescience. And this predilection for memory will doubtless increase as the history of our existence advances. How must it enhance the pleasure of a pure intelligence, to trace back the events which have given interest to the history of ten thousand years!

It might be amusing to contrast the probable state of man, possessed of prescience instead of memory, with his present state. His conduct to-day would not be regulated by the experience of yesterday, but by the events of to-morrow. The philosopher, in discussing the subject of his personal identity, could derive no evidence from the past, but could only show that he is the same

person now that would do such a thing ten or twenty years hence. A man would suffer, if punished at all, for a crime which he would commit, and not for one which he had perpetrated; for if he were allowed to incur the actual guilt, he would escape with impunity. He would be as presumptuous then, who should pry into the mysteries of yesterday, as he is now, who presumes concerning the events of futurity.

There is one peculiarity which would distin-

guish the loss of memory; that its departure would be attended by no regret, since this would imply a recollection of having once possessed it. When we have lost other blessings it is often a solace to feel that we can emblazon them in the memory. But were memory itself to perish, we could only speculate concerning it as we do now concerning a sixth sense. He who drinks the waters of Lethe forgets that he ever drank them.

WINTER.

STERN Winter comes, I hear his sullen voice
Thundering the dark and moaning woods along;
The cloud-clad spirits of the storm rejoice,
The trembling streamlet stays its silver song.
Bound by the icy chains around it cast,
Sudden the roaring cataract is still,
Marble-like glittering, while the rushing blast
Wakes not the frozen stream, as, loud and shrill,
Through leafless woods and groves once robed in green,
Its hollow roar is heard. The dirge of woe,
Sung by the wood-nymphs for their sylvan queen,
From the lone vale comes sounding, sad and slow,
Like plaintive requiems at the close of day,
Sung for repose of one late passed away.

High on a mountain, round whose rugged head
Embatling storms have rushed with horrid roar,
O'er which a robe of virgin white is spread,
Where never eagles' wings have dared to soar,
Nor sun—that flings his fiery glances down—
Has pierced the masses of eternal snow;

There in his chariot, while an angry frown
Gathers upon his deeply-furrowed brow,
Dread Winter stands; thick clouds his feet surround,
Driven by th' north-wind's chill and blasting breath,
No more in arctic frozen caverns bound,
Where reigns the dark and dreadful night of death.
Now Nature slumbers, girt with icy folds,
And stillness deep in awe the spirit holds.

One little flower lifts up its beauteous head,
Shrinking from winds that o'er it rudely fly;
Ten thousand withered leaves are round it spread;
But still the snowdrop bends not down to die;
It yet remains the gloomy scene to cheer,
And tell that gladdening spring shall soon return.
So does the firm though lonely spirit bear
The wintry storms of life that, dark and stern,
Around it roar, while hope, with radiant smiles,
Soaring on wings of rainbow-coloured light,
With gayest dreams the weary soul beguiles,
And breaks the deepest gloom of sorrow's night;
Whispers of days of peace that yet shall rise,
With beaming suns, and fair, unclouded skies.

T. W. A.

EDUCATION.

MENTAL CULTURE.—It was said by Charles XII., of Sweden, that he who was ignorant of the arithmetical art was but half a man. With how much greater force may a similar expression be applied to him who carries to his grave the neglected and unprofitable seeds of faculties which it depended on himself to have reared to maturity, and of which the fruits bring accessions to human happiness more precious than all the gratifications which power or wealth can command!—*Dugald Stewart.*

PRACTICAL INSTRUCTION.—A gentleman not long since took up an apple to show a niece, sixteen years of age, who had studied geography several years, something about the shape and motion of the earth. She looked at him a few minutes, and said with much earnestness, "Why, uncle, you don't mean that the earth really turns round, do you?" He replied, "But did you not learn that several years ago?" "Yes, sir," she replied, "I *learned* it, but I never *knew* it before." Now it is obvious that this young lady had been labouring several years on the subject of geography, and groping in almost total darkness, because some kind friend did not show her at the outset, by some familiar illustration, that the earth really turned round.—*American Annals of Education.*

MICHAEL ANGEL.—At the age of fourteen, Michael Angelo was placed with Ghirlandajo, who had the character of having envy in his disposition, which felt no pleasure in the most distant prospect of a rival;

and from this circumstance Conclivi has asserted that he reaped no benefit from his instructor.

Whatever were the sources of his improvement, he rapidly surpassed his contemporary students, and adopted a style of drawing and design more bold and daring than Ghirlandajo had been accustomed to see practised in his school; and from an anecdote in Vasari, it would seem Michael Angelo soon felt himself even superior to his master. One of the pupils copying a female portrait from a drawing by Ghirlandajo, he took a pen, and made a strong outline round it on the same paper, to show him its defects; and the superior style of the contour was as much admired as the act was considered confident and presumptuous. His great facility in copying with accuracy whatever objects were before him, was exemplified in an instance that forced a compliment even from Ghirlandajo himself. His master being employed in S. Maria Novella, in Florence, Michael Angelo took advantage of his absence, and drew the scaffolding, the desks, the painting utensils and apparatus, and some of the young men who were at work, with so much correctness and ability, that Ghirlandajo, when he returned, was quite astonished, and said it was rather the performance of an experienced artist than of a scholar.—*Duppa's Life of Michael Angelo.*

THE LANCASTERIAN SYSTEM IN GREECE, A.D. 1869.—We found about thirty young lads sitting upon benches, and their master at the head of them teach-

ing them to read. His method was pretty, and much beyond ours; the master causing the whole class to read at a time without confusion, every scholar being obliged to attention, and to mind what his next neighbour read. They had, each of them, the same author in his hand; and, for example, if he had thirty scholars, he chose out some continued discourse, and gave them but thirty words to read, the first boy reading the first word, the second boy the second word, the third boy the third word, and so on. If they read soundly and right, he gave them thirty words more; but if any of the boys were out or imperfect, he was corrected by the next, who was always very exact in observing him, and he his neighbour, till the whole number of words were read; so that the thirty scholars, lying all of them at catch, and ready to take advantage of any defect in their neighbour, stimulated by an ambition of being thought the best scholar, every one's lesson was the lesson of all, and happy was he that could say it the best. To obviate any of the scholars in eluding that order, by preparing himself for any single words, their places were changed, and he who was at one reading in the first place, was removed to a greater distance in the next. Thus one lesson was enough for a whole form, how numerous

soever, and which was very convenient for the master; the boys were not constrained to come to him one after another, for every one was a master to his neighbour.—*Guillatière*.

EMULATION AND RIVALRY.—“There was a boy in my class at school,” says Sir W. Scott, “who stood always at the top, nor could I, with all my efforts, supplant him. Day after day, and he kept his place, do what I would; till at length I observed, that when a question was asked him, he always fumbled with his finger at a particular button in the lower part of his waistcoat. To remove it, therefore, became expedient in my eyes; and in an evil moment it was removed with a knife. Great was my anxiety to know the success of my measure, and it succeeded too well. When the boy was again questioned the finger sought for the button, but it was not to be found. In his distress he looked down for it; it was to be seen no more than to be felt. He stood confounded, and I took possession of his place; nor did he ever recover it, nor ever, I believe, suspect who was the author of his wrong. Often, in after life, has the sight of him smote me as I passed by him; and often have I resolved to make him some reparation; but it ended in good resolutions.”—*Lockhart's Life of Scott*.

NATIONAL CUSTOM.

PERSIA.—Our readers will probably remember that in the article on the state of literature in Persia, the Mirza Ibrahim referred to the change which has of late years taken place in respect to the condition of women, and the liberty now allowed them of having a look at their proposed bridegrooms. The meeting, he observed, generally takes place in some public gardens; the intended is then pointed out to the lady, and she declares her opinion, if it be favourable. The man's chance comes next, and he is introduced to the lady at her own home. In proof of this new fashion, and of its possible consequence, we have received the following anecdote from a Persian friend:—

“When I was a young man a marriage was projected in our family for an uncle of mine, who was all but an old bachelor. The preliminary conditions being settled, the day was appointed for the first interview, which was to take place in the grand mosque of Khreem Khan, at Shiraz. My uncle requested me and my eldest brother to accompany him, to which request we readily assented. We met the fair party at the appointed place, who gazed at us for some time, while my uncle (who had dyed his beard unusually black that morning, and had taken every pains to make himself look as young as was possible for a man of fifty) paraded himself about somewhat conspicuously. When the lady and her friends retired, my uncle hastened home to meet the chief Dallalah, and to understand

from her the nature of the impression his appearance had produced upon the young lady. He was delighted to find that he had been triumphantly successful, and that the lady would be glad to see him the next day at her father's house. Whether my uncle slept that night I cannot say; but he was up early the next morning, took a bath, adorned his person with great care, and repaired to the house of the object of his thoughts full of anxious expectation. He was ushered into a room, and was soon followed by the young Hoory, with a gay look and a delicious smile, which she had reserved for the occasion. In a moment, however, she uttered a scream, shrunk into a corner of the room, and covered her face with her hands. My uncle, who was not a little astonished at this reception, advanced towards her after his consternation was somewhat abated, and began to inquire into the meaning of this distress. ‘I am no stranger,’ he said; ‘I am the man whom you honoured by your choice yesterday in the mosque.’ ‘No, no, sir,’ she replied, in a trembling voice; ‘your's was the only face which I disliked among the party; leave me, I pray you, for you shall never behold mine.’ My disappointed uncle had no alternative but to take leave, which he did, vowing, no doubt, never again to take with him a younger man than himself when he went wooing.”—*Athenæum*.

GEMS.

WASTE OF TIME.—Some men of the greatest talents have taken delight in composing or endeavouring to unravel riddles. Dean Swift is a case in point. Sir William Smyth, the learned Irish baron of the Exchequer, at one time spent two days and nights in considering the answer to this conundrum:—“Why is an egg underdone like an egg overdone?” He would not suffer any one to give him the answer, which he at last discovered. It is a tolerable pun enough: Because they are both *hardly* done.

TENDENCY OF PROSPERITY.—Prosperity too often has the same effect on the Christian that a calm at sea hath on a Dutch mariner, who frequently, it is said, in those circumstances, ties up the rudder and goes to sleep.—*Bishop Horne*.

COMMON SENSE.—Fine sense and exalted sense are not half so valuable as common sense. There are forty men of wit for one man of sense; and he that will carry nothing about him but gold, will be every day at a loss for want of ready change.

HORRORS OF OPIUM.

THERE is reason to believe that the use of this medicine has of late years gained ground in Great Britain. We are told that the practice exists among the work-people at Manchester and elsewhere. Many of our fashionable ladies have recourse to it, when troubled with vapours or low spirits; some of them even carry it about with them for the purpose. This practice is most pernicious, and no way different from that of drunkards, who swallow wine and other liquors to drive away care. While the first effects continue, the intended purpose is sufficiently gained, but the melancholy which follows is infinitely greater than can be compensated by the previous exhilaration.

Opium acts differently on different constitutions: while it disposes some to calm, it arouses others to fury. Whatever passion predominates at the time, it increases, whether it be love, or hatred, or revenge, or benevolence. Lord Kames, in his "Sketches of Man," speaks of the fanatical Faquirs, who, when excited by this drug, have been known with poisoned daggers to assail and butcher every European whom they could overcome. In the century before last, one of this nation attacked a body of Dutch sailors, and murdered seventeen of them in one minute. The Malays are strongly addicted to opium. When violently aroused by it, they sometimes perform what is called *running a-muck*, which consists in rushing out in a state of frenzied excitement, heightened by fanaticism, and murdering every one who comes in their way. The Turkish commanders are well aware of the power of this drug in inspiring an artificial courage, and frequently give it to their men when they put them on any enterprise of great danger.

Opium retains at all times its powers of exciting the imagination, provided sufficient doses are taken. But when it has been continued so long as to bring disease upon the constitution, the pleasurable feelings wear away, and are succeeded by others of a very different kind. Instead of disposing the mind to be happy, it now acts upon it like the spell of a demon, and calls up phantoms of horror and disgust. The fancy is still as powerful as ever, but it is turned in another direction. Formerly it clothed all objects with the light of heaven; now it invests them with the attributes of hell. Goblins, spectres, and every kind of distempered vision, haunt the mind, peopling it with dreary and revolting imagery. The sleep is no longer cheered with its former sights of happiness; frightful dreams usurp their place; till at last the person becomes the victim of an almost perpetual misery. Nor is this confined to the mind alone, for the body suffers in an equal degree. Emaciation, loss of appetite, sickness, vomiting, and a total disorganisation of

the digestive functions, as well as of the mental powers, are sure to ensue, and never fail to terminate in death, if the evil habit which brings them on is continued.

Opium resembles the other agents of intoxication in this, that the fondness for it increases with use, and that at last it becomes nearly essential for bodily comfort and peace of mind. The quantity which may be taken varies exceedingly, and depends wholly upon age, constitution, and habit. A single drop of laudanum has been known to kill a new-born child; and four grains of solid opium have destroyed an adult.

An inquest was held at Walpole lately on the body of Rebecca Eason, aged five years, who had been diseased from her birth, was unable to walk or articulate, and from her size did not appear to be more than five weeks old. The mother had for many years been in the habit of taking opium in large quantities, (nearly a quarter of an ounce a-day,) and it is supposed had entailed a disease on her child which caused its death; it was reduced to a mere skeleton, and had been in that state from birth. Verdict—"Died by the visitation of God; but from the great quantity of opium taken before its birth, and while suckling by the mother, she had greatly injured its health." It appeared that the mother of the deceased had had five children; that she began to take opium after the birth and weaning of her first child, which was and is remarkably healthy; and that the other children have all lingered and died in the same emaciated state as the child who was the subject of this investigation.

Opium resembles wine, spirit, and ales, in affecting the brain, and disposing to apoplexy. Taken in an over-dose, it is fatal in from six to twenty-four hours, according to the quantity swallowed, and the constitution, habits, &c., of the person submitted to its operation.

Women, especially in a low station, who act as nurses, are strongly addicted to the practice of drinking porter and ales, for the purpose of augmenting their milk. This very common custom cannot be sufficiently deprecated. It is often pernicious to both parties, and may lay the foundation of a multitude of diseases in the infant.

Men of genius are often unfortunately addicted to drinking. Nature, as she has gifted them with greater powers than their fellows, seems also to have mingled with their cup of life more bitterness. There is a melancholy which is apt to come like a cloud over the imaginations of such characters. Their minds possess a susceptibility and a delicacy of structure which unfit them for the gross atmosphere of human nature; wherefore, high talent has ever been distinguished for sadness and gloom. Genius lives in a world

of its own; it is the essence of a superior nature—the lofty imaginings of the mind, clothed with a more spiritual and refined verdure. Few men endowed with such faculties enjoy the ordinary happiness of humanity. The stream of their lives runs harsh and broken. Melancholy thoughts sweep perpetually across their souls; and if these be heightened by misfortune, they are plunged into the deepest misery.

To relieve these feelings many plans have been adopted. Dr. Johnson fled for years to wine, under his habitual gloom. He found that the pangs were removed while its immediate influence

lasted, but he also found that they returned with double force when that influence passed away. He saw the dangerous precipice on which he stood, and by an unusual effort of volition gave it over. In its stead he substituted tea; and to this milder stimulus had recourse in his melancholy. Voltaire and Fontenelle, for the same purpose, used coffee. The excitements of Newton and Hobbs were the fumes of tobacco; while Demosthenes and Haller were sufficiently stimulated by drinking freely of cold water.—*Macnish's Anatomy of Drunkenness.*

WILLIAM WORDSWORTH.

ARTICLE V.

IN every age of the world, from the earliest dawn of poetic genius down to the present time, when that dawn has dissolved into the richer glory of noon, the poet has ever been looked up to, admired, and revered. We have the fullest evidence of this fact afforded us in the histories of the earlier times of feudal chieftainship and chivalry, by the high respect which was paid to the minstrel in hall and bower, whithersoever he went. This resulted, in a great degree, from the thrilling music of which he was the master, as well as the peculiarly emphatic and solemn language in which he arrayed all the thoughts and imaginations which struggled for utterance within him. He wrote from feelings and passions excited by real events and circumstances; he felt the energy and power of a loftier feeling striving within him than actuated the common herd of mankind; and he expressed them in language proportionably lofty, energetic, and daring. By this means he hoped to raise in his auditors feelings and thoughts similar to his own, effects and energies similar to those which thrilled and stirred within him; and therefore he employed a language of thoughts that breathed, and words that burned, totally dissimilar from the common powerless language of every-day life. This has been brought down to us, from the ancient days of romance to the modern days of utilitarianism, with few modifications and changes; and the language of Chaucer and Spenser is still devoutly cherished and admired by many a poet of modern times, who, in language and lyrical power, strives to be equal to those splendid "masters of the lyre." Yet, among poets of the present day, there are many who, without the innermost thrillings of power and passion, have yet a strong and burning desire to produce upon mankind at large a feeling and sentiment of equal energy, without being, in their own immediate persons, the sharers in, or dividers of it. To accomplish this, they have resorted to a language whose potentiality shall

embody all these requisites; and the peculiar figures of speech in which this is conveyed has been denominated poetic diction.

Before we proceed to make any further observations on this subject, as applied to our author, we will quote the following magnificent ode, perhaps the loftiest and noblest that ever Wordsworth wrote, nor in the least degree inferior to the sublime strains of Milton, Southey, or Coleridge. It will afford us an example from which to make some remarks on the subject of language and imagination, as applied to our author.

ODE.

ON THE POWER OF SOUND.

I.

THEY functions are ethereal,
As if within thee dwelt a glancing mind,
Organ of vision! And a spirit aerial
Informs the cell of hearing, dark and blind;
Intricate labyrinth more dread for thought
To enter than oracular cave;
Strict passage, through which sighs are brought,
And whispers for the heart—their slave;
And shrieks, that revel in abuse
Of shivering flesh; and warbled air,
Whose piercing sweetness can unloose
The chains of frenzy, or entice a smile
Into the ambush of despair;
Hosannas pealing down the long-drawn aisle,
And requiems answered by the pulse that beats,
Devoutly, in life's last retreats.

II.

The headlong streams and fountains
Serve thee, invisible spirit! with untired powers;
Cheering the wakeful tent on Syrian mountains,
They lull, perchance, ten thousand thousand
flowers.
That roar,—the prowling lion's "Here I am,"—
How fearful to the desert wide!
That bleat, how tender! of the dam
Calling a straggler to her side.
Shout, cuckoo! let the vernal soul
Go with thee to the frozen zone;
Toll from thy loftiest perch, lone bell-bird, toll!
At the still hour to mercy dear,

Mercy, from her twilight throne,
Listening to man's faint throb of holy fear,
To sailor's prayer, breathed from a darkening sea,
Or widow's cottage lullaby.

III.

Ye voices, and ye shadows,
And images of voice, to hound and horn,
From rocky steep and rock-bestudded meadows
Flung back, and in the sky's blue caves reborn,
On with your pastime, till the church-tower bells
A greeting give of measured glee,
And milder echoes from the cells
Repeat the bridal symphony.
Then, or far earlier, let us rove
Where mists are breaking up, or gone,
And from aloft look down into a cove
Besprinkled with a careless choir—
Happy milkmaids, one by one,
Scattering a ditty each to her desire,
A liquid concert matchless by nice art,
A stream as if from one full heart.

IV.

Blest be the song that brightens
The blind man's gloom, exalts the vet'ran's mirth;
Unscorn'd the peasant's whistling breath, that
lightens
His duteous toil of furrowing the green earth.
For the tired slave, song lifts the languid oar,
And bids it aptly fall, with chime
That beautifies the fairest shore,
And mitigates the barsheat clime.
Yon pilgrims see! in lagging file
They move; but soon th' appointed way
A choral *Ave Maria* shall beguile,
And to their hope the distant shrine
Glisten with a livelier ray;
Nora friendless he, the prisoner of the mine,
Who from the well-spring of his own clear breast
Can draw and sing his griefs to rest.

V.

When civic renovation
Dawns on a kingdom, and for needful haste
Beat eloquence avails not, inspiration
Mounts with a tune, that travels like a blast
Piping through cave and battlemented tower;
Then starts the sluggard, pleased to meet
That voice of freedom, in its power
Of promises shrill, wild, and sweet.
Who, from a martial pageant, spreads
Incitements of a battle-day,
Thrilling the unweaponed crowd with plumeless
heads?
Even she whose Lydian airs inspire
Peaceful strivings, gentle play,
Of timid hope and innocent desire,
Shot from the dancing Graces, as they move,
Fanned by the plausive wings of Love.

VI.

How oft along thy mazes,
Regent of sound, have dangerous passions trod!
O Thou, through whom the temple rings with praises,
And blackening clouds in thunder speak of God!
Betray not, by the cozenage of sense,
Thy votaries, wooingly resigned
To a voluptuous influence
That taints the purer, better mind;
But lead sick fancy to a harp
That hath in noble tasks been tried;
And if the virtuous feel a pang too sharp,
Soothe it into patience; stay

Th' uplifted arm of suicide,
And let some mood of thine, in firm array,
Knit every thought th' impending issue needs,
Ere martyr burns or patriot bleeds.

VII.

As conscience, to the centre
Of being, smites with irresistible pain,
So shall a solemn cadence, if it enter
The mouldy vaults of the dull idiot's brain,
Transmute him to a wretch from quiet buried,
Convulsed as by a jarring din;
And then aghast, as at the world
Of reason partially let in,
By concords winding with a sway
Terrible for sense and soul;
Or, awed, he weeps, struggling to quell dismay.
Point not these mysteries to an art
Lodged above the starry pole;
Pure modulations flowing from the heart
Of Divine love, where wisdom, beauty, truth,
With order dwell, in endless youth.

VIII.

Oblivion may not cover
All treasures boarded by the miser, Time.
Orphean Insight! Truth's undaunted lover,
To the first leagues of tutored passion climb,
When Music deigned within this grosser sphere
Her subtle essence to unfold,
And voice and shell drew forth a tear
Softer than nature's self could mould.
Yet *strenuous* was the infant age:
Art, daring because souls could feel,
Stirred nowhere but an urgent equipage
Of rapt imagination spread her march
Through the realms of woe and weal:
Still to the lyre bowed low; the upper arch
Rejoiced that clamorous spell and magic verse
Her wan disasters could disperse.

IX.

The gift to King Amphion,
That walled a city with its melody,
Was for belief no dream:—thy skill, Arion!
Could humanise the creatures of the sea,
Where men were monsters. A last grace he craves,
Leave for one chaunt;—the dulcet sound
Steals from the deck o'er willing waves,
And listening dolphins gather round.
Self-cast, as with a desperate course,
'Mid that strange audience, he bestrides
A proud one, docile as a managed horse,
And singing, while the accordant hand
Sweeps his harp, the master rides;
So shall he touch at length a friendly strand,
And he, with his preserver, shine star-light
In memory, through silent night.

X.

The pipe of Pan, to shepherds
Couched in the shadow of Moenulian pines,
Was passing sweet; the eyeballs of the leopards,
That in high triumph drew the lord of vines,
How did they sparkle to the cymbal's clang!
While fauns and satyrs beat the ground
In cadence,—and Silenus swang
This way and that, with wild-flowers crowned:
To life, to life give back thine ear:
Ye who are longing to be rid
Of fable, though to truth subservient, hear
The little sprinkling of cold earth that fell,
Echoed from the coffin-lid:
The convict's summons in the steeple's knell.

"The vain distress-gun," from a leeward shore,
Repeated—heard, and heard no more!

XI.

Fortune, joy, or pity,
Vast is the compass and the swell of notes :
From the babe's first cry to voice of regal city,
Rolling a solemn sea-like bass that floats
Far as the woodlands—with the trill to blend
Of that shy songstress, whose love-tale
Might tempt an angel to descend
While hovering o'er the moon-light vale.
Ye wandering utterances, has earth no scheme,
No scale of moral music to unite
Powers that survive but in the faintest dream
Of memory? O that ye might stoop to bear
Chains, such precious chains of sight,
As laboured minstrelsies through ages wear!
O for a balance fit the truth to tell
Of the unsubstantial, pondered well!

XII.

By one pervading spirit
Of tones and members, all things are controlled,
As sages taught, where faith was wont to merit
Initiation in that mystery old.
The heavens, whose aspect makes our minds as still
As they themselves appear to be,
Innumerable voices fill
With everlasting harmony;
The towering headlands, crowned with mist,
Their feet among the billows, know
That ocean is a mighty harmonist;
Thy pinions, universal air,
Ever waving to and fro,
Are delegates of harmony, and bear
Strains that support the seasons in their round;
Stern winter loves a dirge-like sound.

XIII.

Break forth into thanksgiving,
Ye banded instruments of wind and chords;
Unite to magnify the Ever-living,
Your inarticulate notes with the voice of words!
Nor hushed be service from the lowing mead,
Nor mute the forest-hum of noon;
Thou too be heard, lone eagle! freed
From snowy peak and cloud, attune
Thy hungry barkings to the hymn
Of joy, that from her utmost walls
The six-days' work, by flaming seraphim,
Transmits to Heaven! As deep to deep
Shouting through one valley calls,
All worlds, all natures, mood and measure keep

For praise and ceaseless gratulation, poured
Into the ear of God, their Lord!

XIV.

A voice to light gave being,
To time and man his earth-born chronicler;
A voice shall finish doubt and dim foreseeing,
And sweep away life's visionary stir;
The trumpet (we, intoxicate with pride,
Arm at its blast for deadly woes)
To archangelic lips applied,
The grave shall open, quench the stars.
O silence! are man's noisy years
No more than moments of thy life?
Is harmony, blest queen of smiles and tears,
With her smooth tones and discords just,
Tempered into rapturous strife,
Thy destined bond-slave? No! though earth be
dust,
And vanish, though the heavens dissolve, her stay
Is in the word that shall not pass away."

We do not hesitate to say that this noble poem includes a general outline of every beauty of poetic imagery which is to be met with in Wordsworth's writings. There was not a nobler theme in the universe for poetry than the one of Sound—the poet felt this; the afflatus of inspiration breathes in every line, the chords of music are wedded to the sweetest verse. It is worthy to be placed by the side of Byron's "Darkness," Campbell's "Last Man," Milton's "Hymn on the Nativity," Coleridge's "Hymn at Sunrise in the Vale of Chamouni," and Shelly's "Ode to Switzerland." It is in no degree whatever inferior to any of these; it is their equal, differing only from them as one star differs from another star in glory. His genius leads him up from the past eras and ages of the world, and wherever voice or sound is heard, there does he record it; he celebrates, with a poem of unrivalled melody, the wide universal creation of harmony, and he raises up an altar of golden song to every voice that can bid its music awake the winds, whether it be the dreaming murmur of an infant in its first-born sleep, or the mighty and awful sound of an archangel's trumpet blast. EPHON.

THE SIGNS OF THE ZODIAC.—No. III.

CANCER, THE CRAB.—CHAPTER I.

I AM afraid that there are too many persons designedly incredulous of any pagan testimony to the truth of sacred history. To such (if there be such) I have the satisfaction of expressing my humble conviction that they are inexhaustible. I have now before me an arranged collection of pictorial proofs which he "that runs may read." They are such as have either never been seen by Bryant and his latent disciples, or, if seen, never combined; certainly never produced. Combined by the hands of some sufficing genius, they would, in my opinion, give the last blow to staggering infidelity. Egypt is open to us; that land whence

the ammunition of infidelity has been too long and too unremittently supplied. Let the warriors of a better cause return the mountains with double force on the heads of the aggressors.

"Eternal night
To match with their inventions they presumed
So easy, and of his thunder made a scorn,
And all his host derided; while they stood
A while in trouble, but they stood not long.
Rage prompted them at length, and found them arms
Against such hellish mischief fit to oppose."

The "devilish enginery" of infidel speculation, with all its juggles of mock philanthropy, would

be swept away by the first wind of such a contest. Though deficient in nerve of body and thew of mind, to lead or join the van of that inevitable encounter, for we, too, can say with Lord Byron,

"It comes, it cometh, and will come, the hour,"

perhaps, from my distant tent, I might supply the Achilles of the day with no mean arms. In the meanwhile, I am not willing to submit my religious faith, nor that proof-supported reason which justifies it to any infidel sneer, or any worldly suffrage. Let those who will, believe that

"'Tis something better not to be."

Let those who will persist in reading nothing on the portal of "this cold hell," as they call this beautiful world, but the grim and terrible inscription of Dante,

"*Voi qui entrate lasciate ogni speranza.*"

Can they complain if they have their choice? Can they complain if they prefer becoming "the children of this world," to being "the children of light?" Can they complain, if, rejecting hope and choosing despair, they find the latter their bonde and affianced companion? They build for themselves a narrow cell of sensuality, and then they loathe their work. "Thus judgment springeth up like hemlock in the furrows of the field."

One of my great positions is, that the zodiacal signs are of antediluvian origin. It is of the utmost importance to the subject to establish this point, and to connect the great tradition of "the hope of a promised Seed," to which the whole circle of the zodiac tends, as to a common centre, with the first family of men. Since I commenced these essays, my attention has been called to a great convert to the same cause—I mean the author of the *Œdipus Judaicus*—the purport of several of whose works, privately circulated, certainly went to shake rather than to consolidate the Christian faith. The recantation of that great scholar is the best of omens. He is an ally of colossal dimensions. "If we believe," says Sir William, "let us not believe by halves." With this exhortation we most cordially agree. He also maintains that signs of the zodiac are antediluvial, though he does not push the inference to the same point for which I am contending. The arguments he adduces are indeed familiar to all those who are versed in the same inquiries. Nevertheless, they are so compactly arranged, and so forcibly urged, that I cannot avoid, before I proceed, availing myself of their powerful support to the foundation of my whole superstructure. "It seems to have been the opinion of Manetho, that the first Hermes lived before the deluge. The Arabian writers have preserved many traditions about the antediluvians, and these traditions correspond with the testimony of Manetho. It

is true that the Arabians generally consider Thoth, or the first Hermes, as the same with Enoch, whom they call Idris; but it is enough for my purpose that they consider Thoth as antediluvian. Achmed Ben Joseph Antiphasi, who has written some account of Egypt, says, that Enoch, or Hermes, instructed his son in the sciences of Egypt. It follows that this was before the deluge. I am inclined to think that the Thoth of the Egyptians was the Seth of Scripture. Every one has heard of the two columns of stone and brick erected by the descendants of Seth, which Josephus pretended existed still in his time, in the land of Siriad. Now Manetho, who flourished three hundred years before Josephus, says, that he took his history from the columns placed in the Siriadic land, which had been inscribed in the sacred dialect, and in hieroglyphical character, by Thoth, the first Hermes, and which were translated out of the hieroglyphical letters of the sacred dialect, into the vulgar Egyptian language, by Agathodæmon, the son of the second Hermes, after the deluge. It is clear, then, that Manetho meant to say that these columns had been placed by the first Hermes in the Siriadic land before the deluge. Now the tradition of the east certainly is, that both Enoch and Seth wrote upon the science of astronomy. We see in the passages just cited from Manetho and Josephus, that the columns which were erected, according to the latter, by the children of Seth, are attributed by the former to Thoth. The progress of the deluge was gradual, and it seems by no means impossible that very strong buildings may have withstood the waves. Now, if we can suppose the pyramids to have been built before the deluge, it is possible that stones and tables inscribed by the antediluvians might have been deposited in them. There is one pyramid of brick. There can be no doubt that the Arabians have the tradition that Hermes, or Thoth, deposited his books, or rather tables of brass and stone, in one of the pyramids before the deluge. With regard to the land of Siriad, I think it was no other than Arabia, because the Nile, above Syene, was called Siri or Siris. Hence the country where it bore the name might be called the Siriadic land. That Thoth was the same as Seth, may be further confirmed from our finding that the dog-star was called Sothis, or rather Seth, and that Thoth, in his character of Anubis, presided over this star. The Hebrew name of Seth comes from *Soth, posuit*. *Thiot* in Coptic signifies *ponere*. Kircher repeatedly asserts that the dog-star was called "Sioti" by the Egyptians, and further says that the name was given to Hermes, or Thoth. The difference between Seth and Thoth is not considerable. But what decides me in my opinion that Soth, Seth, and Thoth were the same name, is this—Vettius, the astrologer, calls the dog-star "Seth."

The inference from this is, that Seth, the son

of Adam, invented the astronomical hieroglyphics of the Egyptians. Is it wonderful, therefore, if traditions and prophecies, the most interesting to his father, and the whole race of men, his progeny, should form the leading feature of the zodiac? The inquiry is the more apposite here, inasmuch as the star Seth, or Soth, is the chief asterisk of Cancer. Without further apology for introducing this corroborative matter, I shall proceed to an elucidation of the sign.

The sign Cancer, on the Egyptian zodiacs, is represented under the form of a beetle. For which representation, Horus Apollo gives us the following reason; that it was generated without female parentage; that the Egyptians considered all Scarabs to be male; that the Scarabæus was supposed to roll itself into a globose form, and to roll backwards and forwards from the Nile, in imitation of the sun and starry bodies. It was therefore considered to be a correct symbol of the sun, and particularly of the sun in the tropic of Cancer, where, having reached the limits of its zodiacal journey, it returns. Clemens Alexandrinus agrees with Horus Apollo, informing us that the Egyptians personified the sun by a beetle, because that animal having formed a ball of dung rolls it backwards. The words of Macrobius, on the same subject, are these:—"Cancer obliquo gressu nihil aliud nisi solura ostendit; maxime in illo signo sol à cursu incipit obliquus inferiura petere." The Greeks and Romans, who substituted the Crab for the Scarabæus, preserved the latter object of the symbol, which they conceived to be expressed by the motion of the crab. The Egyptians attached many mysteries to the symbol. On account of its being a type of virility, their soldiers bore it on their shields. Another idea of a similar nature was attached to it. It was considered as a symbol of the world before parturition was necessary to propagate the species; for being vulgarly supposed to be self-created from the earth, it represented the first-created man, the "Man not of woman born." This circumstance develops the reason of the great importance of the Scarabæus, in the superstition of the Egyptians, and the astonishing multiplications in which sculptured scarabæi are found. But it represented man's fall, as it represented the retrograding of the sun. It was, therefore, the type of Osiris Inferus, and the first object painted or portrayed

over the door of the sepulchral caverns of Egypt. There is not one which is without a scarabæus over the door-way; and sometimes it was placed with an oval at the head of Osiris Inferus, who is reclined in a prostrate form, to represent his temporary death. Sometimes four serpents' heads are added to represent the four winter months of his solar death, and the four days of his natural extinction.

For the same mystical reason the ancient solar temples were built with two gates, one a northern and the other southern; the one representing the sun's way through the tropic of Cancer, the other through that of Capricorn. Homer's Cave of the Nymphs appears to have been constructed upon this principle; the northern entrance being devoted to the entrance of the gods or the priests, the other to mortals or devotees. Of this subject Porphyry treats very largely in his work, *De Antro Nympharum*. The two gates of Truth and Falsehood, which Virgil introduces into what is generally supposed to be an imitation, refer to the same mystic picturing of the soul's lapse, as typified by the annual progression and retrogression of the sun. I apprehend, therefore, that the sepulchral caverns over the door-way, of which the symbol of the sun in Cancer, or the northern solstitial gate, is represented, were occasionally devoted to the universal funeral rites, dedicated throughout the whole pagan world to Sol Inferus, under various designations. The same sloping descent, the *facilis descensus Averni*, is equally common to the pyramids as to the sacred caverns; and the angle of descent appears clearly to be adopted upon an astronomical principle. It is indeed most singular that the angle in question quadrates, or very nearly so, with the angle of declination described by the sun's path on the zodiac with reference to the earth.

As to the sign Cancer representing the first state of man immediately after the creation, there is this further corroboration, that the Egyptians believed that the great Architect of nature created the world when the sun and moon were in this sign: such is the testimony of Porphyry. The Sothic period was dated from this sign, in which the dog-star was, and Isis, or nature herself, is introduced by Diodorus, as saying,

"I am she who rises in the dog-star."

A REMEMBRANCE.

THE sweetest flower that ever saw the light,
The smoothest stream that ever wandered by,
The fairest star upon the brow of night,
Joying and sparkling from his sphere on high,
The softest glances of the stock-dove's eye,
The lily pure, the marybud gold-bright,
The gush of song that floodeth all the sky

From the dear flutterer mounted out of sight;
Are not so pleasure-stirring to the thought,
Not to the wounded soul so full of balm,
As one frail glimpse, by painful straining caught,
Along the past's deep mist-enfolded calm,
Of that sweet face, not visibly defined,
But rising clearly on the inner mind.

H. A.

AN INTRODUCTION TO THE STUDY OF MORAL PHILOSOPHY.

BY PROFESSOR WILSON.

ARTICLE III.

It is in this way the moral inquirer must regard the condition of man; not to treat it in its mere abstraction, but to consider man as we know him existing. Nor will the moral inquirer, if he regard human nature rightly, ever get rid of this persuasion—that there is in that human nature some evil, some self-enduring evil, which, on this earth, will never be removed.

Suppose you were to say, in answer to any melancholy or dark view which the moral inquirer might take of human nature, Let us look upon the past ages of the world, and see the glorious things man has done for man. True, time, that has swept away the work of generations from their place of remembrance, has yet guarded the splendid shadows of their recollection for instruction to men of all succeeding ages. We can unroll the memory of the world of old; we can behold the cities that are fallen; and we can hear the hum of the mingled multitudes that are strewn in all their gates. The glory of their exalted empire, the pride of their invincible might, rise up in their dream—like pomp from the night of the past; and we become spectators of all the works and designs of men whom thousands of years have buried in the dust. We read, and as we read our souls burn within us, we read the annals of human glory; we ask ourselves, what were those happier brothers of mankind, whose valiant deeds thus raise them above the common condition of their kind—what were they moved to do? To what service of the race did they devote their unnumbered powers? You all of you know the answer: these were the desolating conquerors of the world, enslaving their own people, through them to enslave all the nations of the earth; release from the servitude of whom could never free the human mind from the bondage which it views for ever within itself. Therefore the greatest lords of the earth were the meanest slaves within their own corrupt spirits; they were servants of a far direr necessity than that which bowed down the heart of the least of those multitudes; because the lawless will of a slave may be tamed by the yoke, but the will of the lord of nations becomes mad with power, and the source of human evil swells over in his bosom unceasingly and uncontrollably. You grant all this, but you say, It is not to these, but to empires now passed away, that my imagination would turn to discover the pride of our race, and to behold the glory of the human spirit amidst the light and peace of civilisation. There have been, I would observe, certain nations on the earth in whose bosoms genius sprang up, and worshipped wisdom, and guarded the pride of life within her invincible arms; but

if you indeed desire to see the condition of your kind as they have lived on the earth, I answer, it is in vain that you delight your imagination in such bright remembrances as these; for did the earth then see these her children rejoicing and free? No; slavery tilled the soil of liberty; and the deliverer of his country dashed cities and men into dust, and scattered their inhabitants throughout the wild scenery of the wilderness.

Entertaining, therefore, such thoughts as to the condition of man, and as to the nature of man, we are bound never to forget such considerations as these, even when we are drawing what may be said to be abstracted pictures, ideal pictures, of humanity, but to receive them as representations of that human nature to which we belong, and with which we are surrounded in every step we take. May I be permitted to conclude this lecture by quoting what appears to me most eloquent and beautiful language, in which the thoughts I have expressed are briefly summed up? It is the view which a man of great powers of mind takes of the condition of human nature. He says, "The stately ruins are visible to every eye, that bear in their front, yet extant, this doleful inscription, Here God once dwelt. Enough appears of the admirable frame and structure of the soul of man, to show that the Divine presence did sometime reside in it; more than enough of vicious deformity, to proclaim he is now retired and gone: the lamps are extinct; the altar overturned; the light and love are now vanished, which did the one shine with such heavenly brightness, the other burn with such pious fervour. The golden candlestick is displaced, and thrown away as a useless thing, to make room for the throne of the prince of darkness. The sacred incense, which sent rolling up in clouds its rich perfumes, is exchanged for a poisonous, hellish vapour; and here is, instead of a sweet savour, a stench. The comely order of this house is turned all into confusion; the beauties of holiness into noisome impurities; the house of prayer to a den of thieves, and that of the worst and most horrid kind, for every lust is a thief, and every theft a sacrilege: continual rapine and robbery is committed on holy things.

"The noble powers which were designed and dedicated to divine contemplation and delight, are alienated to the service of the most despicable idols, and employed to vilest intuitions and embraces; to behold and admire lying vanities; to indulge and cherish lust and wickedness. What have not the enemies done wickedly in the sanctuary! How have they broken down the carved work thereof, and that too with axes and hammers! the noise whereof was not to be

heard in building, much less in the demolishing this sacred frame.

"Look upon the fragments of that curious sculpture which once adorned the palace of that great King: the relics of common notions; the lively prints of some undefaced truth; the fair ideas of things; the yet legible precepts that relate to practice. Behold, with what accuracy the broken pieces show these to have been engraven by the finger of God; and how they now lie torn and scattered, one in this dark corner, another in that, buried in heaps of dirt and rubbish. There is not now a system, an entire table, of coherent truths to be found, or a frame of holiness, but some shivered parcels. And if any, with great toil and labour, apply themselves to draw out, here one piece, and there another, and set them together, they serve rather to show how exquisite the Divine workmanship was in the original composition, and the excellent purposes for which the whole was first designed, than for present use. Some pieces agree and own one another; but how soon are our inquiries and endeavours nonplussed and superseded!

"How many attempts have been made since that fearful fall and ruin of this fabric, to compose again the truths of so many several kinds into their distinct orders, and make up frames of science, or useful knowledge; and, after so many ages, nothing is finished in any one kind. Sometimes truths are misplaced, and what belongs to one kind is transferred to another, where it will not fitly match. Sometimes falsehood inserted, which shatters or disturbs the whole frame. And

what is with much fruitless pains done by one hand, is dashed in pieces by another; and it is the work of a following age to sweep away the fine-spun cobwebs of a former. And those truths which are of greatest use, though not most out of sight, are least regarded: their tendency and design are overlooked; or they are so loosened and torn off, that they cannot be wrought in, so as to take hold of the soul, but hover as faint, ineffectual notions that signify nothing. Its very fundamental powers are shaken and disjointed, and their order towards one another confounded and broken: so that what is judged considerable is not considered; what is recommended as eligible and lovely, is not loved and chosen; yea, the truth, which is after godliness, is not so much disbelieved as hated, held in unrighteousness, and shines as too feeble a light in that malignant darkness which comprehends it not.

"You come, amidst all this confusion, as into the ruined palace of some great prince, in which you see here the fragments of a noble pillar, there the shattered pieces of some curious imagery, and all lying neglected and useless amongst heaps of dirt. He that invites you to take a view of the soul of man, gives you but such another prospect, and doth say to you, Behold the desolation, all things rude and waste. So that should there be any pretence to the Divine presence, it might be said, 'if God be here, why is it thus?' The faded glory, the darkness, the disorder, the impurity, the decayed state, in all respects, of this temple too plainly show that the great Inhabitant is gone."

CHARLES THE SECOND AND WILLIAM PENN.

[A recent view of Madame Tussaud's beautiful exhibition of wax figures, placed before us an admirable and striking likeness of the distinguished founder of Pennsylvania, and we were forcibly reminded of the following interview, which we now transcribe from his life, for the gratification of our readers.]

WHEN William Penn was about to sail from England to Pennsylvania, he went to take leave of the king, and the following conversation occurred:—

"Well, friend William," said Charles, "I have sold you a noble province in North America; but still I suppose you have no thoughts of going thither yourself."

"Yes I have," replied William, "and I am just come to bid thee farewell."

"What! venture yourself among the savages of North America? Why, man, what security have you that you will not be in their war-kettle in two hours after setting foot on their shores?"

"The best security in the world," replied Penn.

"I doubt that, friend William; I have no idea of any security against those cannibals but in a regiment of good soldiers with their muskets and

bayonets; and mind, I tell you beforehand, that with all my good-will for you and your family, to whom I am under obligations, I will not send a soldier with you."

"I want none of thy soldiers," answered William, "I depend on something better than thy soldiers."

The king wished to know what that was.

"Why, I depend on themselves, on their own moral sense, even on that grace of God which bringeth salvation, and which hath appeared unto all men."

"I fear, friend William, that that grace has never appeared to the Indians of North America."

"Why not to them as well as others?"

"If it had appeared to them," said the king, "they would hardly have treated my subjects so barbarously as they have done."

"That is no proof to the contrary, friend Charles. Thy subjects were the aggressors. When thy subjects first went to North America, they found these people the fondest and kindest creatures in the world. Every day they would

watch for them to come on shore, and hasten to meet them, and feast them on all that they had. In return for the hospitality of the savages, as we call them, thy subjects, termed Christians, seized on their country, and rich hunting-grounds, for farms for themselves! Now, is it to be wondered at that these much-injured people should have been driven to desperation by such injustice; and that burning with revenge they should have committed some excesses?"

"Well, then, I hope, friend William, you will not complain when they come to treat you in the same manner."

"I am not afraid of it," said Penn.

"Ay! how will you avoid it? You mean to get their hunting-grounds too, I suppose?"

"Yes, but not by driving these poor people away from them."

"No, indeed! how then will you get their lands?"

"I mean to buy their lands of them."

"Buy their lands of them! Why, man, you have already bought them of me."

"Yes, I know I have, and at a dear rate, too; but I did it only to get thy good-will, not that I thought thou hadst any right to their lands; no, friend Charles, no right at all: what right hast thou to their lands?"

"Why, the right of discovery; the right which the pope and all Christian kings have agreed to give one another."

"The right of discovery! A strange kind of

right, indeed. Now, suppose, friend Charles, some canoe-loads of these Indians, crossing the sea, and discovering thy island of Great Britain, were to claim it as their own, and set it up for sale over thy head, what wouldst thou think of them?"

"Why—why—why," replied Charles, "I must confess, I should think it a piece of great impudence in them."

"Well, then, how canst thou, a Christian, and a Christian prince too, do that which thou utterly condemnest in these people, whom thou callest savages? Yes, friend Charles, and suppose again that these Indians, on thy refusal to give up thy island of Great Britain, were to make war on thee, and, having weapons more destructive than thine, were to destroy many of thy subjects, and to drive the rest away, dost thou not think it horribly cruel?" The king assented to this with marks of conviction. William proceeded—"Well, then, friend Charles, how can I, who call myself a Christian, do what I should abhor in a heathen? No, I will not do it, but I will buy the right of the proper owners, even of the Indians themselves. By doing this, I shall imitate God himself in his justice and mercy, and thereby insure his blessing on my colony."

Pennsylvania soon became a flourishing colony, and existed for seventy years, (the period when the Quakers held the government,) without any force beyond that of the constable's staff; and during that seventy years it was never invaded by any hostile power.

DULNESS VERSUS TALENT.

"Prævo favore labi mortales solent."—PHÆDRUS.

I AM one of a very numerous body who are often treated with great injustice, and I hope, after bearing the hardships under which we labour, you will not refuse to exert, on our behalf, that extensive influence which your office necessarily bestows.

I am what people in a calm humour call "a man of slow parts," and when irritated, "a dunce." Pope, you know, has not spared our race, though I think it was a pitiful advantage which he took of us; it was something like a man striking a woman, or a poet—pardon the sarcasm. Many of our tribe are by no means to be despised for muscular energy, whatever weakness of intellect they may betray; and Pope, I am sure, would have little relished a cuff from a fist ten times heavier than his own. Why, then, should he have overwhelmed us with his angry wit, when he would have been the first to condemn the exercise on himself of the physical superiority of another?

As a warning to future men of genius who may feel inclined to attack us, I will tell them, that we have it in contemplation to use here-

after the most powerful weapons which nature has given us. It would be silly in a horse, when attacked by a bull, to butt with his head; he very wisely takes to his heels. In like manner, if any one attack us with his wit, let him beware lest we return the blow by some manifestation of muscular vigour.

In modern times affairs of honour, it is well known, are generally decided by pistols, in order to put the combatants as much on an equality as possible, so that the most expert fencer has no advantage over the mere novice. It would be well if some common instrument could likewise be invented for the use of wits and block-heads in their frequent conflicts—something that would bring down the wit to the level of the dunce, or raise the dunce to the elevation of the wit. The pen, as at present used, manifestly gives the same advantage to the man of talents as the sword to the skilful fencer; whence we men of slow parts are worsted in every encounter. I therefore submit to the consideration of the public, whether it might not be used after a novel manner. Let the combatants be provided with a large goose-quill in one hand, and an inkstand

in the other; and, standing at six paces distance, let each in his turn dash the liquid into his adversary's face, which would obviously equalise their powers of blackening. Indeed, this would be an excellent plan for all literary champions, particularly editors of newspapers, who might thus learn the "art to blot," which seems fast sinking into oblivion.

I cannot conceive, however, that there is so much real difference between a man of genius and a man of common understanding as the world is apt to imagine. Not a single idea comes from the mind of one of these clever men, but may be taken in by the dullest intellect, if sufficient time be allowed for the operation; at the same time, I own that when once it has found entrance, you will not easily draw it out. The mind of such an one is something like that curious receptacle (known, perhaps, to some of your readers under the name of a "thrift-pot") with which children provide themselves when seized with the spirit of saving, as a needful auxiliary against the powerful allurements of comfits and gingerbread. The pence can only be put in one by one; and the school-boy will tell you whether they are in greater haste to make their egress. The man of talents, on the contrary, has an understanding like a purse, which receives and parts with coin with equal readiness; but all this serves only to show how little the furniture of their minds essentially differs. I have, I am sure, for my own part, a number of sensible notions and beautiful ideas in my head; but I know not how it is, that although I am a great writer, I seldom please any one besides myself. When I compose, I feel all the fervour of inspiration, and my productions suggest to my own mind emotions of exquisite delight; yet the words in which I exhibit my ideas seem not to convey the same meaning to others. They stare and laugh at passages which affect me with admiration; where I titter, they knit their brows, and look like stoics when I am bursting into tears—an unfortunate case, but obviously leading to no other conclusion than this—that an Addison, a Dryden, or a Shakspeare, is only superior to me because he conveys his thoughts with more success from his own mind to that of another, and not because there is a radical disparity between our powers of understanding.

Nevertheless, I would willingly waive all indulgence and favour from this consideration, if what we men of slow parts actually produce were allowed fair play and candidly estimated by its own merits; but so far from this being done, the partiality and prepossession shown by all the world in favour of the works of men of talent, are quite insupportable. Both genius and stupidity, it is well known, have intervals in which their natural characteristics seem suspended. Homer sometimes nods, and a man of poor intellect is now and then found in possession of a beautiful idea;

but it is all the same to most people; the productions of both are regarded indiscriminately—the one as uniformly fine, the other as invariably worthless.

I well remember being present at a party which was joined by a man of reputed wit and literary celebrity. He talked a long time before I could discover any thing extraordinary in what he said, but it would have been fine diversion for the satirist to watch the rest of the company. All kept their risible muscles on the tip-toe; an exclamation of delight was at the tongue's end of every one; and no matter what he said, out came the laugh and the compliment. They were once, indeed, too hasty. He was telling a story evidently meant to be laughable, but unluckily the company not understanding it, let out their burst of laughter before he had got to the point of the jest, and were so much exhausted and dispirited by their mistake, as not to be able to muster even a passable laugh in the right place. It reminded me of the raw recruit who fires his musket before the word of command is given, for fear of being too late.

A few days after, I happened to be in a different company, and having a good memory, tried to play off a few of the *bons mots* which had called forth such bursts of merriment. "Sir!" says my neighbour, with a stare of perfect vacancy. "Humph!" says another. A third looked out of the window, and a fourth began drumming on the table with the gravity of a judge. I perceived my want of the high character necessary to give dulness the brilliancy of wit, and silently withdrew my pretensions.

I recollect, too, another instance of the *præsumptuous favor*, the unjust partiality which influences mankind in the distribution of their applause. A friend of mine, who has no claim to talents above the ordinary standard, was once fortunate enough to produce a tolerable poem, which was published anonymously. A report got into circulation that it was the production of a certain poet of established reputation. Instantly a thousand heads were at work to find out beauties of which the author was quite unconscious; and a critic proved, to the satisfaction of every one, that there was an elegant and pathetic allusion to the domestic circumstances of the supposed writer, and that the verses were unquestionably destined to immortality. By some accident, in the course of a few days the name of the real author got abroad. Admiration shrunk before the truth; criticism blushed at being so deceived; and in a week the piece was—forgotten.

These incidents were brought very forcibly to my mind by what passed, not many weeks ago, at a tea-party to which I had an invitation. One of the company happening to take up a number of WARD'S MISCELLANY, which lay accidentally on the table, asked a lady near him how she liked one of the papers in it, at the same time

naming, as the reputed author, a gentleman of some note in the literary world. The attention of all the room was immediately awakened, and an unanimous request was made that it might be read aloud. The general buzz of applause which followed had lasted several minutes before I ventured to interrupt it, by questioning the correctness of the information as to the author, and mentioning a circumstance decidedly hostile to it.

A gentleman likely to be acquainted with the matter coming in at that moment, he was appealed to, and, from his own personal knowledge, confirmed what I had advanced.

"Well," exclaimed an old bachelor on my right, "I was thinking all the time, that if Mr. — was really the writer, he must have very much degenerated, or that this was some unfinished scrap from his portfolio."

"Why, to be sure," said a lady, whose exclamations of delight during the perusal had been rather vehement; "though there is an imitation of his style, and though I must contend the paper has some merit, I own there are none of the exquisite touches belonging to his compositions."

"The piece is well enough," cried a blooming beauty of eighteen, with pretty pouting lips; "but I should no more think of taking it for Mr. —'s than of falling in love with my grandfather."

"For my part," said a young man who, having been engaged at play in a corner of the room, had luckily escaped the error of joining in the general admiration, "I think it a wretched at-

tempt, and I wonder the editor should know no better than to insert it."

Now, I have the audacity to think—although I am conscious I oppose myself to the majority of my fellow-creatures—that wit is witty, beauty beautiful, and stupidity stupid, from whatever quarter they proceed. Why are we to suffer a man's reputation to cast the glare of success over his failures, to elevate common-place into elegance, and transmute obscurity into grandeur? Or why not admire beautiful thoughts and expressions, though but the scattered and casual progeny of mediocrity of talent, and lowliness of pretension? As a dunce, I shall not be much injured in the estimation of any one, by confessing that I admire Homer's "Catalogue of Ships," Milton's blank-verse theology, and Wordsworth's "Address to Thomas of Finland," not from any real feeling of admiration, but because I dare not do otherwise.

Your readers may amuse themselves by calculating how much of the admiration lavished on great authors has the same origin. A man of talents may tell me that this is because I have not learned to connect with these passages the same sublime and affecting associations as the authors. It may be so. Wordsworth, I have no doubt, connects many fine associations with the bleating of a sheep, but "*baa*" is no poetry.

I have told you my principles of judging, Sir, and I hope you and your readers will so far adopt them as not to withhold any approbation which this paper may deserve, though it comes from

INEPTUS.

Sheffield.

CATS.

CONCLUDING ARTICLE.

A CAT's "first love," did we say? aye, and why not; wherefore debar a cat from "the first pleasure in life?" wherefore deny to her the "softer feelings" of the "gentler sex?" which, in justice to their meekness of character, when the ferocious fit is not on them, they have won, and well deserve, from the hands or claws of their brother and sister quadrupeds.

A cat's first love!—we repeat it, how full of pathos, and thought, and feeling! how rich, too, overflowing with all the tenderest sentiments and associations! We are almost ready to declare that the subject is too much for us; we are absolutely swooning into a syncope at the bare contemplation of it; oh, jemini! how very queer we feel; how funny; the room is going round, the candles burn blue, cats throng upon us by thousands, all going round and round—fi, fo, fum, he, ho, we are gone—off, off, off * * *

* * * * *

Oh! we are better now, we are just "come to," we are ourselves again. Forgive our fainting away, kind reader, it was all for your sake, but we are better now, and we are smelling alive with vinegar and hartshorn. Cats! cats! what mischief do you cause! who would have thought it, to live all these years and then faint away at the thoughts of a cat! impossible, we can scarcely credit it; we cannot be ourselves, we must be somebody else.

Cats! cats! Oh ye shining ones—come forth again to re-illumine the newly awakened imagination within us; come forth, come from the pan-tile and parapet, gutter and garret, from attic and area, sewer and scullery,

"From garden and grove,
Where by moonlight ye rove,"

from cupboard and cellar, from cock-loft and chimney, from height and from depth; come forth, come forth.

"Come forth, oh ye children of gladness, come;
Where our pages are read, may ye have your home;
Ye of the whisker, and bright green eye,
And the bounding claw-paw, to meet me fly;
With the purr, and the splutter, and caterwaul lay,
Come forth, oh ye kittens, and cats, while ye may."

A cat's first love—there can be no doubt of it, it is useless disputing the point or beating about the bush to evade the question—there is, to a moral certainty, such a thing in the world as a cat's first love. We never had the gratifying opportunity afforded us of basking our optics in such a sunshiny flood of feline affection and regard, and cannot therefore describe, *seriatim*, that which we have seen with our eyes. Our forefathers and foremothers never enlightened our understanding upon the subject, our foregreat-grandmother told us nothing about it, and our schoolmaster, though otherwise a very clever fellow, never troubled himself to teach our young ideas how to shoot in that direction. We are therefore bound to be guided by plain common sense in the matter, to suppose that such an event in the life of the animal of whom we are now discoursing, may have proceeded somewhat after this fashion. We will suppose that two young members of the feline race, just emerged from kittenhood, and arrived at the age of young cats, are placed near to one another at a ball; a mutual friend introduces them to each other; with much cordial and pleasant ceremony they grin graciously at one another—Tabitha demurely and modestly gives a faint purr as she bows her best curtsy. Tom's eyes sparkle, and he brandishes a formidable five yard tail as he places his paw upon his heart, and makes his best bow before the amiable and placid Tabitha. Conversation now ensues. Tom starts many pleasing topics, which elicit numerous approving monosyllabic purrs from the beauteous Tabitha—the last night's adventure, including the scutter and scramble which he had to escape scot and skin free from the ferocious claws of Black Dick, to one of whose innamorata Tom had been whispering more "soft nonsense" than the lady's rightful proprietor deemed either right, proper, or prudent. Tom considers this "gentle hint" of one of his numerous "*affaires du cœur*" may please the fair lady, and raise him proportionably in her estimation, as "a gallant youth," and "a man of the world," and induce her to surmise that he is intimately acquainted with some of the "leading fashionables," and quite a man of "*ton*." Tabitha, however, puts up her fan, and her left fore paw at the same time, on hearing her "young friend" describe his midnight adventure—her blushing modesty, it must be owned, is much shocked at her companion not treating her with more becoming dignity on "so short an acquaintance." Tom, however, being what is technically termed "wide awake," takes no notice of the young lady's "blushing confusion," but immediately makes a "diversion" in his favour by requesting

the honour of his fair partner's hand for the next minuet. Politeness will not allow the lady to refuse this, and she purrs a sweet consent. And now the scene changes, the merry music trills merrily over the cellar-floor,—one, two, and off they go, to one of Hart's most enchanting quadrilles. How soft the lady trips along! her claws are tipped with silver, and at the terminating tip of her little tail, her mamma, ever watchful over the interests of her darling child, and anxious, moreover, that she should "look well," has hung a silver bell that she may have

"Music wherever she goes."

How merrily this tinkles, for she cannot help moving her tail as she dances; this move soon degenerates into a waggle, and this again into a decided downright wag whenever Tom's eyes rest upon her, and altogether she begins to feel "very queer." She leers and looks most comically at Tom, her whole being is in a flutter, and her "young heart" beats pit-a-pat at a rate that it has never beat since the night she lost her mother, and her supper, and her life very nearly too, by the footman throwing a broom at her. Tom is in raptures at these evident tokens of sprouting affection; he inwardly vows by the "lady-moon" to love her for ever; he swears by the stars to be to her a true and constant lover; but his soliloquies with himself are interrupted by the music striking up the merry *Gavotte de Vestris*, and off they go—claws across, and hack again, down the middle, and up again—*balancer, chaine Anglaise*, and *finale*. And now the gentlemen lead the ladies to their seats, and a tray of rat-refreshment is handed round. But where is Tom, and Tabitha with the silver bell? and echo answers—bell.

Out at the back coal-cellar door have they silently escaped, Tom having "adopted the precaution" of wringing the bell off his *belle's* tail—over the stone area, and up the wall have they glided and scrambled, and on the top of the water-butt, and "beneath the midnight-moon" are they seated in gentler converse and most amorous dalliance together.

As the phrase is, there is evidently "something going on between them." Their whiskers are all alive, and evidently seek each other, being actuated thereto by some powerful inherent attraction; they are seated as closely to each other as "circumstances will allow of," and their tails are in "active exercise." Tabitha's being short, gently "stirs the breezeless air," but Tom, young, vigorous, full of ardent passion and strong desire, puts his into most vigorous motion, and flails the water-butt most vigorously; the water is all in motion, and blow after blow is administered with increased vehemence as his passion rises. Mary, who is sleeping in the back kitchen, is awake out of her sleep, and in her confusion tears her best nightcap all to smithereens, in her anxiety in the

dark to see where the noise comes from. Mean- while Tom urges his suit more vigorously and more successfully, and at length is made happy by Tabitha. EPHON.

SUBLIME SCENERY.

It is the pride of poetry to paint the natural sublime. Passion is said to be poetry, so is description. The following lines, from the "New York Evening Star," furnish one of those happy dashes of the poetic pencil which discloses, veiled in "the prismatic broidery of the sun," an object of magnificent and stormy grandeur :—

NIAGARA.

Cloud-girdled thunder ! embodied storm !
Whether enrobed in vapours dark and dun,
Or looms, magnificent, thy giant form
Through the prismatic broidery of the sun.
Wondrous alike ! What floods have swept thy brow
Since the bold plunge of thy primeval wave !
From whose tremendous advent, until now,
Thou hast not paused nor failed. Yon boiling grave
Roars from its depths the song creation gave.

THE JUDGMENT.

SKIES that have hung in beauty o'er the earth
For twice ten thousand years, no longer stay ;
Stars that rejoiced and hailed her morning birth,
Have veiled their glittering fires and melt away ;
Earth has resigned her trust ; the deep, deep sea
Flings back her cavern'd portals to the day,
Where coral shells and pearls rich, glistening lay,
And sleepers bound in dreamless slumbers lie,
Near buried spoils of many an argosy,
Each in his lonely place of rest is stirred,
As the loud trumpet's wakening voice is heard ;
And th' archangel lifts his hand on high,
Swearing by Him who rules with matchless power
On heaven's high throne, that "time shall be no more."

Myriads are there, the lowly and the great,
From earth's remotest boundaries summoned nigh ;
And all in breathless, solemn silence wait
The awful Judge, descending from on high.
"Behold he comes !" clouds are beneath his feet ;
Before his face the winged squadrons fly,
Hymning the songs of gotten victory.
He sits enthroned in yonder judgment seat,
Where earth's pale sons in thickened phalanx meet,
From Him that cannot err their doom to hear.
Now living thunders, presaging despair,
Roll o'er the guilty soul ; while music, sweet,
The rapturous harmony of holy song,
Welcomes the blest amid the angelic throng.

T. W. A.

THE THEATRE IN FRANCE.

I FEAR the French have not profited by their dear-bought lessons so well as they ought to have done. A feverish love of change keeps them always restless, fidgetty, dissatisfied, easily put into good humour by some public display ; but, then, just as easily kindled into madness again upon the slightest occasion. Whatever tends to excite discontent and insubordination is most welcome and most popular. The revolutionary principle lurks within both their literature and their drama. The most audacious and revolting libertinage and impurity are at present the staple of the greater part of the one and the other. If it be said that the pictures thus exhibited are rather derived from the frenzies of maniac imagination than drawn from actual life, the familiar contemplation of vice set out so studiously *con amore* cannot but be attended with a fearful reaction on public morals. In some they must undoubtedly excite disgust, for hardly is it possible that an entire people should be so sunk in depravity as to relish them ; yet, that they are relished by the majority, it is impossible to doubt, else wherefore are they encouraged ? A recent piece, entitled *Le Juif Errant*, is reported to be a tissue of the most scandalous blasphemies ; and yet we are assured it has immense success. At the very best, the

drama is of exceedingly questionable influence in support of morals ; but when thus infamously prostituted to the most base and wicked of purposes, it deserves no quarter whatever, for it becomes a noxious pestilence, calling for the most decisive measures to remove and overcome it. But, let me ask, would the French ever consent to part with their theatre ? No, it is not in their nature ; they would resign their religion, for that they have formally renounced before— I say, they would part with their very souls for any thing or nothing, almost any thing else would they sacrifice except the theatre. It seems part of their nature, their essence ; for they are all of the theatre, theatrical.—*Records of a Route through France and Italy*, by W. Rae Wilson, F.S.A., M.A.R.

Let us see now the opinion of one of the first fathers of their church on the subject of play-houses :—"What ! the theatres are the work of Jesus Christ ! These blasphemies strike me with horror. Would Jesus Christ preside in assemblies of sin, where every thing we hear weakens his doctrines ? where the poison enters into the very soul by all the senses, and every art is employed to seduce, awaken, and justify the passions he condemns ? Every Christian ought to abstain from them, however innocent

he may flatter himself to be in bringing from these places an untainted heart. It is sullied by being there, since by its presence alone he has participated in the works of Satan, and violated the most sacred promises he made to Jesus Christ and to his church. Abstain from a theatre where He is insulted!"—*Massillon*.

Again, another of their fathers observes, "It is at the theatre our daughters are taught the art of skillfully conducting an intrigue, of concealing from their parents the secrets of their hearts, and of cherishing a passion condemned by propriety and morality."—*Abbé Clemens*.

REVIEW.

Ernest Maltravers. In Three Vols. Saunders and Ottley.

ARTICLE II.

It is a circumstance much to be regretted, that in the composition and writing of this novel, Mr. Bulwer should not have finished the story, but have left the various characters unsettled, and wandering still in search of "fairer fields and pastures ever new." This is a defect more particularly referring to the character of Alice Darvil—a creature who appears beautiful even in her fall, lovely in her devotion to her betrayer, and tender in that very adoration of the heart which she shows for Maltravers. We receive a passing glimpse of her character in connexion with a pseudo-banker, whose plans and designs are any thing but guiltless towards a creature still beautiful—a mother innocent in all but the tremendous fall from virtue to vice which has made her so. The reader will be scarcely able to form a correct estimate of her character; we see little of her; her appearances are like those of some fallen angel—she inherits a beauty and glory peculiarly her own, and in her love for her infant, and the long-enduring and confiding faith in the everlasting attachment and devotion of her lover, we recognise a spotless and shining purity of faith and hope which we connect with a lofty and unfallen creation. She wanders over the earth; and, exalted even in her penury and wretchedness, she claims the pity and sympathy of the merciful and the humane; and with such a beautiful conception of character as this,—one of the finest which Mr. Bulwer has ever drawn,—we regret that he should have trifled, and neglected to fill up the canvas where the outline was so bold and shining.

In the second volume we are introduced to Madame de St. Ventadour in England. Ernest meets her by chance, and their former *liaison* is renewed in friendship. In returning from a ride they are caught in a thunder storm, and take refuge in an inn where Alice was staying. Ernest and Valerie were in one room, Alice in the next.

"The door communicating with the next room gently opened. A fair form, a form fairer and younger than that of Valerie de St. Ventadour, entered the apartment; the silence had deceived her, she believed that Maltravers was alone. She had entered with her heart upon her lips; love, sanguine, hopeful love in every vein, in every thought; she had entered, dreaming that across that threshold love would dawn on her afresh, that all would be once more as it had been, when the common air was rapture. Thus she entered; and now she stood spell bound, terror-stricken, pale as death, life turned to stone; youth, hope, bliss, were for ever over to her. Ernest kneeling to another was all she saw. For this had she been faithful and true amidst storm and desolation; for this had she hoped, dreamed, lived. They did not note her, she was unseen, unheard. And Ernest, who would have gone barefoot to the end of the earth to find her, was in the very room with her and knew it not.

"Call me again 'Beloved,' said Valerie, very softly.

"Beloved Valerie, hear me!"

"These words were enough for the listener, she turned noiselessly away. Humble as that heart was, it was proud. The door closed on her. She had obtained the wish of her whole being; Heaven had heard her prayer—she had once more seen

the lover of her youth, and thenceforth all was night and darkness to her. What matter what became of her? One moment—what an effect it produces upon years! One moment—virtue, crime, glory, shame, woe, rapture, rest upon moments. Death itself is but a moment; yet eternity is its successor."

The character of Maltravers is, from its very nature, and the scenes and trials of life through which he passes, necessarily changeable and variable. We recognise no one particular trait of disposition which shines steadily and steadfastly throughout his whole career. The one which most pleases us is the one in which the powers and creations of a mind naturally imaginative are poured forth. Instability and disease arrest his career; and to the pointed queries he puts to his physician, that functionary returns an answer of grave and solemn import.

"Maltravers appeared satisfied, changed the conversation, talked easily on other matters for a few minutes; nor was it till he had dismissed his physician that he broke forth with the thoughts that were burning within him.

"Oh!" cried he aloud, as he rose and paced the room with rapid strides; 'now, when I see before me the broad and luminous path, am I to be condemned to halt and turn aside? A vast empire rises on my view, greater than that of Cesar's and conquerors', an empire durable and universal in the souls of men, that time itself cannot overthrow; and death marches with me, side by side, and the skeleton hand waives me back to the nothingness of common men.'

"He paused at the casement, he threw it open, and leaned forth and gasped for air. Heaven was serene and still, and morning came coldly forth amongst the waning stars; and the haunts of men, in their thoroughfare of idleness and of pleasure, were desolate and void. Nothing, save nature, was awake.

"And if, oh stars!" murmured Maltravers, from the depths of his excited heart, 'if I had been insensible to your solemn beauty, if the heaven and the earth had been to me but as air and clay, if I were one of a dull and dim-eyed herd, I might live on, and drop into the grave from the ripeness of unprofitable years. It is because I yearn for the great objects of an immortal being that life shrinks and shrivels up like a scroll. Away! I will not listen to these human and material monitors, and consider life as a thing greater than the things that I would live for. My choice is made; glory is more persuasive than the grave.'

"He turned impatiently from the casement; his eyes flashed, his chest heaved, he trod the chamber with a monarch's air. All the calculations of prudence, all the tame and methodical reasonings with which, from time to time, he had sought to sober down the impetuous man into the calm machine, faded away before the burst of awful and commanding passions that swept over his soul."

Fragments, beautiful as those we quoted in our former notice, we again quote; they are like scattered seeds of thought over which the summer calm has only to shine, to bring them to a rich and full fruition.

"As vain and arrogant of the last wreck of their national genius as the Romans of old were of the empire of all arts and arms, the modern Italians look upon the harmonies of other lands as barbarous; nor can they appreciate or understand appreciation of the mighty German music, which is the proper minstrelsy of a nation of men—a music of philosophy, of heroism, of the intellect and the imagination, beside which, the strains of modern Italy are indeed effeminate, fantastic, and artificially feeble. Rossini is the Canova of music—with much of the pretty, with nothing of the grand.

"Eternal progress is eternal change.

"A girl who over loves a man, not indeed old, but much older than herself, loves him with such a looking-up and veneration love!

"The poetry of the past rings on our ears the deeper and the

divines because removed from the clay that made the poets. O art, art, how dost thou beautify and exalt us! What is nature without thee?

"There is nothing more salutary to active men than occasional intervals of repose, when we look within instead of without, and examine, almost insensibly (for I hold strict and conscious self-scrutiny a thing much rarer than we suspect) what we have done, what we are capable of doing. It is settling, as it were, a debtor and creditor account with the past, before we plunge into new speculations.

"People who do not write think as well as people who do, but connected, severe, well-developed thought, in contradistinction to vague meditation, must be connected with some tangible plan or object; and, therefore, we must be either writing men or acting men, if we desire to test the logic, and unfold the symmetrical and fused colours of our reasoning faculty.

"Perhaps few men of real genius are much gnawed by the desire of fame until they are artificially worked up to it. There is in a sound, correct intellect, with all its gifts fairly balanced, a calm consciousness of power, a certainty that when its strength is fairly put out, it must be to realise the usual result of strength. Men of second-rate genius, on the contrary, are fretful and nervous, fidgeting after a celebrity which they do not estimate by their own talents, but by the talents of some one else. They see a tower, but are occupied only with measuring its shadow, and think their own height (which they never calculate) is to cast as broad a one over the earth.

"There is in a man that has much in him a wonderfully acute and sensitive perception of his own existence. An imaginative and susceptible person has, indeed, ten times as much life as a dull fellow. He multiplies himself in a thousand objects, associates each with his own identity, lives in each, and almost looks upon the world with its infinite objects as a part of his individual being. Afterwards, as he tames down, he withdraws his forces, but he still has a knowledge of, and an interest in the land they once covered. He understands other people, for he has lived in other people—the dead and the living; fancied himself now Brutus and now Cesar, and thought how he should act in almost every imaginable circumstance of life.

"What a luxury is there in the first love of the muse! that process by which we give the palpable form to the long intangible visions which have flitted across us;—the beautiful ghost of the ideal within us, which we invoke in the Gudara of our still closets, with the wand of the simple pen!

"Models may form our taste as critics, but do not excite us to be authors.

"There is no period of life in which we are more accessible to the sentiment of friendship, than in the intervals of moral exaltation which succeed to the disappointment of the passions. There is then something inviting in those gentler feelings which keep alive, but do not fever the circulation of the affections.

"A man can neither study with much depth, nor compose with much art, unless he has some definite object before him; in the first, some one branch of knowledge to master, in the last, some one conception to work out.

"I believe it has a great effect on the future labours of a writer, the place where he first dreams that it is his destiny to write!

"The farewells of friendship have indeed something of the melancholy, but not the anguish of those of love. Perhaps it would be better if we could get rid of love altogether. Life would go on smoother and happier without it. Friendship is the wine of existence, but love is the dram-drinking.

"There is a conscience of the head as well as of the heart, and in old age we feel as much remorse, if we have wasted our natural talents, as if we have perverted our natural virtues. The profound and exultant satisfaction with which a man who feels that he has not lived in vain—that he has entailed on the world an heirloom of instruction or delight—looks back upon departed struggles—is one of the happiest emotions of which the conscience can be capable. What indeed are the petty faults we commit as individuals, affecting but a narrow circle, ceasing with our own life, to the incalculable and everlasting good we may produce as public men by one book or by one law. Depend upon it, that the Almighty, who sums up all the good and all the evil done by his creatures in a just balance, will not judge the august benefactors of a world with the same severity as these drones of society, who have no great services to show in the eternal ledger, as a set off to the indulgence of their small vices.

"We learn so rapidly when our teachers are those we love! and it is observed that the less our knowledge, the less perhaps our genius in other things, the more facile are our attainments in music, which is a very jealous mistress of the mind.

"By being rubbed long and often against the great loadstone of society, we obtain in a thousand little minute points an attraction in common with our fellows. Their petty sorrows, and small joys—their objects of interest or employment, at some time or other, have been ours. We gather up a vast collection of moral and mental farthings of exchange, and we scarcely find any intellect too poor but what we can deal with it in some way.

"The desire of distinction grows upon us, till excitement becomes disease. At first it seems enough to obtain some credit, and contribute an obulus to the general stock; that done, new visions arise. The dead grow visible from the shades of time, and we dream of occupying a vacant niche in the grand Pantheon. Then we see, for the first time, the vast distinction between reputation and fame, between to-day and immortality.

"The powers of the mind are things that cannot be less immortal than the mere sense of identity; these acquisitions accompany us through the eternal progress; and we may obtain a lower or a higher grade hereafter, in proportion as we are more or less fitted by the exercise of our intellect to comprehend and execute the solemn agencies of God."

BOOKS AND AUTHORS.

MISS EDGEWORTH.—Miss Edgeworth was one evening busily writing beside her father, when a servant brought in the tea equipage. The authoress measured the due spoonfuls into a china cup, then "turned on" the boiling water into the teapot, let it stand the time proper for infusion; put into other cups their cream and sugar, pouring thereon—what? In her literary abstraction she had omitted to put in the hyson, so that the draught she now offered her parent was very milk-and-waterish indeed. "Were you writing on Irish bulls that you made such a blunder, Maria?" asked the sire. "No, papa," returned his witty girl, "'twas Irish *Abent-tea-ism*."

A LEARNED NEGRO.—Job Ben Solomon, son of the Mohammedan King of Banda, was taken in 1730, and sold in Maryland. He afterwards found his way to England, where his talents, dignified air, and amenity of character, procured him friends; among the rest, Sir Hans Sloane, the founder of the British Museum, for whom he translated several Arabic manuscripts. After being received with distinction at the court of St. James's, he was sent back to Banda. The letters which he afterwards wrote to his friends in England and America were published and perused with interest. This man is said to have been able to repeat the whole koran from memory.—*Liberia Herald*, No. VII. Printed at Monrovia, in West Africa, a colony of Blacks; the printer and editor being both of the same colour.

HUBER.—Huber has been blind from the age of seventeen. At that period he fell in love with a rich

young lady, who returned his affection, and consented to become his wife. A few months afterwards he was afflicted with gutta serena, which deprived him entirely of sight. He was sent to Paris in the hope that a cure might be effected, but he obtained no relief, and returned in despair to Geneva. Mademoiselle Lullen married the object of her disinterested affection, notwithstanding his misfortune. This excellent woman soon discovered a thousand means of supplying the wants which her husband's calamity occasioned. During the war she formed whole armies of pins, of various sizes, and thus enabled him to distinguish the positions of the different corps. She stuck pins in a map, and thus gave her husband a correct idea of the movements of the troops. A method by which he was enabled to write was invented for him, and his wife formed plans of the places they inhabited in relief. He had a great taste for natural history. He made his wife read to him a number of works on the subject, and particularly relative to bees. With her assistance he made several discoveries, which he published under the title of "Researches on Bees." To extensive knowledge M. Huber joined an extraordinary memory, and he related in a graceful style a great variety of interesting anecdotes.—*Memoirs of the Court of the Empress Josephine*.

SHARP RETORT.—"Will you lend father your newspaper, sir?—he only just wants to read it!" "Yes, my boy; and ask him to lend me his dinner—I only just want to eat it!"

JEMMY DAWSON.—Shenstone's pathetic and affecting ballad of *Jemmy Dawson* has drawn tears from every person of sensibility, or possessing the feelings of humanity; and it will continue to be admired as long as the English language shall exist. This ballad, which is founded in truth, was taken from a narrative first published in the *Parrot* of the 2d of August, 1746, three days after the transaction it records. It is given in the form of a letter, and is as follows:

"A young lady of a good family and handsome fortune had for some time extremely loved, and was equally beloved by Mr. James Dawson, one of those unhappy gentlemen who suffered on Wednesday last, at Kennington Common, for high treason; and had he either been acquitted, or have found the royal mercy after condemnation, the day of his enlargement was to have been that of their marriage.

"I will not prolong the narrative by any repetition of what she suffered on sentence being passed on him; none, excepting those utterly incapable of feeling any soft or generous emotions, but may easily conceive her agonies; besides, the sad catastrophe will be sufficient to convince you of their sincerity.

"Not all the persuasions of her kindred could prevent her from going to the place of execution; she was determined to see the last of a person so dear to her, and accordingly followed the sledges in a hackney-coach, accompanied by a gentleman nearly related to her, and one female friend. She got near enough to see the fire kindled which was to consume that heart she knew was so much devoted to her, and all the other dreadful preparations for his fate, without betraying any of those emotions her friends apprehended; but when all was over, and that she found he was no more, she threw her head back into the coach, and ejaculating, 'My dear, I follow thee! I follow thee! Lord Jesus! receive both our souls together,' fell on the neck of her companion, and expired the very moment she had done speaking.

"That excessive grief which the force of her resolution had kept smothered within her breast, is thought to have put a stop to the vital motion, and suffocated at once all the animal spirits."

In the "*Whitehall Evening Post*," August 7th, this narrative is copied with the remark, that "upon inquiry every circumstance was literally true."

A ballad was cried about the streets at the time, founded on this melancholy narrative, but it can scarcely be said to have aided Shenstone in his beautiful production.

SINGULAR RECOVERY OF PROPERTY.—The following circumstance is as true as it is remarkable:—A few years ago, two gentlemen who had been left executors to the will of a friend, on examining the property, found a scrap of paper, on which was written, "Seven hundred pounds in Till." This they took in the literal sense, and examined all his apartments carefully, but in vain. They sold his collection of books to a bookseller, near the Mews, and paid the legacies in proportion. The singularity of the circumstance occasioned them very frequently to converse about it, and they recollected among the books sold (which had taken place upwards of seven weeks before) there was

a folio edition of "*Tillotson's Sermons*." The probability of this being what was alluded to by the word "Till," on the piece of paper, made one of them immediately wait upon the bookseller who had purchased the books, and ask him if he had the edition of Tillotson, which had been among the books sold to him; on his reply in the affirmative, and the volumes being handed down, the gentleman immediately purchased them; and on carefully examining the leaves, found bank notes, singly dispersed in various places of the volumes, to the amount of seven hundred pounds! But what is perhaps no less remarkable than the preceding, the bookseller informed him that a gentleman at Cambridge, reading in his catalogue of this edition to be sold, had written to him, and desired it might be sent to Cambridge, which was accordingly done; but the books not answering the gentleman's expectations, they had been in the bookseller's shop till the period of this very singular discovery.

HANNAH MORE.—The energy of her mind in carrying into execution any purpose which had been adopted after sufficient consideration was very remarkable. In conformity with this part of her character, her plan was, in any new resolution which involved the exercise of self-denial, to contend with the most difficult part of the undertaking first, after which she used to say, she found the remaining sacrifices comparatively easy to be submitted to.

On this principle, having resolved to desist from going to the theatre about the time her play of "*Percy*" was revived, she determined to make that the immediate occasion for carrying her new resolution into practice. Mrs. Siddons was then at the height of her fame, and was to act the part of the heroine of the tragedy, a character which she was said to exhibit with remarkable success; and Mrs. Hannah More was in the midst of a brilliant society of friends and admirers, who all attended the representation; but here she was determined to make her first stand against this particular temptation, and to break the spell of enchantment while standing in the centre of the magic circle.

Another anecdote will show the same principle, brought into exercise on a very different occasion. As her limited income began to be sensibly diminished at one time, by her travelling expenses, she determined to perform her journeys in stage-coaches; and in order to overcome at once every obstacle that pride might interpose, she resolved to pay a visit to a nobleman, as she was about to set out in one of these vehicles, which, as there was a public road through the park, set her down at the door of the mansion. She has more than once described her conflicting sensations when his lordship, proceeding through a line of servants, in rich liveries, came to hand her out of her conveyance, a conveyance at that time much less used than at present by persons of high respectability. Thus it was the policy of this able tactician to commence her operations by a decisive blow, whereby the main strength of the opposing force was at once broken and dispersed, and her victory made easy and secure.—*Reber's Memoir of Mrs. Hannah More.*

GEM.

AGE AND YOUTH.—How dangerous, how foolish, how presumptuous is it in adults to suppose that they can read the thoughts and the feelings of those of a tender age! How often has this presumption, on their part, been the ruin of a young mind, which, if truly estimated and duly fostered, would have blossomed and produced good fruit! The blush of honest indignation is as dark as the blush of guilt—and the paleness of concentrated courage as marked as that of fear—the firmness of conscious innocence is but too often mistaken as the effrontery of hardened vice—and the tears

springing from a source of injury, the tongue tied from the oppression of a wounded heart, the trembling and agitation of the little frame convulsed with emotion, have often and often been ascribed by prejudging and self-opinionated witnesses, to the very opposite passions to those which have produced them. Youth should never be judged harshly, and even when judged correctly, should it be in an evil course, may always be reclaimed;—those who decide otherwise, and leave it to drift about the world, have to answer for the cast-away.—*Jacob Faithful.*

SCOTTISH FUNERALS.

CHAPTER II.

IN the summer of 1810, the writer of this article had occasion to pass the evening of a Saturday in the first town which one meets in entering the valley of Strathmore from Perth. The situation of that valley, and especially of this part of it, has many charms, as well for the antiquary, the historian, and the moralist, as for the mere lover of scenery. The valley itself is both ample and rich; through the centre of it flow some of the most delightful streams even of that land of many and bright waters; the mountains which skirt it on the south are rendered memorable by traditions of struggles against Romans, and Danes, and other invaders,—and classical as among the localities of the most wild and witching effort of Shakspeare's muse; while, on the north, the Grampians mingle their blue peaks with the clouds, and conceal valleys, the inhabitants of which still retain customs and traditions that have stood the test of a thousand years.

In such a place to tarry for the night, required no great effort of persuasion; and having rested myself, I crossed the river Ila by a fine old bridge, and took a ramble among the fields and farmhouses on the opposite bank. It was such an evening, and such an hour, as gave to that ramble the highest charm which the first sight of a fine country can possess. The summer was in its prime; the sun, but one brief hour from the western mountains, flung his light, softened and slanting, through the dark foliage of the trees, till, falling upon the windows of some half-concealed cottage, it was reflected back with that sparkling dazzle which excites without injuring the eye; and the soft west wind just bowing the full-grown hay and bended corn into the gentlest waves, bore and mingled upon its wings the rather perfume of the distant heather, and more intense fragrance of the field bean. After a little time, the belfry of a parish church, wildly sequestered among trees, met my eye; and as such a place, at such a time, is by no means the worst either for the mechanical or the moral painter, I bent my steps thither. The structure, though small in its dimensions, humble in its appearance, and grey through the effects of time, bore no trace either of dilapidation or desertion. Around it were collected the bones of many generations, under the green sods or their grey monuments; and the spreading elms and venerable ashes so curtained it around and canopied it above, as to put one in mind of the sacred groves of the Druids. Through the trees I could catch a glimpse of the parsonage house, or manse, as it is styled in that part of the country. It was of larger dimensions and more modern structure

than the church; but it seemed as though it had been spoiled of its inhabitants—the window shutters were closed on the inside, and without the swallows had built such a frieze as to fill nearly the upper third of each opening.

I passed around to the front of the church. An old man, habited in the ancient and peculiar dress of the Scottish lowlander,—a suit of home-made blue, with the coat down to his heels and encircling him like a modern frock, his withered hands exposed half way to the elbows, his neck with one little fold of cravat round it, and his white hair coming out from under a great breadth of blue bonnet,—was leaning upon a long staff, and bending over a grave which seemed only that instant to have been closed. No tear stole down his cheek, and no positive sign of grief escaped him; but in his whole manner and attitude there was an expression of calm and resigned woe, which was not only more affecting at the time, but seemed to bespeak a greater depth and duration of anguish than the most noisy lamentation. As I approached him, he lifted his bonnet in that grave and reverential manner which is peculiar to the Scottish peasantry of the old school.

"You have chosen a melancholy place," said I.

"Ay, sir," replied the old man, "it is fitting that I should visit what may soon be my last and only habitation; and I could not find a season more capable of turning my thoughts in that direction in which, at my time of life, they ought to be turned, than the present, at which life has sustained so great a privation, that, if it were God's will, it would almost be a pleasure to die."

"Have you buried a friend in that grave?" said I, pitying the old man; "human life is subject to such calamities, and they thicken as it approaches its close."

"I have not lost a friend more than others," replied he, "nor, indeed so much, as the days during which I could have profited, if God had spared him, by the kind instructions of him who now lies cold in this grave, must of necessity have been short."

"And pray, may I ask," said I, "who he is in whom, if he was no more a friend to you than to others, you take so deep an interest?"

"He was one," replied the old man, "who, in his brief career, was a blessing to the country side in general, and promised long to be one to this parish in particular; but to our sorrow, his kindness to others has been the cause of his lying down, under circumstances the most melancholy, in a grave the most untimely. But there is no accounting for the lot of man; the hand of Heaven, which often lies light upon the senseless

and sinning, falls with its full weight, and in its most fearful manner, upon the generous and the good. But it is all well ordered; they whom Heaven has chosen and appointed as its own, must endure chastisement, lest prosperity in this world should make them over-fond of its enjoyments, and forgetful of those mansions which are to form their blessed and eternal home."

As the aged mourner spoke these words, there was an earnestness, and even an eloquence of manner about him, which would have done no discredit to a professional public speaker; or rather, they were such as no merely professional speaker could display. The effort exhausted him; and as I pressed him to tell me something of the history and fate of the man in whom he took so deep an interest, he retired slowly from the grave, sat down on the nearest tombstone, invited me to sit by him, and after drawing his hand across his forehead and eyes, and inviting me to take snuff with him, (a ceremony which, in that part of Scotland, is as general and almost as sacred as eating salt with the Arabs in the desert,) he gave me a narrative, of which the following is the substance:—

"The tenant of that newly-closed grave had been for a few years their parish minister. He had been cut off in the very bloom of his days, and in the dawn of his usefulness. He was the only son and favourite child of virtuous and respectable parents, who, though they possessed a considerable freehold in the parish, had no wish to bring up their son to habits of inactivity. In early youth he had shown a great fondness for literary and serious pursuits, and had been rendered conspicuous among his schoolfellows, as well for great personal vigour and manly and generous conduct, as for superiority of intellectual powers. At no very advanced age he had been placed at the neighbouring university, where his appearance, his behaviour, and his success in his studies had rendered him a favourite with every body. By the professors he had been reckoned one who would never commit or conceal any thing mean or improper; and by his class-fellows he had been chosen umpire in all disputes; for which office he was well qualified, both on account of the sagacity of his counsel and the strength of his arm. While attending the university, he had been called home to perform the melancholy duty of attending first one parent, and then another, to the grave. His sisters had gone to reside with their relations; the family seat was let to strangers; and he took up his abode at the university, his great ambition being to perform the functions of clergyman in his native parish. And though the people had every reason to be pleased with the then incumbent, they looked forward to the time when his removal to another parish should place among them one whom they had all known from his boyhood, and of whom all that they knew excited their admira-

tion. The seat of learning at which he had taken up his temporary abode, was upon the seashore, at the bottom of a little bay, having dangerous rocks on the one side, and a long bank of quicksand, which was still more dangerous, on the other. The latter often proved destructive to shipping, from the dreadful surf that rolled upon it during north-east winds, and the impossibility of a ship getting off if it once struck. One dreadful winter day, when the north-east blew a hurricane, accompanied by a fall of snow and sleet so heavy as to darken the air, a vessel was driven upon this bank, at no great distance either from the land or the town; but the sea was so wild, and the weather so inclement, that the hardiest sea-faring men of the place, even with the aid of the life-boat, could render no assistance to the crew, who were in the act of perishing so close to the shore, that the sighs of their distress could be heard. The young preacher, whose stature and strength very much exceeded those of ordinary men, having made a rope fast round his middle, waded into the water, which, though rolling and foaming, and mixed with snow-flakes, was not deep, and landed the shivering, benumbed, and despairing crew, one by one, in safety. This truly heroic conduct got him much and general admiration; but it was gotten at great expense—the intense cold, and the prolonged and almost super-human exertion brought on a violent fever; and though the strength of his constitution overcame that, disease had fastened upon him, and assailed him in a variety of forms and a repetition of degrees of strength, which no human constitution could withstand. He had attained his favourite object—had become minister of his native parish; had married; and flattered himself with restored health and long life among a people where he was mutually loving and beloved. The disease, however, paid no deference to his unusual strength and promising usefulness; but after assailing him in every minor form, deprived him of his understanding, and he died in great agony, of which he appeared to be conscious. This"—said the old man, again advancing to the grave—"this contains all that we have of him now. The pulpit from which we heard him with so much delight, has been silent for two Sabbaths; and to-morrow a friend of his comes from a distant place to preach his funeral sermon. It will be an affecting day; and old and young will flock to hear the last tribute paid to the memory of one who lost his life in consequence of having rescued those who, but for his strength and courage, must have perished."

Upon my inquiring as to the expectations which had been founded upon this ceremony, the old man told me that, in his opinion, they were built more upon the general interest which the conduct and fate of him who was gone had excited, than upon any thing that they knew or cared for the pulpit oratory of the stranger who

was coming to officiate. He added, however, that this same stranger was "a queer childe; could tak' a wonderfu' haud o' the affections when he likit; was a gude deal run after in his own part o' the country; and, what was better than a', was weel likit by their dear departed minister, an' had been the last man to whom he had been able to speak a sensible word."

The peculiarity of the occasion, the representation of the old man, the beautiful situation of the church, and, perhaps, more than any thing else, the consideration that I had nothing better to do, made me resolve to attend on the following day, though my hopes of intellectual gratification were by no means strong. After I entered the little market-town, and was proceeding to the inn, the clergyman who was to perform the melancholy duty to his departed friend, was pointed out to me; and, certainly, his appearance had no tendency to heighten my expectations. In his dress, his air, and his manner, he was about the homeliest personage I ever saw. He had walked some fifteen or twenty miles, and the dust of the road had changed his rusty black clothes to nearly the same colour with his face, which had a heaviness of form, and a dulness of hue, that were any thing but promising. His person, about the middle size, and clumsy rather than athletic, was every bit as ill-fashioned as his dress; and I found it impossible, upon any received principle, to account for the interest and attention that he commanded from the town's-people. Still, however, I resolved to abide by my resolution, although every circumstance seemed unfavourable to its being productive of any corresponding measure of enjoyment. I retired to my chamber, pretty firmly convinced that the morrow would be a lost day. During the early part of the night the rain pelted, the thunder pealed, and the lightning flashed so violently and so incessantly, that I could neither rest my ears nor close my eyes; and the storm continued so long, that when I at last fell into a sleep, I did not awaken till I heard the tinkling of the church-bell, from which I concluded that I had overslept my time. Upon getting up, however, I found that this was only the first of the three warnings—one hour between every two, that summoned the devout people of Scotland to their well-frequented kirks; and so I had abundant time to attire and victual myself.

While I sat at breakfast the landlord could not refrain from telling me, that he supposed "their minister would get the kirk to himself for that day, as the hail country side were thronging to —, to hear Mr. C——."

"And why should they do this?" said I.

"They ken that best themselves," said the landlord; "and if you like to tak' a step that gate yourself, sir, you'll nae doubt find it out as weel as the rest. You might get a post-chaise, but it's no that far, and the country folks here-

away like to see the brute creation get rest on the Sabbath-day, as weel as their twa-legged masters."

I told the landlord that I had no desire to do violence even to the prejudices of the people; that I had already resolved on going to hear the strange preacher, and that it was my intention to perform the journey (little more than a mile) on foot. The landlord seemed somewhat disappointed, which made me conjecture that the hesitation he had expressed about the post-chaise, had less of piety, or of a desire of giving rest to his cattle in it, than of enhancing the price of his proffered accommodation.

"You'll return to dinner, at any rate," said he; "and nae doubt you'll need it when ye come frae the kirk; but you may just do as you like for a' that."

Leaving the landlord to his own conjectures as to where, when, or upon what I should dine, and not disturbing that Sabbath's rest which he had pretended to be so anxious to preserve for his horses, I set out for the rural church, by the same route which had conveyed me to it on the preceding evening.

There was not a little interesting in the day and the scenery. The air had that perfect transparency which indicates a disposition to receive no more moisture by evaporation; the trees, as well as the bearded corn, which was exceedingly luxuriant, were still sparkling with the last drops of the night's rain, and reflecting or transmitting the beams of the glowing sun in every variety of prismatic splendour; and though the sky overhead was without a cloud, it had the greenish tinge which, in such districts, is the type both of the past and the coming summer-storm. The storm which had passed over me seemed still to be wasting itself among the remote Grampians on the north; a few solid and well-defined nimbus clouds were showing their heads over the hills towards the south; and the Illa, which on the preceding evening had been so transparent, so calm, and so shrunken within its channel, came down from the mountain red and roaring, and having the expansion of a lake and the rapidity of a torrent.

As I passed through the long, narrow, and straggling streets of the town, the doors and windows of all the shops and most of the houses were closed, and all was still as though the pestilence had swept over it; but when I gained the summit of the eminence, which conceals from the town the river and the country on the other side, I found long lines of people moving in every direction toward the thick trees which enclosed and canopied the lonely churchyard, like so many rivers emptying themselves into the sea. I wished to enter into conversation with some of the bonneted men and bare-footed maidens, who seemed to have come a pretty long journey; but their looks were so demure,

and their words so few, that I was soon reduced to the condition of a silent pilgrim like themselves. Judging from the uniform "I dinna ken," by which they responded to all my inquiries, I might have concluded that they were the most ignorant race of beings in the world; but then their uniformly shrewd air, and hard but keen physiognomy, forbade that conclusion; and so I set down the sourness and starchedness of their religious system as being the cause of this seemingly total absence, not only of civility, but of curiosity and feeling.

When I reached the churchyard I found that there was a sort of scramble for seats upon the grave-stones; but the scramble was a novel one, and the strife seemed to be not so much who should best accommodate themselves as who should best accommodate their friends.

I soon discovered my venerable Cicerone of the former evening, and though the day and the occasion had produced an additional gloom even in him, he seemed pleased to find me among the rustic worshippers.

"You hae keepit your time, sir," said he, "we maun a' keep our time in the kirkyard sooner or later, gin God spare us frae the raging battle and the roarin' sea; but there's no mony o' your years an' your claithing that's keeping their time owre weel i' the kirk itsel'."

As we moved through the crowd, among the graves, I asked him if he could direct me to a seat in the church.

"Na, sir, I can no do that; there's no sae muckle room, either laigh down or i' the laft, as wad haud a bairn to stand; and so ane o' the windows has been ta'en out, an' Mr. C—— has arranged to stand i' the sole o' that, an' preach so as to be heard both by the crowd within and the crowd without. We maun just sit down, ony gate; but push through, an' let us get as near hand as ever we can. You'll be anxious to see, nae doot, an' I'm no sae gleg at the hearin' as I hae been."

Saying this, the old man pushed his way toward the grave over which he was meditating when I first saw him. I know not whether it was the authority of office or of age, but the rustics gave way as he advanced, and a tombstone sheltered by the little porch of the church, and having nothing between it and the window from which the sermon was to be delivered, save the grave of the deceased pastor, was instantly vacated for us. Upon this we sat down, and my conductor became as taciturn as the rest.

A hum in the crowd, and a melancholy knelling of the bell, announced the approach of the preacher, who soon made his appearance, followed by the weeping relatives of his friend, who were instantly accommodated with seats upon the nearest grave-stones. The preacher stepped upon a few boards that formed a platform across the sole of the window, seated himself for a minute

or two in an old elbow chair, took down the psalm-book from a little table before him, turned over a few of the leaves, and then rose up in the most awkward and even helpless manner that I ever saw in a public speaker. I shall lose my short journey, and many of this multitude will lose their long one, thought I to myself.

Before he read the lines which were to be sung, the large and apparently leaden eyes of the preacher were turned towards the recent grave beneath him, with a look so wildly pathetic, and so fraught with intense and indescribable passion, that, for the moment, I absolutely forgot that I was in the society of mere men. The psalm was read with no very pleasant or promising elocution; and while the whole mass of the people were singing it to one of the most sublime melodies in their psalmody, the preacher, who had sunk into the chair, seemed turned into a monumental statue of the coldest stone, so deadly pale was his large face and forehead, and so motionless every limb of his body. His eyelids were closed, and yet one could almost imagine that the eyes looked through them alternately downwards to that earth which contained the body, and upwards to those heavens which contained the spirit, of his much-loved friend. When the singing was concluded he rose up to pray; and though there was a great deal of energy throughout, as well as an occasional burst of passion or of eloquence, yet the phraseology and the pronunciation were so uncouthly peculiar, that they jarred upon my ear, and made the effect of the whole any thing but agreeable.

The text was read out, and the sermon began, in the same clumsy and unpromising manner. The subject was, indeed, well chosen, the general propositions clearly enumerated, and the reasoning mathematically precise; there was also a breathing of freshness and originality over the whole; but still, during the first fifteen minutes, there was little save an occasional burning glow that stole across the pale cheek of the preacher, and an occasional melting fire that glistened from his eye, that could distinguish it from a commonplace discourse, by a man who knew better how to solve geometrical problems, or analyse chemical substances, than how to manage the fires of eloquence, and move the passions of men.

When, however, he had established the doctrinal truth which he had meant to inculcate; when he had formed a basis of reasoning so firm that doubt could not move or sophistry shake it; when he had subdued the understandings of his audience, and destroyed, by calm listening to clear arguments, the various workings of thought, of fancy, and of passion, which must naturally have actuated so vast and varied an audience when they came together; when he had done all this, he bounded at once upon the structure which he had reared, and, by that inborn and unteachable power of the Spirit which nature has

reserved for the chosen of her sons, and which shakes off all the disadvantages and incumbrances of figure, and voice, and language, as easily as the steed shakes the thistle down from his sides, carried the hearts and the passions of all who heard him with irresistible and even tremendous sway. As he painted the manly disposition and disinterested virtues and piety of his friend, a gleam of unbounded delight lit up every eye that I could notice; the mourners dried their tears, and forgot the sad reality of death, so much to the life and so vigorous was the image which he held up to their minds. The sketch was a rapid one, and the painter went through with it, breaking in pieces the materials with which he worked; but every touch had tenfold the power and expression of the most laborious finishing by a common artist. It could not have occupied ten minutes; and to me it did not seem to occupy as many seconds. But still I knew then, and can remember now, more of the appearance, character, and conduct of the subject of that brief delineation, than I can do of any other man, the volumes of whose biography I have read. The old man's simple story had been affecting; but here was an account the broken fragments of every word of which (and the words were sadly mangled and broken) engraved themselves upon the innermost and most imperishable tablet of my memory.

The exultation which this glowing portraiture was calculated to produce, was fearfully contrasted with the pain resulting from the destruction of such a man by his attempt—his successful attempt—to deliver his fellows from the whelming waves. In the graphic delineation of the preacher, the storm and the sea raged more terribly, and the deliverer shone with more powerful nerves against them, than it was possible for any other man to imagine; and the varied

unrelenting attacks of the consequent disease, with its melancholy termination, drowned the wide-spreading listeners in a deluge of woe.

But the most powerful shafts were yet in the quiver of the orator, and these he set on the string, drew to the head, and discharged around him, with the unerring skill and unequalled strength of an Apollo. The desolate home, the disconsolate widow, the sermonless pulpit, the sorrowing people, the closed grave, the awful and certain admonition of their own mortality, formed a representation to which no pen and no pencil could do justice. One may describe or paint matter, but the giant efforts of mind are like the movements of the Spirit—one can see and feel their effects, but their workings are inscrutable. Antony, pointing to the mangled body of Cesar, and detailing the enormities of his murder, has ever been looked upon as one of the mightiest appeals to the passions of men; but this provincial preacher, (for he was then but a provincial preacher, and hardly known or cared for beyond the county in which he was born,) in an obscure churchyard, addressing ordinary rustics, and pointing to the grave of their minister, produced a more intense effect; and though the enemy who had spoiled them of their pastor was not one against whom they could go to war, they evinced the depth of their excitement by every possible demonstration of mental agony—they wept, they roared aloud, they dashed themselves on the ground, and were, for the time, as a people utterly deprived of their senses.

I have seen many scenes, and I have heard many eloquent men, but this I have never seen equalled or ever imitated. It was not learning, it was not art; it was the untaught and unincumbered incantation of genius—the mightiest engine of which the world can boast.

A LETTER TO THE YOUNG LADIES OF HARTFORD, UNITED STATES.

FROM AN ABSENT FRIEND.

PART I.

MY DEAR YOUNG FRIENDS,

ALTHOUGH a long time has elapsed since you heard from me, my pledge is not forgotten. Well do I bear in mind how earnestly you desired me, and how distinctly I promised to communicate every incident worthy of notice, that might occur under my observation, during my visit.

Yet what of interest or novelty can be expected in the quiet village of H——? Situated, as it is, in one of the deep bends of the Connecticut, and remote from more populous places, it has little intercourse with the world around. Change and variety are strangers to its peaceful borders. The seasons come and go, as they ever

have; the noble river, which rolled by these hills centuries before, still glides past, the same unchanged monitor of our fleeting days: and man, after living and worshipping very much as he was wont in years gone by, goes to his long home without pomp or parade. Such are, for the most part, our occurrences. Perhaps an occasional visiter, a sudden death, or other local circumstance, may now and then break upon the stillness of our monotonous existence; but the impression of such events, not likely soon to be renewed again, ere long passes away, and the neighbourhood is restored to its accustomed calm.

Under such circumstances, then, my young friends, why should I attempt either to amuse or interest you? Still the trial might not prove altogether abortive. And this I feel the more encouraged to hope, from knowing your fondness for those details which tend to show, on the one hand, virtue in a conspicuous and triumphant light, and, on the other, the disastrous effects of that course of conduct, which refuses allegiance alike to the dictates of reason, and the sway of moral principle. While, then, the desire for your improvement is near my heart, as your memory is vivid to my mind, I will, if you please, unfold some of the particulars of a history, the truth of which I have had the most ample means of ascertaining, and which may, I trust, convey a salutary and impressive lesson.

One stormy evening, in the year 1816, the stage-coach set down at the public house, in this village, a woman supporting in her arms a pair of helpless infants. Besides these, no attendants accompanied her. No multitudinous array of trunks and bandboxes betokened the costly wardrobe of the lonely stranger. The coachman soon removed her scanty baggage; for it consisted of but a couple of bundles and a rusty valisee; nor, between these and the garb she wore, was there any want of consistency. A dark cloak, worn threadbare, and a hood of like material, sheltered her from the blasts of a rude November. Although thus partially protected herself from the inclement weather, the fragile beings that hung upon her were abundantly provided for. The tender things were enveloped from head to foot in the finest and warmest flannel, and while the mother shivered, they slept. Introduced by the good landlady into a comfortable apartment, she deposited her charge, and removed her riding dress. The appearance she then presented was by no means an ordinary one; though the icy hand of penury was visible in every thing about her, yet in the choice and arrangement of every article of her humble dress there was the most perfect neatness and correspondence displayed. The impress of thought and intelligence, which was stamped upon her every feature, was rendered still deeper by her pale and emaciated countenance. She might have once been beautiful; and to the generous soul, whose idea of beauty is only enhanced by the shades that misfortune and suffering have cast upon it, she would have now appeared still more so. She said little, except in answer to the inquiries which were put to her; but this she spoke in tones so full of courtesy and sweetness as to arrest the admiration and interest of all who heard.

As might naturally be expected, the wonder and gossip of the neighbourhood were excited to the highest degree. Such an event had never before happened among them. Who could the woman be? where from? and what her object

here? Even the kind hostess would, in all probability, have been alarmed into certain impertinent interrogatories, had not her bill been faithfully and punctually liquidated every evening on retiring. She completely succeeded, however, in evading the questions and hints of her over curious visitors, yet treating them at the same time with such civility and kindness, that, although baffled, they left her with sentiments of love and esteem. To Mrs. L., who was the wife of the resident clergyman, and had ever evinced for her the warmest sympathy and solicitude, she at length revealed a few particulars of her history.

She was the widow of an English officer, who had fought in the late war, and had died sometime in the year following its final termination, from the effects of a severe wound received in battle. Unable to endure the idea of her husband being separated from her in a distant land, and, in case of sickness or death, exposed to the rough severities of the camp, she had attended him to America, and continued to follow his fortunes with heroic constancy and affection until his death. After being wounded, he had been taken to a hospital in New York, for recovery, that being the most convenient resort to obtain medical assistance. While there, she had watched by him with the most untiring assiduity, ministering to his every want, and denying herself, for his sake, of many things necessary, not only to her own comfort and happiness, but to her health, and very life. Her efforts, however, were unavailing. After languishing about four months, he died under the most excruciating distress, both of mind and body, leaving her the mother of twin daughters but little more than eight months old. Worn down with toil and anxiety, reduced to narrow circumstances, and utterly friendless in a strange land, she immediately sought some retired spot, that might at the same time afford her a rural asylum for the renovation of her sinking constitution, and enable her the better to subsist upon the scanty means left her. With this view had she come to H—. Why she did not return to England, was never known. It was suggested that it might have been in consequence of some unfortunate family connexion: possibly a stern and cruel father might have banished her the paternal roof, for marrying against his will, and she too "deep-souled" to forget her wrong, preferred dying on a foreign shore, friendless and alone, rather than to seek again the "home of her birth," to be thrust away, perhaps, more unfeelingly than before. However this may be, it is certain she never disclosed any thing relative to the early part of her life. And Mrs. L—, who possessed her heart and her confidence more than any other individual, aware that even herself could never elicit from the lady any important fact, which she did not choose of her own accord, and unsolicited, to reveal, forbore all inquiries upon the subject.

Mrs. Hastings—for that was her name—continued at the inn only for a few days, until recruited from the effects of her journey. She then purchased a dilapidated cottage near the river's side, which she had fitted up with great neatness and taste, yet with the strictest frugality. The kind offers of Mrs. L——, to take her into her own house, were declined with dignity, yet with gratitude. After becoming established in her humble domicile, she contrived to support herself by embroidery and teaching the village scholars. Her health, however, did not seem to improve, but rather to fail. Some secret worm was gnawing at her heart, that resisted every healing influence. Her situation, though delightful, alleviated not the heaviness of her spirit. She gradually sunk. The well meant attentions of the neighbours, and the beautiful scenery around, would bring perhaps a momentary smile of gladness, but failed of establishing any permanent cheerfulness. Joy had evidently fled her heart for ever, and a settled melancholy established its dark dominion there. Though joy had forsaken her breast, not so with affection. Her attachment to her children increased; than these, no other tie seemed to bind her to earth. Had it not been for a mother's love to her offspring, doubtless she would have stilled the anguish of her troubled spirit long before in a voluntary death. Often was she heard to exclaim, "Oh God! who shall protect these orphan babes?" For these she lived, she prayed, she wept. It was a matter of much speculation whether she was a pious woman or not. Whatever of religion she might have possessed, it was certain but a faint portion of its blessed light apparently ever shone upon her solitary pathway, either to enlighten or console. A dark view of things had taken possession of her mind, which appeared daily to become deeper and more sullen. Consumption at length stretched her upon the couch from which she was no more to arise. From this period her decline was rapid: no solicitude during her fast waning hours was manifested for her temporal concerns, nor her eternal salvation; her thoughts seemed all absorbed in the children she was about to leave. No other anxiety was evinced excepting that which had these for its object. The unsparing hand of death was to divide between them and her. Soon they would be left without a natural protector to shield them from the rude blasts around. Would the world treat them as it had her? Would poverty chill their young blood and wither their forms? or neglect and contempt drive them to guilt, and guilt to shame and the grave? Would they wander in a strange land, desolate and alone, and lie down at last without a relative near to soothe their dying pillow? Such were the reflections that agitated the soul of the fainting sufferer; and it was not till after receiving repeated assurances from her best friend, of the future safety of her children, that

she found comfort. She soon became reconciled and calm, and when at length the inevitable stroke came yielded without a murmur or a fear. She was buried in an unfrequented corner of the village cemetery, apart from the society of the dead, as she had been from the families of the living while alive. No storied stone was reared to show her stranger grave. A young cypress, whose seed the hand of chance had scattered near, reached its dark branch over the new sod; and this was all that marked the spot. The cottage of the deceased was closed soon after her interment. She had provided against the last sad extremity, by bartering away the remnants of an earthly dwelling, to purchase "that narrow house appointed for the living." Consequently, no heartless claimant laid hand upon it, and the curious idler was forbidden to desecrate its pale.

The bereaved orphans were now to be disposed of. The kind-hearted Mrs. L—— would have gladly received them both into her own family, had her circumstances permitted; but as they were, it was impossible. It seemed hard to separate them, yet no one was willing to undertake the charge of rearing them both, in addition to all the other burdens of their families. It was finally resolved, that Mrs. L—— should adopt one of the twins, and Major W—— the other. This gentleman was somewhat past the meridian of life, and living very much at ease, in what was deemed the finest mansion in the village. He had done his country some slight services during the late war, and previously held a civil office of some distinction, by which he had acquired a competency, enabling him to live the rest of his days without labour. His style of living plainly evinced his determination to enjoy the good things of this life, and certainly if a devout and punctual attendance on public worship, an unblemished integrity, and a warm-hearted benevolence be any test of a man's religious character, he was not altogether regardless of the "Great Unseen." Having no family of his own, except a housekeeper and a couple of servants, he was, it would seem, little calculated to take in hand the education of a child, and that child a female. Still it was thought, his fortune would enable him to bestow upon his charge superior advantages, by supporting her at some public seminary. Besides, he had contracted a great fondness for the twins, and, had Mrs. L—— consented, would have taken them both under his guardianship. As it was he must have one, and Mrs. L—— allowing him his option, he chose Caroline.

Amelia, for this was the name of the other, was therefore left to Mrs. L——. This good lady was abundantly competent to the charge she had undertaken. None could have been more so. She had reared a numerous family of her own, and it might be said of her with truth, that she had "brought them up in the way they

should go." To a naturally strong and acute mind, she added a knowledge of human nature scarcely surpassed, and hardly supposable in one of her retired sphere in life. Probably no woman understood better the springs of human action, and the motives suitable to be presented to the mind of a child. And this her own experience and observation had taught her, rather than the philosophy of books. Yet her education was excellent. She had made the best of those advantages which were afforded her when young, and now, as the fruits, possessed an intelligence and cultivation of mind quite superior to any around her. Nor did she look down from her moral and intellectual elevation with aught of pride or contempt on her inferiors. Her every excellence was in an eminent degree graced by that most excellent gift of all—humility. Born with the finest sensibilities, her heart was ever open to the appeals of want and suffering. "More bent to raise the wretched than to rise," there was no office so lowly, so self-denying, that she would not cheerfully perform to alleviate the weight of woe. If the homeless and the wanderer called, she was the first to answer. If the broken heart sought sympathy, she was the first to bind up its bleeding wounds. From her youth up, she had "sat at the feet of Jesus," and learned his ways. And here was the secret of all her loveliness of character and eminent usefulness. Her motives were drawn from heaven, which she hoped hereafter to inherit. Religion made her an ornament to earth and a treasure for the skies.

Amelia and Caroline Hastings were three years old, when their mother died, and left them to the care of the respective individuals at whose characters we have just given a cursory glance. Two lovelier beings, in the garb of mortality, the sun scarce ever looked upon. They were not only twins in birth, but in looks, in form, in disposition, in every thing. It would, perhaps, not be easy to find two more perfect resemblances. A soft blue eye, auburn ringlets, and skin that might vie with the purest alabaster, were equally the property of both. It seemed to have been the mother's purpose to obliterate as much as possible the slight differences which nature had made between them, and to blend them as nearly as might be into one. Perhaps she foresaw and dreaded the prospect of that partiality which ever proves so destructive to family peace and happiness. Be this as it may, she had succeeded so wonderfully in co-operating with nature, that it was difficult for those who were not familiar with them to distinguish between the infant pair, either in the regulation of their already chastened tempers, their inoffensive demeanour, or the manner and tone of their childish prattle. Not more perfectly do two sister lilies, that bud and expand together upon a common stem, reflect each other's snowy

beauty, than did this orphan twain. Happy would it have been for them, had they not so soon been torn from their parent stalk, and forced into that rude separation for which they never seemed by nature intended!

Mrs. L—— immediately applied herself, with the most earnest assiduity and care, to the education of her charge. Aware that impressions made on the mind when most pliant and tender, are the deepest and longest retained, she deemed it her duty to imprint those first which were to effect the character for eternity. She had seen the beneficial consequences of such a course upon her own children. They were all not only acting their several parts in the world with honour and fidelity, but were holding fast that golden hope which looks to a more certain and blissful state of things above. And this they confessed they owed, in its first origin, to those truths and precepts which were instilled into their tender minds by the soft tones of a mother's voice, at the same time that they drew the milk from her breast. The first lessons that were taught Amelia, therefore, were those of God and a Saviour. The great truths of religion and the Gospel were gradually unfolded to her understanding, as she became able to comprehend them, and thus the true principles and motives of action were implanted at the outset of life—the very time when they should ever be. The instruction thus given, was conveyed under every circumstance of affection and solicitude. In this way it was associated in her mind with the feelings of her heart. Each holy precept and truth, inculcated by the voice of maternal love, sinks into the bosom with the very impression of that love, and can only be eradicated with it. And what can drive from the breast the recollections of a mother's love? Having brought her mind properly under the bias of religious motives, Mrs. L—— directed her to pursuits of a more intellectual character; and in these it was surprising to witness the effects of the former. Moral principle seemed to hold in every thing a complete sway over her; directing and urging on her efforts to perfection in all that she undertook. Even her affections and attachments felt its influence. No capricious fancies nor irregular aspirations were ever allowed to harbour for a moment in her mind. Rational in her desires, and temperate in her amusements, she already evinced a stability and constancy of character, which very few possess at a far more advanced age. Every day beheld her strengthening in virtue and perfecting in every useful acquirement; nor did she need ever to go from home to seek any branch of knowledge that was esteemed necessary to a well educated female of that time; for the superior acquirements and the gifted mind of Madame L—— enabled her to conduct the studies of her adopted daughter with entire success. This, together with the extensive learning and com-

municative disposition of Dr. L——, rendered her situation at home more advantageous than any which could have been obtained abroad.

Very different was the course pursued with the sister orphan, Caroline, by Major W——; he had but a poor conception of the proper method of dealing with the young heart. Being childless himself, he had never had the benefit of that best of teachers—experience, and therefore was little skilled to place the proper restraints on the bursting passions of youth, or to apply the suitable stimulus and incentives to early action. He undoubtedly meant well; but the error he committed was fatal to the temporal, and perhaps to the eternal, welfare of the child. He neglected to plant in her mind the principles and truths of religion, as the first elements of education, and the only true incitement to every future acquisition. He believed youthful piety to be rather a chimera, and tending to depress the lightsome buoyancy of juvenile joy, instead of rendering the disposition more innocent and more happy; he thought religion, like politics and other manly sciences, to be the work of advanced years and maturer consideration. Why cloud the spirit of a child with the gloomy anticipations of the future? It is when the paths of experienced ill and misfortune are yet untrodden, that we are best adapted to enjoy the present. Let us then be free and unfettered amid the spring-time of our existence; let us indulge in the charms of the season, and not trouble ourselves about the coming of a darker day before it begin to frown.

Such was the reasoning of the kind, though short-sighted Major W——. And the consequences of his management were soon visible. With no relative upon earth, his attachment would naturally fix on the nearest objects. No father could idolise more his own daughter than did the old gentleman his adopted child. Every indulgence was allowed, every endearing favour lavished upon her. No caprice that was not yielded to, no fancy that was not gratified. At her wish, the most expensive articles of costume, and a thousand trinkets as useless as they were extravagant, were purchased without the least hesitation or reluctance; nor could he be convinced that he was acting injudiciously. Often would Mrs. L—— venture to suggest what she deemed most dangerous in his manner of educating the child; but without effect. The old man was as conceited in regard to his own wisdom and experience, as he was erroneous in the whole course of his management. Unwilling to procure a governess for the instruction of his daughter at home, he placed her at one of the public seminaries, urging her to make the best of her time and advantages, yet furnishing her with a well stocked purse, and allowing her to act very much as she pleased. This was the worst possible measure he could have adopted. Had

she not been deprived of a father and mother, who would have conducted her previous education, disciplining her temper, and subduing her passions to a strict control; who would have watched over her moral conduct and intellectual progress during her residence at a place beset with so many dangers, the case would have been very different; but as it was, the experiment was certainly a most injurious one. Moreover, "the Institution for Young Ladies," at N——, happened about this time to be under exceedingly bad regulations. The rules were generally very good, but they were almost constantly trampled upon with impunity. There was by no means a sufficient strictness in keeping the members of the seminary within doors, and too little caution was shown in the admission of visitors. The literary advantages were said to be very superior, but great laxity prevailed in the moral discipline; while the intellect was cultivated, the heart was left untouched. Such were the circumstances that attended Caroline Hastings to the Female Academy at N——.

At the end of the first term she returned, in every respect improved in the doating eye of Major W——. The sisters had now arrived at the age of sixteen. Both were in appearance lovely and beautiful; but there was no longer that striking personal resemblance which they bore to each other in the days of childhood. In Amelia were united the most unaffected modesty, and the highest ease and elegance of manners. Her dress was simple and plain, yet arranged with consummate taste, and in such a way as to set off her finely proportioned form with the greatest effect. Intelligence beamed in her softened eye, and when she spoke, her words conveyed a charm that went to the soul; the tones of her voice flowed like music, and every movement was the perfection of grace. Yet she seemed totally unconscious of the effect she produced upon the beholder, and this circumstance threw an irresistible loveliness over every other charm. Upon her religion had produced its legitimate effect; it had not only given to her life and character an almost angel purity, but had so chastened and beautified her whole behaviour and conversation, as to attract the love and admiration of every heart. Not so with Caroline. That sweet blue eye that once beamed so mild was now changed. Unsubdued passion glowed from beneath its lid. Pride had now enthroned itself on that brow, where the arch smile of childish innocence once sported; and the vestal paleness that sate upon the features of her sister, was a stranger to her own cheek. The profuse tresses of her hair hung too wantonly around, and her dress, although splendid, seemed to have been selected with a view more to extravagance than propriety. Nor was the difference in their mental qualities less marked. The gentleness of the dove was the leading characteristic in Amelia,

while every accomplishment that could adorn and render her useful was perfectly at her command. She had attained complete control over her passions, and no event could ruffle the equanimity of her subdued temper. The acquirements of Caroline were more superficial and showy. Trifling circumstances would often start flashes of irritation to her eye, which argued any thing but that discipline of feeling which constitutes so necessary an ingredient in the perfect character. Still the sisters loved each other, with undiminished affection. They had always associated much together, and nothing had ever transpired to create the least unkindness of sentiment between them. This had been the constant object of Mrs. L——. Orphans as they were, their mutual love and attachment were among the few solaces afforded to their bereaved condition. Mrs. L—— hoped, too, that by being much together, the spotless example of Amelia might have a beneficial influence over the disposition and habits of her sister. Her affectionate obedience, her unaffected devotion, her unwearied industry and application to her duties, and a thousand other bright and substantial virtues, surely could not be altogether unavailing.

About this time there came to H—— a young man, for the purpose of gaining the assistance of Dr. L—— in the prosecution of his studies. He had already taken his degree at college, and, designing for the sacred profession, was now entered upon the department of theology. A private course being better adapted to his circumstances, he had made application to, and was kindly received by, our good clergyman, the Rev. Dr. L——. His father and mother had been early taken from him, and he thrown upon the wide world without a friend to watch over or counsel him. The lessons of his mother, however, and above all her dying words, had made a lasting impression on his heart, and to this is to be attributed the reason why he was never decoyed into the snares of vice and ruined. Of his own accord, he had taken up one of the mechanical trades, and served his allotted period with so much fidelity and skill, that he gained the entire good-will and approbation of his master. It was here that another and a deeper influence came

upon his mind—an influence that soon taught him to look with contempt upon worldly wealth and acquisitions—an influence that told him to make a sacrifice of himself on earth for the cause of heaven, and to look for his reward hereafter. From that time he resolved to consecrate himself to the ministry, and by hard struggling had arrived at that point in his preparation at which we just introduced him to the reader's notice. He might, indeed, be called a noble instance of devoted self-sacrifice. Had he chosen to continue at a lucrative employment, the science of which he had spent some years in acquiring, he might before this have been perhaps worth thousands, and surrounded with affluence and comfort. But as he now directed his weary and way-worn feet toward the village inn, he had not a farthing of money, nor, beside the clothes that covered him, aught of any of this world's goods, save the little budget he bore on his sapling staff. With the exception of his bible, he had disposed of all his college books, and every article of furniture, to liquidate his arrears; and was consequently left destitute and penniless. Dr. L——, however, by his benevolent charities, soon warmed him into life and activity, and he recommenced his studies with great zeal and energy. His motto seemed to be "Do, or die," and the morning and evening sun, or the midnight hour, alike saw him at his toil. Still, though his studies engrossed the chief of his attention, there were many moments in which he could not, if he would, avoid mingling in the society his benefactor's house afforded. In this, Amelia held of course a prominent place; and you will readily anticipate the result. Yes, even at the risk of becoming common-place and dull, I must write it—Edward Malcolm became the accepted lover of Amelia Hastings. This did not, however, diminish aught from the zeal with which he prosecuted his studies; it was far otherwise; for his love was only an additional incitement to exertion, and never knight in tourney strove harder to win a wreath from the hand of his lady, than did he, that he might win a smile of approbation from the lips of Amelia.

* * * * *

THE SIGNS OF THE ZODIAC.—No. III.

CANCER, THE CRAB.—CHAPTER II.

THE Egyptians had two years, the rural, and the sacerdotal; the latter of which, consisting of three hundred and sixty days, it required a certain period to make the two agree. The commencement of the zodiac in question appears evidently intended to represent the state of the heavens at the commencement of a sothic period. Now a sothic period consisted of one thousand four hundred and sixty years. The zodiac must

therefore be referred either to the year 1322 before Christ, or 2782 before Christ; for if after Christ it must have been of Greek workmanship, which, notwithstanding the opinion of Visconti, appears to me a most preposterous inference, with the evidence of every thing so decidedly Egyptian, or, if I may employ a strong phrase, so anti-Greek, on the face of it. The date of the oblong zodiac of Denderah appears determin-

able by this circumstance ; that the sun was then in the sign Cancer, the ascending part of the sign being represented by a beetle of one size, and the descending part of the sign by a beetle of another. Of course, the small *Scarabæus* next to the sign Gemini represents the ascending part of the sign, namely, that part which the sun has passed in his advance to the solstice ; and this circumstance is proved by a symbol of the sun at the solstice diffusing his rays on the material world, represented by a head of Osiris Bugenes. Mr. Hamilton computes the relative proportions of the smaller Scarab to the larger, as six to twenty-four ; but this I do not apprehend to be correct, and though it may be rather an uncertain decision after all, I should rather take them, as Sir. W. Drummond contends, as fourteen to sixteen. The solstitial colure, at the date of the construction of this zodiac, must, therefore, correspond with the fourteenth degree of Cancer, and consequently the date may be fixed about 1322 before Christ. There is this further corroboration of the date in question, that it answers, or nearly, to the first year of a sothic period.

As to the zodiac of Esneh, I have no doubt whatever, that the hand which first traced the remarkable zodiacal figures upon it was antediluvian. Sir William Drummond does not think so, but dates it about three hundred years after the deluge, according to the chronology of the LXX. ; but he does so upon the ground that part of the sign Leo only was ascending when that zodiac was constructed. My own opinion is, that the whole sign was ascending ; that, consequently, the sun's solstitial place at that time was between Leo and Virgo, which place gave birth to the blended image of the sphinx, portrayed as the first among the descending signs of this zodiac. The symbol answers to the sun's place at the summer solstice, at the time when Seth, the first Hermes, and, according to Josephus and the whole evidence of oriental writers, the first engraver of records on hieroglyphical columns, had reached the six hundredth year of his life. It was in the year 780 after the Creation.

Another singular feature is connected with the examination of this sign. It appears to have been most anciently represented by the figure of an ass. It is so represented on some Javanese and Hindoo zodiacs. It is for this reason that the Monoceros is a secondary symbol of the same sign, on the modern celestial sphere. The be-headed animal, on the planisphere before alluded to, is evidently intended to represent an ass ; and the trunk, which by union with the winged Orus or Persens, becomes the original Sagittarius, and the archetype of the fable of Pegasus, still preserves the same features ; neither is unworthy of remark as a circumstance of corroboration, that Bryant argues at length in favour of the original Centaur being composed of part man and part ass. The ass, like the beetle, was dedicated at

once to the good and evil principle, to Osiris and Typhon—to *Sol superus*, and *Sol inferus*—but when of a red colour it was more especially considered as a symbol of the latter, and some mystical dogma seems to have been connected with the black cross which marks the animal's back. Horus Apollo distinctly says, that an ass was a symbol of one of the solstices. This is conclusive evidence, for it could represent, in that case, no other than Cancer. Clemens Alexandrinus says, that a dog represented one solstice, and an ass the other ; here the evidence is equally conclusive ; for on some of Kircher's planispheres, the sign Capricorn is occupied by Anubis as the principal character, consequently, Cancer must be the animal in question.

It was, perhaps, because they considered the ass as the symbol of Typhon, that they regarded the animal as a type of the Jewish people ; a superstition which had a singular effect, for it caused them to be accused both by the Romans and the Franks of worshipping an ass. The same charge was brought against the Templars, that they, after the Jewish fashion, had an ass's head in the oracle of the Temple at Jerusalem. The whole prejudice appears to have arisen from a pun upon a word. The father-in-law of Moses was a priest of On, which means a priest of the sun, at the temple of Heliopolis, in the neighbourhood of which the Jews were situated while sojourning in Egypt. Now *on* constitutes the radical of a word in Greek, which signifies the ass, and hence the extraordinary imputation. The trilateral word *on*, or *am*, was, besides, the Egyptian version of the incommunicable name of Jehovah.

The sign Cancer, either under this form, or that of the Scarab, seems to constitute the origin of that labour of Hercules by which he took upon himself the deputed task of sustaining the heavens. According to Ashe, the American Indians represent the sign by a Monoceros (a figure now in Cancer) carrying the moon on its back. And here it may be as well to remark, that Isis, or the moon, was said to rise in Cancer. The Monoceros, too, is to this day (as appears from Brown) represented as an ass with a single horn by the Africans. Perhaps the hieroglyphical figure of the male deity of the moon on the back of an ass, gave rise to the character of Silenus ; (whence Selene the moon ;) at all events, he, like Pan, to whom asses were sacrificed, and Chiun, represented some of the starry bodies. But there is one circumstance much more apposite, namely, the fable of the ass of Prometheus carrying the regenerated starry universe, (such is the meaning of the symbol,) in the form of a renovated serpent, on his back. The same illustration applies to the Testudo of the Hindoos, and of the Venus Pandæmonia, which are other variations of the same symbol. The beetle, too, is frequently seen among the hieroglyphics, supporting a globe in

his claws; and not unfrequently with the symbols of life and death, a spade in one claw, and the *crux ansata* in the other.

It appears, moreover, clear, that the ten Avatars of the Hindoos were representations of the ten signs into which the antediluvian year was divided; among these was a giant with an ass's head. The rest agree with the modern zodiac, Aquarius, Capricornus, Leo, the virgin, the winged horse, &c.

As the beetle was chosen for an imaginary feature in its natural history, as well as the crab, so a similar reason may be stated for the selection of the ass. Perhaps it would be considering too nicely (though I have a faint recollection that Kircher states this) that the cross line on the animal's back was a symbol of the solstices; but his two burdens were opposite symbols of the labour of Hercules in supporting the planispheres, and of the division of the signs into equal parts when the sun reached the solstice of Cancer, those parts, the northern and southern signs, being typical of good and evil.

Now let us turn to the prophecy of Jacob, and observe how strikingly it concurs in what relates to Issachar with the image and purport of the sign.

"Issachar is a strong ass, couching down between two burdens," (the two Scarabs, or two hemispheres.) "And he saw that rest was good, and the land that it was pleasant; and he bowed his shoulder to bear, and became a servant unto tribute."

Now the Greek version of the Egyptian pictorial parable is, that Hercules did tribute to Atlas, and bowed his shoulders to bear for the sake of intelligence of the pleasant land of the Hesperides.

A part of the blessing of Judah seems also to refer to this sign, the two being proximate: "Binding his foal unto the vine, and his ass's colt unto the choice vine; he washed his garments in wine, and his clothes in the blood of grapes."

"His eyes shall be red with wine, and his teeth white with milk."

These mystical expressions, indeed, show a propinquity of purport as well as of place between the three signs of Leo, Virgo, and Cancer. This connexion I shall endeavour to illustrate in its proper place, as I proceed. At present, I shall confine myself to what relates to the sign Cancer; premising that there is great reason to believe, and indeed strong evidence to demonstrate, that the sign Virgo was originally a vine.

Now the whole of the above passage I again contend to be a mere translation of the pictorial language, employed in handing down the primitive traditions of mankind by means of the first zodiacs. For the planisphere of Denderah exhibits every particular of the whole prophecy. The lion of Judah "couching"—the lawgiver beneath his feet—(a seated king, with a serpent in either hand, implying right and wrong, and an

archer, or executioner, with a bended bow in front of him.) There is "the sceptre" before him—the ass and equulus of the modern sphere, or foal on one side, and the vine on the other; while between the *spica* of Virgo (the vine, as it was formerly) and the Crab, is a figure of Silenus which was preserved in the form of a satyr on the Roman sphere.

I consider my position as proved without employing a single word farther. But the remainder of the sentence which connects the three signs together is one of the deepest mysteries.

"The sceptre shall not depart until Shiloh come, and unto him shall the gathering of the people be. Binding his foal unto the vine," &c.

Now the "lawgiver" here referred to, is evidently the same personage as "the shepherd, the stone of Israel," to which reference is made in treating of the sign Taurus, and in the blessing to Joseph. The shepherd in question holds in his hand the pastoral staff of Osiris, (the symbol of gathering,) which is generally accompanied by the flail, the symbol of the last great harvest of separation and judgment; and at his feet is the Hoopoo, which, as all the commentators on the hieroglyphics interpret, means a flow of blood.

There is an overwhelming sublimity in the consideration of these antique images, in deciphering which, we appear to converse with the first parents of mankind, which enfeebles my power of language, and renders even the luminous conviction which they carry to my mind, "dark with excessive light." Like the old aspirant in the mysteries, I stand dazzled on the threshold of the oracle, inebriated and overcome by the effulgent presence of the final vision.

My position, derived from these extraordinary images, and their biblical illustration, will appear perhaps, at first sight, paradoxical, but I believe it is capable of the most rigid species of proof: that there was a tradition handed down from the first man or men, and entertained by all the most venerable of the Pagan creeds, especially the oriental, that a great king and lawgiver should come to gather mankind into one common family, and that the name assigned to this expected monarch was the same in other nations besides the Jews; namely, Shiloh.

For instance, the word *Selaw*, signifying a rock or stone, among the Egyptians, is the common characteristic of the Messiah. A rock or stone is frequently seen on coins, with the *draco salutis* twining round it. On Tyrian coins it is sometimes accompanied with a tree—perhaps the tree of life. Stones were emblems of the expected incarnate Divinity through all the east. At Delphi, a stone sacred to Apollo was anointed (Messiah means anointed) every day. Horus, the Egyptian Apollo, was represented by a stone, with a human head and a shepherd's staff. Jugernaut, the same deity among the modern Hin-

doos, is pourtrayed in a similar manner, and his worshippers expect from the deity a general gathering of all people, and a general equality, which is annually prefigured by a species of Saturnalian mixture of castes in honour of him.

From *Selau* comes the name of the shepherd Silenus. And this person wonderfully exhibits the close affinity between pagan mythology and theological tradition. Originally he was a much more important personage than he became in Greek fable, being evidently the same as the Bethpeor of the Phenicians, and the Mendes of Egypt. The Silenus of Egypt was represented with a star in his breast; so Bethpeor appears to have been symbolised by the star Chiun. Plutarch relates an extraordinary circumstance of some great event connected with his future advent in the life of Agis. He calls him a son of Apollo, and one of the ungenerated, or unbegotten gods, and that the oracle of Pasiphæ gave out that he should one day come and rule over the earth. It is a very remarkable circumstance, that on this anticipation was founded a juggle, not much unlike that which Joanna Southcott attempted to play off on the same subject—the appearance of Shiloh.

I am aware that, at first sight, there will appear a profaneness in connecting the image of the drunken Silenus with the Lawgiver and Prophet; but the image which we form of Silenus is derived from the Greeks, who understood nothing of the mythology which they borrowed from Egypt, "their nursing mother." It is, besides, requisite to remark, that great allowance is to be made for the metaphors of the pictorial language. To the necessity of employing these metaphors, perhaps, is owing the corruption of the first pure stream of Egyptian mythology, and the infinitude of silly fables, ingrafted by ignorant interpreters of the language, on its original texture. Indeed, were all the words which we employ now in the most finished compositions traced to their roots, a similar confusion of images would ensue. But when I speak of the original Egyptian church possessing a pure theology, I mean to speak comparatively; for a dash of materialism was certainly blended with its belief in a Trinity, and gross physical association undoubtedly polluted its pre-knowledge and pre-shadowing of the resurrection and final judgment.

MISTAKES CONCERNING GENIUS.

BY THE REV. G. W. BETHUNE, OF NEW YORK.

No man is to suppose himself destitute of genius because its effects do not immediately appear. Genius, in its higher forms, belongs, it is admitted, to few. Some men, indeed, cannot properly be said to possess it at all. Yet there is not one of us without some capacity for usefulness; and observation would lead us to believe, that even the gifts of genius have not been bestowed with such a sparing hand as is commonly believed. The fact, that in certain ages many men of genius arise to high distinction, and that in others not one appears, seems to prove, that certain stimulants to exertion have been wanting in the last, which were felt in the former. Genius, of a very high character, needs no foreign excitement. It has sufficient impulsive force in itself; but when the plant is more feeble, it needs fostering and care. The success of one great mind will induce others, less daring, to follow in its track. The assurance of sympathy, which is thus given, is a strong encouragement to effort. So, rarely has a new star shone out in the firmament of mind, but many smaller lights have twinkled forth to form a constellation. Precocity of talent is not necessarily genius. It is sometimes nothing better than a vice of the mental being in overshooting its proper growth, and prematurely exhausting its powers. Not a few instances will occur to you of men, and those, too, the most distinguished, who have passed many years of their lives before they became

conscious of their powers, or the proper method of directing them. The "*Lay of the Last Minstrel*" did not appear until its author had attained the meridian of life, and "*Waverley*" did not till many years afterward. It is true, that Scott could not have been utterly unconscious of his genius, even in early manhood; yet, I doubt not, he would have smiled incredulously at one who would have prognosticated his future triumphs; and it is easy to see, that but for the preparation of his youth, those triumphs would never have been his. The earlier efforts of Byron were really beneath criticism; but the severe chastisement he received only stimulated him to greater exertions, and he lived to reach the height of fame. No success can be expected without exertion; and no one knows what he can do, until he has resolutely and perseveringly applied himself to the struggle. Even if we have but one talent, there is no reason why that should be buried in the earth. The praise of success is greater where the natural ability is small; and it is infinitely better to be moderately useful, than ingloriously idle.

There is another great error yet more mischievous. It is that of supposing genius sufficient of itself without the aid of study. It is the fault of a strong imagination, when not sufficiently regulated by judgment, to be impatient of delay or control. Persons thus constituted, dazzled with the brilliancy of their conceptions, despise the

sobriety of rule. Conscious of power, but ignorant of difficulties, they determine upon rapid achievement and unshared victories. The melancholy end of many a Chatterton proves how bitter is their disappointment. The maniac's cell, or the wretched garret, has hidden from the world many a light, which, properly trimmed and fed, might have burned long and brightly. Many instances, already quoted, prove that the most successful men of genius have been ordinarily the most profound students. We ought to be more surprised at the amount of information Shakspeare was enabled to attain, under the disadvantages he suffered, than at what he accomplished with the information he had. If we knew nothing more of him than that he was the author of Julius Cesar, we would say that he was versed beyond a parallel in the history of that great period. No one could have sketched with more striking fidelity the cunning Antony, the impetuous Brutus, the infatuated Cesar, or the versatile Roman mob. It is a shame to abandon the cultivation of a soil because it is rich. The luxuriance of its natural fertility is only the promise of what it might yield to careful husbandry. We are accountable, not merely for the ten talents God may have given, but for the increase they might have made at proper usury. If Sir Isaac Newton compared the labours of his miraculous life to a child gathering shells on the shore, while the wide ocean of truth lay undiscovered before him, can any among us be justly satisfied with less attainment? Be independent of study, child of Genius, if you will, but rail not at the world for despising that which cost you no pains. You are your own destroyer. "Men will praise you when you do well yourself."

Much sensibility is also wasted upon the false supposition, that genius is necessarily unfortunate. It is true, that the calamities of men of genius have been proverbial, and volumes have been filled with their recital. But the calamities of men of genius are not necessarily the calamities of genius. Many of them with the same faults of character would have been equally sufferers, had they possessed no genius at all. It was their genius which gave notoriety to their sufferings. The gifts of Providence are more equally distributed than we are accustomed to believe, and great intellectual endowments are not often accompanied by the measure of worldly fortune, which falls to the lot of those whose humble faculties aspire not above the pursuit of gain. It is well for the world it is so, for nothing is more fatal to mental ambition than luxurious ease. The annals of genius should convince us, that it has oftener been repressed by prosperity than adversity. Instances of men born to wealth and rank, who have attained high intellectual eminence, are as rare as the number of those who have risen from obscurity is great. While circumstances induce the one class to indolence,

they compel the other to personal exertion. It requires great effort to raise one's self to distinction, unassisted by friends, and embarrassed by poverty.

*"Haud facile emergunt, quorum virtutibus obstat
Res angusta domi."*—JUV.

But it requires greater still to leave the haunt of fashionable pleasure, and the circle of flattering friends, to pursue, in solitary labour, those difficult paths which alone lead to useful renown. Vice is always its own avenger, and no genius can exempt the transgressor from its penalties. Savage, Otway, Burns, and many others owed their ruin to their unlicensed follies, not to their genius. When such minds leave their high pursuits to company with the votaries of dissipation, they can expect no better fate. If we consider the miserable venality of his pen, we would cease to think the misfortunes of Chatterton as less deserved than those of Dr. Dodd. I am making no excuse for the world, which is too apt to neglect the children of genius, that it may flatter those of power. The early graves of Collins and Kirke White are monuments of its coldness and cruelty. Yet it is human nature to prefer our own interests, and not unfrequently the offerings which genius lays at his feet, are merely beautiful but useless garlands. Even the plough of Burns turned down "the mountain daisy," to make place for the more homely but more useful grain. Besides, it may well be doubted, whether what are frequently called the calamities of genius, are indeed calamities. If to receive the applause of the vociferous mob, to sit in the parasite's chair at the table of the great, to place the name of some wealthy dunce at the head of a dedication, to accumulate mere money that it may be spent in self-indulgence, or to struggle successfully with the demagogue and the gladiator in the political arena, be the chief goods of life, there are many paths to their attainment more easy and certain than those which genius loves and ought to tread. But if the consciousness of lofty thought, fellowship with the mighty spirits of the past, the dignity of noble aims, the applause of the few, but those the truly great, the admiration of posterity, and the benediction of Him who was himself "despised and rejected of men," be worth all the meaner world can give or take away, then has well directed genius no cause to complain. Who estimates the wealth of Milton by the five pounds he received for "Paradise Lost?" or who would not rather have been Galileo than the priestly bigots that murdered him? Even if it be admitted, as should be done, that "the gifts of imagination bring the heaviest task on the vigilance of reason," yet there is the greater reason why we should cultivate the judgment, that we may be preserved from those irregularities which expose the man of genius to calamity,

and not abandon its elevated pursuits, from an unworthy dread of danger. Whatever may have been the case of the past, true genius was never more applauded, or better rewarded, than at the present day. Dismiss, therefore, these mawkish lamentations over the unfortunate fate of genius, and press forward to share its immortal honours.

Another error into which we are apt to fall is, that genius requires peculiar advantages for its cultivation and development. Many a young man enters upon life with glowing hopes of intellectual distinction and determination never to cease in his efforts, but, finding the necessity of attending closely to the business of life, and being continually harassed and vexed by unavoidable interruptions, soon, though reluctantly, abandons his aspirations as idle dreams of his youth, the reality of which is reserved for those in happier circumstances. This is injustice to ourselves. We have already alluded to the many who have risen to fame from the midst of far greater difficulties than can possibly surround any of those now before me. If Æsop was a slave, Ferguson a shepherd's boy, Franklin a friendless apprentice, Heyne the half-starved son of a poor weaver, and Adrian VI. once so poor as to study only by the lamps of the streets, when the daylight had closed upon his labour,

no difficulties can be so great but a determined industry may overcome them. Men of leisure are rarely great. But the ingenious Drew produced his treatise upon the "Immortality of the Soul" when a working shoemaker, and the clearest ethical writer of our day (no one can doubt that I allude to Abercrombie) is a physician of the largest practice in Edinburgh, and must turn to his metaphysical pursuits after the most fatiguing efforts in those entirely different. It is folly to speak of the past being the age of thought, but this the age of action, as if the two were incompatible. I have yet to learn that Calvin was an inactive person, though I may look at his nine huge folios, filled with copious thought and profound criticism. Luther, too, was no sluggard in action, yet his volumes are far from being few in number, or deficient in research; and even in his music, which was but his amusement, you may find compositions in the Greek modes, the most difficult of all. Roscoe found time, in the midst of his commercial engagements, for his lives of the two Medici; and the author of the "Pleasures of Memory" is still a banker. The age of action not the age of thought! It is a disgrace, and not our glory. It is the excuse of indolence, or the boast of presumption.

EVERY DAY'S EMPLOY.

I HAVE found peace in the bright earth,
And in the sunny sky,
By the low voice of summer seas,
And where streams murmur by.

I find it in the quiet tone
Of voices that I love;
By the flickering of a twilight fire,
And in a leafless grove.

I find it in the silent flow
Of solitary thought;

In calm, half-meditated dreams,
And reasonings self taught.

But seldom have I found such peace
As in the soul's deep joy,
Of passing onward free from harm
Through every day's employ.

If gems we seek we only tire,
And lift our hopes too high;
The constant flowers that line our way
Alone can satisfy.

H. A.

REVIEW.

Observations on the Preservation of Hearing, and on the Choice, Use, and Abuse of Hearing-Trumpets, &c. By JOHN HARRISON CURTIS, Esq., M.R.I., Aurist and Oculist. Fifth edition. London: Kenshaw, Strand.

EVERY prudent man, though we do not live under the tyranny of the Stuarts, or the surveillance of the Star Chamber, ought to "take care of his ears." In this salutary duty he cannot select a better guide and counsellor than Mr. Curtis; and as we deem his little work of great value, we shall lay some of its most important advices before our readers, under their respective heads, as given in the analysis of the contents; observing at the same time that they are abridged from the author's celebrated *Treatise on the Physiology and Diseases of the Ear*, containing remarks on the deaf and dumb, and pointing out the necessity of medical

treatment in early infancy, with observations on congenital deafness.

ANATOMY OF THE HUMAN EAR.

"The human ear consists of three principal divisions, viz., an external, intermediate, and internal ear. The parts of the first division are called the helix, antihelix, tragus, anti-tragus, lobe, cavitas innominata, scapha, and concha. In the middle of the external ear is the meatus. The external or outward ear is designed by nature to stand prominent, and thus contribute to the symmetry of the head; but in Europe it is greatly flattened by the pressure of dress: it consists chiefly of elastic cartilage, formed into several hollows or sinuosities, all leading into each other, and finally terminating in the concha, or immediate opening into the tube of the ear. This shape is admirably adapted for receiving, collecting, and retaining sound, so that it may not pass off, or be sent too rapidly to the seat of impression.

"The next division is the intermediate ear, which consists of the tympanum, mastoid cells, and Eustachian tube. The tympanum contains four small delicate bones, viz., the malleus, incus, stapes, and os criculaire, which last is joined to the incus. The intermediate ear displays an irregular cavity, having

the membrana tympani stretched across its extremity: this cavity communicates with the external air through the Eustachian tube, which leads into the fauces or throat. The membrana of the tympanum is intended to carry the vibrations of the atmosphere, collected by the outward ear, to the chain of bones which form the peculiar mechanism of the tympanum.

"The third division of the organ is the internal ear, called the labyrinth: it is divided into the vestibule, three semicircular canals, and the cochlea, the whole being incased within the petrous portion of the temporal bone. The internal ear may be considered as the actual seat of the organ: it consists of a nervous expansion of high sensibility, the sentient extremities of which spread in every direction, and in the most minute manner inoculate with each other, forming plexuses, by which the auricular sense is increased. Here, also, sound is collected and retained by the mastoid cells and cochlea. To this apparatus is added a fluid, contained in sacs and membranes.

"To man the importance of hearing is great; for by it his harangue is heard in the senate, and his commands in the field. The parts essential to the perfect exercise of this function are:—

"1. An external ear: whenever this is completely removed in man, deafness is certain to ensue. 2. The membrane of the tympanum: this may be partially injured, but cannot be entirely lost, without producing deafness. 3. The stapes: all the small bones of the ear may be removed without destroying hearing; but the stapes is the only one that prevents the escape of sound from the internal ear. 4. The aperture of the Eustachian tube: which preserves the access of air through the throat to the tympanum. That this is a necessary part, is evident from the structure of the ear in the tortoise and frog, which have no external ear, but an enlarged Eustachian tube placed behind the roof of the mouth. 5. The presence of a fluid in the internal ear: this heightens the acuteness of impression, and renders it effectual.

"The general structure of the ear resembles a cavern, its form being, as before remarked, the best adapted for the reception and transmission of sound."

THE PHYSIOLOGY OF HEARING.

"The impressions received by the organ of hearing are conveyed through the medium of air, which acquires a tremulous motion or vibration from the action of the body communicating sound; and as these motions or vibrations succeed each other, sound is directed to, and impressed on, the thin membrane stretched obliquely across the auditory passage, where it produces a similar motion, and excites the sense of hearing, with a mysterious yet most efficient precision, and with a certainty of result invariably corresponding to the consecutive causes of noise.

"In all animals the ear is divided into an external and internal part; and the difference in its structure is greater internally than externally. In quadrupeds the variations are also much more marked than in the other classes of animals: but whatever differences of structure occur, the animal is thereby better fitted for its peculiar circumstances and mode of life. For, when we remember that all are the production of Infinite Wisdom, we may rest assured that even the slightest varieties of structure have their uses, and are not the result of accident. The sense of hearing is one of the most powerful helps to preservation that animals possess; since it not only foretells the approach of danger, but is also the means of effecting the re-union of individual families, and of congregating large numbers of a species for defence or migration. By it, too, they are assisted in finding their prey; and hence this faculty is wanting only in the very lowest in the scale of animated nature."

"The form and situation of the ear, however, as well as the delicacy and peculiarity of its structure, render it liable to injury from many causes; and unless particular attention be paid to its preservation, it is rare that it retains its powers in any considerable degree of perfection beyond middle life. But as I do not profess to specify here all the diseases of this organ, I shall only subjoin some observations on such as are most frequent, or are otherwise remarkable."

CAUTIONS TO MOTHERS IN CASES OF DEAFNESS AND DUMBNESS.

"Parents and others, who have the care of young children, should be cautioned against the too free use of cold bathing; many children have become deaf by its improper or unseasonable application, and from their not being wiped quite dry.

"The effect of blows upon the head is often of the most serious nature; and schoolmasters ought to be careful not to box boys on the ear, or otherwise strike them upon the head, as deafness may be caused thereby. A case occurred at the dispensary a short time since, in which an usher having hit a lad on the head with a ruler, deafness was the consequence.

"Nursery-maids should be strictly charged never to set very young children down on the damp grass, as a cold caught at this early period of life, before the function of speech is developed, has not infrequently been the cause of deafness, and, in

"Those who are interested in the instructive study of comparative anatomy will find a mass of very curious facts relative to the form, capabilities, &c., of the ear in man, quadrupeds, birds, fishes, and insects, in the last edition of my Treatise on the Physiology and Diseases of the Ear, in which work I have entered fully into the subject, and condensed much valuable information from various British and foreign sources."

consequence, of dumbness; it being evident that neither the English nor any other language can be spoken correctly unless the ear be able to catch all the niceties of pronunciation, accent, emphasis, &c.

"The habit of frightening children is another source of injury, and very reprehensible. It is an evil the effects of which remain a long time, sometimes till death, producing not only deafness, but epilepsy and a long train of diseases.

"When parents find that children, in early infancy, are dull of hearing, and do not readily acquire their speech, but appear to them to be deaf and dumb.—If they have not an opportunity of consulting a medical man, I would recommend the ears to be well syringed with warm soap and water; and the external part, together with the sides of the ears, to be rubbed night and morning with a coarse linen cloth. Sir Everard Home used to advise in cases where children were dull of hearing, an ointment made of equal parts of hog's lard and soft soap, to be rubbed, not only all over the ears, but on each side of the head in the vicinity of the organ. Though I do not expect much benefit from this application, yet the friction is likely to be of service, and deserves a trial.

"Mothers cannot be too strongly cautioned against considering their children deaf and dumb before they are tested, it having been frequently remarked to me, that infants who heard while teething afterwards became deaf; consequently, deafness in these cases depended on functional, not structural, derangement, and the hearing they once had might have been improved. When a child is supposed to be born blind, advice is sought; why not also if suspected to be deaf and dumb?

"The use of warm night-caps is a custom certainly injurious to the organ of hearing; and there can be no doubt that deafness arising from cold is very often caused by persons sleeping with the head enveloped in flannel, and in the day-time, even in winter, going abroad with the ears completely exposed. The insufficient dress of the ladies also renders them peculiarly liable to catch cold; and hence deafness frequently ensues. In slight cases, a little eau de Cologne applied behind the ears, and cleansing them with soap and water, will generally remove the complaint. When there is violent pain in the ear, a few drops of tincture of opium in oil of almonds, in the proportion of ten drops of opium to a quarter of an ounce of oil, will often afford relief."

CAUTIONS HOW TO AVOID DEAFNESS.

"Few need to be told that if they wish to hear well, and avoid deafness, they must guard against wet feet, thin shoes, cold currents, and draughts of air, keeping on wet clothes, sleeping in damp rooms and unsired beds, going into the night air from heated apartments, living in marshy and low situations, &c. Shunning these things, those who would retain their hearing unimpaired till old age, should attend to their general health, breathe a pure air, take as much out-door exercise as they can, live on plain but nutritious food, keep the mind calm and tranquil, and be especially careful to prevent constipation of the bowels.

The latter portion of the work is devoted to the consideration of various instruments which have been invented, and are in use, to relieve deafness. These are well described, and their comparative merits adjusted; but for these we refer to the book; and our last extract must be on

THE CHOICE, USE, AND ABUSE OF TRUMPETS.

"1. Of their choice. It is impossible to lay down rules applicable generally for the choice of ear-trumpets; what will suit one person exactly is utterly useless to another; and therefore I would here advise, as I have before done with regard to spectacles, that those who require a trumpet should try several. Still there are cases of structural defect in which no trumpet can be of any use. To those who wish to hear well, and who disregard the appearance of the trumpet, (which, by the by, seems to be the *crux sordidum*), I would recommend the tin trumpet with two apertures, in preference to all others; especially for those who hear best with their mouth open, or in a carriage. The cheapest, and even the most unsightly trumpets are often the best; and a common tin one, of the value of half-a-crown collects more sound, and renders the hearing more acute than the German silver ears, which cannot be obtained, if properly made, under £25. They may, it is true, be worn under a cap or wig without being seen.

"2. Of their use. Those who are obliged to have recourse to a trumpet, should begin with one of a moderate degree of power, and use it as sparingly as possible, never employing it when they can do without it; for the less a trumpet is used, that is, the more rest that is given to the ear at a time, the better and longer will it answer the purpose.

"3. Of their abuse. Ear-trumpets are intended for those who would otherwise be unable to hear at all; yet we often see persons using them who, if they were to exert themselves a little, would be able to hear without them. This may be considered as an abuse of them; and such persons should recollect that trumpets act on the ear as glasses do on the eye. Many have injured their hearing by improper trumpets; and, in like manner, many have hurt their sight by unsuitable glasses."

"As pebble is the best material for spectacles, so, in my opinion, is tin the best for ear-trumpets."

A LETTER TO THE YOUNG LADIES OF HARTFORD, UNITED STATES.

FROM AN ABSENT FRIEND.

PART II.

I MUST now leap over a space of two years, and introduce you to a rustic root-house, in the garden of Dr. L——. It was a lovely evening in June; and good Mrs. L——, after the labours of the day, had seated herself here to watch the sun as he descended to his repose, and enjoy the drowsy influences of the breeze as it swept by, bearing on its wings the perfumes of flowers, and that indescribable mingling of sounds, which, like some music, calls up the remembrances of early days. Mrs. L——'s speculations were, however, on present things. She had noticed, with all a mother's solicitude, the growing intimacy of Edward and Amelia, and it had been to her the cause of many sleepless hours and anxious days. To their marriage she was opposed—poverty and pride, were in her opinion but a bad portion; and though the talents of Malcolm were undoubted, and she believed his principles correct, she could not but believe their marriage would be a source of unhappiness both to him and Amelia. To the latter, she had not as yet revealed her fears and forebodings, and she was now planning in what way she might best communicate them, when the abrupt entrance of Amelia gave her the long wished-for opportunity. She soon brought her to acknowledge her love for Malcolm; for her high-souled integrity shrunk from even the semblance of prevarication. She then, in the gentlest manner, communicated her own wishes on the subject, adding, "You know, Amelia, your good is all I can desire, but I cannot see you doomed to a life of poverty, without, at least, an attempt to rescue you from it."

"Poverty," answered Amelia, "is to me no objection. I am not one of those romantic misses who can talk about love and a cottage, but I am willing, in joining my lot to Edward's, to endure a portion of this world's penury. Besides, my dear madam, why call Edward poor? He has the best wealth—intellectual wealth. 'There is that maketh himself poor, and yet hath great riches.'"

Such were not Mrs. L——'s views on the subject, and at length (more, perhaps, by appealing to Amelia's love for her, than by any sound arguments) she brought her to promise that she would separate from Edward, and endeavour to eradicate the love of him from her heart. And in all this, she sought only Amelia's good, and fondly flattered herself that she had found it. Alas! she knew not the deep strength of woman's love! In accordance with her promise to Mrs. L——, Amelia, at their next meeting, detailed to Edward what had passed, and with a calmness that

astonished herself, told him that henceforth they must meet as strangers. This scene I will not attempt to describe. Edward's first emotion was anger, but it soon gave way to a tenderer one, and with a bursting heart he bade Amelia adieu, and left the village, as he thought, for ever. Little did he then imagine what would afterwards befall him there.

In the meantime, Caroline had been thrown into a fashionable boarding-school, where, unfortunately, but little care was taken of the pupils, more than to see that the daily task was readily recited, the entrance courtesy properly made, and the seat at the piano taken with sufficient grace. The result, on a girl like Caroline, may be easily anticipated. Her head was completely turned—her daily conversation was of dress and amusement, and her nightly dreams of new conquests. Among the many visitors who, without the least scrutiny into their characters, were admitted to the institution, was a young lieutenant, of polished address, but worthless character. He soon enrolled himself in the list of her admirers, and became the recipient of her most flattering attentions. This boarding-school flirtation, in time, however, became something more serious, and grew into a passion involving, at least, the happiness of Caroline. On her return to the village of Hartford, he accompanied her, and by his suavity and attention completely won the heart of Major W——, who saw in the future prospects of his adopted child, only bright and happy days. Not so with Mrs. L——. She, from the first, with a shrewdness peculiar to her nature, saw and guessed the character of the stranger. But in vain did she represent the matter to Major W——. His invariable answer was, "Pho! pho! Madam L——, you was young yourself once"—and sometimes he would add, "See how your Amelia is pining because you did not let her marry Edward Malcolm." This was indeed too true. Poor Amelia had found the difficulty of suppressing her love." She had tried to banish the memory of past days from her mind—but how could she do it? She dared not pray for forgetfulness, for she felt that remembrance had in it nought of sin; and she pined, and drooped, till it was evident to all that consumption had laid its iron grasp upon her, and that her days on earth were numbered. Such was her condition at the time of Caroline's arrival in the village of Hartford. Still she continued to perform her daily round of household duties and delightful charities. But the cheek each day grew paler, and the "plague spot" assumed a deeper hue. Poor Madam L—— saw

this with the deepest sorrow, but without the least suspicion that she had ought to do in producing it; and Amelia's gentle spirit rejoiced that the pain of such a feeling was spared her.

As a last resort, Mrs. L—— desired Amelia to counsel her sister, and advise her never to wed Lieutenant B——. But how could she do this? How could she, the living proof of the unconquerableness of woman's love, advise her sister to a course which might end as fatally as her own? She shrunk from it; and though her love for Caroline would have prompted her to it, on the other hand, her fears dissuaded her from such a course. After much deliberation and many struggles, she penned a few lines to Malcolm, urging him by the remembrance of their former love, and the promises he had once made to her, to come to Hartford, and fathom the character of Lieutenant B——. Her request was immediately complied with; and a few days saw Edward established at the little inn in Hartford, a careful though unsuspected observer of his actions. For some time nothing passed which would in any degree confirm the suspicions of Mrs. L——. One day, however, in a conversation with Malcolm, the lieutenant, who had been indulging pretty freely in the juice of the grape, gave him some details, and made some statements, which convinced him of his libertine principles and debauched habits. On representing the matter to Caroline, however, she made light of it, laughed at what she called the indiscretions of a man of fashion, and finally told Edward that she would prefer the gay lieutenant, with all his vices, to any one she would be likely to find in the village of Hartford. On the lieutenant's next visit, she related what had passed, and hinted that should her adopted father hear it, the consequences might be disagreeable. Angry, alike at his own folly in having discovered himself to Edward, and at Edward's relating it to his mistress, the lieutenant immediately sought him; he found him pacing the road, in a state of the greatest mental excitement; high words ensued; blows followed words; a challenge on the spot was given: Edward, forgetting in the heat of passion his character and his principles, accepted it; shots were exchanged; and Malcolm in an instant was laid upon the ground, a corpse. The horror occasioned throughout the village by this event may be easily imagined; even Major W——'s eyes were opened—but it was too late; the infatuated girl had fled with her lover, and the only hope that now remained was, that she went as his wife, and not his dupe. To Amelia the stroke was doubly dreadful. She had fondly indulged the hope that, if Malcolm could again visit the village, something might chance which might bring about their union, and they might yet be happy. It was indeed a slender thread on which to hang a hope, but the poor girl had nursed it until it had grown almost to a

feeling of certainty; and nothing but the deepest piety and the humblest faith could have borne up her spirit under this accumulated load of misery. As it was, her suffering was severe; a lover and a sister both taken—the one indeed most awfully, for she could not but remember that he died with the weapon in his hand which was designed to cause the death of another—and the other lost too to her, and, as she feared, to all the good and virtuous. Still she could feel that there might yet be mercy for both; and this holy hope brought healing to her wounded spirit on its wings.

Meantime weeks, months rolled on, and nothing was heard from the fugitives. The matter was almost hushed up in the village, when one day fresh interest was aroused, by a letter to Amelia, from her wretched sister, postmarked from the metropolis of our New England. It was couched in terms of the most earnest entreaty, urging her as she loved her, to come to her instantly, or she would be too late. Amelia, though on the borders of the "spirit land" herself, hastened to comply with her request, and, accompanied by the worthy Dr. L——, set off upon her sad and lonely journey. They reached the city in safety, and on following the direction in the letter, they found, in a narrow and filthy street, a dirty hovel, filled with ragged and miserable inmates; and among them, clothed in rags, and evincing in her whole appearance the most abject suffering, the once gay and accomplished Caroline. Preparations were instantly made for her removal, for Major W—— had instructed them to spare no expense that might be necessary to her comfort; he dared not trust himself to meet his adopted child, for his kind heart was almost broken with the shock of her ingratitude. Meantime the strictest search was made for the lieutenant, and it was discovered that he had resigned his commission, and embarked on board a vessel of questionable appearance, which had for some time been hovering about the port.

They still had one comfort—for Caroline could assure them that she was a wedded wife, and produced her marriage certificates. For some time Amelia could have but little communication with her, owing to her great weakness. One day, however, Caroline appeared somewhat to revive, and gave to her sister some particulars relating to her life, after her marriage with Lieutenant B——. For a time, nothing could surpass the kind attentions he showed her. On her arrival in the metropolis, she was introduced to some of the lieutenant's gay friends, whose detestable character was for a long time unsuspected by her. A continual round of amusements occupied her attention; and by degrees she came to hear principles advanced, and sentiments avowed, which once would have shocked her. Nor can we wonder that such was the

event. Her character was unbased on sound religious views, she knew little or nothing of the great truths of Christianity, and on eternal things she had never bestowed a thought. Thus, sinking by degrees, she fell into the lowest depths of infamy; scenes of riot and debauchery were now familiar to her sight, nay, she even delighted in them; and her only regrets were that she was no longer to mingle in the gaieties of life; for the realities of death she had made no preparation.

A few days before her death, Amelia, who had all along endeavoured to arouse her to a sense of her situation, seated herself by her bedside, and thus addressed her:—

"My dear Caroline, I wish you would allow me to call in Dr. L——; you must be aware that you are daily losing strength, and why will you not, my sister, prepare for the worst?"

"Amelia," answered she, "it is in vain to urge me; I know nothing more of death than that it is a long sleep—that in dying, I leave life and all its pleasures, and only cease to exist."

"Such thoughts, my sister, are dreadful."

"Dreadful, Amelia! I do not know it; I wish not to think of it; I like not to talk of, or meditate on death,"—her voice assumed a sepulchral hollowness as she uttered the words,—"for sometimes there are dreadful visions come over me when I am thinking of it; I hear sounds that I cannot describe, I see sights which I dare not tell; and it is only by exerting myself to remember the gay scenes of former days that I can banish them."

"And why seek to banish them, Caroline? they are sent in mercy; and, oh! let them have all the power over you they can; they bid you turn from the vanities of this world, to Him in whose presence is deathless life, and at whose right hand are 'pleasures for evermore.'"

"Well, well!" answered Caroline, "I sent for you to nurse me, and not to preach to me. I tell you, Amelia, as I have lived so will I die; I love life, and I cannot bear to leave it. I would wish, at least, to pass away in unconsciousness. One thing I have to ask—that you will bury me by my mother, and that when you die you will lie there too; for, it may be weakness, but I feel it strong at my heart—I wish to lie near those I have loved."

With these words, she motioned Amelia away, and the gentle sister retired, with the sad thought heavy at her heart, that her Caroline was beyond every influence but that of prayer. Still she continued to watch around her couch, in the faint hope that she might return even at this eleventh hour. Her hopes, however, were in vain. A stupor shortly after came on, and Caroline passed from time to eternity, wrapped in an apathy fearfully symbolical of the spiritual stupor that benumbed her soul.

Her last request was complied with. She was buried on one side of her mother, in the churchyard. The mournful winds of November, sighing through the trees, scattered the dead leaves from their branches, as they bore her to her long home—a sad emblem of the decay and blasting of her early hopes, her follies, vanities, and sins.

Amelia only survived her sister a few months. Her earthly lot seemed, to a careless observer, to be all miserable, and to have in it nought of comfort; but it was not so. In prayer, in meditation, and reading the sacred volume, she passed many hours, and they were hours of joy. And when at last her gentle spirit passed away from earth, it left her mortal tenement with the exclamation, "It is very pleasant!"

The opening spring was just breathing its balmy fragrance around, when they laid Amelia in her "narrow house," by the side of her mother. As the cheerless autumn had been emblematic of her sister's fate, so was the bright and glorious spring of her own. As all nature was bursting from her long sleep, so was the angel spirit of Amelia bursting from the chill and sadness of this world into the effulgence and glory of heaven.

Such, my dear young friends, is the history of Amelia and Caroline Hastings. If it shall add one particle of strength to your conviction of the need of *early religious education*, my object will be gained; I shall be repaid the trouble of writing, and you the trouble of perusing, a long, and I fear, a tedious letter,

From your affectionate friend,

ELIZABETH S. BROWN.

THE SIGNS OF THE ZODIAC.—No. III.

CANCER, THE CRAB.—CHAPTER II.

BUT notwithstanding the apology for the admixture of what appears like unseemly metaphor in the case of identity I purpose to establish, the objection will vanish on a closer inspection. The proof of this cannot be gainsaid, for the language used by Jacob, as applied to

Shiloh, as closely applies to Silenus. Silenus was also mounted on an ass; and that ass was thought to have taught the "pruning of vines." His eyes are also red with wine; "his garments washed in wine, and his clothes in the blood of grapes." His teeth may be also said to be

"white with milk," for new milk was one of his peculiar offerings. All this, as we have said, is merely metaphorical, and originates from the peculiar defect of the first language employed by men. The real innocence of the metaphor in question may be easily explained. Every Orientalist knows that, under the images of drunken and Anacreontic songs, Hafiz the poet has attempted to adumbrate the spiritual mysteries of the Persian creed. Every one also knows that Solomon's Song, one of the most charming pastorals in any language, can be taken in nothing but a spiritual sense. In a literal sense it would be little better than a Hebrew empsychedion, advocating incest, and clothing licentiousness in the soft colours of pastoral poetry. In short, inebriation of mind is even now employed as a common figure to express rapture. But the origin of the typical use of the image of drunkenness is traceable to the following circumstance:—The same word means a bunch of grapes and prosperity, in Hebrew. Hence the rabbinical proverb of the wine of Adam being preserved in some secret repository till the final festival of all nations—the feast of "fat things and wine on the lees," at the millennium. But wine, among the Egyptians, had another interpretation. It was a common opinion all over the East that the tree of knowledge, by which man fell, was a vine; and, indeed, the vulgar legend of its being an apple-tree is totally without foundation. The Turks consider it in the same light to this day: and thence, beyond doubt, the Mohammedan prohibition of wine. The Egyptians held it in equal abhorrence, and from the same cause; and they expressed their abhorrence in a metaphor, namely, that wine was the blood of the giants; which clearly points to antediluvian violence and crime as its source. Wine, with them, therefore, had a second meaning, implying blood. One of the titles of Osiris Bacchus was, "Treader of the Wine-press." The Messiah is represented, at his second coming, in the same character; and treading the wine-press, throughout the whole of the Jewish prophetic writings, has the Egyptian meaning, and means "slaughter."

Take, for instance, that most sublime and terrible eclogue of Isaiah:—

"Who is this that cometh from Edom, with dyed garments from Bozrah? He that is glorious in his apparel, travelling in the greatness of his strength."

The image here is derived from Osiris, or the sun.

"Wherefore art thou red in thine apparel, and thy garments like him that treadeth the wine-press?" (like Osiris Leneus,—"he that treadeth the wine-press.")

"I have trodden the wine-press alone, and of the people there was none with me; I will trample them in my fury, and their blood shall be sprinkled upon my garments."

This was a rite in the mysteries of Osiris.

"For the day of vengeance is in my heart, and the year of my redeemed is come."

The same imagery runs through the judgments of the Apocalypse. For instance,—*"The wine-press was trodden without the city, and blood came out of the wine-press, even unto the horse-bridles."*

In the same manner, the woman who sitteth upon many waters is said to have a wine-cup in her hand, and to be drunken with the blood of the saints.

The woman here described is evidently the Omorca of the Chaldeans, the material demon of the Platonists, and personification of evil. She is the same person as the Medusa, who prostituted Minerva's temple, the severing of whose head by Perseus caused the deluge, by the flow of blood; and from that blood arose Pegasus, the place of which, on the most ancient sphere, was certainly filled by the ass and foal, peculiar to the sign we are discussing. Thus the decapitation of Medusa represented the judgment on antediluvian crime at the flood. I have before alluded to the decapitated animal figure, with human hands and feet, in which form Isis Omnia, or nature, is frequently represented embracing the zodiacs, and the Gorgon head with its single eye near it, which is preserved, indeed, on the modern sphere, and grasping in the hand of Perseus. It is singular that David represents the Jewish church in the wilderness under the form of an animal, as the Egyptian church appears to have been. And this shows the harmony of the Apocalyptic denunciation against the "great whore" presiding—as Omorca and Isis did—"over many waters;" for certainly the figure was meant to be a type of the false church, the creed of Egypt and Babylon. The treading of the wine-press, and the deluge of her blood, meant, therefore, the total destruction of her reign of violence. The Gorgons, indeed, were the three Egyptian furies, and the three furies were emblems of the vintage, as their names signify; one meaning, "to gather;" another, "to store in pitchers;" and the third, Megära, in reality meaning, "to press the wine."

I have said quite enough to show that the wine-cup in the hand of Silenus, his drunkenness, and his garments stained with wine, were never intended by the original inventors of the personification to be literally taken, as was the case with the Greeks. But we have, fortunately, one of the strongest proofs that the character of this deity was not of the gross description which it suited the Greeks to give him. I mean the beautiful sixth eclogue of Virgil. He there appears in the same dignified character as Shiloh in the eclogue of Isaiah, and the prophecy of Jacob. That Virgil derived this, the eclogue to Pollio, and the apotheosis of Daphnis, from Sybilline oracles, or traditions then current over the

whole eastern world, cannot be doubted. It would be out of my way to go into argument upon this wide field of inquiry; but it does appear to me that the language of Isaiah might as well be applied to Marcellus as the epistle of Pollio. The application of the death of Daphnis to Julius Cesar is equally incoherent and overstrained. It evidently describes, on the model of some Sibylline or oriental oracle, the violent death of the Syrian deity Adonis, Isis, or Thammuz, or Atys, (for they were all the same person,) his resurrection and ascension to heaven. There is nothing singular in Virgil having employed the poetical eclogue in developing secrets which were shut to the common eye and ear, and which, it is not improbable, that he may have gained from the Sibylline books which Pollio was intrusted to revise. The pastoral eclogue is employed in treating of the same subject by the Hebrew prophets, and by Solomon. The Messiah is always represented as a shepherd, as Osiris was; the Arcadia, the country of shepherds and innocence, was the properest scene which Virgil could have chosen. So Creeshna, the incarnate second person of the Hindoo trinity, is represented as a shepherd in Hindoo sacred poetry; and his amours with the shepherdesses is told in a strain not very dissimilar from that of Solomon's Song, and with circumstances agreeing with those which Virgil refers to Daphnis. Even a Greek blunder in mythology could not entirely turn aside the undeviating stream of ancient tradition. Thus Apollo, when on earth, became a shepherd; and, among other amours, it was then that his pursuit of Daphne occurred. Every one knows that Constantine considered Apollo as a type of the Messiah, and dedicated his threefold serpentine column to the God of Christianity. But, in again referring to Creeshna, there is a remarkable tradition respecting him, which deserves mention, since it strikingly illustrates the prophecy of Jacob—"His teeth shall be white with milk;" for Creeshna is recorded as showing his mouth, after eating milk, to some of his companions; who, on looking therein, discovered a microcosm of the whole universe. Milk and honey are both used in a mystical sense by the prophets; and perhaps with reference to the veneration of Egypt for the cow and the bee, one representing spirit and the other matter. Thus the phrase "butter and honey shall be eat," would seem, on this principle, simply to pre-shadow an incarnation; at all events, milk was eminently devoted to Silenus.

Now, what is the character assigned by Virgil to his Silenus? It is one of that transcendent superiority which, contrasted with the vulgar misunderstanding as to the sylvan deity, has staggered the commentators. He describes him as a shepherd-prophet, a divine philosopher and legislator. He is a description of the beginning of the world, not very dissimilar from, or inferior

to, the Genesis of the inspired Moses; and then, like the "king of the mysteries," he shows the folly of the vulgar and popular creed. Indeed, it appears to me a portion of Virgil's design, of laying open the secrets and traditions of the mysteries. That he should do so just at the birth of our Saviour, when these secrets and traditions were on the point of being accomplished, is not one of the least extraordinary circumstances about that highly-gifted genius, and we are almost led with Petrarch to call him a Christian. We say nothing of the Mithratic or Magian priests; but this is certain, that, at the time in question, there was an universal anticipation, over the whole pagan world, of some great and Divine king who would unite the world under his authority.

Virgil opens his eclogue in a manner which suffices to show that he was going to expound a mystery. He describes the binding and unloosing of the god, as Homer describes that of Proteus, when Menelaus sought information at his oracle. Now, the changes of Proteus into animals and vegetables, meant nothing but the sacred language; and the binding and solving of his fetters, their secrecy and interpretation. The metaphor is employed to this day. Virgil, therefore, begins by implying that he is going to interpret a religious parable, and unloose the knot of a traditional secret. The god's face is smeared, as was the case in the mysteries; and then, being unbound, he relates the cosmogony and moral order of the world.

It is a most remarkable circumstance and striking corroboration of my inference, that many commentators imagine, in consequence of the Epicurean doctrines he puts into Silenus's mouth, that Virgil meant to do honour to Silo, (both names being radically the same,) the pupil of Epicurus, who had been his master. Virgil, therefore, may have employed the name typically, as he employed that of Daphnis, derived from the laurel, which symbol is immortality, instead of Atys or Thammuz; and as he couches a compliment to Asinius Gallus, under the name of Gallus, a high priest of Atys and Cybele, and one of the titles of the universal funereal deity.

It is remarkable, that even in this eclogue, the metaphors resemble those of Isaiah:—

*"Jura vero in nemora fuuncque ferasque ciletes,
Ludere, tum rigulas molare cacumina quercus."*

And again at the conclusion:—

*"Audiet Eurotas, jussitque ediscere lauros
Pulvis referunt ad sidera vallis."*

Bryant has considered Silenus to be a representation of Noah; and the ass on which he is carried, being the original Pegasus, to be the ark which arose upon the deluge from the giant's blood. He being a vine-dresser, certainly supports the inference; and thus he may be scripturally considered a type of the second Noah.

With relation, indeed, to the ass, which was the original tenant of this sign, he is described by the mythologists as having prevented the violation of Vesta, or the earth, by his bray—another proof of the mystical importance attached to the image of Silenus. The winged ass Zif, which carried Mahomet to heaven, is, beyond a doubt, an oriental version of the fable of Pegasus; and while it shows the inveteracy with which old fables maintain their ground, corroborates still further my induction as to an ass having been the original occupant of the sign Cancer.

When, therefore, the Messiah, before entering Jerusalem, sent his disciples for "an ass, and the foal of an ass," on which he made that entry, he not only fulfilled the prophecy which St. Matthew refers to—"Behold thy king cometh unto thee, meek and sitting on an ass, and a colt the foal of an ass," but he sealed up the oldest of the oracles, and contemplated, in his own person, a most venerable and stupendous tradition, common at once to the pagan and the Jewish world. The miserable and would-be atheist Paine, who wrote against his Saviour and blasphemed his God, to save his throat from the axe of his *quondam* allies the Jacobins, is very jocose upon this incident, and considers himself extremely strong in urging the objectless and undignified nature of the miracle. This proceeded from his excessive ignorance and presumption; in fact, he knew nothing of the irrefragable fact that the pagan world, as well as the Jewish nation, expected a Messiah, and that Messiah characterised by certain signs. Of all the mass of proof here collected to show it, I firmly believe that he did not know a scintilla. The ignorant and presumptuous knave thought that he was fighting against the predictions of a small and obscure nation, whereas he was warring against the tra-

ditional anticipations of universal man. What he deems useless and undignified was, under this new feature of the subject, of gigantic import and overwhelming sublimity. The Messiah, in performing that apparently simple action of sending for the ass and the foal, did neither more nor less than this—he claimed the sovereignty of the world as King and Legislator. When he claimed the "ass, and a colt the foal of an ass," of their master, attesting the claim by a miraculous knowledge of their situation, he demanded them like a king requiring his homage fee, as Sovereign of the physical and moral world. By doing so he proclaimed himself to be the expected "Lawgiver," the "Shiloh," into whose hands all earthly sceptres should be transmitted, the "wish of all nations," and the "Shepherd-King," unto whom "the gathering of all people should be." He said to the great hierarchies of Persia, Syria, of India, of Egypt, and Chaldea, "Behold the *sign* that you require! Neither the lion Horus, nor Mithra with the lion's head, nor the lion of Babylon, nor the seventh Leonine Avatar, but the 'Lion of Judah,' the Alpha and Omega of the zodiac. Read who I am in the book of the heavens, acknowledge the real 'Star of your God,' the 'Star of Jacob,' and the 'Sceptre of Israel.' And behold all the traditional prophecies which the first inventors of astronomy inscribed among the stars, accomplished in my person

The magnificence of the issue corresponded with the magnitude of the object. The hosannas, the palm-branches, and the garments spread on the ground, constituted the form of triumph, among these nations, (particularly Egypt,) devoted to a victor-king returning to his capital.

E. C.

REVIEW.

Poems. By JOHN MOULTREIE.—Pickering, 1837.

SECOND NOTICE.

In a preceding number we intimated an intention of extending our examination of this volume. We now proceed to execute our purpose.

There are, perhaps, few influences more extensively diffused than those which genius exerts on congenial spirits, and at the same time there are no influences less defined or uniform in their operation. After rising from the attentive perusal of an author whose production has deeply interested us, if we ourselves attempt a composition in which it is in any way possible that analogous trains of thought may be excited, we are often unconsciously betrayed into that which others would not unjustly deem a plagiarism. The recollection which we retain of the ideas and sentiments of our predecessor is, in the points of resemblance, too vague and indistinct to enable us, at first sight, to detect our own appropriation; yet the sand of our intellect has been channelled by the flow-

ing of waters from the neighbouring fountain, and although this channelling be so slight as to be scarcely perceptible to the eye of the observer, it has the power to give a direction to the waves that may follow. In the excitement of the moment we are not aware of our imitation; and if afterwards the unfortunate truth reveals itself, the mere fact of having once considered the borrowed plumage as our own, renders us exceedingly unwilling to relinquish our possession. This derivative of ours bears nearly the same relation to the primitive which originated it, as does the reflection in a rippling stream to the landscape beauties of the banks, while a translation or positive imitation is like the mirrored picture in an unruffled lake. Now, if there be in the course of our stream any nooks or sheltered angles where the waves are lumbering, and where a clear and plain transcript of the features of the shore and the circumambient clouds may be flashed upon the view of the wayfarer, we are at once convinced that the source whence our shadows are derived will necessarily be detected. Fearful of the

inevitable consequences of such a discovery, we make, at these points, the mightiest efforts of which our minstrel skill is capable, that the frisking of the dolphins that may be allured to listen to our strains, may break the resemblance into a thousand fragments by flinging the spray to intercept the sunlight ere it reaches the bosom of the river. Still, though the "spirits of the vasty deep" may thus be invoked to our assistance, and though, indeed, they may "come when we do call them," they cannot entirely conceal the deception which we would fain practise even on ourselves. We, in common with others, though we cannot assert that the trees, and the rocks, and the clouds, are verily imaged in the wave, are nevertheless conscious that if these had been wanting, the monotonous reflection of the vault of heaven would only have been relieved by the whiteness of the spray, instead of being decorated with the varying tints with which it is adorned. A similar consciousness forces itself upon us when we are examining the works of others. We feel assured that we can trace the parentage of the offspring by a certain indefinite, but striking, family likeness. We are able to recognise, and to point out some of the points of correspondence; but there are others from which, though uncommunicable, we ourselves might have traced the relationship. This recognition is satisfactory to our own minds, and the mere mention of it to others, gives them a clue to a similar train of recollections. They are then equally convinced with ourselves, though they are also equally unable to exhibit the data on which their conclusion is grounded.

We were conscious of a recognition of this kind on our first perusal of "Sir Launfal," and this induced us in our former notice to state our opinion that it was in some part a borrowing from Byron. We then merely mentioned the style as the ground for our notion, we will now transcribe a few examples, which we think will bear us out.

"There is nothing in the world (that is in Trinity)
To make us poets happy;" &c.

"The world imagines, (but the world's an ass.)"

"They—but I won't philosophise—in short," &c.

"Wisdom doth live with children round her knees,
Says Wordsworth, and he says what's very true."

"The appearance instantaneously displayed,
(I borrow that last line from the excursion,") &c.

Since, however, "we won't philosophise, but will be read," we will not bore our readers with any more of these fragmental extracts, though it would be easy to find many more apparently fitted to sustain our position. We take the first that present themselves, and we think that those who are familiar with the mannerisms of the "misanthropic peer," will detect, even in these, the shadow of his mode of borrowing from others, as well as a great likeness to his method of using parentheses. Were we to hear a speaker adopting the intonation and gesture of another, and moreover giving a similar turn to his sentences, we should consider ourselves justified in calling such an one an imitator, though he might be giving utterance to sentiments and ideas most entirely opposite to those of his model. It is in this manner that we accuse Mr. Moultrie of imitation, and the charge is assuredly not a very grave one, if it be the fact, as Sir Joshua Reynolds asserted, that no man produces more than two essentially original ideas in his life time.

There are many points of close resemblance in the description of the dwelling of the Fairy, and the introduction of Sir Launfal thither, and that of the residence of Gulbeyaz, and the presentation of Don Juan. We know that either poet might take his ideas from the descriptions of oriental travellers, and that

hence they may not be less original in the one than in the other; but after those ideas have been transferred from their original soil to the province of poetry by one author, a like use of them by another has very much the appearance of a trespass on a property to which the other has, in some measure, acquired a claim by right of priority of possession—he has planted the flag of his country on the newly discovered land, and he who comes after, though he may never have heard of the visit of the former one, cannot demand to be considered as *the* discoverer. Thus, similarity, or even an almost identity of ideas, does not of itself constitute anything more than a vague species of circumstantial evidence in proof of plagiarism, since it may result from each writer drawing his inspiration from the selfsame source. In the description of similar scenes by different poets, we must of course expect a similarity of sentiment, and that resemblance will be the more striking the more completely each one is the pupil of Nature. In verse, the style and manner are considerably influenced by the form of stanza that is adopted—and if these two poets, whom we have supposed describing kindred scenes, should chance to use the *same* form of stanza, the probability of close correspondence will be proportionally greater. It is a dangerously daring attempt to sing in the stanza of a greater bard, if we are treading on any portion of the territory that he has previously occupied—yea, though we only here and there make transient incursion over the boundary line. We say it is dangerous, for it virtually challenges a comparison—and not only this, but the embodying of the thoughts which are floating around us, and which we feel ourselves at liberty to seize, even when our endeavours have rendered them incarnate, seem like the property of our predecessors, because their material frame seems to have been cast in the same mould. They are like the miserable plagiarism of Prometheus, claimed and appropriated to the honours of the maker of the model. Having selected the same metrical arrangement, and often necessarily touching on scenes previously dwelt upon by Byron, we believe that Mr. Moultrie could not have avoided a certain approximation to the character of the earlier work. We are the more willing to believe this, inasmuch as we ourselves, since the writing of our former article, have tried, by way of experiment, some dozen of similar stanzas; and when we wrote these, we were not aware of having copied Mr. Moultrie, but on examining them critically, and comparing them with Sir Launfal, which we had previously been pondering, we found that we were sad plagiarists—and, therefore, after expunging some lines, we were constrained, even by way of salvo, to write above the verses "after the manner of Sir Launfal." Our verdict, then, as it regards this piece, is, that the author has been guilty of an error of judgment in his selection of the stanza and style, yet not by any means deficient in skill as it regards the subsequent management. We have dwelt thus long on this piece and on the subject of plagiarism, because we wished to be *just* in our critique, and because, moreover, we were desirous of introducing a mode of criticism that cannot be too generally resorted to. We have heard of a village orator who paused in the midst of his harangue, and called out lustily to some who were smiling, "If you think you can do better, come up and try." This illustrates our meaning. We know that we could not, and, therefore, we will not condemn, though we will lightly censure an author for not bestowing a little more care, by which the resemblances might have been rendered unblameable—we think he could have done better. We will only add on this point, that we cannot help surmising that the stanzas on immaterialism at page 266 would never have been written if it had not been for those

beginning "When Bishop Berkely said there was no matter," &c.

We now turn to the more agreeable task of pointing out some of the praiseworthy parts, and these, indeed, are not few, though we must content ourselves with a scanty selection. Our author tells us, in more than one place, that description is not his forte; yet we esteem the following extract as a proof of no mean descriptive power. His hero has been reduced from rank and wealth to poverty, and is now wandering in quest of solace from his care:—

"'Twas summer—the enchanted forest lay,
Rich with the teeming leafiness of June,
In the still silence of meridian day,
Save when, at times, a low and fitful tune
Some wandering Zephyr on the leaves did play,
Or the unseen Cicada hailed the noon
With his shrill chirp, or, with a deep-fetched note,
Some meditative blackbird cleared his throat.

There were some children, playing in the shade,
In one place, on their earnest sports intent;
When a new sound did suddenly invade
Their gambols, and anon their eyes were bent
On an unusual object—through the glade
A handsome knight, upon a steed, sore spent
With travel and starvation, took his way;
The knight was young, but pale, the steed—a bay.

His eyes were sunk and dim—his head was bare;
His arms hung idly at his saddle bow;
There was a pensive sadness in his air,
Which told that he had made fast friends with woe;
And yet a gentle patience lingered there,
Softening his haggard eyes—his pace was slow;
Listlessly on his way he seemed to wend,
He knew not whither—without aim or end.

The little children looked upon his face
With awe, and turned not to their sports again
When he had passed; his melancholy grace
Sank on their spirits with such tender pain:
The knight soon reached the forest's loneliest place,
Dismounted, and took off his charger's rein;
Then, throwing his worn frame beneath a tree,
Began to gather daisies tristfully.

'Twas poor Sir Launfal, who had lately bidden
Farewell to Blanch, and all the world beside;
And thus far on his lonely journey, ridden,
Seeking some savage place, wherein to hide—
What every body wishes to have hidden—
His poverty —."

• • • • •

He stood amidst a region fair and proud,
Round whose horizon, lost in viewless space,
Mountain on mountain rose, like cloud on cloud
In the bright sun-set sky, and at their base
Fair valleys spread, and mighty forests bowed,
And gentle rivers ran a pleasant race;
And giant lakes lay scattered here and there,
And sweetest scents and sounds were floating every where."

The introduction of ludicrous and quaint expressions, and sometimes even of vulgarisms, is conventionally tolerated in the style of poetry, of which Sir Launfal is an example; but though they are not to be regarded as incompatible with the general design of such *naïve* of song, they are evidently blots in poems of a graver character. They belong to the slang of a free-and-easy conversation style, not to serious efforts, and in the latter they are as much misplaced as a figure of Hogarth's comic sketches would be in a classic composition of Titian's. There are several slurs of this kind occurring in the sonnets of the present volume.

"Nine years, nine mortal years, have swiftly passed,"
is an expression we do not admire.

"Said I thou wast not beautiful? in sooth
If that I did, shame blister my false tongue,"

is equally ungraceful; and could, we imagine, scarcely win the thanks of the lady panegyrised. "Love's May-day" is sufficiently laughable. It is really enough to make an imaginative mouth water to hear the reference

"To the first tumultuous kiss,
Harbinger of years of bliss;
To the mingled tear and smile,
Throb and thrill at Upton stile;"

but the salivary pores are unhappily constricted by the remembrance of the record of the preceding page.

"Now the days are altered quite,
Thou must work and I must write;
Thou hast children three to teach;
I have sermons three to preach;
Thou hast clothes to make and mend,
I've a straying flock to tend;" &c.

This might do very well for Mrs. M., or for a book of nursery rhymes, to teach the infant mind the theory of an art, which we for the most part learn practically full soon; but we do not think this exhibiting of the author's skill, in courtship, &c., is altogether fit to publish among "Poems." There is also something extremely puerile in the "Farewell to Herne Bay." The loveliest characteristics of the domestic sanctuary, and the sweetest and best feelings of the domestic bosom, lose their native charm when they seem to court publicity. We feel that we have been rather severe in our strictures; but, be it remembered, indiscriminate praise is more scathing than the bitterness of invective; we have only pointed out some fruitless branches which might advantageously be sacrificed, but we are very far from wishing that the tree itself should be consigned to the axe. There is a sweet and an elegant breathing of regret, that the best energies of our author were allowed to pass away unconsecrated to sacred song, with which we fully sympathise, and which we feel sure our readers will thank us for introducing to their notice.

"I must not think to have my name enrolled
Among the names of those who gave to God
Their strength and fervour of poetic thought.
The days are gone wherein I might have framed
Lays which, outlasting my own span of life,
Should, when my bones were dust, have warmed the hearts
Of Christ's true servants; ne'er in after years
Shall my sweet babes associate with the thought
Of their lost parent, the fair name of one
Bruited in good men's mouths, for rich bequests
Left to the pious and reflective heart,
In tuneful records of his own calm thoughts,
And meditative intercourse with heaven.
Nor sage, nor scholar, nor world-weary man,
Who seeks a respite from heart stifling cares
In poetry's domain, nor saint devout,
Yearning for pious sympathy, and faint
To vent the feelings of his own full heart
In the rich breathings of religious song,
Shall have recourse to me, or count my lays
Among the pure refreshments of his soul.
My song will not be sung on winter nights
By cottage hearths, nor elevate the soul
Of sun-burnt peasant or pale artisan,
Forgetting their six days of care and toil,
In the calm gladness of the Sabbath eve,
And leading up their children's thoughts to heaven
By grave and pious converse, interspersed
With psalms and hymns and spiritual songs,
Making the heart's rich melody to God.
My spirit must not mingle after death
With the free spirit of my native land.
Nor any tones, from these poor chords sent forth,
Linger upon her breezes, and be heard
Faintly, and yet with no discordant sound,
In her full chorus of religious song;
So I shall rest unhonoured in my grave,
And unremembered."

We are not sure whether Mr. Moultrie has not condemned himself rather too sweepingly; we share in his regret, for he would have been a valuable addition to the list of our sacred poets; judging from the talent displayed in the volume before us, and even now we do not despair of seeing a volume from the same pen that will deserve our warmest congratulations. We do not think "Time is past" with our author; and we therefore again would express a wish that he will not allow his power to slumber. We would remind him that the servant to whom few talents were intrusted did not bury even *one*.
